IMPORTANT!

READ CAREFULLY BEFORE USE.

KEEP THIS GUIDE FOR FUTURE REFERENCE.

Note: This guide is a reference for a series of products. Therefore some features or options in this guide may not be available in your product.

Screenshots and graphics in this book may differ slightly from your product due to differences in your product firmware or your computer operating system. Every effort has been made to ensure that the information in this manual is accurate.

Note: It is recommended you use the Web Configurator to configure the Switch.

- Web Configurator Online Help

Click the help icon in any screen for help in configuring that screen and supplementary information.

- More Information

Go to support.zyxel.com to find other information on the Switch.

PART I

User's Guide

Getting to Know Your Switch

This chapter introduces the main features and applications of the Switch.

1.1 Introduction

The GS1900 series is a new generation Gigabit Ethernet (GbE) Web-Managed Switch.

This User's Guide covers the following models:

Table 1 GS1900 Series Comparison Table

MODEL	GS1900-8	GS1900-8HP	GS1900-10HP	GS1900-16	GS1900-24E	GS1900-24	GS1900-24HP	GS1900-48	GS1900-48HP
100/1000 Mbps Port	8	-	-	16	24	24	-	48	24
100/1000 Mbps PoE Port	-	8	8	-	-	-	24	-	24
1G SFP Slots Fiber	-	-	2	-	-	2	2	2	2
Desktop	v	v	v	v	v				
Wall-mount	v	v	v	v	v				
Rack-mount				v	v	v	v	v	v
Power ON/OFF Switch	v	v	v	v	v				

See the datasheet for a full list of firmware features available on the Switch.

1.1.1 Bridging Example

In this example the Switch connects different company departments (RD and Sales) to the corporate backbone. It can alleviate bandwidth contention and eliminate server and network bottlenecks. All users that need high bandwidth can connect to high-speed department servers via the Switch.

Figure 1 Bridging Application

1.1.2 Gigabit Ethernet to the Desktop

The Switch is an ideal solution for small networks which demand high bandwidth for a group of heavy traffic users. You can connect computers and servers directly to the Switch's port or connect other switches to the Switch.

In this example, all computers can share high-speed applications on the server and access the Internet. To expand the network, simply add more networking devices such as switches, routers, computers, print servers and so on.

Figure 2 Gigabit to the Desktop

1.1.3 IEEE 802.1Q VLAN Application Example

A VLAN (Virtual Local Area Network) allows a physical network to be partitioned into multiple logical networks. Stations on a logical network belong to one or more groups. With VLAN, a station cannot

directly talk to or hear from stations that are not in the same group(s) unless such traffic first goes through a router.

For more information on VLANs, refer to [Chapter 9 on page 62](#).

1.1.3.1 Tag-based VLAN Example

Ports in the same VLAN group share the same frame broadcast domain, thus increasing network performance by reducing broadcast traffic. VLAN groups can be modified at any time by adding, moving or changing ports without any re-cabling.

Shared resources such as a server can be used by all ports in the same VLAN as the server. In the following figure only ports that need access to the server need to be part of VLAN 1. Ports can belong to other VLAN groups too.

Figure 3 Shared Server Using VLAN Example

1.1.4 IPv6 Support

IPv6 (Internet Protocol version 6), is designed to enhance IP address size and features. The increase in IPv6 address size to 128 bits (from the 32-bit IPv4 address) allows up to 3.4×10^{38} IP addresses. At the time of writing, the Switch supports the following features.

- Static address assignment and stateless auto-configuration
- Neighbor Discovery Protocol (a protocol used to discover other IPv6 devices in a network)
- Remote Management using PING, SNMP, HTTP and TFTP services
- ICMPv6 to report errors encountered in packet processing and perform diagnostic functions, such as "PING"
- IPv4/IPv6 dual stack; the Switch can run IPv4 and IPv6 at the same time
- DHCPv6 client

1.2 Ways to Manage the Switch

Use any of the following methods to manage the Switch.

- Web Configurator. This is recommended for everyday management of the Switch using a (supported) web browser. See [Chapter 5 on page 33](#).
- TFTP. Use Trivial File Transfer Protocol for firmware upgrades and configuration backup/restore. See [Section 32.1 on page 213](#), [Section 32.3 on page 215](#), and [Section 32.4 on page 217](#).
- SNMP. The device can be configured by a SNMP manager. See [Section 31.3 on page 199](#).

1.3 Good Habits for Managing the Switch

Do the following things regularly to make the Switch more secure and to manage the Switch more effectively.

- Change the password. Use a password that's not easy to guess and that consists of different types of characters, such as numbers and letters.
- Write down the password and put it in a safe place.
- Back up the configuration (and make sure you know how to restore it). Restoring an earlier working configuration may be useful if the device becomes unstable or even crashes. If you forget your password, you will have to reset the Switch to its factory default settings. If you backed up an earlier configuration file, you would not have to totally re-configure the Switch. You could simply restore your last configuration.

Hardware Installation and Connection

This chapter shows you how to install and connect the Switch.

2.1 Freestanding Installation

- 1 Make sure the Switch is clean and dry.
- 2 Set the Switch on a smooth, level surface strong enough to support the weight of the Switch and the connected cables. Make sure there is a power outlet nearby.
- 3 Make sure there is enough clearance around the Switch to allow air circulation and the attachment of cables and the power cord.
- 4 Remove the adhesive backing from the rubber feet.
- 5 Attach the rubber feet to each corner on the bottom of the Switch. These rubber feet help protect the Switch from shock or vibration and ensure space between devices when stacking.

Figure 4 Attaching Rubber Feet

Note: Do NOT block the ventilation holes. Leave space between devices when stacking.

Note: For proper ventilation, allow at least 4 inches (10 cm) of clearance at the front and 3.4 inches (8 cm) at the back of the Switch. This is especially important for enclosed rack installations.

2.2 Hardware Installation

See [Table 1 on page 15](#) for a comparison of the hardware installation methods of each model:

Note: Ask an authorized technician to attach the Switch to the rack/wall.

Refer to [Section 2.2.2 on page 21](#) for rack-mounting instructions. Take note of the following:

- The Switch should have a minimum 25 mm space around it for ventilation.
- The Switch should be placed on a desk that has a level surface and that is able to support the weight of the Switch.

To start using it, simply connect the power cables and turn on the Switch.

2.2.1 Wall Mounting

Do the following to attach your Switch to a wall.

See the following table for how far apart to place the screws.

Table 2 Distance between the centers of the holes for wall mounting

GS1900-8	GS1900-8HP	GS1900-10HP	GS1900-16	GS1900-24E
176 mm	176 mm	176 mm	148 mm	207 mm

Screw the two screws provided with your Switch into the wall (see the figure in step 2). Use screws with 6 mm ~ 8 mm (0.24" ~ 0.31") wide heads. Do not screw the screws all the way in to the wall; leave a small gap between the head of the screw and the wall.

The gap must be big enough for the screw heads to slide into the screw slots and the connection cables to run down the back of the Switch.

Note: Make sure the screws are securely fixed to the wall and strong enough to hold the weight of the Switch with the connection cables.

Align the holes on the back of the Switch with the screws on the wall. Hang the Switch on the screws.

The Switch should be wall-mounted horizontally. The Switch's side panels with ventilation slots should not be facing up or down as this position is less safe.

2.2.2 Rack Mounting

The Switch can be mounted on an EIA standard size, 19-inch rack or in a wiring closet with other equipment. Follow the steps below to mount your Switch on a standard EIA rack using a rack-mounting kit.

Rack-mounted Installation Requirements

- Two mounting brackets.
- Eight M3 flat head screws and a #2 Philips screwdriver.
- Four M5 flat head screws and a #2 Philips screwdriver.

Failure to use the proper screws may damage the unit.

Precautions

- Make sure the rack will safely support the combined weight of all the equipment it contains.
- Make sure the position of the Switch does not make the rack unstable or top-heavy. Take all necessary precautions to anchor the rack securely before installing the unit.

Attaching the Mounting Brackets to the Switch

- 1 Position a mounting bracket on one side of the Switch, lining up the four screw holes on the bracket with the screw holes on the side of the Switch.

Figure 5 Attaching the Mounting Brackets (GS1900-16 and GS1900-24E)

Figure 6 Attaching the Mounting Brackets (GS1900-24, GS1900-24HP, GS1900-48, GS1900-48HP)

- 2 Using a #2 Philips screwdriver, install the M3 flat head screws through the mounting bracket holes into the Switch.
- 3 Repeat steps 1 and 2 to install the second mounting bracket on the other side of the Switch.
- 4 You may now mount the Switch on a rack. Proceed to the next section.

2.2.2.1 Mounting the Switch on a Rack

- 1 Position a mounting bracket (that is already attached to the Switch) on one side of the rack, lining up the two screw holes on the bracket with the screw holes on the side of the rack.

Figure 7 Mounting the Switch on a Rack (GS1900-16 and GS1900-24E)

Figure 8 Mounting the Switch on a Rack (GS1900-24, GS1900-24HP, GS1900-48, GS1900-48HP)

- 2 Using a #2 Philips screwdriver, install the M5 flat head screws through the mounting bracket holes into the rack.
- 3 Repeat steps 1 and 2 to attach the second mounting bracket on the other side of the rack.

Hardware Overview

This chapter describes the front panel and rear panel of the Switch and shows you how to make the hardware connections.

3.1 Front Panel Connections

The following figures show the front panels of the Switch.

Figure 9 Front Panel: GS1900-8

Figure 10 Front Panel: GS1900-8HP

Revision A1

Revision B1

Figure 11 Front Panel: GS1900-10HP

Figure 12 Front Panel: GS1900-16

Figure 13 Front Panel: GS1900-24E

Figure 14 Front Panel: GS1900-24

Figure 15 Front Panel: GS1900-24HP

Figure 16 Front Panel: GS1900-48

Figure 17 Front Panel: GS1900-48HP

3.1.1 Ethernet Ports

The Switch has 1000Base-T auto-negotiating, auto-crossover Ethernet ports. In 10/100/1000 Mbps Gigabit Ethernet, the speed can be 10Mbps, 100 Mbps or 1000 Mbps. The duplex mode can be both half or full duplex at 100 Mbps and full duplex only at 1000 Mbps.

An auto-negotiating port can detect and adjust to the optimum Ethernet speed (10/100/1000 Mbps) and duplex mode (full duplex or half duplex) of the connected device.

An auto-crossover (auto-MDI/MDI-X) port automatically works with a straight-through or crossover Ethernet cable.

3.1.1.1 Default Ethernet Settings

The factory default negotiation settings for the Ethernet ports on the Switch are:

- Speed: Auto
- Duplex: Auto
- Flow control: Off

3.1.2 SFP Slots

These are slots for Small Form-Factor Pluggable (SFP) transceivers. A transceiver is a single unit that houses a transmitter and a receiver. Use a transceiver to connect a fiber-optic cable to the Switch. The Switch does not come with transceivers. You must use transceivers that comply with the Small Form-Factor Pluggable (SFP) Transceiver MultiSource Agreement (MSA). See the SFF committee's INF-8074i specification Rev 1.0 for details.

You can change transceivers while the Switch is operating. You can use different transceivers to connect to Ethernet switches with different types of fiber-optic connectors.

- Type: SFP connection interface
- Connection speed: 1 Gigabit per second (Gbps)

To avoid possible eye injury, do not look into an operating fiber-optic module's connectors.

3.1.2.1 Transceiver Installation

Use the following steps to install a transceiver.

- 1 Insert the transceiver into the slot with the exposed section of PCB board facing down.

Figure 18 Transceiver Installation Example

- 2 Press the transceiver firmly until it clicks into place.

- 3 The Switch automatically detects the installed transceiver. Check the LEDs to verify that it is functioning properly.

Figure 19 Installed Transceiver

3.1.2.2 Transceiver Removal

Use the following steps to remove a transceiver.

- 1 Open the transceiver's latch (latch styles vary).

Figure 20 Opening the Transceiver's Latch Example

- 2 Pull the transceiver out of the slot.

Figure 21 Transceiver Removal Example

3.2 Rear Panel

The following figures show the rear panels of the Switch.

Figure 22 Rear Panel: GS1900-8

Figure 23 Rear Panel: GS1900-8HP

Revision A1

Revision B1

Figure 24 Rear Panel: GS1900-10HP

Figure 26 Rear Panel: GS1900-24E

Figure 27 Rear Panel: GS1900-24

Figure 28 Rear Panel: GS1900-24HP

Figure 29 Rear Panel: GS1900-48**Figure 30** Rear Panel: GS1900-48HP

3.2.1 Power Connection

Make sure you are using the correct power source and that no objects obstruct the airflow of the fans.

The Switch uses two power supply modules, one of which is redundant, so if one power module fails the system can operate on the remaining module.

Rear Panel Power Connection

Connect one end of the supplied power cord or power adaptor to the power receptacle on the back of the Switch and the other end to the appropriate power source.

For Switches with a power switch (see [Table 1 on page 15](#)), use the POWER ON/ OFF switch to have the Switch power on or off.

Connecting the Power

Use the following procedures to connect the Switch to a power source after you have installed it in a rack.

Note: Use the included power cord for the AC power connection.

- 1 Connect the female end of the power cord to the AC power socket.
- 2 Connect the other end of the cord to a power outlet.

Disconnecting the Power

The power input connectors can be disconnected from the power source individually.

- 1 Disconnect the power cord from the power outlet.
- 2 Disconnect the power cord from the AC power socket.

3.3 LEDs

After you connect the power to the Switch, view the LEDs to ensure proper functioning of the Switch and as an aid in troubleshooting.

Table 3 LED Descriptions

LED	COLOR	STATUS	DESCRIPTION
PWR	Green	On	The system is turned on.
		Off	The system is off or has failed.
SYS	Green	On	The system is on and functioning properly.
		Blinking	The system is rebooting and performing self-diagnostic tests.
		Off	The power is off or the system is not ready/malfunctioning.
Ethernet Ports			
LNK/ACT	Green	Blinking	The system is transmitting/receiving to/from a 100/1000 Mbps Ethernet network.
		On	The link to a 100/1000 Mbps Ethernet network is up.
		Off	The link to an Ethernet network is down.
PoE (see Section 1.1 on page 15)	Green	On	Power is supplied to all PoE Ethernet ports.
		Off	There is no power supply.
1G SFP Slots (Fiber Ports - see Section 1.1 on page 15)			
LNK/ACT	Green	Blinking	The system is transmitting/receiving to/from a 100/1000 Mbps Fiber network.
		On	The link to a 100/1000 Mbps Fiber network is up.
		Off	The link to a Fiber network is down.

Table 4 LED Descriptions (GS1900-8HP (Revision B1) and GS1900-10HP Only)

LED	COLOR	STATUS	DESCRIPTION
PWR	Green	On	The system is turned on.
		Off	The system is off or has failed.
SYS	Green	On	The system is on and functioning properly.
		Blinking	The system is rebooting.
	Red	On	There is a system error.
PoE 10/100/1000Base-T Ports (1-8), 2 LEDs per port 			
Right	Amber	On	The port is in PoE AF mode. That is, the Switch is following the IEEE 802.3af standard to supply power to this port.
	Green	On	The port is in PoE AT mode. That is, the Switch is following the IEEE 802.3at standard to supply power to this port.
		Off	Power is not supplied to this port.

Table 4 LED Descriptions (continued) (GS1900-8HP (Revision B1) and GS1900-10HP Only)

LED	COLOR	STATUS	DESCRIPTION
Left	Amber	On	The link to a 10/100 Mbps Ethernet network is up.
		Blinking	The system is transmitting/receiving to/from a 100/1000 Mbps Fiber network.
	Green	On	The link to a 1 Gbps Ethernet network is up.
		Blinking	The system is transmitting/receiving to/from 1 Gbps Mbps Ethernet network.

Table 5 LED Descriptions for SFP Port (GS1100-10HP and GS1900-10HP Only)

LED	COLOR	STATUS	DESCRIPTION
Two arrow LEDs for 1G SFP Slots (Fiber Ports)			
			
right/left arrows	Amber	On	The link to a 100 Mbps Fiber network is up.
		Blinking	The system is transmitting/receiving to/from a 100 Mbps Fiber network.
	Green	On	The link to a 1 Gbps Fiber network is up.
		Blinking	The system is transmitting/receiving to/from 1 Gbps Mbps Fiber network.

ZON Utility

This chapter describes the screens for ZON Utility.

4.1 ZyXEL One Network (ZON) Utility Screen

ZON Utility is a program designed to help you deploy and manage a network more efficiently. It detects devices automatically and allows you to do basic settings on devices in the network without having to be near it.

The ZON Utility issues requests via ZyXEL Discovery Protocol (ZDP) and in response to the query, the device responds back with basic information including IP address, firmware version, location, system and model name in the same broadcast domain. The information is then displayed in the ZON Utility screen and you can perform tasks like basic configuration of the devices and batch firmware upgrade in it. You can download the ZON Utility at www.zyxel.com and install it on a PC.

The following figure shows the ZON Utility screen.

Figure 31 ZON Utility Screen

The Web Configurator

5.1 Overview

The Switch Web Configurator allows easy management using an Internet browser.

In order to use the Web Configurator, you must:

- Use Internet Explorer 7.0 and later or Firefox 1.5 and later
- Allow pop-up windows
- Enable JavaScript (enabled by default)
- Enable Java permissions (enabled by default)
- Enable cookies

The recommended screen resolution is 1024 x 768 pixels and higher.

5.2 Access

- 1 Make sure your Switch hardware is properly connected. See the Quick Start Guide.
- 2 Browse to <https://192.168.1.1>. The Login screen appears.

Figure 32 The Login Screen

The image shows a web browser window displaying the login screen for a GS1900 switch. The background is a light blue gradient. At the top, the text "Enter User Name/Password to login GS1900." is displayed in a bold, black font. Below this text, there are two input fields: "User Name:" and "Password:". Each label is followed by a white rectangular input box. At the bottom of the form, there are two buttons: "Login" and "Reset", both with a light gray background and black text.

- 3 Enter the user name (default: "admin") and password (default: "1234").
- 4 Click Login. If you logged in using the default user name and password, getting start appears. The Getting Start screen appears every time you log in using the default user name and default password.

5.3 Navigating the Web Configurator

The following summarizes how to navigate the web configurator from the Getting Start screen. This guide uses the GS1900-10HP screens as an example. The screens may vary slightly for different models.

Figure 33 The Web Configurator's Main Screen

The Web Configurator's main screen is divided into these parts:

- A - Title Bar
- B - Navigation Panel
- C - Main Window

5.3.1 Title Bar

The title bar provides some useful links that always appear over the screens below, regardless of how deep into the Web Configurator you navigate.

Figure 34 Title Bar

The icons provide the following functions.

Table 6 Title Bar: Web Configurator Icons

LABEL	DESCRIPTION
Logout	Click this to log out of the Web Configurator.
OK	Click OK to apply the changes.
Cancel	Click Cancel to discard the changes.
Save	Click this to apply your changes to the Switch's run-time memory. The Switch loses these changes if it is turned off or loses power, so use the Save link on the top navigation panel to save your changes to the non-volatile memory when you are done configuring.
About	Click this to display basic information about the Switch.
Help	Click this to open the help page for the current screen.

Click Logout in a screen to exit the web configurator. You have to log in with your password again after you log out. This is recommended after you finish a management session for security reasons.

Click OK and confirm at the pop-up screen to complete the task. Click Cancel and confirm at the pop-up screen to discard the changes.

Figure 17 Web Configurator: Logout Screen

5.3.2 Navigation Panel

Use the menu items on the navigation panel to open screens to configure Switch features. The following sections introduce the Switch's navigation panel menus and their screens.

Figure 35 Navigation Panel

Getting Start

Getting Start displays general device information, system status, system resource usage, and interface status.

For details on Getting Start features, see [Chapter 6 on page 41](#).

Monitor Menu

The monitor menu screens display status and statistics information.

Table 7 Monitor Menu Screens Summary

FOLDER OR LINK	TAB	FUNCTION
System		This link takes you to a screen where you can see general identification information for the Switch.
IP	IPv4	This link takes you to a screen where you can see an IPv4 interface and the IPv4 settings on the Switch.
	IPv6	This link takes you to a screen where you can see an IPv6 interface and the IPv6 settings on the Switch.
Information		This link takes you to a screen that displays general system information: system name, system location, and system contact.
Port		This link takes you to screens where you can see speed, flow control and priority settings for individual Switch ports.
Port	Status	Displays status settings for individual Switch ports.
	Port Counters	Displays interface, port 1 interface mib counters, port 1 etherlike mib counters, port 1 RMON mib counters settings for individual Switch ports.
	Bandwidth Utilization	Displays port bandwidth utilization settings for individual Switch ports.
PoE		Displays PoE status.
Bandwidth Management	Bandwidth Control	Displays egress global burst and port rate for individual Switch ports.
Storm Control		This link takes you to a screen that displays broadcast filters.
VLAN		This link takes you to screens where you can see port-based or 802.1Q VLAN (depending on what you configured in the Switch Setup menu). You can also see a protocol based VLAN or a subnet based VLAN in these screens.
VLAN	VLAN	Displays VLAN settings.
	Port	Displays port settings.
	VLAN Port	Displays VLAN port settings.
Guest VLAN		Displays global and port settings.
Voice VLAN		Displays global and port settings.
MAC Table		This link takes you to a screen where you can view the MAC address and VLAN ID of a device attach to a port. You can also view what kind of MAC address it is.
Link Aggregation	LAG	This link takes you to screen where you can view aggregate physical links to form one logical, higher-bandwidth link.
Loop Guard		This link takes you to a screen where you can view protection against network loops that occur on the edge of your network.
Multicast		This link takes you to screen where you can view various multicast features, IGMP snooping and create multicast VLANs.
IGMP	VLAN	Displays VLAN settings.
	Statistics	Displays statistics settings.
	Group	Displays group settings.
	Router	Displays router settings.
Spanning Tree		This link takes you to screens where you can view CIST, MST, STP preventing network loops.

Table 7 Monitor Menu Screens Summary (continued)

FOLDER OR LINK	TAB	FUNCTION
	CIST	Displays CIST instance status.
	CIST Port	Displays CIST port status.
	MST	Displays MST instance status.
	MST Port	Displays MST port status.
	STP Statistics	Displays STP statistics.
LLDP		Displays statistics, remote information, and overloading.
	Statistics	Displays LLDP global and port statistics.
	Remote Information	Displays remote device information.
	Overloading	Displays port overloading information.
Security		Displays port security and 802.1X settings.
Port Security		Displays global and port settings.
802.1X	Port	Displays 802.1X port settings.
	Authenticated Hosts	Displays authenticated hosts table.
Management		Displays syslog and error disable.
Syslog		Displays logging filter select and show system log.
Error Disable		Displays global and port settings.

Configuration Menu

Use the configuration menu screens to configure the Switch's features.

Table 8 Configuration Menu Screens Summary

FOLDER OR LINK	TAB	FUNCTION
System		This link takes you to a screen where you can configure general identification information and time settings for the Switch.
IP	IPv4	This link takes you to a screen where you can enable an IPv4 interface and configure the IPv4 settings on the Switch.
	IPv6	This link takes you to a screen where you can enable an IPv6 interface and configure the IPv6 settings on the Switch.
Time	System Time	Configure time of system.
	SNTP Server	Configure SNTP server settings.
Information	System Information	This link takes you to a screen that configures general system information: system name, system location, and system contact.
Port		This link takes you to screens where you can configure speed, flow control and priority settings for individual Switch ports.
Port		Configure port settings for individual Switch ports.
EEE		Configure EEE settings for individual Switch ports.
PoE	Global	This link takes you to a screen where you can configure the global settings for the Switch to supply power over Ethernet (PoE).
	Port	This link takes you to a screen where you can configure port PoE settings.
Bandwidth Management	Bandwidth Control	Configure egress global burst and port rate.
Storm Control	Port	Configure port settings.

Table 8 Configuration Menu Screens Summary (continued)

FOLDER OR LINK	TAB	FUNCTION
VLAN		This link takes you to screens where you can configure VLAN, guest VLAN, and voice VLAN settings.
VLAN	VLAN	Configure VLAN settings.
	Port	Configure port settings.
	VLAN Port	Configure VLAN port settings.
Guest VLAN	Global	Configure global settings.
	Port	Configure port settings.
Voice VLAN	Global	Configure global settings.
	OUI	Configure OUI settings.
	Port	Configure port settings.
MAC Table		This link takes you to a screen where you can configure the MAC address and VLAN ID of a device attach to a port. You can also configure what kind of MAC address it is.
	Static MAC	This link takes you to screens where you can configure static MAC addresses for a port. These static MAC addresses do not age out.
	Filtering MAC	This link takes you to a screen to set up filtering rules.
	Dynamic Age	Configure dynamic learned and MAC address information.
Link Aggregation		This link takes you to screen where you can logically aggregate physical links to form one logical, higher-bandwidth link.
	Global	Configure global settings.
	LAG Management	Configure LAG management settings.
	LAG Port	Configure LAG port settings.
	LACP Port	Configure LACP port settings.
Loop Guard		This link takes you to a screen where you can configure protection against network loops that occur on the edge of your network.
	Global	Configure global settings.
	Port	Configure port settings.
Mirror		This link takes you to screens where you can copy traffic from one port or ports to another port. Thus, allowing you to examine the traffic from the first port without interference.
Multicast		This link takes you to screen where you can configure various multicast features, IGMP snooping and create multicast VLANs.
IGMP	Global	Configure global settings.
	VLAN	Configure Vlan settings.
	Router Port	Configure router port settings.
	Profile	Configure profile settings.
	Throttling	Configure throttling settings.
Spanning Tree		This link takes you to screens where you can configure the RSTP/ MRSTP/MSTP to prevent network loops.
	Global	Configure global settings.
	STP Port	Configure STP port settings.
	CIST	Configure CIST settings.
	CIST Port	Configure CIST port settings.
	MST	Configure MST settings.

