IMPORTANT!

READ CAREFULLY BEFORE USE.

KEEP THIS GUIDE FOR FUTURE REFERENCE.

This is a User's Guide for a series of products. Not all products support all firmware features. Screenshots and graphics in this book may differ slightly from your product due to differences in product features or web configurator brand style. Most screen shots in this guide come from the USG110 and USG60W. Screen shots for other models may vary. Every effort has been made to ensure that the information in this manual is accurate.

The version number on the cover page refers to the latest firmware version supported by the Zyxel Device.

Related Documentation

- Quick Start Guide

  The Quick Start Guide shows how to connect the Zyxel Device and access the Web Configurator wizards. (See the wizard real time help for information on configuring each screen.) It also contains a connection diagram and package contents list.

- CLI Reference Guide

  The CLI Reference Guide explains how to use the Command-Line Interface (CLI) to configure the Zyxel Device.

Note: It is recommended you use the Web Configurator to configure the Zyxel Device.

- Web Configurator Online Help

  Click the help icon in any screen for help in configuring that screen and supplementary information.

- More Information

  Go to **support.zyxel.com** to find other information on Zyxel Device.

Warnings and Notes

These are how warnings and notes are shown in this guide.

Warnings tell you about things that could harm you or your device.

Note: Notes tell you other important information (for example, other things you may need to configure or helpful tips) or recommendations.

Syntax Conventions

- All models in this series may be referred to as the "Zyxel Device" in this guide.
- Product labels, screen names, field labels and field choices are all in **bold** font.
- A right angle bracket (>) within a screen name denotes a mouse click. For example, **Configuration** > **Network** > **Interface** > **Ethernet** means you first click **Configuration** in the navigation panel, then **Network**, then the **Interface** sub menu and finally the **Ethernet** tab to get to that screen.

Icons Used in Figures

Figures in this user guide may use the following generic icons. The Zyxel Device icon is not an exact representation of your device.

Zyxel Device	Generic Router	Wireless Router / Access Point
Switch	Firewall	Server
Internet	Network Cloud	Smartphone
USB Dongle

7.2.3 Auto Update 183

Chapter 8
Wireless 184

8.1 Overview 184
8.1.1 What You Can Do in this Chapter 184
8.2 Controller Screen 184
8.3 AP Management Screens 185
8.3.1 Mgnt. AP List 185
8.3.2 AP Policy 189
8.3.3 AP Group 190
8.3.4 Firmware 196
8.4 MON Mode 197
8.4.1 Add/Edit Rogue/Friendly List 199
8.5 Auto Healing 200
8.6 RTLS Overview 200
8.6.1 What You Can Do in this Chapter 201
8.6.2 Before You Begin 201
8.6.3 Configuring RTLS 202
8.7 Technical Reference 203
8.7.1 Dynamic Channel Selection 203
8.7.2 Load Balancing 204

Chapter 9
Interfaces 205

9.1 Interface Overview 205
9.1.1 What You Can Do in this Chapter 205
9.1.2 What You Need to Know 205
9.1.3 What You Need to Do First 210
9.2 Port Role 210
9.3 Ethernet Summary Screen 211
9.3.1 Ethernet Edit 213
9.3.2 Proxy ARP 228
9.3.3 Virtual Interfaces 229
9.3.4 References 230
9.3.5 Add/Edit DHCPv6 Request/Release Options 231
9.3.6 Add/Edit DHCP Extended Options 232
9.4 PPP Interfaces 233
9.4.1 PPP Interface Summary 234
9.4.2 PPP Interface Add or Edit 235
9.5 Cellular Configuration Screen 240
9.5.1 Cellular Choose Slot 243
9.5.2 Add / Edit Cellular Configuration 243
9.6 Tunnel Interfaces 249
9.6.1 Configuring a Tunnel 251

9.6.2 Tunnel Add or Edit Screen 252
9.7 VLAN Interfaces 256
9.7.1 VLAN Summary Screen 257
9.7.2 VLAN Add/Edit 258
9.8 Bridge Interfaces 269
9.8.1 Bridge Summary 271
9.8.2 Bridge Add/Edit 272
9.9 VTI 282
9.9.1 Restrictions for IPSec Virtual Tunnel Interface 283
9.9.2 VTI Screen 283
9.9.3 VTI Add/Edit 284
9.10 Trunk Overview 287
9.10.1 What You Need to Know 287
9.11 The Trunk Summary Screen 290
9.11.1 Configuring a User-Defined Trunk 291
9.11.2 Configuring the System Default Trunk 293
9.12 Interface Technical Reference 295

Chapter 10
Routing 299

10.1 Policy and Static Routes Overview 299
10.1.1 What You Can Do in this Chapter 299
10.1.2 What You Need to Know 300
10.2 Policy Route Screen 301
10.2.1 Policy Route Edit Screen 303
10.3 IP Static Route Screen 308
10.3.1 Static Route Add/Edit Screen 308
10.4 Policy Routing Technical Reference 310
10.5 Routing Protocols Overview 310
10.5.1 What You Need to Know 311
10.6 The RIP Screen 311
10.7 The OSPF Screen 313
10.7.1 Configuring the OSPF Screen 316
10.7.2 OSPF Area Add/Edit Screen 317
10.7.3 Virtual Link Add/Edit Screen 319
10.8 BGP (Border Gateway Protocol) 320
10.8.1 Allow BGP Packets to Enter the Zyxel Device 321
10.8.2 Configuring the BGP Screen 321
10.8.3 The BGP Neighbors Screen 323
10.8.4 Example Scenario 324

Chapter 11
DDNS 326

11.1 DDNS Overview 326
11.1.1 What You Can Do in this Chapter 326
11.1.2 What You Need to Know 326
11.2 The DDNS Screen 327
11.2.1 The Dynamic DNS Add/Edit Screen 328

Chapter 12
NAT 332

12.1 NAT Overview 332
12.1.1 What You Can Do in this Chapter 332
12.1.2 What You Need to Know 332
12.2 The NAT Screen 333
12.2.1 The NAT Add/Edit Screen 335
12.3 NAT Technical Reference 338

Chapter 13
Redirect Service 340

13.1 Overview 340
13.1.1 HTTP Redirect 340
13.1.2 SMTP Redirect 340
13.1.3 What You Can Do in this Chapter 341
13.1.4 What You Need to Know 341
13.2 The Redirect Service Screen 343
13.2.1 The Redirect Service Edit Screen 344

Chapter 14
ALG 346

14.1 ALG Overview 346
14.1.1 What You Need to Know 346
14.1.2 Before You Begin 349
14.2 The ALG Screen 349
14.3 ALG Technical Reference 351

Chapter 15
UPnP 353

15.1 UPnP and NAT-PMP Overview 353
15.2 What You Need to Know 353
15.2.1 NAT Traversal 353
15.2.2 Cautions with UPnP and NAT-PMP 354
15.3 UPnP Screen 354
15.4 Technical Reference 355
15.4.1 Turning on UPnP in Windows 7 Example 355
15.4.2 Using UPnP in Windows XP Example 357

15.4.3 Web Configurator Easy Access 359

Chapter 16
IP/MAC Binding 362

16.1 IP/MAC Binding Overview 362
16.1.1 What You Can Do in this Chapter 362
16.1.2 What You Need to Know 362
16.2 IP/MAC Binding Summary 363
16.2.1 IP/MAC Binding Edit 364
16.2.2 Static DHCP Edit 365
16.3 IP/MAC Binding Exempt List 366

Chapter 17
Layer 2 Isolation 367

17.1 Overview 367
17.1.1 What You Can Do in this Chapter 367
17.2 Layer-2 Isolation General Screen 367
17.3 White List Screen 368
17.3.1 Add/Edit White List Rule 369

Chapter 18
DNS Inbound LB 371

18.1 DNS Inbound Load Balancing Overview 371
18.1.1 What You Can Do in this Chapter 371
18.2 The DNS Inbound LB Screen 372
18.2.1 The DNS Inbound LB Add/Edit Screen 373
18.2.2 The DNS Inbound LB Add/Edit Member Screen 375

Chapter 19
IPnP 377

19.1 IPnP Overview 377
19.1.1 What You Can Do in this Chapter 377
19.2 IPnP Screen 378

Chapter 20
IPSec VPN 379

20.1 Virtual Private Networks (VPN) Overview 379
20.1.1 What You Can Do in this Chapter 381
20.1.2 What You Need to Know 381
20.1.3 Before You Begin 384
20.2 The VPN Connection Screen 384
20.2.1 The VPN Connection Add/Edit Screen 386
20.3 The VPN Gateway Screen 393

20.3.1 The VPN Gateway Add/Edit Screen 394
20.4 VPN Concentrator 401
20.4.1 VPN Concentrator Requirements and Suggestions 401
20.4.2 VPN Concentrator Screen 402
20.4.3 The VPN Concentrator Add/Edit Screen 402
20.5 Zyxel Device IPSec VPN Client Configuration Provisioning 403
20.6 IPSec VPN Background Information 405

Chapter 21
SSL VPN 415

21.1 Overview 415
21.1.1 What You Can Do in this Chapter 415
21.1.2 What You Need to Know 415
21.2 The SSL Access Privilege Screen 416
21.2.1 The SSL Access Privilege Policy Add/Edit Screen 417
21.3 The SSL Global Setting Screen 419

Chapter 22
L2TP VPN 421

22.1 Overview 421
22.1.1 What You Can Do in this Chapter 421
22.1.2 What You Need to Know 421
22.2 L2TP VPN Screen 422
22.2.1 Example: L2TP and Zyxel Device Behind a NAT Router 424

Chapter 23
BWM (Bandwidth Management) 426

23.1 Overview 426
23.1.1 What You Can Do in this Chapter 426
23.1.2 What You Need to Know 426
23.2 The Bandwidth Management Configuration 430
23.2.1 The Bandwidth Management Add/Edit Screen 433

Chapter 24
Web Authentication 441

24.1 Web Auth Overview 441
24.1.1 What You Can Do in this Chapter 441
24.1.2 What You Need to Know 442
24.2 Web Authentication General Screen 442
24.2.1 User-aware Access Control Example 447
24.2.2 Authentication Type Screen 453
24.2.3 Custom Web Portal / User Agreement File Screen 457
24.3 SSO Overview 458

24.4 SSO - Zyxel Device Configuration 460
24.4.1 Configuration Overview 460
24.4.2 Configure the Zyxel Device to Communicate with SSO 460
24.4.3 Enable Web Authentication 461
24.4.4 Create a Security Policy 463
24.4.5 Configure User Information 464
24.4.6 Configure an Authentication Method 465
24.4.7 Configure Active Directory 466
24.5 SSO Agent Configuration 467

Chapter 25
Security Policy 470

25.1 Overview 470
25.2 One Security 471
25.3 What You Can Do in this Chapter 474
25.3.1 What You Need to Know 474
25.4 The Security Policy Screen 476
25.4.1 Configuring the Security Policy Control Screen 477
25.4.2 The Security Policy Control Add/Edit Screen 481
25.5 Anomaly Detection and Prevention Overview 482
25.5.1 The Anomaly Detection and Prevention General Screen 483
25.5.2 Creating New ADP Profiles 484
25.5.3 Traffic Anomaly Profiles 485
25.5.4 Protocol Anomaly Profiles 488
25.6 The Session Control Screen 491
25.6.1 The Session Control Add/Edit Screen 492
25.7 Security Policy Example Applications 493

Chapter 26
Application Patrol 496

26.1 Overview 496
26.1.1 What You Can Do in this Chapter 496
26.1.2 What You Need to Know 496
26.2 Application Patrol Profile 497
26.2.1 Apply to a Security Policy 499
26.2.2 The Application Patrol Profile Add/Edit Screen - My Application 501
26.2.3 The Application Patrol Profile Add/Edit Screen - Query Result 503

Chapter 27
Content Filter 505

27.1 Overview 505
27.1.1 What You Can Do in this Chapter 505
27.1.2 What You Need to Know 505

27.1.3 Before You Begin 507
27.2 Content Filter Profile Screen 507
27.2.1 Apply to a Security Policy 508
27.2.2 Content Filter Add Profile Category Service 511
27.2.3 Content Filter Add Filter Profile Custom Service 517
27.3 Content Filter Trusted Web Sites Screen 520
27.4 Content Filter Forbidden Web Sites Screen 521
27.5 Content Filter Technical Reference 522

Chapter 28
Anti-Malware 524

28.1 Overview 524
28.1.1 What You Can Do in this Chapter 524
28.1.2 What You Need to Know 525
28.2 Anti-Malware Screen 526
28.2.1 Anti-Malware Black List or White List Add/Edit 529
28.3 Anti-Malware Signature Searching 530
28.4 Anti-Malware Technical Reference 531

Chapter 29
Botnet Filter 533

29.1 Overview 533
29.1.1 What You Can Do in this Chapter 533
29.2 Botnet Filter Screen 533

Chapter 30
IDP 537

30.1 Overview 537
30.1.1 What You Can Do in this Chapter 537
30.1.2 What You Need To Know 537
30.1.3 Before You Begin 537
30.2 The IDP Screen 537
30.2.1 Query Example 542
30.3 IDP Custom Signatures 543
30.3.1 Add / Edit Custom Signatures 544
30.3.2 Custom Signature Example 548
30.3.3 Applying Custom Signatures 550
30.3.4 Verifying Custom Signatures 551
30.4 IDP Technical Reference 551

Chapter 31
Sandboxing 554

31.1 Overview 554

31.1.1 What You Can Do in this Chapter 554
31.2 Sandboxing Screen 554

Chapter 32
Email Security 556

32.1 Overview 556
32.1.1 What You Can Do in this Chapter 556
32.1.2 What You Need to Know 556
32.2 Before You Begin 557
32.3 The Email Security Screen 558
32.4 The Black List / White List Screen 561
32.4.1 The Black or White List Add/Edit Screen 562
32.4.2 Regular Expressions in Black or White List Entries 563
32.5 Email Security Technical Reference 563

Chapter 33
SSL Inspection 567

33.1 Overview 567
33.1.1 What You Can Do in this Chapter 567
33.1.2 What You Need To Know 567
33.1.3 Before You Begin 568
33.2 The SSL Inspection Profile Screen 568
33.2.1 Apply to a Security Policy 569
33.2.2 Add / Edit SSL Inspection Profiles 572
33.3 Exclude List Screen 573
33.4 Certificate Update Screen 575
33.5 Install a CA Certificate in a Browser 576

Chapter 34
Object 579

34.1 Zones Overview 579
34.1.1 What You Need to Know 579
34.1.2 The Zone Screen 580
34.2 User/Group Overview 582
34.2.1 What You Need To Know 582
34.2.2 User/Group User Summary Screen 584
34.2.3 User/Group Group Summary Screen 587
34.2.4 User/Group Setting Screen 589
34.2.5 User/Group MAC Address Summary Screen 594
34.2.6 User /Group Technical Reference 596
34.3 AP Profile Overview 596
34.3.1 Radio Screen 597
34.3.2 SSID Screen 603

34.4 MON Profile 612
34.4.1 Overview 612
34.4.2 Configuring MON Profile 613
34.4.3 Add/Edit MON Profile 614
34.4.4 Technical Reference 615
34.5 ZyMesh Overview 616
34.5.1 ZyMesh Profile 618

PART I
User's Guide

CHAPTER 1 Introduction

1.1 Overview

Zyxel Device refers to these models as outlined below.

- ATP200
- ATP500

The following table describes the port features of the Zyxel Device by model.

Table 1 ATP Series Comparison Table

ATP MODELS	ATP200	ATP500
USB 3.0 Ports	2	2
1 Gbps SFP interface	1	1
10/100/1000 Mbps Ethernet WAN Ports	2	-
10/100/1000 Mbps Ethernet Ports	4	7

- ATP500 supports Device HA Pro.
- Some interface names vary by model - see Table 13 on page 68 for default port / interface name mapping. See Table 14 on page 69 for default interface / zone mapping.

See the product's datasheet for detailed information on a specific model.

1.2 Registration at myZyxel

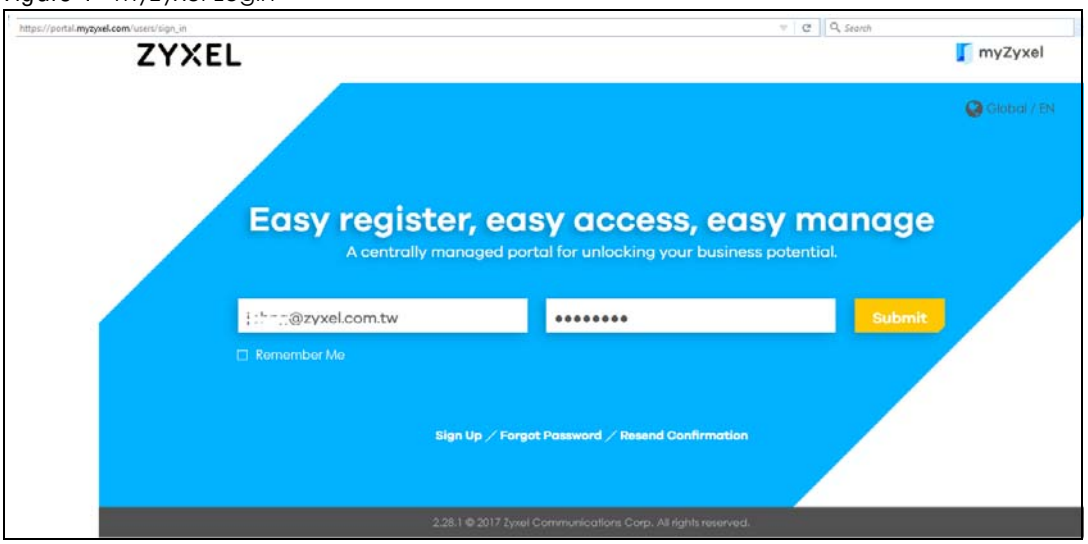
myZyxel is Zyxel's online services center where you can register your Zyxel Device and manage subscription services available for your Zyxel Device (see **Configuration > Licensing > Registration > Service** for services available for your Zyxel Device).

- For Zyxel Devices that already have firmware version 4.25 or later, you have to register your Zyxel Device and activate the corresponding service at myZyxel (through your Zyxel Device).
- For Zyxel Devices upgrading to firmware version 4.25 or later, you may skip registering your Zyxel Device and activating the corresponding service at myZyxel (through your Zyxel Device). However, it is highly recommended to at least register your Zyxel Device. At the time of writing, the Firmware Upgrade license providing Cloud Helper new firmware notifications, is free when you register your Zyxel Device.

Note: You need to create a myZyxel account at *http://portal.myZyxel.com* before you can register your device and activate the services at myZyxel.

You may need your Zyxel Device's serial number and LAN MAC address to register it at myZyxel. See the label at the back of the Zyxel Device's for details.

Figure 1 myZyxel Login



1.2.1 Grace Period

SecuReporter and service licenses have a 15-day grace period after a license expires. Services will continue to work in this period during which you will receive notifications to renew your license(s). New license(s) are valid for 1 year from the date of purchase.

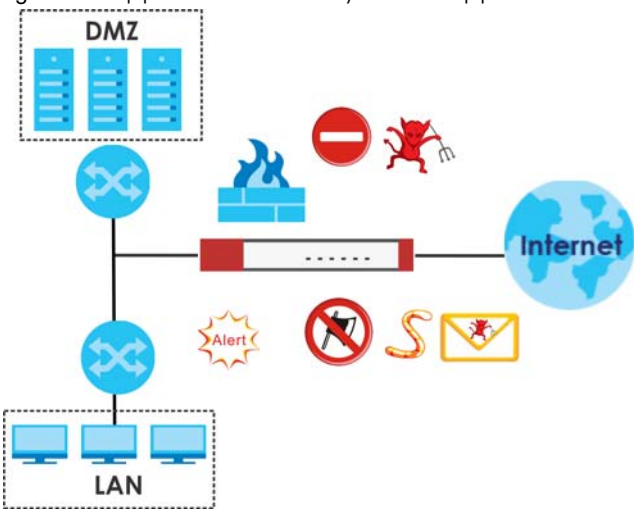
1.2.2 Applications

These are some Zyxel Device application scenarios.

Security Router

Security includes a Stateful Packet Inspection (SPI) firewall.

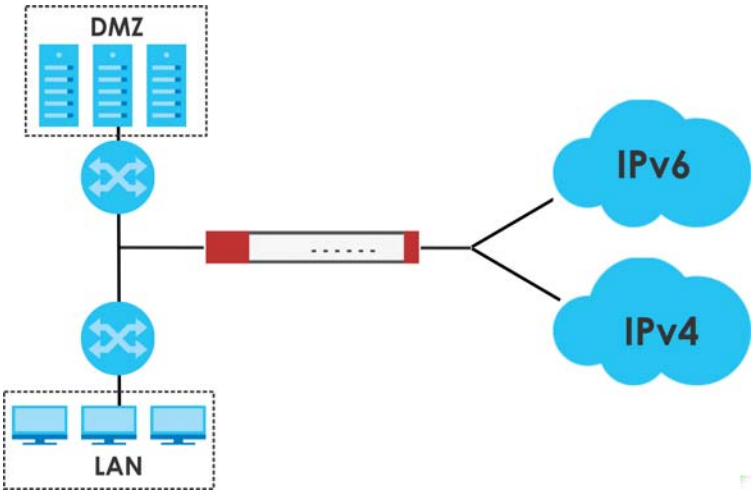
Figure 2 Applications: Security Router Applications: Security Router



IPv6 Routing

The Zyxel Device supports IPv6 Ethernet, PPP, VLAN, and bridge routing. You may also create IPv6 policy routes and IPv6 objects. The Zyxel Device can also route IPv6 packets through IPv4 networks using different tunneling methods.

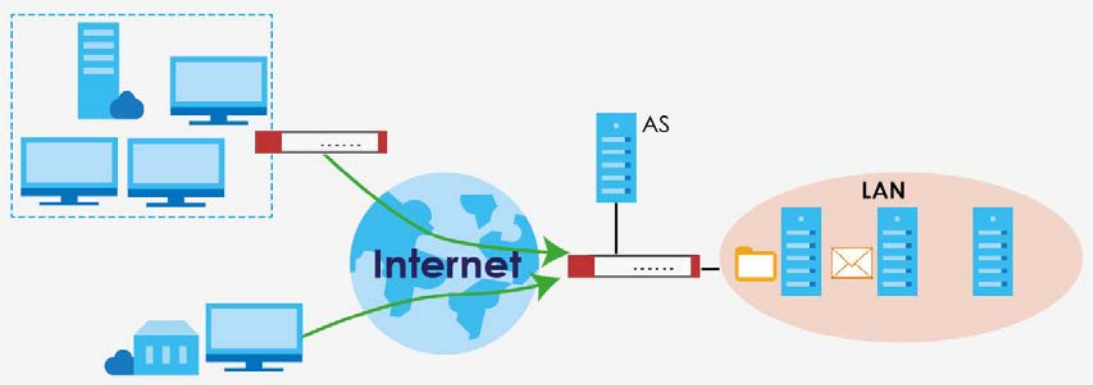
Figure 3 Applications: IPv6 Routing



VPN Connectivity

Set up VPN tunnels with other companies, branch offices, telecommuters, and business travelers to provide secure access to your network. AS is an Authentication Server in the below figure.

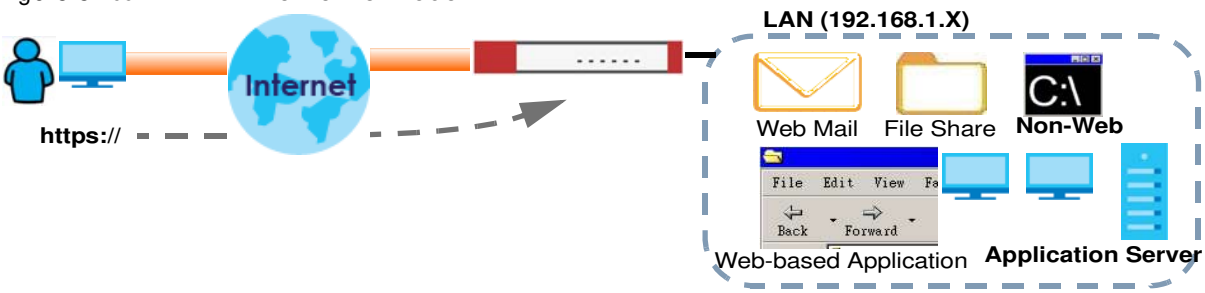
Figure 4 Applications: VPN Connectivity



SSL VPN Network Access

SSL VPN lets remote users use their web browsers for a very easy-to-use VPN solution. A user just browses to the Zyxel Device's web address and enters his user name and password to securely connect to the Zyxel Device's network. Here full tunnel mode creates a virtual connection for a remote user and gives him a private IP address in the same subnet as the local network so he can access network resources in the same way as if he were part of the internal network.

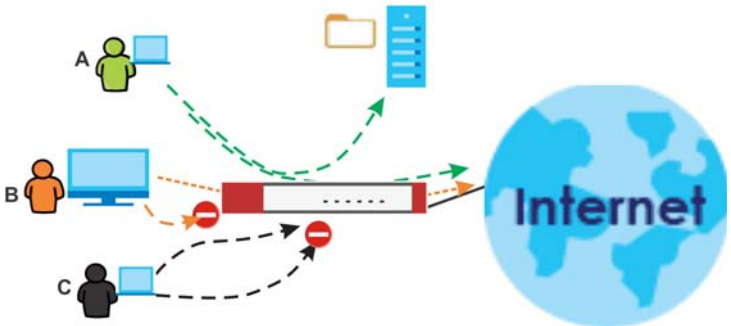
Figure 5 SSL VPN With Full Tunnel Mode



User-Aware Access Control

Set up security policies to restrict access to sensitive information and shared resources based on the user who is trying to access it. In the following figure user A can access both the Internet and an internal file server. User B has a lower level of access and can only access the Internet. User C is not even logged in, so and cannot access either the Internet or the file server.

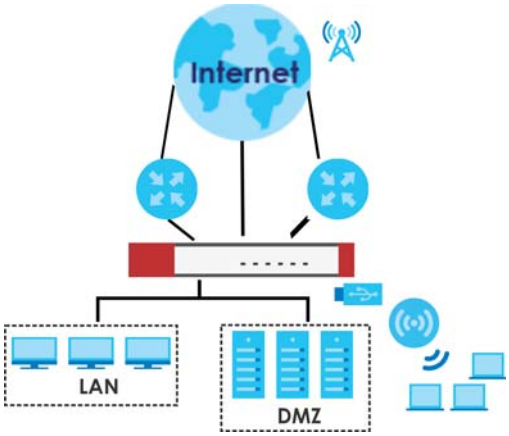
Figure 6 Applications: User-Aware Access Control



Load Balancing

Set up multiple connections to the Internet on the same port, or different ports, including cellular interfaces. In either case, you can balance the traffic loads between them.

Figure 7 Applications: Multiple WAN Interfaces



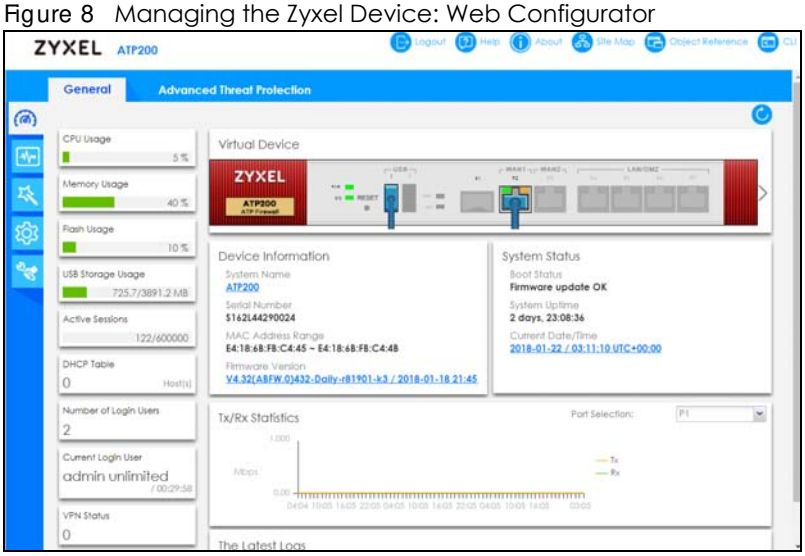
1.3 Management Overview

You can manage the Zyxel Device in the following ways.

Web Configurator

The Web Configurator allows easy Zyxel Device setup and management using an Internet browser. This User's Guide provides information about the Web Configurator.

Figure 8 Managing the Zyxel Device: Web Configurator



Command-Line Interface (CLI)

The CLI allows you to use text-based commands to configure the Zyxel Device. Access it using remote management (for example, SSH or Telnet) or via the physical or Web Configurator console port. See the Command Reference Guide for CLI details. The default settings for the console port are:

Table 2 Console Port Default Settings

SETTING	VALUE
Speed	115200 bps
Data Bits	8
Parity	None
Stop Bit	1
Flow Control	Off

FTP

Use File Transfer Protocol for firmware upgrades and configuration backup/restore.

SNMP

The device can be monitored and/or managed by an SNMP manager. See Section 37.11 on page 732.

CloudCNM

Use the **CloudCNM** screen (see Section 37.15 on page 743) to enable and configure management of the Zyxel Device by a Central Network Management system.

Management Authentication

Managers must be authenticated with a username and password, using one of:

- Local Zyxel Device authentication
- An external RADIUS server
- An external LDAP server
- Certificates

1.4 Web Configurator

In order to use the Web Configurator, you must:

- Use one of the following web browser versions or later:
  - Internet Explorer 10.x, 11.x
  - Chrome latest version (45 or above)
  - Firefox latest version (45 or above)
  - Safari latest version (9.0 or above)
- Allow pop-up windows (blocked by default in some browsers)

- Enable JavaScripts, Java permissions, and cookies

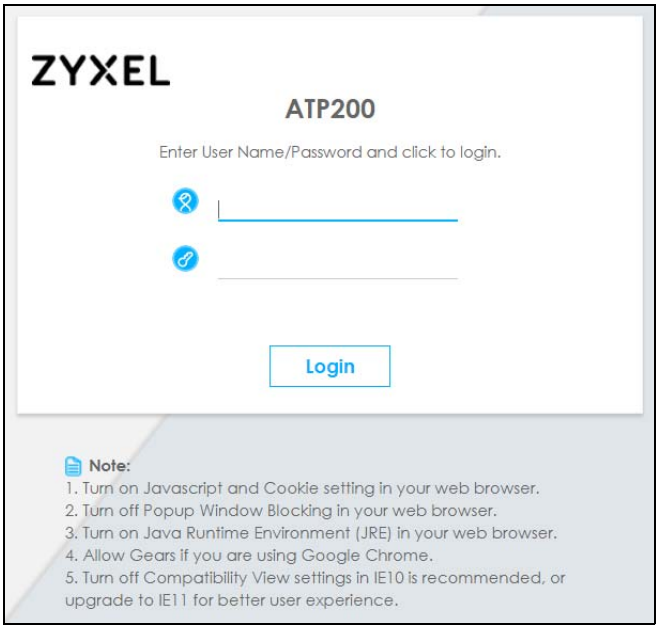
The recommended screen resolution is 1024 x 768 pixels.

Note: Screenshots and graphics in this book may differ slightly from your product due to differences in product features or web configurator brand style. Most screen shots in this guide come from the USG110 and USG60W.

1.4.1 Web Configurator Access

1 Make sure your Zyxel Device hardware is properly connected. See the Quick Start Guide.

2 In your browser go to http://192.168.1.1. By default, the Zyxel Device automatically routes this request to its HTTPS server, and it is recommended to keep this setting. The Login screen appears.

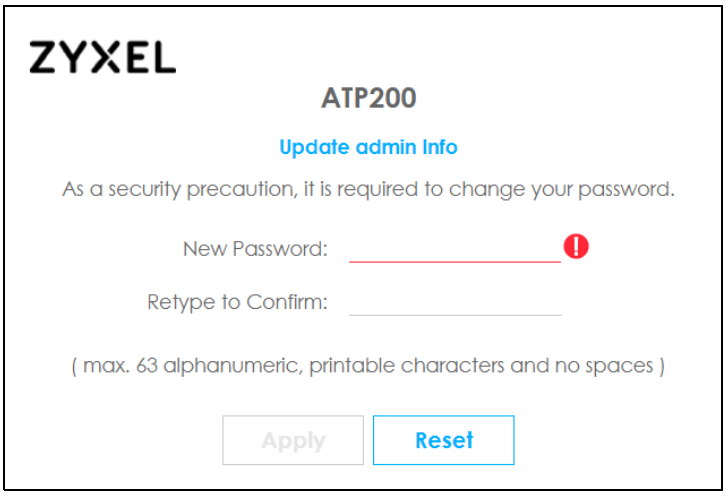


3 Type the user name (default: "admin") and password (default: "1234").

4 Click Login. After you log in for the first time using the default user name and password, you must change the default admin password in the Update Admin Info screen. Enter a new password of from 1 to 64 characters.

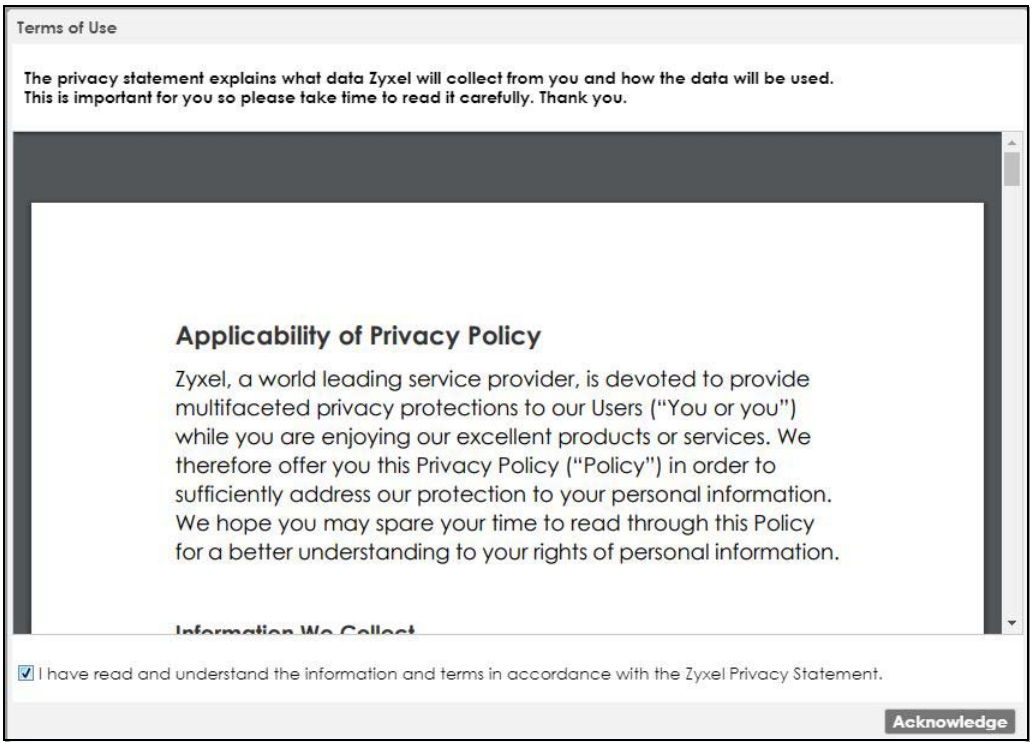
In Configuration > Object > User/Group > Setting, you can enable Password Complexity to require a new password to consist of at least 8 characters and at most 64, where at least 1 character must be a number, at least 1 a lower case letter, at least 1 an upper case letter and at least 1 a special character from the keyboard, such as !@#$%^&*()_+. You can also require periodic changing of the password in that screen by configuring Password must changed every (days).

Make a note of your new password, enter it in the following screen, then click Apply.

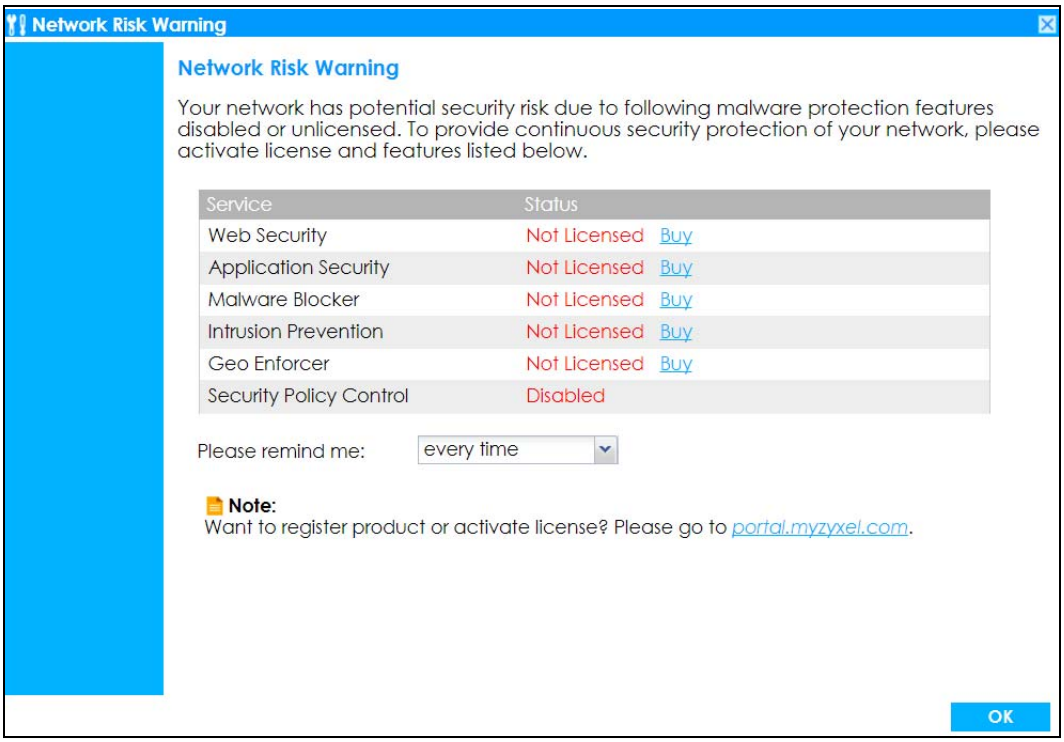


5 A **Terms of Use** screen displays. Read the statement, then click **Acknowledge** to proceed.

Note: If you are using an Internet Explorer browser, the **Terms of Use** will be downloaded automatically.



6 The **Network Risk Warning** screen displays any unregistered or disabled security services. If your Zyxel Device is not registered, you will see a prompt to register it. Select how often to display the screen and click **OK**.

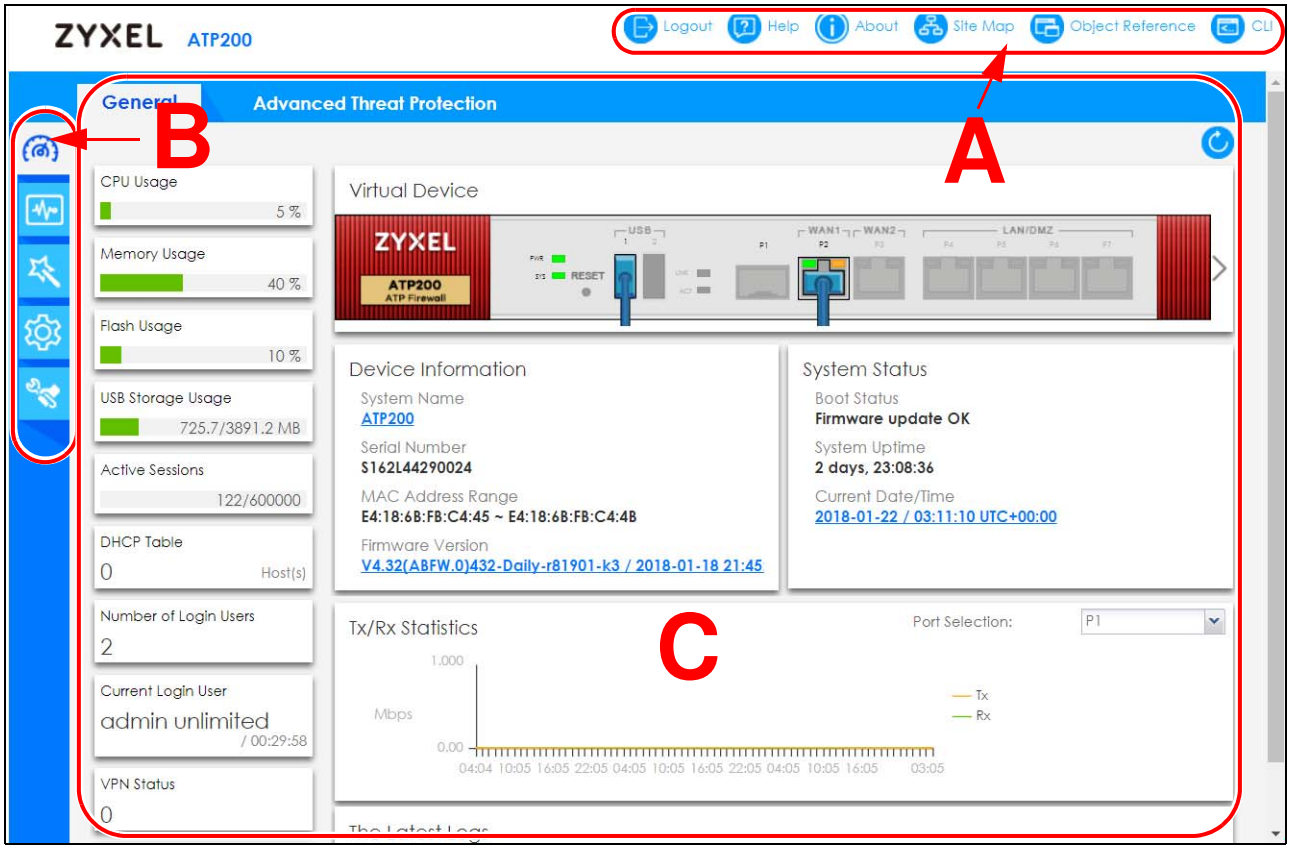


If you select **Never** and you later want to bring this screen back, use these commands (note the space before the underscore).

```
Router> enable
Router#
Router# configure terminal
Router(config)#
Router(config)# service-register _setremind
after-10-days
after-180-days
after-30-days
every-time
never
Router(config)# service-register _setremind every-time
Router(config)#
```

See the Command Line Interface (CLI) Reference Guide (RG) for details on all supported commands.

7 Follow the directions in the **Update Admin Info** screen. If you change the default password, the **Login** screen appears after you click **Apply**. If you click **Ignore**, the **Installation Setup Wizard** opens if the ZyWALL is using its default configuration; otherwise the dashboard appears.



1.4.2 Web Configurator Screens Overview

The Web Configurator screen is divided into these parts (as illustrated on page 32):

- A - title bar
- B - navigation panel
- C - main window

Title Bar

Figure 9 Title Bar

The title bar icons in the upper right corner provide the following functions.

Table 3 Title Bar: Web Configurator Icons

LABEL	DESCRIPTION
Logout	Click this to log out of the Web Configurator.
Help	Click this to open the help page for the current screen.
Forum	Click this to go to the forum website for product discussions.
About	Click this to display basic information about the Zyxel Device.
Site Map	Click this to see an overview of links to the Web Configurator screens.

Table 3 Title Bar: Web Configurator Icons (continued)

LABEL	DESCRIPTION
References	Click this to check which configuration items reference an object.
CLI	Click this to open a popup window that displays the CLI commands sent by the Web Configurator to the Zyxel Device.

About

Click **About** to display basic information about the Zyxel Device.

Figure 10 About

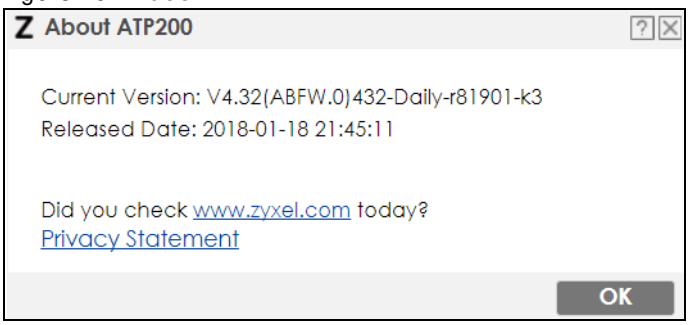


Table 4 About

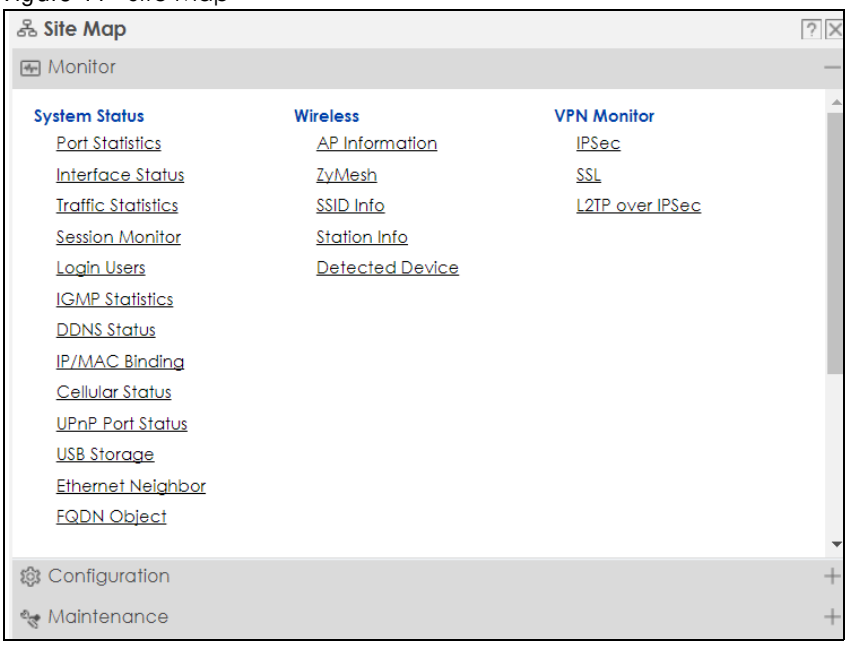
LABEL	DESCRIPTION
Current Version	This shows the firmware version of the Zyxel Device.
Released Date	This shows the date (yyyy-mm-dd) and time (hh:mm:ss) when the firmware is released.
OK	Click this to close the screen.

Site Map

Click **Site MAP** to see an overview of links to the Web Configurator screens. Click a screen's link to go to that screen.

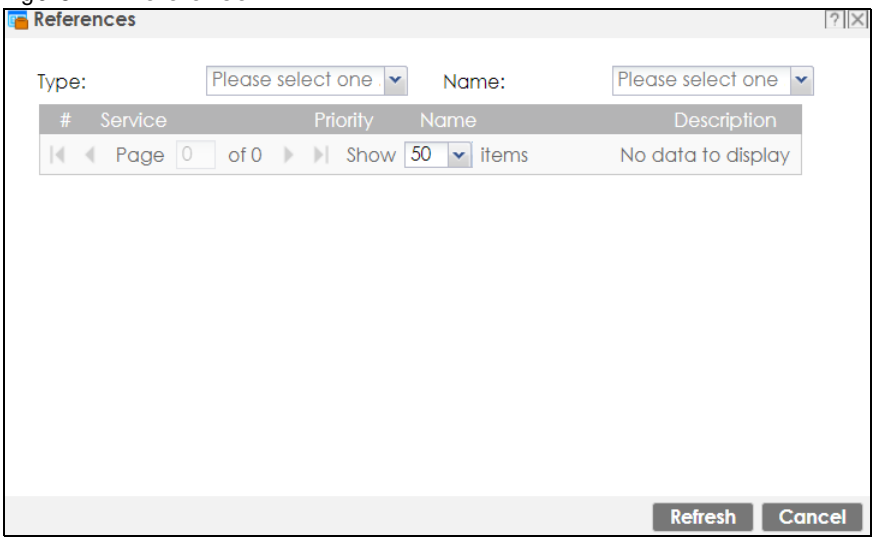
Figure 11 Site Map



Reference

Click **Reference** to open the **Reference** screen. Select the type of object and the individual object and click **Refresh** to show which configuration settings reference the object.

Figure 12 Reference



The fields vary with the type of object. This table describes labels that can appear in this screen.

Table 5 Reference

LABEL	DESCRIPTION
Type	Select an object type to see the services.
Name	This identifies the object for which the configuration settings that use it are displayed. Click the object's name to display the object's configuration screen in the main window.
#	This field is a sequential value, and it is not associated with any entry.

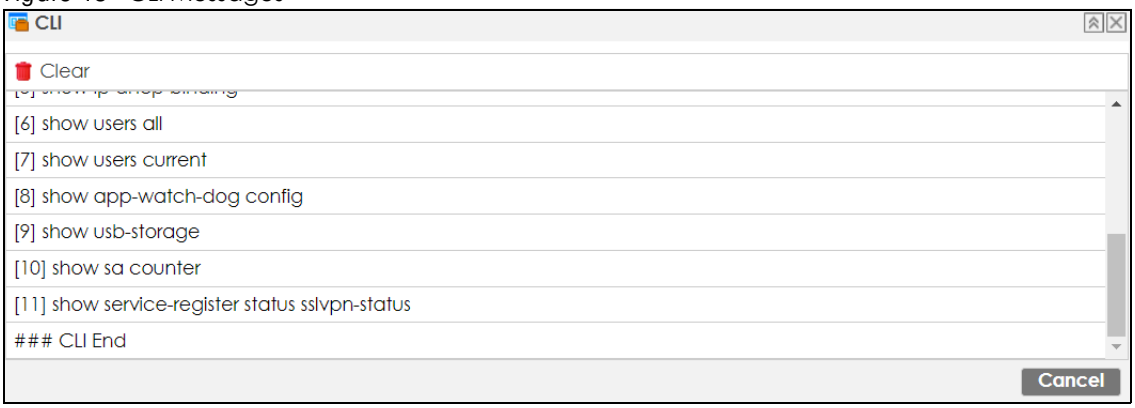
Table 5 Reference (continued)

LABEL	DESCRIPTION
Service	This is the type of setting that references the selected object. Click a service's name to display the service's configuration screen in the main window.
Priority	If it is applicable, this field lists the referencing configuration item's position in its list, otherwise N/A displays.
Name	This field identifies the configuration item that references the object.
Description	If the referencing configuration item has a description configured, it displays here.
Refresh	Click this to update the information in this screen.
Cancel	Click **Cancel** to close the screen.

CLI Messages

Click **CLI** to look at the CLI commands sent by the Web Configurator. Open the pop-up window and then click some menus in the web configurator to display the corresponding commands.

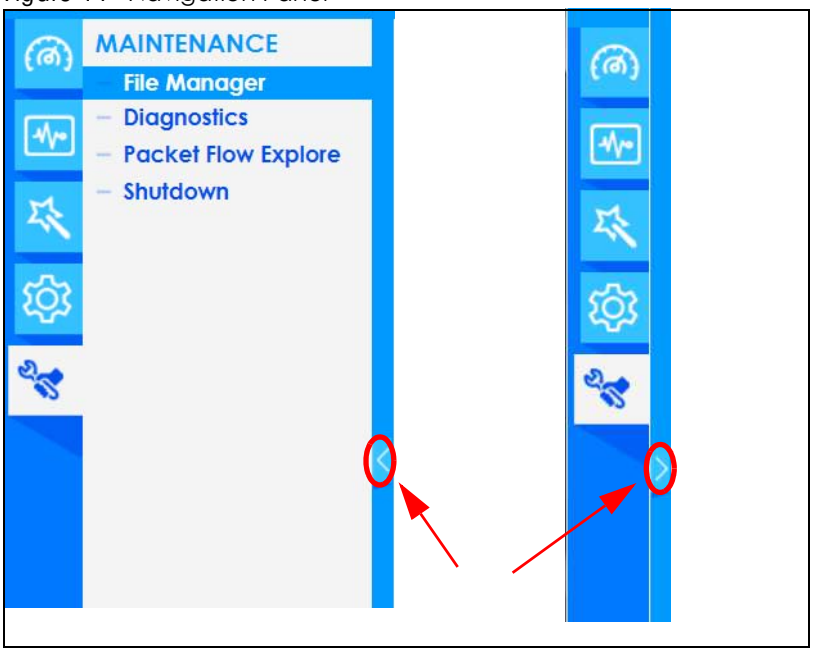
Figure 13 CLI Messages



1.4.3 Navigation Panel

Use the navigation panel menu items to open status and configuration screens. Click the arrow in the middle of the right edge of the navigation panel to hide the panel or drag to resize it. The following sections introduce the Zyxel Device's navigation panel menus and their screens.

Figure 14 Navigation Panel



Dashboard

The dashboard displays general device information, system status, system resource usage, licensed service status, and interface status in widgets that you can re-arrange to suit your needs. See the Web Help for details on the dashboard.

Monitor Menu

The monitor menu screens display status and statistics information.

Table 6 Monitor Menu Screens Summary

FOLDER OR LINK	TAB	FUNCTION
System Status		
Port Statistics	Port Statistics	Displays packet statistics for each physical port.
Interface Status	Interface Summary	Displays general interface information and packet statistics.
Traffic Statistics	Traffic Statistics	Collect and display traffic statistics.
Session Monitor	Session Monitor	Displays the status of all current sessions.
Login Users	Login Users	Lists the users currently logged into the Zyxel Device.
IGMP Statistics	IGMP Statistics	Collect and display IGMP statistics.
DDNS Status	DDNS Status	Displays the status of the Zyxel Device's DDNS domain names.
IP/MAC Binding	IP/MAC Binding	Lists the devices that have received an IP address from Zyxel Device interfaces using IP/MAC binding.
Cellular Status	Cellular Status	Displays details about the Zyxel Device's mobile broadband connection status.
UPnP Port Status	Port Statistics	Displays details about UPnP connections going through the Zyxel Device.

Table 6 Monitor Menu Screens Summary (continued)

FOLDER OR LINK	TAB	FUNCTION
USB Storage	Storage Information	Displays details about USB device connected to the Zyxel Device.
Ethernet Neighbor	Ethernet Neighbor	View and manage the Zyxel Device's neighboring devices via Smart Connect (Layer Link Discovery Protocol (LLDP)). Use the Zyxel One Network (ZON) utility to view and manage the Zyxel Device's neighboring devices via the Zyxel Discovery Protocol (ZDP).
FQDN Object	FQDN Object	Displays FQDN (Fully Qualified Domain Name) object cache lists used in DNS queries.
Wireless		
AP Information	AP List	Lists APs managed by the Zyxel Device.
	Radio List	Lists wireless details of APs managed by the Zyxel Device.
	Top N APs	Lists managed APs with the most wireless traffic usage and most associated wireless stations.
	Single AP	Lists APs wireless traffic usage and associated wireless stations for a managed AP.
ZyMesh	ZyMesh Link Info	Display statistics about ZyMesh wireless connections between managed APs.
SSID Info	SSID Info	Display information about the SSID's wireless clients.
Station Info	Station List	Lists wireless clients associated with the APs managed by the Zyxel Device.
	Top N Stations	Lists wireless stations with the most wireless traffic usage.
	Single Station	Lists wireless traffic usage for an associated wireless station.
Detected Device	Detected Device	Display information about suspected rogue APs.
VPN Monitor		
IPSec	IPSec	Displays and manages the active IPSec SAs.
SSL	SSL	Lists users currently logged into the VPN SSL client portal. You can also log out individual users and delete related session information.
L2TP over IPSec	L2TP over IPSec	Displays details about current L2TP sessions.
Security Statistics		
Content Filter	Summary	Collect and display content filter statistics
App Patrol	Summary	Displays application patrol statistics.
Anti-Malware	Summary	Collect and display statistics on the viruses that the Zyxel Device has detected.
IDP	Summary	Collect and display statistics on the intrusions that the Zyxel Device has detected.
Email Security	Summary	Collect and display spam statistics.
	Status	Displays how many mail sessions the ZyWALL is currently checking and DNSBL (Domain Name Service-based spam Black List) statistics.
Botnet Filter	Summary	Displays the IP addresses and URLs that are blocked by the Zyxel Device.
Sandboxing	Summary	Displays the sandboxing statistics.
SSL Inspection	Report	Collect and display SSL Inspection statistics.
	Certificate Cache List	Displays traffic to destination servers using certificates.

Table 6 Monitor Menu Screens Summary (continued)

FOLDER OR LINK	TAB	FUNCTION
Log	View Log	Lists log entries.
	View AP Log	Lists AP log entries.

Configuration Menu

Use the configuration menu screens to configure the Zyxel Device's features.

Table 7 Configuration Menu Screens Summary

FOLDER OR LINK	TAB	FUNCTION
Quick Setup		Quickly configure WAN interfaces or VPN connections.
Licensing		
Registration	Registration	Register the device and activate trial services.
	Service	View the licensed service status and upgrade licensed services.
Signature Update	Signature	Update signatures immediately or by a schedule.
Wireless		
Controller	Configuration	Configure manual or automatic controller registration.
AP Management	Mgnt AP List	Edit or remove entries in the lists of APs managed by the Zyxel Device.
	AP Policy	Configure the AP controller's IP address on the managed APs and determine the action the managed APs take if the current AP controller fails.
	AP Group	Create groups of APs, define their radio, VLAN, port and load balancing settings.
	Firmware	Update the firmware on APs connected to your Zyxel Device.
MON Profile	Rogue/Friendly AP List	Configure how the Zyxel Device monitors rogue APs.
Auto Healing	Auto Healing	Enable auto healing to extend the wireless service coverage area of the managed APs when one of the APs fails.
RTLS	Real Time Location System	Use the managed APs as part of an Ekahau RTLS to track the location of Ekahau Wi-Fi tags.
Network		
Interface	Port Role	Use this screen to set the Zyxel Device's flexible ports such as LAN, OPT, WLAN, or DMZ.
	Ethernet	Manage Ethernet interfaces and virtual Ethernet interfaces.
	PPP	Create and manage PPPoE and PPTP interfaces.
	Cellular	Configure a cellular Internet connection for an installed mobile broadband card.
	Tunnel	Configure tunneling between IPv4 and IPv6 networks.
	VLAN	Create and manage VLAN interfaces and virtual VLAN interfaces.
	Bridge	Create and manage bridges and virtual bridge interfaces.
	VTI	Configure IP address assignment and interface parameters for VTI (Virtual Tunnel Interface).
	Trunk	Create and manage trunks (groups of interfaces) for load balancing.

