PHILIPS

Highlights

HDMI (720p/ 1080i)

HDMI (High-Definition Multimedia Interface) is a direct digital connection that carries digital high definition resolution video as well as digital multichannel audio. With video upscaling you can increase the resolution of SD (Standard Definition) video signals that DVD uses to High Definition resolutions up to 720p or 1080i, so you will be able to see more details thanks to a sharper, more true-to-life picture. The resulting HD resolution video output signal can be fed to an HD ready display through HDMI. HDMI is fully backward-compatible with DVI.

One Touch Pause Live TV

Pause Live TV puts you in absolute control. Once the recorder is turned on, a large built-in memory automatically starts recording the program you are watching -- allowing you to pause, replay or save the program, anytime. If you need to take a break, you can pause your 'live' TV program with just one touch of a button, and resume watching when it suits you.

Instant Replay

With Instant Replay, you can relive magic movie moments and super sports scenes - anytime you want. At the touch of a button, the hard disk will replay the last 30 seconds. Skipping backwards further requires nothing more than pressing the button again.

Dual Media

Philips DVD Recorders support 'dual media' recording - the ability to create recordings on DVD+R/RW, DVD-R/RW and DVD+R DL discs. Now you can buy any disc and the Philips recorder will always create fully compatible recordings, which can be played by any DVD player.

G-CODE

With the G-CODE system, all you need to do to program your video recorder is entering the G-CODE number -- a single code of up to nine digits (but usually less) that is printed next to each TV program in most TV guides.