Table 8 Configuration Menu Screens Summary (continued)

FOLDER OR LINK	TAB	FUNCTION
	MST Port	Configure MST port settings.
LLDP		Configure global, port, local information, MED network policy, and MED port settings.
	Global	Configure global settings.
	Port	Configure port settings.
	Local Information	Configure local information settings.
	MED Network Policy	Configure MED network policy settings.
	MED Port	Configure MED port settings.
QoS		Configure general and trust mode settings.
General	Port	Configure port settings.
	Queue	This link takes you to a screen where you can configure queuing with associated queue weights for each port.
	CoS Mapping	Configure CoS mapping settings.
	DSCP Mapping	Configure DSCP mapping settings.
	IP Precedence Mapping	Configure IP precedence mapping settings.
Trust Mode	Global	Configure global settings.
	Port	Configure port settings.
Security		Configure port security, protected port, 802.1X and DoS settings.
Port Security	Global	Configure global settings.
	Port	Configure port settings.
Protected Port		Configure protected port settings.
802.1X	Global	Configure global settings.
	Port	Configure port settings.
DoS	Global	Configure global settings.
	Port	Configure port settings.
AAA		This link takes you to a screen where you can view authentication, authorization and accounting services via external servers. The external servers can be either RADIUS (Remote Authentication Dial-In User Service) or TACACS+ (Terminal Access Controller Access-Control System Plus).
Auth Method		Configure auth method settings.
RADIUS		Configure RADIUS settings.
TACACS+		Configure TACACS+ settings.
Management		Configure syslog, SNMP, error disable, HTTP/HTTPS, users and remote access control.
Syslog	Global	Configure global settings.
	Local	Configure local settings.
	Remote	Configure remote settings.
SNMP	Global	Configure global settings.
	Community	Configure community settings.
	Group	Configure group settings.
	User	Configure users settings.

Table 8 Configuration Menu Screens Summary (continued)

FOLDER OR LINK	TAB	FUNCTION
	Trap	Configure trap settings.
	Trap Destination	Configure trap destination settings.
Error Disable		This link takes you to a screen where you can configure CPU protection and error disable recovery.
HTTP/HTTPS	HTTP	Configure HTTP settings.
	HTTPS	Configure HTTPS settings.
Users		Configure users settings.
Remote Access Control		This link takes you to a screen where you can configure global and profile settings.

Maintenance Menu

Use the maintenance menu screens to manage configuration and firmware files, run diagnostics, and reboot or shut down the Switch.

Table 9 Maintenance Menu Screens Summary

FOLDER OR LINK	TAB	FUNCTION
Firmware	Upload	Manage upload settings.
	Management	Manage dual image and images information.
Configuration	Backup	Manage backup configuration.
	Restore	Manage restore configuration.
	Management	Manage configuration settings.
	Factory Default	Restore factory defaults.
Diagnostics		This link takes you to screens where you can view system logs and can test port(s).
Port Test	Cable Diag	Manage cable diag and test results.
PING	IPv4	Manage ping test settings.
	IPv6	Manage IPv6 ping test settings.
Trace	Trace Route	Manage trace route settings.
Reboot		Reset the system.

Getting Start

6.1 Overview

Use the Getting Start screens to check status information about the Switch.

6.1.1 What You Can Do in this Chapter

- The main Getting Start screen (Section 6.2 on page 41) displays the Switch's general device information, system status, system resource usage, and interface status. You can also display other status screens for more information.

6.2 Getting Start

This screen is the first thing you see when you log into the Switch. It also appears every time you click the Getting Start icon in the navigation panel. The Getting Start displays general device information, system status, system resource usage, and interface status in widgets.

Figure 36 Getting Start

The following table describes the labels in this screen.

Table 10 Getting Start

LABEL	DESCRIPTION
Refresh Interval (A)	Use the drop-box to select: None, 5 seconds, 10 seconds, 15 seconds, 20 seconds, 25 seconds, or 30 seconds.
Virtual Device	Displays an image of the Switch.
Wizard	Displays the following links: Start up, VLAN, QoS, and link aggregation.

Table 10 Getting Start (continued)

LABEL	DESCRIPTION
Device Information	
System Name	This field displays the name used to identify the Switch on any network.
Model Name	This field displays the model name of this Switch.
Revision	This field displays the hardware revision number of this Switch.
Serial Number	This field displays the serial number of this Switch.
MAC Address Range	This field displays the MAC addresses used by the Switch. Each physical port or wireless radio has one MAC address. The first MAC address is assigned to the Ethernet LAN port, the second MAC address is assigned to the first radio, and so on.
Firmware Version	This field displays the version number and date of the firmware the Switch is currently running.
System Up Time	This field displays how long the Switch has been running since it last restarted or was turned on.
Current Date/Time	This field displays the current date and time in the Switch. The format is hh:mm:ss yyyy-mm-dd .
CPU Usage	This field displays the Switch's recent CPU usage.
Memory Usage	This field displays the Switch's recent memory usage.

6.2.1 Wizard

Wizard displays start up, VLAN, QoS, and link aggregation.

For details on Wizard features, see system [Chapter 7 on page 52](#), VLAN [Chapter 9 on page 62](#), QoS [Chapter 28 on page 172](#), and link aggregation [Chapter 11 on page 70](#).

Start up

In start up, you can set up IP/DNS, set up your username/password, and view finished results.

In order to set up your IP/DNS, please do the following. Click Getting Start > Start up > 1 Step 1 Set up IP to access this screen.

Figure 37 Getting Start > Start up > 1 Step 1 Set up IP

1 Step 1

PART II

Technical Reference

Monitor: System

7.1 Overview

This section provides information for System in Monitor. Use the System screens to view general Switch settings.

7.1.1 What You Can Do in this Chapter

- The IP screen ([Section 7.2 on page 52](#)) displays IPv4 and IPv6.
- The Information screen ([Section 7.3 on page 54](#)) displays the system information.

7.2 IP

The Switch needs an IP address for it to be managed over the network. The factory default IP address is 192.168.1.1. The subnet mask specifies the network number portion of an IP address. The factory default subnet mask is 255.255.255.0.

7.2.1 IPv4

Use this screen to view the Switch's IPv4 information. Click Monitor > System > IP > IPv4 to open this screen.

Figure 47 Monitor > System > IP > IPv4

IPv4 IPv6	
IPv4 Information	
DHCP State	Disable
IP Address	192.168.1.1
Subnet Mask	255.255.255.0
Gateway	0.0.0.0
DNS Server 1	0.0.0.0
DNS Server 2	0.0.0.0
Management VLAN	1

The following table describes the labels in this screen.

Table 21 Monitor > System > IP > IPv4

LABEL	DESCRIPTION
DHCP State	This field displays the state of Dynamic Host Configuration Protocol RFC 2131 and RFC 2132 (DHCP).
IP Address	This field displays IP address of the Switch in the IP domain.
Subnet Mask	This field displays the subnet mask of the Switch in the IP domain.
Gateway	This field displays the IP address of the default outgoing gateway in dotted decimal notation, for example 192.168.1.254.
DNS Server 1	DNS (Domain Name System) is for mapping a domain name to its corresponding IP address and vice versa. This field displays a domain name server IP address, enabling the use of a domain.
DNS Server 2	DNS (Domain Name System) is for mapping a domain name to its corresponding IP address and vice versa. This field displays a domain name server IP address, enabling the use of a domain.
Management VLAN	This field displays the management VLAN.

7.2.2 IPv6

Use this screen to view the Switch's IPv6 information. Click Monitor > System > IP > IPv6 to open this screen.

Figure 48 Monitor > System > IP > IPv6

IPv4	IPv6
IPv6 Information	
Auto Configuration	Enable
IPv6 Address	2001:db8:0:1::254 / 128 2002:b022:22:2002:2e0:4cff:fe00:0 / 64 fe80::2e0:4cff:fe00:0 / 64
IPv6 Gateway	fe80::20c:29ff:fee7:f32e
DHCPv6 Client	Enable
DHCPv6 DUID	00:01:00:01:00:00:56:a0:00:e0:4c:00:00:00
DHCPv6 DNS Server 1	fec0:0:0:1::1
DHCPv6 DNS Server 2	2001::ff

The following table describes the labels in this screen.

Table 22 Monitor > System > IP > IPv6

LABEL	DESCRIPTION
Auto Configuration	This field displays auto configuration.
IPv6 Address	This field displays IP address of the Switch in the IP domain.
IPv6 Gateway	This field displays the IP address of the default outgoing gateway.
DHCPv6 Client	This field displays the Switch's DHCP settings when it is acting as a DHCPv6 client.

Table 22 Monitor > System > IP > IPv6 (continued)

LABEL	DESCRIPTION
DHCPv6 DUID	DUID(DHCP Unique Identifier). The DHCP server will provide the IP address based on the DUID information from client.
DHCPv6 DNS server 1	Primary DNS server IPv6 address form DHCP.
DHCPv6 DNS server 2	Secondary DNS server IPv6 address from DHCP.

7.3 Information

In the navigation panel, click Monitor > System > Information > System Information to display the screen as shown. You can view system information.

Figure 49 Monitor > System > Information > System Information

System Information	
System Information	
System Name	GS1900
System Location	Location
System Contact	Contact

The following table describes the labels in this screen.

Table 23 Monitor > System > Information > System Information

LABEL	DESCRIPTION
System Name	This field displays the descriptive name of the Switch for identification purposes.
System Location	This field displays the geographic location of the Switch for identification purposes.
System Contact	This field displays the person in charge of the Switch for identification purposes.

Monitor: Port

8.1 Overview

This section provides information for Port in Monitor. Use the Port screens to view general Switch port settings.

8.1.1 What You Can Do in this Chapter

- The Port screen ([Section 8.2 on page 55](#)) displays status, port counters, and bandwidth utilization.
- The PoE screen ([Section 8.3 on page 59](#)) displays PoE.
- The Bandwidth Management screen ([Section 8.4 on page 60](#)) displays bandwidth control.
- The Storm Control screen ([Section 8.5 on page 61](#)) displays port settings of the Switch.

8.2 Port

Use this screen to view Switch port settings.

8.2.1 Status

Use this screen to view the Switch's port statistics. Click Monitor > Port > Port > Status to access this screen.

Figure 50 Monitor > Port > Port > Status

Figure 33 Monitor > Port > Port > Status

Status	Port Counters	Bandwidth Utilization
--------	---------------	-----------------------

Status

Port	Port Name	State	Link Status	Speed	Duplex	FlowCtrl Status	Type
1		Enable	Up	Auto-100M	Auto-full	Disable	Copper
2		Enable	Down	Auto	Auto	Disable	Copper
3		Enable	Down	Auto	Auto	Disable	Copper
4		Enable	Down	Auto	Auto	Disable	Copper
5		Enable	Down	Auto	Auto	Disable	Copper
6		Enable	Down	Auto	Auto	Disable	Copper
7		Enable	Down	Auto	Auto	Disable	Copper
8		Enable	Down	Auto	Auto	Disable	Copper

Each field is described in the following table.

Table 24 Monitor > Port > Port > Status

LABEL	DESCRIPTION
Port	This is the port index number.
Port Name	A descriptive name that identifies this port.

Table 24 Monitor > Port > Port > Status (continued)

LABEL	DESCRIPTION
State	This is port admin setting state.
Link Status	This field displays Up, Down or NotPresent. It displays Up when the port is linked up or Down when it is not. When no any physical port is binding with this group, it displays NotPresent.
Speed	View the speed of the Ethernet connection on this port.
Duplex	View the duplex mode of the Ethernet connection on this port.
FlowCtrl Status	A concentration of traffic on a port decreases port bandwidth and overflows buffer memory causing packet discards and frame losses. Flow Control is used to regulate transmission of signals to match the bandwidth of the receiving port.
Type	View the type on this port.

8.2.2 Port Counters

Use this screen to view the Switch's port counters settings. Click Monitor > Port > Port > Port Counters to access this screen.

Figure 51 Monitor > Port > Port > Port Counters

Port 1 Interface with Counters	Port 1 Ethernet with Counters	Port 1 802.3 with Counters
#RxPkts: 24638711	ethStatsAlignmentErrors: 0	etherStatsDropEvents: 0

8.2.3 Bandwidth Utilization

Utilization is the percentage of a network's bandwidth that is currently being consumed by network traffic. Each vertical bar represents the highest utilization on a port, and can be either transmitted (Tx) traffic or received (Rx) traffic during the last time interval in seconds.

Use this screen to view the Switch's bandwidth utilization settings. Click Monitor > Port > Port > Bandwidth Utilization to access this screen.

Figure 52 Monitor > Port > Port > Bandwidth Utilization

Each field is described in the following table.

Table 26 Monitor > Port > Port > Bandwidth Utilization

LABEL	DESCRIPTION
Port Bandwidth Utilization	
1Gbps	This field displays the 1Gbps.
100Mbps	This field displays the 100Mbps.
10Mbps	This field displays the 10Mbps.
Link down	This field displays the link down.
Refresh period	This field displays the refresh period.
IFG	This field displays the IFG.
Tx	Transmitted (Tx) traffic during the last time interval in seconds.
Rx	Received (Rx) traffic during the time interval in seconds.

8.3 PoE

Note: The PoE function and the following screens are available for models ending in “HP” only.

The Switch supports both the IEEE 802.3af Power over Ethernet (PoE) and IEEE 802.3at High Power over Ethernet (PoE) standards. The Switch is Power Sourcing Equipment (PSE) because it provides a source of power via its Ethernet ports, and each device that receives power through an Ethernet port is a Powered Device (PD).

In the figure below, the IP camera and IP phone get their power directly from the Switch. Aside from minimizing the need for cables and wires, PoE removes the hassle of trying to find a nearby electric outlet to power up devices.

Figure 53 Powered Device Examples

You can also set priorities so that the Switch is able to reserve and allocate power to certain PDs.

Note: The PoE devices that supply or receive power and their connected Ethernet cables must all be completely indoors.

To view the current amount of power that PDs are receiving from the Switch, click Monitor > Port > PoE.

Figure 54 Monitor > Port > PoE

PoE				
PoE				
PoE Mode	Total Power(W)	Consuming Power(W)	Allocated Power(W)	Remaining Power(W)
Classification	70.0	0.0	0.0	70.0

Each field is described in the following table.

Table 27 Monitor > Port > PoE

LABEL	DESCRIPTION
PoE Mode	This field displays the power management mode used by the Switch, whether it is in Classification or Consumption mode.
Total Power(W)	This field displays the total power the Switch can provide to the connected PoE-enabled devices on the PoE ports. The total power of GS1900-10HP is 77W and GS1900-8HP is 70W.
Consuming Power(W)	This field displays the total amount of power the Switch is currently supplying to the connected PoE-enabled devices.

Table 27 Monitor > Port > PoE

LABEL	DESCRIPTION
Allocated Power(W)	This field displays the total amount of power the Switch has reserved for PoE after negotiating with the connected PoE device(s). Consuming Power (W) can be less than or equal but not more than the Allocated Power (W).
Remaining Power(W)	This field displays the amount of power the Switch can still provide for PoE. Note: The Switch must have at least 16 W of remaining power in order to supply power to a PoE device, even if the PoE device needs less than 16 W.

8.4 Bandwidth Management

This section shows you the maximum bandwidth using the Bandwidth Management screen. Bandwidth management shows the maximum allowable bandwidth for incoming and/or out-going traffic flows on a port.

8.4.1 Bandwidth Control

Use this screen to view the Switch's bandwidth control in egress global burst and port rate.

An egress port is an outgoing port, that is, a port through which a data packet leaves for both ports. An ingress port is an incoming port, that is, a port through which a data packet enters.

Click Monitor > Port > Bandwidth Management > Bandwidth Control to access this screen.

Figure 55 Monitor > Port > Bandwidth Management > Bandwidth Control

Bandwidth Control

Egress Global Burst

Egress Global Burst40000(Byte)

Port Rate

Port	Ingress RateLimit (Kbps)	Egress RateLimit (Kbps)

2	Disable	Disable
3	Disable	Disable
4	Disable	Disable
5	Disable	Disable
6	Disable	Disable
7	Disable	Disable
8	Disable	Disable

Each field is described in the following table.

Table 28 Monitor > Port > Bandwidth Management > Bandwidth Control

LABEL	DESCRIPTION
Egress Global Burst	
Egress Global Burst	This field specifies the current egress burst size in bytes all ports.
Port Rate	View the maximum bandwidth allowed in kilobits per second (Kbps) for the traffic flow on a port.
Port	This field displays the port number.

Table 28 Monitor > Port > Bandwidth Management > Bandwidth Control (continued)

LABEL	DESCRIPTION
Ingress RateLimit (Kbps)	View the maximum bandwidth allowed in kilobits per second (Kbps) for the incoming traffic flow on a port.
Egress RateLimit (Kbps)	View the maximum bandwidth allowed in kilobits per second (Kbps) for the out-going traffic flow on a port.

8.5 Storm Control

This section shows you the storm control feature.

Storm control limits the number of broadcast, multicast and unicast packets the Switch receives per second on the ports. When the maximum number of allowable broadcast, multicast and/or unicast packets is reached per second, the subsequent packets are discarded. Enabling this feature reduces broadcast, multicast and/or unicast packets in your network. You can specify limits for each packet type on each port.

Click Monitor > Port > Storm Control to access this screen.

Figure 56 Monitor > Port > Storm Control

Port	State	Broadcast (pps)	Unknown Multicast (pps)	Unknown Unicast (pps)	Action
1	Disable	Disable	Disable	Disable	Drop
2	Disable	Disable	Disable	Disable	Drop
3	Disable	Disable	Disable	Disable	Drop
4	Disable	Disable	Disable	Disable	Drop
5	Disable	Disable	Disable	Disable	Drop
6	Disable	Disable	Disable	Disable	Drop
7	Disable	Disable	Disable	Disable	Drop
8	Disable	Disable	Disable	Disable	Drop

Each field is described in the following table.

Table 29 Monitor > Port > Storm Control

LABEL	DESCRIPTION
Port	
Port	This field displays the port number.
State	This field displays the state.
Broadcast (pps)	Displays how many broadcast packets the port receives (in pps).
Unknown Multicast (pps)	Displays how many unknown multicast packets the port receives (in pps).
Unknown Unicast (pps)	Displays how many unknown unicast packets the port receives (in pps).
Action	Displays the action the device takes when a limit is reached. The following options are available: - Drop - drop the packet. - Shutdown - shutdown the connection.

Monitor: VLAN

9.1 Overview

This section provides information for VLAN in Monitor.

A VLAN (Virtual Local Area Network) allows a physical network to be partitioned into multiple logical networks. Devices on a logical network belong to one group. A device can belong to more than one group. With VLAN, a device cannot directly talk to or hear from devices that are not in the same group(s); the traffic must first go through a router.

In MTU (Multi-Tenant Unit) applications, VLAN is vital in providing isolation and security among the subscribers. When properly configured, VLAN prevents one subscriber from accessing the network resources of another on the same LAN, thus a user will not see the printers and hard disks of another user on the same network.

VLAN also increases network performance by limiting broadcasts to a smaller and more manageable logical broadcast domain. In traditional switched environments, all broadcast packets go to each and every individual port. With VLAN, all broadcasts are confined to a specific broadcast domain.

9.1.1 What You Can Do in this Chapter

- The VLAN screen ([Section 9.2 on page 62](#)) displays VLAN, port, and VLAN port settings.
- The Guest VLAN screen ([Section 9.3 on page 65](#)) displays the global and port settings of the Switch.
- The Voice VLAN screen ([Section 9.4 on page 66](#)) displays the global and port settings of the Switch.

9.2 VLAN

Use this screen to view Switch VLAN settings.

9.2.1 VLAN

Use this screen to view the Switch's VLAN settings. Click Monitor > VLAN > VLAN > VLAN to access this screen.

Figure 57 Monitor > VLAN > VLAN > VLAN

VLAN	Port	VLAN Port
VLAN

LAG5	1	ALL	Enable	Disable
LAG6	1	ALL	Enable	Disable
LAG7	1	ALL	Enable	Disable
LAG8	1	ALL	Enable	Disable

Each field is described in the following table.

Table 31 Monitor > VLAN > VLAN > Port

LABEL	DESCRIPTION
Port	
Port	This field displays the port number.
PVID	This is the port VLAN identification number. A PVID (Port VLAN ID) is a tag that adds to incoming untagged frames received on a port so that the frames are forwarded to the VLAN group that the tag defines.

Table 31 Monitor > VLAN > VLAN > Port (continued)

LABEL	DESCRIPTION
Accept Frame Type	This field displays the type that is accepted by the frame. Specifies the type of frames allowed on a port. Choices are All, Tag Only and Untag Only. All accepts all untagged or tagged frames on this port. This is the default setting. Tag Only accepts only tagged frames on this port. All untagged frames will be dropped. Untag Only accepts only untagged frames on this port. All tagged frames will be dropped.
Ingress Filter	If set, the Switch discards incoming frames for VLANs that do not have this port as a member.
VLAN Trunks	Enable VLAN Trunking on ports connected to other switches or routers (but not ports directly connected to end users) to allow frames belonging to unknown VLAN groups to pass through the Switch.

9.2.3 VLAN Port

Port-based VLANs are VLANs where the packet forwarding decision is based on the destination MAC address and its associated port. Port-based VLANs require allowed outgoing ports to be defined for each port. Therefore, if you wish to allow two subscriber ports to talk to each other, for example, between conference rooms in a hotel, you must define the egress (an egress port is an outgoing port, that is, a port through which a data packet leaves) for both ports. Port-based VLANs are specific only to the Switch on which they were created.

Use this screen to view the Switch's VLAN port settings. Click Monitor > VLAN > VLAN > VLAN Port to access this screen.

Figure 59 Monitor > VLAN > VLAN > VLAN Port

Table 32 Monitor > VLAN > VLAN > VLAN Port (continued)

LABEL	DESCRIPTION
Port	Displays the port index value.
Membership	Displays the status of the VLAN group: Forbidden, Excluded, Tagged or Untagged.

9.3 Guest VLAN

When 802.1x port authentication is enabled on the Switch and its ports, clients that do not have the correct credentials are blocked from using the port(s). You can configure your Switch to have one VLAN that acts as a guest VLAN. If you enable the guest VLAN (102 in the example) on a port (2 in the example), the user (A in the example) that is not IEEE 802.1x capable or fails to enter the correct username and password can still access the port, but traffic from the user is forwarded to the guest VLAN. That is, unauthenticated users can have access to limited network resources in the same guest VLAN, such as the Internet. The rights granted to the Guest VLAN depends on how the network administrator configures switches or routers with the guest network feature.

Figure 60 Guest VLAN Example

Use this screen to view the Switch's guest VLAN. Click Monitor > VLAN > Guest VLAN to access this screen.

Figure 61 Monitor > VLAN > Guest VLAN

State	This field displays the state of global guest VLAN.
Port	
Port	This field displays a port number.
State	This field displays the state of a port.
In Guest VLAN	This field displays the status of the port, is the port is in guest VLAN or not.

9.4 Voice VLAN

Voice VLANs are VLANs configured specially for voice traffic. By adding the ports connected with voice devices to voice VLANs, you can have voice traffic transmitted within voice VLANs and perform QoS-related configuration for voice traffic as required, thus ensuring the transmission priority of voice traffic and voice quality.

Use this screen to view Switch global and port voice VLAN settings for voice traffic. Click Monitor > VLAN > Voice VLAN to access this screen.

Monitor: MAC Table

10.1 Overview

This section provides information for MAC Table in Monitor.

The MAC Table screen (a MAC table is also known as a filtering database) shows how frames are forwarded or filtered across the Switch's ports. When a device (which may belong to a VLAN group) sends a packet which is forwarded to a port on the Switch, the MAC address of the device is shown on the Switch's MAC Table. It also shows whether the MAC address is dynamic (learned by the Switch) or static (manually entered in the Static MAC Forwarding screen).

The Switch uses the MAC Table to determine how to forward frames. See the following figure.

- 1 The Switch examines a received frame and learns the port from which this source MAC address came.
- 2 The Switch checks to see if the frame's destination MAC address matches a source MAC address already learned in the MAC Table.
 - If the Switch has already learned the port for this MAC address, then it forwards the frame to that port.
 - If the Switch has not already learned the port for this MAC address, then the frame is flooded to all ports. Too much port flooding leads to network congestion.
 - If the Switch has already learned the port for this MAC address, but the destination port is the same as the port it came in on, then it filters the frame.

Figure 63 MAC Table Flowchart

This link takes you to a screen where you can view the MAC address and VLAN ID of a device attached to a port. You can also view what kind of MAC address it is.

10.1.1 What You Can Do in this Chapter

- The MAC Table screen ([Section 10.2 on page 69](#)) displays view filter and MAC table of the Switch.

10.2 MAC Table

Use this screen to view filter static and MAC table settings. Click Monitor > MAC Table to access this screen.

Figure 64 Monitor > MAC Table

The screenshot shows the 'MAC Table' screen. At the top, there is a 'View Filter' section with three input fields: 'MAC Address' (with a placeholder '(00:00:00:00:00:00)'), 'VLAN' (a dropdown menu), and 'Port' (a dropdown menu). Below these fields are 'View' and 'Clear' buttons. The main section is titled 'MAC Table' and contains a table with three columns: 'MAC Address', 'VLAN', and 'Type'. The table has three rows of data. Below the table, there is a 'Total Entries:3' label.

MAC Address	VLAN	Type	Port
00:13:49:6A:E0:3B	default(1)	Dynamic	5
00:40:80:95:05:00	default(1)	Dynamic	5
FC:F5:28:4F:1C:20	default(1)	Static Unicast	CPU

Total Entries:3

Each field is described in the following table.

Table 35 Monitor > MAC Table

LABEL	DESCRIPTION
View filter	
MAC Address	This is the MAC address of the device from which this incoming frame came.
VLAN	Displays a type for the VLAN for identification purposes.
Port	This is the port from which the above MAC address was learned.
View	This link takes you to a screen where you can view the MAC address and VLAN ID of a device attach to a port. You can also view what kind of MAC address it is.
Clear	Click Clear to return the fields to the factory defaults.
MAC Table	
MAC Address	This is the MAC address of the device from which this incoming frame came.
VLAN	Displays a type for the VLAN for identification purposes.
Type	This shows whether the MAC address is dynamic (learned by the Switch) or static (manually entered in the Static MAC Forwarding screen).
Port	This is the port from which the above MAC address was learned.
Total Entries	Displays the number of total entries.

Monitor: Link Aggregation

11.1 Overview

This section provides information for Link Aggregation in Monitor.

Link aggregation (trunking) is the grouping of physical ports into one logical higher-capacity link. You may want to trunk ports if for example, it is cheaper to use multiple lower-speed links than to under-utilize a high-speed, but more costly, single-port link. However, the more ports you aggregate then the fewer available ports you have. A trunk group is one logical link containing multiple ports.

The Switch supports both static and dynamic link aggregation.

Note: In a properly planned network, it is recommended to implement static link aggregation only. This ensures increased network stability and control over the trunk groups on your Switch.

11.1.1 What You Can Do in this Chapter

- The Link Aggregation screen ([Section 11.2 on page 70](#)) displays link aggregation status.

11.2 Link Aggregation

Use the Link Aggregation screens to view Switch link aggregation status. Click Monitor > Link Aggregation > LAG to access this screen.

Figure 65 Monitor > Link Aggregation > LAG

LAG					
Status					
LAG	Name	Type	Link Status	Active Member	Standby Member
LAG1		---	Not Present	---	---
LAG2		---	Not Present	---	---
LAG3		---	Not Present	---	---
LAG4		---	Not Present	---	---
LAG5		---	Not Present	---	---
LAG6		---	Not Present	---	---
LAG7		---	Not Present	---	---
LAG8		---	Not Present	---	---

Each field is described in the following table.