Table 7 Configuration Menu Screens Summary (continued)

FOLDER OR LINK	TAB	FUNCTION
Routing	Policy Route	Create and manage routing policies.
	Static Route	Create and manage IP static routing information.
	RIP	Configure device-level RIP settings.
	OSPF	Configure device-level OSPF settings, including areas and virtual links.
	BGP	Configure exchange of Border Gateway Protocol (BGP) information over an IPSec tunnel.
DDNS	DDNS	Define and manage the Zyxel Device's DDNS domain names.
NAT	NAT	Set up and manage port forwarding rules.
Redirect Service	Redirect Service	Set up and manage HTTP and SMTP redirection rules.
ALG	ALG	Configure SIP, H.323, and FTP pass-through settings.
UPnP	UPnP	Configure interfaces that allow UPnP and NAT-PMP connections.
IP/MAC Binding	Summary	Configure IP to MAC address bindings for devices connected to each supported interface.
	Exempt List	Configure ranges of IP addresses to which the Zyxel Device does not apply IP/MAC binding.
Layer 2 Isolation	General	Enable layer-2 isolation on the Zyxel Device and the internal interface(s).
	White List	Enable and configure the white list.
DNS Inbound LB	DNS Load Balancing	Configure DNS Load Balancing.
IPnP	IPnP	Enable IPnP on the Zyxel Device and the internal interface(s).
VPN		
IPSec VPN	VPN Connection	Configure IPSec tunnels.
	VPN Gateway	Configure IKE tunnels.
	Concentrator	Combine IPSec VPN connections into a single secure network
	Configuration Provisioning	Set who can retrieve VPN rule settings from the Zyxel Device using the Zyxel Device IPSec VPN Client.
SSL VPN	Access Privilege	Configure SSL VPN access rights for users and groups.
	Global Setting	Configure the Zyxel Device's SSL VPN settings that apply to all connections.
L2TP VPN	L2TP VPN	Configure L2TP over IPSec tunnels.
BWM	BWM	Enable and configure bandwidth management rules.
Web Authentication	Web Authentication General/ Authentication Type/Custom Web Portal File/Custom User Agreement File	Define a web portal and exempt services from authentication.
	SSO	Configure the Zyxel Device to work with a Single Sign On agent.
Security Policy		
Policy Control	Policy	Create and manage level-3 traffic rules and apply Security Service profiles.
ADP	General	Display and manage ADP bindings.
	Profile	Create and manage ADP profiles.
Session Control	Session Control	Limit the number of concurrent client NAT/security policy sessions.

Table 7 Configuration Menu Screens Summary (continued)

FOLDER OR LINK	TAB	FUNCTION
Security Service		
Botnet Filter	Botnet Filter	Enable botnet filtering and specify the actions.
Content Filter	Profile	Create and manage the detailed filtering rules for content filtering profiles and then apply to a traffic flow using a security policy.
	Trusted Web Sites	Create a list of allowed web sites that bypass content filtering policies.
	Forbidden Web Sites	Create a list of web sites to block regardless of content filtering policies.
AppPatrol	Profile	Manage different types of traffic in this screen. Create App Patrol template(s) of settings to apply to a traffic flow using a security policy.
Email Security	Email Security	Turn email security on or off and manage email security policies. Create email security template(s) of settings to apply to a traffic flow using a security policy.
	Black/White List	Set up a black list to identify spam and a white list to identify legitimate email.
Anti-Malware	Anti-Malware	Enable and set up a black list to identify files with virus file patterns and a white list to identify files that should not be checked for AV.
	Signature	Search for particular signatures and get more information about them.
IDP	IDP	Enable and configure IDP settings. Create, import, or export custom signatures.
Sandboxing	Sandboxing	Enable sandboxing, and specify the actions the Zyxel Device takes when malicious or suspicious files are detected.
SSL Inspection	Profile	Decrypt HTTPS traffic for Security Service inspection. Create SSL Inspection template(s) of settings to apply to a traffic flow using a security policy.
	Exclude List	Configure services to be excluded from SSL Inspection.
	Certificate Update	Use this screen to update the latest certificates of servers using SSL connections to the Zyxel Device network.
Object		
Zone	Zone	Configure zone template(s) used to define various policies.
User/Group	User	Create and manage users.
	Group	Create and manage groups of users.
	Setting	Manage default settings for all users, general settings for user sessions, and rules to force user authentication.
	MAC Address	Configure the MAC addresses of wireless clients for MAC authentication using the local user database.
AP Profile	Radio	Create template(s) of radio settings to apply to policies as an object.
	SSID	Create template(s) of wireless settings to apply to radio profiles or policies as an object.
MON Profile	MON Profile	Create and manage rogue AP monitoring files that can be associated with different APs.
ZyMesh Profile	ZyMesh Profile	Create and manage ZyMesh files that can be associated with different APs.

Table 7 Configuration Menu Screens Summary (continued)

FOLDER OR LINK	TAB	FUNCTION
Address/Geo IP	Address	Create and manage host, range, and network (subnet) addresses.
	Address Group	Create and manage groups of addresses to apply to policies as a single objects.
	Geo IP	Update the database of country-to-IP address mappings and manually configure country-to-IP address mappings for geographic address objects that can be used in security policies.
Service	Service	Create and manage TCP and UDP services.
	Service Group	Create and manage groups of services to apply to policies as a single object.
Schedule	Schedule	Create one-time and recurring schedules.
	Schedule Group	Create and manage groups of schedules to apply to policies as a single object.
AAA Server	Active Directory	Configure the Active Directory settings.
	LDAP	Configure the LDAP settings.
	RADIUS	Configure the RADIUS settings.
Auth. Method	Authentication Method	Create and manage ways of authenticating users.
Certificate	My Certificates	Create and manage the Zyxel Device's certificates.
	Trusted Certificates	Import and manage certificates from trusted sources.
DHCPv6	Request	Configure IPv6 DHCP request type and interface information.
	Lease	Configure IPv6 DHCP lease type and interface information.
Cloud CNM	SecuManager	Enable and configure management of the Zyxel Device by a Central Network Management system.
	SecuReporter	Enable SecuReporter logging and access the SecuReporter security analytics portal that collects and analyzes logs from your Zyxel Device in order to identify anomalies, alert on potential internal / external threats, and report on network usage.
System		
Host Name	Host Name	Configure the system and domain name for the Zyxel Device.
USB Storage	Settings	Configure the settings for the connected USB devices.
Date/Time	Date/Time	Configure the current date, time, and time zone in the Zyxel Device.
Console Speed	Console Speed	Set the console speed.
DNS	DNS	Configure the DNS server and address records for the Zyxel Device.
WWW	Service Control	Configure HTTP, HTTPS, and general authentication.
	Login Page	Configure how the login and access user screens look.
SSH	SSH	Configure SSH server and SSH service settings.
TELNET	TELNET	Configure telnet server settings for the Zyxel Device.
FTP	FTP	Configure FTP server settings.
SNMP	SNMP	Configure SNMP communities and services.
Auth. Server	Auth. Server	Configure the Zyxel Device to act as a RADIUS server.
Notification	Mail Server	Configure a mail server with authentication to send reports and password expiration notification emails.
Language	Language	Select the Web Configurator language.
IPv6	IPv6	Enable IPv6 globally on the Zyxel Device here.

Table 7 Configuration Menu Screens Summary (continued)

FOLDER OR LINK	TAB	FUNCTION
ZON	ZON	Use the Zyxel One Network (ZON) utility to view and manage the Zyxel Device's neighboring devices via the Zyxel Discovery Protocol (ZDP).
Log & Report		
Email Daily Report	Email Daily Report	Configure where and how to send daily reports and what reports to send.
Log Settings	Log Settings	Configure the system log, email logs, and remote syslog servers.

Maintenance Menu

Use the maintenance menu screens to manage configuration and firmware files, run diagnostics, and reboot or shut down the Zyxel Device.

Table 8 Maintenance Menu Screens Summary

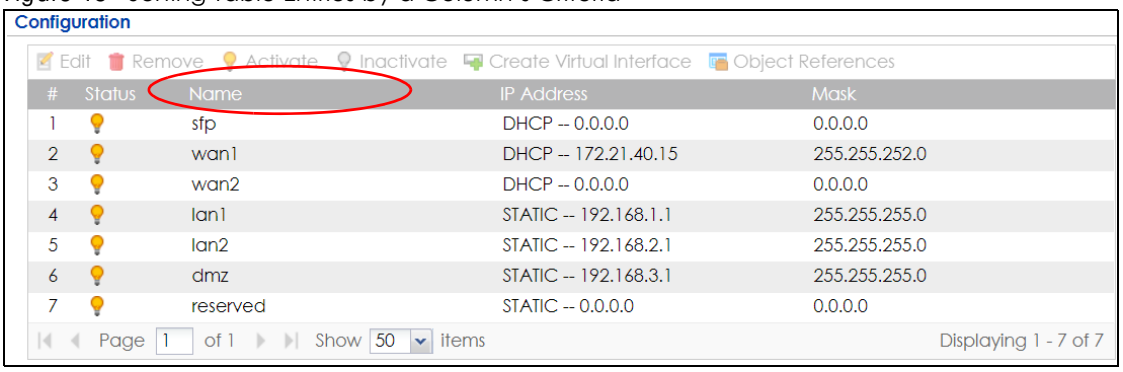
FOLDER OR LINK	TAB	FUNCTION
File Manager	Configuration File	Manage and upload configuration files for the Zyxel Device.
	Firmware Management	View the current firmware version and upload firmware. Reboot with your choice of firmware.
	Shell Script	Manage and run shell script files for the Zyxel Device.
Diagnostics	Diagnostics Collect Collect on AP Files	Collect diagnostic information.
	Packet Capture	Capture packets for analysis.
	CPU/Memory Status	View CPU and memory usage statistics.
	System Log	Connect a USB device to the Zyxel Device and archive the Zyxel Device system logs to it here.
	Remote Assistance	Configure and schedule external access to the Zyxel Device for troubleshooting.
	Network Tool	Identify problems with the connections. You can use Ping or Traceroute to help you identify problems.
	Routing Traces	Configure traceroute to identify where packets are dropped for troubleshooting.
	Wireless Frame Capture	Capture wireless frames from APs for analysis.
Packet Flow Explore	Routing Status	Check how the Zyxel Device determines where to route a packet.
	SNAT Status	View a clear picture on how the Zyxel Device converts a packet's source IP address and check the related settings.
Shutdown	Shutdown	Turn off the Zyxel Device.

1.4.4 Tables and Lists

Web Configurator tables and lists are flexible with several options for how to display their entries.

Click a column heading to sort the table's entries according to that column's criteria.

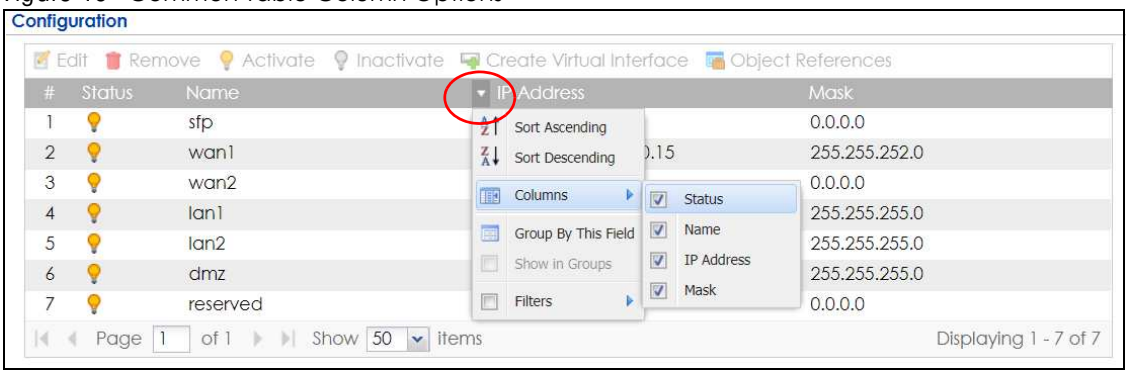
Figure 15 Sorting Table Entries by a Column's Criteria



Click the down arrow next to a column heading for more options about how to display the entries. The options available vary depending on the type of fields in the column. Here are some examples of what you can do:

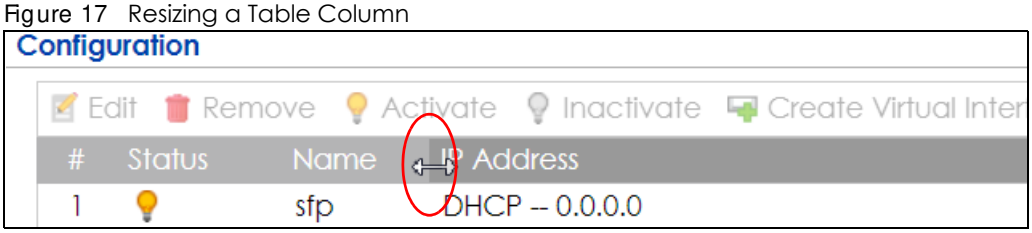
- Sort in ascending or descending (reverse) alphabetical order
- Select which columns to display
- Group entries by field
- Show entries in groups
- Filter by mathematical operators (<, >, or =) or searching for text

Figure 16 Common Table Column Options



Select a column heading cell's right border and drag to re-size the column.

Figure 17 Resizing a Table Column



Select a column heading and drag and drop it to change the column order. A green check mark displays next to the column's title when you drag the column to a valid new location.

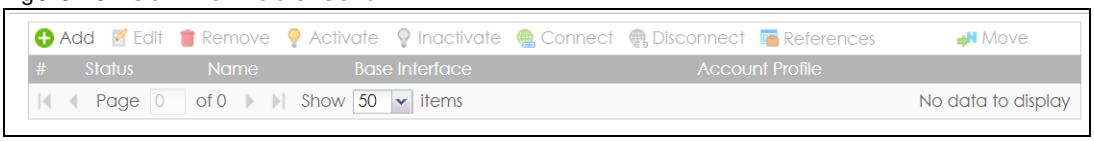
Figure 18 Moving Columns

Use the icons and fields at the bottom of the table to navigate to different pages of entries and control how many entries display at a time.

Figure 19 Navigating Pages of Table Entries

The tables have icons for working with table entries. You can often use the [Shift] or [Ctrl] key to select multiple entries to remove, activate, or deactivate.

Figure 20 Common Table Icons



Here are descriptions for the most common table icons.

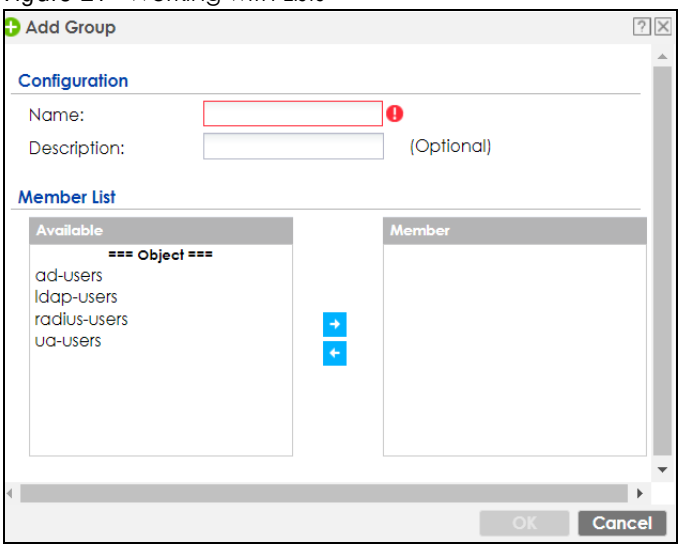
Table 9 Common Table Icons

LABEL	DESCRIPTION
Add	Click this to create a new entry. For features where the entry's position in the numbered list is important (features where the Zyxel Device applies the table's entries in order like the security policy for example), you can select an entry and click **Add** to create a new entry after the selected entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings. In some tables you can just click a table entry and edit it directly in the table. For those types of tables small red triangles display for table entries with changes that you have not yet applied.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Connect	To connect an entry, select it and click **Connect**.
Disconnect	To disconnect an entry, select it and click **Disconnect**.
References	Select an entry and click **References** to check which settings use the entry.
Move	To change an entry's position in a numbered list, select it and click **Move** to display a field to type a number for where you want to put that entry and press [ENTER] to move the entry to the number that you typed. For example, if you type 6, the entry you are moving becomes number 6 and the previous entry 6 (if there is one) gets pushed up (or down) one.

Working with Lists

When a list of available entries displays next to a list of selected entries, you can often just double-click an entry to move it from one list to the other. In some lists you can also use the [Shift] or [Ctrl] key to select multiple entries, and then use the arrow button to move them to the other list.

Figure 21 Working with Lists



CHAPTER 2
Initial Setup Wizard

2.1 Initial Setup Wizard Screens

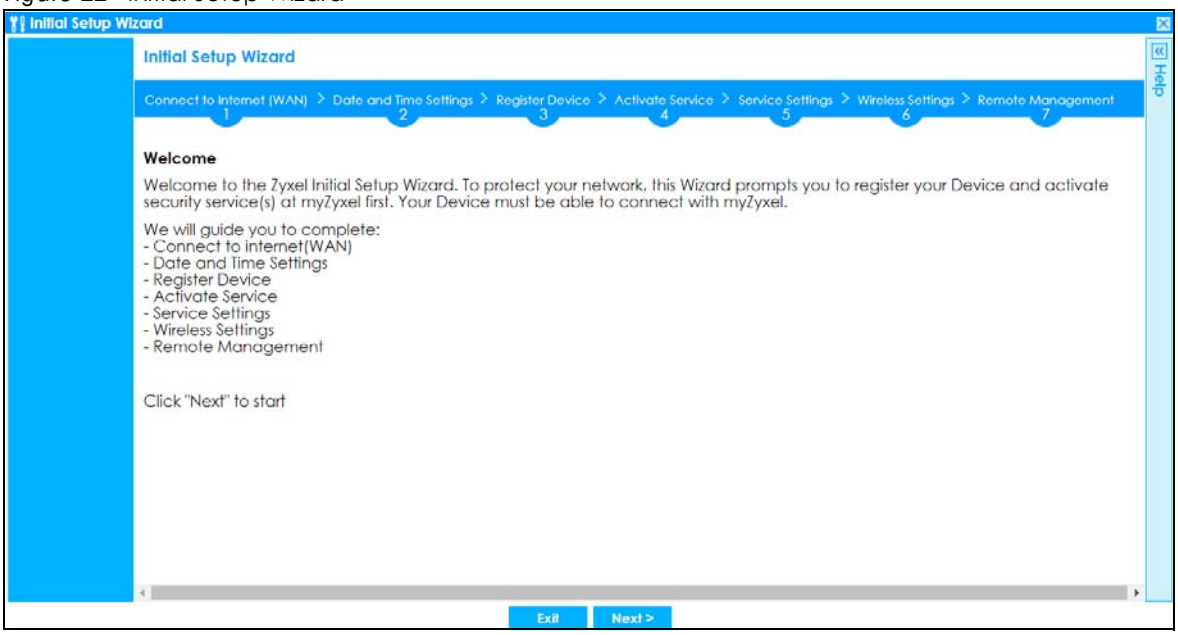
When you log into the Web Configurator for the first time or when you reset the Zyxel Device to its default configuration, the **Initial Setup Wizard** screen displays. This wizard helps you configure Internet connection settings and activate subscription services.

Note: For Zyxel Devices that already have firmware version 4.25 or later, you have to register your Zyxel Device and activate the corresponding service at myZyxel (through your Zyxel Device).

This chapter provides information on configuring the Web Configurator's **Initial Setup Wizard**. See the feature-specific chapters in this User's Guide for background information.

- Click the double arrow in the upper right corner to display or hide the help.
- Click **Logout** to exit the **Initial Setup Wizard** or click **Next** to continue the wizard. Click **Finish** at the end of the wizard to complete the wizard.

Figure 22 Initial Setup Wizard



2.1.1 Internet Access Setup - WAN Interface

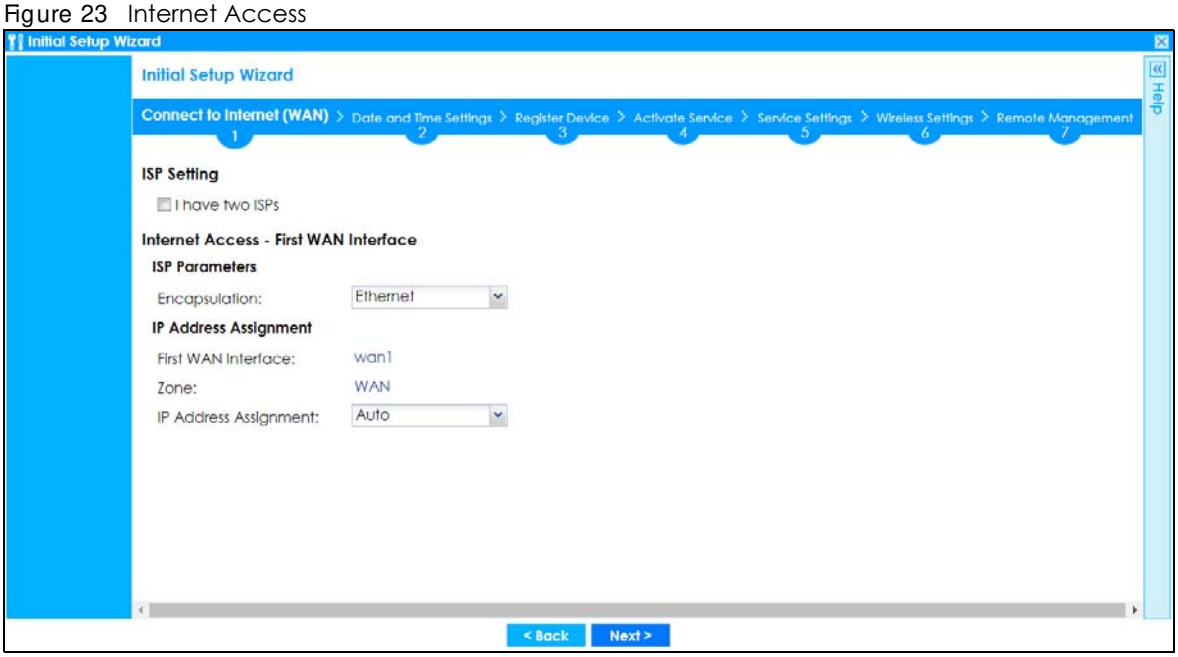
Use this screen to set how many WAN interfaces to configure and the first WAN interface's type of encapsulation and method of IP address assignment.

The screens vary depending on the encapsulation type. Refer to information provided by your ISP to know what to enter in each field.

Note: Enter the Internet access information exactly as your ISP gave it to you. Leave a field blank if you don't have that information.

- **I have two ISPs**: Select this option to configure two Internet connections. Leave it cleared to configure just one. This option appears when you are configuring the first WAN interface.
- **Encapsulation**: Choose the **Ethernet** option when the WAN port is used as a regular Ethernet. Choose **PPPoE**, **PPTP** or **L2TP** for a dial-up connection according to the information from your ISP.
- **WAN Interface**: This is the interface you are configuring for Internet access.
- **Zone**: This is the security zone to which this interface and Internet connection belong.
- **IP Address Assignment**: Select **Auto** if your ISP did not assign you a fixed IP address. Select **Static** if the ISP assigned a fixed IP address.

Figure 23 Internet Access



2.1.2 Internet Access: Ethernet

This screen is read-only if you set the previous screen's **IP Address Assignment** field to **Auto**. If you set the previous screen's **IP Address Assignment** field to **Static**, use this screen to configure your IP address settings.

- **Encapsulation**: This displays the type of Internet connection you are configuring.
- **First WAN Interface**: This is the number of the interface that will connect with your ISP.
- **Zone**: This is the security zone to which this interface and Internet connection will belong.
- **IP Address**: Enter your (static) public IP address. **Auto** displays if you selected **Auto** as the **IP Address Assignment** in the previous screen.

The following fields display if you selected static IP address assignment.

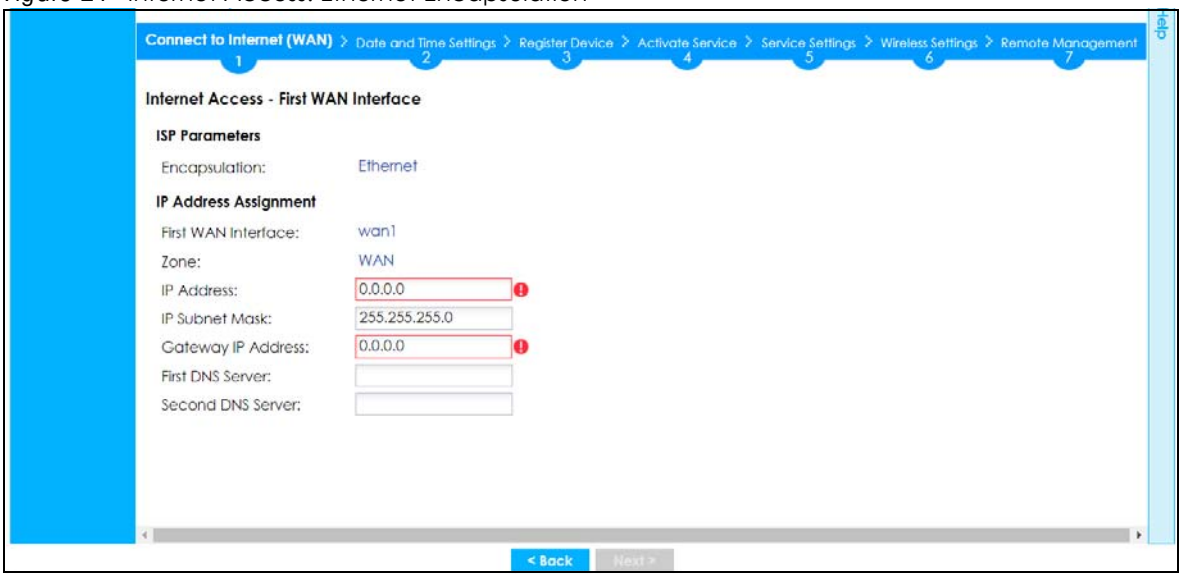
- **IP Subnet Mask**: Enter the subnet mask for this WAN connection's IP address.

- **Gateway IP Address:** Enter the IP address of the router through which this WAN connection will send traffic (the default gateway).
- **First / Second DNS Server:** These fields display if you selected static IP address assignment. The Domain Name System (DNS) maps a domain name to an IP address and vice versa. Enter a DNS server's IP address(es). The DNS server is extremely important because without it, you must know the IP address of a computer before you can access it. The Zyxel Device uses these (in the order you specify here) to resolve domain names for VPN, DDNS and the time server. Leave the field as 0.0.0.0 if you do not want to configure DNS servers.

2.1.2.1 Possible Errors

- Check that your cable connection is coming from the correct interface you're using for the WAN connection on the Zyxel Device.
- Check that the interface is connected to the device you're using for Internet access such as a broadband router and that the router is turned on. The LED of the interface you're using for the WAN connection on the Zyxel Device should be orange.
- If your Zyxel Device was not able to obtain an IP address, check that your Internet access information uses DHCP as the WAN connection type. If it fails again, check with your Internet service provider or administrator for correct WAN settings.
- If your Zyxel Device was not able to use the IP address entered, check that you were given an IP address, subnet mask and gateway address as part of your Internet access information. Re-enter your IP address, subnet mask and gateway IP address exactly as given. If it fails again, check with your Internet service provider or administrator for correct IP address, subnet mask and gateway address and other WAN settings.

Figure 24 Internet Access: Ethernet Encapsulation



2.1.3 Internet Access: PPPoE

2.1.3.1 ISP Parameters

- Type the PPPoE **Service Name** from your service provider. PPPoE uses a service name to identify and reach the PPPoE server. You can use alphanumeric and -_@$./ characters, and it can be up to 64 characters long.
- **Authentication Type** - Select an authentication protocol for outgoing connection requests. Options are:
  - **Chap/PAP** - Your Zyxel Device accepts either CHAP or PAP when requested by the remote node.

  - **Chap** - Your Zyxel Device accepts CHAP only.
  - **PAP** - Your Zyxel Device accepts PAP only.
  - **MSCHAP** - Your Zyxel Device accepts MSCHAP only.
  - **MSCHAP-V2** - Your Zyxel Device accepts MSCHAP-V2 only.
- Type the **User Name** given to you by your ISP. You can use alphanumeric and -_@$./ characters, and it can be up to 31 characters long.
- Type the **Password** associated with the user name. Use up to 64 ASCII characters except the [] and ?. This field can be blank.
- Select **Nailed-Up** if you do not want the connection to time out. Otherwise, type the **Idle Timeout** in seconds that elapses before the router automatically disconnects from the PPPoE server.

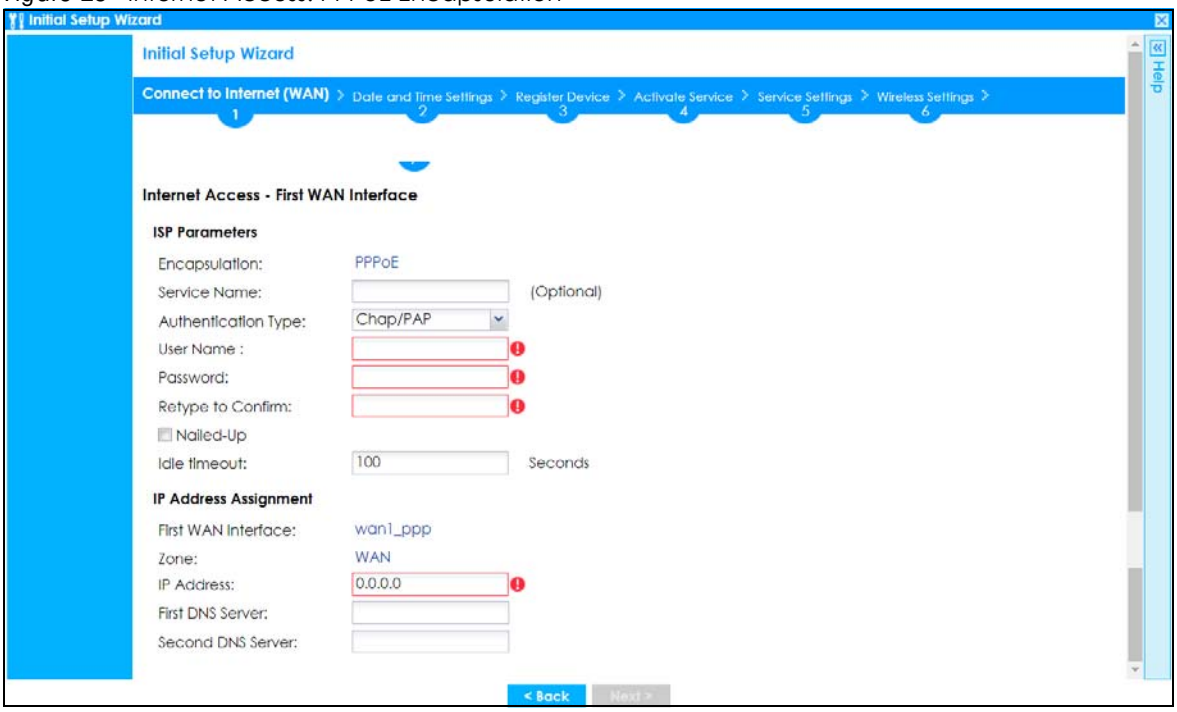
2.1.3.2 WAN IP Address Assignments

- **WAN Interface**: This is the name of the interface that will connect with your ISP.
- **Zone**: This is the security zone to which this interface and Internet connection will belong.
- **IP Address**: Enter your (static) public IP address. **Auto** displays if you selected **Auto** as the **IP Address Assignment** in the previous screen.
- **First / Second DNS Server**: These fields display if you selected static IP address assignment. The Domain Name System (DNS) maps a domain name to an IP address and vice versa. Enter a DNS server's IP address(es). The DNS server is extremely important because without it, you must know the IP address of a computer before you can access it. The Zyxel Device uses these (in the order you specify here) to resolve domain names for VPN, DDNS and the time server. Leave the field as 0.0.0.0 if you do not want to configure DNS servers. If you do not configure a DNS server, you must know the IP address of a machine in order to access it.

2.1.3.3 Possible Errors

- Check that you're using the correct PPPoE **Service Name** and **Authentication Type**.
- Make sure that your Internet access information uses PPPoE as the WAN connection type. Re-enter your PPPoE user name and password exactly as given. If it fails again, check with your Internet service provider or administrator for correct WAN settings and user credentials.
- If you were given an IP address and DNS server information as part of your Internet access information, re-enter them exactly as given. If it fails again, check with your Internet service provider or administrator for correct IP address, subnet mask and gateway address and other WAN settings.

Figure 25 Internet Access: PPPoE Encapsulation



2.1.4 Internet Access: PPTP

2.1.4.1 ISP Parameters

- **Authentication Type** - Select an authentication protocol for outgoing calls. Options are:
  - **Chap/PAP** - Your Zyxel Device accepts either CHAP or PAP when requested by the remote node.
  - **Chap** - Your Zyxel Device accepts CHAP only.
  - **PAP** - Your Zyxel Device accepts PAP only.
  - **MSCHAP** - Your Zyxel Device accepts MSCHAP only.
  - **MSCHAP-V2** - Your Zyxel Device accepts MSCHAP-V2 only.
- Type the **User Name** given to you by your ISP. You can use alphanumeric and -_@$./ characters, and it can be up to 31 characters long.
- Type the **Password** associated with the user name. Use up to 64 ASCII characters except the [] and ?. This field can be blank. Re-type your password in the next field to confirm it.
- Select **Nailed-Up** if you do not want the connection to time out. Otherwise, type the **Idle Timeout** in seconds that elapses before the router automatically disconnects from the PPTP server.

2.1.4.2 PPTP Configuration

- **Base Interface**: This identifies the Ethernet interface you configure to connect with a modem or router.
- Type a **Base IP Address** (static) assigned to you by your ISP.
- Type the **IP Subnet Mask** assigned to you by your ISP (if given).
- **Gateway IP Address**: Enter the IP address of the router through which this WAN connection will send traffic (the default gateway).
- **Server IP**: Type the IP address of the PPTP server.

- Type a **Connection ID** or connection name. It must follow the "c:id" and "n:name" format. For example, C:12 or N:My ISP. This field is optional and depends on the requirements of your broadband modem or router. You can use alphanumeric and -_: characters, and it can be up to 31 characters long.

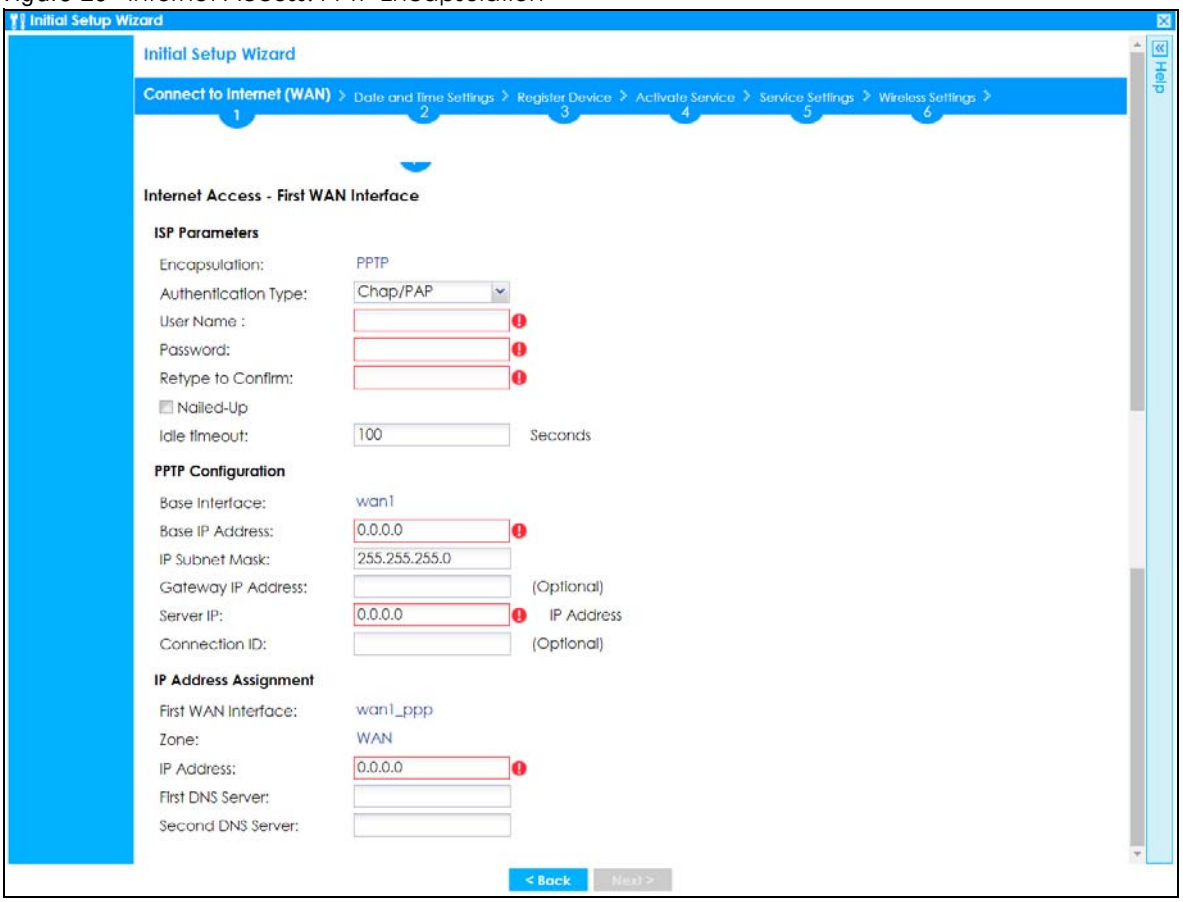
2.1.4.3 WAN IP Address Assignments

- **First WAN Interface**: This is the connection type on the interface you are configuring to connect with your ISP.
- **Zone** This is the security zone to which this interface and Internet connection will belong.
- **IP Address**: Enter your (static) public IP address. Auto displays if you selected **Auto** as the **IP Address Assignment** in the previous screen.
- **First / Second DNS Server**: These fields display if you selected static IP address assignment. The Domain Name System (DNS) maps a domain name to an IP address and vice versa. Enter a DNS server's IP address(es). The DNS server is extremely important because without it, you must know the IP address of a computer before you can access it. The Zyxel Device uses these (in the order you specify here) to resolve domain names for VPN, DDNS and the time server. Leave the field as 0.0.0.0 if you do not want to configure DNS servers.

2.1.4.4 Possible Errors

- Check that you're using the correct PPPT **Service IP**, **Base IP Address**, **IP Subnet Mask**, **Gateway IP Address**, **Connection ID** and **Authentication Type**.
- Make sure that your Internet access information uses PPTP as the WAN connection type. Re-enter your PPTP user name and password exactly as given. If it fails again, check with your Internet service provider or administrator for correct WAN settings and user credentials.
- If you were given an IP address and DNS server information as part of your Internet access information, re-enter them exactly as given. If it fails again, check with your Internet service provider or administrator for correct IP address, subnet mask and gateway address and other WAN settings.

Figure 26 Internet Access: PPTP Encapsulation



2.1.5 Internet Access: L2TP

2.1.5.1 ISP Parameters

- **Authentication Type** - Select an authentication protocol for outgoing connection requests. Options are:
  - **Chap/PAP** - Your Zyxel Device accepts either CHAP or PAP when requested by the remote node.
  - **Chap** - Your Zyxel Device accepts CHAP only.
  - **PAP** - Your Zyxel Device accepts PAP only.
  - **MSCHAP** - Your Zyxel Device accepts MSCHAP only.
  - **MSCHAP-V2** - Your Zyxel Device accepts MSCHAP-V2 only.
- Type the **User Name** given to you by your ISP. You can use alphanumeric and -_@$./ characters, and it can be up to 31 characters long.
- Type the **Password** associated with the user name. Use up to 64 ASCII characters except the [] and ?. This field can be blank.
- Select **Nailed-Up** if you do not want the connection to time out. Otherwise, type the **Idle Timeout** in seconds that elapses before the router automatically disconnects from the PPPoE server.

2.1.5.2 L2TP Configuration

- **Base Interface**: This identifies the Ethernet interface you configure to connect with a modem or router.
- Type a **Base IP Address** (static) assigned to you by your ISP.

- **IP Subnet Mask**: Enter the subnet mask for this WAN connection's IP address.
- **Gateway IP Address**: Enter the IP address of the router through which this WAN connection will send traffic (the default gateway).
- **Server IP**: Type the IP address of the L2TP server.

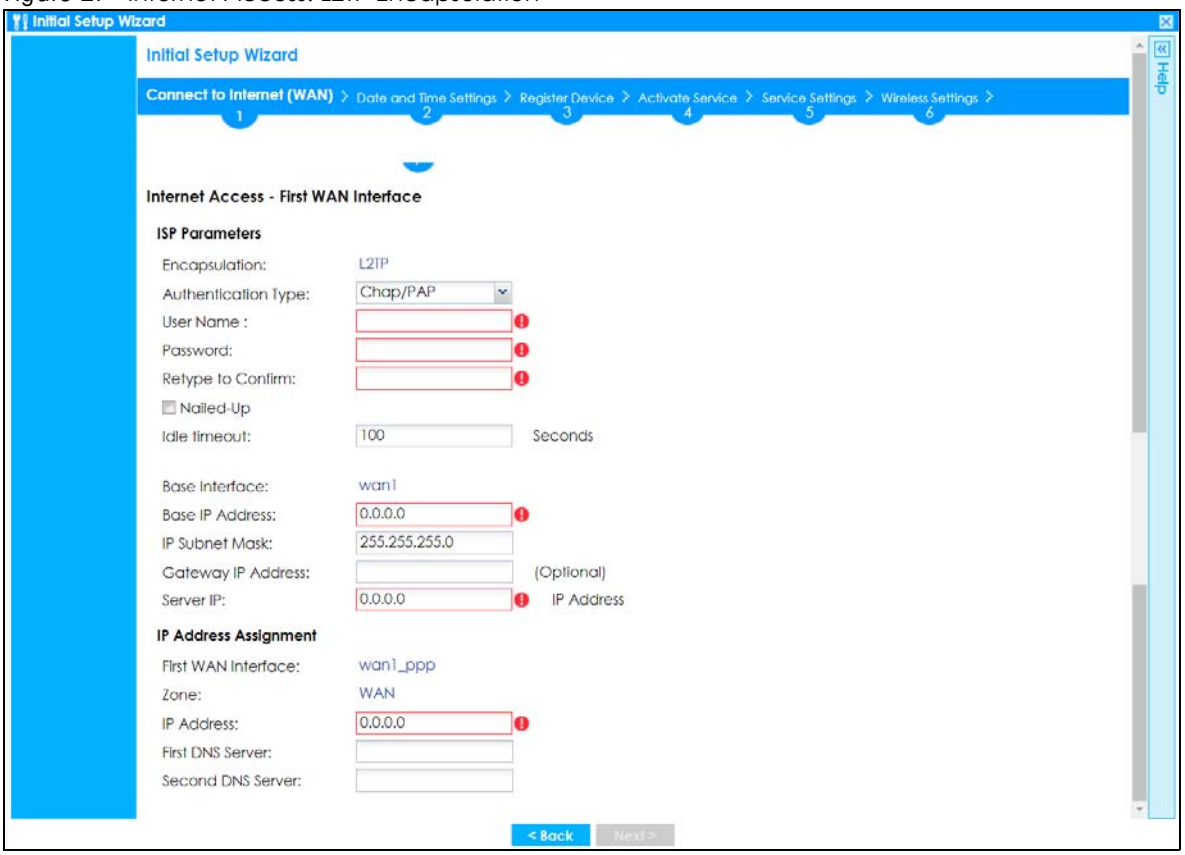
2.1.5.3 WAN IP Address Assignments

- **WAN Interface**: This is the name of the interface that will connect with your ISP.
- **Zone**: This is the security zone to which this interface and Internet connection will belong.
- **IP Address**: Enter your (static) public IP address. **Auto** displays if you selected **Auto** as the **IP Address Assignment** in the previous screen.
- **First / Second DNS Server**: These fields display if you selected static IP address assignment. The Domain Name System (DNS) maps a domain name to an IP address and vice versa. Enter a DNS server's IP address(es). The DNS server is extremely important because without it, you must know the IP address of a computer before you can access it. The Zyxel Device uses these (in the order you specify here) to resolve domain names for VPN, DDNS and the time server. Leave the field as 0.0.0.0 if you do not want to configure DNS servers.

2.1.5.4 Possible Errors

- Check that you're using the correct L2PT **Server IP**, **Subnet Mask**, **Gateway IP Address**, **IP Subnet Mask** and **Authentication Type**.
- Make sure that your Internet access information uses L2TP as the WAN connection type. Re-enter your L2TP user name and password exactly as given. If it fails again, check with your Internet service provider or administrator for correct WAN settings and user credentials.
- If you were given an IP address and DNS server information as part of your Internet access information, re-enter them exactly as given. If it fails again, check with your Internet service provider or administrator for correct IP address, subnet mask and gateway address and other WAN settings.

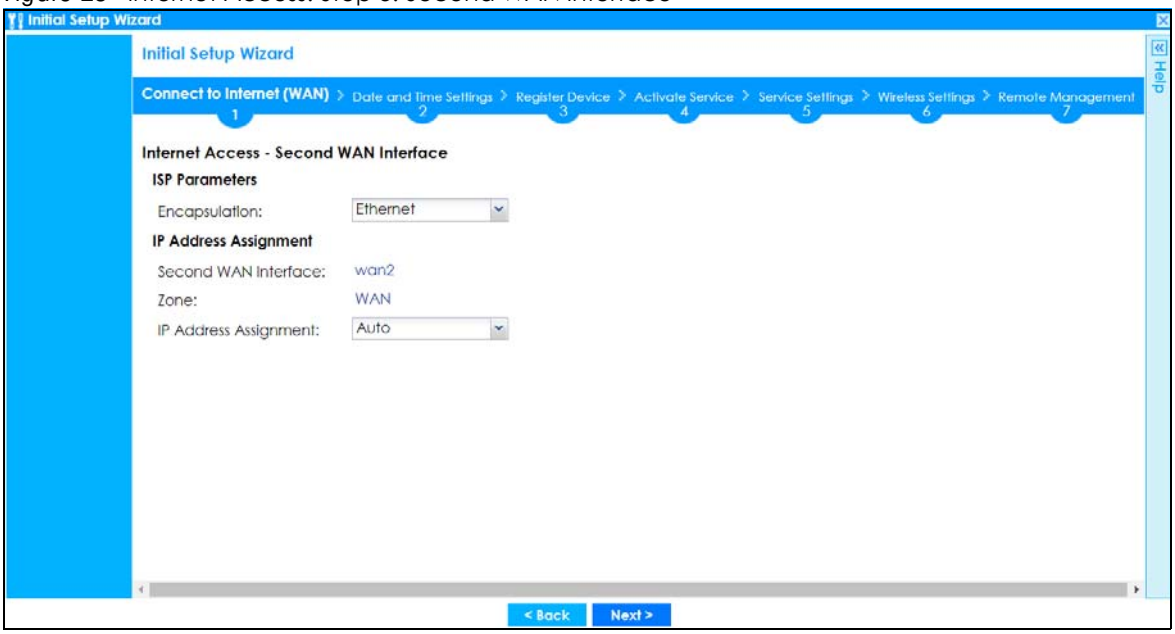
Figure 27 Internet Access: L2TP Encapsulation



2.1.6 Internet Access Setup - Second WAN Interface

If you selected **I have two ISPs**, after you configure the **First WAN Interface**, you can configure the **Second WAN Interface**. The screens for configuring the second WAN interface are similar to the first (see Section 2.1.1 on page 47).

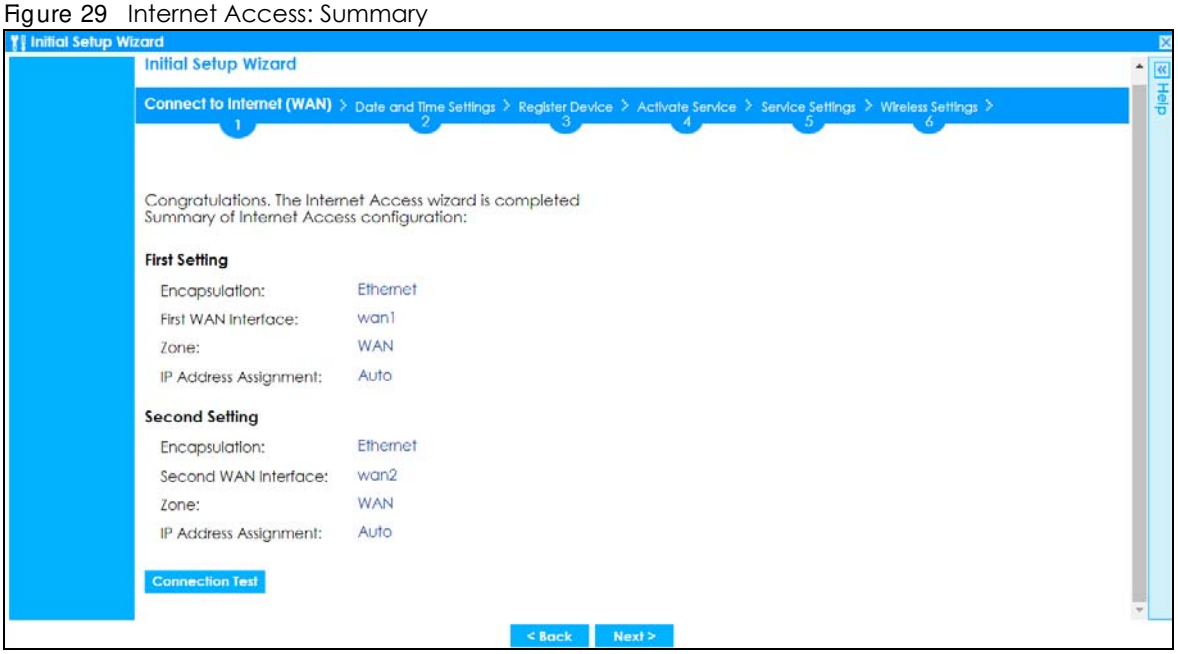
Figure 28 Internet Access: Step 3: Second WAN Interface



2.1.7 Internet Access: Congratulations

You have set up your Zyxel Device to access the Internet. A screen displays with your settings. Click **Connection Test** to check that you can access the Internet. If you cannot, click **Back** and confirm that you entered the settings correctly. If you have, check that you got the correct settings from your ISP or network administrator.

Figure 29 Internet Access: Summary

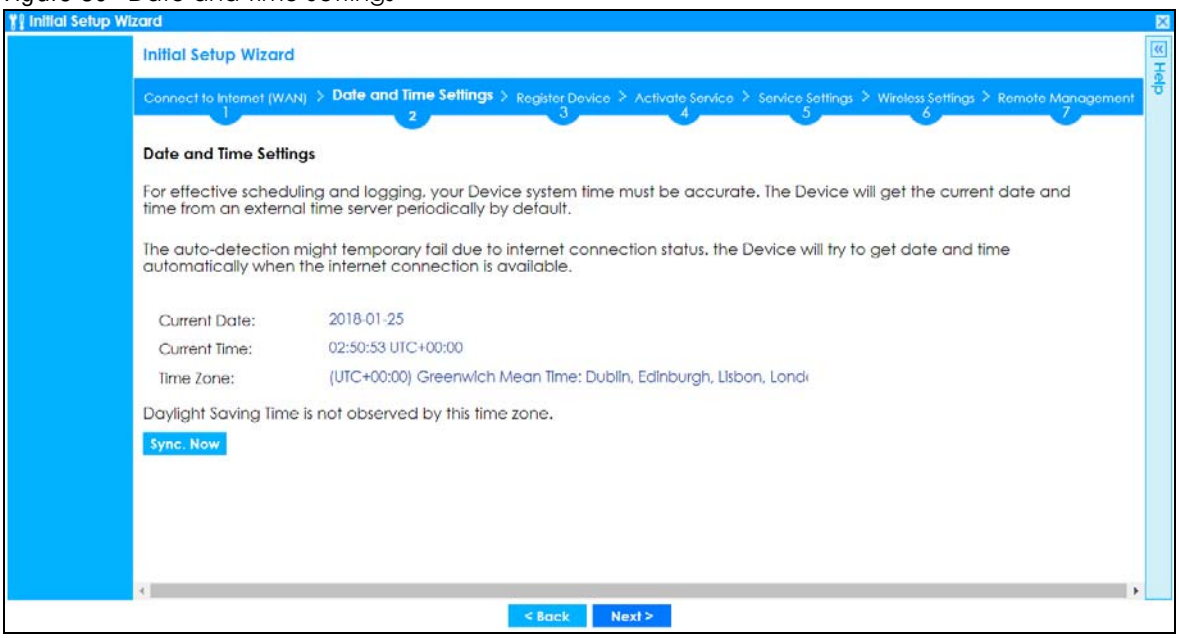


2.1.8 Date and Time Settings

It's important to have correct date and time values in the logs. The Zyxel Device can automatically update the time and date by detecting your time zone and whether Daylight Savings is in effect in that time zone.

If your Zyxel Device cannot get the correct date and time, it may not able to connect to a time server. Check that the Zyxel Device has Internet access, then click **Sync. Now.**

Figure 30 Date and Time Settings

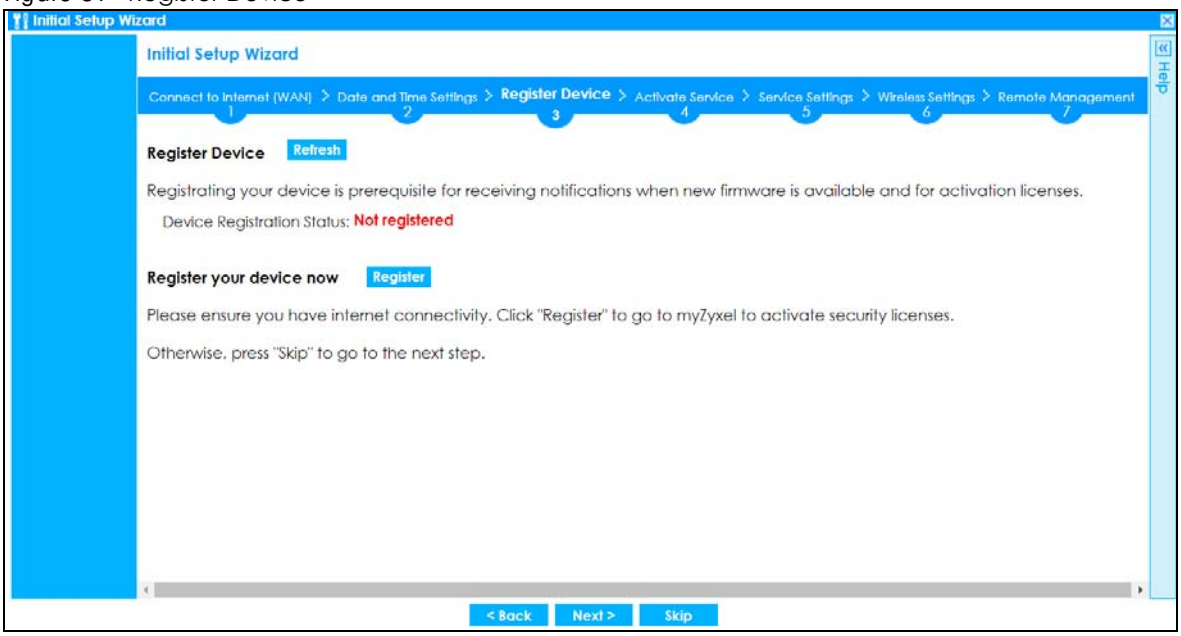


2.1.9 Register Device

Click the **Register** button in this screen to register your device at portal.myzyxel.com.

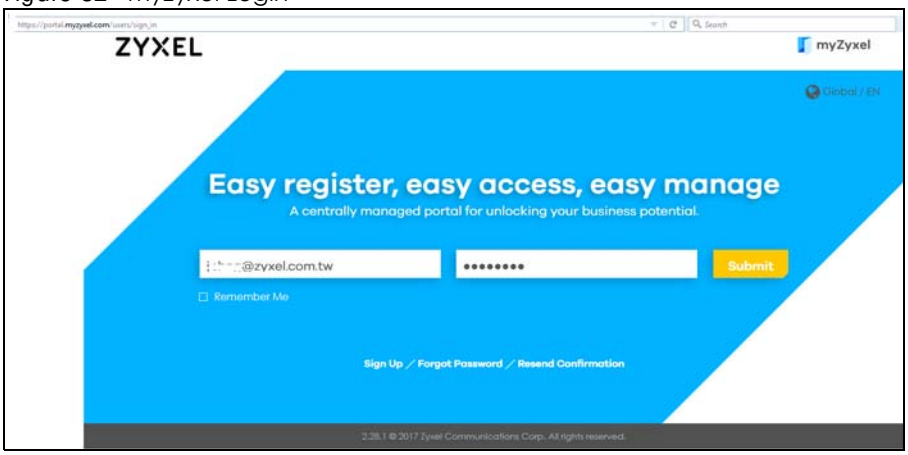
Note: The Zyxel Device must be connected to the Internet in order to register.

Figure 31 Register Device



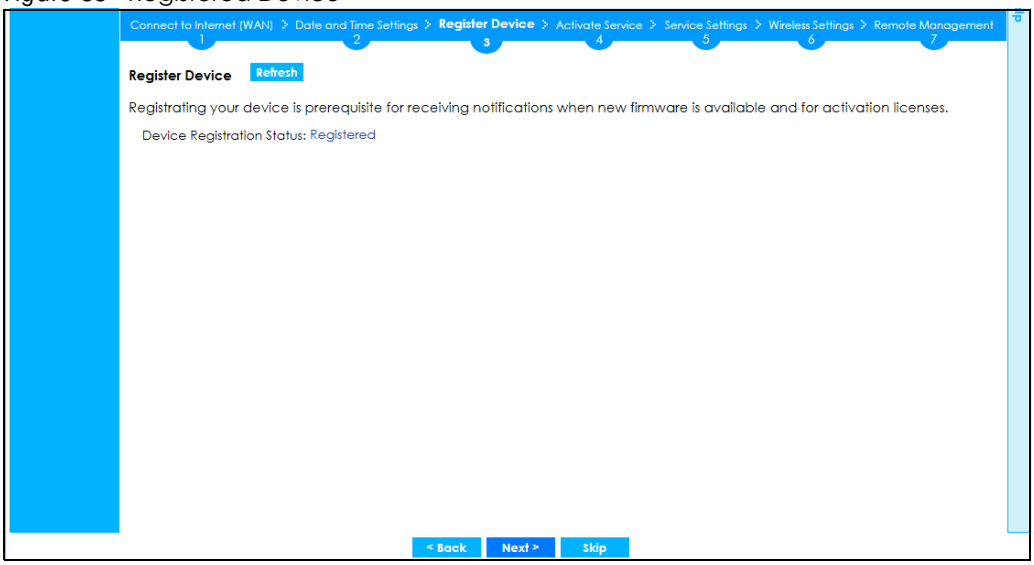
You may need the Zyxel Device's serial number and LAN MAC address to register it at myZyxel if you have not already done so. Refer to the label at the back of the Zyxel Device's for details.

Figure 32 myZyxel Login



Click **Refresh** or use the **Configuration** > **Licensing** > **Registration** screen to update your Zyxel Device registration status.

Figure 33 Registered Device



2.1.10 Activate Service

After you register your Zyxel Device, you can register for the services supported by your model. Examples of services are:

- Web Security (to access a database that can block websites by category)
- Application Security (to use signature for Application Patrol inspection and signatures to recognize unsolicited commercial or junk email suspect of being sent by spammers.)
- Malware Blocker (to detect virus patterns in files)
- Intrusion Prevention (to use signatures for Intrusion Detection and Prevention attacks)
- Geo Enforcer (to access a database of country-to-IP address mappings)
- Sandboxing (to specify the actions the Zyxel Device takes when malicious or suspicious files are detected)
- Managed AP Service (to manage more APs than the default for your Zyxel Device when the AP controller is enabled)

Click **Refresh** and wait a few moments for the registration information to update in this screen. If the page does not refresh, make sure the Internet connection is working and click **Refresh** again. To check your Internet connection, try to access the Internet from a computer connected to a LAN port on the Zyxel Device. If you cannot, then check your Internet access settings on the Zyxel Device.

Figure 34 Activate Service

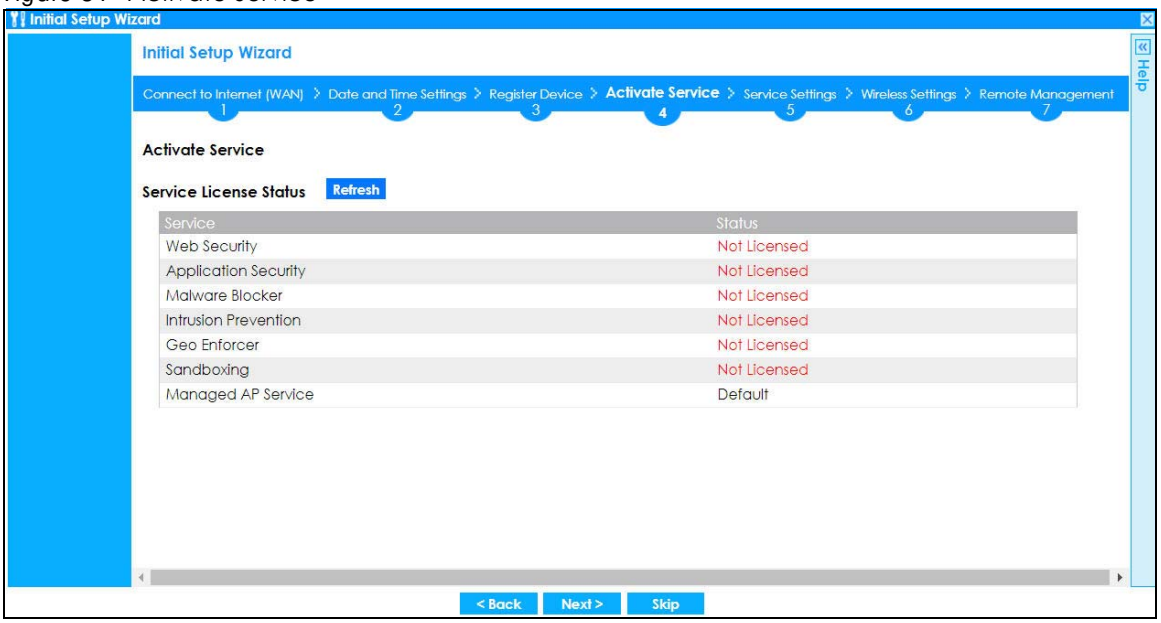


Figure 35 Activated Service

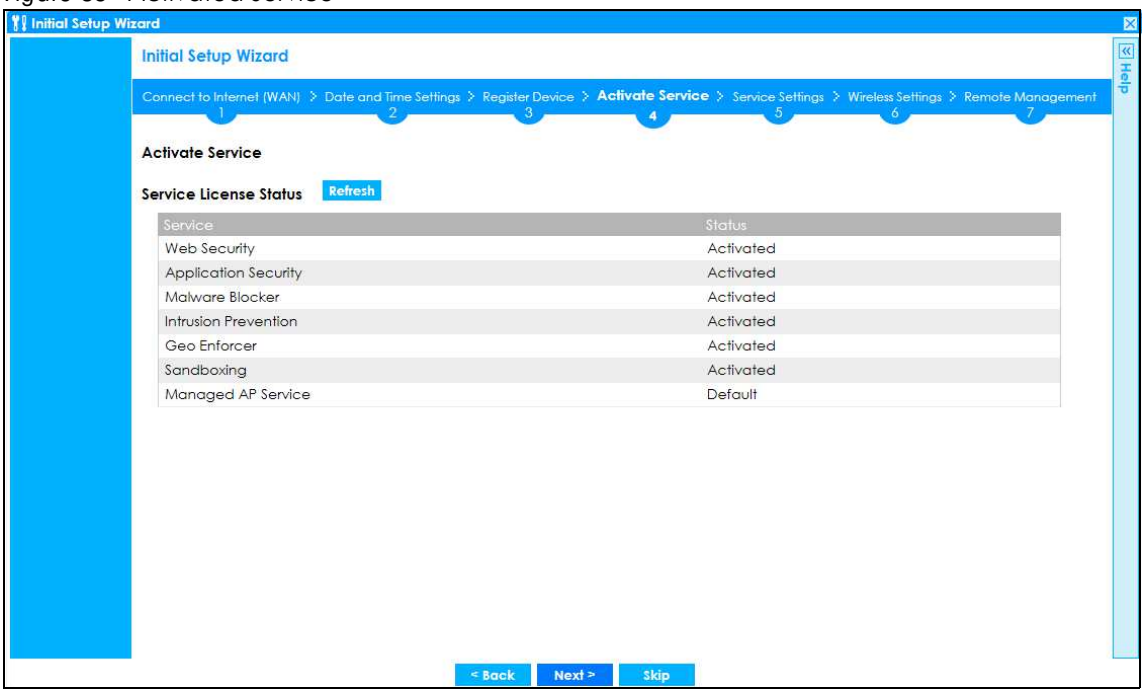


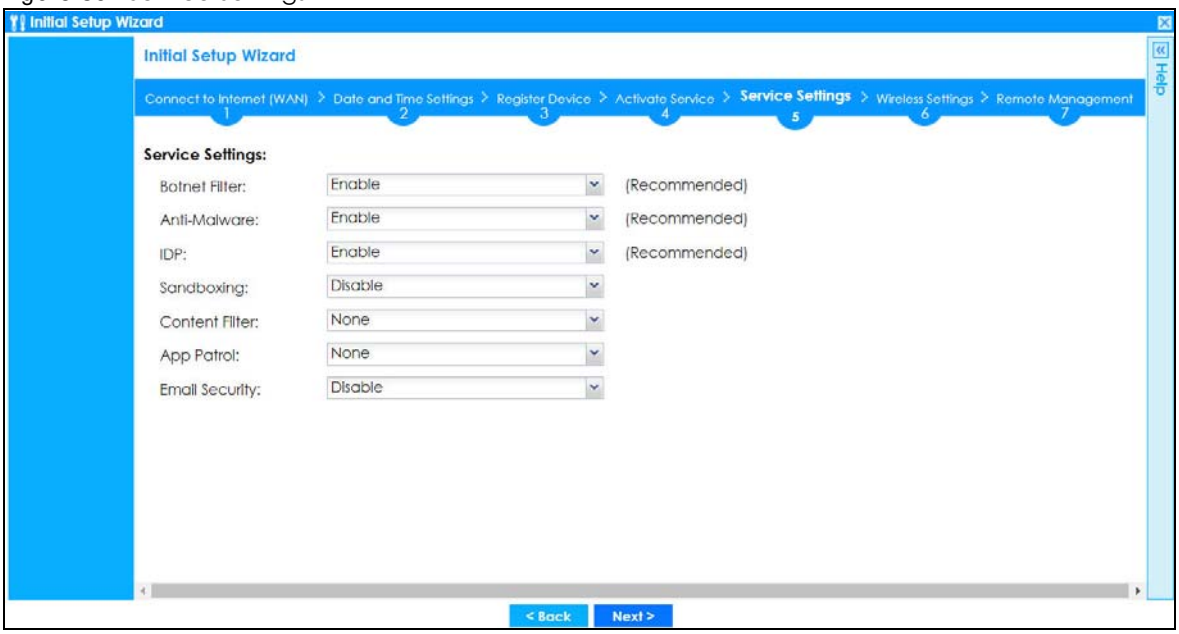
2.1.11 Service Settings

You can enable or disable the following features in this screen.

- **Botnet Filter**: Use this feature to detect and block connection attempts to or from the C&C server or known botnet IP addresses.
- **Anti-Malware**: Use this feature to protect your connected network from virus/spyware infection.
- **IDP**: Use this feature to detect malicious or suspicious packets and respond instantaneously.

- **Sandboxing**: Use this feature to provide a safe environment to separate running programs from your network and host devices.
- **Content Filter**: Use this feature to control access to specific web sites or web content.
- **App Patrol**: Use this feature to manage the use of various applications on the network.
- **Email Security**: Use this feature to mark or discard spam (unsolicited commercial or junk email).

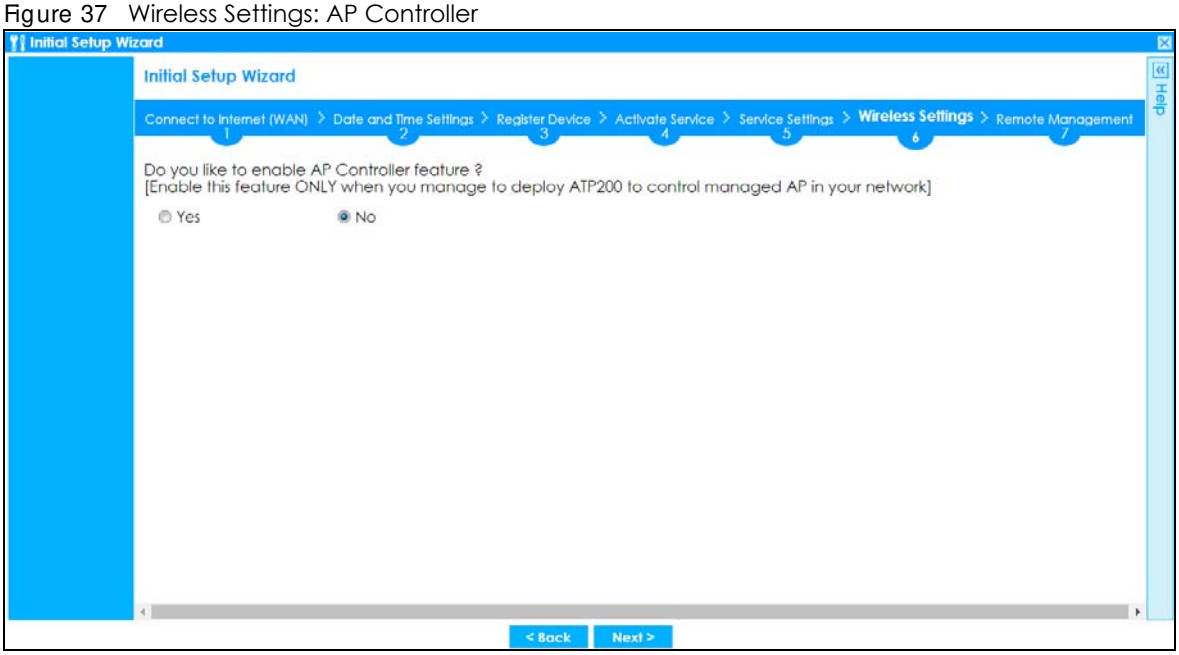
Figure 36 Service Settings



2.1.12 Wireless Settings: AP Controller

The Zyxel Device can act as an AP Controller that can manage APs in the same network as the Zyxel Device. Select **Yes** if you want your Zyxel Device to manage APs in your network; otherwise select **No**.

Figure 37 Wireless Settings: AP Controller



2.1.13 Wireless Settings: SSID & Security

Configure SSID and wireless security in this screen.

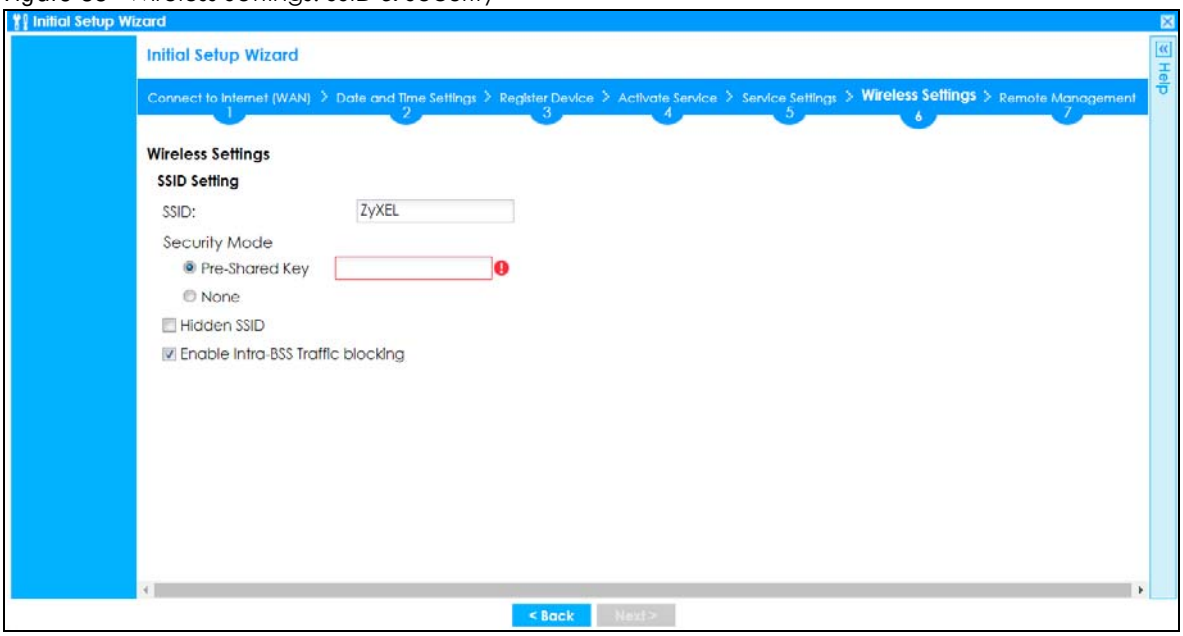
SSID Setting

- **SSID** - Enter a descriptive name of up to 32 printable characters for the wireless LAN.
- **Security Mode** - Select **Pre-Shared Key** to add security on this wireless network. Otherwise, select **None** to allow any wireless client to associate this network without authentication.
- **Pre-Shared Key** - Enter a pre-shared key of between 8 and 63 case-sensitive ASCII characters (including spaces and symbols) or 64 hexadecimal characters.
- **Hidden SSID** - Select this option if you want to hide the SSID in the outgoing beacon frame. A wireless client then cannot obtain the SSID through scanning using a site survey tool.
- **Enable Intra-BSS Traffic Blocking** - Select this option if you want to prevent crossover traffic from within the same SSID. Wireless clients can still access the wired network but cannot communicate with each other.

For Built-in Wireless AP Only

Bridged to: Zyxel Devices with W in the model name have a built-in AP. Select an interface to bridge with the built-in AP wireless network. Devices connected to this interface will then be in the same broadcast domain as devices in the AP wireless network.

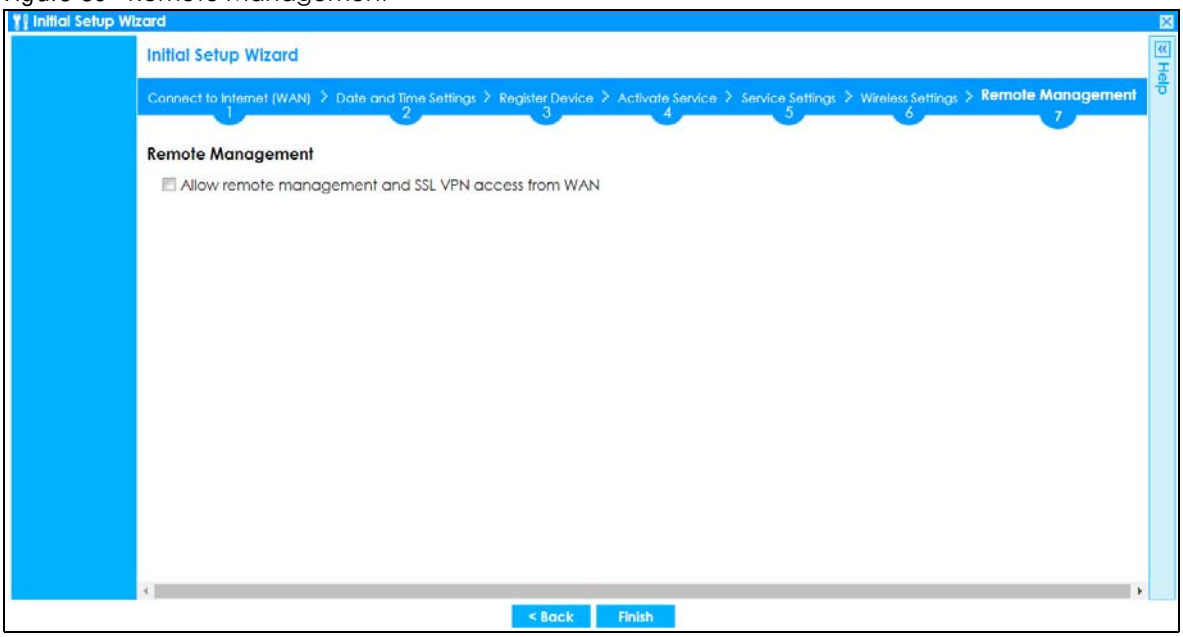
Figure 38 Wireless Settings: SSID & Security



2.1.14 Remote Management

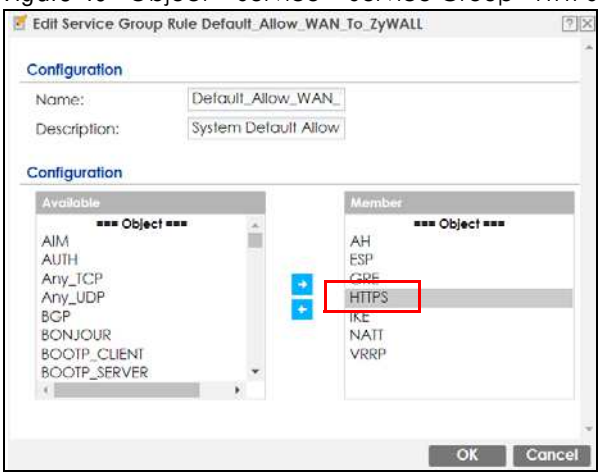
Select this to allow access to the Zyxel Device using HTTP or HTTPS from the Internet.

Figure 39 Remote Management



HTTPS is added to the Default_Allow_WAN_to_ZyWALL rule in Object > Service > Service Group screen when you enable Remote Management.

Figure 40 Object > Service > Service Group - HTTPS



CHAPTER 3
Hardware, Interfaces and Zones

3.1 Hardware Overview

This section describes the front and rear panels for each model.

3.1.1 Front Panels

The LED indicators are located on the front panel.

Figure 41 ATP200 Front Panel

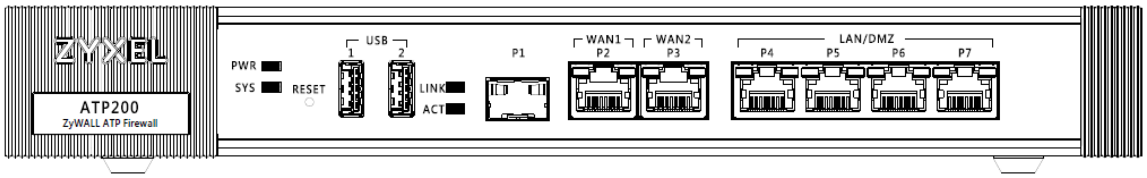


Figure 42 ATP500 Front Panel

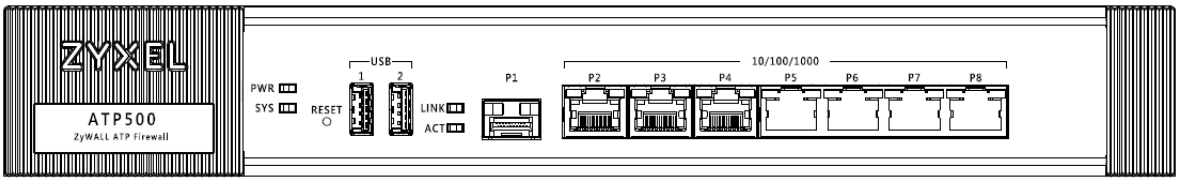

The following table describes the front panel LEDs.

Table 10 LED Descriptions

LED	COLOR	STATUS	DESCRIPTION
PWR		Off	The Zyxel Device is turned off.
	Green	On	The Zyxel Device is turned on.
	Red	On	There is a hardware component failure. Shut down the device, wait for a few minutes and then restart the device. If the LED turns red again, then please contact your vendor.
SYS	Green	Off	The Zyxel Device is not ready or has failed.
		On	The Zyxel Device is ready and running.
		Blinking	The Zyxel Device is booting.
	Red	On	The Zyxel Device has an error or has failed.
P1 (SFP)			

Table 10 LED Descriptions (continued)

LED	COLOR	STATUS	DESCRIPTION
LINK	Yellow	Off	There is no connection on this port.
		On	This port has a successful 1000 Mbps link.
	Green	Off	There is no connection on this port.
		On	This port has a successful 100 Mbps link.
ACT	Green	Off	There is no traffic on this port.
		Blinking	The Zyxel Device is sending or receiving packets on this port at 100/1000 Mbps.
P2, P3... (WAN/ LAN/ DMZ)	Yellow	Off	There is no connection on this port.
		On	This port has a successful 1000 Mbps link.
		Blinking	The Zyxel Device is sending or receiving packets on this port at 1000 Mbps.
	Green	Off	There is no connection on this port.
		On	This port has a successful 10/100 Mbps link.
		Blinking	The Zyxel Device is sending or receiving packets on this port at 10/100 Mbps.

The following table describes the ports on the front panel.

Table 11 Front Panel Ports

LABEL	DESCRIPTION
RESET	Press the button in for about 5 seconds (or until the SYS LED starts to blink), then release it to return the Zyxel Device to the factory defaults (password is 1234, LAN IP address 192.168.1.1 etc.)
CONSOLE	You can use the console port to manage the Zyxel Device using CLI commands. You will be prompted to enter your user name and password. See the Command Reference Guide for more information about the CLI. When configuring using the console port, you need a computer equipped with communications software configured to the following parameters: • Speed 115200 bps • Data Bits 8 • Parity None • Stop Bit 1 • Flow Control Off
USB	Connect a storage device for system logs (see Maintenance > Diagnostics > System Log) and storage (see Configuration > System > USB Storage).
P2-P7 (ATP200) P2-P8 (ATP500)	These are 1G RJ-45 Ethernet ports.

3.1.2 Rear Panels

The connection ports are located on the rear panel.

Figure 43 ATP200 Rear Panel

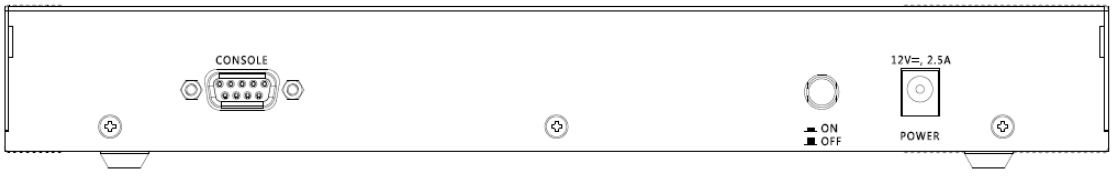

Figure 44 ATP500 Rear Panel

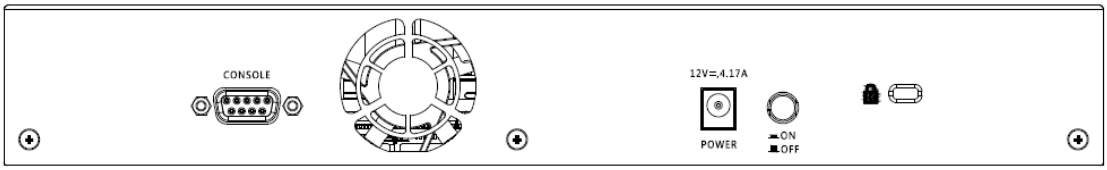


The following table describes the items on the rear panel.

Table 12 Rear Panel Items

LABEL	DESCRIPTION
Console	You can use the console port to manage the Zyxel Device using CLI commands. You will be prompted to enter your user name and password. See the Command Reference Guide for more information about the CLI. When configuring using the console port, you need a computer equipped with communications software configured to the following parameters: • Speed 115200 bps • Data Bits 8 • Parity None • Stop Bit 1 • Flow Control Off
Power	Use the included power cord to connect the power socket to a power outlet. Turn the power switch on if your Zyxel Device has a power switch.
Lock	Attach a lock-and-cable from the Kensington lock (the small, metal-reinforced, oval hole) to a permanent object, such as a pole, to secure the Zyxel Device in place.
Fan	The fans are for cooling the Zyxel Device. Make sure they are not obstructed to allow maximum ventilation.

Note: Use an 8-wire Ethernet cable to run your Gigabit Ethernet connection at 1000 Mbps. Using a 4-wire Ethernet cable limits your connection to 100 Mbps. Note that the connection speed also depends on what the Ethernet device at the other end can support.

3.2 Mounting

The Zyxel Device can be mounted in a rack.

3.2.1 Rack-mounting

Use the following steps to mount the Zyxel Device on an EIA standard size, 19-inch rack or in a wiring closet with other equipment using a rack-mounting kit. Make sure the rack will safely support the combined weight of all the equipment it contains and that the position of the ZyWALL does not make the rack unstable or top-heavy. Take all necessary precautions to anchor the rack securely before installing the unit.

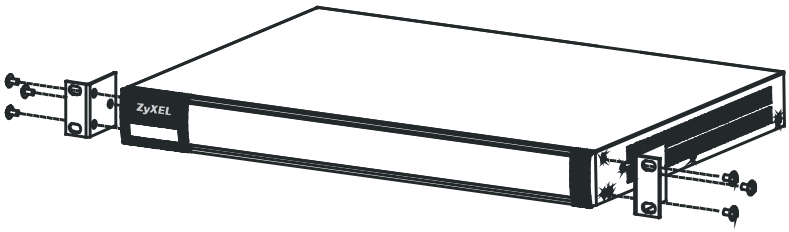
Note: Leave 10 cm of clearance at the sides and 20 cm in the rear.

Use a #2 Phillips screwdriver to install the screws.

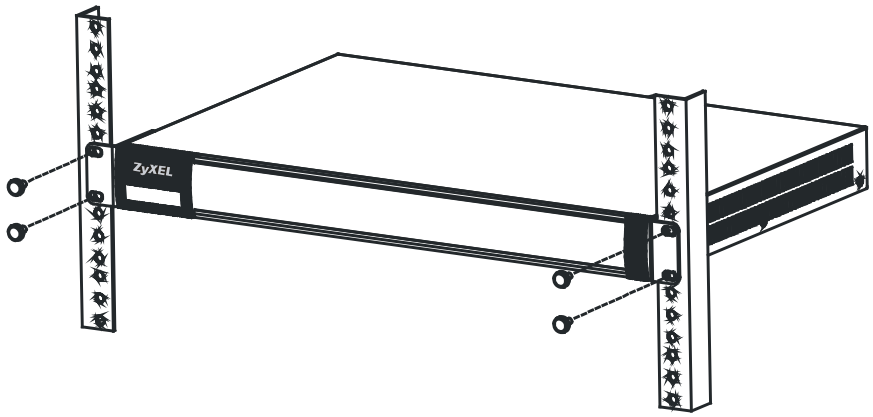
Note: Failure to use the proper screws may damage the unit.

1 Align one bracket with the holes on one side of the Zyxel Device and secure it with the included bracket screws (smaller than the rack-mounting screws).

2 Attach the other bracket in a similar fashion.



3 After attaching both mounting brackets, position the Zyxel Device in the rack and match up the bracket holes with the rack holes. Secure the Zyxel Device to the rack with the rack-mounting screws.



3.2.2 Wall-mounting

Do the following to attach your Zyxel Device to a wall.

1 Drill two holes 3 mm ~ 4 mm (0.12" ~ 0.16") wide, 20 mm ~ 30 mm (0.79" ~ 1.18") deep and 150 mm (5.90") apart, into a wall. Place two screw anchors in the holes.

2 Screw two screws with 6 mm ~ 8 mm (0.24" ~ 0.31") wide heads into the screw anchors. Do not screw the screws all the way in to the wall; leave a small gap between the head of the screw and the wall.

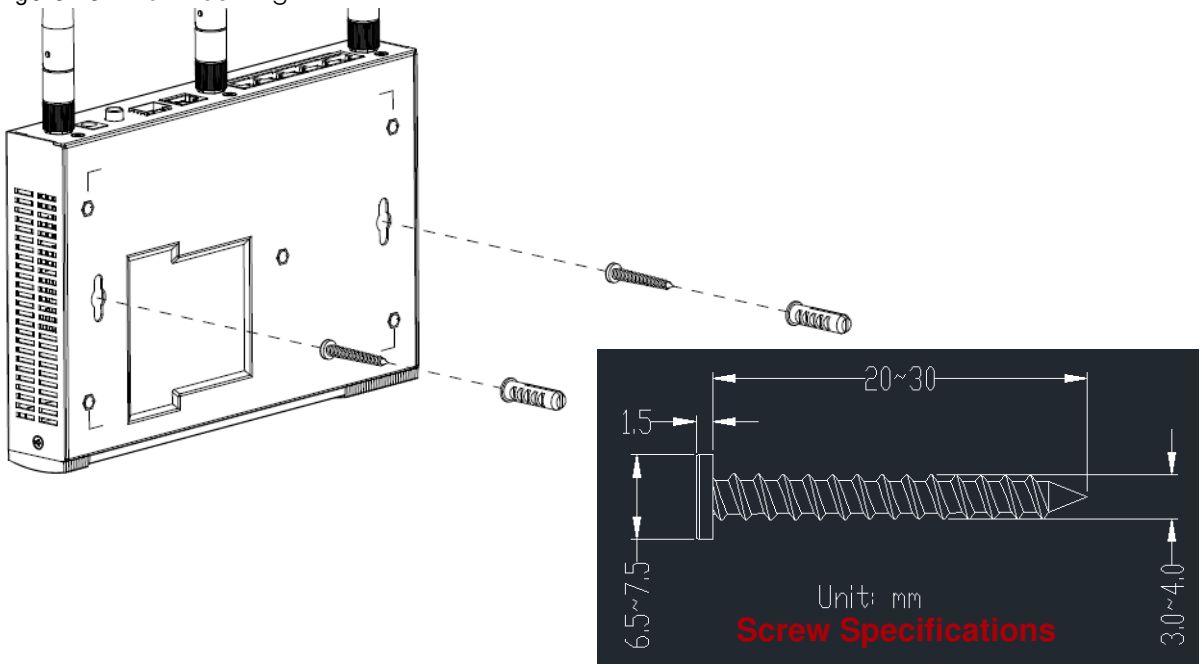
The gap must be big enough for the screw heads to slide into the screw slots and the connection cables to run down the back of the Zyxel Device.

Note: Make sure the screws are securely fixed to the wall and strong enough to hold the weight of the Zyxel Device with the connection cables.

3 Use the holes on the bottom of the Zyxel Device to hang the Zyxel Device on the screws.

Wall-mount the Zyxel Device horizontally. The Zyxel Device's side panels with ventilation slots should not be facing up or down as this position is less safe.

Figure 45 Wall Mounting



3.3 Default Zones, Interfaces, and Ports

The default configurations for zones, interfaces, and ports are as follows. References to interfaces may be generic rather than the specific name used in your model. For example, this guide may use "the WAN interface" rather than "wan1" or "wan2", "ge2" or" ge3".

An OPT (optional) Ethernet port can be configured as an additional WAN port, LAN, WLAN, or DMZ port.

The following table shows the default physical port and interface mapping for each model at the time of writing.

Table 13 Default Physical Port - Interface Mapping

PORT/ INTERFACE	P1	P2	P3	P4	P5	P6	P7	P8
• ATP500	ge1	ge2	ge3	ge4	ge5	ge6	ge7	ge8
• ATP200	sfp	wan	wan	lan1	lan1	lan1	lan1	

The following table shows the default interface and zone mapping for each model at the time of writing.

Table 14 Default Zone - Interface Mapping

ZONE / INTERFACE	WAN	LAN1	LAN2	DMZ	OPT	NO DEFAULT ZONE
• ATP200	WAN1 WAN1_PPP WAN2 WAN2_PPP	LAN1	LAN2	DMZ	OPT OPT_PPP	
• ATP500	GE2 GE2_PPP GE3 GE3_PPP	GE4	GE5	GE6	GE1	GE1_PPP GE4_PPP GE5_PPP GE6_PPP GE7 GE7_PPP GE8 GE8_PPP

3.4 Stopping the Zyxel Device

Always use **Maintenance** > **Shutdown** > **Shutdown** or the `shutdown` command before you turn off the Zyxel Device or remove the power. Not doing so can cause the firmware to become corrupt.

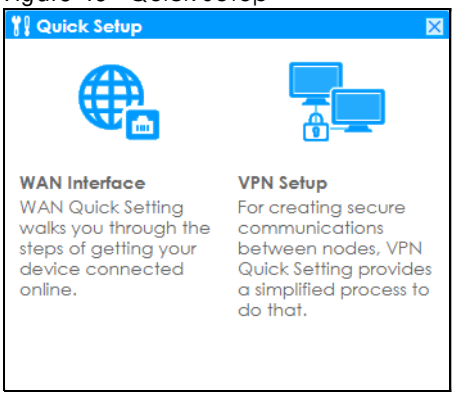
CHAPTER 4
Quick Setup Wizards

4.1 Quick Setup Overview

The Web Configurator's quick setup wizards help you configure Internet and VPN connection settings. This chapter provides information on configuring the quick setup screens in the Web Configurator. See the feature-specific chapters in this User's Guide for background information.

In the Web Configurator, click **Quick Setup** to open the first **Quick Setup** screen.

Figure 46 Quick Setup



- WAN Interface

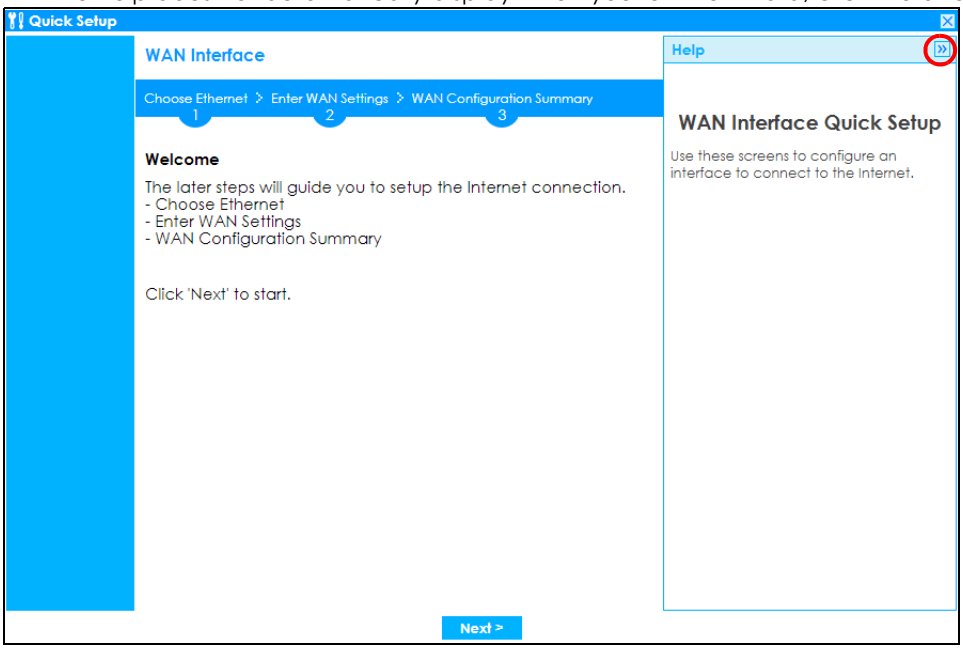
  Click this link to open a wizard to set up a WAN (Internet) connection. This wizard creates matching ISP account settings in the Zyxel Device if you use PPPoE or PPTP. See Section 4.2 on page 71.

- VPN Setup

  Use **VPN Setup** to configure a VPN (Virtual Private Network) rule for a secure connection to another computer or network. **Use VPN Settings for Configuration Provisioning** to set up a VPN rule that can be retrieved with the Zyxel Device IPSec VPN Client. You only need to enter a user name, password and the IP address of the Zyxel Device in the IPSec VPN Client to get all VPN settings automatically from the Zyxel Device. See Section 4.3 on page 77.Use **VPN Settings for L2TP VPN Settings** to configure the L2TP VPN for clients.

- Wizard Help

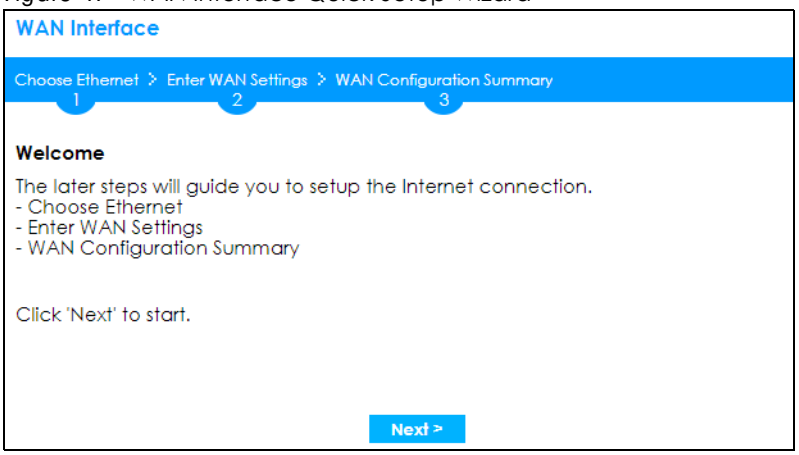
  If the help does not automatically display when you run the wizard, click the arrow to display it.



4.2 WAN Interface Quick Setup

Click **WAN Interface** in the main **Quick Setup** screen to open the **WAN Interface Quick Setup Wizard Welcome** screen. Use these screens to configure an interface to connect to the Internet. Click **Next**.

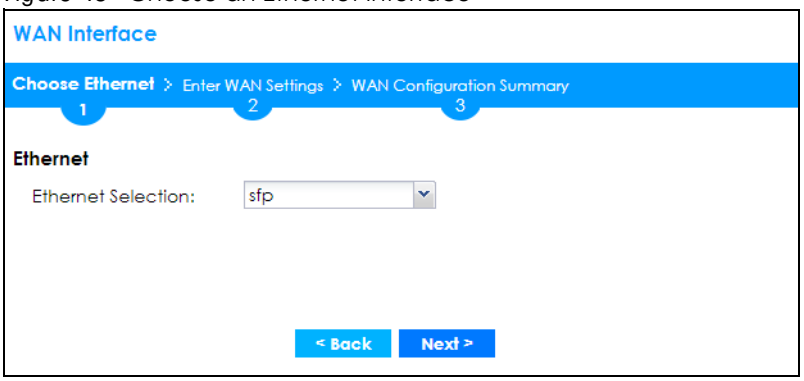
Figure 47 WAN Interface Quick Setup Wizard



4.2.1 Choose an Ethernet Interface

Select a WAN interface (names vary by model) that you want to configure for a WAN connection and click **Next**.

Figure 48 Choose an Ethernet Interface

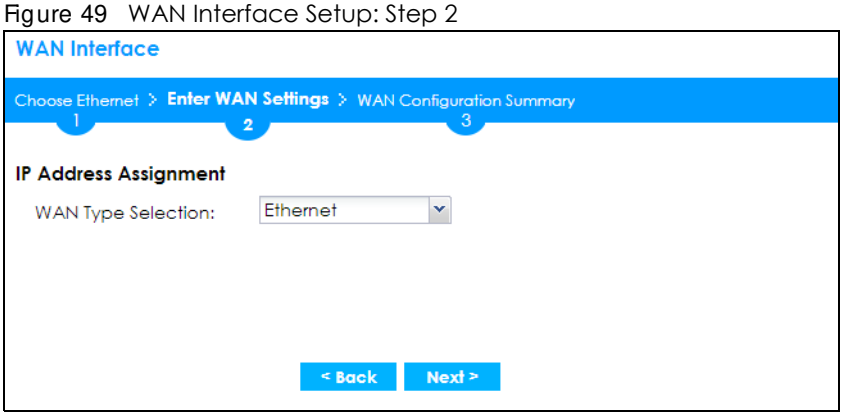


4.2.2 Select WAN Type

WAN Type Selection: Select the type of encapsulation this connection is to use. Choose **Ethernet** when the WAN port is used as a regular Ethernet.

Otherwise, choose **PPPoE**, **PPTP** or **L2TP** for a dial-up connection according to the information from your ISP.

Figure 49 WAN Interface Setup: Step 2



The screens vary depending on what encapsulation type you use. Refer to information provided by your ISP to know what to enter in each field. Leave a field blank if you don't have that information.

Note: Enter the Internet access information exactly as your ISP gave it to you.

4.2.3 Configure WAN IP Settings

Use this screen to select whether the interface should use a fixed or dynamic IP address.

Figure 50 WAN Interface Setup: Step 2 Ethernet Dynamic IP

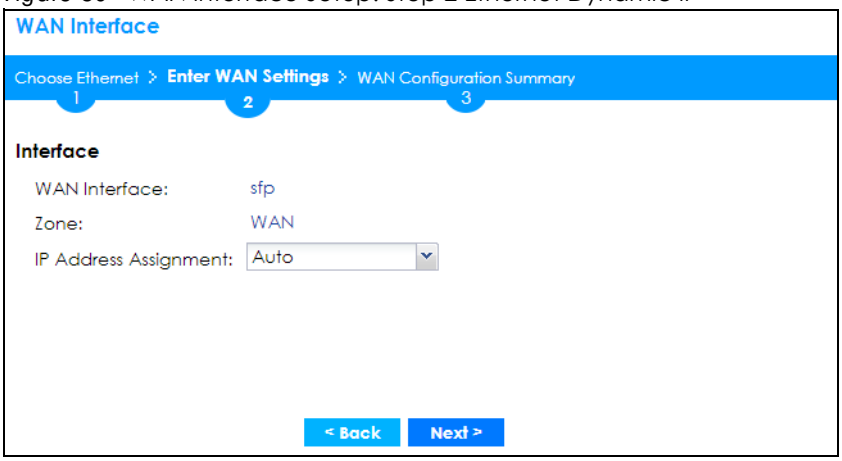


Figure 51 WAN Interface Setup: Step 2 Ethernet Static IP

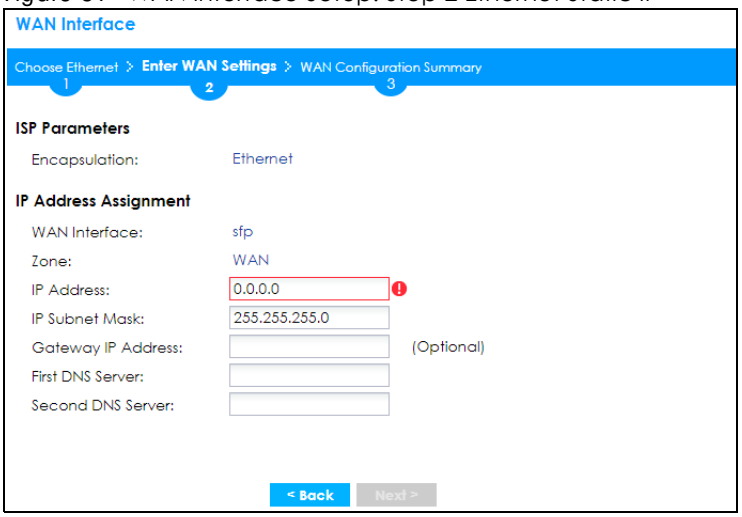

- **WAN Interface**: This is the interface you are configuring for Internet access.
- **Zone**: This is the security zone to which this interface and Internet connection belong.
- **IP Address Assignment**: Select **Auto** If your ISP did not assign you a fixed IP address.
  Select **Static** if you have a fixed IP address and enter the IP address, subnet mask, gateway IP address (optional) and DNS server IP address(es).

4.2.4 ISP and WAN and ISP Connection Settings

Use this screen to configure the ISP and WAN interface settings. This screen is read-only if you select **Ethernet** and set the **IP Address Assignment** to **Auto**. If you set the **IP Address Assignment** to **static** and/or select **PPTP** or **PPPoE**, enter the Internet access information exactly as your ISP gave it to you.

Note: Enter the Internet access information exactly as your ISP gave it to you.

Figure 52 WAN and ISP Connection Settings: (PPTP)

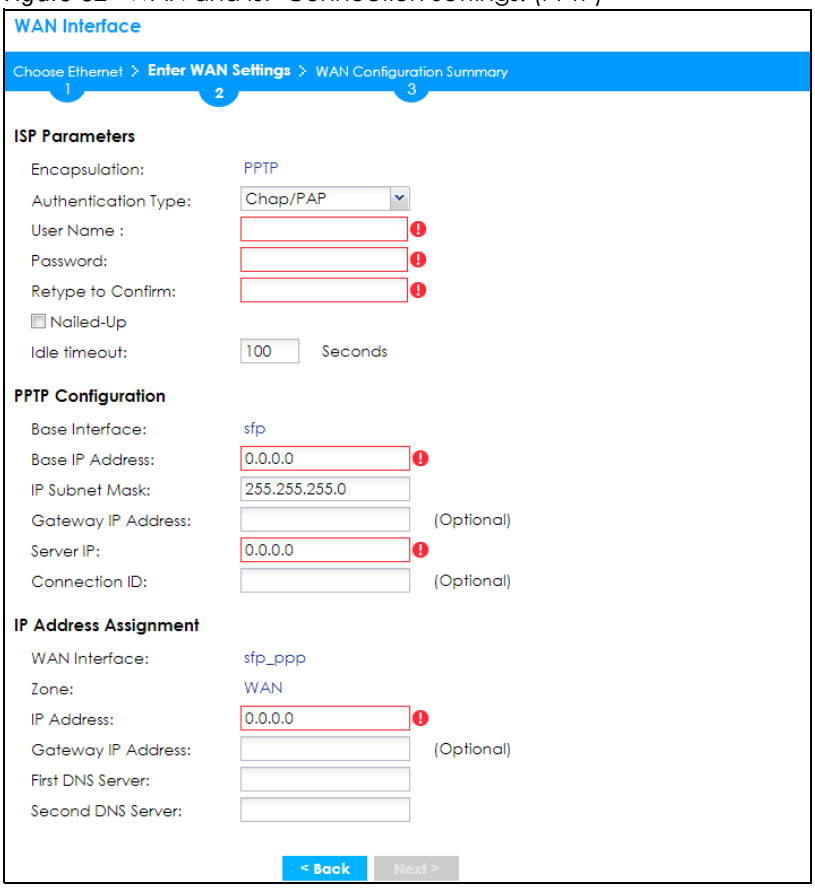

Figure 53 WAN and ISP Connection Settings: (PPPoE)

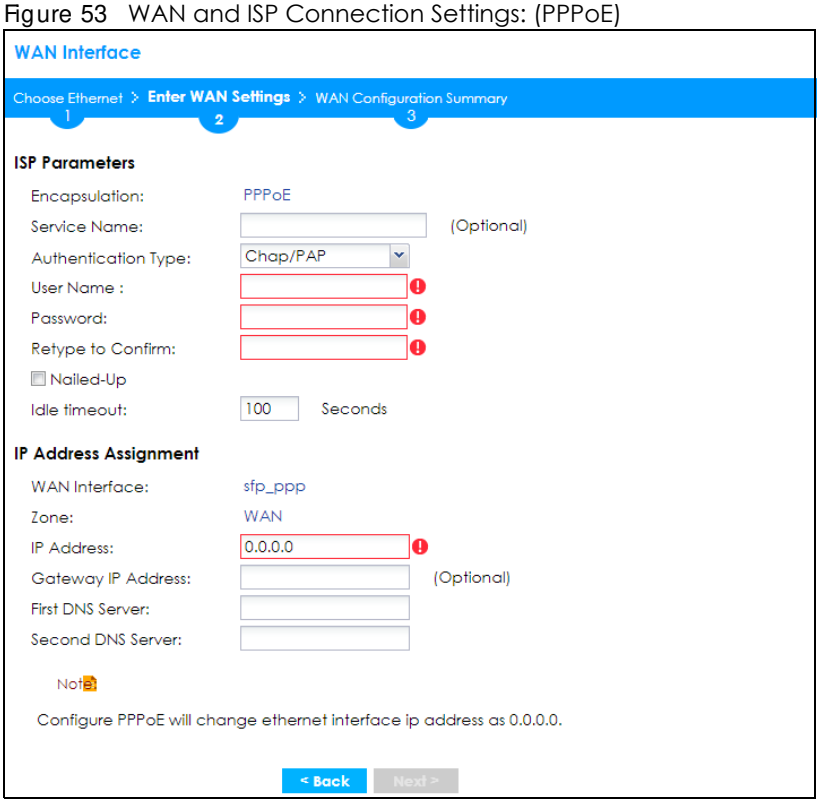

Figure 54 WAN and ISP Connection Settings: (L2TP)

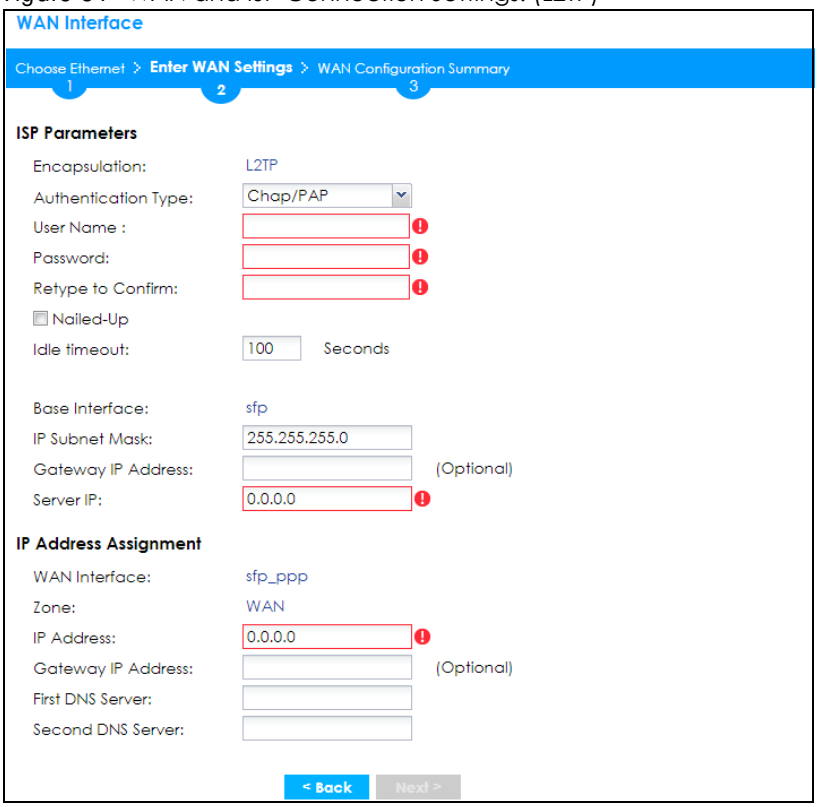


- ISP Parameter: This section appears if the interface uses a PPPoE or PPTP Internet connection.
- Encapsulation: This displays the type of Internet connection you are configuring.
- Service Name: Type the PPPoE service name if you were given one by your ISP.
- Authentication Type: Use the drop-down list box to select an authentication protocol for outgoing calls. Options are:
  - CHAP/PAP - Your Zyxel Device accepts either CHAP or PAP when requested by this remote node.
  - CHAP - Your Zyxel Device accepts CHAP only.
  - PAP - Your Zyxel Device accepts PAP only.
  - MSCHAP - Your Zyxel Device accepts MSCHAP only.
  - MSCHAP-V2 - Your Zyxel Device accepts MSCHAP-V2 only.
- User Name: Type the user name given to you by your ISP. You can use alphanumeric and -_@$./ characters, and it can be up to 31 characters long.
- Password: Type the password associated with the user name above. Use up to 64 ASCII characters except the [] and ?. This field can be blank.
- Retype to Confirm: Type your password again for confirmation.
- Nailed-Up: Select Nailed-Up if you do not want the connection to time out.
- Idle Timeout: Type the time in seconds that elapses before the router automatically disconnects from the PPPoE server. 0 means no timeout.
- PPTP Configuration: This section only appears if the interface uses a PPTP Internet connection.
- Base Interface: This displays the identity of the Ethernet interface you configure to connect with a modem or router.
- Base IP Address: Type the (static) IP address assigned to you by your ISP.

- **IP Subnet Mask**: Type the subnet mask assigned to you by your ISP (if given).
- **Gateway IP Address**: For PPTP or L2TP, type the gateway IP address if you were given one by your ISP.
- **Server IP**: Type the IP address of the PPTP server.
- **Connection ID**: Enter the connection ID or connection name in this field. It must follow the "c:id" and "n:name" format. For example, C:12 or N:My ISP. This field is optional and depends on the requirements of your DSL modem. You can use alphanumeric and -_: characters, and it can be up to 31 characters long.

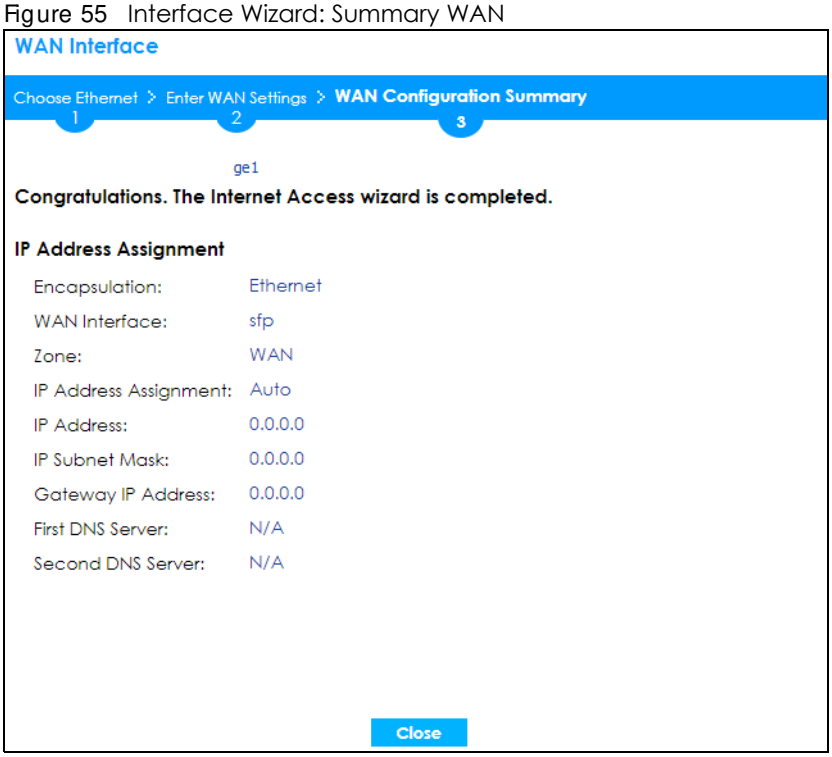
IP Address Assignment

- **WAN Interface**: This displays the identity of the interface you configure to connect with your ISP.
- **Zone**: This field displays to which security zone this interface and Internet connection will belong.
- **IP Address**: This field is read-only when the WAN interface uses a dynamic IP address. If your WAN interface uses a static IP address, enter it in this field.
- **IP Subnet Mask**: If your WAN interface uses Ethernet encapsulation with a static IP address, enter the subnet mask in this field.
- **Gateway IP Address**: Type the IP address of the Ethernet device connected to this WAN port.
- **First DNS Server / Second DNS Server**: These fields only display for an interface with a static IP address. Enter the DNS server IP address(es) in the field(s) to the right. Leave the field as 0.0.0.0 if you do not want to configure DNS servers. If you do not configure a DNS server, you must know the IP address of a machine in order to access it.

4.2.5 Quick Setup Interface Wizard: Summary

This screen displays an example WAN interface's settings.

Figure 55 Interface Wizard: Summary WAN



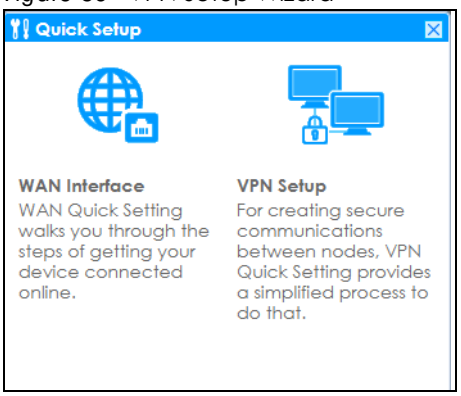
- **Encapsulation**: This displays what encapsulation this interface uses to connect to the Internet.

- **Service Name**: This field only appears for a PPPoE interface. It displays the PPPoE service name specified in the ISP account.
- **Server IP**: This field only appears for a PPTP interface. It displays the IP address of the PPTP server.
- **User Name**: This is the user name given to you by your ISP.
- **Nailed-Up**: If **No** displays the connection will not time out. **Yes** means the Zyxel Device uses the idle timeout.
- **Idle Timeout**: This is how many seconds the connection can be idle before the router automatically disconnects from the PPPoE server. 0 means no timeout.
- **Connection ID**: If you specified a connection ID, it displays here.
- **WAN Interface**: This identifies the interface you configure to connect with your ISP.
- **Zone**: This field displays to which security zone this interface and Internet connection will belong.
- **IP Address Assignment**: This field displays whether the WAN IP address is static or dynamic (**Auto**).
- **IP Address**: This field displays the current IP address of the Zyxel Device WAN interface selected in this wizard.
- **IP Subnet Mask**: This field displays the subnet mask of the Zyxel Device WAN interface selected in this wizard.
- **Gateway IP Address**: This field displays the IP address of the Ethernet device connected to this WAN port.
- **First DNS Server / Second DNS Server**: If the **IP Address Assignment** is **Static**, these fields display the DNS server IP address(es).

4.3 VPN Setup Wizard

Click **VPN Setup** in the main **Quick Setup** screen to open the VPN Setup Wizard **Welcome** screen.