Table 36 Monitor > Link Aggregation > LAG

LABEL	DESCRIPTION
LAG	Displays the link aggregation status index value.
Name	This field displays the name.
Type	This field displays the type.
Link Status	This field displays the status of the link. It displays Up when the port is linked up or Down when it is not. When no any physical port is binding with this group, it displays NotPresent.
Active Member	Displays if this member is an active member of a trunk.
Standby Member	Displays if this member is an standby member of a trunk.

Monitor: Loop Guard

12.1 Overview

This section provides information for Loop Guard in Monitor.

Loop guard is designed to handle loop problems on the edge of your network. This can occur when a port is connected to a Switch that is in a loop state. Loop state occurs as a result of human error. It happens when two ports on a switch are connected with the same cable. When a switch in loop state sends out broadcast messages the messages loop back to the switch and are re-broadcast again and again causing a broadcast storm.

If a switch (not in loop state) connects to a switch in loop state, then it will be affected by the switch in loop state in the following way:

- It will receive broadcast messages sent out from the switch in loop state.
- It will receive its own broadcast messages that it sends out as they loop back. It will then re-broadcast those messages again.

The following figure shows port N on switch A connected to switch B. Switch B is in loop state. When broadcast or multicast packets leave port N and reach switch B, they are sent back to port N on A as they are rebroadcast from B.

Figure 66 Switch in Loop State

The loop guard feature checks to see if a loop guard enabled port is connected to a switch in loop state. This is accomplished by periodically sending a probe packet and seeing if the packet returns on the same port. If this is the case, the Switch will shut down the port connected to the switch in loop state.

The following figure shows a loop guard enabled port N on switch A sending a probe packet P to switch B. Since switch B is in loop state, the probe packet P returns to port N on A. The Switch then shuts down port N to ensure that the rest of the network is not affected by the switch in loop state.

Figure 67 Loop Guard - Probe Packet

The Switch also shuts down port N if the probe packet returns to switch A on any other port. In other words loop guard also protects against standard network loops. The following figure illustrates three switches forming a loop. A sample path of the loop guard probe packet is also shown. In this example, the probe packet is sent from port N and returns on another port. As long as loop guard is enabled on port N. The Switch will shut down port N if it detects that the probe packet has returned to the Switch.

Figure 68 Loop Guard - Network Loop

12.1.1 What You Can Do in this Chapter

- The Loop Guard screen ([Section 12.2 on page 73](#)) displays loop guard status.

12.2 Loop Guard

Use the Loop Guard screen to view Switch loop guard status. Click Monitor > Loop Guard to access this screen.

Figure 69 Monitor > Loop Guard

Loop Guard			
Status			
Port	Status	Time Left (sec)	Action
1	No Loop	---	Recovery
2	No Loop	---	Recovery
3	No Loop	---	Recovery
4	No Loop	---	Recovery
5	No Loop	---	Recovery
6	No Loop	---	Recovery
7	No Loop	---	Recovery
8	No Loop	---	Recovery

Each field is described in the following table.

Table 37 Monitor > Loop Guard

LABEL	DESCRIPTION
Loop Guard Status	
Port	This field displays a port number.
Status	This field displays the status.
Time Left (sec)	This field displays the amount of time left in seconds.
Action	This field displays the action.

Monitor: Multicast

13.1 Overview

This section provides information for Multicast in Monitor.

Traditionally, IP packets are transmitted in one of either two ways - Unicast (1 sender to 1 recipient) or Broadcast (1 sender to everybody on the network). Multicast delivers IP packets to just a group of hosts on the network.

IGMP (Internet Group Management Protocol) is a network-layer protocol used to establish membership in an IPv4 multicast group - it is not used to carry user data. Refer to RFC 1112, RFC 2236 and RFC 3376 for information on IGMP versions 1, 2 and 3 respectively.

13.1.1 What You Can Do in this Chapter

- The IGMP screen ([Section 13.2 on page 75](#)) displays Vlan, statistics, group, and router.

13.2 IGMP

Use this screen to view Switch various multicast features.

13.2.1 Vlan

Use this screen to view the Switch's IGMP vlan. Click Monitor > Multicast > IGMP > Vlan to access this screen.

Figure 70 Monitor > Multicast > IGMP > Vlan

VLAN ID	Operate Status	Router Ports Auto Learn	Query			Last Member Query		Querier		
			Retry	Interval(sec)	Max. Response Interval(sec)	Count	Interval(sec)	Status	Version	IP
1	Disable	Enable	2	125	10	2	1	Non-Querier	---	---

Total Entries:1

Each field is described in the following table.

Table 38 Monitor > Multicast > IGMP > Vlan

LABEL	DESCRIPTION
VLAN ID	Displays the identification for the VLAN.
Operate Status	Displays the status of the operation.
Router Ports Auto Learn	Displays whether the router ports are auto learn or not.
Query	
Retry	Displays the number of retry.
Interval	Displays the number (in seconds) for the time interval.
Max. Reponse Interval(sec)	Displays the maximum reponse (in seconds) for the time interval.
Last Member Query	
Count	Displays the number of count.
Interval(sec)	Displays the in seconds for the time interval.
Querier	Allow sthe Switch to send IGMP General Query messages to the VLANs with the multicast hosts attached.
Status	This field displays the entry as querier or non-querier.
Version	This field displays the entry querier version.
IP	This field displays the the entry querier IP address.
Total Entries	This field displays the number of total entries.

13.2.2 Statistics

Use this screen to view the Switch's IGMP statistics. Click Monitor > Multicast > IGMP > Statistics to access this screen.

Figure 71 Monitor > Multicast > IGMP > Statistics

VLAN Statistics Group Router

LAG8	0	0	0	0	0	0	0	0	0	0	0	0	0	0			

Each field is described in the following table.

Table 39 Monitor > Multicast > IGMP > Statistics

LABEL	DESCRIPTION
Clear	Click Clear to reset the fields to the factory defaults.
Refresh	Click Refresh to reload the page.
Port	This field displays a port number.
Total RX	This field displays the total amount of RX.
Valid RX	This field displays the total amount of valid RX.
Invalid RX	This field displays the total amount of invalid RX.
Other RX	This field displays the total amount of other RX.
Leave RX	This field displays the total amount of leave RX.
Report RX	This field displays the total amount of report RX.
General Query RX	This field displays the total amount of general query RX.
Group-Spec Query RX	This field displays the total amount of group-spec query RX.
Source-Spec Query RX	This field displays the total amount of source-spec query RX.
Leave TX	This field displays the total amount of leave TX.
Report TX	This field displays the total amount of report TX.
General Query TX	This field displays the total amount of general query TX.
Group-Spec Query TX	This field displays the total amount of group-spec query TX.
Source-Spec Query TX	This field displays the total amount of source-spec query TX.
Action	Click Action to reset the statistics of the specific field back to zero .
OK	Click OK to apply the changes.
Cancel	Click Cancel to discard the changes.

In the Action column, the Action option allows you to clear the statistics.

Click OK and confirm at the pop-up screen to complete the task. Click Cancel and confirm at the pop-up screen to discard the changes.

Figure 72 Monitor > Multicast > IGMP > Statistics > Action

13.2.3 Group

Use this screen to view the Switch's IGMP group. Click Monitor > Multicast > IGMP > Group to access this screen.

Figure 73 Monitor > Multicast > IGMP > Group

Each field is described in the following table.

Table 40 Monitor > Multicast > IGMP > Group

LABEL	DESCRIPTION
Clear	Click Clear to delete the dynamic groups.
Refresh	Click Refresh to reload the page.
VLAN ID	Displays the identification for the VLAN.
Group IP Address	This field displays the group IP address.
Member Ports	This field displays the member ports.
Life(sec)	Displays life in seconds for the time interval.
Total Entries	This field displays the number of total entries.

13.2.4 Router

Use this screen to view the Switch's IGMP router. Click Monitor > Multicast > IGMP > Router to access this screen.

Figure 74 Monitor > Multicast > IGMP > Router

Each field is described in the following table.

Table 41 Monitor > Multicast > IGMP > Router

LABEL	DESCRIPTION
Refresh	Click Refresh to reload the page.
VLAN ID	Displays the identification for the VLAN.
Dynamic Router Ports	This field displays the dynamic router ports.
Static Router Ports	This field displays the static router ports.
Forbidden Router Ports	This field displays the forbidden router ports.
Total Entries	This field displays the number of total entries.

Monitor: Spanning Tree

14.1 Overview

This section provides information for Spanning Tree in Monitor.

The Switch supports Spanning Tree Protocol (STP), Common and Internal Spanning Tree (CIST), and Multiple Spanning Tree (MST).

14.1.1 What You Can Do in this Chapter

- The Spanning Tree screen ([Section 14.2 on page 79](#)) displays CIST, CIST port, MST, MST port, STP statistics.

14.2 Spanning Tree

Use this screen to view Switch spanning tree settings.

14.2.1 CIST

Use this screen to view the Switch's spanning tree CIST instance. Click Monitor > Spanning Tree > CIST to access this screen.

Figure 75 Monitor > Spanning Tree > CIST

CIST	CIST Port	MST	MST Port	STP Statistics
CIST Instance				
State	Disable			
Bridge Identifier	32768/ 0/00:E0:4C:00:00:00			
Designated Root Bridge	0/ 0/00:00:00:00:00:00			
External Root Path Cost	0			
Regional Root Bridge	0/ 0/00:00:00:00:00:00			
Internal Root Path Cost	0			
Designated Bridge	0/ 0/00:00:00:00:00:00			
Root Port	0/0			
Remaining Hops	0			
Last Topology Change	0			

Each field is described in the following table.

Table 42 Monitor > Spanning Tree > CIST

LABEL	DESCRIPTION
State	This field displays the state.
Bridge Identifier	This is the unique identifier for this bridge, consisting of the bridge priority plus the MAC address.
Designate Root Bridge	Root bridge refers to the base of the spanning tree.
External Root Path Cost	The cost of the path from this bridge to the cist Root Bridge.
Regional Root Bridge	Root bridge refers to the base of the spanning tree.
Internal Root Path Cost	The cost of the path from this bridge to the internal Regional Root Bridge.
Designated Bridge	For each LAN segment, a designated bridge is selected. This bridge has the lowest cost to the root among the bridges connected to the LAN.
Root Port	On each bridge, the bridge communicates with the root through the root port. The root port is the port on this Switch with the lowest path cost to the root (the root path cost). If there is no root port, then this Switch has been accepted as the root bridge of the spanning tree network.
Remaning Hops	This field displays the number of remaning hops.
Last Topology Change	Topology change information is directly propagated throughout the network from the device that generates the topology change.

14.2.2 CIST Port

Use this screen to view the Switch's spanning tree CIST port status. Click Monitor > Spanning Tree > CIST Port to access this screen.

Figure 76 Monitor > Spanning Tree > CIST Port

CIST Port Status													
Port	Identifier (Priority / Port Id)	External Path Cost Operation	Internal Path Cost Operation	Designated Root Bridge	External Root Cost	Regional Root Bridge	Internal Root Cost	Designated Bridge	Edge Port Operation	P2P MAC Operation	Port Role	Port State	
1	128 / 1	200000	200000	32768 / FC:F5:28:4F:1C:20	0	32768 / FC:F5:28:4F:1C:20	0	32768 / FC:F5:28:4F:1C:20	No	Yes	Designated	Forwarding

LAG3	128 / 11	20000	20000	0 / 00:00:00:00:00:00	0	0 / 00:00:00:00:00:00	0	0 / 00:00:00:00:00:00	No	No	Disabe	Disable	
LAG4	128 / 12	20000	20000	0 / 00:00:00:00:00:00	0	0 / 00:00:00:00:00:00	0	0 / 00:00:00:00:00:00	No	No	Disabe	Disable	
LAG5	128 / 13	20000	20000	0 / 00:00:00:00:00:00	0	0 / 00:00:00:00:00:00	0	0 / 00:00:00:00:00:00	No	No	Disabe	Disable	
LAG6	128 / 14	20000	20000	0 / 00:00:00:00:00:00	0	0 / 00:00:00:00:00:00	0	0 / 00:00:00:00:00:00	No	No	Disabe	Disable	
LAG7	128 / 15	20000	20000	0 / 00:00:00:00:00:00	0	0 / 00:00:00:00:00:00	0	0 / 00:00:00:00:00:00	No	No	Disabe	Disable	
LAG8	128 / 16	20000	20000	0 / 00:00:00:00:00:00	0	0 / 00:00:00:00:00:00	0	0 / 00:00:00:00:00:00	No	No	Disabe	Disable	

Each field is described in the following table.

Table 43 Monitor > Spanning Tree > CIST Port

LABEL	DESCRIPTION
Port	This field displays the port number.
Identifier (Priority / Port Id)	This field displays the identifier (in priority / port number).
External Path Cost Operation	Path cost is the cost of transmitting a frame on to a LAN through that port. It is recommended to assign this value according to the speed of the bridge. The slower the media, the higher the cost.
Internal Path Cost Operation	Path cost is the cost of transmitting a frame on to a LAN through that port. It is recommended to assign this value according to the speed of the bridge. The slower the media, the higher the cost.
Designated Root Bridge	Root bridge refers to the base of the spanning tree.
External Root Cost	This field displays the external root cost.
Regional Root Bridge	Root bridge refers to the base of the spanning tree.
Internal Root Cost	This field displays the internal root cost.
Designated Bridge	For each LAN segment, a designated bridge is selected. This bridge has the lowest cost to the root among the bridges connected to the LAN.
Edge Port Operation	An edge port changes its initial STP port state from blocking state to forwarding state immediately without going through listening and learning states right after the port is configured as an edge port or when its link status changes.
P2P MAC Operation	This field displays the state of the P2P MAC operation.
Port Role	This field displays the state of the port role.
Port State	This field displays the state of the port.

14.2.3 MST

Use this screen to view the Switch's spanning tree MST instance. Click Monitor > Spanning Tree > MST to access this screen.

Figure 77 Monitor > Spanning Tree > MST

The screenshot shows the 'MST Instance' configuration page. At the top, there is a navigation bar with tabs for 'CIST', 'CIST Port', 'MST' (which is the active tab), 'MST Port', and 'STP Statistics'. Below the tabs, the 'MST Instance' section contains a list of parameters and their current values:

- MST ID: 1 (selected from a dropdown menu)
- State: Disable
- Regional Root Bridge: ---f---
- Internal Root Cost: ---
- Designated Bridge: --f--
- Root Port: ---f---
- Remaining Hops: ---f---
- Last Topology Change: ---f---

Each field is described in the following table.

Table 44 Monitor > Spanning Tree > MST

LABEL	DESCRIPTION
MST ID	This is the unique identifier for this MST. Select a number from the drop-down menu to display results.
State	This field displays the state.
Regional Root Bridge	Root bridge refers to the base of the spanning tree.
Internal Root Cost	This field displays the internal root cost.
Designated Bridge	For each LAN segment, a designated bridge is selected. This bridge has the lowest cost to the root among the bridges connected to the LAN.
Root Port	On each bridge, the bridge communicates with the root through the root port. The root port is the port on this Switch with the lowest path cost to the root (the root path cost). If there is no root port, then this Switch has been accepted as the root bridge of the spanning tree network.
Remanining Hops	This field displays the number of remanining hops.
Last Topology Change	Topology change information is directly propagated throughout the network from the device that generates the topology change.

14.2.4 MST Port

Use this screen to view the Switch's spanning tree MST port status. Click Monitor > Spanning Tree > MST Port to access this screen.

Figure 78 Monitor > Spanning Tree > MST Port

Port	MST ID	Identifier (Priority / Port Id)	Internal Path Cost (Operation)	Regional Root Bridge	Internal Root Cost	Designated Bridge	Port Role	Port State
1	1	128/1	---	---	---	---	---	---
2	1	128/2	---	---	---	---	---	---
3	1	128/3	---	---	---	---	---	---
4	1	128/4	---	---	---	---	---	---
5	1	128/5	---	---	---	---	---	---

LAG5	1	128/13	---	---	---	---	---	---
LAG6	1	128/14	---	---	---	---	---	---
LAG7	1	128/15	---	---	---	---	---	---
LAG8	1	128/16	---	---	---	---	---	---

Each field is described in the following table.

Table 45 Monitor > Spanning Tree > MST Port

LABEL	DESCRIPTION
MST ID	This is the unique identifier for this MST. Select a number from the drop-down menu to display results.
Port	This field displays the port number.
MSTI ID	A VLAN can be mapped to a specific Multiple Spanning Tree Instance (MSTI). MSTI allows multiple VLANs to use the same spanning tree.

Table 45 Monitor > Spanning Tree > MST Port (continued)

LABEL	DESCRIPTION
Identifier (Priority / Port Id)	This field displays the identifier (in priority / port number).
Internal Path Cost(Operation)	Path cost is the cost of transmitting a frame on to a LAN through that port. It is recommended to assign this value according to the speed of the bridge. The slower the media, the higher the cost.
Regional Root Bridge	Root bridge refers to the base of the spanning tree.
Internal Root Cost	This field displays the internal root cost.
Designated Bridge	For each LAN segment, a designated bridge is selected. This bridge has the lowest cost to the root among the bridges connected to the LAN.
Port Role	This field displays the state of the port role.
Port State	This field displays the state of the port.

14.2.5 STP Statistics

(R)STP detects and breaks network loops and provides backup links between switches, bridges or routers. It allows a Switch to interact with other (R)STP-compliant switches in your network to ensure that only one path exists between any two stations on the network.

The Switch uses IEEE 802.1w RSTP (Rapid Spanning Tree Protocol) that allows faster convergence of the spanning tree than STP (while also being backwards compatible with STP-only aware bridges). In RSTP, topology change information is directly propagated throughout the network from the device that generates the topology change. In STP, a longer delay is required as the device that causes a topology change first notifies the root bridge and then the root bridge notifies the network. Both RSTP and STP flush unwanted learned addresses from the filtering database. In RSTP, the port states are Discarding, Learning, and Forwarding.

Note: In this user's guide, "STP" refers to both STP and RSTP.

Use this screen to view the Switch's spanning tree STP statistics. Click Monitor > Spanning Tree > STP Statistics to access this screen.

Monitor: LLDP

15.1 Overview

This section provides information for LLDP in Monitor.

Link Layer Discovery Protocol (LLDP), defined as IEEE 802.1ab, enables LAN devices that support LLDP to exchange their configured settings. This helps eliminate configuration mismatch issues.

15.1.1 What You Can Do in this Chapter

- The LLDP screen ([Section 15.2 on page 85](#)) displays statistics, remote information, and overloading.

15.2 LLDP

This link takes you to a screen where you can view LLDP on the Switch. LLDP allows a network device to advertise its identity and capabilities on the local network. It also allows the device to maintain and store information from adjacent devices which are directly connected to the network device.

15.2.1 Statistics

Use this screen to view the Switch's LLDP global and port statistics. Click Monitor > LLDP > Statistics to access this screen.

Monitor: Management

17.1 Overview

This section provides information for Management in Monitor.

This chapter describes how to view management settings on the Switch.

17.1.1 What You Can Do in this Chapter

- The Syslog screen ([Section 17.2 on page 91](#)) displays logging filter select and shows system log.
- The Error Disable screen ([Section 17.3 on page 92](#)) displays global and port.

17.2 Syslog

Use this screen to view Switch syslog management. Click Monitor > Management > Syslog to access this screen.

Configuration: System

18.1 Overview

This section provides information for System in Configuration.

18.1.1 What You Can Do in this Chapter

- The IP screen ([Section 18.2 on page 94](#)) displays IPv4 and IPv6 settings.
- The Time screen ([Section 18.3 on page 96](#)) displays the system time and SNTP settings.
- The Information screen ([Section 18.4 on page 97](#)) displays the system information.

18.2 IP

The Switch needs an IP address for it to be managed over the network. The factory default IP address is 192.168.1.1. The subnet mask specifies the network number portion of an IP address. The factory default subnet mask is 255.255.255.0.

18.2.1 The IPv4 Screen

Use this screen to view the IPv4 interface status and Switch's management IPv4 addresses. Click Configuration > System > IP > IPv4 to open this screen.

Figure 88 Configuration > System > IP > IPv4

The screenshot shows the 'IPv4 Address' configuration page. At the top, there are two tabs: 'IPv4' and 'IPv6'. Below the tabs, the title 'IPv4 Address' is displayed. The configuration options are as follows:

- Mode:** Two radio buttons are present: 'Static' (which is selected) and 'DHCP'.
- IP Address:** A text input field with a default value of '192.168.1.1'.
- Subnet Mask:** A text input field with a default value of '255.255.255.0'.
- Gateway:** A text input field with a default value of '192.168.1.254'.
- DNS 1:** A text input field with a default value of '192.168.1.1'.
- DNS 2:** A text input field with a default value of '192.168.1.1'.
- Management VLAN:** A text input field with the value '1' and a range indicator '(1 - 4094)' to its right.

At the bottom right of the form, there are two buttons: 'Apply' and 'Cancel'.

The following table describes the labels in this screen.

Table 55 Configuration > System > IP > IPv4

LABEL	DESCRIPTION
IPv4 Address	
Mode	Select Static to define the IPv4 network properties or DHCP to allow the device to define the properties.
IP Address	Enter the IP address of the Switch in the IP domain.
Subnet Mask	Enter the subnet mask of the Switch in the IP domain.
Gateway	Enter the IP address of the default outgoing gateway in dotted decimal notation, for example 192.168.1.254.
DNS Server 1	Enter the IP address for the primary domain name server. DNS (Domain Name System) is for mapping a domain name to its corresponding IP address and vice versa.
DNS Server 2	Enter the IP address for the secondary domain name server. DNS (Domain Name System) is for mapping a domain name to its corresponding IP address and vice versa.
Management VLAN	Enter the port number of the management VLAN.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

18.2.2 The IPv6 Screen

Use this screen to view the IPv6 interface status and Switch's management IPv6 addresses.

Click Configuration > System > IP > IPv6 to open this screen.

Figure 89 Configuration > System > IP > IPv6

The screenshot shows the IPv6 configuration interface. At the top, there are two tabs: 'IPv4' and 'IPv6', with 'IPv6' being the active tab. Below the tabs is a header 'IPv6 Address'. The main area contains two rows of radio buttons: 'DHCPv6 Client' with 'Enable' and 'Disable' options (where 'Disable' is selected), and 'Auto Configuration' with 'Enable' and 'Disable' options (where 'Enable' is selected). Below these are two text input fields: 'IPv6 Address' and 'Gateway'. At the bottom right, there are two buttons: 'Apply' and 'Cancel'.

The following table describes the labels in this screen.

Table 56 Configuration > System > IP > IPv6

LABEL	DESCRIPTION
IPv6 Address	
DHCPv6 Client	Select Enable to allow the device to act as a DHCPv6 client or Disable to disallow it. This field displays the Switch's DHCP settings when it is acting as a DHCPv6 client.
Auto Configuration	Select Enable to allow the device to auto-configure the IPv6 properties or Disable to manually enter the properties.

Table 56 Configuration > System > IP > IPv6 (continued)

LABEL	DESCRIPTION
IPv6 Address	Enter the IPv6 address of the Switch in the IP domain.
Gateway	Enter the IPv6 address of the default outgoing gateway.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

18.3 Time

The Time option is used to setup the system time and SNTP (Simple Network Time Protocol) server settings.

18.3.1 The System Time Screen

In the navigation panel, click Configuration > System > Time > System Time to display the screen as shown.

Figure 90 Configuration > System > Time > System Time

The following table describes the labels in this screen.

Table 57 Configuration > System > Time

LABEL	DESCRIPTION
System Time	
Enable SNTP	Select Enable to enable using a simple network time protocol (SNTP) server to manage the system time or Disable to manually manage system time.
Manual Time	Select the system date and time values from the dropdown lists.
Time Zone	Select the time zone from the dropdown list.
Daylight Saving Time	Select Enable to use Daylight Saving Time to offset the system time or Disable not adjust system time.

Table 57 Configuration > System > Time (continued)

LABEL	DESCRIPTION
Daylight Saving Time Offset	Enter the daylight saving time offset value in minutes.
Start Date	Select the start date of the daylight saving time period from the dropdown lists.
End Date	Select the end date of the daylight saving time period from the dropdown lists.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

18.3.2 The SNTP Server Screen

In the navigation panel, click Configuration > System > Time > SNTP Server to display the screen as shown.

Figure 91 Configuration > System > Time > SNTP Server

The following table describes the labels in this screen.

Table 58 Configuration > System > Time > SNTP Server

LABEL	DESCRIPTION
SNTP Server	
Server	Enter the address of the simple network time protocol (SNTP) server as an IP address (192.168.0.1) or as a URL (www.zyxel.com).
Server Port	Enter the port number of the SNTP server. The numeric value can be between 1 and 65535.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

18.4 Information

The information option is used to set the following system information properties: system name, system location, and system contact information.

18.4.1 The System Information Screen

In the navigation panel, click Configuration > System > System Information to display the screen as shown. You can set the system name, system location, and system contact.

Figure 92 Configuration > System > System Information

System Information

System Information

System Name GS1900

System Location Location

System Contact Contact

Apply Cancel

The following table describes the labels in this screen.

Table 59 Configuration > System > System Information

LABEL	DESCRIPTION
System Information	
System Name	Enter the descriptive name of the Switch for identification purposes.
System Location	Enter the geographic location of the Switch for identification purposes.
System Contact	Enter the person in charge of the Switch for identification purposes.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

Configuration: Port

19.1 Overview

This section provides information for Port in Configuration.

19.1.1 What You Can Do in this Chapter

- The Port screen ([Section 19.2 on page 99](#)) displays general port settings.
- The EEE screen ([Section 19.3 on page 101](#)) displays the port EEE settings.
- The PoE screen ([Section 19.4 on page 102](#)) displays the port PoE settings.
- The Bandwidth Management screen ([Section 19.5 on page 108](#)) displays the port ingress and egress settings.
- The Storm Control screen ([Section 19.6 on page 110](#)) displays the port storm control settings.

19.2 Port

Use this screen to view Switch port settings and select ports for configuration. Click Configuration > Port > Port > Port to open this screen.

Figure 93 Configuration > Port > Port > Port

Port							
Port							
	Edit						
☐	Port	Port Name	State	Link Status	Speed	Duplex	FlowCtrl State
☐	1		Enable	Up	Auto	Auto	Disable
☐	2		Enable	Down	Auto	Auto	Disable
☐	3		Enable	Down	Auto	Auto	Disable
☐	4		Enable	Down	Auto	Auto	Disable
☐	5		Enable	Down	Auto	Auto	Disable
☐	6		Enable	Down	Auto	Auto	Disable
☐	7		Enable	Down	Auto	Auto	Disable
☐	8		Enable	Down	Auto	Auto	Disable

The following table describes the labels in this screen.

Table 60 Configuration > Port > Port > Port

LABEL	DESCRIPTION
Port	
Edit	Select this check box to configure the properties of a port. Click the Edit button change the properties of the port.
Port	Displays the port index number.

Table 60 Configuration > Port > Port > Port (continued)

LABEL	DESCRIPTION
Port Name	Displays a descriptive name that identifies this port. The length of the name can be up to 32 alpha-numerical characters. Note: Due to space limitations, the port name may be truncated in some web configurator screens.
State	Displays the port status as enabled or disabled.
Link Status	Displays the link status as up or down.
Speed	Displays the speed of the Ethernet connection on this port. The choices are Auto, 10M, 100M, and 1000M.
Duplex	Displays the duplex mode of the Ethernet connection on this port. The choices are auto, full, or half.
FlowCtrl State	Displays the flow control state as enabled or disabled. A concentration of traffic on a port decreases port bandwidth and overflows buffer memory causing packet discards and frame losses. Flow Control is used to regulate transmission of signals to match the bandwidth of the receiving port.

19.2.1 The Port Edit Screen

Use this screen to configure Switch port settings. Click Configuration > Port > Port > Edit to open this screen.

Figure 94 Configuration > Port > Port > Edit

Port

Port List 1,3-4

Port Name

State ☒ Enable ☐ Disable

Speed ☒ Auto
☐ 10M
☐ 100M
☐ 1000M

Duplex ☒ Auto
☐ Full
☐ Half

Flow Control ☐ Enable ☒ Disable

Apply Cancel

The following table describes the labels in this screen.

Table 61 Configuration > Port > Port > Edit

LABEL	DESCRIPTION
Port Edit	
Port List	Displays the list of port index numbers that are being configured.
Port Name	Enter a descriptive name that identifies this port. The length of the name can be up to 32 alpha-numerical characters. Note: Due to space limitations, the port name may be truncated in some web configurator screens.
State	Select Enable to enable the ports or Disable to disable them.
Speed	Select the speed of the Ethernet connection on this port. The choices are Auto, 10M, 100M, and 1000M.
Duplex	Select the duplex mode of the Ethernet connection on this port. The choices are Auto, Full, or Half.
FlowCtrl State	Select Enable to allow the device to manage data flow or Disable to have no data flow management. A concentration of traffic on a port decreases port bandwidth and overflows buffer memory causing packet discards and frame losses. Flow Control is used to regulate transmission of signals to match the bandwidth of the receiving port.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

19.3 EEE

Use this screen to view Switch port Energy-Efficient Ethernet (EEE) settings and select ports for configuration. Click Configuration > Port > EEE > EEE to open this screen.

Figure 95 Configuration > Port > EEE > EEE

The screenshot shows the 'EEE' configuration page. At the top, there is a blue header with 'EEE' and a sub-header 'EEE'. Below this, there is a green '+ Edit' button. The main content is a table with three columns: a checkbox, 'Port', and 'State'. The table lists ports 1 through 8, all of which are currently set to 'Disable'.

☐	Port	State
☐	1	Disable
☐	2	Disable
☐	3	Disable
☐	4	Disable
☐	5	Disable
☐	6	Disable
☐	7	Disable
☐	8	Disable

The following table describes the labels in this screen.

Table 62 Configuration > Port > EEE > EEE

LABEL	DESCRIPTION
EEE	
Edit	Select this check box to configure the properties of a port. Click the Edit button change the properties of the port.
Port	Displays the port index number.
State	Displays the port status as enabled or disabled.

19.3.1 The EEE Edit Screen

Use this screen to configure Switch port EEE settings. Click Configuration > Port > EEE > EEE > Edit to open this screen.

Figure 96 Configuration > Port > EEE > EEE > Edit

The following table describes the labels in this screen.

Table 63 Configuration > Port > EEE > EEE > Edit

LABEL	DESCRIPTION
EEE	
Port List	Displays the list of port index numbers that are being configured.
State	Select Enable to designate the ports as EEE or Disable to not designate them as EEE.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

19.4 PoE

The Switch supports both the IEEE 802.3af Power over Ethernet (PoE) and IEEE 802.3at High Power over Ethernet (PoE) standards. The Switch is Power Sourcing Equipment (PSE) because it provides a source of power via its Ethernet ports, and each device that receives power through an Ethernet port is a Powered Device (PD).

19.4.1 The Global Screen

In the navigation panel, click Configuration > Port > PoE > Global to display the screen as shown. Use this screen to configure Power over Ethernet (PoE) global settings.

Figure 97 Configuration > Port > PoE > Global

The following table describes the labels in this screen.

Table 64 Configuration > Port > PoE > Global

LABEL	DESCRIPTION
PoE Mode	Select the power management mode you want the Switch to use. - Classification - Select this if you want the Switch to reserve the Max Power (mW) to each PD according to the priority level. If the total power supply runs out, PDs with lower priority do not get power to function. - Consumption - Select this if you want the Switch to manage the total power supply so that each connected PD gets a resource. However, the power allocated by the Switch may be less than the Max Power (mW) of the PD. PDs with higher priority also get more power than those with lower priority levels.
Pre-Allocate	This field is only available on GS1900-8HP (Revision B1) and GS1900-10HP only. Select Enable to have the Switch pre-allocate power to each port based on the classification of the PD device. Otherwise, select Disable.
Power Up Sequence Delay	This field is only available on GS1900-8HP (Revision B1) and GS1900-10HP only. Select Enable to allow PoE ports to be powered up one-by-one randomly or Disable to allow them all to be powered up at the same time.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

19.4.2 The Port Screen

Use this screen to view Switch port PoE settings and select ports for configuration. Click Configuration > Port > PoE > Port to open this screen.

Figure 98 Configuration > Port > PoE > Port

	7	Enable	class0	Low	802.3at	Disable	0	0	0.0
	8	Enable	class0	Low	802.3at	Disable	0	0	0.0

The following table describes the labels in this screen.

Table 65 Configuration > Port > PoE > Port

LABEL	DESCRIPTION
Edit	Select one or more ports in the first column of the table and click this to configure PoE settings for the ports.
Port	Displays the port index number.
State	Displays which ports can receive power from the Switch. You can set this in the Configuration > Port > PoE Edit screen. - Disable - The powered device (PD) connected to this port cannot get power. - Enable - The PD connected to this port can receive power.
Class	This shows the power classification of the PD. This is a number from 0 to 4, where each value represents a range of power (W) and current (mA) that the PD requires to function. The ranges are as follows. - Class 0 - Default, 0.44 to 12.94 - Class 1 - Optional, 0.44 to 3.84 - Class 2 - Optional, 3.84 to 6.49 - Class 3 - Optional, 6.49 to 12.95 - Class 4 - Reserved (PSEs classify as Class 0) in a switch that supports IEEE 802.3af only. Optional, 12.95 to 25.50 in a switch that supports IEEE 802.3at.
PD Priority	When the total power requested by the PDs exceeds the total PoE power budget on the Switch, you can set the PD priority to allow the Switch to provide power to ports with higher priority first. - Critical has the highest priority. - High has the Switch assign power to the port after all critical priority ports are served. - Medium has the Switch assign power to the port after all critical and high priority ports are served. - Low has the Switch assign power to the port after all critical, high and medium priority ports are served.

Table 65 Configuration > Port > PoE > Port (continued)

LABEL	DESCRIPTION
Power-Up	This shows how the Switch provides power to the connected PD at power-up. 802.3af - the Switch follows the IEEE 802.3af Power over Ethernet standard to supply power to the connected PDs during power-up. Legacy - the Switch can provide power to the connected PDs that require high inrush currents at power-up. Pre-802.3at - the Switch initially offers power on the port according to the IEEE 802.3af standard, and then switches to support the IEEE 802.3at standard within 75 milliseconds after a PD is connected to the port. Select this option if the Switch is performing 2-event Layer-1 classification (PoE+ hardware classification) or the connected PD is NOT performing Layer 2 power classification using Link Layer Discovery Protocol (LLDP). 802.3at - the Switch supports the IEEE 802.3at High Power over Ethernet standard and can supply power of up to 30W per Ethernet port. IEEE 802.3at is also known as PoE+ or PoE Plus. An IEEE 802.3at compatible device is referred to as Type 2. Power Class 4 (High Power) can only be used by Type 2 devices. If the connected PD requires a Class 4 current when it is turned on, it will be powered up in this mode.
Wide Range Detection	This field is available on GS1900-8HP (Revision B1) and GS1900-10HP only. This shows whether the Switch enables a wider detection range for the PD or not. The Switch detects whether a connected device is a powered device or not before supplying power to the port. For the PD detection, the Switch applies a fixed voltage to the device and then receives returned current. If the returned current is within the IEEE 802.3AF/AT standard range, the device will be considered as a valid PD by the Switch. However, in real cases, environmental interferences might easily cause the returned current out of the standard range. This field displays Enable if the Switch applies a wider range for PD detection. Otherwise, it displays Disable.
Consuming Power (mW)	Displays the current amount of power consumed by the PD from the Switch on this port.
Max Power (mW)	Displays the maximum amount of power the PD could use from the Switch on this port. The maximum power the Switch can supply to a port is 30W.
Max Current (mA)	Displays the maximum amount of current drawn by the PD from the Switch on this port.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

19.4.3 The PoE Edit Screen

Use this screen to configure Switch port PoE settings. Click Configuration > Port > PoE > Port > Edit to open this screen.

Figure 99 Configuration > Port > PoE > Port > Edit

The following table describes the labels in this screen.

Table 66 Configuration > Port > PoE > Port > Edit

LABEL	DESCRIPTION
Port	
Port List	Displays the list of port index numbers that are being configured.
PD State	Select Enable to provide power to a PD connected to the port or Disable so the port cannot receive power from the Switch.
PD Priority	This field is not available for the SFP or SFP+ ports. When the total power requested by the PDs exceeds the total PoE power budget on the Switch, you can set the PD priority to allow the Switch to provide power to ports with higher priority. Select Critical to give the PD connected to this port the highest priority. Select High to set the Switch to assign the remaining power to the port after all critical priority ports are served. Select Medium to set the Switch to assign the remaining power to the port after all critical and high priority ports are served. Select Low to set the Switch to assign the remaining power to the port after all critical, high and medium priority ports are served.
Power-Up	Set how the Switch provides power to a connected PD at power-up. 802.3af - the Switch follows the IEEE 802.3af Power over Ethernet standard to supply power to the connected PDs during power-up. Legacy - the Switch can provide power to the connected PDs that require high inrush currents at power-up. Pre-802.3at - the Switch initially offers power on the port according to the IEEE 802.3af standard, and then switches to support the IEEE 802.3at standard within 75 milliseconds after a PD is connected to the port. Select this option if the Switch is performing 2-event Layer-1 classification (PoE+ hardware classification) or the connected PD is NOT performing Layer 2 power classification using Link Layer Discovery Protocol (LLDP). 802.3at - the Switch supports the IEEE 802.3at High Power over Ethernet standard and can supply power of up to 30W per Ethernet port. IEEE 802.3at is also known as PoE+ or PoE Plus. An IEEE 802.3at compatible device is referred to as Type 2. Power Class 4 (High Power) can only be used by Type 2 devices. If the connected PD requires a Class 4 current when it is turned on, it will be powered up in this mode.

Table 66 Configuration > Port > PoE > Port > Edit (continued)

LABEL	DESCRIPTION
Wide Range Detection	This field is available on GS1900-8HP (Revision B1) and GS1900-10HP only. Select whether to enable a wider detection range for the PD or not. Cancel	Click Cancel to discard the changes.

19.6 Storm Control

Broadcast storm control limits the number of broadcast, multicast and destination lookup failure (DLF) packets the Switch receives per second on the ports. When the maximum number of allowable broadcast, multicast and/or DLF packets is reached per second, the subsequent packets are discarded. Enable this feature to reduce broadcast, multicast and/or DLF packets in your network. You can specify limits for each packet type on each port.

19.6.1 The Port Screen

Use this screen to view Storm Control settings for individual ports. Click Configuration > Port > Storm Control > Port to open this screen.

Figure 102 Configuration > Port > Storm Control > Port

Port	Displays the port index number.
State	Displays whether the traffic storm control on the Switch is enabled or disabled.
Broadcast (pps)	Displays how many broadcast packets the port receives per second.
Unknown Multicast (pps)	Displays how many multicast packets the port receives per second.
Unknown Unicast (pps)	Displays how many unicast packets the port receives per second.
Action	Displays the action the device takes when a limit is reached. The following options are available: - Drop - drop the packet. - Shutdown - shutdown the connection.

19.6.2 The Port Edit Screen

Use this screen to configure Storm Control settings for individual ports. Click Configuration > Port > Storm Control > Port > Edit to open this screen.

Figure 103 Configuration > Port > Storm Control > Port > Edit

The screenshot shows the 'Port Edit' configuration window. At the top, there's a tab labeled 'Port'. Below it, the 'Port List' is set to '1-8'. The 'State' is set to 'Disable' (radio button selected). The 'Action' is set to 'Drop' (radio button selected). There are three sections for storm control: 'Broadcast', 'Unknown Multicast', and 'Unknown Unicast'. Each section has an 'Enable' checkbox (unchecked) and a text input field set to '10000' with '(unit:pps)' next to it. At the bottom right, there are 'Apply' and 'Cancel' buttons.

The following table describes the labels in this screen.

Table 70 Configuration > Port > Storm Control > Port > Edit

LABEL	DESCRIPTION
Port	
Port List	Displays the port list index number(s).
State	Select Enable to activate traffic storm control on the port(s).
Action	Determines the action the device takes when a limit is reached. The following options are available: - Drop - drop the packet when limit is reached. - Shutdown - shutdown the connection when a limit is reached.
Broadcast (pps)	Click the Enable checkbox to activate the feature. Enter the maximum number of broadcast packets the port can receive per second.
Unknown Multicast (pps)	Click the Enable checkbox to activate the feature. Enter the maximum number of multicast packets the port can receive per second.
Unknown Unicast (pps)	Click the Enable checkbox to activate the feature. Enter the maximum number of unicast packets the port can receive per second.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

Configuration: VLAN

20.1 Overview

This section provides information for VLAN in Configuration.

A VLAN (Virtual Local Area Network) allows a physical network to be partitioned into multiple logical networks. Devices on a logical network belong to one group. A device can belong to more than one group. With VLAN, a device cannot directly talk to or hear from devices that are not in the same group(s); the traffic must first go through a router.

In MTU (Multi-Tenant Unit) applications, VLAN is vital in providing isolation and security among the subscribers. When properly configured, VLAN prevents one subscriber from accessing the network resources of another on the same LAN, thus a user will not see the printers and hard disks of another user on the same network.

VLAN also increases network performance by limiting broadcasts to a smaller and more manageable logical broadcast domain. In traditional switched environments, all broadcast packets go to each and every individual port. With VLAN, all broadcasts are confined to a specific broadcast domain.

20.1.1 What You Can Do in this Chapter

- The VLAN screen ([Section 20.2 on page 113](#)) displays VLAN, port, and VLAN port settings.
- The Guest VLAN screen ([Section 20.3 on page 118](#)) displays the global and port settings of the Switch.
- The Voice VLAN screen ([Section 20.4 on page 120](#)) displays the global, OUI, and port settings of the Switch.

20.2 VLAN

Use this screen to view and configure VLAN settings.

20.2.1 The VLAN Screen

Use this screen to view VLAN settings. Click Configuration > VLAN > VLAN > VLAN to open this screen.

Figure 104 Configuration > VLAN > VLAN > VLAN

The screenshot shows the 'VLAN' configuration screen. At the top, there are tabs for 'VLAN', 'Port', and 'VLAN Port'. Below the tabs, there is a 'VLAN' section with a list of VLANs. The list has a header row with columns: 'VLAN ID', 'VLAN Name', 'VLAN Type', and 'Action'. There is one entry in the list: '1', 'default', 'Default', and an edit icon. Above the list, there are buttons for 'FIRST', 'PREV', '1', 'NEXT', and 'LAST'. There is also an 'Add' button with a green plus icon.

The following table describes the labels in this screen.

Table 71 Configuration > VLAN > VLAN > VLAN

LABEL	DESCRIPTION
Create VLAN	
Add	Click Add to create a new VLAN entry.
VLAN ID	Displays the VLAN ID number.
VLAN Name	Displays a descriptive name for the VLAN group for identification purposes. This name consists of up to 64 printable characters; spaces are allowed.
VLAN Type	Displays Default or Static.
Action	
Edit	Click Edit to make changes to the entry.

20.2.2 The VLAN Add Screen

Use this screen to add a VLAN. Click Configuration > VLAN > VLAN > VLAN > Add to open this screen.

Figure 105 Configuration > VLAN > VLAN > VLAN > Add

The screenshot shows the 'VLAN Add' screen. It has a title bar 'VLAN'. Below the title bar, there are two input fields: 'VLAN List' and 'VLAN Name Prefix'. At the bottom right, there are two buttons: 'Apply' and 'Cancel'.

The following table describes the labels in this screen.

Table 72 Configuration > VLAN > VLAN > VLAN > Add

LABEL	DESCRIPTION
VLAN	
VLAN List	Primary private VLANs can associate with several (secondary) Community private VLANs and up to one (secondary) Isolated private VLAN. You only configure VLAN Association List for Primary private VLANs. Use a dash to associate consecutive VLANs and a comma (no spaces) to associate non-consecutive VLANs. For example, 51-53 includes 51, 52 and 53, but 51,53 does not include 52. Secondary private VLANs can only be associated with one primary private VLAN.
VLAN Name Prefix	Enter a prefix for the VLAN name.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

20.2.3 The Port Screen

Use this screen to view port settings and select VLANs for configuration. Click Configuration > VLAN > VLAN > Port to open this screen.

Figure 106 Configuration > VLAN > VLAN > Port

	LAG6	1	ALL	Disable	Disable
	LAG7	1	ALL	Disable	Disable
	LAG8	1	ALL	Disable	Disable

The following table describes the labels in this screen.

Table 73 Configuration > VLAN > VLAN > Port

LABEL	DESCRIPTION
Port	
Edit	Select this check box to configure the properties of a port. Click the Edit button change the properties of the port.
Port	Displays the port index number.
PVID	A PVID (Port VLAN ID) is a tag that adds to incoming untagged frames received on a port so that the frames are forwarded to the VLAN group that the tag defines.
Accept Frame Type	Specify the type of frames allowed on a port. Choices are All, Tag Only and Untag Only.
Ingress Check	If this check box is selected for a port, the Switch discards incoming frames for VLANs that do not include this port in its member set.
VLAN Trunk	Enable VLAN Trunking on ports connected to other switches or routers (but not ports directly connected to end users) to allow frames belonging to unknown VLAN groups to pass through the Switch.

20.2.4 The Port Edit Screen

Use this screen to configure port settings. Click Configuration > VLAN > VLAN > Port > Edit to open this screen.

Figure 107 Configuration > VLAN > VLAN > Port > Edit

The following table describes the labels in this screen.

Table 74 Configuration > VLAN > VLAN > Port > Edit

LABEL	DESCRIPTION
Port	
Port Select	Displays the list of port index numbers that are being configured.
PVID	Enter a number between 1 and 4094 as the port VLAN ID.

Table 74 Configuration > VLAN > VLAN > Port > Edit (continued)

LABEL	DESCRIPTION
Accepted Type	Select All from the drop-down list box to accept all untagged or tagged frames on this port. This is the default setting. Select Tag Only to accept only tagged frames on this port. All untagged frames will be dropped. Select Untag Only to accept only untagged frames on this port. All tagged frames will be dropped.
Ingress Filtering	If this check box is selected for a port, the Switch discards incoming frames for VLANs that do not include this port in its member set. Clear this check box to disable ingress filtering.
VLAN Trunk	Enable VLAN Trunking on ports connected to other switches or routers (but not ports directly connected to end users) to allow frames belonging to unknown VLAN groups to pass through the Switch.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

20.2.5 The VLAN Port Screen

Port-based VLANs are VLANs where the packet forwarding decision is based on the destination MAC address and its associated port. Port-based VLANs require allowed outgoing ports to be defined for each port. Therefore, if you wish to allow two subscriber ports to talk to each other, for example, between conference rooms in a hotel, you must define the egress (an egress port is an outgoing port, that is, a port through which a data packet leaves) for both ports. Port-based VLANs are specific only to the Switch on which they were created.

Use this screen to view VLAN port settings. Click Configuration > VLAN > VLAN > VLAN Port to open this screen.

Figure 108 Configuration > VLAN > VLAN > VLAN Port

The following table describes the labels in this screen.

Table 75 Configuration > VLAN > VLAN > VLAN Port

LABEL	DESCRIPTION
VLAN Port	
VLAN ID	Select the ID of the VLAN you want to configure.
Port	Displays the port index value.
Membership	Select Forbidden if you want to prohibit the port from joining this VLAN group. Select Excluded to remove the port from the VLAN. Select Tagged to set the port TX tag status to tagged in the VLAN. Select Untagged to set the port TX tag status to untagged in the VLAN.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

20.3 Guest VLAN

When 802.1x port authentication is enabled on the Switch and its ports, clients that do not have the correct credentials are blocked from using the port(s). You can configure your Switch to have one VLAN that acts as a guest VLAN. If you enable the guest VLAN (102 in the example) on a port (2 in the example), the user (A in the example) that is not IEEE 802.1x capable or fails to enter the correct username and password can still access the port, but traffic from the user is forwarded to the guest VLAN. That is, unauthenticated users can have access to limited network resources in the same guest VLAN, such as the Internet. The rights granted to the Guest VLAN depends on how the network administrator configures switches or routers with the guest network feature.

Figure 109 Guest VLAN Example

Use this screen to view and configure guest VLAN settings.

20.3.1 The Global Screen

Use this screen to configure the global Guest VLAN settings. Click Configuration > VLAN > Guest VLAN to open this screen.

Figure 110 Configuration > VLAN > Guest VLAN > Global

The following table describes the labels in this screen.

Table 76 Configuration > VLAN > Guest VLAN > Global

LABEL	DESCRIPTION
Global	
State	Select to enable the global Guest VLAN feature.

Table 76 Configuration > VLAN > Guest VLAN > Global (continued)

LABEL	DESCRIPTION
Guest VLAN ID	Enter the global guest VLAN ID.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

20.3.2 The Port Screen

Use this screen to view the Guest VLAN port settings and select VLAN port(s) for configuration. Click Configuration > VLAN > Guest VLAN > Port to open this screen.

Figure 111 Configuration > VLAN > Guest VLAN > Port

	Port	State
☐	1	Disable
☐	2	Disable
☐	3	Disable
☐	4	Disable
☐	5	Disable

Table 77 Configuration > VLAN > Guest VLAN > Port

LABEL	DESCRIPTION
Port	
Edit	Select this check box to configure the properties of a port. Click the Edit button change the properties of the port.
Port	Displays the port index number.
State	Display the state of the selected port.

20.3.3 The Port Edit Screen

Use this screen to configure the guest VLAN port EEE settings. Click Configuration > VLAN > Guest VLAN > Port > Edit to open this screen.

Figure 112 Configuration > VLAN > Guest VLAN > Port > Edit

The following table describes the labels in this screen.

Table 78 Configuration > VLAN > Guest VLAN > Port > Edit

LABEL	DESCRIPTION
Port	
Port List	Displays the list of port index numbers that are being configured.
State	Enable/Disable the guest VLAN feature.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

20.4 Voice VLAN

The Voice VLAN feature enables voice traffic forwarding on the Voice VLAN, then the switch can classify and schedule network traffic. It is recommended that there be two VLANs on a port - one for voice, one for data. Before connecting the IP device to the switch, the IP phone should configure the voice VLAN ID correctly. It should be configured through its own GUI.

Use this screen to view and configure voice VLAN settings.

20.4.1 The Global Screen

Use this screen to configure the global Voice VLAN settings. Click Configuration > VLAN > Voice VLAN > Global to open this screen.

Figure 113 Configuration > VLAN > Voice VLAN > Global

The following table describes the labels in this screen.

Table 79 Configuration > VLAN > Voice VLAN > Global

LABEL	DESCRIPTION
Global	
State	Select Enable to activate the global voice VLAN feature.
Voice VLAN ID	Enter the global voice VLAN ID. It should be a unique VLAN ID in the system and cannot equal each port PVID. It is a conflict in configuration if the value equals management VID, MVR VID, PVID etc. The allowed range is 1 to 4095.
Cos/802.1p	Displays the 802.1p packet priority field.
Remark Cos/802.1p	Select to Enable the priority remark function for cos/802.1p.
Aging Time	Enter the voice VLAN secure learning aging time. The allowed range is 10 to 10000000 seconds. It is used when security mode or auto detect mode is enabled. In other cases, it will be based on hardware aging time. The actual aging time will be situated between the [age_time; 2 * age_time] interval.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

20.4.2 The OUI Screen

Use this screen to view the OUI settings. The maximum number of entries is 16. Modifying the OUI table will restart auto detection of OUI process. Click Configuration > VLAN > Voice VLAN > OUI to open this screen.

Figure 114 Configuration > VLAN > Voice VLAN > OUI

The screenshot shows the 'OUI' configuration page with tabs for 'Global', 'OUI', and 'Port'. The 'OUI' tab is active. Below the tabs is an 'Add' button. A table lists OUI addresses and their descriptions, with edit and delete icons in the 'Action' column.

OUI Address	Description	Action
00:E0:BB	3COM	[Edit] [Delete]
00:03:6B	Cisco	[Edit] [Delete]
00:E0:75	Veritel	[Edit] [Delete]
00:D0:1E	Pingtel	[Edit] [Delete]
00:01:E3	Siemens	[Edit] [Delete]
00:60:B9	NEC/Philips	[Edit] [Delete]
00:0F:E2	H3C	[Edit] [Delete]
00:09:6E	Avaya	[Edit] [Delete]

The following table describes the labels in this screen.

Table 80 Configuration > VLAN > Voice VLAN > OUI

LABEL	DESCRIPTION
OUI	
Add	Click Add to create a new OUI entry.
OUI Address	Displays an OUI address. A telephony OUI address is a globally unique identifier assigned to a vendor by IEEE. It must be 6 characters long and the input format is "xx-xx-xx" (x is a hexadecimal digit).
Description	Displays a description of the OUI address. Normally, it describes which vendor telephony device it belongs to. The allowed string length is 0 to 32.
Action	
Edit	Click Edit to make changes to the entry.
Delete	Click Delete to remove the entry.

20.4.3 The OUI Add/Edit Screen

Use this screen to add/edit an OUI address. Click Configuration > VLAN > Voice VLAN > OUI > Add/ Edit to open this screen.