Figure 56 VPN Setup Wizard



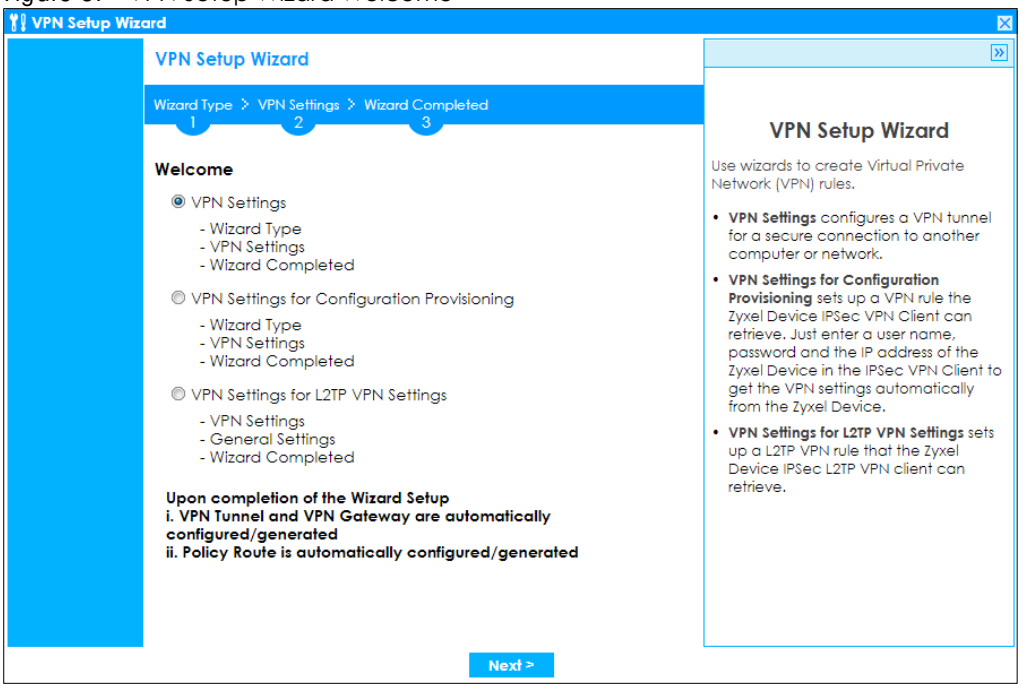
4.3.1 Welcome

Use wizards to create Virtual Private Network (VPN) rules. After you complete the wizard, the Phase 1 rule settings appear in the **Configuration** > **VPN** > **IPSec VPN** > **VPN Gateway** screen and the Phase 2 rule settings appear in the **Configuration** > **VPN** > **IPSec VPN** > **VPN Connection** screen.

- **VPN Settings** configures a VPN tunnel for a secure connection to another computer or network.

- **VPN Settings for Configuration Provisioning** sets up a VPN rule the Zyxel Device IPSec VPN Client can retrieve. Just enter a user name, password and the IP address of the Zyxel Device in the IPSec VPN Client to get the VPN settings automatically from the Zyxel Device.
- **VPN Settings for L2TP VPN Settings** sets up a L2TP VPN rule that the Zyxel Device IPSec L2TP VPN client can retrieve.

Figure 57 VPN Setup Wizard Welcome

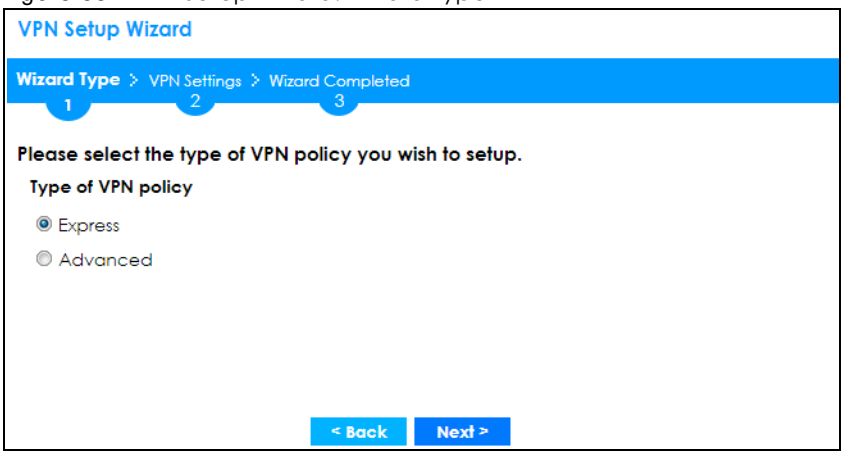


4.3.2 VPN Setup Wizard: Wizard Type

Choose **Express** to create a VPN rule with the default phase 1 and phase 2 settings to connect to another ZLD-based Zyxel Device using a pre-shared key.

Choose **Advanced** to change the default settings and/or use certificates instead of a pre-shared key to create a VPN rule to connect to another IPSec device.

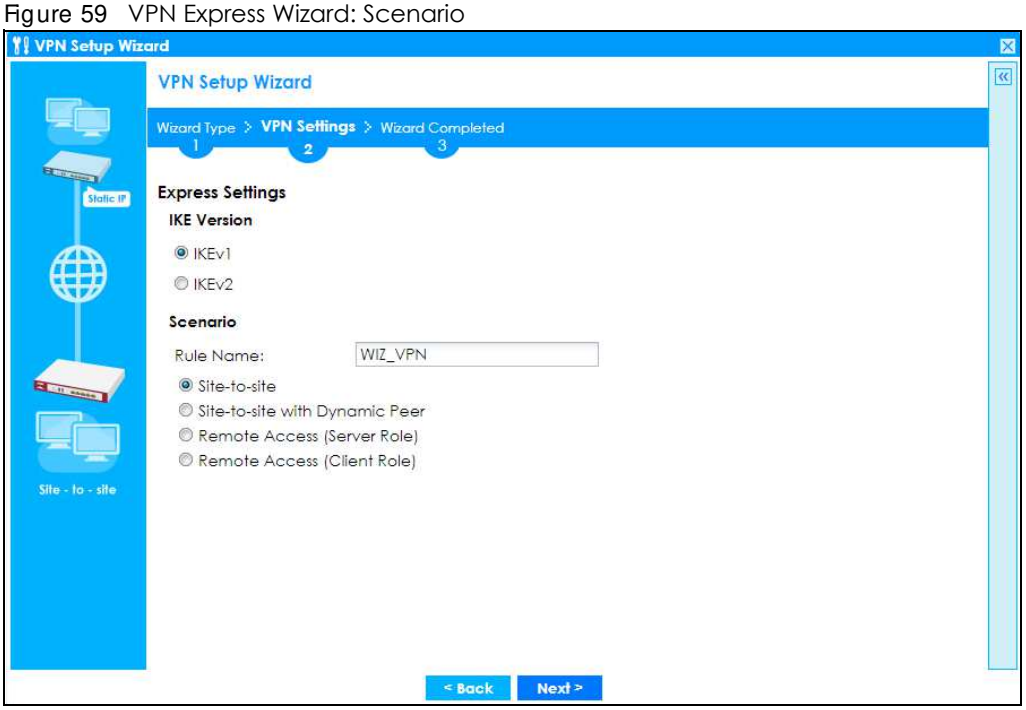
Figure 58 VPN Setup Wizard: Wizard Type



4.3.3 VPN Express Wizard - Scenario

Click the **Express** radio button as shown in Figure 58 on page 78 to display the following screen.

Figure 59 VPN Express Wizard: Scenario



IKE (Internet Key Exchange) Version: IKEv1 and IKEv2

IKE (Internet Key Exchange) is a protocol used in security associations to send data securely. IKE uses certificates or pre-shared keys for authentication and a Diffie–Hellman key exchange to set up a shared session secret from which encryption keys are derived.

IKEv2 supports Extended Authentication Protocol (EAP) authentication, and IKEv1 supports X-Auth. EAP is important when connecting to existing enterprise authentication systems.

Scenario

Rule Name: Type the name used to identify this VPN connection (and VPN gateway). You may use 1-31 alphanumeric characters, underscores (_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.

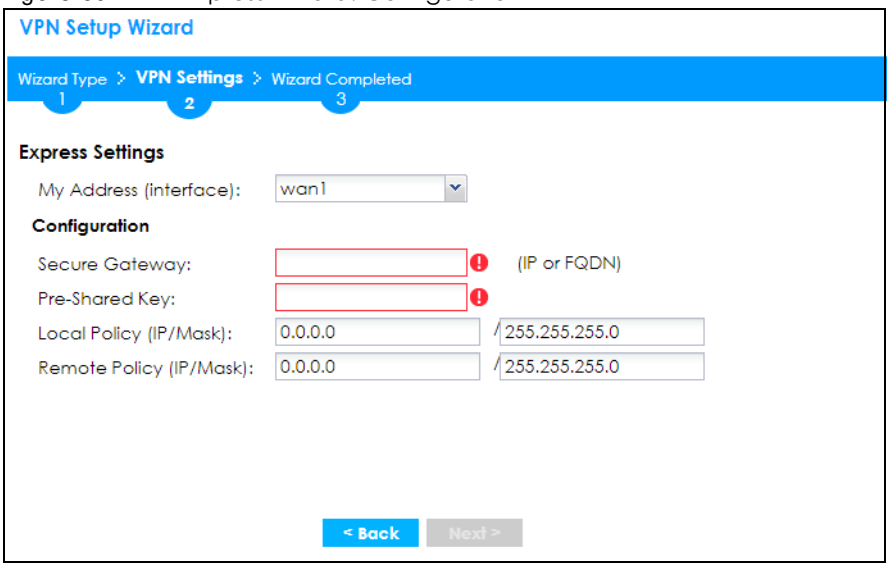
Select the scenario that best describes your intended VPN connection. The figure on the left of the screen changes to match the scenario you select.

- **Site-to-site** - The remote IPSec device has a static IP address or a domain name. This Zyxel Device can initiate the VPN tunnel.
- **Site-to-site with Dynamic Peer** - The remote IPSec device has a dynamic IP address. Only the remote IPSec device can initiate the VPN tunnel.
- **Remote Access (Server Role)** - Allow incoming connections from IPSec VPN clients. The clients have dynamic IP addresses and are also known as dial-in users. Only the clients can initiate the VPN tunnel.

- **Remote Access (Client Role)** - Connect to an IPSec server. This Zyxel Device is the client (dial-in user) and can initiate the VPN tunnel.

4.3.4 VPN Express Wizard - Configuration

Figure 60 VPN Express Wizard: Configuration

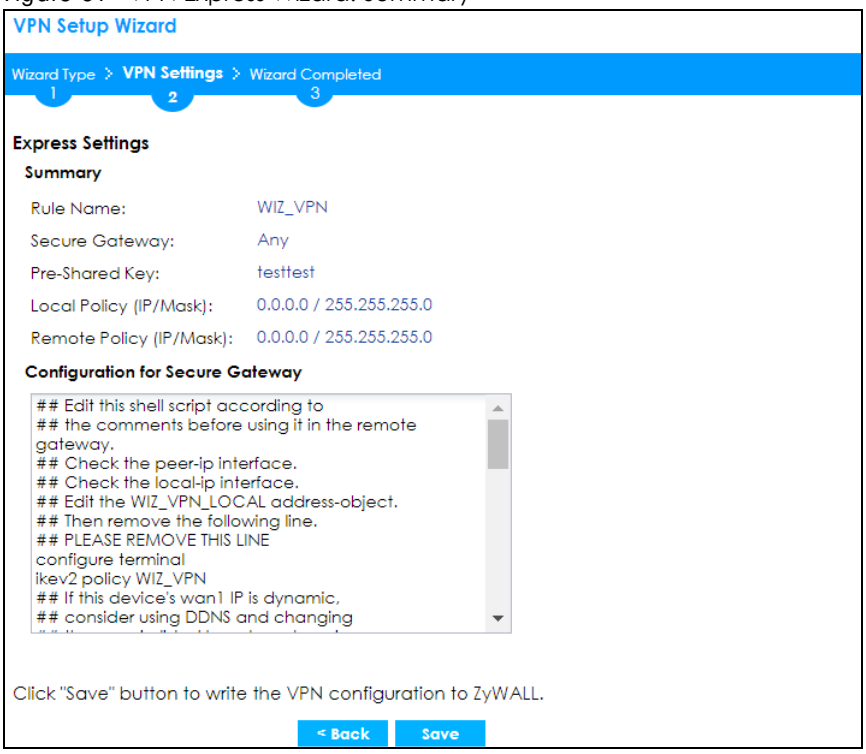


- **My Address (interface)**: Select an interface from the drop-down list box to use on your Zyxel Device.
- **Secure Gateway**: **Any** displays in this field if it is not configurable for the chosen scenario. Otherwise, enter the WAN IP address or domain name of the remote IPSec device (secure gateway) to identify the remote IPSec router by its IP address or a domain name. Use 0.0.0.0 if the remote IPSec router has a dynamic WAN IP address.
- **Pre-Shared Key**: Type the password. Both ends of the VPN tunnel must use the same password. Use 8 to 31 case-sensitive ASCII characters or 8 to 31 pairs of hexadecimal ("0-9", "A-F") characters. Proceed a hexadecimal key with "0x". You will receive a PYLD_MALFORMED (payload malformed) packet if the same pre-shared key is not used on both ends.
- **Local Policy (IP/Mask)**: Type the IP address of a computer on your network that can use the tunnel. You can also specify a subnet. This must match the remote IP address configured on the remote IPSec device.
- **Remote Policy (IP/Mask)**: **Any** displays in this field if it is not configurable for the chosen scenario. Otherwise, type the IP address of a computer behind the remote IPSec device. You can also specify a subnet. This must match the local IP address configured on the remote IPSec device.

4.3.5 VPN Express Wizard - Summary

This screen provides a read-only summary of the VPN tunnel's configuration and commands that you can copy and paste into another ZLD-based Zyxel Device's command line interface to configure it.

Figure 61 VPN Express Wizard: Summary

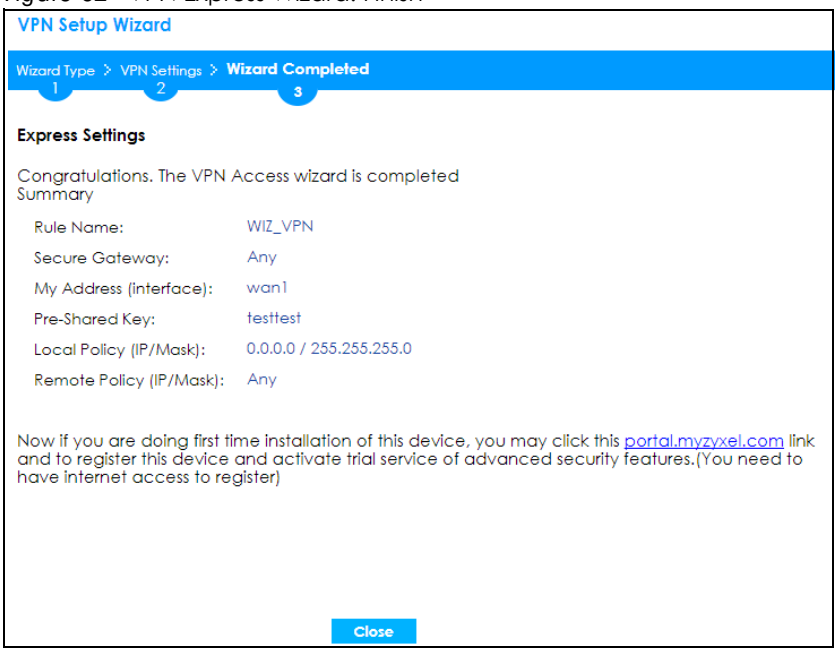


- **Rule Name**: Identifies the VPN gateway policy.
- **Secure Gateway**: IP address or domain name of the remote IPSec device. If this field displays **Any**, only the remote IPSec device can initiate the VPN connection.
- **Pre-Shared Key**: VPN tunnel password. It identifies a communicating party during a phase 1 IKE negotiation.
- **Local Policy**: IP address and subnet mask of the computers on the network behind your Zyxel Device that can use the tunnel.
- **Remote Policy**: IP address and subnet mask of the computers on the network behind the remote IPSec device that can use the tunnel. If this field displays **Any**, only the remote IPSec device can initiate the VPN connection.
- Copy and paste the **Configuration for Secure Gateway** commands into another ZLD-based Zyxel Device's command line interface to configure it to serve as the other end of this VPN tunnel. You can also use a text editor to save these commands as a shell script file with a ".zysh" filename extension. Use the file manager to run the script in order to configure the VPN connection. See the commands reference guide for details on the commands displayed in this list.

4.3.6 VPN Express Wizard - Finish

Now the rule is configured on the Zyxel Device. The Phase 1 rule settings appear in the **VPN > IPSec VPN > VPN Gateway** screen and the Phase 2 rule settings appear in the **VPN > IPSec VPN > VPN Connection** screen.

Figure 62 VPN Express Wizard: Finish

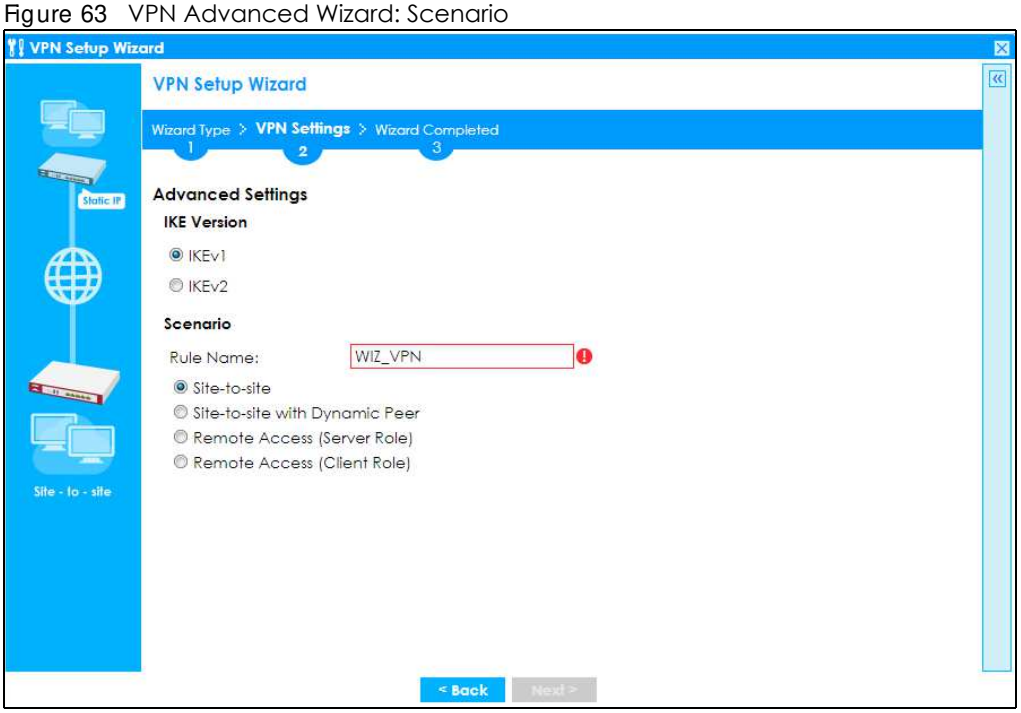


Click **Close** to exit the wizard.

4.3.7 VPN Advanced Wizard - Scenario

Click the **Advanced** radio button as shown in Figure 58 on page 78 to display the following screen.

Figure 63 VPN Advanced Wizard: Scenario



IKE (Internet Key Exchange) Version: IKEv1 and IKEv2

IKE (Internet Key Exchange) is a protocol used in security associations to send data securely. IKE uses certificates or pre-shared keys for authentication and a Diffie–Hellman key exchange to set up a shared session secret from which encryption keys are derived.

IKEv2 supports Extended Authentication Protocol (EAP) authentication, and IKEv1 supports X-Auth. EAP is important when connecting to existing enterprise authentication systems.

Scenario

Rule Name: Type the name used to identify this VPN connection (and VPN gateway). You may use 1-31 alphanumeric characters, underscores (_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.

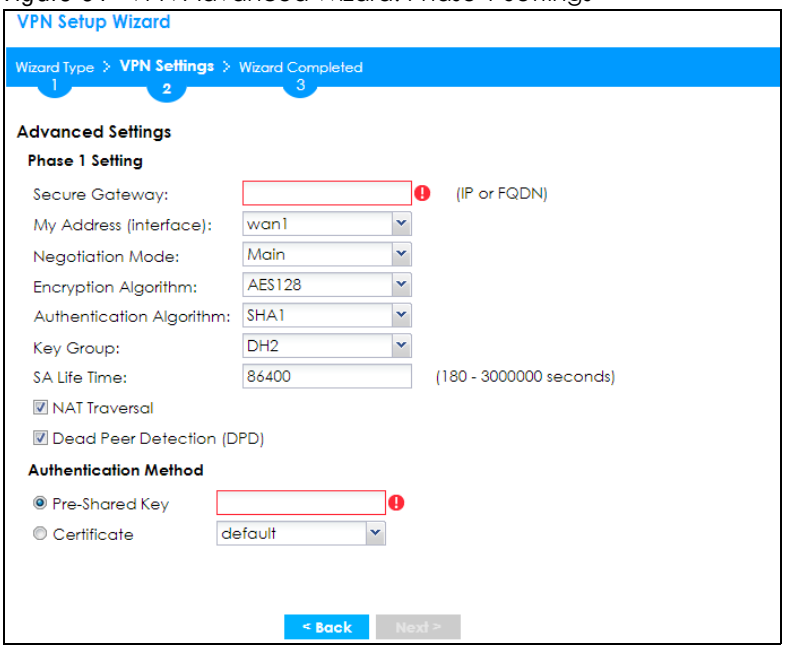
Select the scenario that best describes your intended VPN connection. The figure on the left of the screen changes to match the scenario you select.

- **Site-to-site** - The remote IPSec device has a static IP address or a domain name. This Zyxel Device can initiate the VPN tunnel.
- **Site-to-site with Dynamic Peer** - The remote IPSec device has a dynamic IP address. Only the remote IPSec device can initiate the VPN tunnel.
- **Remote Access (Server Role)** - Allow incoming connections from IPSec VPN clients. The clients have dynamic IP addresses and are also known as dial-in users. Only the clients can initiate the VPN tunnel.
- **Remote Access (Client Role)** - Connect to an IPSec server. This Zyxel Device is the client (dial-in user) and can initiate the VPN tunnel.

4.3.8 VPN Advanced Wizard - Phase 1 Settings

There are two phases to every IKE (Internet Key Exchange) negotiation – phase 1 (Authentication) and phase 2 (Key Exchange). A phase 1 exchange establishes an IKE SA (Security Association).

Figure 64 VPN Advanced Wizard: Phase 1 Settings



- Secure Gateway: Any displays in this field if it is not configurable for the chosen scenario. Otherwise, enter the WAN IP address or domain name of the remote IPSec device (secure gateway) to identify the remote IPSec device by its IP address or a domain name. Use 0.0.0.0 if the remote IPSec device has a dynamic WAN IP address.
- My Address (interface): Select an interface from the drop-down list box to use on your Zyxel Device.
- Negotiation Mode: This displays Main or Aggressive:
  - Main encrypts the ZyWALL/USG's and remote IPSec router's identities but takes more time to establish the IKE SA
  - Aggressive is faster but does not encrypt the identities.

The ZyWALL/USG and the remote IPSec router must use the same negotiation mode. Multiple SAs connecting through a secure gateway must have the same negotiation mode.

- Encryption Algorithm: 3DES and AES use encryption. The longer the key, the higher the security (this may affect throughput). Both sender and receiver must use the same secret key, which can be used to encrypt and decrypt the message or to generate and verify a message authentication code. The DES encryption algorithm uses a 56-bit key. Triple DES (3DES) is a variation on DES that uses a 168-bit key. As a result, 3DES is more secure than DES. It also requires more processing power, resulting in increased latency and decreased throughput. AES128 uses a 128-bit key and is faster than 3DES. AES192 uses a 192-bit key, and AES256 uses a 256-bit key.
- Authentication Algorithm: MD5 gives minimal security and SHA512 gives the highest security. MD5 (Message Digest 5) and SHA (Secure Hash Algorithm) are hash algorithms used to authenticate packet data. The stronger the algorithm the slower it is.
- Key Group: DH5 is more secure than DH1 or DH2 (although it may affect throughput). DH1 (default) refers to Diffie-Hellman Group 1 a 768 bit random number. DH2 refers to Diffie-Hellman Group 2 a 1024 bit (1Kb) random number. DH5 refers to Diffie-Hellman Group 5 a 1536 bit random number.
- SA Life Time: Set how often the Zyxel Device renegotiates the IKE SA. A short SA life time increases security, but renegotiation temporarily disconnects the VPN tunnel.
- NAT Traversal: Select this if the VPN tunnel must pass through NAT (there is a NAT router between the IPSec devices).

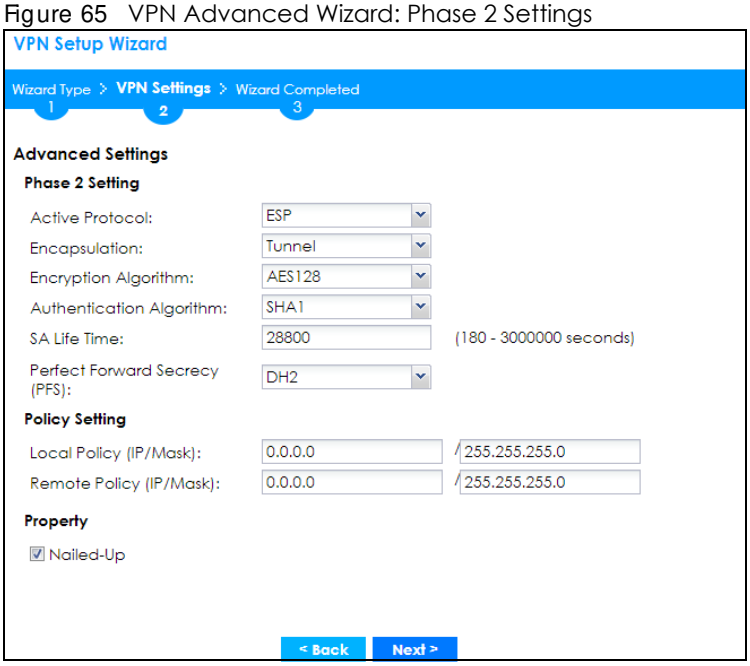
Note: The remote IPSec device must also have NAT traversal enabled. See the help in the main IPSec VPN screens for more information.

- **Dead Peer Detection (DPD)** has the Zyxel Device make sure the remote IPSec device is there before transmitting data through the IKE SA. If there has been no traffic for at least 15 seconds, the Zyxel Device sends a message to the remote IPSec device. If it responds, the Zyxel Device transmits the data. If it does not respond, the Zyxel Device shuts down the IKE SA.
- **Authentication Method**: Select **Pre-Shared Key** to use a password or **Certificate** to use one of the Zyxel Device's certificates.

4.3.9 VPN Advanced Wizard - Phase 2

Phase 2 in an IKE uses the SA that was established in phase 1 to negotiate SAs for IPSec.

Figure 65 VPN Advanced Wizard: Phase 2 Settings



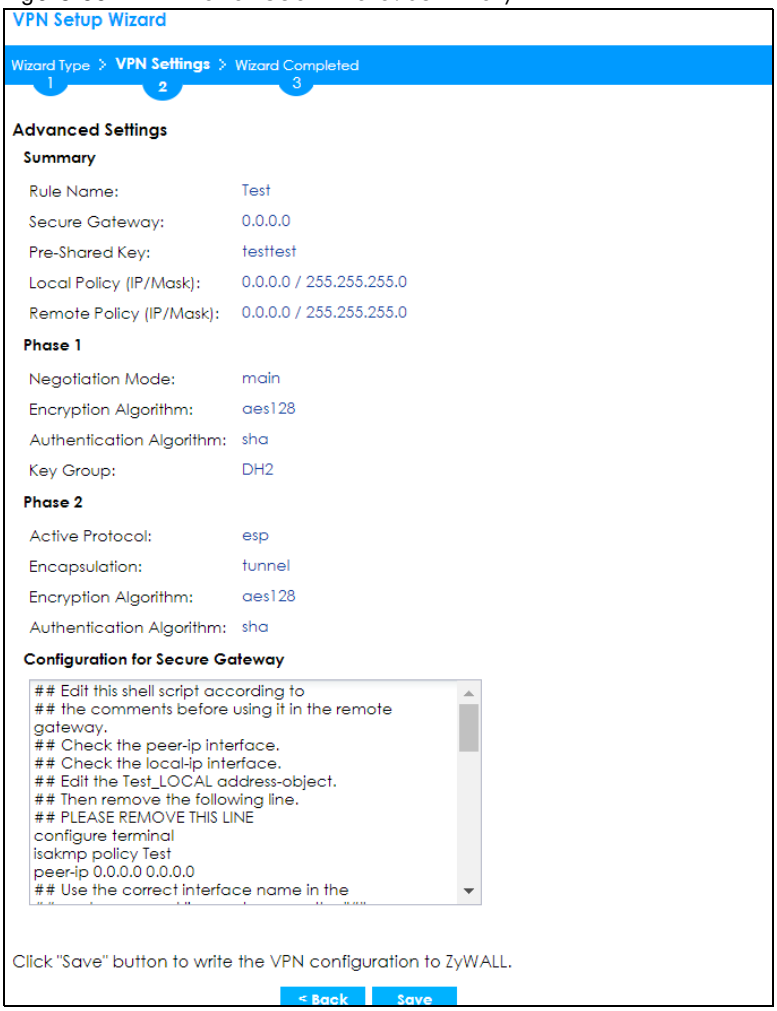
- **Active Protocol**: **ESP** is compatible with NAT, **AH** is not.
- **Encapsulation**: **Tunnel** is compatible with NAT, **Transport** is not.
- **Encryption Algorithm**: **3DES** and **AES** use encryption. The longer the **AES** key, the higher the security (this may affect throughput). **Null** uses no encryption.
- **Authentication Algorithm**: **MD5** gives minimal security and **SHA512** gives the highest security. MD5 (Message Digest 5) and SHA (Secure Hash Algorithm) are hash algorithms used to authenticate packet data. The stronger the algorithm the slower it is.
- **SA Life Time**: Set how often the Zyxel Device renegotiates the IKE SA. A short SA life time increases security, but renegotiation temporarily disconnects the VPN tunnel.
- **Perfect Forward Secrecy (PFS)**: Disabling PFS allows faster IPSec setup, but is less secure. Select DH1, DH2 or DH5 to enable PFS. **DH5** is more secure than **DH1** or **DH2** (although it may affect throughput). DH1 refers to Diffie-Hellman Group 1 a 768 bit random number. DH2 refers to Diffie-Hellman Group 2 a 1024 bit (1Kb) random number. DH5 refers to Diffie-Hellman Group 5 a 1536 bit random number (more secure, yet slower).
- **Local Policy (IP/Mask)**: Type the IP address of a computer on your network. You can also specify a subnet. This must match the remote IP address configured on the remote IPSec device.

- **Remote Policy (IP/Mask)**: Type the IP address of a computer behind the remote IPSec device. You can also specify a subnet. This must match the local IP address configured on the remote IPSec device.
- **Nailed-Up**: This displays for the site-to-site and remote access client role scenarios. Select this to have the Zyxel Device automatically renegotiate the IPSec SA when the SA life time expires.

4.3.10 VPN Advanced Wizard - Summary

This is a read-only summary of the VPN tunnel settings.

Figure 66 VPN Advanced Wizard: Summary



- **Rule Name**: Identifies the VPN connection (and the VPN gateway).
- **Secure Gateway**: IP address or domain name of the remote IPSec device.
- **Pre-Shared Key**: VPN tunnel password.
- **Certificate**: The certificate the Zyxel Device uses to identify itself when setting up the VPN tunnel.
- **Local Policy**: IP address and subnet mask of the computers on the network behind your Zyxel Device that can use the tunnel.
- **Remote Policy**: IP address and subnet mask of the computers on the network behind the remote IPSec device that can use the tunnel.

Phase 1

- **Negotiation Mode**: This displays **Main** or **Aggressive**:
  - **Main** encrypts the ZyWALL/USG's and remote IPSec router's identities but takes more time to establish the IKE SA
  - **Aggressive** is faster but does not encrypt the identities.

The ZyWALL/USG and the remote IPSec router must use the same negotiation mode. Multiple SAs connecting through a secure gateway must have the same negotiation mode.

- **Encryption Algorithm**: This displays the encryption method used. The longer the key, the higher the security, the lower the throughput (possibly).
  - **DES** uses a 56-bit key.
  - **3DES** uses a 168-bit key.
  - **AES128** uses a 128-bit key
  - **AES192** uses a 192-bit key
  - **AES256** uses a 256-bit key.
- **Authentication Algorithm**: This displays the authentication algorithm used. The stronger the algorithm, the slower it is.
  - **MD5** gives minimal security.
  - **SHA1** gives higher security
  - **SHA256** gives the highest security.
- **Key Group**: This displays the Diffie-Hellman (DH) key group used. **DH5** is more secure than **DH1** or **DH2** (although it may affect throughput).
  - **DH1** uses a 768 bit random number.
  - **DH2** uses a 1024 bit (1Kb) random number.
  - **DH5** uses a 1536 bit random number.

Phase 2

- **Active Protocol**: This displays **ESP** (compatible with NAT) or **AH**.
- **Encapsulation**: This displays **Tunnel** (compatible with NAT) or **Transport**.
- **Encryption Algorithm**: This displays the encryption method used. The longer the key, the higher the security, the lower the throughput (possibly).
  - **DES** uses a 56-bit key.
  - **3DES** uses a 168-bit key.
  - **AES128** uses a 128-bit key
  - **AES192** uses a 192-bit key
  - **AES256** uses a 256-bit key.
  - **Null** uses no encryption.
- **Authentication Algorithm**: This displays the authentication algorithm used. The stronger the algorithm, the slower it is.
  - **MD5** gives minimal security.
  - **SHA1** gives higher security
  - **SHA256** gives the highest security.

Copy and paste the **Configuration for Remote Gateway** commands into another ZLD-based Zyxel Device's command line interface.

Click **Save** to save the VPN rule.

4.3.11 VPN Advanced Wizard - Finish

Now the rule is configured on the Zyxel Device. The Phase 1 rule settings appear in the **VPN > IPSec VPN > VPN Gateway** screen and the Phase 2 rule settings appear in the **VPN > IPSec VPN > VPN Connection** screen.

Figure 67 VPN Wizard: Finish

Click **Close** to exit the wizard.

4.4 VPN Settings for Configuration Provisioning Wizard: Wizard Type

Use VPN Settings for Configuration Provisioning to set up a VPN rule that can be retrieved with the Zyxel Device IPSec VPN Client.

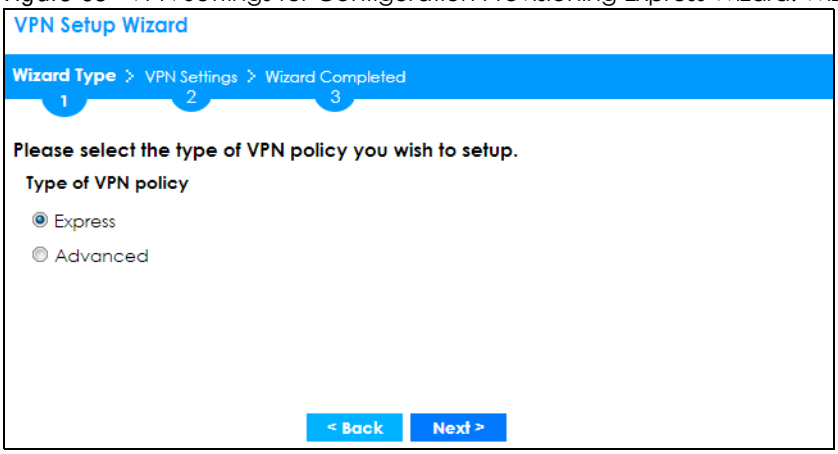
VPN rules for the Zyxel Device IPSec VPN Client have certain restrictions. They must *not* contain the following settings:

- **AH** active protocol
- **NULL** encryption
- **SHA512** authentication
- A subnet or range remote policy

Choose **Express** to create a VPN rule with the default phase 1 and phase 2 settings and to use a pre-shared key.

Choose **Advanced** to change the default settings and/or use certificates instead of a pre-shared key in the VPN rule.

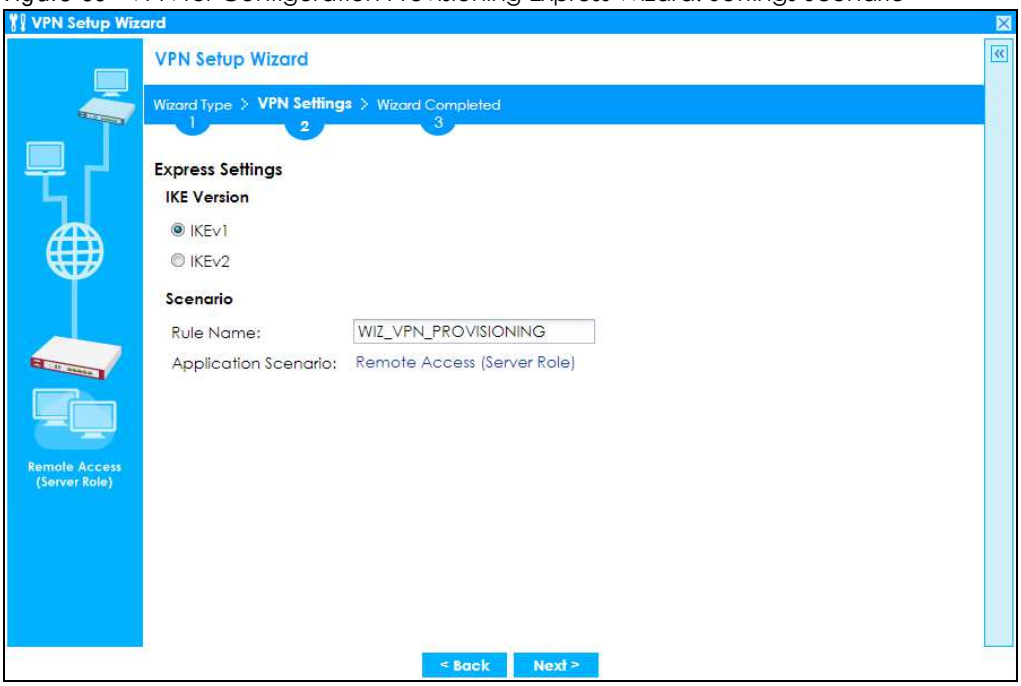
Figure 68 VPN Settings for Configuration Provisioning Express Wizard: Wizard Type



4.4.1 Configuration Provisioning Express Wizard - VPN Settings

Click the **Express** radio button as shown in the previous screen to display the following screen.

Figure 69 VPN for Configuration Provisioning Express Wizard: Settings Scenario

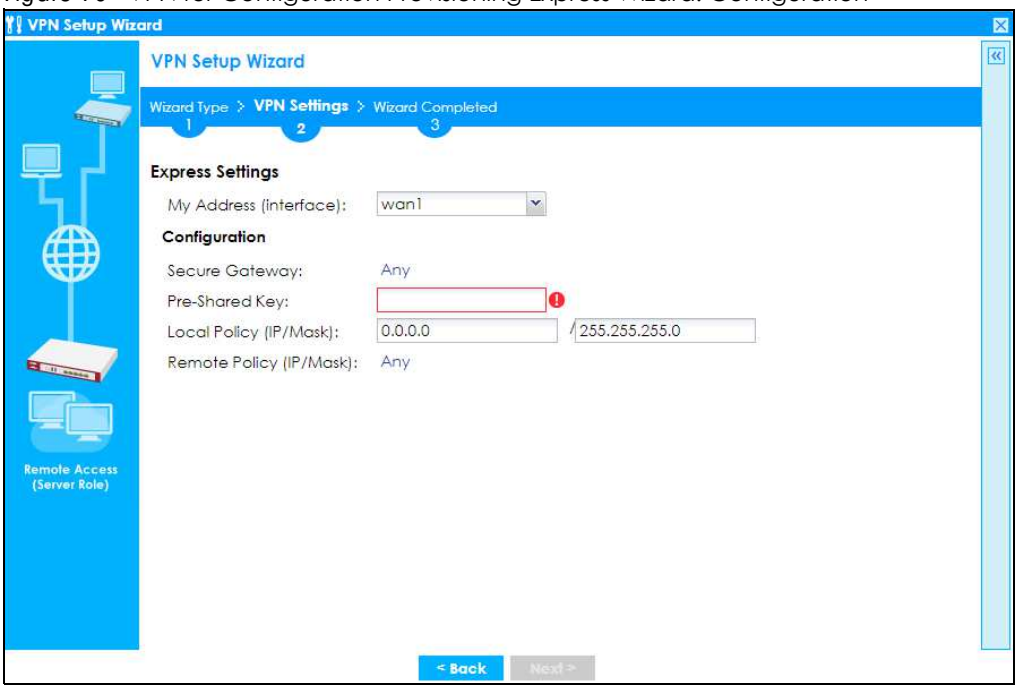


- IKE (Internet Key Exchange) is a protocol used in security associations to send data securely. IKE uses certificates or pre-shared keys for authentication and a Diffie–Hellman key exchange to set up a shared session secret from which encryption keys are derived.
- IKEv2 supports Extended Authentication Protocol (EAP) authentication, and IKEv1 supports X-Auth. EAP is important when connecting to existing enterprise authentication systems.
- Rule Name: Type the name used to identify this VPN connection (and VPN gateway). You may use 1-31 alphanumeric characters, underscores (_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
- Application Scenario: Only the Remote Access (Server Role) is allowed in this wizard. It allows incoming connections from the Zyxel Device IPSec VPN Client.

4.4.2 Configuration Provisioning VPN Express Wizard - Configuration

Click Next to continue the wizard.

Figure 70 VPN for Configuration Provisioning Express Wizard: Configuration

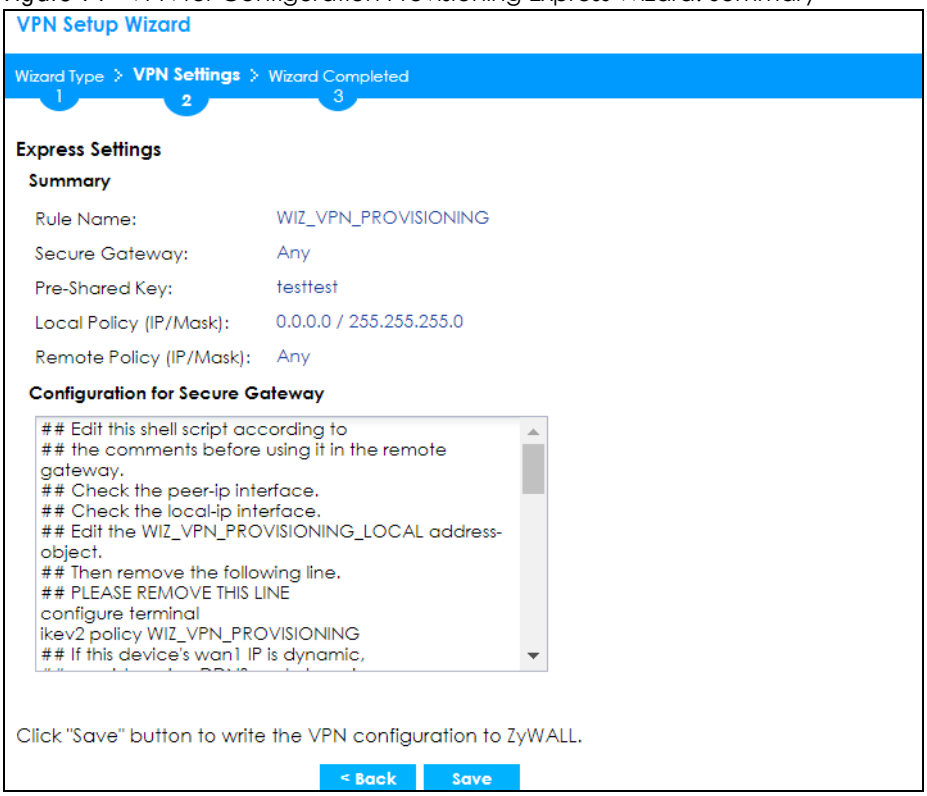


- My Address (interface): Select an interface from the drop-down list box to use on your Zyxel Device.
- Secure Gateway: Any displays in this field because it is not configurable in this wizard. It allows incoming connections from the Zyxel Device IPSec VPN Client.
- Pre-Shared Key: Type the password. Both ends of the VPN tunnel must use the same password. Use 8 to 31 case-sensitive ASCII characters or 8 to 31 pairs of hexadecimal ("0-9", "A-F") characters. Proceed a hexadecimal key with "0x". You will receive a PYLD_MALFORMED (payload malformed) packet if the same pre-shared key is not used on both ends.
- Local Policy (IP/Mask): Type the IP address of a computer on your network. You can also specify a subnet. This must match the remote IP address configured on the remote IPSec device.
- Remote Policy (IP/Mask): Any displays in this field because it is not configurable in this wizard.

4.4.3 VPN Settings for Configuration Provisioning Express Wizard - Summary

This screen has a read-only summary of the VPN tunnel's configuration and commands you can copy and paste into another ZLD-based Zyxel Device's command line interface to configure it.

Figure 71 VPN for Configuration Provisioning Express Wizard: Summary

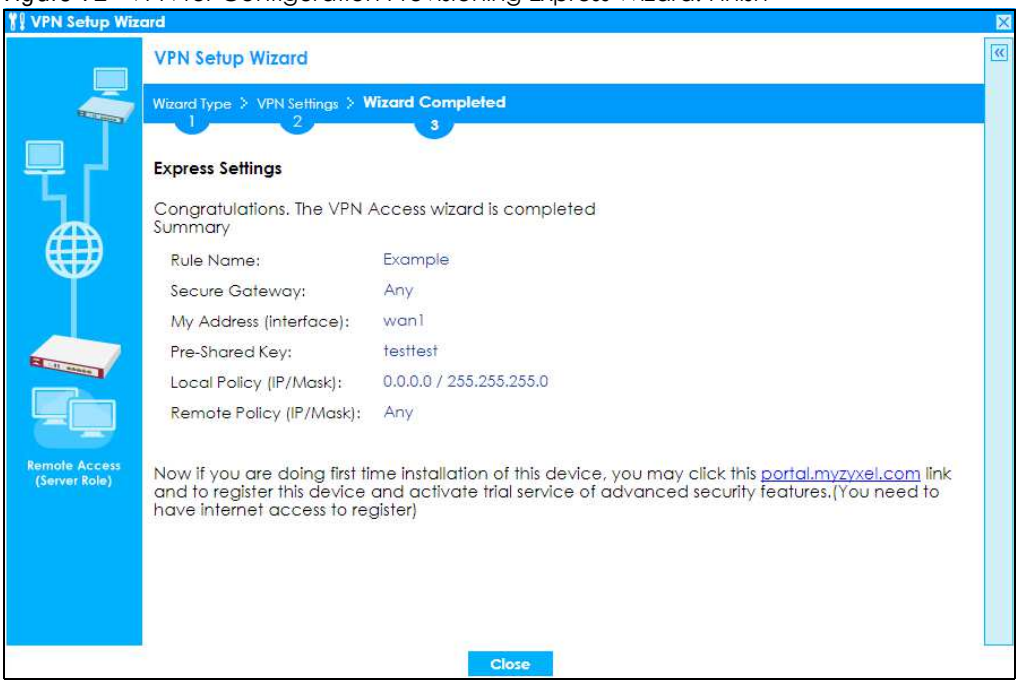


- **Rule Name**: Identifies the VPN gateway policy.
- **Secure Gateway**: **Any** displays in this field because it is not configurable in this wizard. It allows incoming connections from the Zyxel Device IPSec VPN Client.
- **Pre-Shared Key**: VPN tunnel password. It identifies a communicating party during a phase 1 IKE negotiation.
- **Local Policy**: (Static) IP address and subnet mask of the computers on the network behind your Zyxel Device that can be accessed using the tunnel.
- **Remote Policy**: **Any** displays in this field because it is not configurable in this wizard.
- The **Configuration for Secure Gateway** displays the configuration that the Zyxel Device IPSec VPN Client will get from the Zyxel Device.
- Click **Save** to save the VPN rule.

4.4.4 VPN Settings for Configuration Provisioning Express Wizard - Finish

Now the rule is configured on the Zyxel Device. The Phase 1 rule settings appear in the **Configuration > VPN > IPSec VPN > VPN Gateway** screen and the Phase 2 rule settings appear in the **Configuration > VPN > IPSec VPN > VPN Connection** screen. Enter the IP address of the Zyxel Device in the Zyxel Device IPSec VPN Client to get all these VPN settings automatically from the Zyxel Device.

Figure 72 VPN for Configuration Provisioning Express Wizard: Finish

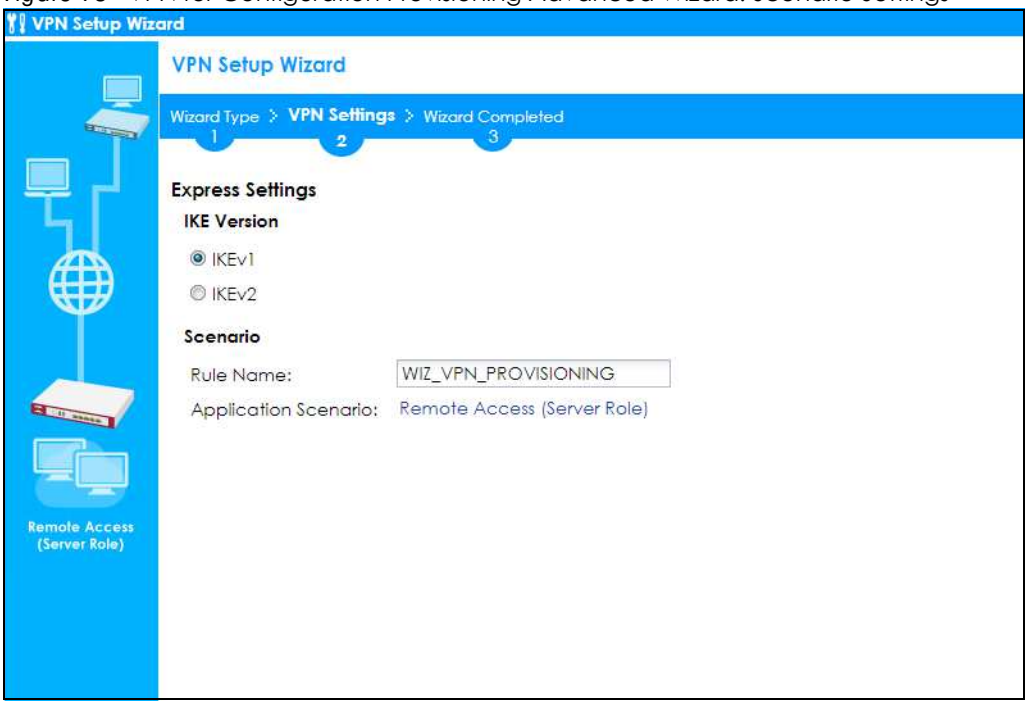


Click **Close** to exit the wizard.

4.4.5 VPN Settings for Configuration Provisioning Advanced Wizard - Scenario

Click the **Advanced** radio button as shown in the screen shown in Figure 68 on page 89 to display the following screen.

Figure 73 VPN for Configuration Provisioning Advanced Wizard: Scenario Settings



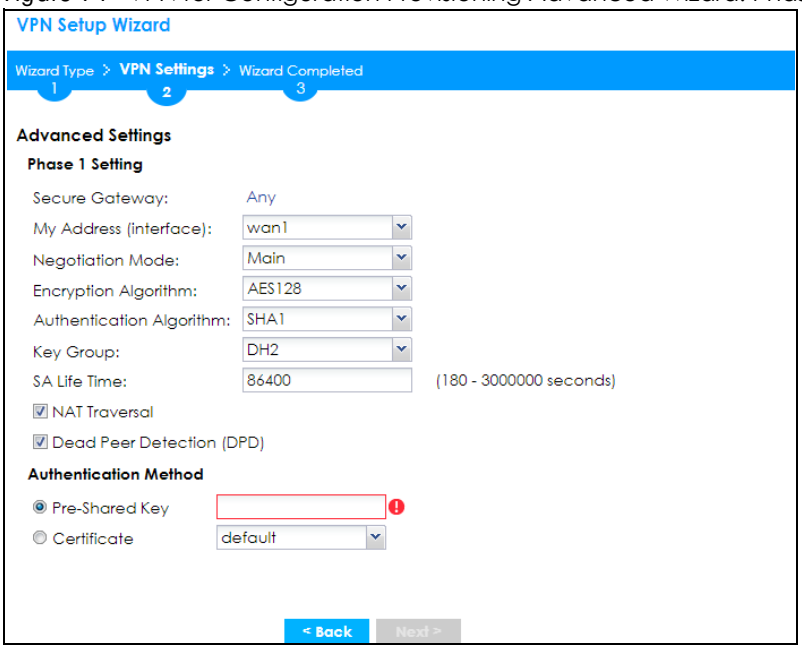
- IKE (Internet Key Exchange) is a protocol used in security associations to send data securely. IKE uses certificates or pre-shared keys for authentication and a Diffie–Hellman key exchange to set up a shared session secret from which encryption keys are derived.
- IKEv2 supports Extended Authentication Protocol (EAP) authentication, and IKEv1 supports X-Auth. EAP is important when connecting to existing enterprise authentication systems.
- Rule Name: Type the name used to identify this VPN connection (and VPN gateway). You may use 1-31 alphanumeric characters, underscores (_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
- Application Scenario: Only the Remote Access (Server Role) is allowed in this wizard. It allows incoming connections from the Zyxel Device IPSec VPN Client.

Click Next to continue the wizard.

4.4.6 VPN Settings for Configuration Provisioning Advanced Wizard - Phase 1 Settings

There are two phases to every IKE (Internet Key Exchange) negotiation – phase 1 (Authentication) and phase 2 (Key Exchange). A phase 1 exchange establishes an IKE SA (Security Association).

Figure 74 VPN for Configuration Provisioning Advanced Wizard: Phase 1 Settings



- Secure Gateway: Any displays in this field because it is not configurable in this wizard. It allows incoming connections from the Zyxel Device IPSec VPN Client.
- My Address (interface): Select an interface from the drop-down list box to use on your Zyxel Device.
- Negotiation Mode: This displays Main or Aggressive:
  - Main encrypts the ZyWALL/USG's and remote IPSec router's identities but takes more time to establish the IKE SA
  - Aggressive is faster but does not encrypt the identities.

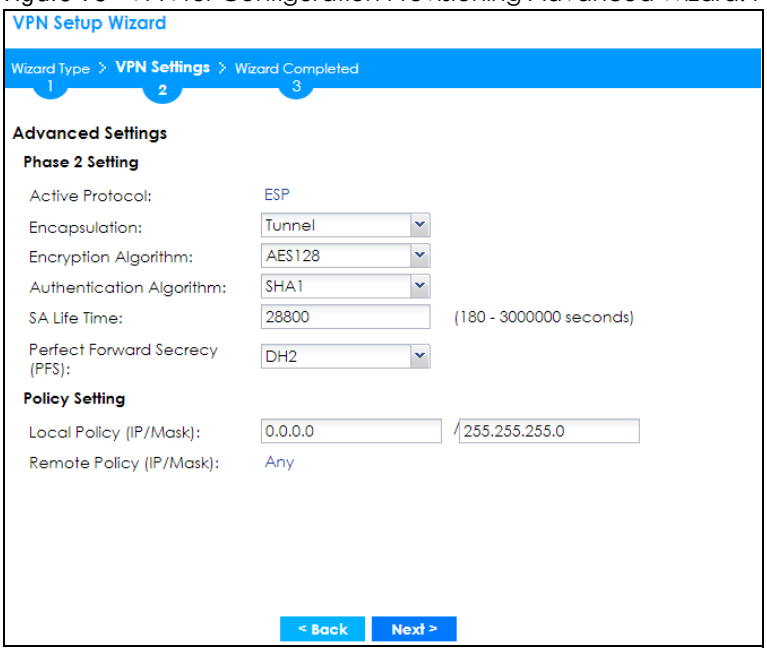
The ZyWALL/USG and the remote IPSec router must use the same negotiation mode. Multiple SAs connecting through a secure gateway must have the same negotiation mode.

- Encryption Algorithm: 3DES and AES use encryption. The longer the key, the higher the security (this may affect throughput). Both sender and receiver must know the same secret key, which can be used to encrypt and decrypt the message or to generate and verify a message authentication code. The DES encryption algorithm uses a 56-bit key. Triple DES (3DES) is a variation on DES that uses a 168-bit key. As a result, 3DES is more secure than DES. It also requires more processing power, resulting in increased latency and decreased throughput. AES128 uses a 128-bit key and is faster than 3DES. AES192 uses a 192-bit key and AES256 uses a 256-bit key.
- Authentication Algorithm: MD5 (Message Digest 5) and SHA (Secure Hash Algorithm) are hash algorithms used to authenticate packet data. MD5 gives minimal security. SHA1 gives higher security and SHA256 gives the highest security. The stronger the algorithm, the slower it is.
- Key Group: DH5 is more secure than DH1 or DH2 (although it may affect throughput). DH1 (default) refers to Diffie-Hellman Group 1 a 768 bit random number. DH2 refers to Diffie-Hellman Group 2 a 1024 bit (1Kb) random number. DH5 refers to Diffie-Hellman Group 5 a 1536 bit random number.
- SA Life Time: Set how often the Zyxel Device renegotiates the IKE SA. A short SA life time increases security, but renegotiation temporarily disconnects the VPN tunnel.
- Authentication Method: Select Pre-Shared Key to use a password or Certificate to use one of the Zyxel Device's certificates.

4.4.7 VPN Settings for Configuration Provisioning Advanced Wizard - Phase 2

Phase 2 in an IKE uses the SA that was established in phase 1 to negotiate SAs for IPSec.