Figure 115 Configuration > VLAN > Voice VLAN > OUI > Add/Edit

The screenshot shows the 'OUI Add/Edit' screen with tabs for 'Global', 'OUI', and 'Port'. The 'OUI' tab is active. It contains two input fields: 'OUI Address' with the value '00:00:00' and 'Description' which is empty. At the bottom are 'Apply' and 'Cancel' buttons.

The following table describes the labels in this screen.

Table 81 Configuration > VLAN > Voice VLAN > OUI > Add/Edit

LABEL	DESCRIPTION
OUI	
OUI Address	Enter an OUI address. A telephony OUI address is a globally unique identifier assigned to a vendor by IEEE. It must be 6 characters long and the input format is "xx-xx-xx" (x is a hexadecimal digit).
Description	Enter a description of the OUI address. Normally, it describes which vendor telephony device it belongs to. The allowed string length is 0 to 32.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

20.4.4 The Port Screen

Use this screen to view the Voice VLAN port settings and select a port for configuration. Click Configuration > VLAN > Voice VLAN > Port to open this screen.

Figure 116 Configuration > VLAN > Voice VLAN > Port

Global	OUI	Port

☐	LAG8	Disable

The following table describes the labels in this screen.

Table 82 Configuration > VLAN > Voice VLAN > Port

LABEL	DESCRIPTION
Port	
Edit	Select this check box to configure the properties of a port. Click the Edit button change the properties of the port.

Table 82 Configuration > VLAN > Voice VLAN > Port (continued)

LABEL	DESCRIPTION
Port	Displays the port index value.
State	Displays the Voice VLAN port security mode state. When the function is enabled, all non-telephonic MAC addresses in the Voice VLAN will be blocked for 10 seconds. Possible port modes are: - Enabled: Enable Voice VLAN security mode operation. - Disabled: Disable Voice VLAN security mode operation.

20.4.5 The Port Edit Screen

Use this screen to edit the port(s) security state. Click Configuration > VLAN > Voice VLAN > Port > Add/ Edit to open this screen.

Figure 117 Configuration > VLAN > Voice VLAN > Port > Add/Edit

The following table describes the labels in this screen.

Table 83 Configuration > VLAN > Voice VLAN > Port > Add/Edit

LABEL	DESCRIPTION
Port	
Port	Displays the port(s) index value.
State	Select the Voice VLAN port security mode state. When the function is enabled, all non-telephonic MAC addresses in the Voice VLAN will be blocked for 10 seconds. Possible port modes are: - Enabled: Enable Voice VLAN security mode operation. - Disabled: Disable Voice VLAN security mode operation.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

Configuration: MAC Table

21.1 Overview

This section provides information for MAC Table in Configuration.

The MAC Table screen (a MAC table is also known as a filtering database) shows how frames are forwarded or filtered across the Switch's ports. When a device (which may belong to a VLAN group) sends a packet which is forwarded to a port on the Switch, the MAC address of the device is shown on the Switch's MAC Table. It also shows whether the MAC address is dynamic (learned by the Switch) or static (manually entered in the Static MAC Forwarding screen).

21.1.1 What You Can Do in this Chapter

The MAC Table screen ([Section 21.2 on page 125](#)) displays Static MAC, Filtering MAC, and Dynamic MAC settings.

21.2 MAC Table

21.2.1 The Static MAC Screen

Use this screen to view Static MAC addresses settings. Click Configuration > MAC Table > Static MAC to open this screen.

Figure 118 Configuration > MAC Table > Static MAC

The following table describes the labels in this screen.

Table 84 Configuration > MAC Table > Static MAC

LABEL	DESCRIPTION
Static MAC	
Add	Click Add to create a new Static MAC entry.
MAC Address	Displays the object MAC address from which this incoming frame came.

Table 84 Configuration > MAC Table > Static MAC (continued)

LABEL	DESCRIPTION
VLAN	Displays the VLAN group to which this frame belongs.
Port	Displays the port from which the above MAC address was learned.
Action	Click Delete to remove the MAC address.

21.2.2 The Static MAC Add Screen

Use this screen to add new Static MAC addresses. Click Configuration > MAC Table > Static MAC > Add to open this screen.

Figure 119 Configuration > MAC Table > Static MAC > Add

The following table describes the labels in this screen.

Table 85 Configuration > MAC Table > Static MAC > Add

LABEL	DESCRIPTION
Static MAC	
MAC Address	Enter the object MAC address.
VLAN	Select the VLAN group which to associate the MAC address.
Port	Select the port which to associate the above MAC address.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

21.2.3 The Filtering MAC Screen

Use this screen to view Filtering MAC addresses. Click Configuration > MAC Table > Filtering MAC to open this screen.

Figure 120 Configuration > MAC Table > Filtering MAC

The following table describes the labels in this screen.

Table 86 Configuration > MAC Table > Filtering MAC

LABEL	DESCRIPTION
MAC Filtering	
Add	Click Add to create a new Filtering MAC entry.
MAC Address	Displays the filtering object MAC address from which this incoming frame came.
VLAN	Displays the VLAN group to which this frame belongs.
Action	
Delete	Click Delete to remove the entry.

21.2.4 The Filtering MAC Add Screen

Use this screen to add new Filtering MAC addresses. Click Configuration > MAC Table > Filtering MAC > Add to open this screen.

Figure 121 Configuration > MAC Table > Filtering MAC > Add

The following table describes the labels in this screen.

Table 87 Configuration > MAC Table > Filtering MAC > Add

LABEL	DESCRIPTION
Filtering MAC	
MAC Address	Enter the MAC address of the device.
VLAN	Select the VLAN group to associate the filtering object MAC address.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

21.2.5 The Dynamic Age Screen

Use this screen to enter the Dynamic MAC Age. The dynamic MAC age is how long all dynamically learned MAC addresses remain in the MAC address table before they age out (and must be relearned). Click Configuration > MAC Table > Dynamic Age to open this screen.

Figure 122 Configuration > MAC Table > Dynamic Age

Static MAC Filtering MAC Dynamic Age

Dynamic MAC Age

Aging Time (10 - 630 sec)

Apply Cancel

The following table describes the labels in this screen.

Table 88 Configuration > Dynamic Age

LABEL	DESCRIPTION
Dynamic MAC Age	
Aging Time	Enter the aging time of the MAC address. The value can be between 10 and 630 seconds.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

Configuration: Link Aggregation

22.1 Overview

This section provides information for Link Aggregation in Configuration.

This chapter shows you how to logically aggregate physical links to form one logical, higher bandwidth link.

22.1.1 What You Can Do in this Chapter

The Link Aggregation screen ([Section 22.2 on page 129](#)) displays global, LAG management, LAG port, and LACP port settings.

22.2 Link Aggregation

Link aggregation (trunking) is the grouping of physical ports into one logical higher-capacity link. You may want to trunk ports if for example, it is cheaper to use multiple lower-speed links than to under-utilize a high-speed, but more costly, single-port link.

However, the more ports you aggregate then the fewer available ports you have. A trunk group is one logical link containing multiple ports.

The Switch supports both static and dynamic link aggregation.

Note: In a properly planned network, it is recommended to implement static link aggregation only. This ensures increased network stability and control over the trunk groups on your Switch.

22.2.1 The Global Screen

Use this screen to configure global Link Aggregation settings. Click Configuration > Link Aggregation > Global to open this screen.

Figure 123 Configuration > Link Aggregation > Global

The following table describes the labels in this screen.

Table 89 Configuration > Link Aggregation > Global

LABEL	DESCRIPTION
Global	
LACP State	Select Enable to activate the link aggregation control protocol.
LACP System Priority	LACP system priority is a number between 1 and 65,535. The switch with the lowest system priority (and lowest port number if system priority is the same) becomes the LACP “server”. The LACP “server” controls the operation of LACP setup. Enter a number to set the priority of an active port using Link Aggregation Control Protocol (LACP). The smaller the number, the higher the priority level.
Load Balance Algorithm	Select the outgoing traffic distribution type. Packets from the same source and/or to the same destination are sent over the same link within the trunk. By default, the Switch uses the IP/ MAC Address distribution type. If the Switch is behind a router, the packet’s destination or source MAC address will be changed. In this case, set the Switch to distribute traffic based on its IP address to make sure port trunking can work properly. Select MAC Address to distribute traffic based on a combination of the packet’s source and destination MAC addresses. Select IP/ MAC Address to distribute traffic based on a combination of the packet’s source and destination IP addresses.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

22.2.2 The LAG Management Screen

Use this screen to view LAG management settings. Click Configuration > Link Aggregation > LAG Management to open this screen.

Figure 124 Configuration > Link Aggregation > LAG Management

The following table describes the labels in this screen.

Table 90 Configuration > Link Aggregation > LAG Management

LABEL	DESCRIPTION
LAG Management	
Add	Click Add to create a new LAG Management entry.
LAG	Displays the link aggregation group (LAG), that is, one logical link containing multiple ports.
Name	Displays the name of the link aggregation group.
Type	This field displays how these ports were added to the trunk group. It displays: Static - if the ports are configured as static members of a trunk group. LACP - if the ports are configured to join a trunk group via LACP.
Link Status	Displays link status as either Link up or Link down.
Active Member	Displays if this member is an active member of a trunk.
Standby Member	Displays if this member is a standby member of a trunk.
Modify	
Edit	Click Edit to make changes to the entry.
Delete	Click Delete to remove the entry.

22.2.3 The LAG Add Screen

Use this screen to add a LAG. Click Configuration > Link Aggregation > LAG Management > Add to open this screen.

Figure 125 Configuration > Link Aggregation > LAG Management > Add

The screenshot shows the 'LAG Management' configuration window. At the top, there are four tabs: 'Global', 'LAG Management' (selected), 'LAG Port', and 'LACP Port'. Below the tabs, the title 'LAG Management' is displayed. The main area contains the following fields:

- LAG:** A dropdown menu currently showing 'LAG1'.
- Name:** An empty text input field.
- Type:** Two radio buttons; 'Static' is selected (indicated by a green dot), and 'LACP' is unselected.
- Member Ports:** This section contains two vertical lists of ports. The 'Available' list on the left contains ports 1 through 8. The 'Acting' list on the right is currently empty. Between the two lists are two arrows: a right-pointing arrow (>) and a left-pointing arrow (<), used to move ports between the available and acting states.

At the bottom right of the window, there are two buttons: 'Apply' and 'Cancel'.

The following table describes the labels in this screen.

Table 91 Configuration > Link Aggregation > LAG Management > Add

LABEL	DESCRIPTION
LAG Management	
LAG	Select the link aggregation group (LAG).
Name	Enter the name of this entry.
Type	Select Static or LACP.
Member Ports	Select the member ports to be part of the LAG.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

22.2.4 The LAG Port Screen

Use this screen to view LAG port settings. Click Configuration > Link Aggregation > LAG Port to open this screen.

Figure 126 Configuration > Link Aggregation > LAG Port

Global

LAG Management

LAG Port

☐	LAG6			Enable	Auto	Auto	Disable	Disable
☐	LAG7			Enable	Auto	Auto	Disable	Disable
☐	LAG8			Enable	Auto	Auto	Disable	Disable

The following table describes the labels in this screen.

Table 92 Configuration > Link Aggregation > LAG Port

LABEL	DESCRIPTION
LAG Port	
Edit	Select this check box to configure the properties of a port. Click the Edit button change the properties of the port.
LAG	Displays the LAG index value.
Name	Displays the LAG name.
Port Type	Displays the port type.
State	Displays the state as Enable/Disable.
Speed	Displays the speed value as Auto, Auto-10M, Auto-100M, Auto-1000M, Auto-10/100M, 10M, 100M, or 1000M.
Duplex	Displays the duplex value as Full, Half, or Auto.
FlowCtrl State	Displays whether flow control is Enable/Disable.
FlowCtrl Status	Displays whether flow control is in use (Enable) or not (Disable).

22.2.5 The LAG Port Edit Screen

Use this screen to edit a LAG port. Click Configuration > Link Aggregation > LAG Port > Edit to open this screen.

Figure 127 Configuration > Link Aggregation > LAG Port > Edit

The following table describes the labels in this screen.

Table 93 Configuration > Link Aggregation > LAG Port > Edit

LABEL	DESCRIPTION
LAG Port Edit	
LAG	Displays the LAG index values.
State	Select the state to be Enable or Disable.
Speed	Displays the speed value as Auto, 10M, 100M, or 1000M.
Flow Control	Select Enable to use the flow control feature.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

22.2.6 The LACP Port Screen

Use this screen to view LACP Port settings. Click Configuration > Link Aggregation > LACP Port to open this screen.

Figure 128 Configuration > Link Aggregation > LACP Port

 Edit			
☐	Port	Priority	Timer(sec)
☐	1	1	30
☐	2	1	30
☐	3	1	30
☐	4	1	30
☐	5	1	30
☐	6	1	30
☐	7	1	30
☐	8	1	30

The following table describes the labels in this screen.

Table 94 Configuration > Link Aggregation > LACP Port

LABEL	DESCRIPTION
LACP Port	
Edit	Select this check box to configure the properties of a port. Click the Edit button change the properties of the port.
Port	Displays the port index number.
Priority	Displays the priority value.
Timer (sec)	Displays the Timer value in seconds. Timeout is the time interval between the individual port exchanges of LACP packets in order to check that the peer port in the trunk group is still up. If a port does not respond after three tries, then it is deemed to be "down" and is removed from the trunk. Set a short timeout (one second) for busy trunked links to ensure that disabled ports are removed from the trunk group as soon as possible.

22.2.7 The LACP Port Edit Screen

Use this screen to edit a LACP Port. Click Configuration > Link Aggregation > LACP Port > Edit to open this screen.

Figure 129 Configuration > Link Aggregation > LACP Port > Edit

The following table describes the labels in this screen.

Table 95 Configuration > Link Aggregation > LACP Port > Edit

LABEL	DESCRIPTION
LACP Port	
Port List	Displays the list of port index numbers to be configured.
Priority	Enter a value for the port priority. The number can be between 1 and 65,535.
Timer	Select a timer value of either 1 second or 30 seconds.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

Configuration: Loop Guard

23.1 Overview

This section provides information for Loop Guard in Configuration.

This chapter shows you how to configure the Switch to guard against loops on the edge of your network.

23.2 Loop Guard

Loop guard allows you to configure the Switch to shut down a port if it detects that packets sent out on that port loop back to the Switch. While you can use Spanning Tree Protocol (STP) to prevent loops in the core of your network. STP cannot prevent loops that occur on the edge of your network.

23.2.1 The Global Screen

Use this screen to configure the global Loop Guard. Click Configuration > Loop Guard to open this screen.

Figure 130 Configuration > Loop Guard

The following table describes the labels in this screen.

Table 96 Configuration > Loop Guard

LABEL	DESCRIPTION
Global	
State	Select Enable to activate loop protection on this switch.

Table 96 Configuration > Loop Guard (continued)

LABEL	DESCRIPTION
Recovery Time	Enter the period (in seconds) for which a port will be kept disabled in the event of a loop is detected (and the port action shuts down the port).
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

23.2.2 The Loop Guard Port

Use this screen to view the Loop Guard Port. Click Configuration > Loop Guard > Port to open this screen.

Figure 131 Configuration > Loop Guard > Port

☐	Port	State	Action
☐	1	Disable	Shutdown Port
☐	2	Disable	Shutdown Port
☐	3	Disable	Shutdown Port

Table 97 Configuration > Loop Guard > Port

LABEL	DESCRIPTION
Port	
Edit	Click Edit to change the properties of the port.
Port	Displays the port index number.
State	Displays whether the port state is Enable or Disable.
Action	Displays the action to take by the Switch. The options are Log, Shutdown Port, and Shutdown and Log.

23.2.3 The Port Edit Screen

Use this screen to configure a Loop Guard port. Click Configuration > Loop Guard > Port > Edit to open this screen.

Figure 132 Configuration > Loop Guard > Port > Edit

The screenshot shows a configuration window titled 'Port' under the 'Loop Guard' section. It has two tabs: 'Global' and 'Port'. The 'Port' tab is selected. The configuration area includes:

- Port List:** A text field containing '1,4-5'.
- State:** Two radio buttons labeled 'Enable' and 'Disable'. The 'Disable' button is selected.
- Action:** A dropdown menu with 'Shutdown Port' selected.

At the bottom right of the window are two buttons: 'Apply' and 'Cancel'.

The following table describes the labels in this screen.

Table 98 Configuration > Loop Guard > Port > Edit

LABEL	DESCRIPTION
Port	
Port List	Displays the list of port index numbers to be configured.
State	Select Enable to use the Admin Enabled feature.
Action	Select the action to take by the Switch.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

Configuration: Mirror

24.1 Overview

This section provides information for Mirror in Configuration.

24.2 Mirror

Port mirroring allows you to copy a traffic flow to a monitor port (the port you copy the traffic to) in order that you can examine the traffic from the monitor port without interference.

The Switch supports local port mirroring.

24.2.1 The Mirror Screen

Use this screen to configure Mirroring. Click Configuration > Mirror to open this screen.

Figure 133 Configuration > Mirror

The screenshot shows the 'Configuration > Mirror' interface. It includes a sidebar with navigation options: Mirror, Mirroring, Monitor Port, Egress, and Ingress. The main content area is titled 'Mirror' and contains the following elements:

- Mirroring:** Radio buttons for 'Enable' and 'Disable'. The 'Disable' option is selected.
- Monitor Port:** A dropdown menu currently showing '1'.
- Egress:** A section for configuring egress mirroring. It features an 'Available' list (ports 1-8) and an 'Acting' list, connected by right and left arrow buttons.
- Ingress:** A section for configuring ingress mirroring. It also features an 'Available' list (ports 1-8) and an 'Acting' list, connected by right and left arrow buttons.
- Buttons:** 'Apply' and 'Cancel' buttons at the bottom right.

The following table describes the labels in this screen.

Table 99 Configuration > Mirror

LABEL	DESCRIPTION
Mirror	
Mirroring	Select Enable to activate port mirroring on the Switch or Disable to disable the feature.
Monitor Port	The monitor port is the port you copy the traffic to in order to examine it in more detail without interfering with the traffic flow on the original port(s). Type the port number of the monitor port.
Egress	Specify the ports to mirror outgoing traffic.
Available	Click < to move a severity type from the acting box to the available box. Click > to move a severity type to the acting box from the available box.
Acting	Click < to move a severity type from the acting box to the available box. Click > to move a severity type to the acting box from the available box.
>	Click > to move a severity type to the acting box from the available box.
<	Click < to move a severity type from the acting box to the available box.
Ingress	Specify the ports to mirror incoming traffic.
Available	Click < to move a severity type from the acting box to the available box. Click > to move a severity type to the acting box from the available box.
Acting	Click < to move a severity type from the acting box to the available box. Click > to move a severity type to the acting box from the available box.
>	Click > to move a severity type to the acting box from the available box.
<	Click < to move a severity type from the acting box to the available box.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

Configuration: Multicast

25.1 Overview

This section provides information for Multicast in Configuration.

Traditionally, IP packets are transmitted in one of either two ways - Unicast (1 sender to 1 recipient) or Broadcast (1 sender to everybody on the network). Multicast delivers IP packets to just a group of hosts on the network.

25.2 IGMP

IGMP (Internet Group Management Protocol) is a network-layer protocol used to establish membership in an IPv4 multicast group - it is not used to carry user data. Refer to RFC 1112, RFC 2236 and RFC 3376 for information on IGMP versions 1, 2 and 3 respectively.

25.2.1 The Global Screen

Use this screen to view the IGMP Global settings. Click Configuration > Multicast > IGMP to open this screen.

Figure 134 Configuration > Multicast > IGMP

The following table describes the labels in this screen.

Table 100 Configuration > Multicast > IGMP

LABEL	DESCRIPTION
IGMP Global	
Snooping Status	Select Enable to turn on IGMP packet snooping or Disable to turn snooping off.

Table 100 Configuration > Multicast > IGMP (continued)

LABEL	DESCRIPTION
Snooping Version	Select v2 or v3 depending on the snooping version you require.
Unknown Multicast Action	Select to send the IPv4 unknown multicast frame to the router port. The following options are available: - Flood - select to send the frame(s) to all ports. - Drop - select to discard the frame(s). - Router Port - select to send the frame to router port.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

25.2.2 The VLAN Screen

Use this screen to view the IGMP VLAN settings. Click Configuration > Multicast > IGMP > VLAN to open this screen.

Figure 135 Configuration > Multicast > IGMP > VLAN

The following table describes the labels in this screen.

Table 101 Configuration > Multicast > IGMP > VLAN

LABEL	DESCRIPTION
IGMP VLAN	
Edit	Click Edit to change the properties of the IGMP VLAN entry.
VLAN ID	Displays the ID of a static VLAN; the valid range is between 1 and 4094.
Status	Display the status of the VLAN as enabled or disabled.
Router Ports Auto Learn	Displays the Switch learn multicast router port member status of any VLANs as enabled or disabled.
Query	
Retry	Displays the number of query retry times.
Interval (sec)	Displays the amount of time (in seconds) between general query messages sent by the router connected to the upstream port.
Max. Response Interval (sec)	Displays the amount of time (in seconds) the router connected to the upstream port waits for a response to an IGMP general query message.
Last Member Query	
Count	Displays the number of queries.
Interval (sec)	Displays the amount of time (in milliseconds) between the IGMP group-specific queries sent by an upstream port when an IGMP Done message is received.
Querier	

Table 101 Configuration > Multicast > IGMP > VLAN (continued)

LABEL	DESCRIPTION
State	Displays the switch current VLAN querier entry as Enable or Disable.
Version	Displays the switch current VLAN querier entry version.

25.2.3 The Edit IGMP Screen

Use this screen to configure the IGMP VLAN settings. Click Configuration > Multicast > IGMP > VLAN > Edit to open this screen.

Figure 136 Configuration > Multicast > IGMP > VLAN > Edit

The following table describes the labels in this screen.

Table 102 Configuration > Multicast > IGMP > VLAN > Modify

LABEL	DESCRIPTION
IGMP Edit	
VLAN List	Enter the ID of a static VLAN; the valid range is between 1 and 4094.
IGMP State	Select the status of the VLAN to Enable or Disable the function.
Router Ports Auto Learn	Select Enabled to have the Switch learn multicast router membership information of any VLANs automatically.
Query	
Retry	Enter the number of query retry times. The value can be between 1 and 7.
Interval (sec)	Enter the amount of time (in seconds) between general query messages sent by the router connected to the upstream port. The value can be between 30 and 18000.
Max. Response Interval (sec)	Enter the amount of time (in seconds) the router connected to the upstream port waits for a response to an IGMP general query message.

Table 102 Configuration > Multicast > IGMP > VLAN > Modify (continued)

LABEL	DESCRIPTION
Last Member Query	
Count	Enter the number of queries.
Interval (sec)	Enter the amount of time (in seconds) between the IGMP group-specific queries sent by an upstream port when an IGMP Done message is received.
Querier	
IGMP Querier State	Select the IGMP querier status to Enable or Disable the function.
IGMP Querier Version	Select the IGMP Querier version to v2 or v3.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

25.2.4 The Router Port Screen

Use this screen to view the Router Port settings. Click Configuration > Multicast > IGMP > Router Port to open this screen.

Figure 137 Configuration > Multicast > IGMP > Router Port

The following table describes the labels in this screen.

Table 103 Configuration > Multicast > IGMP > Router Port

LABEL	DESCRIPTION

☐	LAG6	256	Deny	None
☐	LAG7	256	Deny	None
☐	LAG8	256	Deny	None

The following table describes the labels in this screen.

Table 107 Configuration > Multicast > IGMP > Throttling

LABEL	DESCRIPTION
IGMP Port Throttling	
Edit	Select this check box to configure the properties of a port. Click the Edit button change the properties of the port.
Port	Displays the port index value.
Max. Groups	Displays the maximum number of groups.
Exceed Group Number Action	Displays the action taken by the groups as Permit or Deny.
Filter Profile ID	Displays the throttling filter profile ID.

25.2.9 The Add/Edit Throttling Screen

Use this screen to configure the Throttling settings. Click Configuration > Multicast > IGMP > Throttling > Add/ Edit to open this screen.

Figure 142 Configuration > Multicast > IGMP > Throttling > Add/Edit

The screenshot shows the 'IGMP Port Throttling' configuration window. It has a tabbed interface with 'Global', 'VLAN', 'Router Port', 'Profile', and 'Throttling' tabs. The 'Throttling' tab is selected. The window title is 'IGMP Port Throttling'. Inside, there are four main configuration areas: 'Port List' (empty text field), 'Max. Groups' (text field with '256' and a range '(0-256)' to its right), 'Exceed Group Number Action' (radio buttons for 'Deny' and 'Replace', with 'Deny' selected), and 'Filter Profile ID' (dropdown menu showing 'None'). At the bottom right, there are 'Apply' and 'Cancel' buttons.

The following table describes the labels in this screen.

Table 108 Configuration > Multicast > IGMP > Throttling > Add/Edit

LABEL	DESCRIPTION
IGMP Port Throttling	
Port List	Enter the port index value(s).
Max. Groups	Enter the maximum number of groups. Enter a value between 0 and 256.
Exceed Group Number Action	Select the action taken by the groups to be Deny or Replace.
Filter Profile ID	Select the throttling filter profile ID from the dropdown list.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

Configuration: Spanning Tree

26.1 Overview

This section provides information for Spanning Tree in Configuration.

The Switch supports Spanning Tree Protocol (STP), Rapid Spanning Tree Protocol (RSTP) and Multiple Spanning Tree Protocol (MSTP) as defined in the following standards.

- IEEE 802.1D Spanning Tree Protocol
- IEEE 802.1w Rapid Spanning Tree Protocol
- IEEE 802.1s Multiple Spanning Tree Protocol

The Switch also allows you to set up multiple STP configurations (or trees). Ports can then be assigned to the trees.

26.2 Spanning Tree

(R)STP detects and breaks network loops and provides backup links between switches, bridges or routers. It allows a Switch to interact with other (R)STP-compliant switches in your network to ensure that only one path exists between any two stations on the network.

26.2.1 The Global Screen

Use this screen to view the Global settings. Click Configuration > Spanning Tree to open this screen.

Figure 143 Configuration > Spanning Tree

The screenshot shows the 'Global' configuration tab for Spanning Tree. It contains several settings with radio buttons or dropdown menus. The 'State' is set to 'Disable'. 'BPDU Forward' is set to 'Flooding'. 'PathCost Method' is set to 'Long'. 'Version' is set to 'RSTP'. 'Configuration Name' is a text field containing 'FC:F5:28:4F:1C:20' with a '(Max.32 charactor)' note. 'Configuration Revision' is a text field containing '0' with a '(0 - 65535)' note. At the bottom right are 'Apply' and 'Cancel' buttons.

The following table describes the labels in this screen.

Table 109 Configuration > Spanning Tree

LABEL	DESCRIPTION
Global	
State	Select to Enable or Disable the Spanning-Tree function.
BPDU Forward	Select the bridge protocol data units forward (BPDU) option to be Flooding or Filtering.
Path Cost Method	Select Short or Long as a Path Cost method. Path cost is the cost of transmitting a frame on to a LAN through that port. It is recommended that you assign this value according to the speed of the bridge. The slower the media, the higher the cost - see Table 40 on page 112 for more information.
Version	Select the type of spanning tree protocol to use. The following options are available: • STP • RSTP • MSTP
Configuration Name	Enter the name of the configuration in hexadecimal. The maximum number characters is 32.
Configuration Revision	Enter the revision number of configuration. The number can be between 0 and 65535.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

26.2.2 The STP Port Screen

Use this screen to view the STP Port settings. Click Configuration > Spanning Tree > STP Port to open this screen.

Figure 144 Configuration > Spanning Tree > STP Port

GlobalSTP PortCISTCIST PortMSTMST Port

STP Port

Edit

	Port	State	External Cost	Edge Port	BPDU Filter	P2P MAC
	1	Enable	0	Yes	No	Yes
	2	Enable	0	Yes	No	Yes
	3	Enable	0	Yes	No	Yes
	4	Enable	0	Yes	No	Yes
	5	Enable	0	Yes	No	Yes
	6	Enable	0	Yes	No	Yes
	7	Enable	0	Yes	No	Yes
	8	Enable	0	Yes	No	Yes
	LAG1	Enable	0	Yes	No	Yes
	LAG2	Enable	0	Yes	No	Yes
	LAG3	Enable	0	Yes	No	Yes
	LAG4	Enable	0	Yes	No	Yes
	LAG5	Enable	0	Yes	No	Yes
	LAG6	Enable	0	Yes	No	Yes
	LAG7	Enable	0	Yes	No	Yes
	LAG8	Enable	0	Yes	No	Yes

The following table describes the labels in this screen.

Table 110 Configuration > Spanning Tree > STP Port

LABEL	DESCRIPTION
STP Port	
Edit	Select this check box to configure the properties of a port. Click the Edit button change the properties of the port.
Port	Displays the index number of the STP port.
State	Display the status of the STP port as enabled or disabled.
External Cost	Displays the external path cost.
Edge Port	Displays the edge port status as Yes or No.
BPDU Filter	Displays the BPDU filter status as Yes or No.
P2P MAC	Displays the P2P MAC status as Yes or No.

26.2.3 The STP Port Edit Screen

Use this screen to configure the STP Port Edit settings. Click Configuration > Spanning Tree > STP Port > Edit to open this screen.

Figure 145 Configuration > Spanning Tree > STP Port > Edit

The following table describes the labels in this screen.

Table 111 Configuration > Spanning Tree > STP Port > Edit

LABEL	DESCRIPTION
STP Port	
Port List	Enter the index number of the STP port(s).
External Path Cost (0= Auto)	Enter the external path cost. Enter 0 for Auto.
State	Select the state of the STP port as enabled or disabled.
Edge Port	Select this check box to configure a port as an edge port when it is directly attached to a computer. An edge port changes its initial STP port state from blocking state to forwarding state immediately without going through listening and learning states right after the port is configured as an edge port or when its link status changes. Note: An edge port becomes a non-edge port as soon as it receives a Bridge Protocol Data Unit (BPDU).
BPDU Filter	Select Yes to activate BPDU filter or No to deactivate it.
P2P MAC	Select Yes to activate P2P MAC or No to deactivate it.
Migrate	Select Yes to activate Migrate or No to deactivate it.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

26.2.4 The CIST Screen

Use this screen to view the CIST settings. Click Configuration > Spanning Tree > CIST to open this screen.

Figure 146 Configuration > Spanning Tree > CIST

CIST Instance

Priority: 32768 (dropdown)

Max Hops: 20 (1-40)

Forward Delay: 15 (4-30)

Max Age: 20 (6-40)

Tx Hold Count: 6 (1-10)

Hello Time: 2 (1-10)

Apply Cancel

The following table describes the labels in this screen.

Table 112 Configuration > Spanning Tree > CIST

LABEL	DESCRIPTION
CIST Instance	
Priority	Configure priority of CIST bridge ID. Priority is part of bridge ID, used for CIST root bridge selection.
Max Hops	Enter a maximum number of hops value. The value can be between 1 and 40.
Forward Delay	This is the maximum time (in seconds) a switch will wait before changing states. This delay is required because every switch must receive information about topology changes before it starts to forward frames. In addition, each port needs time to listen for conflicting information that would make it return to a blocking state; otherwise, temporary data loops might result. The allowed range is 4 to 30 seconds. As a general rule: Note: $2 * (\text{Forward Delay} - 1) \geq \text{Max Age} \geq 2 * (\text{Hello Time} + 1)$
Max Age	This is the maximum time (in seconds) a switch can wait without receiving a BPDU before attempting to reconfigure. All switch ports (except for designated ports) should receive BPDUs at regular intervals. Any port that ages out STP information (provided in the last BPDU) becomes the designated port for the attached LAN. If it is a root port, a new root port is selected from among the switch ports attached to the network. The allowed range is 6 to 40 seconds.
Tx Hold Count	Enter a transmission hold count value. The value can be between 1 and 10.
Hello Time	This is the time interval in seconds between BPDU (Bridge Protocol Data Units) configuration message generations by the root switch. The allowed range is 1 to 10 seconds.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

26.2.5 The CIST Port Screen

Use this screen to view the CIST Port settings. Click Configuration > Spanning Tree > CIST Port to open this screen.

Figure 147 Configuration > Spanning Tree > CIST Port

Configuration: LLDP

27.1 Overview

This section provides information for LLDP in Configuration.

Use the Link Layer Discovery Protocol (LLDP) screens to configure LLDP Switch settings.

27.2 LLDP

This page allows the user to inspect and configure the current LLDP port settings.

27.2.1 The Global Screen

Use this screen to configure the Global settings. Click Configuration > LLDP > Global to open this screen.

Figure 153 Configuration > LLDP > Global

Global	Port	Local Information	MED Network Policy	MED Port
Global				
State	☒ Enable ☐ Disable			
Transmission Interval	30	(5-32768 sec)		
Hold Multiplier	4	(2-10)		
Reinitialization Delay	2	(1-10 sec)		
Transmit Delay	2	(1-8192 sec)		
LLDP-MED Fast Start Repeat Count	3	(1-10)		
Apply Cancel				

The following table describes the labels in this screen.

Table 119 Configuration > LLDP > Global

LABEL	DESCRIPTION
Global	
State	Select Enable to activate the global LLDP.

Table 119 Configuration > LLDP > Global (continued)

LABEL	DESCRIPTION
Transmission Interval	Enter the transmission interval value. The switch periodically transmits LLDP frames to its neighbors for having the network discovery information up-to-date. The interval between each LLDP frame is determined by the Tx Interval value. Valid values are restricted to 5 - 32768 seconds.
Hold Multiplier	Enter the hold multiplier value. Each LLDP frame contains information about how long the information in the LLDP frame shall be considered valid. The LLDP information valid period is set to Tx Hold multiplied by Tx Interval seconds. Valid values are restricted to 2 - 10 times.
Reinitialization Delay	Enter the reinitialization delay value. When a port is disabled, LLDP is disabled or the switch is rebooted, an LLDP shutdown frame is transmitted to the neighboring units, signalling that the LLDP information isn't valid anymore. Tx Reinit controls the amount of seconds between the shutdown frame and a new LLDP initialization. Valid values are restricted to 1 - 10 seconds.
Transmit Delay	Enter the transmission delay value. If some configuration is changed (e.g. the IP address) a new LLDP frame is transmitted, but the time between the LLDP frames will always be at least the value of Tx Delay seconds. Tx Delay cannot be larger than 1/4 of the Tx Interval value. Valid values are restricted to 1 - 8192 seconds.
LLDP-MED Fast Start Repeat Count	Enter the LLDP-MED fast start repeat count value. Because there is a risk of an LLDP frame being lost during transmission between neighbors, it is recommended to repeat the fast start transmission multiple times to increase the possibility of the neighbors receiving the LLDP frame. With Fast start repeat count it is possible to specify the number of times the fast start transmission would be repeated. The recommended value is 4 times, given that 4 LLDP frames with a 1 second interval will be transmitted, when an LLDP frame with new information is received.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

27.2.2 The Port Screen

Use this screen to view the Port settings. Click Configuration > LLDP > Port to open this screen.

The following table describes the labels in this screen.

Table 122 Configuration > LLDP > Local Information

LABEL	DESCRIPTION
Local Device Summary	
Chassis ID Subtype	Displays the chassis ID subtype.
Chassis ID	The Chassis ID is the identification of the neighbor's LLDP frames.
System Name	System Name is the name advertised by the neighbor unit.
System Description	Displays the System Description.

Table 122 Configuration > LLDP > Local Information (continued)

LABEL	DESCRIPTION
Capabilities Supported	Capabilities Supported describes the neighbor unit's capabilities. The possible capabilities are: 1. Other 2. Repeater 3. Bridge 4. WLAN Access Point 5. Router 6. Telephone 7. DOCSIS cable device 8. Station only 9. Reserved When a capability is enabled, the capability is followed by (+). If the capability is disabled, the capability is followed by (-).
Capabilities Enable	Displays which capability is enabled.
Port ID Subtype	Displays the Port ID Subtype.
MED Port Location	
Edit	Select this check box to configure the properties of a port. Click the Edit button change the properties of the port.
Port	Displays the index number of the LLDP port(s).
Coordinate	Displays the location coordinate of the LLDP port(s).
Civic Address	Displays the location of the civic address(es) in hexadecimal.
ECS ELIN	Emergency Call Service (e.g. E911 and others), such as defined by TIA or NENA. Emergency Call Service ELIN identifier data format is defined to carry the ELIN identifier as used during emergency call setup to a traditional CAMA or ISDN trunk-based PSAP. This format consists of a numerical digit string, corresponding to the ELIN to be used for emergency calling.

27.2.5 The Local Information Edit Screen

Use this screen to configure the Port Edit settings. Click Configuration > LLDP > Local Information > Edit to open this screen.

The following table describes the labels in this screen.

Table 123 Configuration > LLDP > Local Information > Edit

LABEL	DESCRIPTION
MED Port Location	
Port List	Displays the index number of the LLDP port(s). The value is made of 16 pairs of hexadecimal characters.

Table 123 Configuration > LLDP > Local Information > Edit (continued)

LABEL	DESCRIPTION
Location Coordinates	
Latitude	Latitude SHOULD be normalized to within 0-90 degrees with a maximum of 4 digits. It is possible to specify the direction to either North of the equator or South of the equator.
Longitude	Longitude SHOULD be normalized to within 0-180 degrees with a maximum of 4 digits. It is possible to specify the direction to either East of the prime meridian or West of the prime meridian.
Altitude	Altitude SHOULD be normalized to within -32767 to 32767 with a maximum of 4 digits. It is possible to select between two altitude types (floors or meters). Meters: Representing meters of Altitude defined by the vertical datum specified. Floors: Representing altitude in a form more relevant in buildings which have different floor-to-floor dimensions. An altitude = 0.0 is meaningful even outside a building, and represents ground level at the given latitude and longitude. Inside a building, 0.0 represents the floor level associated with ground level at the main entrance.
Map Datum	The Map Datum is used for the coordinates given in these options: WGS84: (Geographical 3D) - World Geodesic System 1984, CRS Code 4327, Prime Meridian Name: Greenwich. NAD83/ NAVD88: North American Datum 1983, CRS Code 4269, Prime Meridian Name: Greenwich; The associated vertical datum is the North American Vertical Datum of 1988 (NAVD88). This datum pair is to be used when referencing locations on land, not near tidal water (which would use Datum = NAD83/MLLW). NAD83/ MLLW: North American Datum 1983, CRS Code 4269, Prime Meridian Name: Greenwich; The associated vertical datum is Mean Lower Low Water (MLLW). This datum pair is to be used when referencing locations on water/sea/ocean.
Location Civic Address	IETF Geopriv Civic Address based Location Configuration Information (Civic Address LCI). - Country code: The two-letter ISO 3166 country code in capital ASCII letters - Example: DK, DE or US. - State: National subdivisions (state, canton, region, province, prefecture). - County: County, parish, gun (Japan), district. - City: City, township, shi (Japan) - Example: Copenhagen. - City district: City division, borough, city district, ward, chou (Japan). - Block (Neighborhood): Neighborhood, block. - Street: Street - Example: Poppelvej. - Leading street direction: Leading street direction - Example: N. - Trailing street suffix: Trailing street suffix - Example: SW. - Street suffix: Street suffix - Example: Ave, Platz. - House no.: House number - Example: 21. - House no. suffix: House number suffix - Example: A, 1/2. - Landmark: Landmark or vanity address - Example: Columbia University. - Additional location info: Additional location info - Example: South Wing. - Name: Name (residence and office occupant) - Example: Flemming Jahn. - Zip code: Postal/zip code - Example: 2791. - Building: Building (structure) - Example: Low Library. - Apartment: Unit (Apartment, suite) - Example: Apt 42. - Floor: Floor - Example: 4. - Room no.: Room number - Example: 450F. - Place type: Place type - Example: Office. - Postal community name: Postal community name - Example: Leonia. - P.O. Box: Post office box (P.O. BOX) - Example: 12345.

No. (dropdown)

Application (dropdown)

VLAN ID (1-4094)

VLAN Tag ☐ Tagged ☒ Untagged

L2 Priority (0-7)

DSCP Value (0-63)

The following table describes the labels in this screen.

Table 125 Configuration > LLDP > MED Network Policy > Edit

LABEL	DESCRIPTION
MED Port Location Edit	
No.	Select the index of network policy
Application	Select the Application type indicating the primary function of the application(s) defined for this network policy, advertised by an Endpoint or Network Connectivity Device. The possible application types are shown below. 1. Voice - for use by dedicated IP Telephony handsets and other similar appliances supporting interactive voice services. These devices are typically deployed on a separate VLAN for ease of deployment and enhanced security by isolation from data applications. 2. Voice Signalling - for use in network topologies that require a different policy for the voice signalling than for the voice media. 3. Guest Voice - to support a separate limited feature-set voice service for guest users and visitors with their own IP Telephony handsets and other similar appliances supporting interactive voice services. 4. Guest Voice Signalling - for use in network topologies that require a different policy for the guest voice signalling than for the guest voice media. 5. Softphone Voice - for use by softphone applications on typical data centric devices, such as PCs or laptops. 6. Video Conferencing - for use by dedicated Video Conferencing equipment and other similar appliances supporting real-time interactive video/audio services. 7. Streaming Video - for use by broadcast or multicast based video content distribution and other similar applications supporting streaming video services that require specific network policy treatment. Video applications relying on TCP with buffering would not be an intended use of this application type. 8. Video Signalling - for use in network topologies that require a separate policy for the video signalling than for the video media.

Table 125 Configuration > LLDP > MED Network Policy > Edit (continued)

LABEL	DESCRIPTION
VLAN ID	Enter the VLAN ID (VID) for the port as defined in IEEE 802.1Q-2003. A value of 1 through 4094 is used to define a valid VLAN ID. A value of 0 (Priority Tagged) is used if the device is using priority tagged frames as defined by IEEE 802.1Q-2003, meaning that only the IEEE 802.1D priority level is significant and the default PVID of the ingress port is used instead.
VLAN Tag	TAG is indicative of whether the specified application type is using a tagged or an untagged VLAN. Select Tagged or Untagged. Untagged: The device is using an untagged frame format and as such does not include a tag header as defined by IEEE 802.1Q-2003. Tagged: The device is using the IEEE 802.1Q tagged frame format.
L2 Priority	Priority is the Layer 2 priority to be used for the specified application type. One of the eight priority levels (0 through 7).
DSCP Value	DSCP is the DSCP value to be used to provide Diffserv node behavior for the specified application type as defined in IETF RFC 2474. Contain one of 64 code point values (0 through 63).
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

27.2.8 The MED Port Screen

LABEL	DESCRIPTION
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

Configuration: QoS

28.1 Overview

This section provides information for QoS (Quality of Service) in Configuration.

28.2 General

Quality of Service (QoS) refers to both a network's ability to deliver data with minimum delay, and the networking methods used to control the use of bandwidth. Without QoS, all traffic data is equally likely to be dropped when the network is congested. This can cause a reduction in network performance and make the network inadequate for time-critical application such as video-on-demand.

28.2.1 The Port Screen

Use this screen to view the Port settings. Click Configuration > QoS > General to open this screen.

Figure 162 Configuration > QoS > General

Port	Queue	CoS Mapping	DSCP Mapping	IP Precedence Mapping

☐	8	No Authentication	Enable	3600	60	30	2

The following table describes the labels in this screen.

Table 143 Configuration > Security > 802.1X > Port

LABEL	DESCRIPTION
Port	
Edit	Select this check box to configure the properties of a port. Click the Edit button change the properties of the port.
Port	Displays the port index value.
State	Displays the Trust status as enabled or disabled.
Reauthentication	Displays if Reauthentication function is enabled. If enabled, the subscriber has to periodically re-enter his or her username and password to stay connected to the port.
Reauthentication Period	Displays the Reauthentication period for the function: the period of time ften a client has to re-enter his or her username and password to stay connected to the port.
Quiet Period	Display the time out period to transmit request after receiving a rejection from the sever.
Supplicant Time out	Display the time out period to transmit a request when the client does not responded.
Max EAP Requests	Enter the maximum number of request retries.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

29.4.3 The Port Edit Screen

Use this screen to configure the Port settings. Click Configuration > Security > 802.1X > Port > Edit to open this screen.

Figure 178 Configuration > Security > 802.1X > Port > Edit

The following table describes the labels in this screen.

Table 144 Configuration > Security > 802.1X > Port > Edit

LABEL	DESCRIPTION
802.1X Port Edit	
Port List	Displays the port index value.
State	Displays the Trust status as enabled or disabled.
Reauthentication State	Specify if a subscriber has to periodically re-enter his or her username and password to stay connected to the port. Select Enable to activate feature.
Reauthentication Period	Specify how often a client has to re-enter his or her username and password to stay connected to the port.
Quiet Period	Display the time out period to transmit request after receiving a rejection from the sever.
Supplicant Period	Display the time out period to transmit a request when the client does not responded.
Maximum Request Retries	Enter the maximum number of request retries.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

29.5 DoS

The Switch protects against Denial of Service (DoS) attacks, such as Scan attack and Ping of Death. The goal of DoS attacks is not to steal information, but to disable a device or network on the Internet.

By default, the DoS feature is disabled. You need to enable it on the Switch and its port(s). See [Table 148 on page 190](#) for the types of DoS attacks that the Switch prevents when you turn on this feature. You cannot set the Switch to block a specific type of DoS attacks.

Note: DoS protection doesn't work on LACP-enabled ports.

29.5.1 The Global Screen

Use this screen to view the Global settings. Click Configuration > Security > DoS > Global to open this screen.

Figure 179 Configuration > Security > DoS > Global

The following table describes the labels in this screen.

Table 145 Configuration > Security > DoS > Global

LABEL	DESCRIPTION
Global	
State	Select the DoS security setting to be enabled or disabled.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

29.5.2 The Port Screen

Use this screen to view the Port settings. Click Configuration > Security > DoS > Port to open this screen.

Figure 180 Configuration > Security > DoS > Port

	Port	State

☐	2	Disable
☐	3	Disable
☐	4	Disable
☐	5	Disable
☐	6	Disable
☐	7	Disable
☐	8	Disable

The following table describes the labels in this screen.

Table 146 Configuration > Security > DoS > Port

LABEL	DESCRIPTION
Port	
Edit	Select this check box to configure the properties of a port. Click the Edit button change the properties of the port.
Port	Displays the port index value.
State	Displays the port's DoS feature as Enable or Disable.

29.5.3 The Port Edit Screen

Use this screen to configure the Port settings.

Click Configuration > Security > DoS > Port > Edit to open this screen.

Figure 181 Configuration > Security > DoS > Port > Edit

The following table describes the labels in this screen.

Table 147 Configuration > Security > DoS > Port > Edit

LABEL	DESCRIPTION
Port	
Port List	Displays the port index value.
State	Select Enable to activate the port's DoS feature.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

29.5.4 DoS Attack Types

The following table describes the types of DoS attacks that the Switch can prevent when you enable the DoS feature on the Switch and the port(s).

Table 148 DoS Attack Types

TYPE	PACKET TYPE	DESCRIPTION
DA_EQUAL_SA	Layer 2	These attacks result from sending a specially crafted packet to a machine where the source MAC address is the same as the destination MAC address. The system attempts to reply to itself, resulting in system lockup.
LAND	Layer 3 IPv4/IPv6	These attacks result from sending a specially crafted packet to a machine where the source host IPv4/IPv6 address is the same as the destination host IPv4/IPv6 address. The system attempts to reply to itself, resulting in system lockup.
UDP_BLAT / TCP_BLAT (Blat Attack)	Layer 3 IPv4/IPv6	These attacks result from sending a specially crafted packet to a machine where the source host UDP/TCP port is the same as the destination host UDP/TCP port. The system attempts to reply to itself, resulting in system lockup.
PoD (Ping of Death)	Layer 3 IPv4/IPv6	Ping of Death uses a "ping" utility to create and send an IP packet that exceeds the maximum 65,536 bytes of data allowed by the IP specification. This may cause systems to crash, hang or reboot.
IPv6_FRAG_LEN_MIN	Layer 3 IPv6	This attack uses IPv6 fragmented packets (excluding the last one) whose payload length is less than 1240 bytes.
ICMP_FRAG_PKT	Layer 3 IPv4/IPv6	This attack uses many small fragmented ICMP packets.
ICMPv4_PING_MAX / ICMPv6_PING_MAX	Layer 3 IPv4/IPv6	This attack uses Ping packets whose length is larger than 512 bytes.
SMURF	Layer 3 IPv4	This attack uses Internet Control Message Protocol (ICMP) echo requests packets (pings) to cause network congestion or outages.
SYNchronization (SYN), ACKnowledgment (ACK) and FINish (FIN) packets are used to initiate, acknowledge and conclude TCP/IP communication sessions. The following scans exploit weaknesses in the TCP/IP specification and try to illicit a response from a host to identify ports for an attack:		
TCP_HDR_LEN_MIN	Layer 3 IPv4	TCP packets with header length less than 20 bytes.
SYN_SPORT_LESS_1024	Layer 3 IPv4/IPv6	TCP SYN packets with source port less than 1024.
NULL_SCAN (Scan Attack)	Layer 3 IPv4/IPv6	TCP sequence number is zero and all control bits are zeroes.
XMAS (Scan Attack)	Layer 3 IPv4/IPv6	TCP sequence number is zero and the FIN, URG and PSH bits are set.
SYN_FIN	Layer 3 IPv4/IPv6	SYN and FIN bits are set in the TCP packet.

Configuration: AAA

30.1 Overview

This section provides information for AAA in Configuration.

Use the AAA screens to configure authentication, authorization and accounting settings on the Switch.

30.2 Auth Method

Authentication is the process of determining who a user is and validating access to the Switch. The Switch can authenticate users who try to log in based on user accounts configured on the Switch itself. The Switch can also use an external authentication server to authenticate a large number of users.

30.2.1 The Auth Method Screen

Use this screen to view the Auth Method settings. Click Configuration > AAA > Auth Method to open this screen.

Figure 182 Configuration > AAA > Auth Method

Name	Method List	Action
default	Local	

The following table describes the labels in this screen.

Table 149 Configuration > AAA > Auth Method

LABEL	DESCRIPTION
Auth Method	
Add	Click Add to create a new Auth Method entry.
Name	Displays the authentication method name. The name can be between 1 and 31 ASCII Alphanumeric Characters.
Method List	Displays the list of authentication methods as being Local or Radius or TACACS+ .
Action	Click the Action button to change the configuration settings for a VLAN entry.

30.2.2 The Auth Method Add/Modify Screen

Use this screen to configure the Auth Method settings. Click Configuration > AAA > Auth Method > Add/Modify to open this screen.

Figure 183 Configuration > AAA > Auth Method > Add/Modify

The following table describes the labels in this screen.

Table 150 Configuration > AAA > Auth Method > Add/Modify

LABEL	DESCRIPTION
Auth Method	
Name	Enter the authentication method name. The name can be between 1 and 31 ASCII Alphanumeric Characters.
Method 1	Select the first authentication method as being Local, Radius, or TACACS+.
Method 2	Select the second authentication method as being Empty, Local, Radius, or TACACS+.
Method 3	Select the third authentication method as being Empty, Local, Radius, or TACACS+.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

30.3 RADIUS

30.3.1 The RADIUS Screen

Use this screen to configure the RADIUS settings. Click Configuration > AAA > RADIUS to open this screen.

Figure 184 Configuration > AAA > RADIUS

The following table describes the labels in this screen.

Table 151 Configuration > AAA > RADIUS

LABEL	DESCRIPTION
Server	
Add	Click Add to create a new Server entry.
Server	Displays the server name(s) as an IP address or a domain name.
Auth Port	Displays the authentication port number(s) as a value between 0 and 65535.
Key	Displays the authentication key.
Time out	Displays the number of time outs for replies. The value can be between 1 and 30 seconds.
Retries	Displays the number of retries. The value can be between 1 and 30.
Priority	Displays the server priority as High or Low.
Usage Type	Displays the server usage type as Login, 802.1X, or All.
Action	
Edit	Click to Edit modify the entry.
Modify	Click Delete to delete the entry.

30.3.2 The RADIUS Add/Modify Screen

Use this screen to configure the RADIUS settings. Click Configuration > AAA > RADIUS > Add/Modify to open this screen.

Figure 185 Configuration > AAA > RADIUS > Add/Modify

The following table describes the labels in this screen.

Table 152 Configuration > AAA > RADIUS > Add/Modify

LABEL	DESCRIPTION
RADIUS	
Server	Enter the server name(s) as an IP address or a domain name.

Table 152 Configuration > AAA > RADIUS > Add/Modify (continued)

LABEL	DESCRIPTION
Authentication Port	Enter the authentication port number(s) as a value between 0 and 65535.
Key String	Enter the authentication key string: 0 - 63 ASCII Alphanumeric Characters.
Timeout for Reply	Enter the number of time outs for replies. The value can be between 1 and 30 seconds.
Retries	Enter the number of retries. The value can be between 1 and 30.
Server Priority	Select the server priority as High or Low .
Usage	Select the server usage type as Login, 802.1X, or All.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

30.4 TACACS+

30.4.1 The TACACS+ Screen

Use this screen to configure the TACACS+ settings. Click Configuration > AAA > TACACS+ to open this screen.

Figure 186 Configuration > AAA > TACACS+

Server	Port	key	Timeout	Priority	Action
--------	------	-----	---------	----------	--------

The following table describes the labels in this screen.