Figure 75 VPN for Configuration Provisioning Advanced Wizard: Phase 2 Settings

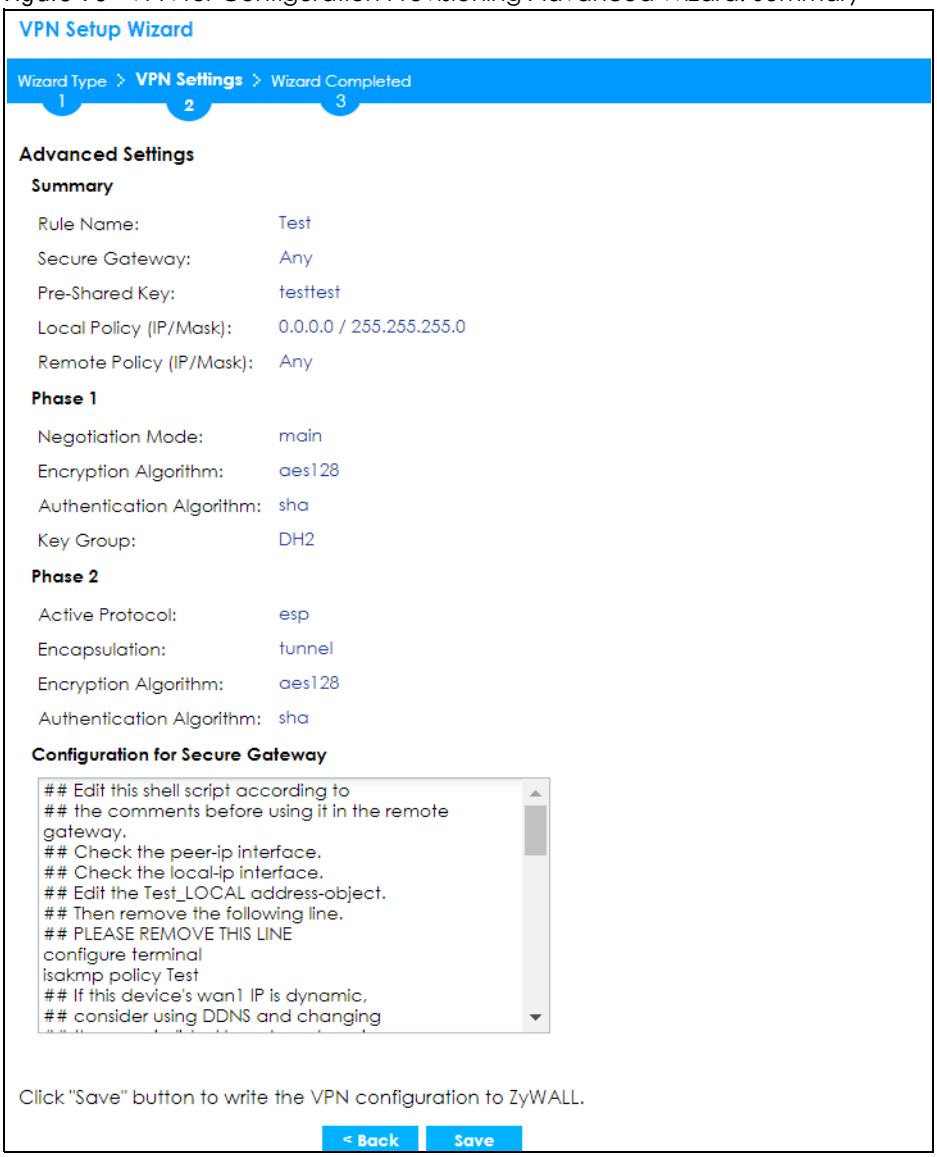


- **Active Protocol**: **ESP** is compatible with NAT. **AH** is not available in this wizard.
- **Encapsulation**: **Tunnel** is compatible with NAT, **Transport** is not.
- **Encryption Algorithm**: **3DES** and **AES** use encryption. The longer the **AES** key, the higher the security (this may affect throughput). **Null** uses no encryption.
- **Authentication Algorithm**: MD5 (Message Digest 5) and SHA (Secure Hash Algorithm) are hash algorithms used to authenticate packet data. **MD5** gives minimal security. **SHA1** gives higher security and **SHA256** gives the highest security. The stronger the algorithm, the slower it is.
- **SA Life Time**: Set how often the Zyxel Device renegotiates the IKE SA. A short SA life time increases security, but renegotiation temporarily disconnects the VPN tunnel.
- **Perfect Forward Secrecy (PFS)**: Disabling PFS allows faster IPSec setup, but is less secure. Select DH1, DH2 or DH5 to enable PFS. **DH5** is more secure than **DH1** or **DH2** (although it may affect throughput). DH1 refers to Diffie-Hellman Group 1 a 768 bit random number. DH2 refers to Diffie-Hellman Group 2 a 1024 bit (1Kb) random number. DH5 refers to Diffie-Hellman Group 5 a 1536 bit random number (more secure, yet slower).
- **Local Policy (IP/Mask)**: Type the IP address of a computer on your network. You can also specify a subnet. This must match the remote IP address configured on the remote IPSec device.
- **Remote Policy (IP/Mask)**: **Any** displays in this field because it is not configurable in this wizard.
- **Nailed-Up**: This displays for the site-to-site and remote access client role scenarios. Select this to have the Zyxel Device automatically renegotiate the IPSec SA when the SA life time expires.

4.4.8 VPN Settings for Configuration Provisioning Advanced Wizard - Summary

This is a read-only summary of the VPN tunnel settings.

Figure 76 VPN for Configuration Provisioning Advanced Wizard: Summary



Summary

- **Rule Name**: Identifies the VPN connection (and the VPN gateway).
- **Secure Gateway**: **Any** displays in this field because it is not configurable in this wizard. It allows incoming connections from the Zyxel Device IPSec VPN Client.
- **Pre-Shared Key**: VPN tunnel password.
- **Local Policy**: IP address and subnet mask of the computers on the network behind your Zyxel Device that can use the tunnel.
- **Remote Policy**: **Any** displays in this field because it is not configurable in this wizard.

Phase 1

- **Negotiation Mode**: This displays **Main** or **Aggressive**:
  - **Main** encrypts the ZyWALL/USG's and remote IPSec router's identities but takes more time to establish the IKE SA

- **Aggressive** is faster but does not encrypt the identities.

The ZyWALL/USG and the remote IPSec router must use the same negotiation mode. Multiple SAs connecting through a secure gateway must have the same negotiation mode.

- **Encryption Algorithm**: This displays the encryption method used. The longer the key, the higher the security, the lower the throughput (possibly).
  - **DES** uses a 56-bit key.
  - **3DES** uses a 168-bit key.
  - **AES128** uses a 128-bit key
  - **AES192** uses a 192-bit key
  - **AES256** uses a 256-bit key.
- **Authentication Algorithm**: This displays the authentication algorithm used. The stronger the algorithm, the slower it is.
  - **MD5** gives minimal security.
  - **SHA1** gives higher security
  - **SHA256** gives the highest security.
- **Key Group**: This displays the Diffie-Hellman (DH) key group used. **DH5** is more secure than **DH1** or **DH2** (although it may affect throughput).
  - **DH1** uses a 768 bit random number.
  - **DH2** uses a 1024 bit (1Kb) random number.
  - **DH5** uses a 1536 bit random number.

Phase 2

- **Active Protocol**: This displays **ESP** (compatible with NAT) or **AH**.
- **Encapsulation**: This displays **Tunnel** (compatible with NAT) or **Transport**.
- **Encryption Algorithm**: This displays the encryption method used. The longer the key, the higher the security, the lower the throughput (possibly).
  - **DES** uses a 56-bit key.
  - **3DES** uses a 168-bit key.
  - **AES128** uses a 128-bit key
  - **AES192** uses a 192-bit key
  - **AES256** uses a 256-bit key.
  - **Null** uses no encryption.
- **Authentication Algorithm**: This displays the authentication algorithm used. The stronger the algorithm, the slower it is.
  - **MD5** gives minimal security.
  - **SHA1** gives higher security
  - **SHA256** gives the highest security.

The **Configuration for Secure Gateway** displays the configuration that the Zyxel Device IPSec VPN Client will get from the Zyxel Device.

Click **Save** to save the VPN rule.

4.4.9 VPN Settings for Configuration Provisioning Advanced Wizard - Finish

Now the rule is configured on the Zyxel Device. The Phase 1 rule settings appear in the VPN > IPSec VPN > VPN Gateway screen and the Phase 2 rule settings appear in the VPN > IPSec VPN > VPN Connection screen. Enter the IP address of the Zyxel Device in the Zyxel Device IPSec VPN Client to get all these VPN settings automatically from the Zyxel Device.

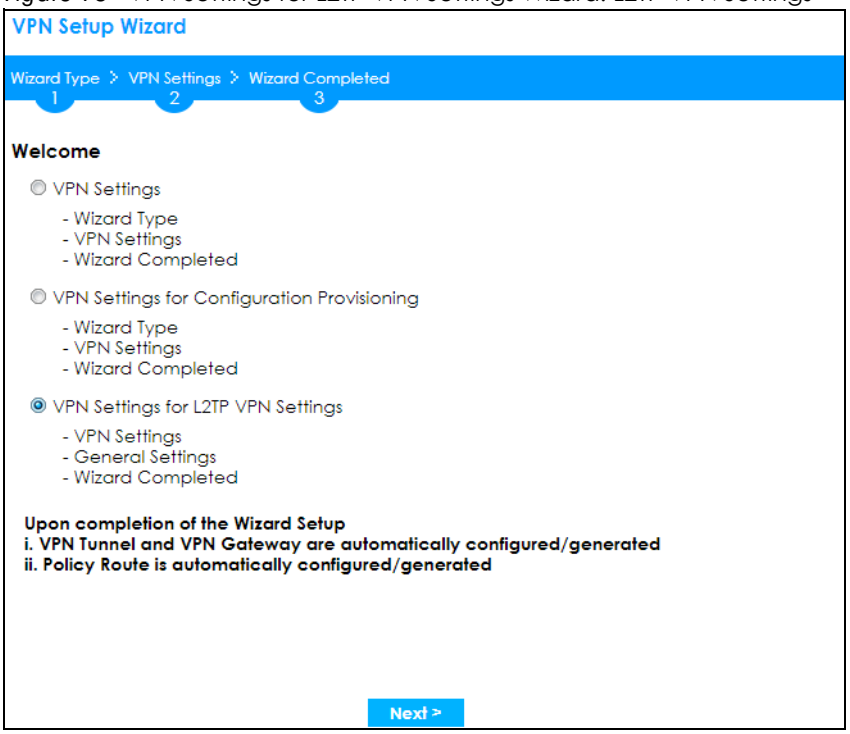
Figure 77 VPN for Configuration Provisioning Advanced Wizard: Finish

Click Close to exit the wizard.

4.5 VPN Settings for L2TP VPN Settings Wizard

Use VPN Settings for L2TP VPN Settings to set up an L2TP VPN rule. Click Configuration > Quick Setup > VPN Setup and select VPN Settings for L2TP VPN Settings to see the following screen.

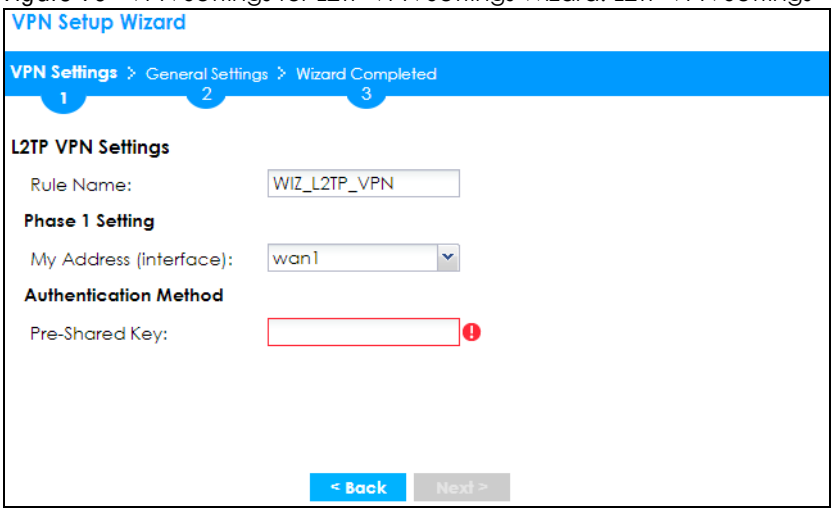
Figure 78 VPN Settings for L2TP VPN Settings Wizard: L2TP VPN Settings



Click Next to continue the wizard.

4.5.1 L2TP VPN Settings

Figure 79 VPN Settings for L2TP VPN Settings Wizard: L2TP VPN Settings

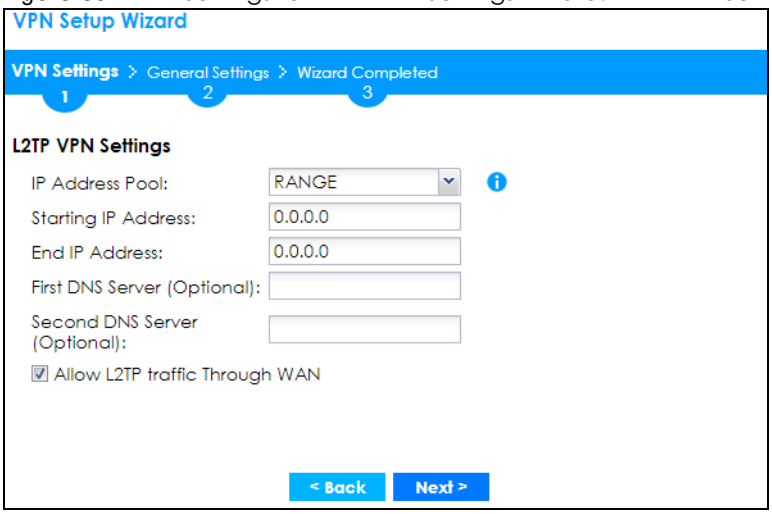


- Rule Name: Type the name used to identify this L2TP VPN connection (and L2TP VPN gateway). You may use 1-31 alphanumeric characters, underscores (_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
- My Address (interface): Select one of the interfaces from the pull down menu to apply the L2TP VPN rule.

- **Pre-Shared Key**: Type the password. Both ends of the VPN tunnel must use the same password. Use 8 to 31 case-sensitive ASCII characters or 8 to 31 pairs of hexadecimal ("0-9", "A-F") characters. Proceed a hexadecimal key with "0x". You will receive a PYLD_MALFORMED (payload malformed) packet if the same pre-shared key is not used on both ends.
- Click **Next** to continue the wizard.

4.5.2 L2TP VPN Settings

Figure 80 VPN Settings for L2TP VPN Settings Wizard: L2TP VPN Settings



- **IP Address Pool**: Select Range or Subnet from the pull down menu. This IP address pool is used to assign to the L2TP VPN clients.
- **Starting IP Address**: Enter the starting IP address in the field.
- **End IP Address**: Enter the ending IP address in the field.
- **Network**: Enter the IPv4 IP address in this field if you selected **SUBNET**.
- **Netmask**: Enter the associated subnet mask of the subnet in this field.
- **First DNS Server (Optional)**: Enter the first DNS server IP address in the field. Leave the filed as 0.0.0.0 if you do not want to configure DNS servers. If you do not configure a DNS server you must know the IP address of a machine in order to access it.
- **Second DNS Server (Optional)**: Enter the second DNS server IP address in the field. Leave the filed as 0.0.0.0 if you do not want to configure DNS servers. If you do not configure a DNS server you must know the IP address of a machine in order to access it.
- **Allow L2TP traffic Through WAN**: Select this check box to allow traffic from L2TP clients to go to the Internet.

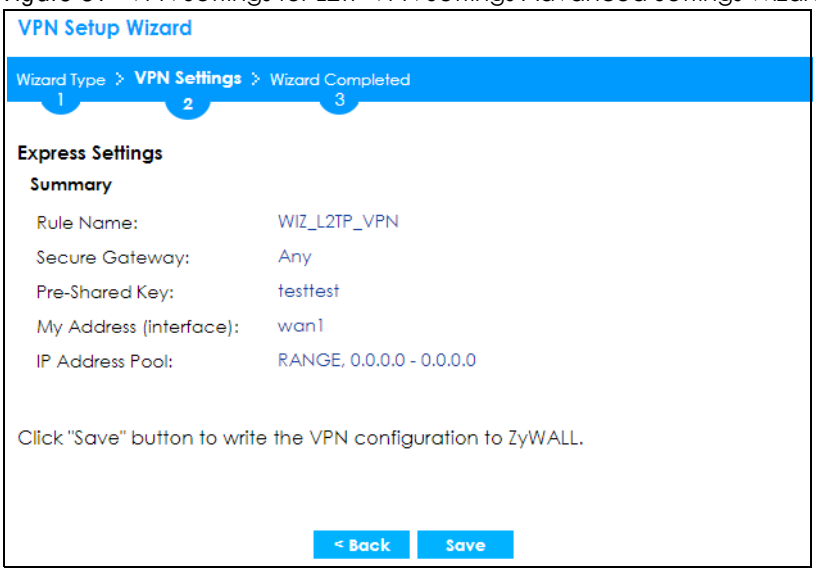
Click **Next** to continue the wizard.

Note: DNS (Domain Name System) is for mapping a domain name to its corresponding IP address and vice versa. The DNS server is extremely important because without it, you must know the IP address of a computer before you can access it. The Zyxel Device uses a system DNS server (in the order you specify here) to resolve domain names for VPN, DDNS and the time server.

4.5.3 VPN Settings for L2TP VPN Setting Wizard - Summary

This is a read-only summary of the L2TP VPN settings.

Figure 81 VPN Settings for L2TP VPN Settings Advanced Settings Wizard: Summary

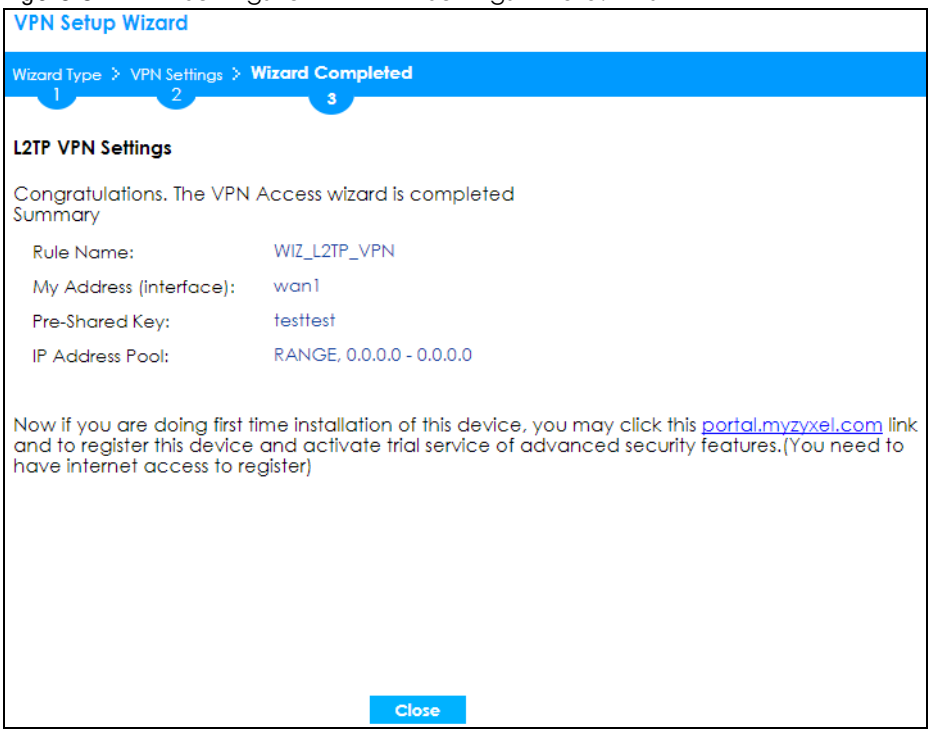


- **Rule Name**: Identifies the L2TP VPN connection (and the L2TP VPN gateway).
- **Secure Gateway** "**Any**" displays in this field because it is not configurable in this wizard. It allows incoming connections from the L2TP VPN Client.
- **Pre-Shared Key**: L2TP VPN tunnel password.
- **My Address (Interface)**: This displays the interface to use on your Zyxel Device for the L2TP tunnel.
- **IP Address Pool**: This displays the IP address pool used to assign to the L2TP VPN clients.

Click **Save** to complete the L2TP VPN Setting and the following screen will show.

4.5.4 VPN Settings for L2TP VPN Setting Wizard Completed

Figure 82 VPN Settings for L2TP VPN Settings Wizard: Finish



Now the rule is configured on the Zyxel Device. The L2TP VPN rule settings appear in the **Configuration > VPN > L2TP VPN** screen and also in the **Configuration > VPN > IPSec VPN > VPN Connection** and **VPN Gateway** screen.

CHAPTER 5
Dashboard

5.1 Overview

Use the **Dashboard** screens to check status information about the Zyxel Device.

5.1.1 What You Can Do in this Chapter

Use the main **Dashboard** screen to see the Zyxel Device's general device information, system status, and system resource usage. You can also display other status screens for more information.

Use the **Dashboard** screens to view the following.

- Device Information Screen on page 106
- System Status Screen on page 107
- Tx/Rx Statistics on page 107
- The Latest Logs Screen on page 108
- System Resources Screen on page 108
- DHCP Table Screen on page 109
- Number of Login Users Screen on page 110
- Current Login User on page 111
- VPN Status on page 111
- SSL VPN Status on page 111
- The Advanced Threat Protection Screen on page 112

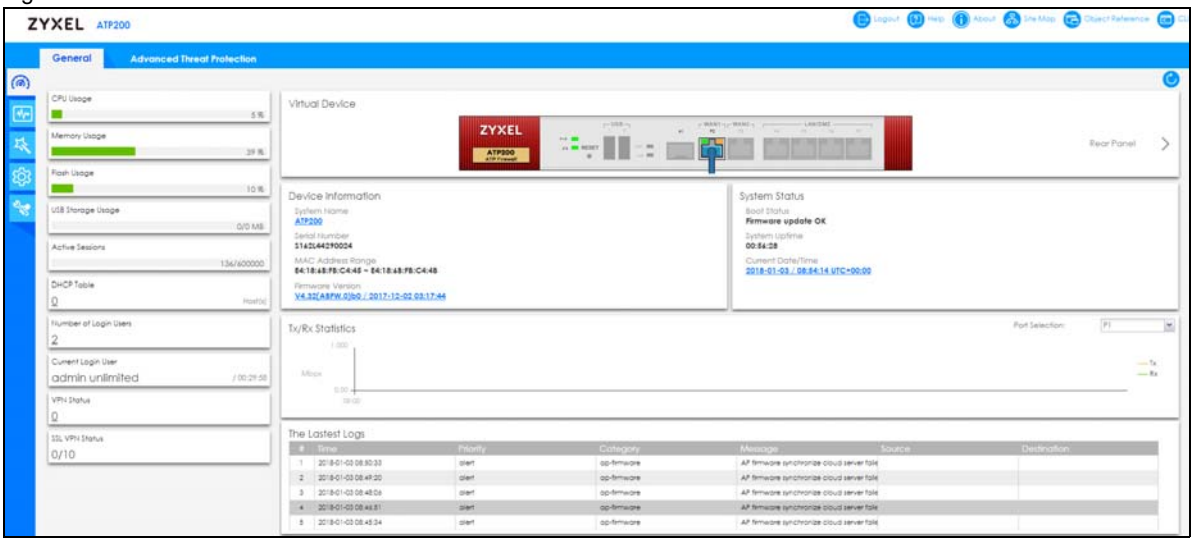
5.2 The General Screen

The **Dashboard** screen displays when you log into the Zyxel Device or click **Dashboard** in the navigation panel. The dashboard displays general device information, system status, system resource usage, licensed service status, and interface status in widgets that you can re-arrange to suit your needs. You can also collapse, refresh, and close individual widgets.

Click on the icon to go to the OneSecurity website where there is guidance on configuration walkthroughs, troubleshooting, and other information.

The following screen is an example of a Brand 2.0 web configurator web style.

Figure 83 Dashboard



The following table describes the labels in this screen.

Table 15 Dashboard

LABEL	DESCRIPTION
Refresh Now	Click this to update the widget's information immediately.
Virtual Device	
Rear Panel	Click this to view details about the Zyxel Device's rear panel. Hover your cursor over a connected interface or slot to display status details.
Front Panel	Click this to view details about the status of the Zyxel Device's front panel LEDs and connections. See Section 3.1.1 on page 64 for LED descriptions. An unconnected interface or slot appears grayed out.
	The following front and rear panel labels display when you hover your cursor over a connected interface or slot.
Name	This field displays the name of each interface.
Status	This field displays the current status of each interface or device installed in a slot. The possible values depend on what type of interface it is. **Inactive** - The Ethernet interface is disabled. **Down** - The Ethernet interface does not have any physical ports associated with it or the Ethernet interface is enabled but not connected. **Speed / Duplex** - The Ethernet interface is enabled and connected. This field displays the port speed and duplex setting (**Full** or **Half**). The status for a WLAN card is **none**. For cellular (mobile broadband) interfaces, see Section 9.5 on page 240 for the status that can appear. For the auxiliary interface: **Inactive** - The auxiliary interface is disabled. **Connected** - The auxiliary interface is enabled and connected. **Disconnected** - The auxiliary interface is not connected.

Table 15 Dashboard (continued)

LABEL	DESCRIPTION
Zone	This field displays the zone to which the interface is currently assigned.
IP Address/ Mask	This field displays the current IP address and subnet mask assigned to the interface. If the interface is a member of an active virtual router, this field displays the IP address it is currently using. This is either the static IP address of the interface (if it is the master) or the management IP address (if it is a backup).

5.2.1 Device Information Screen

The **Device Information** screen displays Zyxel Device's system and model name, serial number, MAC address and firmware version shown in the below screen.

Figure 84 Dashboard > Device Information (Example)

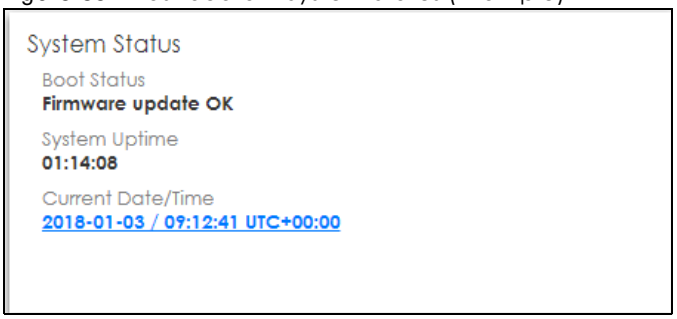
This table describes the fields in the above screen.

Table 16 Dashboard > Device Information

LABEL	DESCRIPTION
System Name	This field displays the name used to identify the Zyxel Device on any network. Click the link and open the **Host Name** screen where you can edit and make changes to the system and domain name.
Serial Number	This field displays the serial number of this Zyxel Device. The serial number is used for device tracking and control.
MAC Address Range	This field displays the MAC addresses used by the Zyxel Device. Each physical port has one MAC address. The first MAC address is assigned to physical port 1, the second MAC address is assigned to physical port 2, and so on.
Firmware Version	This field displays the version number and date of the firmware the Zyxel Device is currently running. Click the link to open the **Firmware Package** screen where you can upload firmware.

5.2.2 System Status Screen

Figure 85 Dashboard > System Status (Example)



This table describes the fields in the above screen.

Table 17 Dashboard > System Status

LABEL	DESCRIPTION
Boot Status	This field displays details about the Zyxel Device's startup state. **OK** - The Zyxel Device started up successfully. **Firmware update OK** - A firmware update was successful. **Problematic configuration after firmware update** - The application of the configuration failed after a firmware upgrade. **System default configuration** - The Zyxel Device successfully applied the system default configuration. This occurs when the Zyxel Device starts for the first time or you intentionally reset the Zyxel Device to the system default settings. **Fallback to lastgood configuration** - The Zyxel Device was unable to apply the startup-config.conf configuration file and fell back to the lastgood.conf configuration file. **Fallback to system default configuration** - The Zyxel Device was unable to apply the lastgood.conf configuration file and fell back to the system default configuration file (system-default.conf). **Booting in progress** - The Zyxel Device is still applying the system configuration.
System Uptime	This field displays how long the Zyxel Device has been running since it last restarted or was turned on.
Current Date/Time	This field displays the current date and time in the Zyxel Device. The format is yyyy-mm-dd hh:mm:ss. Click on the link to see the **Date/Time** screen where you can make edits and changes to the date, time and time zone information.

5.2.3 Tx/Rx Statistics

This screen displays a line graph of packet statistics for each physical port.

Figure 86 Dashboard > Tx/Rx Statistics

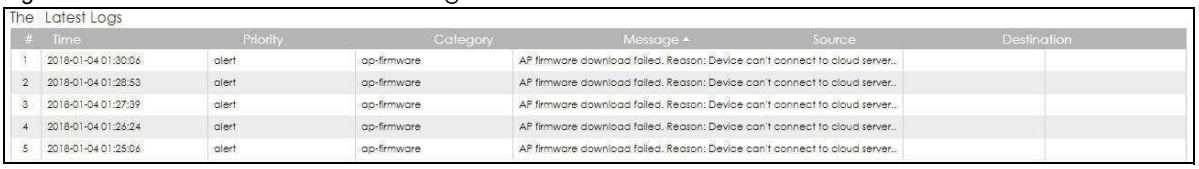
This table describes the fields in the above screen.

Table 18 Dashboard > The Lastest Logs

LABEL	DESCRIPTION
Mbps	The y-axis represents the speed of transmission or reception.
Time	The x-axis shows the time period over which the transmission or reception occurred.

5.2.4 The Latest Logs Screen

Figure 87 Dashboard > The Lastest Logs



This table describes the fields in the above screen.

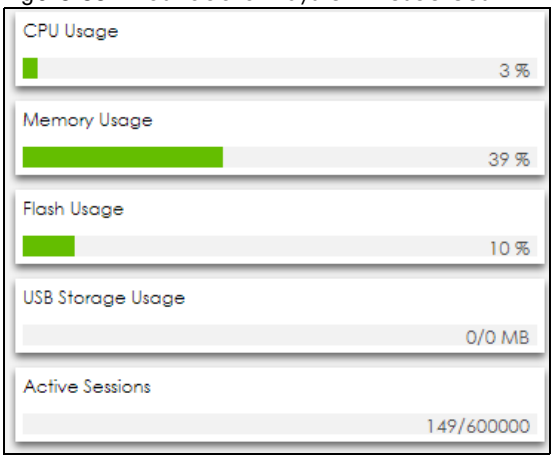
Table 19 Dashboard > The Lastest Logs

LABEL	DESCRIPTION
#	This is the entry's rank in the list of alert logs.
Time	This field displays the date and time the log was created.
Priority	This field displays the severity of the log.
Category	This field displays the type of log generated.
Message	This field displays the actual log message.
Source	This field displays the source address (if any) in the packet that generated the log.
Destination	This field displays the destination address (if any) in the packet that generated the log.

5.2.5 System Resources Screen

Click the bar to see a graphic on that resource.

Figure 88 Dashboard > System Resources



This table describes the fields in the above screen.

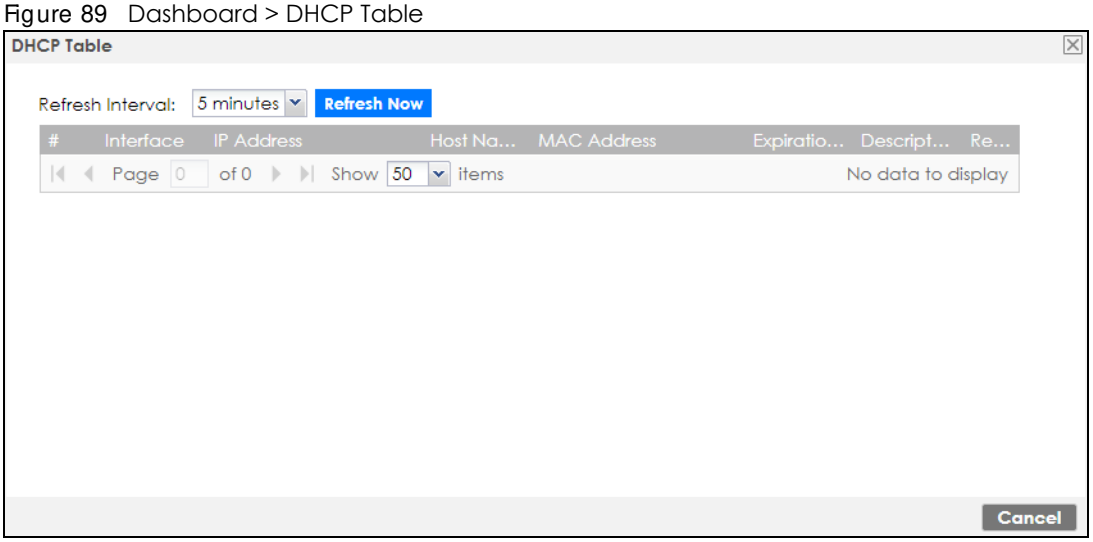
Table 20 .Dashboard > System Resources

LABEL	DESCRIPTION
CPU Usage	This field displays what percentage of the Zyxel Device's processing capability is currently being used. Hover your cursor over this field to display the **Show CPU Usage** icon that takes you to a chart of the Zyxel Device's recent CPU usage.
Memory Usage	This field displays what percentage of the Zyxel Device's RAM is currently being used. Hover your cursor over this field to display the **Show Memory Usage** icon that takes you to a chart of the Zyxel Device's recent memory usage.
Flash Usage	This field displays what percentage of the Zyxel Device's onboard flash memory is currently being used.
USB Storage Usage	This field shows how much storage in the USB device connected to the Zyxel Device is in use.
Active Sessions	This field shows how many sessions, established and non-established, that pass through/from/to/within the ZyWALL. Hover your cursor over this field to display icons. Click the **Detail** icon to go to the **Session Monitor** screen to see details about the active sessions. Click the **Show Active Sessions** icon to display a chart of Zyxel Device's recent session usage.

5.2.6 DHCP Table Screen

Click on the number to look at the IP addresses currently assigned to DHCP clients and the IP addresses reserved for specific MAC addresses. The following screen will show.

Figure 89 Dashboard > DHCP Table



This table describes the fields in the above screen.

Table 21 Dashboard > DHCP Table

LABEL	DESCRIPTION
Refresh Interval	Select how often you want this window to be updated automatically.
Refresh Now	Click this to update the information in the window right away.
#	This field is a sequential value, and it is not associated with a specific entry.
Interface	This field identifies the interface that assigned an IP address to a DHCP client.

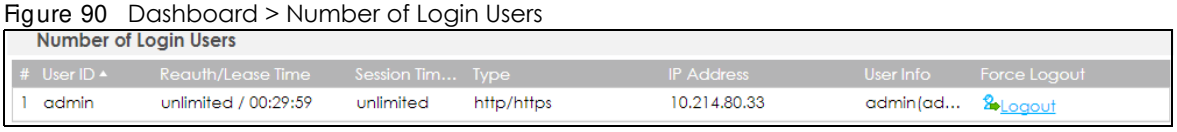
Table 21 Dashboard > DHCP Table (continued)

LABEL	DESCRIPTION
IP Address	This field displays the IP address currently assigned to a DHCP client or reserved for a specific MAC address. Click the column's heading cell to sort the table entries by IP address. Click the heading cell again to reverse the sort order.
Host Name	This field displays the name used to identify this device on the network (the computer name). The Zyxel Device learns these from the DHCP client requests. "None" shows here for a static DHCP entry.
MAC Address	This field displays the MAC address to which the IP address is currently assigned or for which the IP address is reserved. Click the column's heading cell to sort the table entries by MAC address. Click the heading cell again to reverse the sort order.
Expiration Time	This is the period of time DHCP-assigned addresses is used.
Description	For a static DHCP entry, the host name or the description you configured shows here. This field is blank for dynamic DHCP entries.
Reserve	If this field is selected, this entry is a static DHCP entry. The IP address is reserved for the MAC address. If this field is clear, this entry is a dynamic DHCP entry. The IP address is assigned to a DHCP client. To create a static DHCP entry using an existing dynamic DHCP entry, select this field, and then click **Apply**. To remove a static DHCP entry, clear this field, and then click **Apply**.

5.2.7 Number of Login Users Screen

Click the Number of Login Users link to see the following screen.

Figure 90 Dashboard > Number of Login Users



This table describes the fields in the above screen.

Table 22 Dashboard > Number of Login Users

LABEL	DESCRIPTION
#	This field is a sequential value and is not associated with any entry.
User ID	This field displays the user name of each user who is currently logged in to the Zyxel Device.
Reauth/Lease Time	This field displays the amount of reauthentication time remaining and the amount of lease time remaining for each user.
Session Timeout	This field displays the total account of time the account (authenticated by an external server) can use to log into the UAG or access the Internet through the Zyxel Device. This shows unlimited for an administrator account.
Type	This field displays the way the user logged in to the Zyxel Device.
IP address	This field displays the IP address of the computer used to log in to the Zyxel Device.

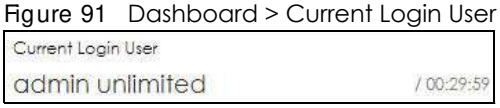
Table 22 Dashboard > Number of Login Users

LABEL	DESCRIPTION
User Info	This field displays the types of user accounts the Zyxel Device uses. If the user type is **ext-user** (external user), this field will show its external-group information when you move your mouse over it. If the external user matches two external-group objects, both external-group object names will be shown.
Force Logout	Click this icon to end a user's session.

5.2.8 Current Login User

This field displays the user name used to log in to the current session, the amount of reauthentication time remaining, and the amount of lease time remaining.

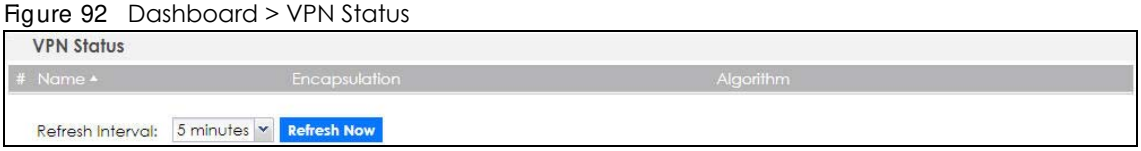
Figure 91 Dashboard > Current Login User



5.2.9 VPN Status

Click on the link to look at the VPN tunnels that are currently established.

Figure 92 Dashboard > VPN Status



This table describes the fields in the above screen.

Table 23 Dashboard > VPN Status

LABEL	DESCRIPTION
#	This field is a sequential value and is not associated with any entry.
Name	This field displays the name of the VPN tunnel.
Encapsulation	This field displays the type of encapsulation the VPN tunnel uses.
Algorithm	This field displays the hash algorithm that the VPN tunnel uses to authenticate packet data.
Refresh Interval	Select how often you want this window to be updated automatically.
Refresh Now	Click this to update the information in the window right away.

5.2.10 SSL VPN Status

The first number is the actual number of VPN tunnels up and the second number is the maximum number of SSL VPN tunnels allowed.

Figure 93 Dashboard > SSL VPN Status

5.3 The Advanced Threat Protection Screen

Use the **Advanced Threat Protection** screen to check security status information about the Zyxel Device.

Figure 94 Dashboard > Advanced Threat Protection

This screen gives the following information:

- The number of scanned traffic
- The number of the scanned connections for botnet filtering
- The number of the scanned files for sandboxing
- The number of the scanned connections for IDP
- The number of the scanned emails for email security
- The number of the scanned sites for content filtering
- Top 5 applications that are used the most
- Top 5 URLs that are detected the most
- Botnet filtering reports
- Sandboxing reports
- Threat statistics

Click the **Refresh** icon to update the information in the window right away.

PART II
Technical Reference

CHAPTER 6
Monitor

6.1 Overview

Use the **Monitor** screens to check status and statistics information.

6.1.1 What You Can Do in this Chapter

Use the **Monitor** screens for the following.

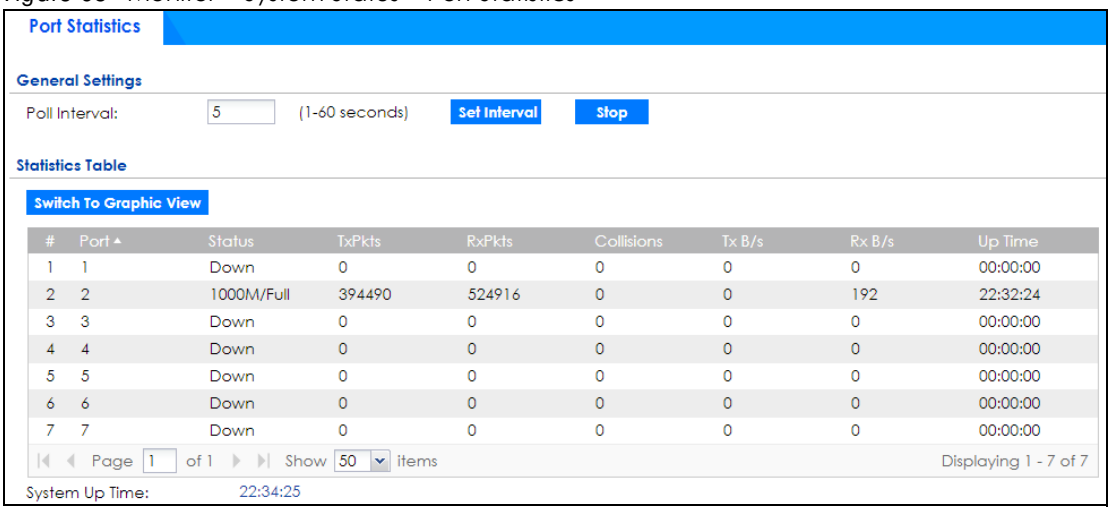
- Use the **System Status > Port Statistics** screen (see Section 6.2 on page 116) to look at packet statistics for each physical port.
- Use the **System Status > Port Statistics > Graph View** screen (see Section 6.2 on page 116) to look at a line graph of packet statistics for each physical port.
- Use the **System Status > Interface Status** screen (Section 6.3 on page 118) to see all of the Zyxel Device's interfaces and their packet statistics.
- Use the **System Status > Traffic Statistics** screen (see Section 6.4 on page 121) to start or stop data collection and view statistics.
- Use the **System Status > Session Monitor** screen (see Section 6.5 on page 124) to view sessions by user or service.
- Use the **System Status > IGMP Statistics** screen (see Section 6.7 on page 127) to view multicasting details.
- Use the **System Status > DDNS Status** screen (see Section 6.8 on page 128) to view the status of the Zyxel Device's DDNS domain names.
- Use the **System Status > IP/MAC Binding** screen (Section 6.9 on page 128) to view a list of devices that have received an IP address from Zyxel Device interfaces with IP/MAC binding enabled.
- Use the **System Status > Login Users** screen (Section 6.6 on page 126) to look at a list of the users currently logged into the Zyxel Device.
- Use the **System Status > Cellular Status** screen (Section 6.10 on page 129) to check your mobile broadband connection status.
- Use the **System Status > UPnP Port Status** screen (see Section 6.11 on page 133) to look at a list of the NAT port mapping rules that UPnP creates on the Zyxel Device.
- Use the **System Status > USB Storage** screen (Section 6.12 on page 134) to view information about a connected USB storage device.
- Use the **System Status > Ethernet Neighbor** screen (Section 6.13 on page 135) to view and manage the Zyxel Device's neighboring devices via Layer Link Discovery Protocol (LLDP).
- Use the **System Status > FQDN Object** screen (Section 6.14 on page 136) to display fully qualified domain name (FQDN) object cache lists used in DNS queries.
- Use the **Wireless > AP Information > AP List** screen (Section 6.15 on page 138) to display which APs are currently connected to the Zyxel Device.
- Use the **Wireless > AP Information > Radio List** screen (Section 6.16 on page 145) to display statistics about the wireless radio transmitters in each of the APs connected to the Zyxel Device.

- Use the **Wireless** > **AP Information** > **Top N APs** screen (Section 6.17 on page 148) to view managed APs with the most wireless traffic usage and most associated wireless stations.
- Use the **Wireless** > **AP Information** > **Single AP** screen (Section 6.18 on page 150) to view APs wireless traffic usage and associated wireless stations for a managed AP.
- Use the **Wireless** > **ZyMesh** screen (Section 6.19 on page 151) to display statistics about the ZyMesh wireless connections between the managed APs.
- Use the **Wireless** > **SSID Info** screen (Section 6.20 on page 152) to display the number of wireless clients that are currently connected to an SSID and the SSID's security mode.
- Use the **Wireless** > **Station Info** > **Station List** screen (Section 6.22 on page 153) to view information on connected wireless stations.
- Use the **Wireless** > **Station Info** > **Top N Stations** screen (Section 6.22 on page 153) to view wireless stations with the most wireless traffic usage.
- Use the **Wireless** > **Station Info** > **Single Station** screen (Section 6.23 on page 154) to view wireless traffic usage for an associated wireless station.
- Use the **Wireless** > **Detected Device** screen (Section 6.22 on page 153) to view information about suspected rogue APs.
- Use the **VPN Monitor** > **IPSec** screen (Section 6.25 on page 156) to display and manage active IPSec SAs.
- Use the **VPN Monitor** > **SSL** screen (see Section 6.26 on page 158) to list the users currently logged into the VPN SSL client portal. You can also log out individual users and delete related session information.
- Use the **VPN Monitor** > **L2TP over IPSec** screen (see Section 6.27 on page 158) to display and manage the Zyxel Device's connected L2TP VPN sessions.
- Use the **Security Statistics** > **Content Filter** screen (Section 6.28 on page 159) to start or stop data collection and view content filter statistics.
- Use the **Security Statistics** > **App Patrol** screen (see Section 6.29 on page 161) to start or stop data collection and view virus statistics
- Use the **Security Statistics** > **Anti-Malware** screen (see Section 6.30 on page 162) to start or stop data collection and view virus statistics.
- Use the **Security Statistics** > **IDP** screen (Section 6.31 on page 164) to start or stop data collection and view IDP statistics.
- Use the **Security Statistics** > **Email Security** > **Summary** screen (Section 6.32 on page 166) to start or stop data collection and view spam statistics.
- Use the **Security Statistics** > **Email Security** > **Status** screen (Section 6.32.2 on page 168) to see how many mail sessions the Zyxel Device is currently checking and DNSBL statistics.
- Use the **Security Statistics** > **Botnet Filter** screen (Section 6.33 on page 170) to start or stop data collection and view anti-botnet statistics.
- Use the **Security Statistics** > **Sandboxing** screen (Section 6.34 on page 171) to start or stop data collection and view sandboxing statistics.
- Use the **Security Statistics** > **SSL Inspection** screen (Section 6.35 on page 172) to see a report on SSL Inspection and a certificate cache list.
- Use the **Log** > **View Log** screen (see Section 6.36.1 on page 174) to view the Zyxel Device's current log messages. You can change the way the log is displayed, you can email the log, and you can also clear the log in this screen.
- Use the **Log** > **View AP Log** screen (see Section 6.36.2 on page 176) to view the Zyxel Device's current wireless AP log messages.

6.2 The Port Statistics Screen

Use this screen to look at packet statistics for each Gigabit Ethernet port. To access this screen, click Monitor > System Status > Port Statistics.

Figure 95 Monitor > System Status > Port Statistics



The following table describes the labels in this screen.

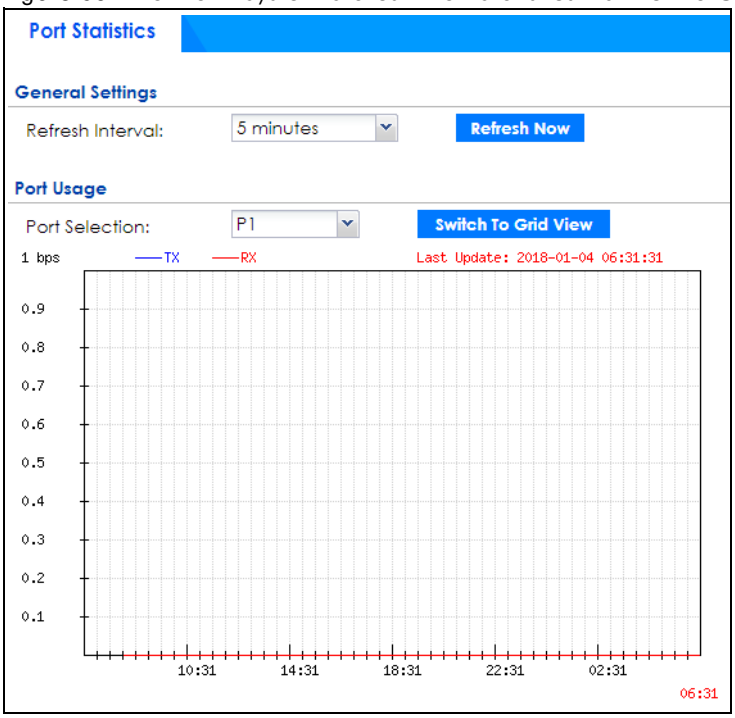
Table 24 Monitor > System Status > Port Statistics

LABEL	DESCRIPTION
Poll Interval	Enter how often you want this window to be updated automatically, and click Set Interval.
Set Interval	Click this to set the Poll Interval the screen uses.
Stop	Click this to stop the window from updating automatically. You can start it again by setting the Poll Interval and clicking Set Interval.
Switch to Graphic View	Click this to display the port statistics as a line graph.
#	This field is a sequential value, and it is not associated with a specific port.
Port	This field displays the physical port number.
Status	This field displays the current status of the physical port. Down - The physical port is not connected. Speed / Duplex - The physical port is connected. This field displays the port speed and duplex setting (Full or Half).
TxPkts	This field displays the number of packets transmitted from the Zyxel Device on the physical port since it was last connected.
RxPkts	This field displays the number of packets received by the Zyxel Device on the physical port since it was last connected.
Collisions	This field displays the number of collisions on the physical port since it was last connected.
Tx B/s	This field displays the transmission speed, in bytes per second, on the physical port in the one-second interval before the screen updated.
Rx B/s	This field displays the reception speed, in bytes per second, on the physical port in the one-second interval before the screen updated.
Up Time	This field displays how long the physical port has been connected.
System Up Time	This field displays how long the Zyxel Device has been running since it last restarted or was turned on.

6.2.1 The Port Statistics Graph Screen

Use this screen to look at a line graph of packet statistics for each physical port. To access this screen, click **Port Statistics** in the **Status** screen and then the **Switch to Graphic View Button**.

Figure 96 Monitor > System Status > Port Statistics > Switch to Graphic View



The following table describes the labels in this screen.

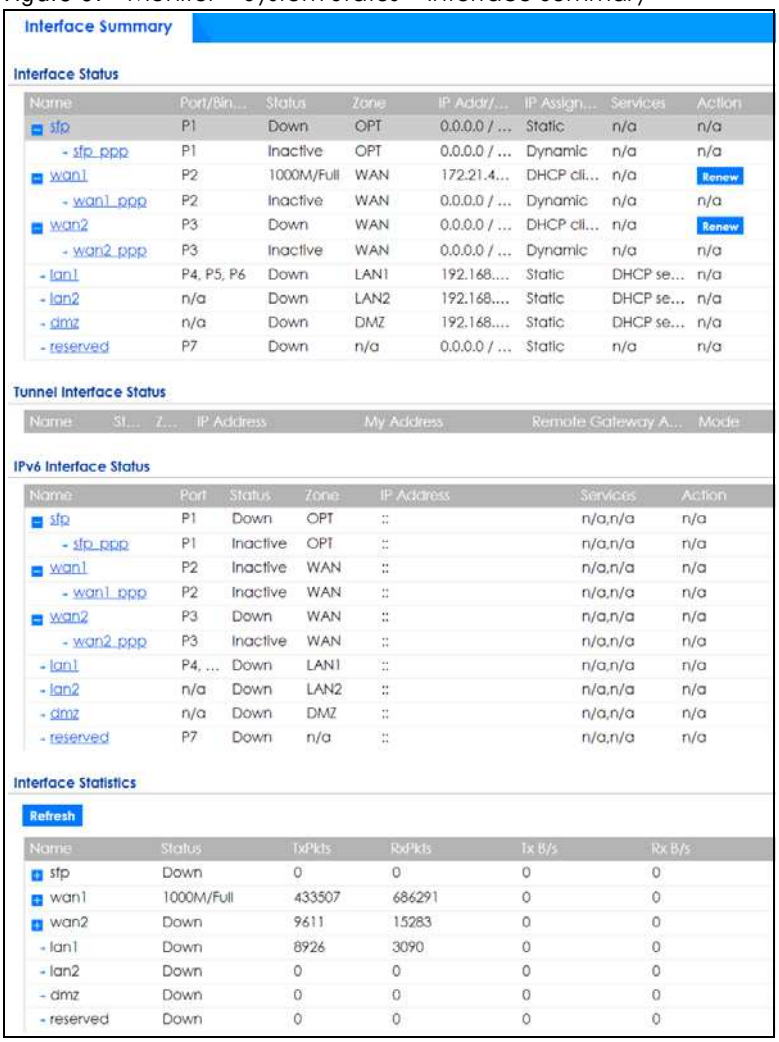
Table 25 Monitor > System Status > Port Statistics > Switch to Graphic View

LABEL	DESCRIPTION
Refresh Interval	Enter how often you want this window to be automatically updated.
Refresh Now	Click this to update the information in the window right away.
Port Selection	Select the number of the physical port for which you want to display graphics.
Switch to Grid View	Click this to display the port statistics as a table.
bps	The y-axis represents the speed of transmission or reception.
time	The x-axis shows the time period over which the transmission or reception occurred
TX	This line represents traffic transmitted from the Zyxel Device on the physical port since it was last connected.
RX	This line represents the traffic received by the Zyxel Device on the physical port since it was last connected.
Last Update	This field displays the date and time the information in the window was last updated.

6.3 Interface Status Screen

This screen lists all of the Zyxel Device's interfaces and gives packet statistics for them. Click **Monitor** > **System Status** > **Interface Summary** to access this screen.

Figure 97 Monitor > System Status > Interface Summary



Each field is described in the following table.

Table 26 Monitor > System Status > Interface Summary

LABEL	DESCRIPTION
Interface Status If an Ethernet interface does not have any physical ports associated with it, its entry is displayed in light gray text.	
Name	This field displays the name of each interface. If there is an **Expand** icon (plus-sign) next to the name, click this to look at the status of virtual interfaces on top of this interface.
Port/Binding	This field displays the physical port number.

Table 26 Monitor > System Status > Interface Summary

LABEL	DESCRIPTION
Status	This field displays the current status of each interface. The possible values depend on what type of interface it is. For Ethernet interfaces: • **Inactive** - The Ethernet interface is disabled. • **Down** - The Ethernet interface does not have any physical ports associated with it or the Ethernet interface is enabled but not connected. • **Speed / Duplex** - The Ethernet interface is enabled and connected. This field displays the port speed and duplex setting (**Full** or **Half**). For cellular (mobile broadband) interfaces, see Section 6.12 on page 134 the Web Help for the status that can appear. For the auxiliary interface: • **Inactive** - The auxiliary interface is disabled. • **Connected** - The auxiliary interface is enabled and connected. • **Disconnected** - The auxiliary interface is not connected. For virtual interfaces, this field always displays **Up**. If the virtual interface is disabled, it does not appear in the list. For VLAN and bridge interfaces, this field always displays **Up**. If the VLAN or bridge interface is disabled, it does not appear in the list. For PPP interfaces: • **Connected** - The PPP interface is connected. • **Disconnected** - The PPP interface is not connected. If the PPP interface is disabled, it does not appear in the list. For WLAN interfaces: • **Up** - The WLAN interface is enabled. • **Down** - The WLAN interface is disabled.
Zone	This field displays the zone to which the interface is assigned.
IP Addr/Netmask	This field displays the current IP address and subnet mask assigned to the interface. If the IP address and subnet mask are 0.0.0.0, the interface is disabled or did not receive an IP address and subnet mask via DHCP. If this interface is a member of an active virtual router, this field displays the IP address it is currently using. This is either the static IP address of the interface (if it is the master) or the management IP address (if it is a backup).
IP Assignment	This field displays how the interface gets its IP address. • **Static** - This interface has a static IP address. • **DHCP Client** - This interface gets its IP address from a DHCP server.
Services	This field lists which services the interface provides to the network. Examples include **DHCP relay**, **DHCP server**, **DDNS**, **RIP**, and **OSPF**. This field displays **n/a** if the interface does not provide any services to the network.
Action	Use this field to get or to update the IP address for the interface. Click **Renew** to send a new DHCP request to a DHCP server. Click **Connect** to try to connect a PPPoE/PPTP interface. If the interface cannot use one of these ways to get or to update its IP address, this field displays **n/a**.
Tunnel Interface Status This displays the details of the Zyxel Device's configured tunnel interfaces.	
Name	This field displays the name of the interface.
Status	The activate (light bulb) icon is lit when the entry is active and dimmed when the entry is inactive.

Table 26 Monitor > System Status > Interface Summary

LABEL	DESCRIPTION
Zone	This field displays the zone to which the interface is assigned.
IP Address	This is the IP address of the interface. If the interface is active (and connected), the Zyxel Device tunnels local traffic sent to this IP address to the **Remote Gateway Address**.
My Address	This is the interface or IP address uses to identify itself to the remote gateway. The Zyxel Device uses this as the source for the packets it tunnels to the remote gateway.
Remote Gateway Address	This is the IP address or domain name of the remote gateway to which this interface tunnels traffic.
Mode	This field displays the tunnel mode that you are using.
IPv6 Interface Status If an Ethernet interface does not have any physical ports associated with it, its entry is displayed in light gray text.	
Name	This field displays the name of each interface. If there is an **Expand** icon (plus-sign) next to the name, click this to look at the status of virtual interfaces on top of this interface.
Port	This field displays the physical port number.
Status	This field displays the current status of each interface. The possible values depend on what type of interface it is. For Ethernet interfaces: • **Inactive** - The Ethernet interface is disabled. • **Down** - The Ethernet interface does not have any physical ports associated with it or the Ethernet interface is enabled but not connected. • **Speed / Duplex** - The Ethernet interface is enabled and connected. This field displays the port speed and duplex setting (**Full** or **Half**). For cellular (mobile broadband) interfaces, see Section 6.12 on page 134 the Web Help for the status that can appear. For the auxiliary interface: • **Inactive** - The auxiliary interface is disabled. • **Connected** - The auxiliary interface is enabled and connected. • **Disconnected** - The auxiliary interface is not connected. For virtual interfaces, this field always displays **Up**. If the virtual interface is disabled, it does not appear in the list. For VLAN and bridge interfaces, this field always displays **Up**. If the VLAN or bridge interface is disabled, it does not appear in the list. For PPP interfaces: • **Connected** - The PPP interface is connected. • **Disconnected** - The PPP interface is not connected. If the PPP interface is disabled, it does not appear in the list. For WLAN interfaces: • **Up** - The WLAN interface is enabled. • **Down** - The WLAN interface is disabled.
Zone	This field displays the zone to which the interface is assigned.
IP Address	This field displays the current IPv6 address assigned to the interface. If the IPv6 address is ::, the interface is disabled or did not receive an IPv6 address via DHCP. If this interface is a member of an active virtual router, this field displays the IPv6 address it is currently using. This is either the static IPv6 address of the interface (if it is the master) or the management IPv6 address (if it is a backup).

Table 26 Monitor > System Status > Interface Summary

LABEL	DESCRIPTION
Services	This field lists which services the interface provides to the network. Examples include **DHCP relay**, **DHCP server**, **DDNS**, **RIP**, and **OSPF**. This field displays **n/a** if the interface does not provide any services to the network.
Action	Use this field to get or to update the IP address for the interface. Click **Renew** to send a new DHCP request to a DHCP server. Click **Connect** to try to connect a PPPoE/PPTP interface. If the interface cannot use one of these ways to get or to update its IP address, this field displays **n/a**.
Interface Statistics This table provides packet statistics for each interface.	
Refresh	Click this button to update the information in the screen.
Name	This field displays the name of each interface. If there is a **Expand** icon (plus-sign) next to the name, click this to look at the statistics for virtual interfaces on top of this interface.
Status	This field displays the current status of the interface. • **Down** - The interface is not connected. • **Speed** / **Duplex** - The interface is connected. This field displays the port speed and duplex setting (**Full** or **Half**). This field displays **Connected** and the accumulated connection time (hh:mm:ss) when the PPP interface is connected.
TxPkts	This field displays the number of packets transmitted from the Zyxel Device on the interface since it was last connected.
RxPkts	This field displays the number of packets received by the Zyxel Device on the interface since it was last connected.
Tx B/s	This field displays the transmission speed, in bytes per second, on the interface in the one-second interval before the screen updated.
Rx B/s	This field displays the reception speed, in bytes per second, on the interface in the one-second interval before the screen updated.

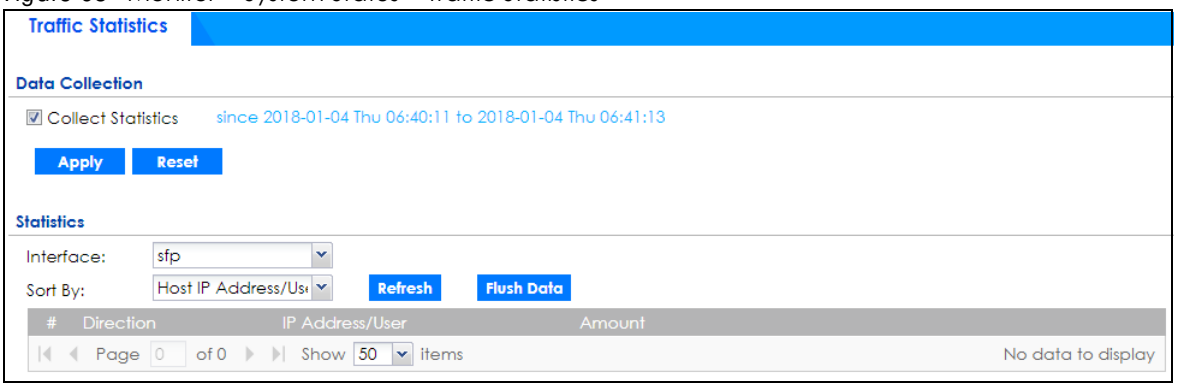
6.4 The Traffic Statistics Screen

Click **Monitor** > **System Status** > **Traffic Statistics** to display the **Traffic Statistics** screen. This screen provides basic information about the following for example:

- Most-visited Web sites and the number of times each one was visited. This count may not be accurate in some cases because the Zyxel Device counts HTTP GET packets. Please see Table 27 on page 122 for more information.
- Most-used protocols or service ports and the amount of traffic on each one
- LAN IP with heaviest traffic and how much traffic has been sent to and from each one

You use the **Traffic Statistics** screen to tell the Zyxel Device when to start and when to stop collecting information for these reports. You cannot schedule data collection; you have to start and stop it manually in the **Traffic Statistics** screen.

Figure 98 Monitor > System Status > Traffic Statistics



There is a limit on the number of records shown in the report. Please see Table 28 on page 123 for more information. The following table describes the labels in this screen.

Table 27 Monitor > System Status > Traffic Statistics

LABEL	DESCRIPTION
Data Collection	
Collect Statistics	Select this to have the Zyxel Device collect data for the report. If the Zyxel Device has already been collecting data, the collection period displays to the right. The progress is not tracked here real-time, but you can click the **Refresh** button to update it.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.
Statistics	
Interface	Select the interface from which to collect information. You can collect information from Ethernet, VLAN, bridge and PPPoE/PPTP interfaces.
Sort By	Select the type of report to display. Choices are: • **Host IP Address/ User** - displays the IP addresses or users with the most traffic and how much traffic has been sent to and from each one. • **Service/ Port** - displays the most-used protocols or service ports and the amount of traffic for each one. • **Web Site Hits** - displays the most-visited Web sites and how many times each one has been visited. • **Country** - displays the countries with the most traffic and the amount of traffic for each one. Each type of report has different information in the report (below).
Refresh	Click this button to update the report display.
Flush Data	Click this button to discard all of the screen's statistics and update the report display.
	These fields are available when the **Traffic Type** is **Host IP Address/ User**.
#	This field is the rank of each record. The IP addresses and users are sorted by the amount of traffic.
Direction	This field indicates whether the IP address or user is sending or receiving traffic. • **Ingress**- traffic is coming from the IP address or user to the Zyxel Device. • **Egress** - traffic is going from the Zyxel Device to the IP address or user.
IP Address/ User	This field displays the IP address or user in this record. The maximum number of IP addresses or users in this report is indicated in Table 28 on page 123.
Amount	This field displays how much traffic was sent or received from the indicated IP address or user. If the **Direction** is **Ingress**, a red bar is displayed; if the **Direction** is **Egress**, a blue bar is displayed. The unit of measure is bytes, Kbytes, Mbytes or Gbytes, depending on the amount of traffic for the particular IP address or user. The count starts over at zero if the number of bytes passes the byte count limit. See Table 28 on page 123.

Table 27 Monitor > System Status > Traffic Statistics (continued)

LABEL	DESCRIPTION
	These fields are available when the **Traffic Type** is **Service/Port**.
#	This field is the rank of each record. The protocols and service ports are sorted by the amount of traffic.
Service/Port	This field displays the service and port in this record. The maximum number of services and service ports in this report is indicated in Table 28 on page 123.
Protocol	This field indicates what protocol the service was using.
Direction	This field indicates whether the indicated protocol or service port is sending or receiving traffic. • **Ingress** - traffic is coming into the Zyxel Devicethrough the interface • **Egress** - traffic is going out from the Zyxel Device through the interface
Amount	This field displays how much traffic was sent or received from the indicated service / port. If the **Direction** is **Ingress**, a red bar is displayed; if the **Direction** is **Egress**, a blue bar is displayed. The unit of measure is bytes, Kbytes, Mbytes, Gbytes, or Tbytes, depending on the amount of traffic for the particular protocol or service port. The count starts over at zero if the number of bytes passes the byte count limit. See Table 28 on page 123.
	These fields are available when the **Traffic Type** is **Web Site Hits**.
#	This field is the rank of each record. The domain names are sorted by the number of hits.
Web Site	This field displays the domain names most often visited. The Zyxel Device counts each page viewed on a Web site as another hit. The maximum number of domain names in this report is indicated in Table 28 on page 123.
Hits	This field displays how many hits the Web site received. The Zyxel Device counts hits by counting HTTP GET packets. Many Web sites have HTTP GET references to other Web sites, and the Zyxel Device counts these as hits too. The count starts over at zero if the number of hits passes the hit count limit. See Table 28 on page 123.
	These fields are available when the **Traffic Type** is **Country**.
#	This field is the rank of each record. The country name is sorted by the amount of traffic.
Direction	This field indicates whether the indicated protocol or service port is sending or receiving traffic. • **Ingress** - traffic is coming into the Zyxel Devicethrough the interface • **Egress** - traffic is going out from the Zyxel Device through the interface
Country Name	This field displays the name of the country.
Country	This field displays the country code.
Amount	This field displays how much traffic was sent or received from the indicated country. If the **Direction** is **Ingress**, a red bar is displayed; if the **Direction** is **Egress**, a blue bar is displayed. The unit of measure is bytes, Kbytes, Mbytes, Gbytes, or Tbytes, depending on the amount of traffic for the particular protocol or service port. The count starts over at zero if the number of bytes passes the byte count limit. See Table 28 on page 123. • **Ingress** - traffic is coming into the Zyxel Device from the country. • **Egress** - traffic is going from the Zyxel Device to the country.

The following table displays the maximum number of records shown in the report, the byte count limit, and the hit count limit.

Table 28 Maximum Values for Reports

LABEL	DESCRIPTION
Maximum Number of Records	20
Byte Count Limit	2^{64} bytes; this is just less than 17 million terabytes.
Hit Count Limit	2^{64} hits; this is over 1.8×10^{19} hits.

6.5 The Session Monitor Screen

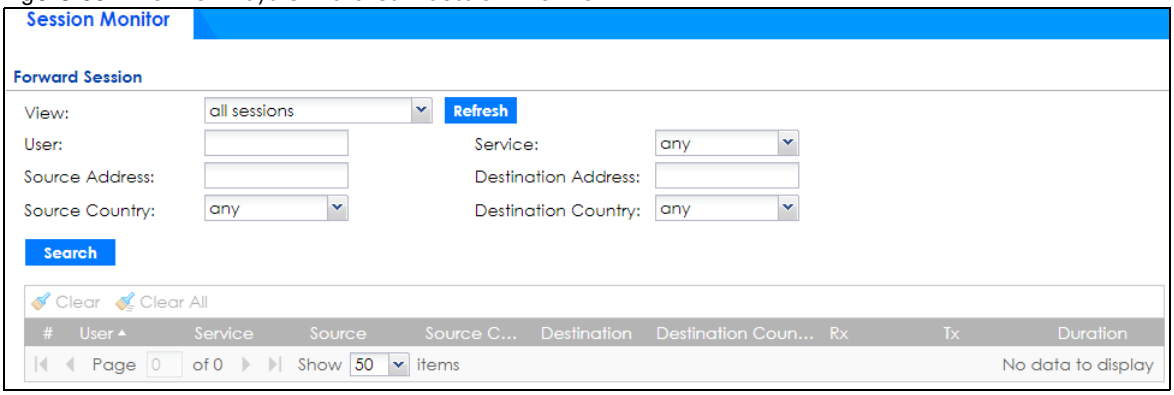
The **Session Monitor** screen displays all established sessions that pass through the Zyxel Device for debugging or statistical analysis. It is not possible to manage sessions in this screen. The following information is displayed.

- User who started the session
- Protocol or service port used
- Source address
- Destination address
- Number of bytes received (so far)
- Number of bytes transmitted (so far)
- Duration (so far)

You can look at all established sessions that passed through the Zyxel Device by user, service, source IP address, or destination IP address. You can also filter the information by user, protocol / service or service group, source address, and/or destination address and view it by user.

Click **Monitor** > **System Status** > **Session Monitor** to display the following screen.

Figure 99 Monitor > System Status > Session Monitor



The following table describes the labels in this screen.

Table 29 Monitor > System Status > Session Monitor

LABEL	DESCRIPTION
View	Select how you want the established sessions that passed through the Zyxel Device to be displayed. Choices are: • **sessions by users** - display all active sessions grouped by user • **sessions by services** - display all active sessions grouped by service or protocol • **sessions by source IP** - display all active sessions grouped by source IP address • **session by source country** - display all active sessions grouped by where the traffic is coming from by country • **sessions by destination IP** - display all active sessions grouped by destination IP address • **sessions by destination country** - display all active sessions grouped by where the traffic is going to by country • **all sessions** - filter the active sessions by the **User**, **Service**, **Source Address**, and **Destination Address**, and display each session individually (sorted by user).
Refresh	Click this button to update the information on the screen. The screen also refreshes automatically when you open and close the screen.

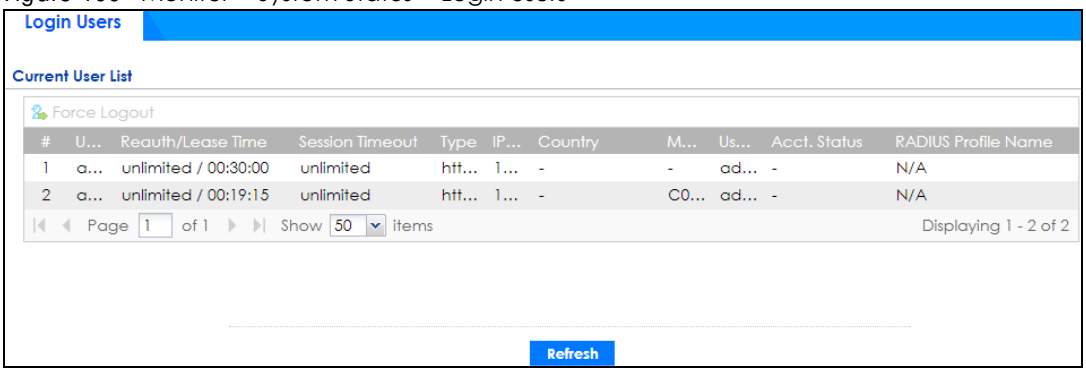
Table 29 Monitor > System Status > Session Monitor (continued)

LABEL	DESCRIPTION
	The **User**, **Service**, **Source Address**, **Destination Address**, **Source Country** and **Destination Country** fields display if you view all sessions. Select your desired filter criteria and click the Refresh button to filter the list of sessions.
User	This field displays when **View** is set to **all sessions**. Type the user whose sessions you want to view. It is not possible to type part of the user name or use wildcards in this field; you must enter the whole user name.
Service	This field displays when **View** is set to **all sessions**. Select the service or service group whose sessions you want to view. The Zyxel Device identifies the service by comparing the protocol and destination port of each packet to the protocol and port of each services that is defined.
Source Address	This field displays when **View** is set to **all sessions**. Type the source IP address whose sessions you want to view. You cannot include the source port.
Source Country	This field displays when **View** is set to **all sessions**. Select the country where the traffic is coming from.
Destination Address	This field displays when **View** is set to **all sessions**. Type the destination IP address whose sessions you want to view. You cannot include the destination port.
Destination Country	This field displays when **View** is set to **all sessions**. Select the country where the traffic is going to.
Search	Click this to display all sessions in the table below according to the criteria you defined above.
Clear Clear All	Administrators can use these buttons to forcibly terminate selected TCP/UDP connections. Select one or multiple connections and then click **Clear**; click **Clear All** to terminate all connections displayed. Cleared sessions display in the **Log** > **View Log** screen.
#	This field is the rank of each record. The names are sorted by the name of user in active session. You can use the pull down menu on the right to choose sorting method.
User	This field displays the user in each active session. If you are looking at the **sessions by users** (or **all sessions**) report, click + or - to display or hide details about a user's sessions.
Service	This field displays the protocol used in each active session. If you are looking at the **sessions by services** report, click + or - to display or hide details about a protocol's sessions.
Source	This field displays the source IP address and port in each active session. If you are looking at the **sessions by source IP** report, click + or - to display or hide details about a source IP address's sessions.
Source Country	This field displays the source country in each active session.
Destination	This field displays the destination IP address and port in each active session. If you are looking at the **sessions by destination IP** report, click + or - to display or hide details about a destination IP address's sessions.
Destination Country	This field displays the destination country in each active session.
Rx	This field displays the amount of information received by the source in the active session.
Tx	This field displays the amount of information transmitted by the source in the active session.
Duration	This field displays the length of the active session in seconds.

6.6 The Login Users Screen

Use this screen to look at a list of the users currently logged into the Zyxel Device. To access this screen, click **Monitor** > **System Status** > **Login Users**.

Figure 100 Monitor > System Status > Login Users



The following table describes the labels in this screen.

Table 30 Monitor > System Status > Login Users

LABEL	DESCRIPTION
Force Logout	Select a user ID and click this icon to end a user's session.
#	This field is a sequential value and is not associated with any entry.
User ID	This field displays the user name of each user who is currently logged in to the Zyxel Device.
Reauth/Lease Time	This field displays the amount of reauthentication time remaining and the amount of lease time remaining for each user.
Session Timeout	This field displays the total account of time the account (authenticated by an external server) can use to log into the Zyxel Device or access the Internet through the Zyxel Device. This shows **unlimited** for an administrator account.
Type	This field displays the way the user logged in to the Zyxel Device.
IP Address	This field displays the IP address of the computer used to log in to the Zyxel Device.
Country	The Internet Assigned Numbers Authority (IANA) has reserved the following blocks of **Private IP** addresses specifically for private networks: • 10.0.0.0-10.255.255.255 • 172.16.0.0-172.31.255.255 • 192.168.0.0-192.168.255.255 • 224.0.0.0-239.255.255.255
MAC	This field displays the MAC address of the computer used to log in to the Zyxel Device.
User Info	This field displays the types of user accounts the Zyxel Device uses. If the user type is **ext-user** (external user), this field will show its external-group information when you move your mouse over it. If the external user matches two external-group objects, both external-group object names will be shown.

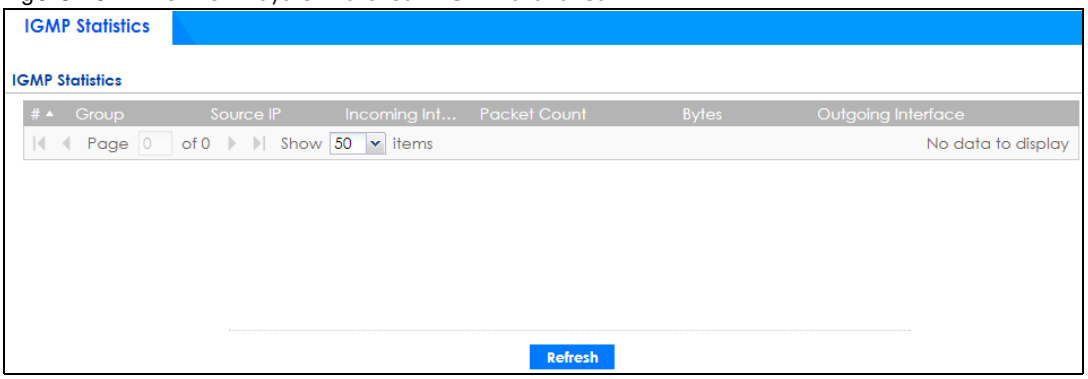
Table 30 Monitor > System Status > Login Users (continued)

LABEL	DESCRIPTION
Acct. Status	For a captive portal login, this field displays the accounting status of the account used to log into the Zyxel Device. **Accounting-on** means accounting is being performed for the user login. **Accounting-off** means accounting has stopped for this user login. A "-" displays if accounting is not enabled for this login.
RADIUS Profile Name	This field displays the name of the RADIUS profile used to authenticate the login through the captive portal. **N/A** displays for logins that do not use the captive portal and RADIUS server authentication.
Refresh	Click this button to update the information in the screen.

6.7 IGMP Statistics

The Internet Group Management Protocol (IGMP) Statistics is used by Zyxel Device IP hosts to inform adjacent router about multicast group memberships. It can also be used for one-to-many networking applications such as online streaming video and gaming, distribution of company newsletters, updating address book of mobile computer users in the field allowing more efficient use of resources when supporting these types of applications. Click **Monitor** > **System Status** > **IGMP Statistics** to open the following screen.

Figure 101 Monitor > System Status > IGMP Statistics



The following table describes the labels in this screen.

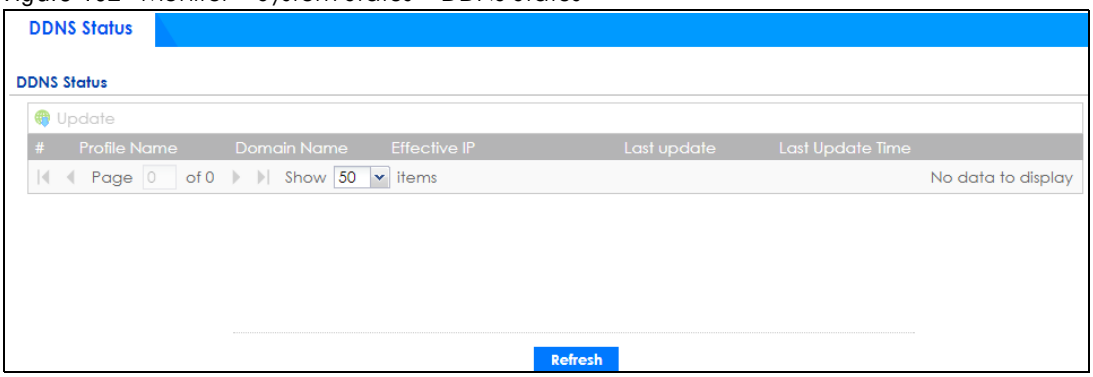
Table 31 Monitor > System Status > IGMP Statistics

LABEL	DESCRIPTION
#	This field is a sequential value, and it is not associated with a specific I GMP Statistics.
Group	This field displays the group of devices in the IGMP.
Source IP	This field displays the host source IP information of the IGMP.
Incoming Interface	This field displays the incoming interface that's connected on the IGMP.
Packet Count	This field displays the packet size of the data being transferred.
Bytes	This field displays the size of the data being transferred in Byes.
Outgoing Interface	This field displays the outgoing interface that's connected on the IGMP.
Refresh	Click this button to update the information in the screen.

6.8 The DDNS Status Screen

The **DDNS Status** screen shows the status of the Zyxel Device's DDNS domain names. Click **Monitor** > **System Status** > **DDNS Status** to open the following screen.

Figure 102 Monitor > System Status > DDNS Status



The following table describes the labels in this screen.

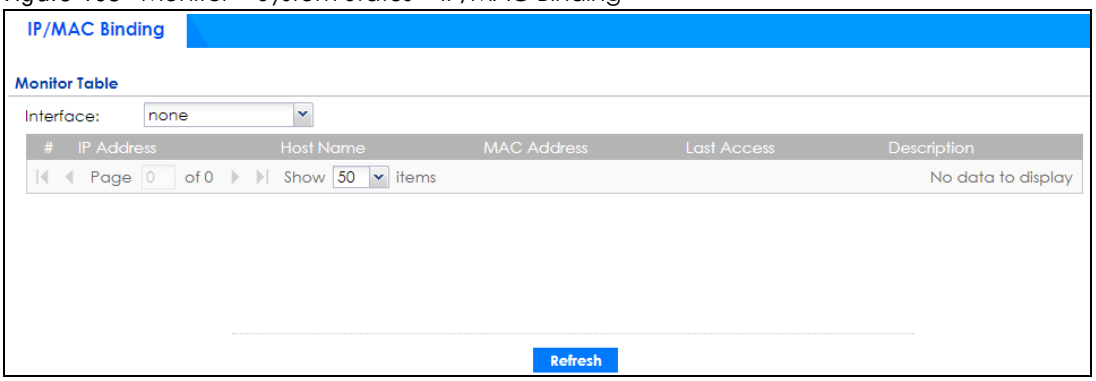
Table 32 Monitor > System Status > DDNS Status

LABEL	DESCRIPTION
Update	Click this to have the Zyxel Device update the profile to the DDNS server. The Zyxel Device attempts to resolve the IP address for the domain name.
#	This field is a sequential value, and it is not associated with a specific DDNS server.
Profile Name	This field displays the descriptive profile name for this entry.
Domain Name	This field displays each domain name the Zyxel Device can route.
Effective IP	This is the (resolved) IP address of the domain name.
Last Update	This shows whether the last attempt to resolve the IP address for the domain name was successful or not. **Updating** means the Zyxel Device is currently attempting to resolve the IP address for the domain name.
Last Update Time	This shows when the last attempt to resolve the IP address for the domain name occurred (in year-month-day hour:minute:second format).
Refresh	Click this button to update the information in the screen.

6.9 IP/MAC Binding

Click **Monitor** > **System Status** > **IP/MAC Binding** to open the **IP/MAC Binding** screen. This screen lists the devices that have received an IP address from Zyxel Device interfaces with IP/MAC binding enabled and have ever established a session with the Zyxel Device. Devices that have never established a session with the Zyxel Device do not display in the list.

Figure 103 Monitor > System Status > IP/MAC Binding



The following table describes the labels in this screen.

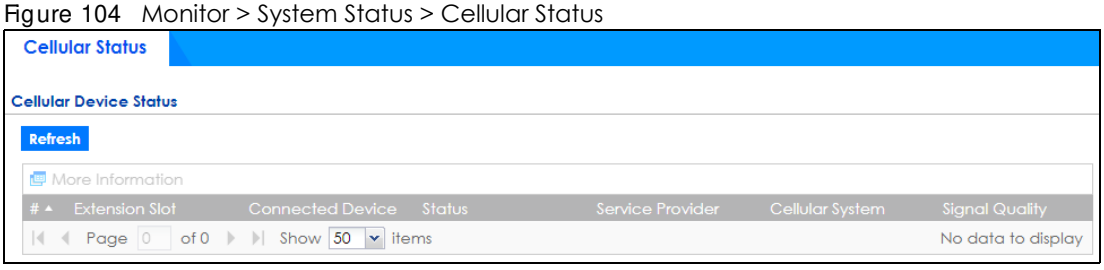
Table 33 Monitor > System Status > IP/MAC Binding

LABEL	DESCRIPTION
Interface	Select a Zyxel Device interface that has IP/MAC binding enabled to show to which devices it has assigned an IP address.
#	This field is a sequential value, and it is not associated with a specific IP/MAC binding entry.
IP Address	This is the IP address that the Zyxel Device assigned to a device.
Host Name	This field displays the name used to identify this device on the network (the computer name). The Zyxel Device learns these from the DHCP client requests.
MAC Address	This field displays the MAC address to which the IP address is currently assigned.
Last Access	This is when the device last established a session with the Zyxel Device through this interface.
Description	This field displays the description of the IP/MAC binding.
Refresh	Click this button to update the information in the screen.

6.10 Cellular Status Screen

This screen displays your mobile broadband connection status. Click **Monitor** > **System Status** > **Cellular Status** to display this screen.

Figure 104 Monitor > System Status > Cellular Status



The following table describes the labels in this screen.

Table 34 Monitor > System Status > Cellular Status

LABEL	DESCRIPTION
Refresh	Click this button to update the information in the screen.
More Information	Click this to display more information on your mobile broadband, such as the signal strength, IMEA/ESN and IMSI. This is only available when the mobile broadband device attached and activated on your Zyxel Device. Refer to Section 6.10.1 on page 132.
#	This field is a sequential value, and it is not associated with any interface.
Extension Slot	This field displays where the entry's cellular card is located.
Connected Device	This field displays the model name of the cellular card.

Table 34 Monitor > System Status > Cellular Status (continued)

LABEL	DESCRIPTION
Status	• No device - no mobile broadband device is connected to the Zyxel Device. • No Service - no mobile broadband network is available in the area; you cannot connect to the Internet. • Limited Service - returned by the service provider in cases where the SIM card is expired, the user failed to pay for the service and so on; you cannot connect to the Internet. • Device detected - displays when you connect a mobile broadband device. • Device error - a mobile broadband device is connected but there is an error. • Probe device fail - the Zyxel Device's test of the mobile broadband device failed. • Probe device ok - the Zyxel Device's test of the mobile broadband device succeeded. • Init device fail - the Zyxel Device was not able to initialize the mobile broadband device. • Init device ok - the Zyxel Device initialized the mobile broadband card. • Check lock fail - the Zyxel Device's check of whether or not the mobile broadband device is locked failed. • Device locked - the mobile broadband device is locked. • SIM error - there is a SIM card error on the mobile broadband device. • SIM locked-PUK - the PUK is locked on the mobile broadband device's SIM card. • SIM locked-PIN - the PIN is locked on the mobile broadband device's SIM card. • Unlock PUK fail - Your attempt to unlock a WCDMA mobile broadband device's PUK failed because you entered an incorrect PUK. • Unlock PIN fail - Your attempt to unlock a WCDMA mobile broadband device's PIN failed because you entered an incorrect PIN. • Unlock device fail - Your attempt to unlock a CDMA2000 mobile broadband device failed because you entered an incorrect device code. • Device unlocked - You entered the correct device code and unlocked a CDMA2000 mobile broadband device. • Get dev-info fail - The Zyxel Device cannot get cellular device information. • Get dev-info ok - The Zyxel Device succeeded in retrieving mobile broadband device information. • Searching network - The mobile broadband device is searching for a network. • Get signal fail - The mobile broadband device cannot get a signal from a network. • Network found - The mobile broadband device found a network. • Apply config - The Zyxel Device is applying your configuration to the mobile broadband device. • Inactive - The mobile broadband interface is disabled. • Active - The mobile broadband interface is enabled. • Incorrect device - The connected mobile broadband device is not compatible with the Zyxel Device. • Correct device - The Zyxel Device detected a compatible mobile broadband device. • Set band fail - Applying your band selection was not successful. • Set band ok - The Zyxel Device successfully applied your band selection. • Set profile fail - Applying your ISP settings was not successful. • Set profile ok - The Zyxel Device successfully applied your ISP settings. • PPP fail - The Zyxel Device failed to create a PPP connection for the cellular interface. • Need auth-password - You need to enter the password for the mobile broadband card in the cellular edit screen. • Device ready - The Zyxel Device successfully applied all of your configuration and you can use the mobile broadband connection.
Service Provider	This displays the name of your network service provider. This shows Limited Service if the service provider has stopped service to the mobile broadband card. For example if the bill has not been paid or the account has expired.

Table 34 Monitor > System Status > Cellular Status (continued)

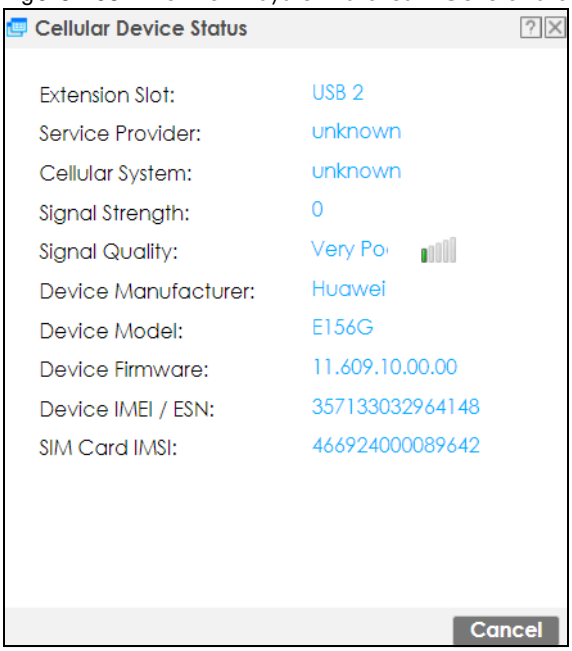
LABEL	DESCRIPTION
Cellular System	This field displays what type of cellular network the mobile broadband connection is using. The network type varies depending on the mobile broadband card you inserted and could be UMTS, UMTS/HSDPA, GPRS or EDGE when you insert a GSM mobile broadband card, or 1xRTT, EVDO Rev.0 or EVDO Rev.A when you insert a CDMA mobile broadband card.
Signal Quality	This displays the strength of the signal. The signal strength mainly depends on the antenna output power and the distance between your Zyxel Device and the service provider's base station.

6.10.1 More Information

This screen displays more information on your mobile broadband, such as the signal strength, IMEA/ESN and IMSI that helps identify your mobile broadband device and SIM card. Click **Monitor** > **System Status** > **Cellular Status** > **More Information** to display this screen.

Note: This screen is only available when the mobile broadband device is attached to and activated on the Zyxel Device.

Figure 105 Monitor > System Status > Cellular Status > More Information



The following table describes the labels in this screen.

Table 35 Monitor > System Status > Cellular Status > More Information

LABEL	DESCRIPTION
Extension Slot	This field displays where the entry's cellular card is located.
Service Provider	This displays the name of your network service provider. This shows **Limited Service** if the service provider has stopped service to the mobile broadband card. For example if the bill has not been paid or the account has expired.

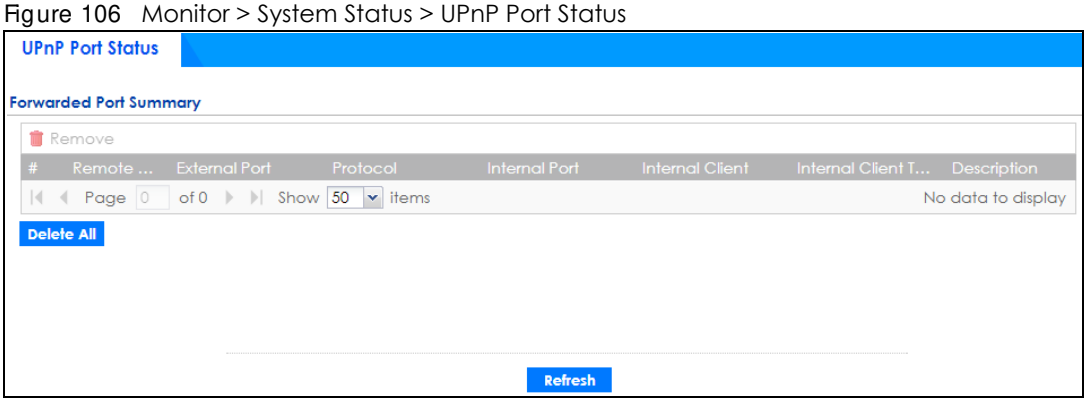
Table 35 Monitor > System Status > Cellular Status > More Information (continued)

LABEL	DESCRIPTION
Cellular System	This field displays what type of cellular network the mobile broadband connection is using. The network type varies depending on the mobile broadband card you inserted and could be UMTS, UMTS/HSDPA, GPRS or EDGE when you insert a GSM mobile broadband card, or 1xRTT, EVDO Rev.0 or EVDO Rev.A when you insert a CDMA mobile broadband card.
Signal Strength	This is the Signal Quality measured in dBm.
Signal Quality	This displays the strength of the signal. The signal strength mainly depends on the antenna output power and the distance between your Zyxel Device and the service provider's base station.
Device Manufacturer	This shows the name of the company that produced the mobile broadband device.
Device Model	This field displays the model name of the cellular card.
Device Firmware	This shows the software version of the mobile broadband device.
Device IMEI/ESN	IMEI (International Mobile Equipment Identity) is a 15-digit code in decimal format that identifies the mobile broadband device. ESN (Electronic Serial Number) is an 8-digit code in hexadecimal format that identifies the mobile broadband device.
SIM Card IMSI	IMSI (International Mobile Subscriber Identity) is a 15-digit code that identifies the SIM card.

6.11 The UPnP Port Status Screen

Use this screen to look at the NAT port mapping rules that UPnP creates on the Zyxel Device. To access this screen, click Monitor > System Status > UPnP Port Status.

Figure 106 Monitor > System Status > UPnP Port Status



The following table describes the labels in this screen.

Table 36 Monitor > System Status > UPnP Port Status

LABEL	DESCRIPTION
Remove	Select an entry and click this button to remove it from the list.
#	This is the index number of the UPnP-created NAT mapping rule entry.

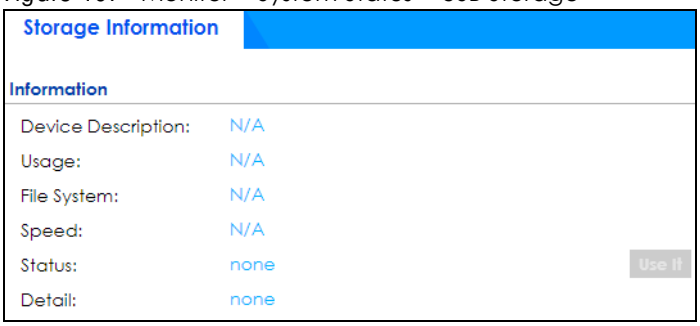
Table 36 Monitor > System Status > UPnP Port Status (continued)

LABEL	DESCRIPTION
Remote Host	This field displays the source IP address (on the WAN) of inbound IP packets. Since this is often a wild-card, the field may be blank. When the field is blank, the Zyxel Device forwards all traffic sent to the **External Port** on the WAN interface to the **Internal Client** on the **Internal Port**. When this field displays an external IP address, the NAT rule has the Zyxel Device forward inbound packets to the **Internal Client** from that IP address only.
External Port	This field displays the port number that the Zyxel Device "listens" non the WAN port) for connection requests destined for the NAT rule's **Internal Port** and **Internal Client**. The Zyxel Device forwards incoming packets (from the WAN) with this port number to the **Internal Client** on the **Internal Port** (on the LAN). If the field displays "0", the Zyxel Device ignores the **Internal Port** value and forwards requests on all external port numbers (that are otherwise unmapped) to the **Internal Client**.
Protocol	This field displays the protocol of the NAT mapping rule (TCP or UDP).
Internal Port	This field displays the port number on the **Internal Client** to which the Zyxel Device should forward incoming connection requests.
Internal Client	This field displays the DNS host name or IP address of a client on the LAN. Multiple NAT clients can use a single port simultaneously if the internal client field is set to 255.255.255.255 for UDP mappings.
Internal Client Type	This field displays the type of the client application on the LAN.
Description	This field displays a text explanation of the NAT mapping rule.
Delete All	Click this to remove all mapping rules from the NAT table.
Refresh	Click this button to update the information in the screen.

6.12 USB Storage Screen

This screen displays information about a connected USB storage device. Click **Monitor** > **System Status** > **USB Storage** to display this screen.

Figure 107 Monitor > System Status > USB Storage



The following table describes the labels in this screen.

Table 37 Monitor > System Status > USB Storage

LABEL	DESCRIPTION
Device description	This is a basic description of the type of USB device.
Usage	This field displays how much of the USB storage device's capacity is currently being used out of its total capacity and what percentage that makes.

Table 37 Monitor > System Status > USB Storage (continued)

LABEL	DESCRIPTION
Filesystem	This field displays what file system the USB storage device is formatted with. This field displays **Unknown** if the file system of the USB storage device is not supported by the Zyxel Device, such as NTFS.
Speed	This field displays the connection speed the USB storage device supports.
Status	**Ready** - you can have the Zyxel Device use the USB storage device. Click **Remove Now** to stop the Zyxel Device from using the USB storage device so you can remove it. **Unused** - the connected USB storage device was manually unmounted by using the **Remove Now** button or for some reason the Zyxel Device cannot mount it. Click **Use It** to have the Zyxel Device mount a connected USB storage device. This button is grayed out if the file system is not supported (unknown) by the Zyxel Device. **none** - no USB storage device is connected.
Detail	This field displays any other information the Zyxel Device retrieves from the USB storage device. • **Deactivated** - the use of a USB storage device is disabled (turned off) on the Zyxel Device. • **OutofSpace** - the available disk space is less than the disk space full threshold. • **Mounting** - the Zyxel Device is mounting the USB storage device. • **Removing** - the Zyxel Device is unmounting the USB storage device. • **none** - the USB device is operating normally or not connected.

6.13 Ethernet Neighbor Screen

The Ethernet Neighbor screen allows you to view the Zyxel Device's neighboring devices in one place.

It uses Smart Connect, that is Link Layer Discovery Protocol (LLDP) for discovering and configuring LLDP-aware devices in the same broadcast domain as the Zyxel Device that you're logged into using the web configurator.

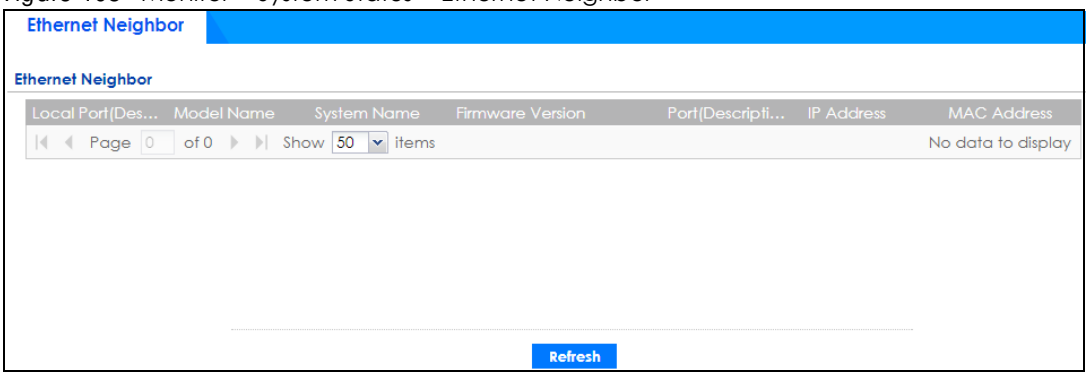
LLDP is a layer-2 protocol that allows a network device to advertise its identity and capabilities on the local network. It also allows the device to maintain and store information from adjacent devices which are directly connected to the network device. This helps you discover network changes and perform necessary network reconfiguration and management.

Note: Enable Smart Connect in the **System > ZON** screen.

See also **System > ZON** for more information on the Zyxel One Network (ZON) utility that uses the Zyxel Discovery Protocol (ZDP) for discovering and configuring ZDP-aware Zyxel devices in the same network as the computer on which the ZON utility is installed.

Click **Monitor > System Status > Ethernet Neighbor** to see the following screen

Figure 108 Monitor > System Status > Ethernet Neighbor



The following table describes the fields in the previous screen.

Table 38 Monitor > System Status > Ethernet Neighbor

LABEL	DESCRIPTION
Local Port (Description)	This field displays the port of the Zyxel Device, on which the neighboring device is discovered. For Zyxel Devices that support **Port Role**, if ports 3 to 5 are grouped together and there is a connection to P5 only, the Zyxel Device will display P3 as the interface port number (even though there is no connection to that port).
Model Name	This field displays the model name of the discovered device.
System Name	This field displays the system name of the discovered device.
Firmware Version	This field displays the firmware version of the discovered device.
Port (Description)	This field displays the first internal port on the discovered device. Internal is an interface type displayed in the **Network > Interface > Ethernet > Edit** screen. For example, if P1 and P2 are WAN, P3 to P5 are LAN, and P6 is DMZ, then Zyxel Device will display P3 as the first internal interface port number. For Zyxel Devices that support **Port Role**, if ports 3 to 5 are grouped together and there is a connection to P5 only, the Zyxel Device will display P3 as the first internal interface port number (even though there is no connection to that port).
IP Address	This field displays the IP address of the discovered device.
MAC Address	This field displays the MAC address of the discovered device.
Refresh	Click this button to update the information in the screen.

6.14 FQDN Object Screen

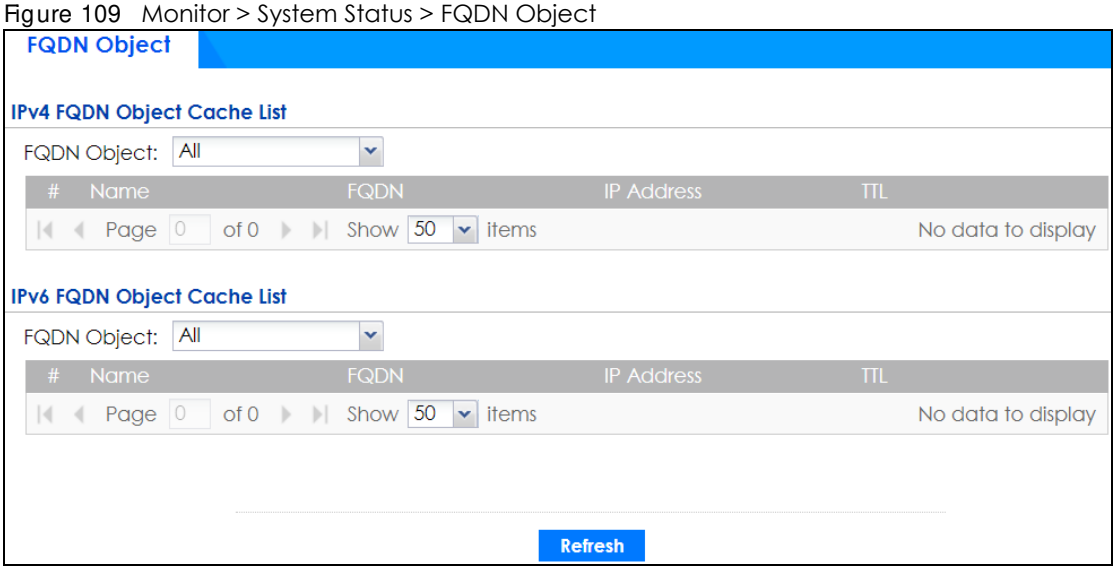
Click **Monitor > System Status > FQDN Object** to open the **FQDN Object** screen. View FQDN-to-IP address mappings cached in this screen. An FQDN is resolved to its IP address using the DNS server configured on the Zyxel Device. If the Zyxel Device receives a DNS query for an FQDN and the Zyxel Device has an FQDN cache entry, the Zyxel Device can map the IP address in a DNS response without having to query a DNS name server. The Zyxel Device updates FQDN-to-IP address mappings when the TTL (Time To Live) setting expires.

You can configure FQDN objects in **Configuration > Object > Address/Geo IP > Address** or **Configuration > Object > Address/Geo IP > Address Group**.

FQDN can be used in Security Policy, Policy Route, BWM and Web Authentication profiles as source and destination criteria. FQDN with a wildcard (for example, *.zyxel.com) can be used in these profiles as destination criteria only.

Suppose you want to block certain users from going to a website with a dynamically updated IP address using DDNS. Create an FQDN object for the website in **Object** > **Address**, and then create a Security Policy in **Security Policy** > **Policy Control** > **Add**. Use the FQDN object to identify the website as a destination, and configure specific users to block. When a user tries to connect to the forbidden website, the Zyxel Device first checks the IP address - website mapping in response to the DNS query and then finds the FQDN object match. The Security Policy that has this FQDN object match can then block the configured users from accessing the website.

Figure 109 Monitor > System Status > FQDN Object



The following table describes the fields in the previous screen.

Table 39 Monitor > System Status > FQDN Object

LABEL	DESCRIPTION
IPv4 FQDN Object Cache List You must first configure IPv4 FQDN objects in **Configuration** > **Object** > **Address/ Geo IP** in the **IPv4 Address Configuration** field.	
FQDN Object	Select a previously created object from the drop-down list box to display related FQDN object caches used in DNS queries.
#	This is the index number of the FQDN entry.
Name	This field displays the name of the selected FQDN object used in DNS queries.
FQDN	This field displays a host's fully qualified domain name.
IP Address	This field displays the mapping of the FQDN to an IP address. This is the IP address of a host.
TTL	This field displays the number of seconds the Zyxel Device holds IP address - FQDN object mapping in its cache. The mapping is updated when the TTL (Time To Live) setting expires.
IPv6 FQDN Object Cache List You must first configure IPv6 FQDN objects in **Configuration** > **Object** > **Address/ Geo IP** in the **IPv6 Address Configuration** field.	

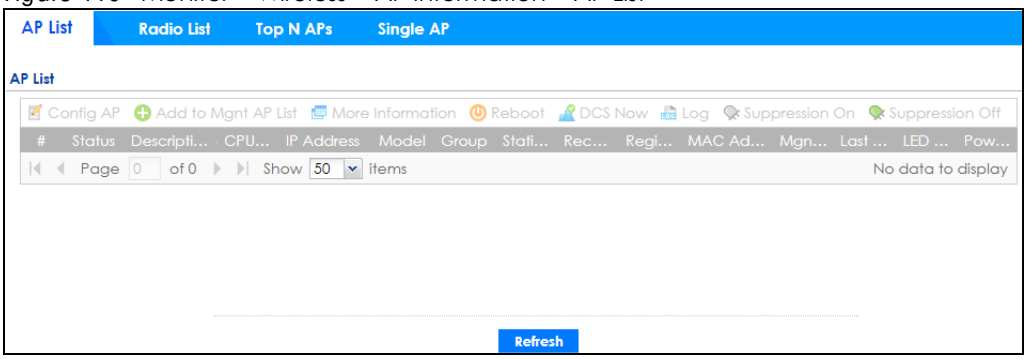
Table 39 Monitor > System Status > FQDN Object

LABEL	DESCRIPTION
FQDN Object	Select an object from the drop-down list box to display related IPv6 FQDN object caches used in DNS queries.
#	This is the index number of the IPv6 FQDN entry.
Name	This field displays the name of the selected IPv6 FQDN object used in DNS queries.
FQDN	This field displays a host's fully qualified domain name.
IP Address	This field displays the mapping of the FQDN to an IPv6 address. This is the IPv6 address of a host.
TTL	This field displays the number of seconds the Zyxel Device holds IP address - FQDN object mapping in its cache. The mapping is updated when the TTL (Time To Live) setting expires.
Refresh	Click this button to update the information in the screen.

6.15 AP Information: AP List

The **AP Information** menu contains **AP List**, **Radio List**, **Top N APs** and **Single AP** screens. Click **Monitor** > **Wireless** > **AP Information** to display the **AP List** screen.

Figure 110 Monitor > Wireless > AP Information > AP List



The following table describes the labels in this screen.

Table 40 Monitor > Wireless > AP Information > AP List

LABEL	DESCRIPTION
Config AP	Select an AP and click this to change the selected AP's group, radio, VLAN and port settings.
Add to Mgnt AP List	Click this to add new Access Points
More Information	Click this icon to see AP Information and Station count.
Reboot	Select an AP and click this button to force it to restart.
DCS Now	Select one or multiple APs and click this button to use DCS (Dynamic Channel Selection) to allow the AP to automatically find a less-used channel in an environment where there are many APs and there may be interference. Note: You should have enabled DCS in the applied AP radio profile before the APs can use DCS. Note: DCS is not supported on the radio which is working in repeater AP mode.

Table 40 Monitor > Wireless > AP Information > AP List (continued)

LABEL	DESCRIPTION
Log	Select an AP and click this button to go to the **Monitor > Log > View AP Log** screen to view the selected AP's current log messages.
Suppression On	Click this button to turn suppression on.
Suppression Off	Click this button to turn suppression off.
#	This field is a sequential value, and it is not associated with a specific AP.
Status	This field displays the on-line or off-line status of the AP, move the cursor to the AP icon and a status pop up message will appear.
Description	This field displays the AP's description, which you can configure by selecting the AP's entry and clicking the **Edit** button.
CPU Usage	This field displays what percentage of the AP's processing capability is currently being used.
IP Address	This field displays the IP address of the AP.
Model	This field displays the AP's hardware model information. It displays **N/A** (not applicable) only when the AP disconnects from the Zyxel Device and the information is unavailable as a result.
Group	This displays the name of the AP group to which the AP belongs.
Station	This field displays the station count information.
Recent On-line Time	This field displays the latest date and time that the AP was logged on.
Registration	This field displays the registration information of the AP. You can set the AP's registration at Configuration > Wireless > Controller screen. APs must be connected to the Zyxel Device by a wired connection or network.
MAC Address	This field displays the MAC address of the AP.
Mgnt. VLAN ID (AC/AP)	This displays the Access Controller (the Zyxel Device) and runtime management VLAN ID setting for the AP. **VLAN Conflict** displays if the AP's management VLAN ID does not match the **Mgmnt. VLAN ID(AC)**. This field displays **n/a** if the Zyxel Device cannot get VLAN information from the AP.
Last Off-line Time	This field displays the date and time that the AP was last logged out.

Table 40 Monitor > Wireless > AP Information > AP List (continued)

LABEL	DESCRIPTION
LED Status	This field displays the AP LED status. N/A displays if the AP does not support LED suppression mode and/or have a locator LED to show the actual location of the AP. A gray LED icon signifies that the AP LED suppression mode is enabled. All the LEDs of the AP will turn off after the AP is ready. A green LED icon signifies that the AP LED suppression mode is disabled and the AP LEDs stay lit after the AP is ready. A sun icon signifies that the AP's locator LED is blinking. A circle signifies that the AP's locator LED is extinguished.
Power Mode	This field displays the AP's power status. Full - the AP receives power using a power adapter and/or through a PoE switch/injector using IEEE 802.3at PoE plus. The PoE device that supports IEEE 802.3at PoE Plus can supply power of up to 30W per Ethernet port. Limited - the AP receives power through a PoE switch/injector using IEEE 802.3af PoE even when it is also connected to a power source using a power adaptor. The PoE device that supports IEEE 802.3af PoE can supply power of up to 15.4W per Ethernet port. When the AP is in limited power mode, the AP throughput decreases and has just one transmitting radio chain. It always shows Full if the AP does not support power detection.

The following table describes the icons in this screen.

Table 41 Monitor > Wireless > AP Information > AP List Icons

LABEL	DESCRIPTION
	This AP is not on the management list.
	This AP is on the management list and online.
	This AP is in the process of having its firmware updated.
	This AP is on the management list but offline.
	This indicates one of the following cases: • This AP has a runtime management VLAN ID setting that conflicts with the VLAN ID setting on the Access Controller (the Zyxel Device). • A setting the Zyxel Device assigns to this AP does not match the AP's capability.

6.15.1 AP List: More Information

Use this screen to look at station statistics for the connected AP. To access this screen, select an entry and click the More Information button in the AP List screen. Use this screen to look at configuration

information, port status and station statistics for the connected AP. To access this screen, select an entry and click the **More Information** button in the **AP List** screen.

Figure 111 Monitor > Wireless > AP Information > AP List > More Information

The following table describes the labels in this screen.

Table 42 Monitor > Wireless > AP Information > AP List > More Information

LABEL	DESCRIPTION
Configuration Status	This displays whether or not any of the AP's configuration is in conflict with the Zyxel Device's settings for the AP.
Non Support	If any of the AP's configuration conflicts with the Zyxel Device's settings for the AP, this field displays which configuration conflicts. It displays **n/a** if none of the AP's configuration conflicts with the Zyxel Device's settings for the AP.
Port Status	
Port	This shows the name of the physical Ethernet port on the Zyxel Device.

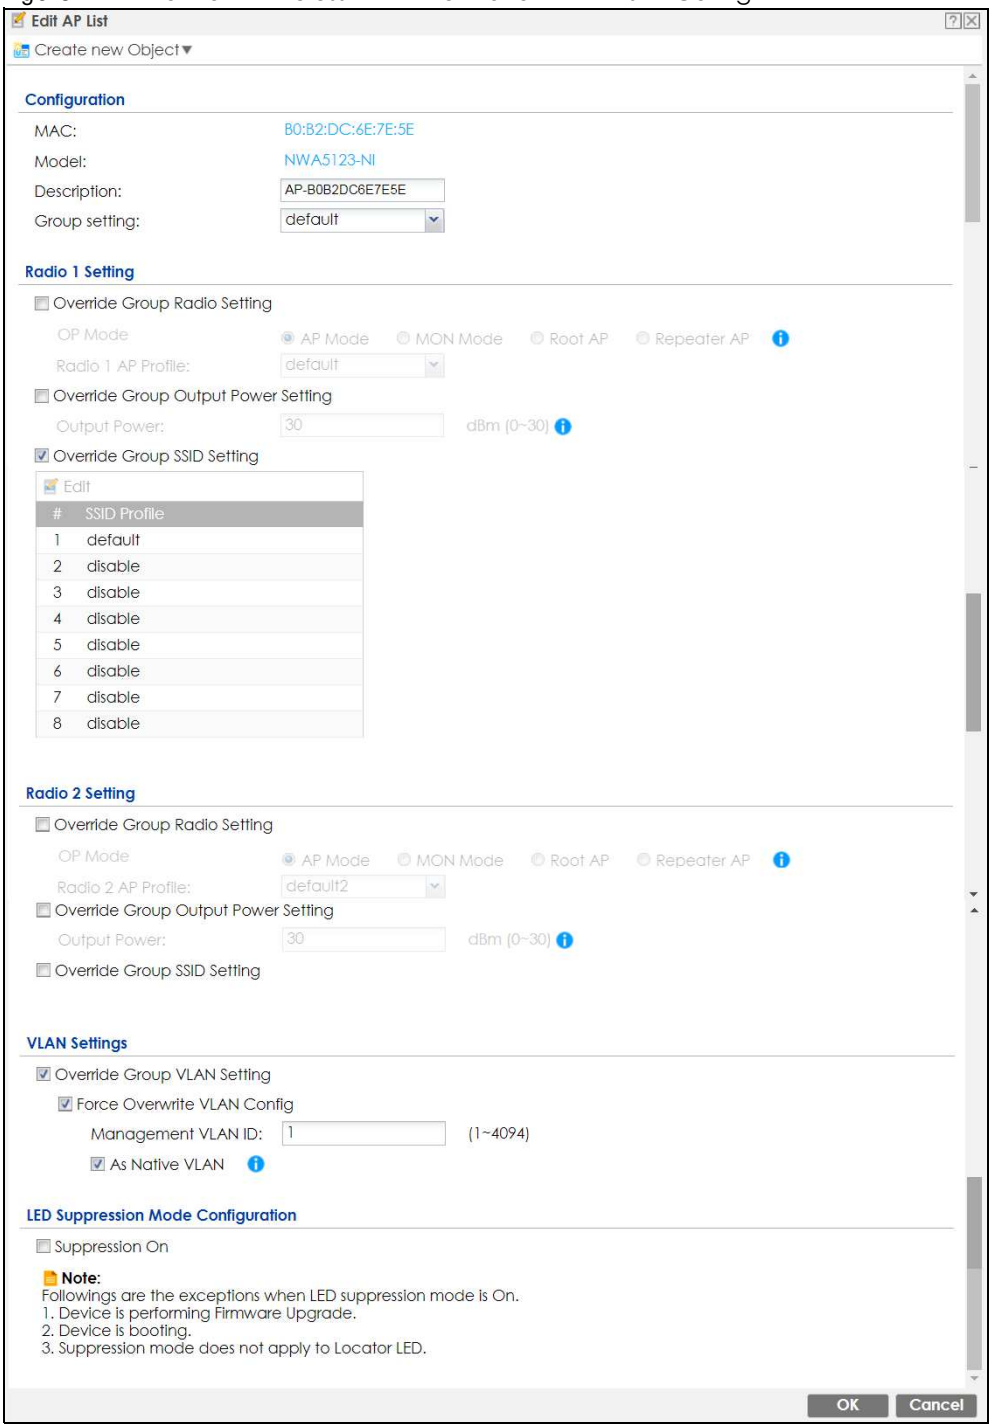
Table 42 Monitor > Wireless > AP Information > AP List > More Information (continued)

LABEL	DESCRIPTION
Status	This field displays the current status of each physical port on the AP. **Down** - The port is not connected. **Speed / Duplex** - The port is connected. This field displays the port speed and duplex setting (**Full** or **Half**).
PVID	This shows the port's PVID. A PVID (Port VLAN ID) is a tag that adds to incoming untagged frames received on a port so that the frames are forwarded to the VLAN group that the tag defines.
Up Time	This field displays how long the physical port has been connected.
VLAN Configuration	
Name	This shows the name of the VLAN.
Status	This displays whether or not the VLAN is activated.
VID	This shows the VLAN ID number.
Member	This field displays the Ethernet port(s) that is a member of this VLAN.
Ethernet Neighbor	
Local Port (Description)	This field displays the port of the Zyxel Device, on which the neighboring device is discovered. For Zyxel Devices that support **Port Role**, if ports 3 to 5 are grouped together and there is a connection to P5 only, the Zyxel Device will display P3 as the interface port number (even though there is no connection to that port).
Model Name	This field displays the model name of the discovered device.
System Name	This field displays the system name of the discovered device.
Firmware Version	This field displays the firmware version of the discovered device.
Port (Description)	This field displays the first internal port on the discovered device. Internal is an interface type displayed in the **Network > Interface > Ethernet > Edit** screen. For example, if P1 and P2 are WAN, P3 to P5 are LAN, and P6 is DMZ, then Zyxel Device will display P3 as the first internal interface port number. For Zyxel Devices that support **Port Role**, if ports 3 to 5 are grouped together and there is a connection to P5 only, the Zyxel Device will display P3 as the first internal interface port number (even though there is no connection to that port).
IP Address	This field displays the IP address of the discovered device.
MAC Address	This field displays the MAC address of the discovered device.
Station Count	
	The y-axis represents the number of connected stations.
	The x-axis shows the time over which a station was connected.
Last Update	This field displays the date and time the information in the window was last updated.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

6.15.2 AP List: Config AP

Select an AP and click the **Config AP** button in the **Monitor** > **Wireless** > **AP Information** > **AP List** table to display this screen.