Table 153 Configuration > AAA > TACACS+

LABEL	DESCRIPTION
Server	
Add	Click Add to create a new Server entry.
Server	Displays the server name(s) as an IP address or a domain name.
Port	Displays the port number(s) as a value between 0 and 65535.
Key	Displays the authentication key.
Timeout	Displays the number of time outs for replies. The value can be between 1 and 30 seconds.
Priority	Displays the priority as High or Low .
Action	
Edit	Click to Edit modify the entry.
Modify	Click Delete to delete the entry.

30.4.2 The TACACS+ Add/Modify Screen

Use this screen to configure the TACACS+ settings. Click Configuration > AAA > TACACS+ > Add/Modify to open this screen.

Figure 187 Configuration > AAA > TACACS+ > Add/Modify

The following table describes the labels in this screen.

Table 154 Configuration > AAA > TACACS+ > Add/Modify

LABEL	DESCRIPTION
TACACS+	
Server	Enter the server name(s) as an IP address or a domain name.
Port	Enter the port number(s) as a value between 0 and 65535.
Key String	Enter the authentication key string: 0 - 63 ASCII alphanumeric characters.
Timeout for Reply	Enter the number of time outs for replies. The value can be between 1 and 30 seconds.
Priority	Select the server priority as High or Low.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

Configuration: Management

31.1 Overview

This section provides information for Management in Configuration.

Use the Management screens to configure settings on the Switch. The following submenus are accessed from this section: Syslog, SNMP, Error Disable, HTTP/ HTTPS, Users, Remote Access Control.

31.2 Syslog

31.2.1 The Global Screen

Use this screen to view the Global settings. Click Configuration > Management > Syslog to open this screen.

Figure 188 Configuration > Management > Syslog

The following table describes the labels in this screen.

Table 155 Configuration > Management > Syslog

LABEL	DESCRIPTION
Global	
State	Select the global logging setting to be enabled or disabled.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

31.2.2 The Local Screen

Use this screen to view the Local settings. Click Configuration > Management > Syslog > Local to open this screen.

Figure 189 Configuration > Management > Syslog > Local

Target	Severity	Action
Buffered	notice	

The following table describes the labels in this screen.

Table 156 Configuration > Management > Syslog > Local

LABEL	DESCRIPTION
Local	
Add	Click Add to create a new Local entry.
Target	Displays the local storage target for logging messages. The options are Buffered or Flash.
Severity	Displays the severity level of messages to be written to logs.
Action	
Edit	Click Edit to make changes to the entry.
Delete	Click Delete to remove the entry.

31.2.3 The Local Add/Modify Screen

Use this screen to configure the Local settings. Click Configuration > Management > Syslog > Local > Add/Modify to open this screen.

Figure 190 Configuration > Management > Syslog > Local > Add/Modify

Local

Target ☒ Buffered ☐ Flash

Severity

The following table describes the labels in this screen.

Table 157 Configuration > Management > Syslog > Local > Add/Modify

LABEL	DESCRIPTION
Local Add	
Target	Select the local storage target for logging messages. The options are Buffered or Flash.
Severity	Select the severity level of messages to be written to logs.

Table 157 Configuration > Management > Syslog > Local > Add/Modify (continued)

LABEL	DESCRIPTION
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

31.2.4 The Remote Screen

Use this screen to view the Remote settings. Click Configuration > Management > Syslog > Remote to open this screen.

Figure 191 Configuration > Management > Syslog > Remote

The following table describes the labels in this screen.

Table 158 Configuration > Management > Syslog > Remote

LABEL	DESCRIPTION
Local	
Add	Click Add to create a new Remote entry.
Server	Displays the server information which includes the server IP address and port number.
Severity	Displays the severity level of messages to be written to logs.
Facility	Displays the facility designation of the remote entry.
Action	
Edit	Click Edit to make changes to the entry.
Delete	Click Delete to remove the entry.

31.2.5 The Remote Add/Modify Screen

Use this screen to configure the Remote settings. Click Configuration > Management > Syslog > Remote > Add/Modify to open this screen.

Figure 192 Configuration > Management > Syslog > Remote > Add/Modify

The following table describes the labels in this screen.

Table 159 Configuration > Management > Syslog > Remote > Add/Modify

LABEL	DESCRIPTION
Remote	
Server	Enter a server IP address or domain name.
Server Port	Enter a server port number.
Severity	Select the severity level of messages to be written to logs.
Facility	Select the facility from the dropdown list.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

31.3 SNMP

Simple Network Management Protocol (SNMP) is an application layer protocol used to manage and monitor TCP/IP-based devices. SNMP is used to exchange management information between the network management system (NMS) and a network element (NE). A manager station can manage and monitor the Switch through the network via SNMP version 1 (SNMPv1), SNMP version 2c or Table 170 Access Control Overview Console Port SSH Telnet FTP Web SNMP One session Share up to nine sessions One session Up to five accounts No limit Chapter 42 Access Control 338 GS3700/XGS3700 Series User's Guide SNMP version 3. The next figure illustrates an SNMP management operation. SNMP is only available if TCP/IP is configured.

31.3.1 The Global Screen

Use this screen to view the Global settings. Click Configuration > Management > SNMP to open this screen.

Figure 193 Configuration > Management > SNMP

The following table describes the labels in this screen.

Table 160 Configuration > Management > SNMP

LABEL	DESCRIPTION
Global	
State	Select the global SNMP setting to be enabled or disabled.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

31.3.2 The Community Screen

Use this screen to view the Community settings. Click Configuration > Management > SNMP > Community to open this screen.

Figure 194 Configuration > Management > SNMP > Community

The screenshot shows the 'SNMP Community' configuration page. At the top, there are tabs: Global, Community (selected), Group, User, Trap, and Trap Destination. Below the tabs, there is a section titled 'SNMP Community'. Inside this section, there is an 'Add' button with a green plus icon. Below the button is a table with three columns: Community Name, Access Right, and Action. The table contains one row with the values 'public', 'Read-Write', and a delete icon (trash can).

Community Name	Access Right	Action
public	Read-Write	

The following table describes the labels in this screen.

Table 161 Configuration > Management > SNMP > Community

LABEL	DESCRIPTION
SNMP community	
Add	Click Add to create a new SNMP Community entry.
Community Name	Displays a string identifying the community name that this entry should belong to. The allowed string length is 1 to 20, and the allowed content is ASCII characters from 33 to 126.
Access Right	Displays the access mode for this entry. The possible values are Read-Only and Read-Write.
Action	
Edit	Click Edit to make changes to the entry.
Delete	Click Delete to remove the entry.

31.3.3 The Community Add/Modify Screen

Use this screen to configure the Community settings. Click Configuration > Management > SNMP > Community > Add/ Modify to open this screen.

Figure 195 Configuration > Management > SNMP > Community > Add/Modify

The screenshot shows the 'SNMP Community Add/Modify' configuration page. At the top, there are tabs: Global, Community (selected), Group, User, Trap, and Trap Destination. Below the tabs, there is a section titled 'SNMP Community'. Inside this section, there are two input fields: 'Community Name' with a text box, and 'Access Right' with two radio buttons: 'Read-Only' (selected) and 'Read-Write'. At the bottom right, there are two buttons: 'Apply' and 'Cancel'.

The following table describes the labels in this screen.

Table 162 Configuration > Management > SNMP > Community > Add/Modify

LABEL	DESCRIPTION
SNMP Community	
Community Name	Enter a string identifying the community name that this entry should belong to. The allowed string length is 1 to 20, and the allowed content is ASCII characters from 33 to 126.
Access Right	Select the access mode for this entry. The possible values are Read-Only and Read-Write.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

31.3.4 The Group Screen

Use this screen to view the Group settings. Click Configuration > Management > SNMP > Group to open this screen.

Figure 196 Configuration > Management > SNMP > Group

The following table describes the labels in this screen.

Table 163 Configuration > Management > SNMP > Group

LABEL	DESCRIPTION
SNMPv3 Group	
Add	Click Add to create a new SNMPv3 Group entry.
Group Name	Displays a string identifying the group name that this entry should belong to. The allowed string length is 1 to 30, and the allowed content is ASCII characters from 33 to 126.
Security Model	Displays the security model that this entry belongs to. Possible security models are: - any: Any security model accepted(v1 v2c usm). - v1: Reserved for SNMPv1. - v2c: Reserved for SNMPv2c. - usm: User-based Security Model (USM).
Security Level	Displays the security model that this entry belongs to. Possible security models are: - NoAuth, NoPriv: No authentication and no privacy. - Auth, NoPriv: Authentication and no privacy. - Auth, Priv: Authentication and privacy.
Access Right	Displays the access mode for this entry. The possible values are Read Only and Read-Write.
Action	
Edit	Click Edit to make changes to the entry.
Delete	Click Delete to remove the entry.

31.3.5 The Group Add/Modify Screen

Use this screen to configure the Group settings. Click Configuration > Management > SNMP > Group > Add/Modify to open this screen.

Figure 197 Configuration > Management > SNMP > Group > Add/Modify

The following table describes the labels in this screen.

Table 164 Configuration > Management > SNMP > Group > Add/Modify

LABEL	DESCRIPTION
SNMPv3 Group Edit	
Group Name	Enter a string identifying the group name that this entry should belong to. The allowed string length is 1 to 30, and the allowed content is ASCII characters from 33 to 126.
Security Level	Select the security model that this entry belongs to. Possible security models are: - NoAuth, NoPriv: No authentication and no privacy. - Auth, NoPriv: Authentication and no privacy. - Auth, Priv: Authentication and privacy.
Access Right	Select the access mode for this entry. The possible values are Read-Only and Read-Write.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

31.3.6 The User Screen

Use this screen to view the User settings. Click Configuration > Management > SNMP > User to open this screen.

Figure 198 Configuration > Management > SNMP > User

User Name	Group	Privilege Mode	Authentication Protocol	Encryption Protocol	Access Right	Action
username	GroupName	noauth	none	none	ro	

The following table describes the labels in this screen.

Table 165 Configuration > Management > SNMP > User

LABEL	DESCRIPTION
SNMP User	
Add	Click Add to create a new SNMP user.
User Name	Displays a string identifying the user name that this entry belongs to. The allowed string length is 1 to 30, and the allowed content is ASCII characters from 33 to 126.
Group	Displays a string identifying the group name that this entry belongs to. The allowed string length is 1 to 30, and the allowed content is ASCII characters from 33 to 126.
Privilege Mode	Displays the privilege mode that this entry belongs to.
Authentication Protocol	Displays the authentication protocol that this entry belongs to. Possible authentication protocols are: • None: No authentication protocol. • MD5: An optional flag to indicate that this user uses MD5 authentication protocol. • SHA: An optional flag to indicate that this user uses SHA authentication protocol. The value of the security level cannot be modified if the entry already exists. That means you must first ensure that the value is set correctly.
Encryption Protocol	Displays the encryption protocol that this entry belongs to.
Access Right	Displays the access mode for this entry. The possible values are Read-Only and Read-Write.
Action	
Delete	Click Delete to remove the entry.

31.3.7 The User Add/Modify Screen

Use this screen to configure the User settings. Click Configuration > Management > SNMP > User > Add/ Modify to open this screen.

Figure 199 Configuration > Management > SNMP > User > Add/Modify

The screenshot shows the 'SNMP User' configuration window. It features a tabbed interface with 'User' selected. The form includes input fields for 'User Name', 'Group Name' (with a dropdown), 'Auth Password', and 'Priv Password'. The 'Auth Protocol' section has radio buttons for 'MD5' (selected) and 'SHA'. 'Apply' and 'Cancel' buttons are at the bottom right.

The following table describes the labels in this screen.

Table 166 Configuration > Management > SNMP > User > Add/Modify

LABEL	DESCRIPTION
SNMP User	
User Name	Enter a string identifying the user name that this entry belongs to. The allowed string length is 1 to 30, and the allowed content is ASCII characters from 33 to 126.
Group Name	Enter a string identifying the group name that this entry belongs to. The allowed string length is 1 to 30, and the allowed content is ASCII characters from 33 to 126.
Auth Protocol	Select the authentication protocol that this entry belongs to. Possible authentication protocols are: - MD5: An optional flag to indicate that this user uses MD5 authentication protocol. - SHA: An optional flag to indicate that this user uses SHA authentication protocol. The value of the security level cannot be modified if the entry already exists. That means you must first ensure that the value is set correctly.
Auth Password	Enter a string identifying the authentication password phrase. For MD5 authentication protocol, the allowed string length is 8 to 32. For SHA authentication protocol, the allowed string length is 8 to 32. The allowed content is ASCII characters from 33 to 126.
Priv password	Enter a string identifying the privacy password phrase. The allowed string length is 8 to 64 and the allowed content is ASCII characters from 33 to 126.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

31.3.8 The Trap Screen

Use this screen to configure the Trap settings. Click Configuration > Management > SNMP > Trap to open this screen.

Figure 200 Configuration > Management > SNMP > Trap

Global	Community	Group	User	Trap	Trap Destination
SNMP Trap					
SNMP Authfailure Trap State		☒ Enable ☐ Disable			
SNMP LinkupDown Trap State		☒ Enable ☐ Disable			
SNMP Warm-Start Trap State		☒ Enable ☐ Disable			
SNMP Cold-Start Trap State		☒ Enable ☐ Disable			
					Apply Cancel

The following table describes the labels in this screen.

Table 167 Configuration > Management > SNMP > Trap

LABEL	DESCRIPTION
SNMP Trap	
SNMP Authfailure Trap State	Select the SNMP entity is permitted to generate authentication failure traps. Possible modes are: - Enabled: Enable SNMP trap authentication failure. - Disabled: Disable SNMP trap authentication failure.
SNMP LinkupDown Trap State	Select the SNMP trap link-up and link-down mode operation. Possible modes are: - Enabled: Enable SNMP trap link-up and link-down mode operation. - Disabled: Disable SNMP trap link-up and link-down mode operation.
SNMP Warm-Start Trap State	Reboot using software or hardware button reboot.
SNMP Cold-Start Trap State	Reboot though power off.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

31.3.9 The Trap Destination Screen

Use this screen to view the Trap Destination settings. Click Configuration > Management > SNMP > Trap Destination to open this screen.

Figure 201 Configuration > Management > SNMP > Trap Destination

Server	Version	Community/User Name	UDP Port	Action
192.168.1.1	v1	public	162	

The following table describes the labels in this screen.

Table 168 Configuration > Management > SNMP > Trap Destination

LABEL	DESCRIPTION
SNMP Trap Host	
Add	Click Add to create a new SNMP Trap Host entry.
Server	Displays a string identifying the server address that this entry belongs to.
Version	Indicates the SNMP trap supported version. Possible versions are: - SNMP v1: Set SNMP trap supported version 1. - SNMP v2c: Set SNMP trap supported version 2c. - SNMP v3: Set SNMP trap supported version 3.
Community/User Name	Displays the community / user name that this entry belongs to.
UDP Port	Displays the trap use destination for the UDP port.
Action	
Delete	Click Delete to remove the entry.

31.3.10 The Trap Destination Add/Modify Screen

Use this screen to configure the Trap Destination settings. Click Configuration > Management > SNMP > Trap Destination > Add/Modify to open this screen.

Figure 202 Configuration > Management > SNMP > Trap Destination > Add/Modify

The following table describes the labels in this screen.

Table 169 Configuration > Management > SNMP > Trap Destination > Add/Modify

LABEL	DESCRIPTION
SNMP Trap Destination	
Server	Enter the IP address of the server or a string identifying the server address that this entry belongs to.
Version	Select the SNMP trap supported version. Possible versions are: - SNMP v1: Set SNMP trap supported version 1. - SNMP v2c: Set SNMP trap supported version 2c. - SNMP v3: Set SNMP trap supported version 3.
Community Name	Displays the community name that this entry belongs to.
User Name	Displays the user name that this entry belongs to.
UDP Port	Enter a UDP port for this entry.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

31.4 Error Disable

31.4.1 The Error Disabled Screen

Use this screen to configure the Error Disabled settings. Click Configuration > Management > Error Disable to open this screen.

Figure 203 Configuration > Management > Error Disable

The following table describes the labels in this screen.

Table 170 Configuration > Management > Error Disable

LABEL	DESCRIPTION
Error Disabled Settings	
Recovery Interval	Enter the recovery interval value.
Broadcast Flood	Select an option to Enable or Disable the Broadcast Flood.
Unknown Multicast Flood	Select an option to Enable or Disable the Unknown Multicast Flood.
Unicast Flood	Select an option to Enable or Disable the Unicast Flood.
Port Security	Select an option to Enable or Disable the Port Security.
POE Inline Power	Select an option to Enable or Disable the POE Inline Power.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

31.5 HTTP/HTTPS

31.5.1 The HTTP Screen

Use this screen to configure the HTTP settings. Click Configuration > Management > HTTP/HTTPS to open this screen.

State ☒ Enable ☐ Disable

Authentication Method default

Session Timeout 10 (0-86400 min)

Apply Cancel

The following table describes the labels in this screen.

Table 172 Configuration > Management > HTTP/HTTPS > HTTPS

LABEL	DESCRIPTION
HTTPS	
State	Select the HTTPS mode operation. Possible modes are: Enabled: Enable HTTPS mode operation.
Authentication Method	Select the authentication method from the dropdown list.
Session Timeout	Enter the session timeout value. The timeout can be between 0 and 86400 minutes.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

31.6 Users

31.6.1 The Users Screen

Use this screen to configure the Users settings. Click Configuration > Management > Users to open this screen.

Figure 206 Configuration > Management > Users

User	Password	Privilege Level	Action
admin	*****	Admin	

The following table describes the labels in this screen.

Table 173 Configuration > Management > Users

LABEL	DESCRIPTION
Users	
Add	Click Add to create a new User entry.
User	A string identifying the user name that this entry should belong to. The allowed string length is 1 to 32. The valid user name is a combination of letters, numbers and underscores.
Encryption	Displays the encryption status. The values can be Clear Text, Encrypted, and No Password.
Password	Displays the password of the user. The allowed string length is 0 to 32.
Privilege Level	Displays the privilege level of the user, range: admin and user.
Action	
Edit	Click Edit to make changes to the entry.

31.6.2 The Users Add/Modify Screen

Use this screen to configure the Users settings. Click Configuration > Management > Users > Add/Modify to open this screen.

Figure 207 Configuration > Management > Users > Add/Modify

The following table describes the labels in this screen.

Table 174 Configuration > Management > Users > Add/Modify

LABEL	DESCRIPTION
Add New Local User	
User	Enter a string identifying the user name that this entry should belong to. The allowed string length is 1 to 32. The valid user name is a combination of letters, numbers and underscores.
Encryption	Select the encryption type. The values can be Clear Text, Encrypted, and No Password.
Password	Enter a password for the user. The allowed string length is 0 to 32.
Password Confirm	Enter the same password again to confirm.
Privilege Level	Select the privilege level of the user range: admin and user.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

31.7 Remote Access Control

31.7.1 The Global Screen

Use this screen to configure the Global settings. Click Configuration > Management > Remote Access Control to open this screen.

Figure 208 Configuration > Management > Remote Access Control

Profile

Add

No.	Action	Source IP	Source IP Mask	Port	Service	Action
1	Permit	All	---	1	ALL	

The following table describes the labels in this screen.

Table 175 Configuration > Management > Remote Access Control

LABEL	DESCRIPTION
Global	
State	Select the global remote access setting to be enabled or disabled.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.
Profile	
Add	Click Add to create a new profile entry.
No.	Displays the priority level of the entry. The value can be between 1 and 16.
Action	Displays the action value. The values are Permit or Deny.
Source IP	Display the source IP value.
Source IP Mask	Displays the source IP wildcard.
Port	Display the port value.
Service	Display the service used for remote access. The values are ALL, HTTP, HTTPS, or SNMP.
Action	
Edit	Click Edit to make changes to the entry.
Delete	Click Delete to remove the entry.

31.7.2 The Profile Add/Modify Screen

Use this screen to configure the Profile settings. Click Configuration > Management > Remote Access Control > Profile > Add/ Modify to open this screen.

Figure 209 Configuration > Management > Remote Access Control > Profile > Add/Modify

The screenshot shows the 'Remote Access Control' configuration window. The 'Management Access List' section is active. It includes fields for 'No.' (1-16), 'Action' (Permit/Deny), 'Port' (Available/Acting list), 'Source' (ALL/IPv4/Wildcard), and 'Service' (ALL). The 'Available' port list contains numbers 1 through 8. The 'Acting' port list is empty. The 'Source' is set to 'ALL'. The 'Service' is set to 'ALL'. 'Apply' and 'Cancel' buttons are at the bottom.

The following table describes the labels in this screen.

Table 176 Configuration > Management > Remote Access Control > Profile > Add/Modify

LABEL	DESCRIPTION
Management Access List Add	
No.	Enter the priority level of the entry. The value can be between 1 and 16.
Action	Select the action value. The values are Permit or Deny.
Port	Select a value in Available and click the Add (>) icon to transfer to the Acting column. Select a value in Acting and click the Remove (<) icon to transfer to the Available column.
Source	Select the source IP value. The options are ALL or IPv4/Wildcard.
IPv4/Wildcard	Select and enter the IPv4/Wildcard source.
Service	Select the service to use for remote access. The values are ALL, HTTP, HTTPS, or SNMP.
Apply	Click Apply to save the changes.
Cancel	Click Cancel to discard the changes.

Maintenance

32.1 Firmware Upgrade

32.1.1 Overview

Firmware updates contain bug fixes and fixes for security vulnerabilities. It is recommended to keep the Switch's firmware up to date. You can upgrade the Switch's firmware manually using a file downloaded on your computer or through the online web configurator.

Note: Be sure to upload the correct model firmware as uploading the wrong model firmware may damage your device.

From the Maintenance screen, display the Upload screen as shown next. Use this screen to upgrade the Switch firmware.

Figure 210 Maintenance > Firmware > Upload

The following table describes the labels under Upload.

Table 177 Maintenance > Firmware > Upload

LABEL	DESCRIPTION
Method	Choose HTTP to use the web configurator for the firmware upload. Alternatively, choose TFTP to download the firmware from a TFTP server.
Server IP	To download from a TFTP server, enter the TFTP server IP address.
File Name	Enter the name of the firmware file on the TFTP server.
Image	Choose Backup to upload the firmware file as the backup image. Alternatively, choose Active to upload the firmware file as the active image.
Browse File	Browse to the path on your computer where the firmware you want to upload to be the active image is kept.

Upgrade the firmware from a file on a server

Follow the steps below to upgrade the firmware from a TFTP server.

1. In Method, choose TFTP.
2. In Server IP, enter the TFTP server IP address.
3. In File Name, enter the name of the firmware file on the TFTP server.
4. In Image, choose Backup to upload the firmware file as the backup image.
OR
Choose Active to upload the firmware file as the active image.
5. Click Apply to upgrade the chosen image.
OR
Click Cancel to discard the changes.

After the firmware upgrade process is complete, see the System Info screen to verify your current firmware version number.

32.1.2 Upgrade the firmware from a file on your computer

Note: For manual upgrade, make sure you have downloaded (and unzipped) the correct model firmware and version to your computer before uploading it to the device. The file name should have a .bin extension.

Follow the steps below to upgrade the firmware from a file on your computer.

1. In Method, choose HTTP.
2. In Image, choose Active to upload the firmware file on the active partition image.
OR
Choose Backup to upload the firmware file on the Backup partition image.
3. Click Browse to display the Choose File screen from which you can locate the firmware file in the bin format on your computer.
4. Click Apply to upload the chosen file.
OR
Click Cancel to discard the changes.

After the firmware upgrade process is complete, see the System Info screen to verify your current firmware version number.

32.2 Firmware Management

32.2.1 Overview

The Firmware Management screen provides instant access to the firmware versions installed on your Switch. Active and backup firmware versions are saved as images on flash partitions. The backup image is used when the active partition has problems during boot.

From the Maintenance screen, display the Firmware Management screen as shown next. Use this screen to view image information and activate an image.

Figure 211 Maintenance > Firmware > Management

Image Select

Active Image ☒ V100AAHI0b4.bix (Backup) ☐ V100AAHI0b4.bix (Active)

Images Information

V100AAHI0b4.bix		Backup
Flash Partition		0
Image Size		5404428 Bytes
Created Time		2013-05-11 12:24:09 UTC

V100AAHI0b4.bix		Active
Flash Partition		1
Image Size		5404428 Bytes
Created Time		2013-05-11 12:24:09 UTC

The following table describes the labels shown under Images Information.

Table 178 Maintenance > Firmware > Management

LABEL	DESCRIPTION
Flash Partition	Displays the partition number.
Firmware Version	Displays the name given to the partition image, if any. This field also displays the image type: Active or Backup.
Image Size	Displays the size of the partition image in bytes.
Created Time	Displays the date and time when the image was created in the Coordinated Universal Time (UTC) format.

32.2.2 Activate the Backup Image

The current active partition is shown under Image Select.

Follow the steps below to choose the backup image if you are facing problems with the active partition during boot.

1. In Active Image, choose Partition0 (Backup).
2. Click Apply to activate the backup image.
OR
Click Cancel to discard the changes.

32.3 Backup a Configuration File

32.3.1 Overview

You can save various “snapshots” of your device to the server or your computer and restore them at a later date, if required.

From the Maintenance screen, display the Backup screen as shown next. Use this screen to back up your current Switch configuration and log files to a server or as local files to your computer.

Figure 212 Maintenance > Configuration > Backup

The following table describes the labels under Backup.

Table 179 Maintenance > Configuration > Backup

LABEL	DESCRIPTION
Method	Choose HTTP to use the web configurator to backup the configuration. Alternatively, choose TFTP to upload the snapshot to a TFTP server.
Server IP	To upload the backup to a TFTP server, enter the TFTP server IP address.
Content	Choose the type of file for backup. You can back up configuration files (running, startup, or backup) or log files (flash or buffer). There are three different types of configuration files: Startup - this is the configuration used when the switch is booting up. Running - this is the configuration when the switch is running. Backup - this is saved in the Switch. If you make changes to the current configuration, and there are problems, you can revert to the Backup configuration without having to restore a new file.

32.3.2 Back up configuration or log files to a server

Follow the steps below to backup configuration or log files to a TFTP server.

1. In Method, choose TFTP.
2. In Server IP, enter the TFTP server IP address.
3. In Content, choose any one file type.
4. Click Apply to save a snapshot of your current configuration to the TFTP server.
OR
Click Cancel to discard the changes.

32.3.3 Back up configuration or log files to your computer

Follow the steps below to backup configuration or log files to your computer.

1. In Method, choose HTTP.
2. In Content, choose any one file type.
3. Click Apply to display the Save File screen from which you can save the configuration file in the cfg format or the log file in the log format to your computer.
OR
Click Cancel to discard the changes.