Figure 112 Monitor > Wireless > AP Information > AP List > Config AP



Each field is described in the following table.

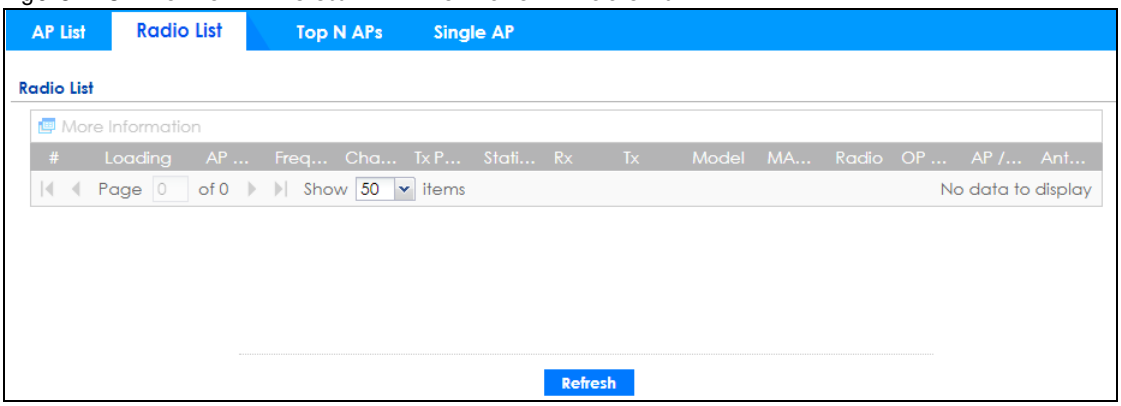
Table 43 Monitor > Wireless > AP Information > AP List > Config AP

LABEL	DESCRIPTION
Create new Object	Use this menu to create a new **Radio Profile** object to associate with this AP.
MAC	This displays the MAC address of the selected AP.
Model	This field displays the AP's hardware model information. It displays **N/A** (not applicable) only when the AP disconnects from the Zyxel Device and the information is unavailable as a result.
Description	Enter a description for this AP. You can use up to 31 characters, spaces and underscores allowed.
Group Setting	Select an AP group to which you want this AP to belong.
Radio 1/2 Setting	
Override Group Radio Setting	Select this option to overwrite the AP radio settings with the settings you configure here.
Radio 1/2 OP Mode	Select the operating mode for radio 1 or radio 2. **AP Mode** means the AP can receive connections from wireless clients and pass their data traffic through to the Zyxel Device to be managed (or subsequently passed on to an upstream gateway for managing). **MON Mode** means the AP monitors the broadcast area for other APs, then passes their information on to the Zyxel Device where it can be determined if those APs are friendly or rogue. If an AP is set to this mode it cannot receive connections from wireless clients.
Radio 1/2 Profile	Select a profile from the list. If no profile exists, you can create a new one through the **Create new Object** menu.
Override Group Output Power Setting	Select this option to overwrite the AP output power setting with the setting you configure here.
Output Power	Set the output power of the AP.
Override Group SSID Setting	Select this option to overwrite the AP SSID profile setting with the setting you configure here. This section allows you to associate an SSID profile with the radio.
Edit	Select an SSID and click this button to reassign it. The selected SSID becomes editable immediately upon clicking.
#	This is the index number of the SSID profile. You can associate up to eight SSID profiles with an AP radio.
SSID Profile	Indicates which SSID profile is associated with this radio profile.
Override Group VLAN Setting	Select this option to overwrite the AP VLAN setting with the setting you configure here.
Force Overwrite VLAN Config	Select this to have the Zyxel Device change the AP's management VLAN to match the configuration in this screen.
Management VLAN ID	Enter a VLAN ID for this AP.
As Native VLAN	Select this option to treat this VLAN ID as a VLAN created on the Zyxel Device and not one assigned to it from outside the network.
Suppression On	Select this option to enable the AP's LED suppression mode. All the LEDs of the AP will turn off after the AP is ready. If the check box is unchecked, it means the LEDs will stay lit after the AP is ready.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to close the window with changes unsaved.

6.16 AP Information: Radio List

Click **Monitor** > **Wireless** > **AP Information** > **Radio List** to display the **Radio List** screen.

Figure 113 Monitor > Wireless > AP Information > Radio List



The following table describes the labels in this screen.

Table 44 Monitor > Wireless > AP Information > Radio List

LABEL	DESCRIPTION
More Information	Click this icon to see the traffic statistics, station count, SSID, Security Mode and VLAN ID information on the AP.
#	This field is a sequential value, and it is not associated with a specific radio.
Loading	This indicates the AP's load balance status (**UnderLoad** or **OverLoad**) when load balancing is enabled on the AP. Otherwise, it shows - when load balancing is disabled or the radio is in monitor mode.
AP Description	Enter a description for this AP. You can use up to 31 characters, spaces and underscores allowed.
Frequency Band	This field displays the WLAN frequency band using the IEEE 802.11 a/b/g/n standard of 2.4 or 5 GHz.
Channel ID	This field displays the WLAN channels using the IEEE 802.11 protocols.
Tx Power	This shows the radio's output power (in dBm).
Station	This field displays the station count information.
Rx	This field displays the total number of bytes received by the radio.
Tx	This field displays the total number of bytes transmitted by the radio.
Model	This field displays the AP's hardware model information. It displays **N/A** (not applicable) only when the AP disconnects from the Zyxel Device and the information is unavailable as a result.
MAC Address	This field displays the MAC address of the AP.
Radio	This field displays the Radio number. For example 1.
OP Mode	This field displays the operating mode of the AP. It displays **n/a** for the profile for a radio not using an AP profile. **AP Mode** means the AP can receive connections from wireless clients and pass their data traffic through to the Zyxel Device to be managed (or subsequently passed on to an upstream gateway for managing).

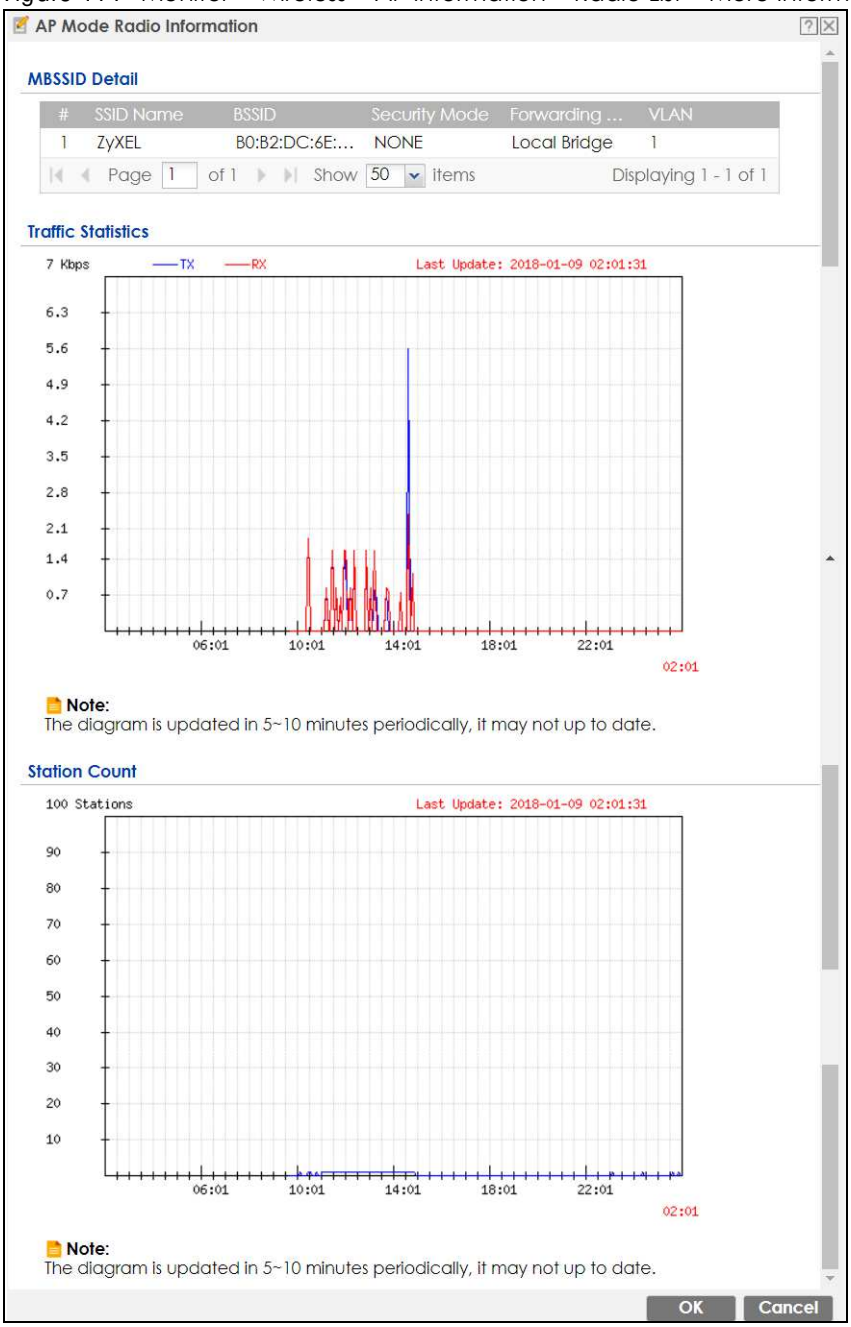
Table 44 Monitor > Wireless > AP Information > Radio List

LABEL	DESCRIPTION
AP / ZyMesh Profile	This indicates the AP radio and ZyMesh profile names to which the radio belongs.
Antenna	This indicates the antenna orientation for the radio (Wall or Ceiling). This shows N/A if the AP does not allow you to adjust coverage depending on the orientation of the antenna for each radio using the web configurator or a physical switch.

6.16.1 Radio List: More Information

This screen allows you to view detailed information about a selected radio's SSID(s), wireless traffic and wireless clients for the preceding 24 hours. To access this window, select an entry and click the **More Information** button in the **Radio List** screen.

Figure 114 Monitor > Wireless > AP Information > Radio List > More Information



The following table describes the labels in this screen.

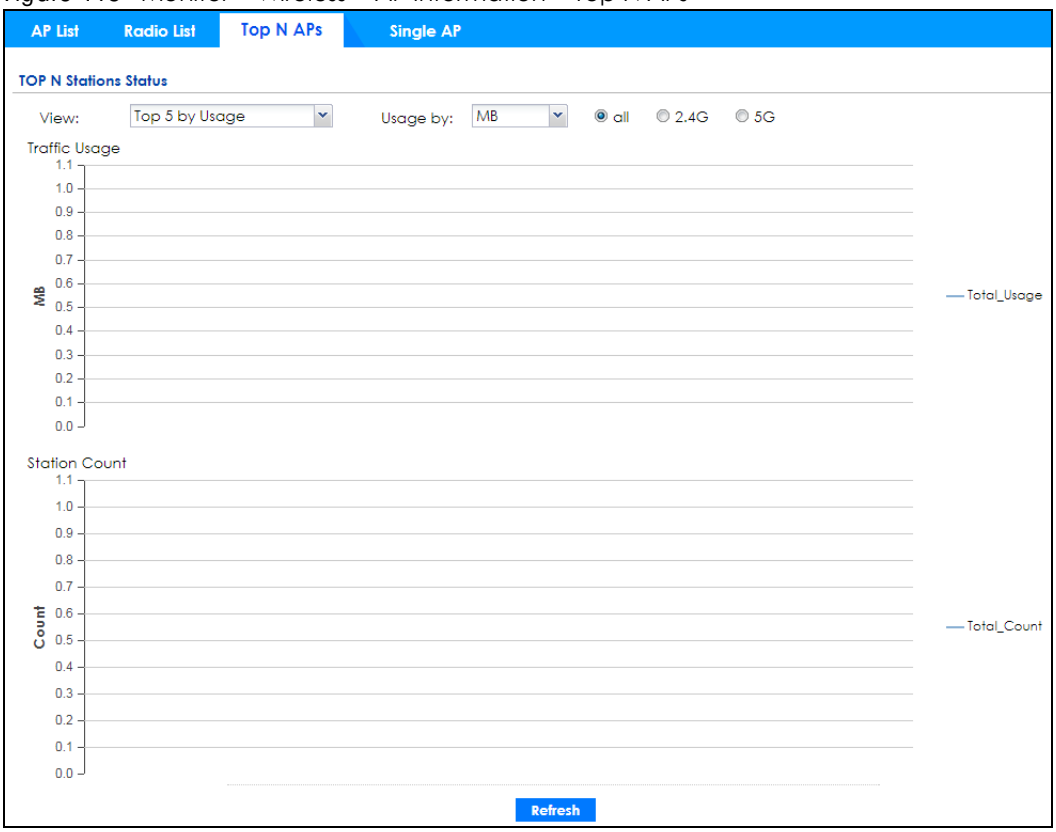
Table 45 Monitor > Wireless > AP Information > Radio List > More Information

LABEL	DESCRIPTION
MBSSID Detail	This list shows information about the SSID(s) that is associated with the radio over the preceding 24 hours.
#	This is the items sequential number in the list. It has no bearing on the actual data in this list.
SSID Name	This displays an SSID associated with this radio. There can be up to eight maximum.
BSSID	This displays the MAC address associated with the SSID.
Security Mode	This displays the security mode in which the SSID is operating.
Forwarding Mode	This field indicates the forwarding mode (Local Bridge or Tunnel) associated with the SSID profile.
VLAN	This displays the VLAN ID associated with the SSID.
Traffic Statistics	This graph displays the overall traffic information about the radio over the preceding 24 hours.
y-axis	This axis represents the amount of data moved across this radio in megabytes per second.
x-axis	This axis represents the amount of time over which the data moved across this radio.
Station Count	This graph displays information about all the wireless clients that have connected to the radio over the preceding 24 hours.
y-axis	The y-axis represents the number of connected wireless clients.
x-axis	The x-axis shows the time over which a wireless client was connected.
Last Update	This field displays the date and time the information in the window was last updated.
OK	Click this to close this window.
Cancel	Click this to close this window.

6.17 AP Information: Top N APs

Use this screen to view the top five or top ten wireless traffic usage and associated wireless stations for the preceding 24 hours. Click Monitor > Wireless > AP Information > Top N APs to display the Top N APs screen.

Figure 115 Monitor > Wireless > AP Information > Top N APs



The following table describes the labels in this screen.

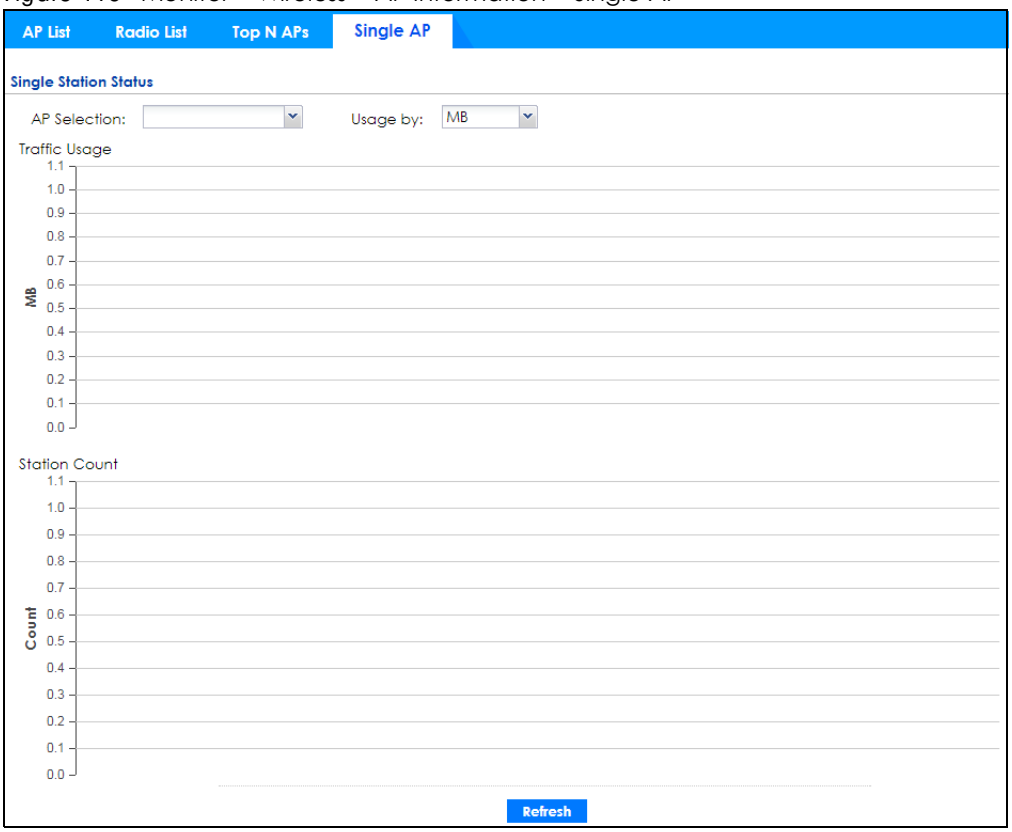
Table 46 Monitor > Wireless > AP Information > Top N APs

LABEL	DESCRIPTION
View	Select this to view the top five or top ten wireless traffic usage and associated wireless stations for the preceding 24 hours.
Usage by	If you view the data usage by **Usage**, select the frequency band and the measure unit in GB or MB to display the graph. If you view the date usage by **Station Number**, select the measure unit in GB or MB to display the graph.
Traffic Usage	This graph displays the overall traffic information about the top five or top ten wireless traffic for the preceding 24 hours.
y-axis	The y-axis represents the amount of traffic in megabytes/gigabytes.
x-axis	The x-axis represents the time over which wireless traffic flows transmitting from/to the AP.
Station Count	This graph displays information about all the wireless stations that have connected to the AP for the preceding 24 hours.
y-axis	The y-axis represents the number of connected wireless stations.
x-axis	The x-axis represents the time over which a wireless client was connected.
Refresh	Click **Refresh** to update this screen.

6.18 AP Information: Single AP

Use this screen to view wireless traffic usage and wireless stations for a managed AP. Click **Monitor** > **Wireless** > **AP Information** > **Single AP** to display the **Single AP** screen.

Figure 116 Monitor > Wireless > AP Information > Single AP



The following table describes the labels in this screen.

Table 47 Monitor > Wireless > AP Information > Single AP

LABEL	DESCRIPTION
AP Selection	Select a managed AP from the drop-down list box to view its wireless traffic usage and wireless stations.
Usage by	Select the measure unit in GB or MB to display the graph.
Traffic Usage	This graph displays the overall traffic information about the AP you specified for the preceding 24 hours.
y-axis	The y-axis represents the amount of traffic in megabytes/gigabytes.
x-axis	The x-axis represents the time over which wireless traffic flows transmitting from/to the AP.
Station Count	This graph displays information about all the wireless stations that have connected to the AP for the preceding 24 hours.
y-axis	The y-axis represents the number of connected wireless stations.
x-axis	The x-axis represents the time over which a wireless client was connected.
Refresh	Click **Refresh** to update this screen.

6.19 ZyMesh

Use this screen to view the ZyMesh traffic statistics between the managed APs. Click **Monitor** > **Wireless** > **ZyMesh** to display this screen.

Figure 117 Monitor > Wireless > ZyMesh

The following table describes the labels in this screen.

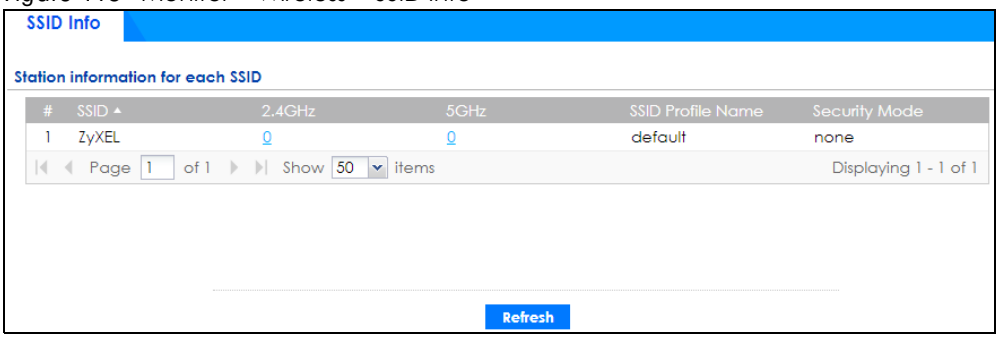
Table 48 Monitor > Wireless > ZyMesh

LABEL	DESCRIPTION
#	This field displays the index number of the managed AP (in repeater mode) in this list.
Description	This field displays the descriptive name of the managed AP (in repeater mode).
IP Address	This field displays the IP address of the managed AP (in repeater mode).
Channel ID	This field displays the number of the channel used by the managed AP (in repeater mode).
Hop	This is the hop count of the managed AP. For example, "1" means the managed AP is connected to a root AP directly. "2" means there is another repeater AP between the managed AP and the root AP.
Uplink AP Info	This shows the role and descriptive name of the managed AP to which this managed AP is connected wirelessly.
SSID Name	This indicates the name of the wireless network (SSID) the managed AP uses to associated with another managed AP.
Signal Strength	Before the slash, this shows the signal strength the uplink AP (a root AP or a repeater) receives from this managed AP (in repeater mode). After the slash, this shows the signal strength this managed AP (in repeater mode) receives from the uplink AP.
Link Up Time	This field displays the time the managed AP first associated with the root AP or repeater.
MAC Address	This field displays the MAC address of the managed AP (in repeater mode).
Tx Power	This field displays the output power of the managed AP (in repeater mode).
Root AP	This field displays the descriptive name of the root AP to which the managed AP is connected wirelessly.
Tx Rate	This field displays the maximum transmission rate of the root AP or repeater to which the managed AP is connected.
Rx Rate	This field displays the maximum reception rate of the root AP or repeater to which the managed AP is connected.
Refresh	Click **Refresh** to update this screen.

6.20 SSID Info

Use this screen to view the number of wireless clients currently connected to an SSID and the security type used by the SSID. Click **Monitor** > **Wireless** > **SSID Info** to display this screen.

Figure 118 Monitor > Wireless > SSID Info



The following table describes the labels in this screen.

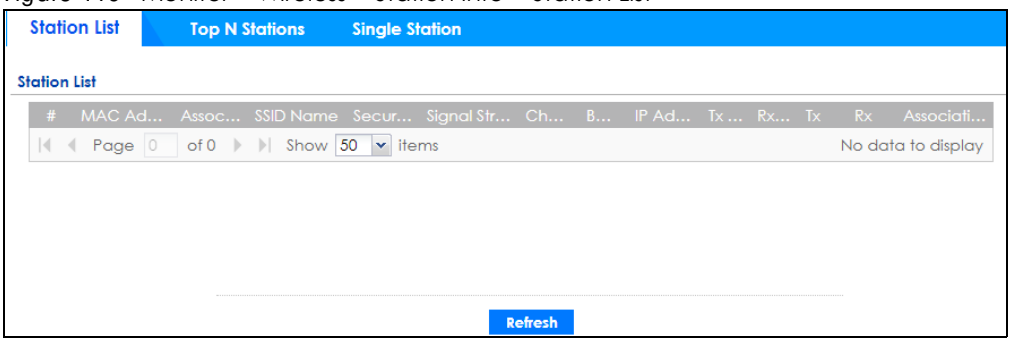
Table 49 Monitor > Wireless > SSID Info

LABEL	DESCRIPTION
#	This is the SSID's index number in this list.
SSID	This indicates the name of the wireless network to which the client is connected. A single AP can have multiple SSIDs or networks.
2.4GHz	This shows the number of wireless clients which are currently connected to the SSID using the 2.4 GHz frequency band, Click the number to go to the **Station Info** > **Station List** screen. See Section 6.22 on page 153.
5GHz	This shows the number of wireless clients which are currently connected to the SSID using the 5 GHz frequency band, Click the number to go to the **Station Info** > **Station List** screen. See Section 6.22 on page 153.
SSID Profile Name	This indicates the name of the SSID profile in which the SSID is defined,
Security Mode	This indicates which secure encryption methods is being used by the SSID.
Refresh	Click **Refresh** to update this screen.

6.21 Station Info: Station List

The **Station Info** menu contains **Station List**, **Top N Stations** and **Single Station** screens. This screen displays information about connected wireless stations. Click **Monitor** > **Wireless** > **Station Info** > **Station List** to display this screen.

Figure 119 Monitor > Wireless > Station Info > Station List



The following table describes the labels in this screen.

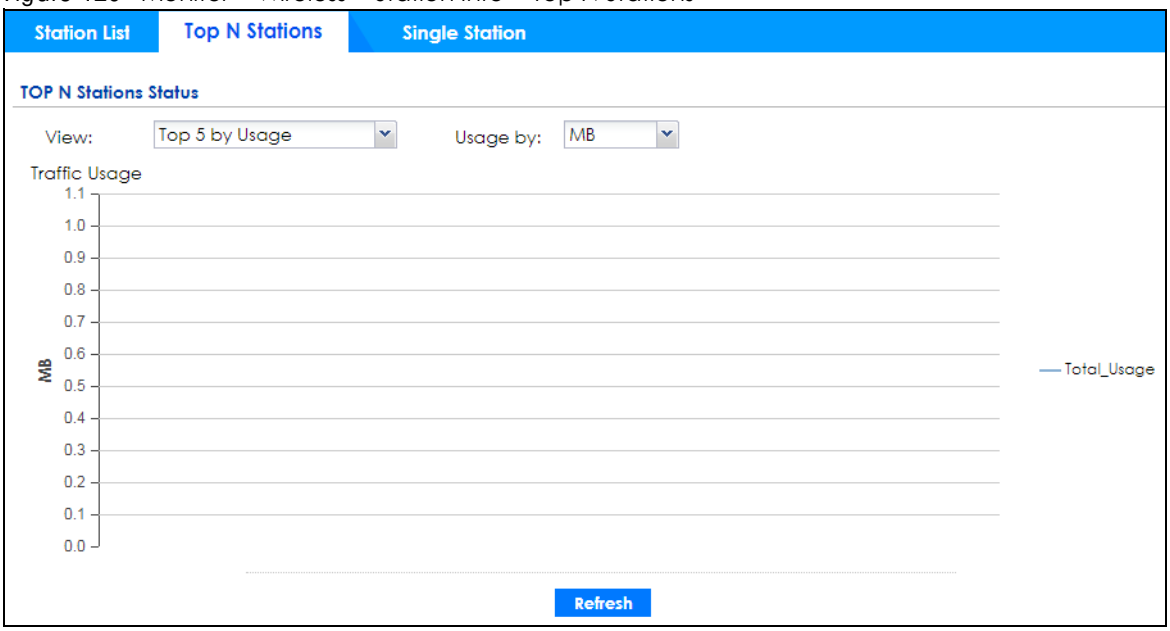
Table 50 Monitor > Wireless > Station Info > Station List

LABEL	DESCRIPTION
#	This field is a sequential value, and it is not associated with a specific station.
MAC Address	This field displays the MAC address of the station.
Associated AP	This field displays the APs that are associated with the station.
SSID Name	This field displays the SSID names of the station.
Security Mode	This field displays the security mode the station is using.
Signal Strength	This field displays the signal strength of the station.
Channel	This field displays the number of the channel used by the station to connect to the network.
Band	This field displays the frequency band which is currently being used by the station.
IP Address	This field displays the IP address of the station.
Tx Rate	This field displays the transmit data rate of the station.
Rx Rate	This field displays the receive data rate of the station.
Tx	This field displays the number of bytes transmitted from the station.
Rx	This field displays the number of bytes received by the station.
Association Time	This field displays the time duration the station was online and offline.
Refresh	Click **Refresh** to update this screen.

6.22 Station Info: Top N Stations

Use this screen to view the top five or top ten traffic statistics of the wireless stations. Click **Monitor** > **Wireless** > **Station Info** > **Top N Stations** to display this screen.

Figure 120 Monitor > Wireless > Station Info > Top N Stations



The following table describes the labels in this screen.

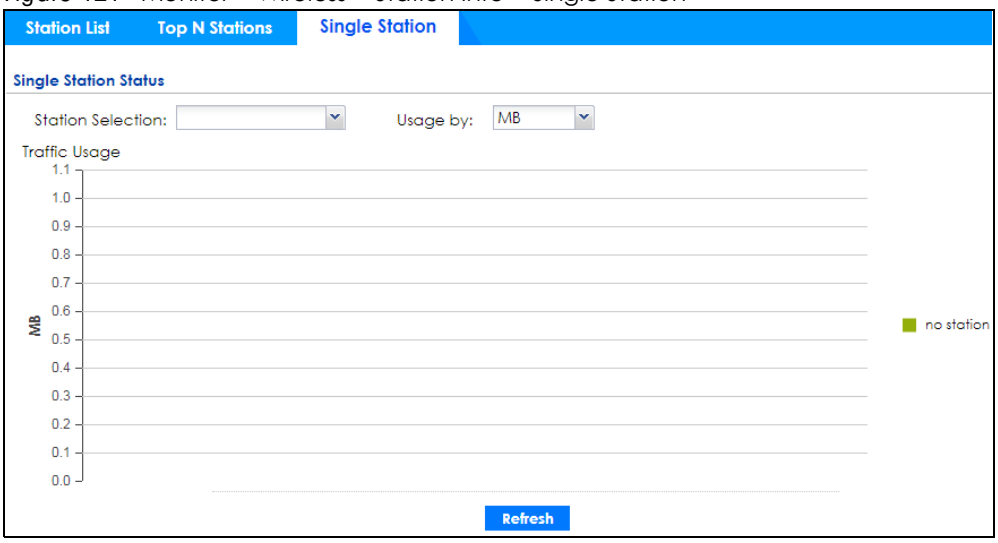
Table 51 Monitor > Wireless > Station Info > Top N Stations

LABEL	DESCRIPTION
View	Select this to view the top five or top ten traffic statistics of the wireless stations.
Usage by	Select the measure unit in GB or MB to display the graph.
Traffic Usage	This graph displays the overall traffic information about the stations for the preceding 24 hours.
y-axis	This axis represents the amount of data moved across stations in megabytes per second.
Refresh	Click **Refresh** to update this screen.

6.23 Station Info: Single Station

Use this screen to view traffic statistics of the wireless station you specified. Click **Monitor** > **Wireless** > **Station Info** > **Single Station** to display this screen.

Figure 121 Monitor > Wireless > Station Info > Single Station



The following table describes the labels in this screen.

Table 52 Monitor > Wireless > Station Info > Single Station

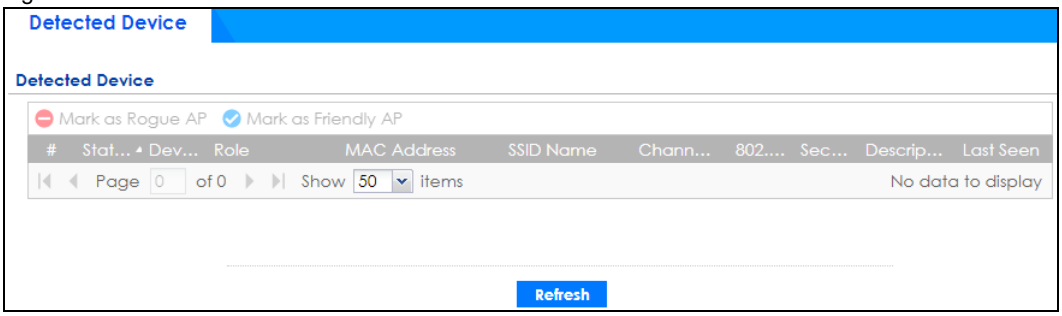
LABEL	DESCRIPTION
Station Selection	Select this to view the traffic statistics of the wireless station.
Usage by	Select the measure unit in GB or MB to display the graph.
Traffic Usage	This graph displays the overall traffic information about the station over the preceding 24 hours.
y-axis	This axis represents the amount of data moved across this station in megabytes per second.
Refresh	Click **Refresh** to update this screen.

6.24 Detected Device

Use this screen to view information about wireless devices detected by the AP. Click **Monitor** > **Wireless** > **Detected Device** to access this screen.

Note: At least one radio of the APs connected to the Zyxel Device must be set to monitor mode (in the **Configuration** > **Wireless** > **AP Management** screen) in order to detect other wireless devices in its vicinity.

Figure 122 Monitor > Wireless > Detected Device



The following table describes the labels in this screen.

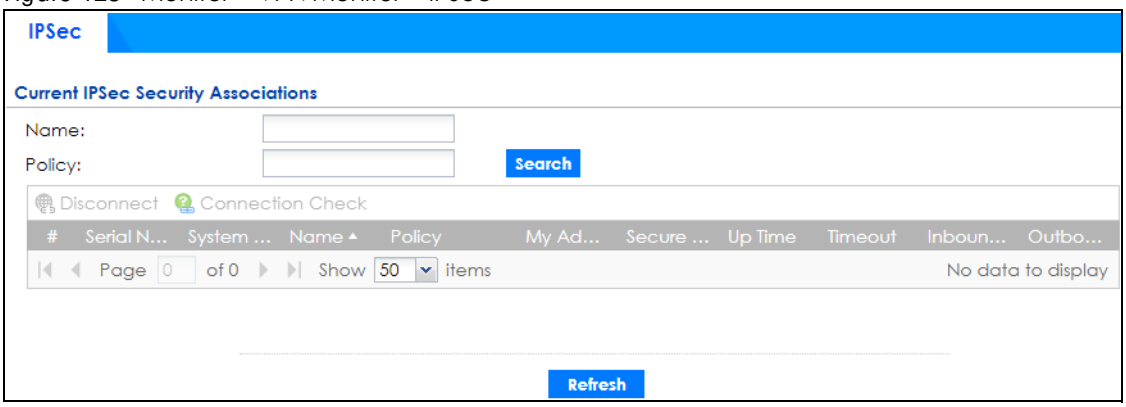
Table 53 Monitor > Wireless > Detected Device

LABEL	DESCRIPTION
Mark as Rogue AP	Click this button to mark the selected AP as a rogue AP. A rogue AP can be contained in the **Configuration > Wireless > MON Mode** screen.
Mark as Friendly AP	Click this button to mark the selected AP as a friendly AP. For more on managing friendly APs, see the **Configuration > Wireless > MON Mode** screen.
#	This is the station's index number in this list.
Status	This indicates the detected device's status.
Device	This indicates the detected device's network type (such as **infrastructure** or **ad-hoc**).
Role	This indicates the detected device's role (such as friendly or rogue).
MAC Address	This indicates the detected device's MAC address.
SSID Name	This indicates the detected device's SSID.
Channel ID	This indicates the detected device's channel ID.
802.11 Mode	This indicates the 802.11 mode (a/b/g/n) transmitted by the detected device.
Security	This indicates the encryption method (if any) used by the detected device.
Description	This displays the detected device's description. For more on managing friendly and rogue APs, see the **Configuration > Wireless > MON Mode** screen.
Last Seen	This indicates the last time the device was detected by the Zyxel Device.
Refresh	Click this to refresh the items displayed on this page.

6.25 The IPSec Screen

You can use the **IPSec Monitor** screen to display and to manage active IPSec SAs. To access this screen, click **Monitor > VPN Monitor > IPSec**. The following screen appears. Click a column's heading cell to sort the table entries by that column's criteria. Click the heading cell again to reverse the sort order.

Figure 123 Monitor > VPN Monitor > IPSec



Each field is described in the following table.

Table 54 Monitor > VPN Monitor > IPSec

LABEL	DESCRIPTION
Name	Type the name of a IPSec SA here and click **Search** to find it (if it is associated). You can use a keyword or regular expression. Use up to 30 alphanumeric and _+-.()!$*^:? | {}[]<>/ characters. See Section on page 157 for more details.
Policy	Type the IP address(es) or names of the local and remote policies for an IPSec SA and click **Search** to find it. You can use a keyword or regular expression. Use up to 30 alphanumeric and _+-.()!$*^:? | {}[]<>/ characters. See Section on page 157 for more details.
Search	Click this button to search for an IPSec SA that matches the information you specified above.
Disconnect	Select an IPSec SA and click this button to disconnect it.
Connection Check	Select an IPSec SA and click this button to check the connection.
#	This field is a sequential value, and it is not associated with a specific SA.
Serial Number	This field displays the serial number of this Zyxel Device.
System Name	This field displays the name used to identify the Zyxel Device.
Name	This field displays the name of the IPSec SA.
Policy	This field displays the content of the local and remote policies for this IPSec SA. The IP addresses, not the address objects, are displayed.
My Address	This field displays the IP address of local computer.
Secure Gateway	This field displays the secure gateway information.
Up Time	This field displays how many seconds the IPSec SA has been active. This field displays **N/A** if the IPSec SA uses manual keys.
Timeout	This field displays how many seconds remain in the SA life time, before the Zyxel Device automatically disconnects the IPSec SA. This field displays **N/A** if the IPSec SA uses manual keys.
Inbound (Bytes)	This field displays the amount of traffic that has gone through the IPSec SA from the remote IPSec router to the Zyxel Device since the IPSec SA was established.
Outbound (Bytes)	This field displays the amount of traffic that has gone through the IPSec SA from the Zyxel Device to the remote IPSec router since the IPSec SA was established.

Regular Expressions in Searching IPSec SAs

A question mark (?) lets a single character in the VPN connection or policy name vary. For example, use "a?c" (without the quotation marks) to specify abc, acc and so on.

Wildcards (*) let multiple VPN connection or policy names match the pattern. For example, use "*abc" (without the quotation marks) to specify any VPN connection or policy name that ends with "abc". A VPN connection named "testabc" would match. There could be any number (of any type) of characters in front of the "abc" at the end and the VPN connection or policy name would still match. A VPN connection or policy name named "testacc" for example would not match.

A * in the middle of a VPN connection or policy name has the Zyxel Device check the beginning and end and ignore the middle. For example, with "abc*123", any VPN connection or policy name starting with "abc" and ending in "123" matches, no matter how many characters are in between.

The whole VPN connection or policy name has to match if you do not use a question mark or asterisk.

6.26 The SSL Screen

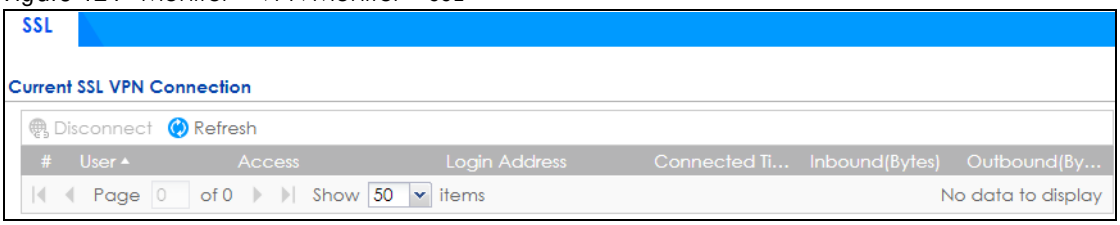
The Zyxel Device keeps track of the users who are currently logged into the VPN SSL client. Click **Monitor** > **VPN Monitor** > **SSL** to display the user list.

Use this screen to do the following:

- View a list of active SSL VPN connections.
- Log out individual users and delete related session information.

Once a user logs out, the corresponding entry is removed from the screen.

Figure 124 Monitor > VPN Monitor > SSL



The following table describes the labels in this screen.

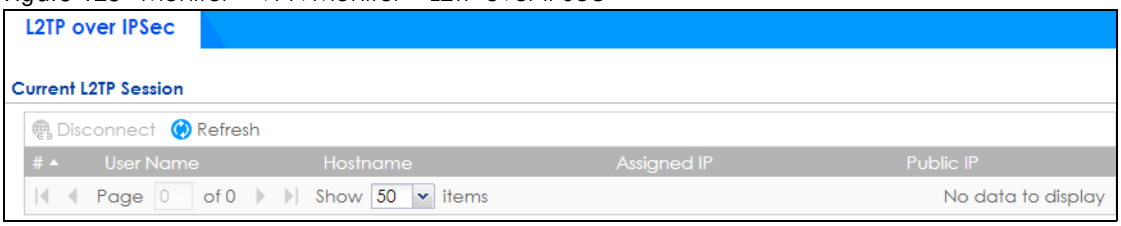
Table 55 Monitor > VPN Monitor > SSL

LABEL	DESCRIPTION
Disconnect	Select a connection and click this button to terminate the user's connection and delete corresponding session information from the Zyxel Device.
Refresh	Click **Refresh** to update this screen.
#	This field is a sequential value, and it is not associated with a specific SSL.
User	This field displays the account user name used to establish this SSL VPN connection.
Access	This field displays the name of the SSL VPN application the user is accessing.
Login Address	This field displays the IP address the user used to establish this SSL VPN connection.
Connected Time	This field displays the time this connection was established.
Inbound (Bytes)	This field displays the number of bytes received by the Zyxel Device on this connection.
Outbound (Bytes)	This field displays the number of bytes transmitted by the Zyxel Device on this connection.

6.27 The L2TP over IPSec Screen

Click **Monitor** > **VPN Monitor** > **L2TP over IPSec** to open the following screen. Use this screen to display and manage the Zyxel Device's connected L2TP VPN sessions.

Figure 125 Monitor > VPN Monitor > L2TP over IPSec



The following table describes the fields in this screen.

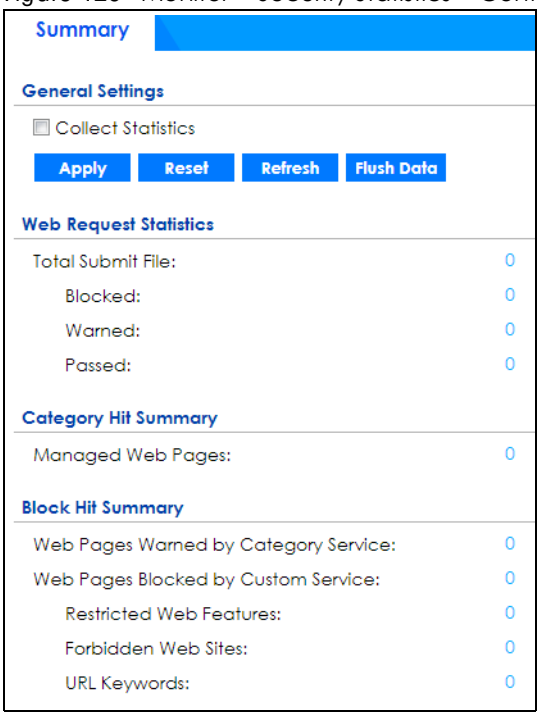
Table 56 Monitor > VPN Monitor > L2TP over IPSec

LABEL	DESCRIPTION
Disconnect	Select a connection and click this button to disconnect it.
Refresh	Click **Refresh** to update this screen.
#	This field is a sequential value, and it is not associated with a specific L2TP VPN session.
User Name	This field displays the remote user's user name.
Hostname	This field displays the name of the computer that has this L2TP VPN connection with the Zyxel Device.
Assigned IP	This field displays the IP address that the Zyxel Device assigned for the remote user's computer to use within the L2TP VPN tunnel.
Public IP	This field displays the public IP address that the remote user is using to connect to the Internet.

6.28 The Content Filter Screen

Click **Monitor** > **Security Statistics** > **Content Filter** to display the following screen. This screen displays content filter statistics.

Figure 126 Monitor > Security Statistics > Content Filter



The following table describes the labels in this screen.

Table 57 Monitor > Security Statistics > Content Filter

LABEL	DESCRIPTION
General Settings	
Collect Statistics	Select this check box to have the Zyxel Device collect content filtering statistics. The collection starting time displays after you click **Apply**. All of the statistics in this screen are for the time period starting at the time displayed here. The format is year, month, day and hour, minute, second. All of the statistics are erased if you restart the Zyxel Device or click **Flush Data**. Collecting starts over and a new collection start time displays.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.
Refresh	Click this button to update the report display.
Flush Data	Click this button to discard all of the screen's statistics and update the report display.
Web Request Statistics	
Total Submit File	This field displays the number of web pages that the Zyxel Device's content filter feature has checked.
Blocked	This is the number of web pages that the Zyxel Device blocked access.
Warned	This is the number of web pages for which the Zyxel Device displayed a warning message to the access requesters.
Passed	This is the number of web pages to which the Zyxel Device allowed access.
Category Hit Summary	
Managed Web Pages	This is the number of requested web pages that the Zyxel Device's content filtering service identified as belonging to a category that was selected to be managed.
Block Hit Summary	

Table 57 Monitor > Security Statistics > Content Filter (continued)

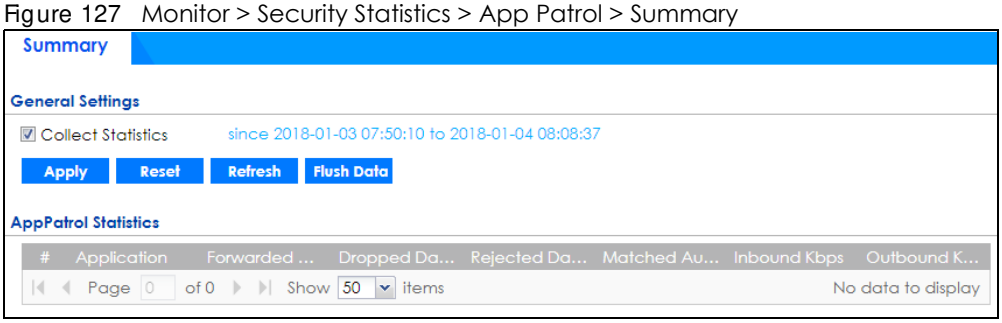
LABEL	DESCRIPTION
Web Pages Warned by Category Service	This is the number of web pages that matched an external database content filtering category selected in the Zyxel Device and for which the Zyxel Device displayed a warning before allowing users access.
Web Pages Blocked by Custom Service	This is the number of web pages to which the Zyxel Device did not allow access due to the content filtering custom service configuration.
Restricted Web Features	This is the number of web pages to which the ZyWALL limited access or removed cookies due to the content filtering custom service's restricted web features configuration.
Forbidden Web Sites	This is the number of web pages to which the Zyxel Device did not allow access because they matched the content filtering custom service's forbidden web sites list.
URL Keywords	This is the number of web pages to which the Zyxel Device did not allow access because they contained one of the content filtering custom service's list of forbidden keywords.

6.29 The App Patrol Screen

Application patrol provides a convenient way to manage the use of various applications on the network. It manages general protocols (for example, HTTP and FTP) and instant messenger (IM), peer-to-peer (P2P), Voice over IP (VoIP), and streaming (RSTP) applications. You can even control the use of a particular application's individual features (like text messaging, voice, video conferencing, and file transfers).

Click **Monitor** > **Security Statistics** > **App Patrol** > **Summary** to display the following screen. This screen displays **Application Patrol** statistics based on the **App Patrol** profiles bound to **Security Policy** profiles.

Figure 127 Monitor > Security Statistics > App Patrol > Summary



The following table describes the labels in this screen.

Table 58 Monitor > Security Statistics > App Patrol > Summary

LABEL	DESCRIPTION
Collect Statistics	Select this check box to have the Zyxel Device collect app patrol statistics. The collection starting time displays after you click **Apply**. All of the statistics in this screen are for the time period starting at the time displayed here. The format is year, month, day and hour, minute, second. All of the statistics are erased if you restart the Zyxel Device or click **Flush Data**. Collecting starts over and a new collection start time displays.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

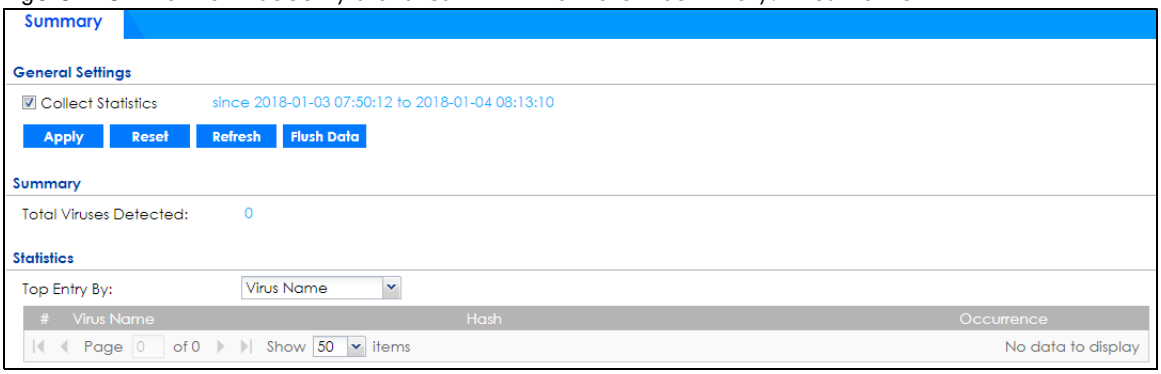
Table 58 Monitor > Security Statistics > App Patrol > Summary

LABEL	DESCRIPTION
Refresh	Click this button to update the report display.
Flush Data	Click this button to discard all of the screen's statistics and update the report display.
App Patrol Statistics	
#	This field is a sequential value, and it is not associated with a specific App Patrol session.
Application	This is the protocol.
Forwarded Data (KB)	This is how much of the application's traffic the Zyxel Device has sent (in kilobytes).
Dropped Data (KB)	This is how much of the application's traffic the Zyxel Device has discarded without notifying the client (in kilobytes). This traffic was dropped because it matched an application policy set to "drop".
Rejected Data (KB)	This is how much of the application's traffic the Zyxel Device has discarded and notified the client that the traffic was rejected (in kilobytes). This traffic was rejected because it matched an application policy set to "reject".
Matched Auto Connection	This is how much of the application's traffic the Zyxel Device identified by examining the IP payload.
Inbound Kbps	This field displays the amount of the application's traffic that has gone to the ZyWALL (in kilo bits per second).
Outbound Kbps	This field displays the amount of the application's traffic that has gone from the ZyWALL (in kilo bits per second).

6.30 The Anti-Malware Screen

Click **Monitor** > **Security Statistics** > **Anti-Malware** > **Summary** to display the following screen. This screen displays anti-malware statistics.

Figure 128 Monitor > Security Statistics > Anti-Malware > Summary: Virus Name



The following table describes the labels in this screen.

Table 59 Monitor > Security Statistics > Anti-Malware > Summary: Virus Name

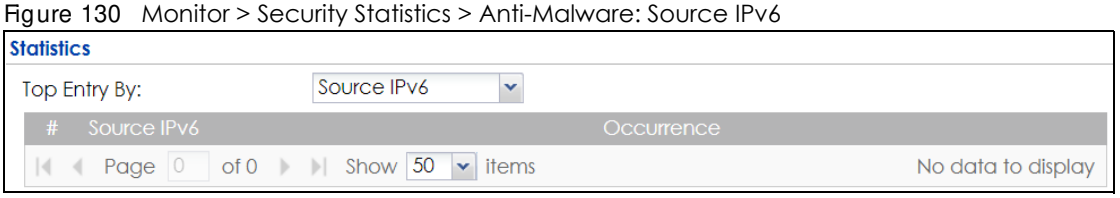
LABEL	DESCRIPTION
Collect Statistics	Select this check box to have the Zyxel Device collect anti-malware statistics. The collection starting time displays after you click **Apply**. All of the statistics in this screen are for the time period starting at the time displayed here. The format is year, month, day and hour, minute, second. All of the statistics are erased if you restart the Zyxel Device or click **Flush Data**. Collecting starts over and a new collection start time displays.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.
Refresh	Click this button to update the report display.
Flush Data	Click this button to discard all of the screen's statistics and update the report display.
Total Viruses Detected	This field displays the number of different viruses that the Zyxel Device has detected.
Top Entries By	Use this field to have the following (read-only) table display the top anti-malware log entries by **Virus Name**, **Source IP**, and **Destination IP**, **Source IPv6** and **Destination IPv6**. This table displays the most common, recent virus logs. See the log screen for less common virus logs or use a syslog server to record all virus logs. Select **Virus Name** to list the most common viruses that the Zyxel Device has detected. Select **Source IP** to list the source IP addresses from which the Zyxel Device has detected the most virus-infected files. Select **Destination IP** to list the most common destination IP addresses for virus-infected files that Zyxel Device has detected. Select **Source IPv6** to list the source IPv6 addresses from which the Zyxel Device has detected the most virus-infected files. Select **Destination IPv6** to list the most common destination IPv6 addresses for virus-infected files that Zyxel Device has detected.
#	This field displays the entry's rank in the list of the top entries.
Virus name	This column displays when you display the entries by **Virus Name**. This displays the name of a detected virus.
Hash	This column displays a hash value, MD5 (Message Digest 5) and SHA (Secure Hash Algorithm), of the detected virus file. MD5 and SHA are hash algorithms used to authenticate packet data.
Source IP	This column displays when you display the entries by **Source IP**. It shows the source IP address of virus-infected files that the Zyxel Device has detected.
Source IPv6	his column displays when you display the entries by **Source IPv6**. It shows the source IPv6 address of virus-infected files that the Zyxel Device has detected.
Destination IP	This column displays when you display the entries by **Destination IP**. It shows the destination IP address of virus-infected files that the Zyxel Device has detected.
Destination IPv6	This column displays when you display the entries by **Destination IPv6**. It shows the destination IPv6 address of virus-infected files that the Zyxel Device has detected.
Occurrences	This field displays how many times the Zyxel Device has detected the event described in the entry.

The statistics display as follows when you display the top entries by source IP.

Figure 129 Monitor > Security Statistics > Anti-Malware > Summary: Source IP

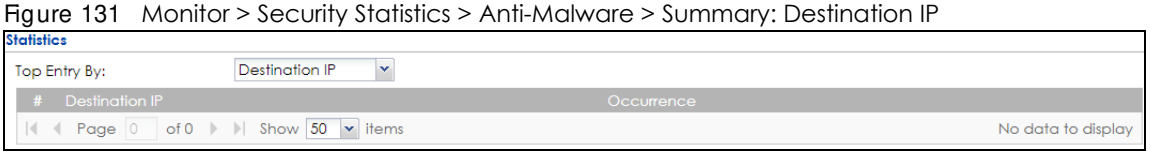
The statistics display as follows when you display the top entries by source IPv6.

Figure 130 Monitor > Security Statistics > Anti-Malware: Source IPv6



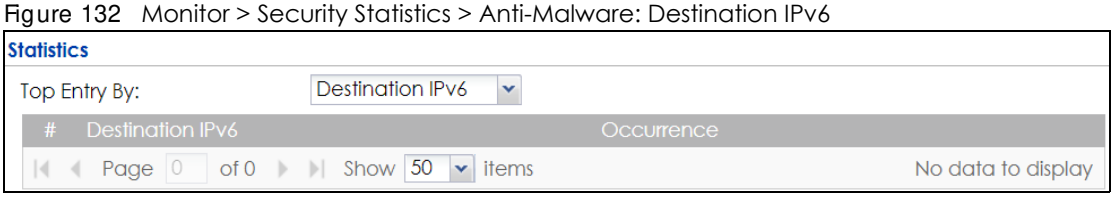
The statistics display as follows when you display the top entries by destination IP.

Figure 131 Monitor > Security Statistics > Anti-Malware > Summary: Destination IP



The statistics display as follows when you display the top entries by destination IPv6.

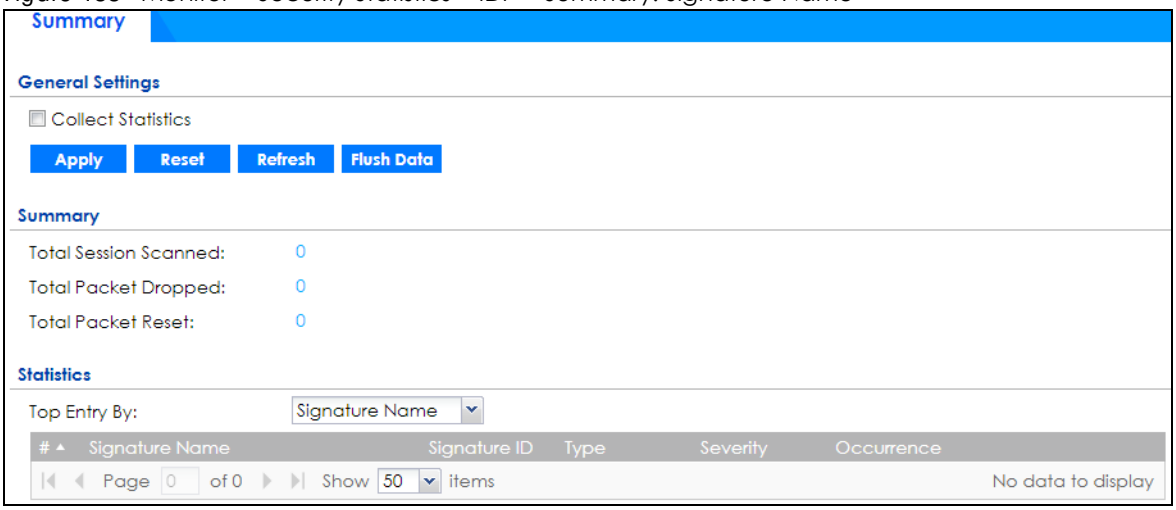
Figure 132 Monitor > Security Statistics > Anti-Malware: Destination IPv6



6.31 The IDP Screen

Click **Monitor** > **Security Statistics** > **IDP** > **Summary** to display the following screen. This screen displays IDP (Intrusion Detection and Prevention) statistics.

Figure 133 Monitor > Security Statistics > IDP > Summary: Signature Name



The following table describes the labels in this screen.

Table 60 Monitor > Security Statistics > IDP > Summary

LABEL	DESCRIPTION
Collect Statistics	Select this check box to have the Zyxel Device collect IDP statistics. The collection starting time displays after you click **Apply**. All of the statistics in this screen are for the time period starting at the time displayed here. The format is year, month, day and hour, minute, second. All of the statistics are erased if you restart the Zyxel Device or click **Flush Data**. Collecting starts over and a new collection start time displays.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.
Refresh	Click this button to update the report display.
Flush Data	Click this button to discard all of the screen's statistics and update the report display.
Total Session Scanned	This field displays the number of sessions that the Zyxel Device has checked for intrusion characteristics.
Total Packet Dropped	The Zyxel Device can detect and drop malicious packets from network traffic. This field displays the number of packets that the Zyxel Device has dropped.
Total Packet Reset	The Zyxel Device can detect and drop malicious packets from network traffic. This field displays the number of packets that the Zyxel Device has reset.
Top Entries By	Use this field to have the following (read-only) table display the top IDP log entries by **Signature Name**, **Source IP** or **Destination IP**. This table displays the most common, recent IDP logs. See the log screen for less common IDP logs or use a syslog server to record all IDP logs. Select **Signature Name** to list the most common signatures that the Zyxel Device has detected. Select **Source IP** to list the source IP addresses from which the Zyxel Device has detected the most intrusion attempts. Select **Destination IP** to list the most common destination IP addresses for intrusion attempts that the Zyxel Device has detected.
#	This field displays the entry's rank in the list of the top entries.
Signature Name	This column displays when you display the entries by **Signature Name**. The signature name identifies the type of intrusion pattern. Click the hyperlink for more detailed information on the intrusion.