32.4 Restore a Configuration File

32.4.1 Overview

You can restore a previously saved device configuration from the server or your computer.

From the Maintenance screen, display the Restore screen as shown next. Use this screen to restore a previously saved configuration from a server or your computer.

Figure 213 Maintenance > Configuration > Restore

The following table describes the labels under Configuration Restore.

Table 180 Maintenance > Configuration > Restore

LABEL	DESCRIPTION
Method	Choose HTTP to use the web configurator for restoring the configuration file. Alternatively, choose TFTP to download the snapshot from a TFTP server.
Server IP	To download from a TFTP server, enter the TFTP server IP address.
File Name	Enter the name of the configuration file on the TFTP server.
Browse File	Browse to the path on your computer where the configuration you want to upload to be the active image is kept.

32.4.2 Restore the configuration from a file on a server

Follow the steps below to restore the configuration from a server.

1. In Method, choose TFTP.
2. In Server IP, enter the TFTP server IP address.
3. In File Name, enter the name of the configuration file on the TFTP server.

4. Click Apply to restore to the chosen file as the running configuration.
OR
Click Cancel to discard the changes.

32.4.3 Restore the configuration from a file on your computer

Follow the steps below to restore the configuration from a file on your computer.

1. In Method, choose HTTP.
2. Click Browse to display the Choose File screen from which you can locate the configuration file in the cfg format on your computer.
3. Click Apply to restore to the chosen file as the running configuration.
OR
Click Cancel to discard the changes.

32.5 Manage Configuration Files

32.5.1 Overview

The Configuration Management screen provides instant access to the configuration files of your Switch. You can overwrite the startup and backup configurations with the current running, startup, or backup configuration file.

From the Maintenance screen, display the Management screen as shown next. Use this screen to replace startup and backup configuration files.

Figure 214 Maintenance > Configuration > Management

The screenshot shows the 'Configuration Management' window with tabs for Backup, Restore, Management, and Factory Default. The 'Management' tab is active. Below the tabs, the 'File Management' section contains two groups of radio buttons. The 'Source File' group has three options: 'Running configuration' (selected), 'Startup configuration', and 'Backup configuration'. The 'Destination File' group has two options: 'Startup configuration' (selected) and 'Backup configuration'. At the bottom right, there are 'Apply' and 'Cancel' buttons.

Follow the steps to overwrite the startup or backup configuration file.

1. In Source File, select the file to be used as a reference.
2. In Destination File, select the file to be overwritten.
3. Click Apply to restore to overwrite the destination file with the source file.
OR
Click Cancel to discard the changes.

32.6 Reset to Factory Defaults

32.6.1 Overview

You can reset the Switch to its original settings.

From the Maintenance screen, display the Factory Default screen as shown next. Use this screen to reset the Switch back to factory defaults.

Table 181 Maintenance > Configuration > Factory Default

Backup	Restore	Management	Factory Default
--------	---------	------------	-----------------

Restore to Factory Default

This would reset the configuration to factory default and will reboot the system.

32.6.2 Reset the Switch to Factory Defaults

Follow the steps below to reset the Switch back to factory defaults.

1. Click Restore.
2. Click OK to reset all Switch configurations to the factory defaults. Wait for the Switch to restart. This takes up to two minutes.
OR
Click Cancel to discard the changes.

Note: If you want to access the Switch web configurator again, you may need to change the IP address of your computer to be in the same subnet as that of the default Switch IP address (192.168.1.1).

32.7 Network Diagnostics

Use the network utilities to perform diagnostics.

32.7.1 Port Test

Click Maintenance > Diagnostics > Port Test in the navigation panel to open this screen. Use this screen to perform an internal loopback test on an ethernet port.

Figure 215 Maintenance > Diagnostics > Port Test

Cable Diag

Port: 1

Note: Service will stop a while if do it!

Test

Test Results

Port	Result
------	--------

Follow the steps to perform the port test.

1. In Port Test, select the port number from the Port drop-down list.
2. Click Test to start the port test.

The test results are displayed in Test Results.

32.7.2 IPv4 Ping Test

Click Maintenance > Diagnostics > PING > IPv4 in the navigation panel to open this screen. Use this screen to ping an IPv4 server.

Figure 216 Maintenance > Diagnostics > PING > IPv4

IPv4 **IPv6**

Ping Test

IP Address: 192.168.1.100 (x.x.x.x or hostname)

Count: 4 (1 - 5)

Interval: 1 (1 - 5 sec)

Size: 56 (8 - 5120 byte)

Results

Apply Cancel

The following table describes the labels under Ping Test.

Table 182 Maintenance > Diagnostics > PING > IPv4

LABEL	DESCRIPTION
IP Address	Enter the address of the target host server.
Count	Enter the number of ping packets to send. The range is 1 to 5 packets; the default count is 4.
Interval	Enter the time in seconds between sending ping packets. The range is 1 to 5 seconds; the default is 1 second.
Size	Enter the individual packet size in bytes. The range is 8 to 5120 bytes; the default is 56 bytes.

Follow the steps to perform a ping test.

1. In IP Address, enter the IPv4 address.
2. In Count, enter the number of ping packets.
3. In Interval, enter the time interval in seconds.
4. In Size, enter the packet size in bytes
5. Click Apply to perform the ping test.

OR

Click Cancel to discard the changes.

The test results are displayed in Results.

32.7.3 IPv6 Ping Test

Click Maintenance > Diagnostics > PING > IPv6 in the navigation panel to open this screen. Use this screen to ping an IPv6 server.

Figure 217 Maintenance > Diagnostics > PING > IPv6

The following table describes the labels in IPv6 Ping Test.

Table 183 Maintenance > Diagnostics > PING > IPv6

LABEL	DESCRIPTION
IPv6 Address	Enter the address of the target host server.
Count	Enter the number of ping packets to send. The range is 1 to 5 packets; the default count is 4.
Interval	Enter the time in seconds between sending ping packets. The range is 1 to 5 seconds; the default is 1 second.
Size	Enter the individual packet size in bytes. The range is 8 to 5120 bytes; the default is 56 bytes.

Follow the steps to perform a ping test.

1. In IP Address, enter the IPv6 address.
2. In Count, enter the number of ping packets.
3. In Interval, enter the time interval in seconds.
4. In Size, enter the packet size in bytes

5. Click Apply to perform the ping test.
OR
Click Cancel to discard the changes.

The test results are displayed in Results.

32.7.4 Trace Route

Click Maintenance > Diagnostics > Trace in the navigation panel to open this screen. Use this screen to print the route that IP packets take to a network host.

Figure 218 Maintenance > Diagnostics > Trace

The following table describes the labels in Trace Route.

Table 184 Maintenance > Diagnostics > Trace

LABEL	DESCRIPTION
IP Address	Enter the address of the target host server.
Hops	Enter the maximum number of time-to-live or hops used in outgoing probe packets. The range is 2 to 255 packets; the default is 30 hops.

Follow the steps to perform a trace route.

1. In IP Address, enter the IPv6 address.
2. In Hops, enter the number of hops.
3. Click Apply to perform the test.
OR
Click Cancel to discard the changes.

The test results are displayed in Result.

32.8 Reboot

32.8.1 Overview

You can reboot the Switch from the web configurator.

Click Maintenance > Reboot in the navigation panel to open this screen. Use this screen to restart the Switch without physically turning the power off.

Figure 219 Maintenance > Reboot

32.8.2 Reboot the Switch

Follow the steps below to restart the Switch.

1. Click Reboot.
2. Click OK and then wait for the Switch to restart. This process takes up to two minutes and does not affect the Switch's configuration.
OR
Click Cancel to discard the changes.

Troubleshooting

This chapter offers some suggestions to solve problems you might encounter. The potential problems are divided into the following categories.

- [Power, Hardware Connections, and LEDs](#)
- [Switch Access and Login](#)
- [Switch Configuration](#)

33.1 Power, Hardware Connections, and LEDs

The Switch does not turn on. None of the LEDs turn on.

- 1 Make sure the Switch is turned on (in DC models or if the DC power supply is connected in AC/DC models).
- 2 Make sure you are using the power adaptor or cord included with the Switch.
- 3 Make sure the power adaptor or cord is connected to the Switch and plugged in to an appropriate power source. Make sure the power source is turned on.
- 4 Turn the Switch off and on (in DC models or if the DC power supply is connected in AC/DC models).
- 5 Disconnect and re-connect the power adaptor or cord to the Switch (in AC models or if the AC power supply is connected in AC/DC models).
- 6 If the problem continues, contact the vendor.

The ALM LED is on.

- 1 Turn the Switch off and on (in DC models or if the DC power supply is connected in AC/DC models).
- 2 Disconnect and re-connect the power adaptor or cord to the Switch (in AC models or if the AC power supply is connected in AC/DC models).
- 3 If the problem continues, contact the vendor.

One of the LEDs does not behave as expected.

- 1 Make sure you understand the normal behavior of the LED. See [Section 3.3 on page 30](#).
- 2 Check the hardware connections. See [Chapter 2 on page 19](#).
- 3 Inspect your cables for damage. Contact the vendor to replace any damaged cables.
- 4 Turn the Switch off and on (in DC models or if the DC power supply is connected in AC/DC models).
- 5 Disconnect and re-connect the power adaptor or cord to the Switch (in AC models or if the AC power supply is connected in AC/DC models).
- 6 If the problem continues, contact the vendor.

33.2 Switch Access and Login

I forgot the IP address for the Switch.

- 1 The default in-band IP address is 192.168.1.1.
- 2 Use the console port to log in to the Switch.
- 3 Use the MGMT port to log in to the Switch, the default IP address of the MGMT port is 192.168.0.1.
- 4 If this does not work, you have to reset the device to its factory defaults. See [Section 32.6 on page 219](#).

I forgot the username and/or password.

- 1 The default username is admin and the default password is 1234.
- 2 If this does not work, you have to reset the device to its factory defaults. See [Section 32.6 on page 219](#).

I cannot see or access the Login screen in the web configurator.

- 1 Make sure you are using the correct IP address.
 - The default in-band IP address is 192.168.1.1.

- If you changed the IP address, use the new IP address.
 - If you changed the IP address and have forgotten it, see the troubleshooting suggestions for [I forgot the IP address for the Switch](#).
- 2 Check the hardware connections, and make sure the LEDs are behaving as expected. See [Section on page 19](#).
 - 3 Make sure your Internet browser does not block pop-up windows and has JavaScripts and Java enabled.
 - 4 Make sure your computer is in the same subnet as the Switch. (If you know that there are routers between your computer and the Switch, skip this step.)
 - 5 Reset the device to its factory defaults, and try to access the Switch with the default IP address. See [Section 32.6 on page 219](#).
 - 6 If the problem continues, contact the vendor, or try one of the advanced suggestions.

Advanced Suggestions

- Try to access the Switch using another service, such as Telnet. If you can access the Switch, check the remote management settings to find out why the Switch does not respond to HTTP.

[I can see the Login screen, but I cannot log in to the Switch.](#)

- 1 Make sure you have entered the user name and password correctly. The default user name is admin, and the default password is 1234. These fields are case-sensitive, so make sure [Caps Lock] is not on.
- 2 You may have exceeded the maximum number of concurrent Telnet sessions. Close other Telnet session(s) or try connecting again later.

Check that you have enabled logins for HTTP or Telnet. If you have configured a secured client IP address, your computer's IP address must match it. Refer to the chapter on access control for details.
- 3 Disconnect and re-connect the cord to the Switch.
- 4 If this does not work, you have to reset the device to its factory defaults. See [Section 32.6 on page 219](#).

[Pop-up Windows, JavaScripts and Java Permissions](#)

In order to use the web configurator you need to allow:

- Web browser pop-up windows from your device.
- JavaScripts (enabled by default).
- Java permissions (enabled by default).

I cannot see some of Advanced Application submenus at the bottom of the navigation panel.

The recommended screen resolution is 1024 by 768 pixels. Adjust the value in your computer and then you should see the rest of Advanced Application submenus at the bottom of the navigation panel.

There is unauthorized access to my Switch via telnet, HTTP and SSH.

Click the Maintenance > Diagnostics screen to check for unauthorized access to your Switch. To avoid unauthorized access, configure the secured client setting in the Configuration > Management > Remote Access Control screen for telnet, HTTP and SSH (see [Section 31.7 on page 210](#)). Computers not belonging to the secured client set cannot get permission to access the Switch.

33.3 Switch Configuration

I lost my configuration settings after I restart the Switch.

Make sure you save your configuration into the Switch's nonvolatile memory each time you make changes. Click

Save at the top right corner of the web configurator to save the configuration permanently. See also [Section 5.3.1 on page 34](#) for more information about how to save your configuration.

A screenshot of the top navigation bar of a web configurator. It contains the text 'Welcome: user | Logout | Save | About ?Help'. The 'Save' button is highlighted with a red circle.

Customer Support

In the event of problems that cannot be solved by using this manual, you should contact your vendor. If you cannot contact your vendor, then contact a ZyXEL office for the region in which you bought the device.

See <http://www.zyxel.com/homepage.shtml> and also http://www.zyxel.com/about_zyxel/zyxel_worldwide.shtml for the latest information.

Please have the following information ready when you contact an office.

Required Information

- Product model and serial number.
- Warranty Information.
- Date that you received your device.
- Brief description of the problem and the steps you took to solve it.

Model List: GS1900-8HP (Revision A1), GS1900-24, GS1900-24HP, GS1900-48, GS1900-48HP

United States of America

The following information applies if you use the product within USA area.

Federal Communications Commission (FCC) EMC Statement

- This device complies with Part 15 of FCC rules. Operation is subject to the following two conditions:
 - (1) This device may not cause harmful interference.
 - (2) This device must accept any interference received, including interference that may cause undesired operations.
- Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
- This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Safety Warnings

- Do not use this product near water, for example, in a wet basement or near a swimming pool.
- Do not expose your device to dampness, dust or corrosive liquids.
- Do not store things on the device.
- Do not install, use, or service this device during a thunderstorm. There is a remote risk of electric shock from lightning.
- Connect ONLY suitable accessories to the device.
- Do not open the device or unit. Opening or removing covers can expose you to dangerous high voltage points or other risks. Only qualified service personnel should service or disassemble this device. Please contact your vendor for further information.
- Make sure to connect the cables to the correct ports.
- Place connecting cables carefully so that no one will step on them or stumble over them.
- Always disconnect all cables from this device before servicing or disassembling.
- Do not remove the plug and connect it to a power outlet by itself; always attach the plug to the power adaptor first before connecting it to a power outlet.
- Do not allow anything to rest on the power adaptor or cord and do NOT place the product where anyone can walk on the power adaptor or cord.
- Please use the provided or designated connection cables/power cables/ adaptors. Connect it to the right supply voltage (for example, 110V AC in North America or 230V AC in Europe). If the power adaptor or cord is damaged, it might cause electrocution. Remove it from the device and the power source, repairing the power adapter or cord is prohibited. Contact your local vendor to order a new one.
- Do not use the device outside, and make sure all the connections are indoors. There is a remote risk of electric shock from lightning.
- Caution: Risk of explosion if battery is replaced by an incorrect type, dispose of used batteries according to the instruction. Dispose them at the applicable collection point for the recycling of electrical and electronic device. For detailed information about recycling of this product, please contact your local city office, your household waste disposal service or the store where you purchased the product.
- Use ONLY power wires of the appropriate wire gauge for your device. Connect it to a power supply of the correct voltage.
- Fuse Warning! Replace a fuse only with a fuse of the same type and rating.
- The POE (Power over Ethernet) devices that supply or receive power and their connected Ethernet cables must all be completely indoors.
- Do not obstruct the device ventilation slots as insufficient airflow may harm your device.
- The following warning statements apply, where the disconnect device is not incorporated in the device or where the plug on the power supply cord is intended to serve as the disconnect device,
 - For permanently connected devices, a readily accessible disconnect device shall be incorporated external to the device;
 - For pluggable devices, the socket-outlet shall be installed near the device and shall be easily accessible.
- This device must be grounded. Never defeat the ground conductor or operate the device in the absence of a suitably installed ground conductor. Contact the appropriate electrical inspection authority or an electrician if you are uncertain that suitable grounding is available.
- When connecting or disconnecting power to hot-pluggable power supplies, if offered with your system, observe the following guidelines:
 - Install the power supply before connecting the power cable to the power supply.
 - Unplug the power cable before removing the power supply.
 - If the system has multiple sources of power, disconnect power from the system by unplugging all power cables from the power supply.

Environment Statment

European Union - Disposal and Recycling Information

The symbol below means that according to local regulations your product and/or its battery shall be disposed of separately from domestic waste. If this product is end of life, take it to a recycling station designated by local authorities. At the time of disposal, the separate collection of your product and/or its battery will help save natural resources and ensure that the environment is sustainable development.

Die folgende Symbol bedeutet, dass Ihr Produkt und/oder seine Batterie gemäß den örtlichen Bestimmungen getrennt vom Hausmüll entsorgt werden muss. Wenden Sie sich an eine Recyclingstation, wenn dieses Produkt das Ende seiner Lebensdauer erreicht hat. Zum Zeitpunkt der Entsorgung wird die getrennte Sammlung von Produkt und/oder seiner Batterie dazu beitragen, natürliche Ressourcen zu sparen und die Umwelt und die menschliche Gesundheit zu schützen.

El símbolo de abajo indica que según las regulaciones locales, su producto y/o su batería deberán depositarse como basura separada de la doméstica. Cuando este producto alcance el final de su vida útil, llévelo a un punto limpio. Cuando llegue el momento de desechar el producto, la recogida por separado éste y/o su batería ayudará a salvar los recursos naturales y a proteger la salud humana y medioambiental.

Le symbole ci-dessous signifie que selon les réglementations locales votre produit et/ou sa batterie doivent être éliminés séparément des ordures ménagères. Lorsque ce produit atteint sa fin de vie, amenez-le à un centre de recyclage. Au moment de la mise au rebut, la collecte séparée de votre produit et/ou de sa batterie aidera à économiser les ressources naturelles et protéger l'environnement et la santé humaine.

Il simbolo sotto significa che secondo i regolamenti locali il vostro prodotto e/o batteria deve essere smaltito separatamente dai rifiuti domestici. Quando questo prodotto raggiunge la fine della vita di servizio portarlo a una stazione di riciclaggio. Al momento dello smaltimento, la raccolta separata del vostro prodotto e/o della sua batteria aiuta a risparmiare risorse naturali e a proteggere l'ambiente e la salute umana.

Symbolen innebär att enligt lokal lagstiftning ska produkten och/eller dess batteri kastas separat från hushållsavfallet. När den här produkten når slutet av sin livslängd ska du ta den till en återvinningsstation. Vid tiden för kasseringen bidrar du till en bättre miljö och mänsklig hälsa genom att göra dig av med den på ett återvinningsställe.

台灣

警告使用者：
這是甲類的資訊產品，在居住的環境中使用時，可能會造成射頻干擾，在這種情況下，使用者會被要求採取某些適當的對策。」

安全警告

為了您的安全，請先閱讀以下警告及指示：

- 請勿將此產品接近水、火焰或放置在高溫的環境。
- 避免設備接觸
任何液體 - 切勿讓設備接觸水、雨水、高濕度、污水腐蝕性的液體或其他水份。
灰塵及污物 - 切勿接觸灰塵、污物、沙土、食物或其他不合適的材料。
- 雷雨天氣時，不要安裝，使用或維修此設備。有遭受電擊的風險。
- 切勿重摔或撞擊設備，並勿使用不正確的電源變壓器。
- 若接上不正確的電源變壓器會有爆炸的風險。。
- 請勿隨意更換產品內的電池。
- 如果更換不正確之電池型式，會有爆炸的風險，請依製造商說明書處理使用過之電池。
- 請將廢電池丟棄在適當的電器或電子設備回收處。
- 請勿將設備解體。
- 請勿阻礙設備的散熱孔，空氣對流不足將會造成設備損害。
- 請插在正確的電壓供給插座（如：北美 / 台灣電壓 110V AC，歐洲是 230V AC）。
- 假若電源變壓器或電源變壓器的纜線損壞，請從插座拔除，若您還繼續插電使用，會有觸電死亡的風險。
- 請勿試圖修理電源變壓器或電源變壓器的纜線，若有毀損，請直接聯絡您購買的店家，購買一個新的電源變壓器。
- 請勿將此設備安裝於室外，此設備僅適合放置於室內。
- 請勿隨一般垃圾丟棄。
- 請參閱產品背貼上的設備額定功率。
- 請參考產品型錄或是彩盒上的作業溫度。
- 設備必須接地，接地導線不允許被破壞或沒有適當安裝接地導線，如果不確定接地方式是否符合要求可聯繫相應的電氣檢驗機構檢驗。
- 如果您提供的系統中有提供熱插拔電源，連接或斷開電源請遵循以下指導原則
 - 先連接電源線至設備連，再連接電源。
 - 先斷開電源再拔除連接至設備的電源線。
 - 如果系統有多個電源，需拔除所有連接至電源的電源線再關閉設備電源。
- 產品沒有斷電裝置或者採用電源線的插頭視為斷電裝置的一部分，以下警語將適用：
 - 對永久連接之設備，在設備外部須安裝可觸及之斷電裝置；
 - 對插接式之設備，插座必須接近安裝之地點而且是易於觸及的。

Regulatory Notice and Statement (Class B)

UNITED STATES of AMERICA

The following information applies if you use the product within USA area.

FCC EMC Statement

- The device complies with Part 15 of FCC rules. Operation is subject to the following two conditions:
 - (1) This device may not cause harmful interference, and
 - (2) This device must accept any interference received, including interference that may cause undesired operation.
- Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the device.
- This product has been tested and complies with the specifications for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This device generates, uses, and can radiate radio frequency energy and, if not installed and used according to the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.
- If this device does cause harmful interference to radio or television reception, which is found by turning the device off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
 - Reorient or relocate the receiving antenna
 - Increase the separation between the devices
 - Connect the equipment to an outlet other than the receiver's
 - Consult a dealer or an experienced radio/TV technician for assistance

 - For permanently connected devices, a readily accessible disconnect device shall be incorporated external to the device;

- For pluggable devices, the socket-outlet shall be installed near the device and shall be easily accessible.

Environment Statement

ErP (Energy-related Products)

ZyXEL products put on the EU market in compliance with the requirement of the European Parliament and the Council published Directive 2009/125/EC establishing a framework for the setting of ecodesign requirements for energy-related products (recast), so called as "ErP Directive (Energy-related Products directive) as well as ecodesign requirement laid down in applicable implementing measures, power consumption has satisfied regulation requirements which are:

Network standby power consumption < 12W, and/or

Off mode power consumption < 0.5W, and/or

Standby mode power consumption < 0.5W.

Wireless setting, please refer to "Wireless" chapter for more detail.

European Union - Disposal and Recycling Information

The symbol below means that according to local regulations your product and/or its battery shall be disposed of separately from domestic waste. If this product is end of life, take it to a recycling station designated by local authorities. At the time of disposal, the separate collection of your product and/or its battery will help save natural resources and ensure that the environment is sustainable development.

台灣

安全警告

為了您的安全，請先閱讀以下警告及指示：

- 請勿將此產品接近水、火焰或放置在高溫的環境。
- 避免設備接觸任何液體 - 切勿讓設備接觸水、雨水、高濕度、污水腐蝕性的液體或其他水份。
- 灰塵及污物 - 切勿接觸灰塵、污物、沙土、食物或其他不合適的材料。
- 雷雨天氣時，不要安裝，使用或維修此設備。有遭受電擊的風險。
- 切勿重摔或撞擊設備，並勿使用不正確的電源變壓器。
- 若接上不正確的電源變壓器會有爆炸的風險。
- 請勿隨意更換產品內的電池。
- 如果更換不正確之電池型式，會有爆炸的風險，請依製造商說明書處理使用過之電池。
- 請將廢電池丟棄在適當的電器或電子設備回收處。
- 請勿將設備解體。
- 請勿阻礙設備的散熱孔，空氣對流不足將會造成設備損害。
- 請插在正確的電壓供給插座（如：北美 / 台灣電壓 110V AC，歐洲是 230V AC）。
- 假若電源變壓器或電源變壓器的纜線損壞，請從插座拔除，若您還繼續插電使用，會有觸電死亡的風險。
- 請勿試圖修理電源變壓器或電源變壓器的纜線，若有毀損，請直接聯絡您購買的店家，購買一個新的電源變壓器。
- 請勿將此設備安裝於室外，此設備僅適合放置於室內。
- 請勿隨一般垃圾丟棄。
- 請參閱產品背貼上的設備額定功率。
- 請參考產品型錄或是彩盒上的作業溫度。
- 產品沒有斷電裝置或者採用電源線的插頭視為斷電裝置的一部分，以下警語將適用：
 - 對永久連接之設備，在設備外部須安裝可觸及之斷電裝置；
 - 對插接式之設備，插座必須接近安裝之地點而且是易於觸及的。

ZyXEL Limited Warranty

ZyXEL warrants to the original end user (purchaser) that this product is free from any defects in material or workmanship for a specific period (the Warranty Period) from the date of purchase. The Warranty Period varies by region. Check with your vendor and/or the authorized ZyXEL local distributor for details about the Warranty Period of this product. During the warranty period, and upon proof of purchase, should the product have indications of failure due to faulty workmanship and/or materials, ZyXEL will, at its discretion, repair or replace the defective products or components without charge for either parts or labor, and to whatever extent it shall deem necessary to restore the product or components to proper operating condition. Any replacement will consist of a new or re-manufactured functionally equivalent product of equal or higher value, and will be solely at the discretion of ZyXEL. This warranty shall not apply if the product has been modified, misused, tampered with, damaged by an act of God, or subjected to abnormal working conditions.

Note

Repair or replacement, as provided under this warranty, is the exclusive remedy of the purchaser. This warranty is in lieu of all other warranties, express or implied, including any implied warranty of merchantability or fitness for a particular use or purpose. ZyXEL shall in no event be held liable for indirect or consequential damages of any kind to the purchaser.

To obtain the services of this warranty, contact your vendor. You may also refer to the warranty policy for the region in which you bought the device at http://www.zyxel.com/web/support_warranty_info.php.

Registration

Register your product online to receive e-mail notices of firmware upgrades and information at www.zyxel.com for global products, or at www.us.zyxel.com for North American products.

Trademarks

ZyNOS (ZyXEL Network Operating System) and ZON (ZyXEL One Network) are registered trademarks of ZyXEL Communications, Inc. Other trademarks mentioned in this publication are used for identification purposes only and may be properties of their respective owners.

Open Source Licenses

This product contains in part some free software distributed under GPL license terms and/or GPL like licenses. Open source licenses are provided with the firmware package. You can download the latest firmware at www.zyxel.com. To obtain the source code covered under those Licenses, please contact support@zyxel.com.tw to get it.