Table 60 Monitor > Security Statistics > IDP > Summary (continued)

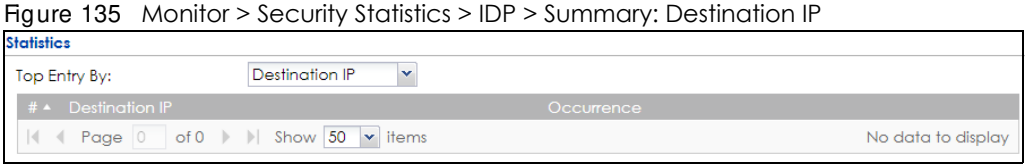
LABEL	DESCRIPTION
Signature ID	This column displays when you display the entries by **Signature Name**. The signature ID is a unique value given to each intrusion detected.
Type	This column displays when you display the entries by **Signature Name**. It shows the categories of intrusions.
Severity	This column displays when you display the entries by **Signature Name**. It shows the level of threat that the intrusions may pose.
Source IP	This column displays when you display the entries by **Source**. It shows the source IP address of the intrusion attempts.
Destination IP	This column displays when you display the entries by **Destination**. It shows the destination IP address at which intrusion attempts were targeted.
Occurrences	This field displays how many times the Zyxel Device has detected the event described in the entry.

The statistics display as follows when you display the top entries by source.

Figure 134 Monitor > Security Statistics > IDP > Summary: Source IP

The statistics display as follows when you display the top entries by destination.

Figure 135 Monitor > Security Statistics > IDP > Summary: Destination IP



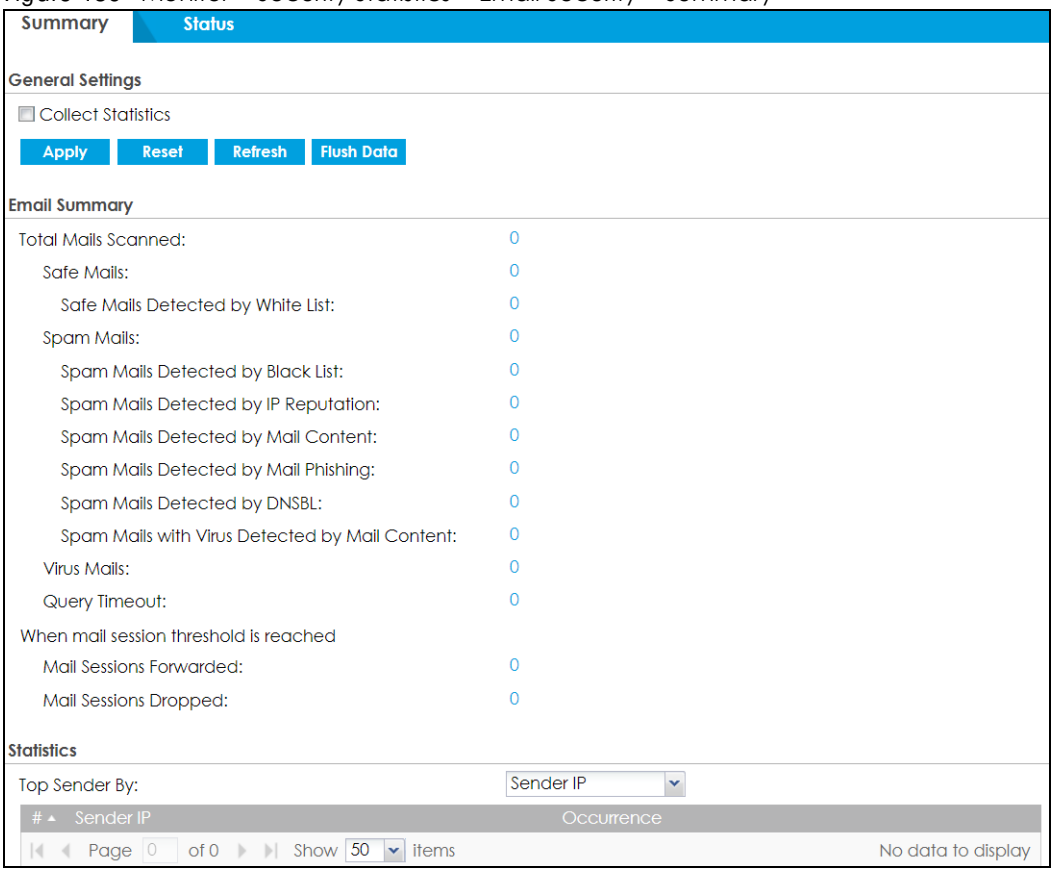
6.32 The Email Security Screens

The **Email Security** menu contains the **Summary** and **Status** screens.

6.32.1 Email Security Summary

Click **Monitor** > **Security Statistics** > **Email Security** > **Summary** to display the following screen. This screen displays spam statistics.

Figure 136 Monitor > Security Statistics > Email Security > Summary



The following table describes the labels in this screen.

Table 61 Monitor > Security Statistics > Email Security > Summary

LABEL	DESCRIPTION
Collect Statistics	Select this check box to have the Zyxel Device collect email security statistics. The collection starting time displays after you click **Apply**. All of the statistics in this screen are for the time period starting at the time displayed here. The format is year, month, day and hour, minute, second. All of the statistics are erased if you restart the Zyxel Device or click **Flush Data**. Collecting starts over and a new collection start time displays.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.
Refresh	Click this button to update the report display.
Flush Data	Click this button to discard all of the screen's statistics and update the report display.
Email Summary	
Total Mails Scanned	This field displays the number of emails that the Zyxel Device's email security feature has checked.
Safe Mails	This is the number of emails that the Zyxel Device has determined to not be spam.
Safe Mails Detected by White list	This is the number of emails that matched an entry in the Zyxel Device's email security white list.
Spam Mails	This is the number of emails that the Zyxel Device has determined to be spam.
Spam Mails Detected by Black List	This is the number of emails that matched an entry in the Zyxel Device's email security black list.

Table 61 Monitor > Security Statistics > Email Security > Summary (continued)

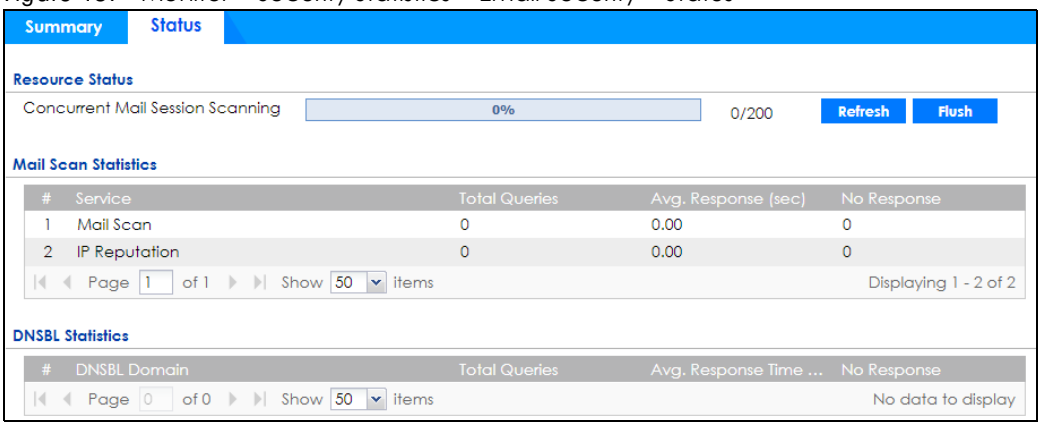
LABEL	DESCRIPTION
Spam Mails Detected by IP Reputation	This is the number of emails that the Zyxel Device has determined to be spam by IP Reputation. Spam or Unwanted Bulk Email is determined by the sender's IP address.
Spam Mails Detected by Mail Content	This is the number of emails that the Zyxel Device has determined to have malicious contents.
Spam Mails Detected by Phishing	This is the number of emails that the Zyxel Device has determined to be spam sent by phishing websites.
Spam Mails Detected by DNSBL	The Zyxel Device can check the sender and relay IP addresses in an email's header against DNS (Domain Name Service)-based spam Black Lists (DNSBLs). This is the number of emails that had a sender or relay IP address in the header which matched one of the DNSBLs that the Zyxel Device uses.
Spam Mails with Virus Detected by Mail Content	This is the number of emails that the Zyxel Device has determined to have malicious contents and attached with virus.
Virus Mails	This is the number of emails that the Zyxel Device has determined to be attached with virus.
Query Timeout	This is how many queries that were sent to the Zyxel Device's configured list of DNSBL domains or Mail Scan services and did not receive a response in time.
When mail session threshold is reached	
Mail Sessions Forwarded	This is how many email sessions the Zyxel Device allowed because they exceeded the maximum number of email sessions that the email security feature can check at a time. You can see the Zyxel Device's threshold of concurrent email sessions in the **Email Security > Status** screen. Use the **Email Security > Summary** screen to set whether the Zyxel Device forwards or drops sessions that exceed this threshold.
Mail Sessions Dropped	This is how many email sessions the Zyxel Device dropped because they exceeded the maximum number of email sessions that the email security feature can check at a time. You can see the Zyxel Device's threshold of concurrent email sessions in the **Email Security > Status** screen. Use the **Email Security > Summary** screen to set whether the Zyxel Device forwards or drops sessions that exceed this threshold.
Statistics	
Top Sender By	Use this field to list the top email or IP addresses from which the Zyxel Device has detected the most spam. Select **Sender IP** to list the source IP addresses from which the Zyxel Device has detected the most spam. Select **Sender Email Address** to list the top email addresses from which the Zyxel Device has detected the most spam.
#	This field displays the entry's rank in the list of the top entries.
Sender IP	This column displays when you display the entries by **Sender IP**. It shows the source IP address of spam emails that the Zyxel Device has detected.
Sender Email Address	This column displays when you display the entries by **Sender Email Address**. This column displays the email addresses from which the Zyxel Device has detected the most spam.
Occurrence	This field displays how many spam emails the Zyxel Device detected from the sender.

6.32.2 The Email Security Status Screen

Click **Monitor > Security Statistics > Email Security > Status** to display the **Email Security Status** screen.

Use the **Email Security Status** screen to see how many email sessions the email security feature is scanning and statistics for the DNSBLs.

Figure 137 Monitor > Security Statistics > Email Security > Status



The following table describes the labels in this screen.

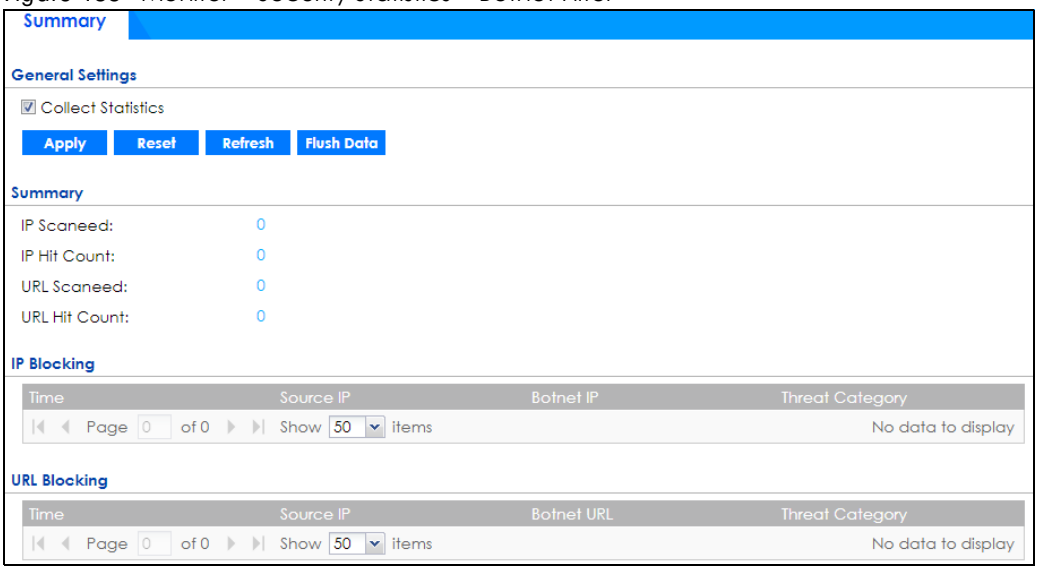
Table 62 Monitor > Security Statistics > Email Security > Status

LABEL	DESCRIPTION
Resource Status	
Concurrent Mail Session Scanning	The darker shaded part of the bar shows how much of the Zyxel Device's total spam checking capability is currently being used. The lighter shaded part of the bar and the pop-up show the historical high. The first number to the right of the bar is how many email sessions the Zyxel Device is presently checking for spam. The second number is the maximum number of email sessions that the Zyxel Device can check at once. An email session is when an email client and email server (or two email servers) connect through the Zyxel Device.
Refresh	Click this button to update the information displayed on this screen.
Flush	Click this button to clear the DNSBL statistics. This also clears the concurrent mail session scanning bar's historical high.
Mail Scan Statistics	These are the statistics for the service the Zyxel Device uses. These statistics are for when the Zyxel Device actually queries the service servers.
#	This is the entry's index number in the list.
Service	This displays the name of the service.
Total Queries	This is the total number of queries the Zyxel Device has sent to this service.
Avg. Response Time (sec)	This is the average for how long it takes to receive a reply from this service.
No Response	This is how many queries the Zyxel Device sent to this service without receiving a reply.
DNSBL Statistics	These are the statistics for the DNSBL the Zyxel Device uses. These statistics are for when the Zyxel Device actually queries the DNSBL servers. Matches for DNSBL responses stored in the cache do not affect these statistics.
#	This is the entry's index number in the list.
DNSBL Domain	These are the DNSBLs the Zyxel Device uses to check sender and relay IP addresses in emails.
Total Queries	This is the total number of DNS queries the Zyxel Device has sent to this DNSBL.
Avg. Response Time (sec)	This is the average for how long it takes to receive a reply from this DNSBL.
No Response	This is how many DNS queries the Zyxel Device sent to this DNSBL without receiving a reply.

6.33 The Botnet Filter Screen

Click **Monitor** > **Security Statistics** > **Botnet Filter** to display the following screen. This screen displays anti-botnet statistics.

Figure 138 Monitor > Security Statistics > Botnet Filter



The following table describes the labels in this screen.

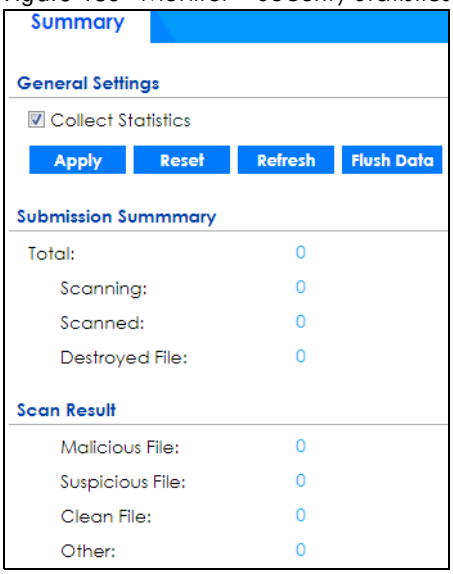
Table 63 Monitor > Security Statistics > Botnet Filter

LABEL	DESCRIPTION
Collect Statistics	Select this check box to have the Zyxel Device collect anti-botnet statistics. The collection starting time displays after you click **Apply**. All of the statistics in this screen are for the time period starting at the time displayed here. The format is year, month, day and hour, minute, second. All of the statistics are erased if you restart the Zyxel Device or click **Flush Data**. Collecting starts over and a new collection start time displays.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.
Refresh	Click this button to update the report display.
Flush Data	Click this button to discard all of the screen's statistics and update the report display.
IP Scanned	This field displays the total number of the IP addresses that are scanned.
IP Hit Count	This field displays the total number of the hit counts on the scanned IP addresses.
URL Scanned	This field displays the total number of the URLs that are scanned.
URL Hit Count	This field displays the total number of the hit counts on the scanned URLs.
Time	This field displays the date and time the entry was created.
Source IP	This field displays the source IP address of traffic that you want to trace.
Botnet IP	This field displays the IP address of a botnet command and control (C&C) server.
Botnet URL	This field displays the URL of an infected website or a botnet C&C server.
Threat Category	This field displays the category of the entry.

6.34 The Sandboxing Screen

Click **Monitor** > **Security Statistics** > **Sandboxing** to display the following screen. This screen displays sandboxing statistics.

Figure 139 Monitor > Security Statistics > Sandboxing



The following table describes the labels in this screen.

Table 64 Monitor > Security Statistics > Sandboxing

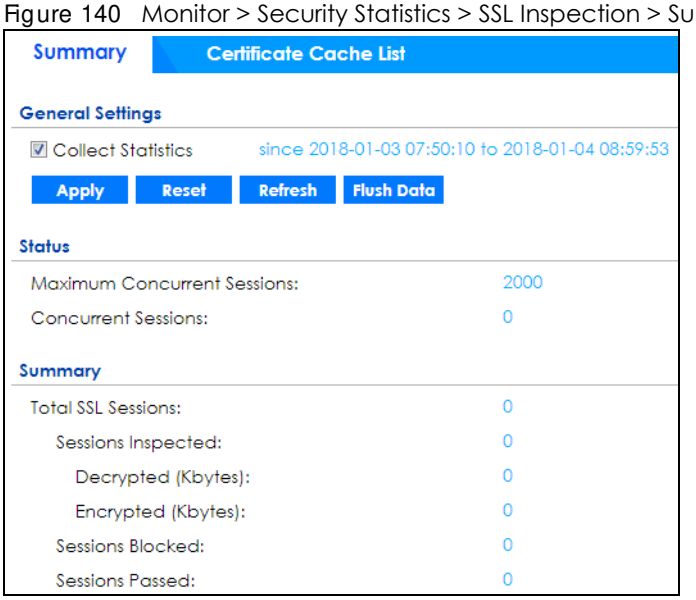
LABEL	DESCRIPTION
Collect Statistics	Select this check box to have the Zyxel Device collect sandboxing statistics. The collection starting time displays after you click **Apply**. All of the statistics in this screen are for the time period starting at the time displayed here. The format is year, month, day and hour, minute, second. All of the statistics are erased if you restart the Zyxel Device or click **Flush Data**. Collecting starts over and a new collection start time displays.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.
Refresh	Click this button to update the report display.
Flush Data	Click this button to discard all of the screen's statistics and update the report display.
Total	This field displays the total number of files that the Zyxel Device sent to a cloud server for analysis.
Scanning	This field displays the total number of files that the Zyxel Device is still scanning.
Scanned	This field displays the total number of files that have been scanned.
Destroyed Files	This shows the number of files that have been destroyed.
Malicious Files	This shows the number of malicious files that have been detected.
Suspicious Files	This shows the number of suspicious files that have been detected.
Safe File	This shows the number of clean files that have been detected.
Other	This shows the number of internal and external networks errors.

6.35 The SSL Inspection Screens

The Zyxel Device uses SSL Inspection to decrypt SSL traffic, sends it to the Security Service engines for inspection, then encrypts traffic that passes inspection and forwards it. You must enable SSL Inspection if you want to use Content Filtering 2.0 Safe Search.

Click **Monitor** > **Security Statistics** > **SSL Inspection** > **Summary** to display the following screen.

Figure 140 Monitor > Security Statistics > SSL Inspection > Summaryt



The following table describes the labels in this screen.

Table 65 Monitor > Security Statistics > SSL Inspection > Summary

LABEL	DESCRIPTION
Collect Statistics	Select this check box to have the Zyxel Device collect SSL Inspection statistics. The collection starting time displays after you click **Apply**. All of the statistics in this screen are for the time period starting at the time displayed here. The format is year, month, day and hour, minute, second. All of the statistics are erased if you restart the Zyxel Device or click **Flush Data**. Collecting starts over and a new collection start time displays.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.
Refresh	Click this button to update the report display.
Flush Data	Click this button to discard all of the screen's statistics and update the report display.
Status	
Maximum Concurrent Sessions	This shows the maximum number of simultaneous SSL Inspection sessions allowed for your Zyxel Device model.
Concurrent Sessions	This shows the actual number of simultaneous SSL Inspection sessions in progress.
Summary	
Total SSL Sessions	This is the total of SSL sessions inspected and number of sessions blocked and number of sessions passed since data was last flushed or the Zyxel Device last rebooted after **Collect Statistics** was enabled.
Sessions Inspected	This shows the total number of SSL sessions inspected since data was last flushed or the Zyxel Device last rebooted after **Collect Statistics** was enabled

Table 65 Monitor > Security Statistics > SSL Inspection > Summary (continued)

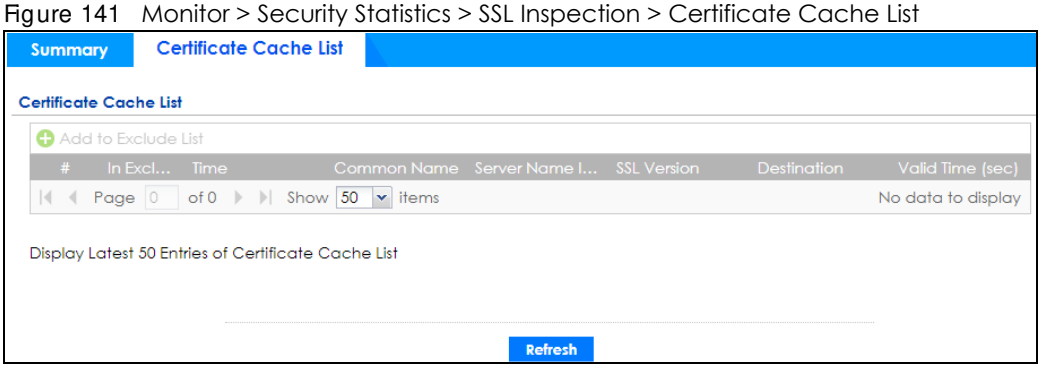
LABEL	DESCRIPTION
Decrypted (Kbytes)	This shows the number of kilobytes (KB) of data that was decrypted for Security Service inspection.
Encrypted (Kbytes)	This shows the number of kilobytes (KB) of data that was re-encrypted after Security Service inspection and then forwarded.
Sessions Blocked	This shows the number of SSL sessions blocked.
Sessions Passed	This shows the number of SSL sessions passed.

6.35.1 Certificate Cache List

SSL traffic to a server to be excluded from SSL Inspection is identified by its certificate. Traffic in an **Exclude List** is not intercepted by **SSL Inspection**.

Click **Monitor** > **Security Statistics** > **SSL Inspection** > **Certificate Cache List** to display a screen that shows details on SSL traffic going to servers identified by its certificate and an option to add that traffic to the **Exclude List**.

Figure 141 Monitor > Security Statistics > SSL Inspection > Certificate Cache List



The following table describes the labels in this screen.

Table 66 Monitor > Security Statistics > SSL Inspection > Certificate Cache List

LABEL	DESCRIPTION
Certificate Cache List	
Add to Exclude list	Select and item in the list and click this icon to add the common name (CN) to the **Exclude List**.
#	This field is a sequential value, and it is not associated with a specific entry.
In Exclude List	If any one of common name, DNS name, email address or IP address of the certificate is in the **Exclude List**, then traffic to the server identified by the certificate is excluded from inspection. The icons here are defined as follows: • Gray: The identity of the certificate is not in the **Exclude List** • Green: The common name of the certificate is in the **Exclude List** • Yellow: The common name of certificate is not in the **Exclude List** but one of the DNS name, email address or IP address is.
Time	This is the latest date (yyyy-mm-dd) and time (hh-mm-ss) that the record in the certificate cache list was met.
Common Name	This displays the common name in the certificate of the SSL traffic destination server.

Table 66 Monitor > Security Statistics > SSL Inspection > Certificate Cache List (continued)

LABEL	DESCRIPTION
Server Name Indication	Server Name Indication (SNI) is the domain name entered in the browser, FTP client, etc. to begin the SSL session with the server. It allows multiple SSL sessions to the same IP address and port number with different certificates from different SNI. This field displays the SNI for this SSL session.
SSL Version	This field shows the SSL version. SSLv3/TLS1.0 is currently supported.
Destination	This displays the IP address and port number of the SSL traffic destination server.
Valid Time	This displays the cache item expiry time in seconds. The cache item is deleted when the remaining time expires.
Refresh	Click this button to update the information in the screen.

6.36 Log Screens

Log messages are stored in two separate logs, one for regular log messages and one for debugging messages. In the regular log, you can look at all the log messages by selecting **All Logs**, or you can select a specific category of log messages (for example, security policy or user). You can also look at the debugging log by selecting **Debug Log**. All debugging messages have the same priority.

6.36.1 View Log

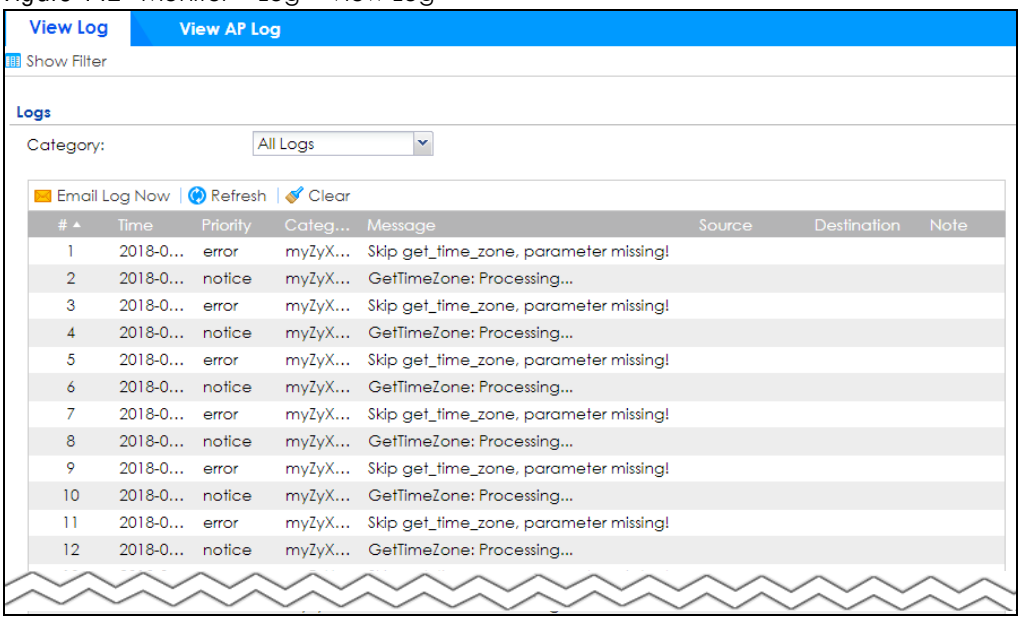
To access this screen, click **Monitor > Log**. The log is displayed in the following screen.

Note: When a log reaches the maximum number of log messages, new log messages automatically overwrite existing log messages, starting with the oldest existing log message first.

- The maximum possible number of log messages in the Zyxel Device varies by model.

Events that generate an alert (as well as a log message) display in red. Regular logs display in black. Click a column's heading cell to sort the table entries by that column's criteria. Click the heading cell again to reverse the sort order. The Web Configurator saves the filter settings if you leave the **View Log** screen and return to it later.

Figure 142 Monitor > Log > View Log



The following table describes the labels in this screen.

Table 67 Monitor > Log > View Log

LABEL	DESCRIPTION
Show (Hide) Filter	Click this button to show or hide criteria that allow you to filter logs that will be displayed. If the filter settings are hidden, the **Category**, **Email Log Now**, **Refresh**, and **Clear** fields are available. If the filter settings are shown, the **Category**, **Priority**, **Source Address**, **Destination Address**, **Source Interface**, **Destination Interface**, **Service**, **Keyword**, **Protocol** and **Search** fields are available.
Category	Select the type of log message(s) you want to view. You can also view **All Logs** at one time, or you can view the **Debug Log**.
Priority	This displays when you show the filter. Select the priority of log messages to display. The log displays the log messages with this priority or higher. Choices are: **any**, **emerg**, **alert**, **crit**, **error**, **warn**, **notice**, and **info**, from highest priority to lowest priority. This field is grayed out if the **Category** is **Debug Log**.
Source Address	This displays when you show the filter. Type the source IP address of the incoming packet that generated the log message. Do not include the port in this filter.
Destination Address	This displays when you show the filter. Type the IP address of the destination of the incoming packet when the log message was generated. Do not include the port in this filter.
Source Interface	This displays when you show the filter. Type the source interface of the incoming packet that generated the log message.
Destination Interface	This displays when you show the filter. Type the interface of the destination of the incoming packet when the log message was generated.
Service	This displays when you show the filter. Select the service whose log messages you would like to see. The Web Configurator uses the protocol and destination port number(s) of the service to select which log messages you see.

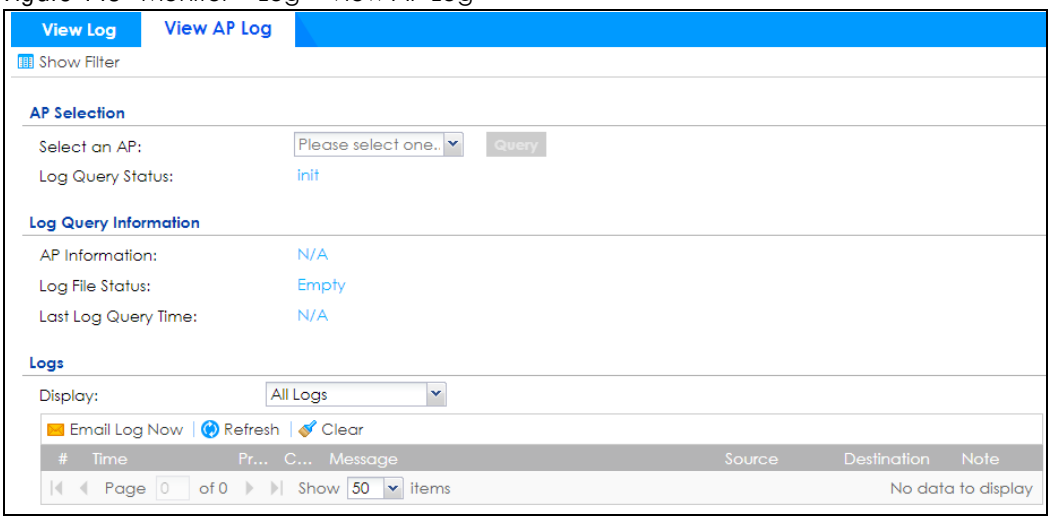
Table 67 Monitor > Log > View Log (continued)

LABEL	DESCRIPTION
Keyword	This displays when you show the filter. Type a keyword to look for in the **Message**, **Source**, **Destination** and **Note** fields. If a match is found in any field, the log message is displayed. You can use up to 63 alphanumeric characters and the underscore, as well as punctuation marks ()' ,.;?! +-*/= #$% @ ; the period, double quotes, and brackets are not allowed.
Protocol	This displays when you show the filter. Select a service protocol whose log messages you would like to see.
Search	This displays when you show the filter. Click this button to update the log using the current filter settings.
Reset	Click **Reset** to return the screen to its last-saved settings.
Email Log Now	Click this button to send log message(s) to the **Active** email address(es) specified in the **Send Log To** field on the **Log Settings** page.
Refresh	Click this button to update the information in the screen.
Clear	Click this button to clear the whole log, regardless of what is currently displayed on the screen.
#	This field is a sequential value, and it is not associated with a specific log message.
Time	This field displays the time the log message was recorded.
Priority	This field displays the priority of the log message. It has the same range of values as the **Priority** field above.
Category	This field displays the log that generated the log message. It is the same value used in the **Category** field above.
Message	This field displays the reason the log message was generated. The text "[count=*x*]", where *x* is a number, appears at the end of the **Message** field if log consolidation is turned on and multiple entries were aggregated to generate into this one.
Source	This field displays the source IP address and the port number in the event that generated the log message.
Destination	This field displays the destination IP address and the port number of the event that generated the log message.
Note	This field displays any additional information about the log message.

6.36.2 View AP Log

Click on **Monitor** > **Log** > **View AP Log** to open the following screen.

Figure 143 Monitor > Log > View AP Log



The following table describes the labels in this screen.

Table 68 Monitor > Log > View AP Log

LABEL	DESCRIPTION
Show Filter	Click this button to show or hide the filter settings. If the filter settings are hidden, the **Display**, **Email Log Now**, **Refresh**, and **Clear** fields are available. If the filter settings are shown, the **Display**, **Priority**, **Source Address**, **Destination Address**, **Source Interface**, **Destination Interface**, **Service**, **Keyword**, **Protocol**, and **Search** fields are available.
Select an AP	Click the pull down menu to choose an AP.
Query	Click Query to create a Query log.
Log Query Status	The field displays the
AP Information	This field displays the AP information. N/A is displayed when
Log File Status	This field displays how many logs are available. It will display Empty if there's none.
Last Log Query Time	This field displays the most recent time a log query was solicited.
Display	Select the category of log message(s) you want to view. You can also view **All Logs** at one time, or you can view the **Debug Log**.
Priority	This displays when you show the filter. Select the priority of log messages to display. The log displays the log messages with this priority or higher. Choices are: **any**, **emerg**, **alert**, **crit**, **error**, **warn**, **notice**, and **info**, from highest priority to lowest priority. This field is read-only if the **Category** is **Debug Log**.
Source Address	Type the IP address of the source AP.
Destination Address	This displays when you show the filter. Type the IP address of the destination of the incoming packet when the log message was generated. Do not include the port in this filter.
Source Interface	This displays when you show the filter. Type the source interface of the incoming packet that generated the log message.
Destination Interface	This displays when you show the filter. Type the interface of the destination of the incoming packet when the log message was generated.
Service	Select a policy service available from Zyxel Device from the pull down menu.
Keyword	Type a keyword of the policy service available from Zyxel Device to search for a log.
Protocol	Select the protocol of the AP from the pull down menu.

Table 68 Monitor > Log > View AP Log (continued)

LABEL	DESCRIPTION
Search	Click this to start the search.
Email Log Now	Click this button to send log message(s) to the **Active** email address(es) specified in the **Send Log To** field on the **Log Settings** page.
Refresh	Click this button to update the information in the screen.
Clear	Click this button to clear the whole log, regardless of what is currently displayed on the screen.
#	This field is a sequential value, and it is not associated with a specific log message.
Time	This field displays the time the log message was recorded.
Priority	This displays when you show the filter. Select the priority of log messages to display. The log displays the log messages with this priority or higher. Choices are: **any**, **emerg**, **alert**, **crit**, **error**, **warn**, **notice**, and **info**, from highest priority to lowest priority. This field is read-only if the **Category** is **Debug Log**.
Category	This field displays the log that generated the log message. It is the same value used in the **Display** and (other) **Category** fields.
Message	This field displays the message of the log.
Source	This displays the source IP address of the selected log message.
Destination	This displays the source IP address of the selected log message.
Note	This field displays any additional information about the log message.

CHAPTER 7
Licensing

7.1 Registration Overview

Use the **Configuration** > **Licensing** > **Registration** screens to register your Zyxel Device and manage its service subscriptions.

- Use the **Registration** screen (see Section 7.1.2 on page 180) to refresh Zyxel Device registration, go to portal.myZyxel.com to register your Zyxel Device and activate a service, such as content filtering.
- Use the **Service** screen (see Section 7.1.3 on page 180) to display the status of your service registrations and upgrade licenses.

7.1.1 What you Need to Know

This section introduces the topics covered in this chapter.

Subscription Services Available

See **Configuration** > **Licensing** > **Registration** > **Service** for the subscription services that your Zyxel Device supports. Zyxel offers two types of security packs for your Zyxel Device. The subscription services you can use on the Zyxel Device vary depending on the security pack license you purchase. See the table below for services available in each pack.

Table 69 Security Packs and Subscription Services

SERVICE MODULE	SERVICE	SILVER SECURITY PACK	GOLD SECURITY PACK
Web Security	Content Filter	V	V
	Botnet Filter		
Application Security	App Patrol	V	V
	Email Security		
Malware Blocker	Anti-Malware	V	V
	Cloud Threat Database		
Intrusion Prevention	IDP	V	V
Geo Enforcer	Geo IP	V	V
Sandboxing	Sandboxing		V
Managed AP Service	Wireless Controller		V (Unlimited)
SecuReporter	SecuReporter		1-Year Standard Service • Unlimited log retention period • Log analysis for 30 days

You can purchase an iCard and enter its license key at myZyxel to extend a service.

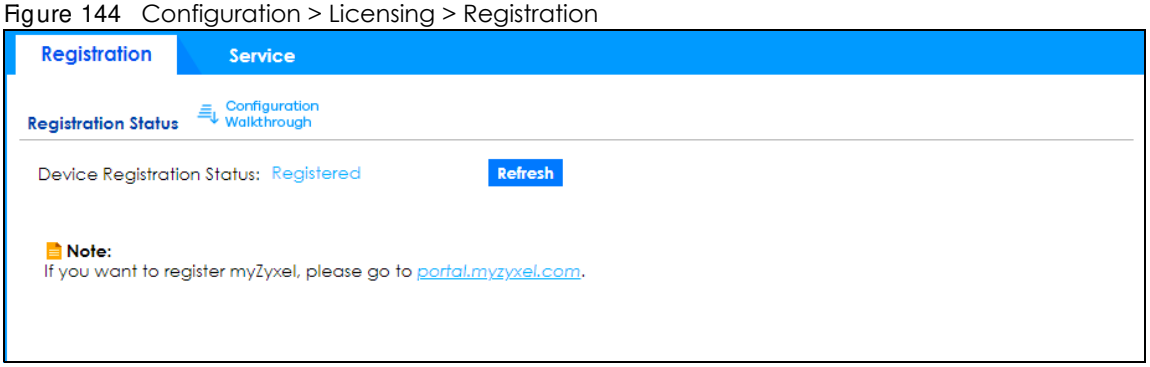
Note: The silver security pack license can be transferred from the Zyxel Device to another device, while the gold security pack license is not transferable.

7.1.2 Registration Screen

Click the link in this screen to register your Zyxel Device at myZyxel. Then click **Refresh** in this screen and wait a few moments for the registration information to update. If the page does not refresh, make sure the Internet connection is working and click **Refresh** again. The Zyxel Device should already have Internet access and be able to access myZyxel. Click **Configuration** > **Licensing** > **Registration** in the navigation panel to open the screen as shown next.

Click on the icon to go to the OneSecurity website where there is guidance on configuration walkthrough and other information.

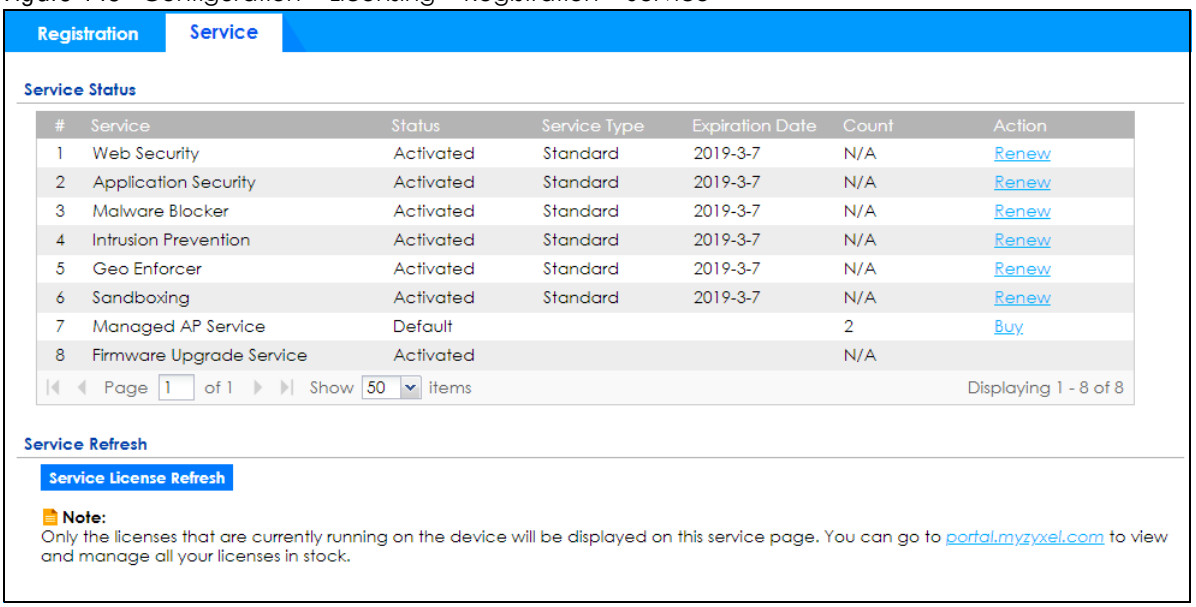
Figure 144 Configuration > Licensing > Registration



7.1.3 Service Screen

Use this screen to display the status of your service registrations and upgrade licenses. To activate or extend a standard service subscription, purchase an iCard and enter the iCard's PIN number (license key) at myZyxel. Click **Activate** in this screen to enable both Trial and Standard services on this Zyxel Device. Click **Configuration** > **Licensing** > **Registration** > **Service** to open the screen as shown next.

Figure 145 Configuration > Licensing > Registration > Service



The following table describes the labels in this screen.

Table 70 Configuration > Licensing > Registration > Service

LABEL	DESCRIPTION
Service Status	
#	This is the entry's position in the list.
Service	This lists the name of services or service modules that are available on the Zyxel Device.
Web Security	This is a license to a database that can block websites by category, such as Gambling.
Application Security	This is a license for signatures for Application Patrol inspection and signatures to recognize unsolicited commercial or junk email suspect of being sent by spammers.
Malware Blocker	This is a license for signatures to detect virus patterns in files.
Intrusion Prevention	This is a license for signatures for Intrusion Detection and Prevention attacks.
Geo Enforcer	This is a license to a database of country-to-IP address mappings.
Sandboxing	This is a license to create a virtual sandboxing environment to separate running programs from your network and host devices.
Managed AP Service	This is a license to manage more APs than the default for your Zyxel Device when the AP controller is enabled.
Firmware Upgrade Service	This is a free license to get Cloud Helper notifications when new firmware is available. You must register your Zyxel Device at myZyxel.
SecuReporter	This is a license that allows SecuReporter to collect and analyze logs from your Zyxel Device in order to identify anomalies, alert on potential internal / external threats, and report on network usage.
Status	This field displays whether a service license is enabled at myZyxel (**Activated**) or not (**Not Activated**) or expired (**Expired**). It displays the remaining Grace Period if your license has **Expired**. It displays **Not Licensed** if there isn't a license to be activated for this service. **Default** displays for quantity-based licenses when the Zyxel Device is currently using the allowed free number without a license. For example, if a Zyxel Device is allowed to manage x number of APs without a license and it is currently using that number, then Managed AP Service **Status** displays **Default**.
Service Type	This field displays whether you applied for a trial application (**Trial**) or registered a service with your iCard's PIN number (**Standard**). This field is blank when a service is not activated.
Expiration Date	This field displays the date your service license expires or the date the grace period expires if the license has already expired. You can continue to use IDP/AppPatrol, Anti-Malware, Content Filter, Email Security during the grace period. After the grace period expires, you cannot use these functions except for the Anti-Malware, and Email Security Black/White lists.
Count	This field displays how many instances of a service you can use with your current license. **N/A** means a count does not apply to this service.
Action	If you need a license or a trial license has expired, click **Buy** to buy a new one. If a **Standard** license has expired, click **Renew** to extend the license. Then, click **Activate** to connect with the myZyxel server to activate the new license.
Service License Refresh	Click this button to renew service license information (such as the registration status and expiration day). Note: It is recommended you use this button after you register for a new service.

7.2 Signature Update

This section shows you how to update the signature packages of the Zyxel Device.

- Use the **Configuration** > **Licensing** > **Signature Update** screen (Section 7.2.2 on page 182) to update the signatures used for a service, such as IDP and application patrol.

7.2.1 What you Need to Know

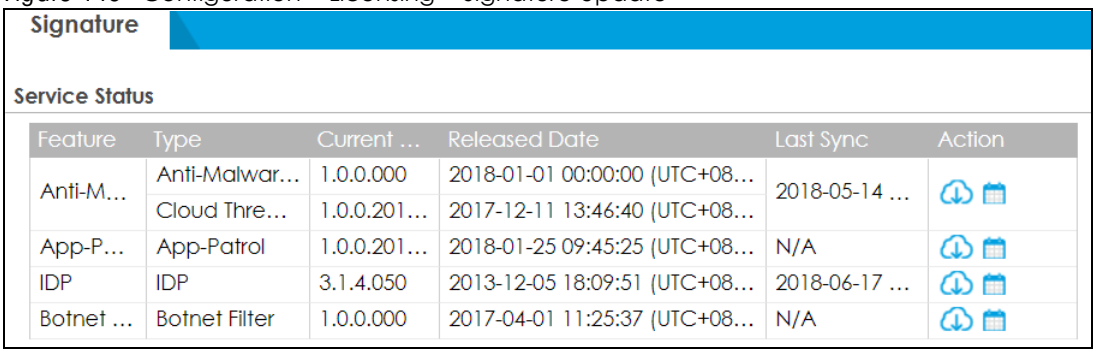
- You need a valid service registration to update the anti-malware signatures, the botnet filer signatures, the IDP signatures and the App-Patrol signatures.
- You do not need a service registration to update the system-protection signatures.
- Schedule signature updates for a day and time when your network is least busy to minimize disruption to your network.
- Your custom signature configurations are not over-written when you download new signatures.

Note: The Zyxel Device does not have to reboot when you upload new signatures.

7.2.2 The Signature Screen

Click **Configuration** > **Licensing** > **Signature Update** to display the following screen.

Figure 146 Configuration > Licensing > Signature Update



The following table describes the labels in this screen.

Table 71 Configuration > Licensing > Signature Update

LABEL	DESCRIPTION
Service Status	The following fields display the status and information on the current signature set that the Zyxel Device is using.
Feature	This field displays the name of the services available on the Zyxel Device.
Type	This field displays the type of service engine used by the Zyxel Device.
Current Version	This field displays the signatures version number currently used by the Zyxel Device. This number gets larger as new signatures are added.
Released Date	This field displays the date and time the set was released.

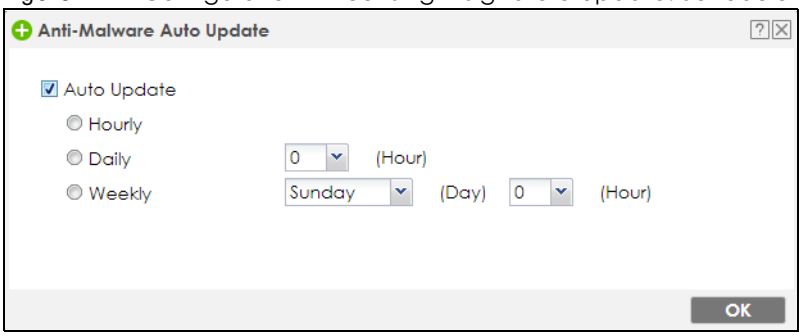
Table 71 Configuration > Licensing > Signature Update (continued)

LABEL	DESCRIPTION
Last Sync	This field displays the date and time the Zyxel Device last checked for new signatures at myZyxel.
Action	Click the **Update** icon to have the Zyxel Device immediately check for new signatures at myZyxel. If new signatures are found, they are then downloaded to the Zyxel Device. Click the **Schedule** icon to have the Zyxel Device automatically check for new signatures regularly at the time and day specified. You should select a time when your network is not busy for minimal interruption.

7.2.3 Auto Update

Click the **Schedule** icon of a service to display the following screen.

Figure 147 Configuration > Licensing > Signature Update: Schedule > Auto Update



The following table describes the labels in this screen.

Table 72 Configuration > Licensing > Signature Update: Schedule > Auto Update

LABEL	DESCRIPTION
Auto Update	Select this check box to have the Zyxel Device automatically check for new signatures regularly at the time and day specified. You should select a time when your network is not busy for minimal interruption.
Hourly	Select this option to have the Zyxel Device check for new signatures every hour.
Daily	Select this option to have the Zyxel Device check for new signatures every day at the specified time. The time format is the 24 hour clock, so '23' means 11 PM for example.
Weekly	Select this option to have the Zyxel Device check for new signatures once a week on the day and at the time specified.
OK	Click this button to save your changes to the Zyxel Device.

CHAPTER 8
Wireless

8.1 Overview

Use the **Wireless** screens to configure how the Zyxel Device manages supported Access Points (APs). Supported APs should be in managed mode. See the product page **Licenses** tab for a list of supported APs.

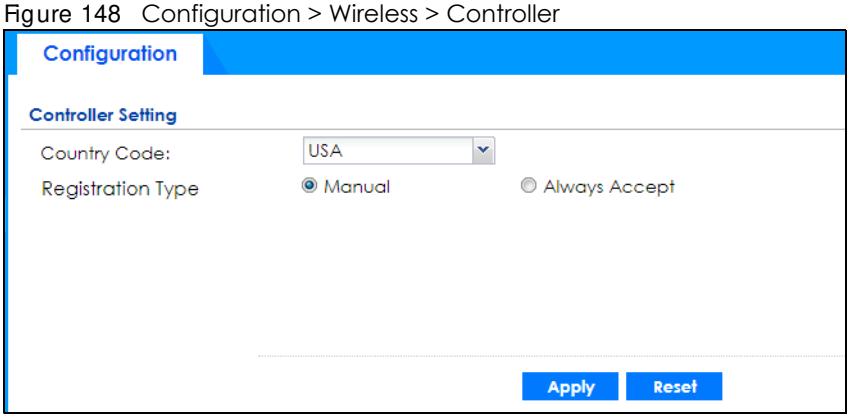
8.1.1 What You Can Do in this Chapter

- Use the **Controller** screen (Section 8.2 on page 184) to set how the Zyxel Device allows new APs to connect to the network and set the country code of APs that are connected to the Zyxel Device.
- Use the **AP Management** screens (Section 8.3 on page 185) to manage all of the APs connected to the Zyxel Device.
- Use the **MON Mode** screen (Section 8.4 on page 197) to assign APs either to the rogue AP list or the friendly AP list.
- Use the **Auto Healing** screen (Section 8.5 on page 200) to extend the wireless service coverage area of the managed APs when one of the APs fails.
- Use the **RTLS** screen (Section 8.6 on page 200) to allow managed APs with battery-powered Wi-Fi tags be part of Ekahau RTLS (Real Time Location Service). RTLS can track the location of APs managed by the Zyxel Device to create maps, alerts, and reports.

8.2 Controller Screen

Use this screen to set how the Zyxel Device allows new APs to connect to the network. Click **Configuration** > **Wireless** > **Controller** to access this screen.

Figure 148 Configuration > Wireless > Controller



Each field is described in the following table.

Table 73 Configuration > Wireless > Controller

LABEL	DESCRIPTION
Country Code	Select the country code of APs that are connected to the Zyxel Device to be the same as where the Zyxel Device is located/installed. The available channels vary depending on the country you selected.
Registration Type	Select **Manual** to add each AP to the Zyxel Device for management, or **Always Accept** to automatically add APs to the Zyxel Device for management. If you select **Manual**, then go to **Monitor** > **Wireless** > **AP Information** > **AP List**, select an AP to be managed and then click **Add to Mgnt AP List**. That AP will then appear in **Configuration** > **Wireless** > **Controller** > **Mgnt. AP List**. Note: Select the **Manual** option for managing a specific set of APs. This is recommended as the registration mechanism cannot automatically differentiate between friendly and rogue APs. APs must be connected to the Zyxel Device by a wired connection or network.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

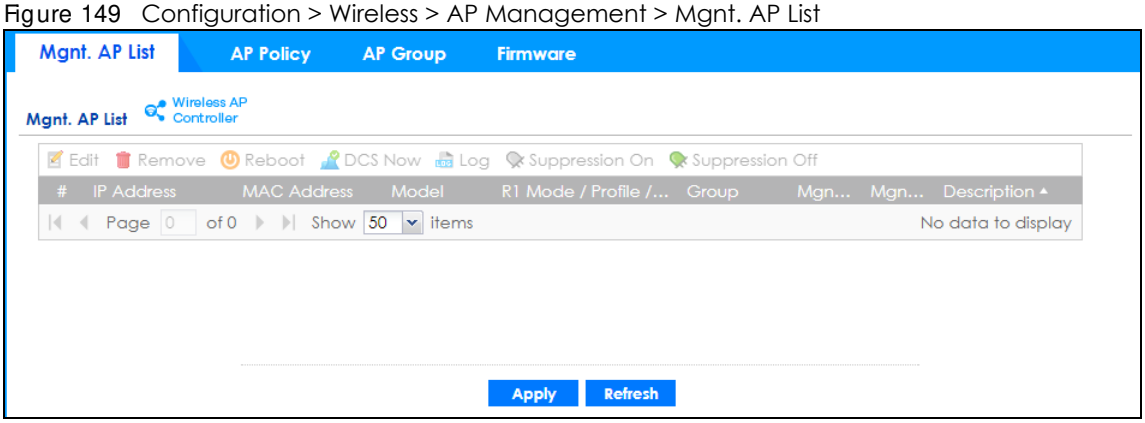
8.3 AP Management Screens

Use these screens to manage all of the APs connected to the Zyxel Device. Click **Configuration** > **Wireless** > **AP Management** to access these screens.

Click on the icon to go to the OneSecurity website where there is guidance on configuration walkthroughs and other information.

8.3.1 Mgnt. AP List

Figure 149 Configuration > Wireless > AP Management > Mgnt. AP List



Each field is described in the following table.

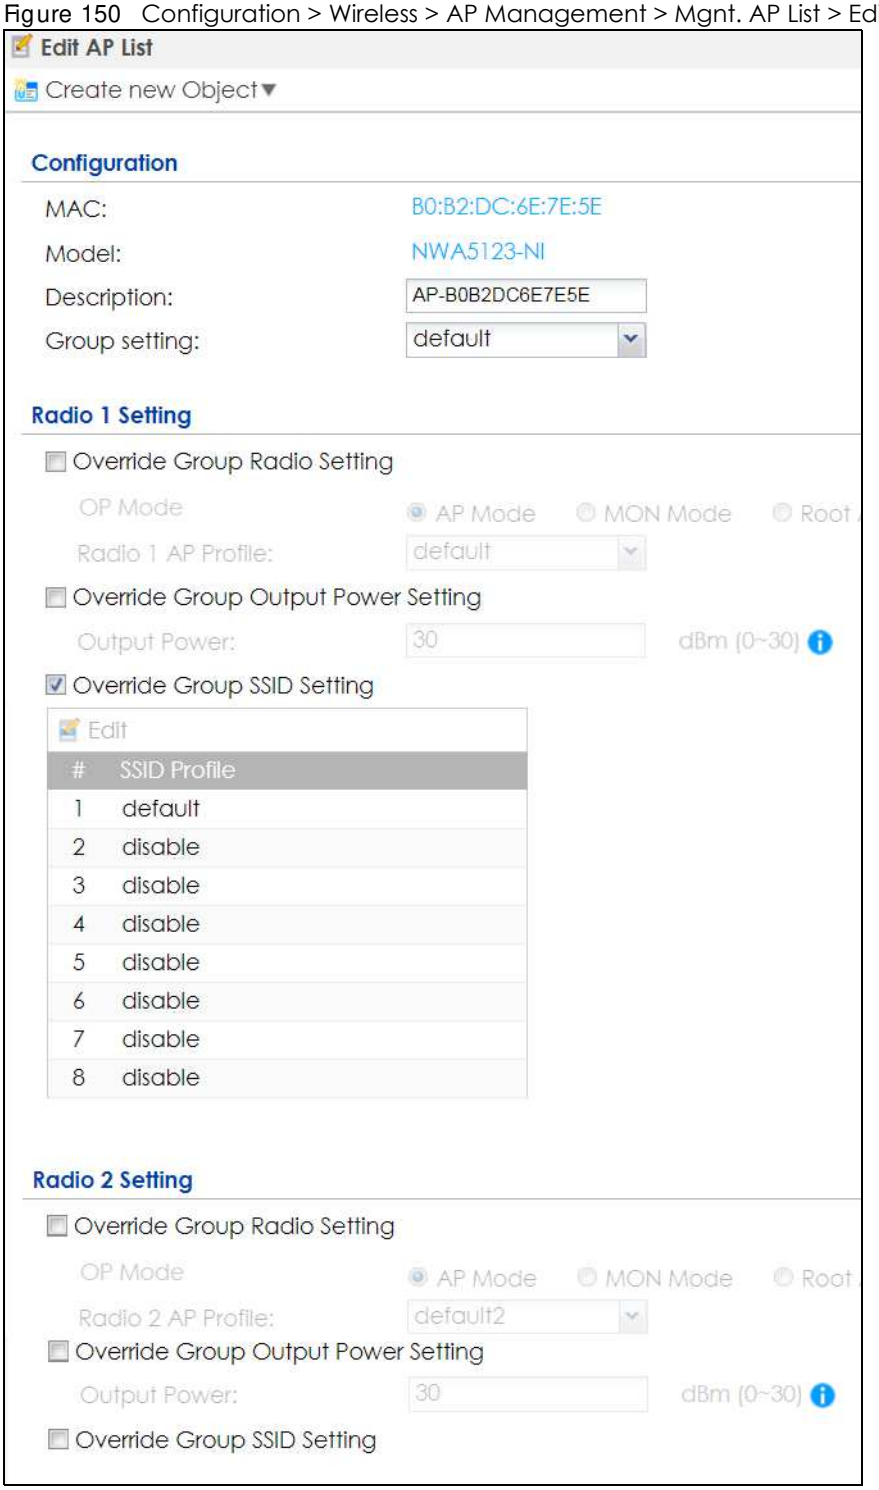
Table 74 Configuration > Wireless > AP Management > Mgnt. AP List

LABEL	DESCRIPTION
Edit	Select an AP and click this button to edit its properties.
Remove	Select an AP and click this button to remove it from the list. Note: If in the **Configuration > Wireless > Controller** screen you set the **Registration Type** to **Always Accept**, then as soon as you remove an AP from this list it reconnects.
Reboot	Select an AP and click this button to force it to restart.
DCS Now	Select one or multiple APs and click this button to use DCS (Dynamic Channel Selection) to allow the AP to automatically find a less-used channel in an environment where there are many APs and there may be interference. Note: You should have enabled DCS in the applied AP radio profile before the APs can use DCS. Note: DCS is not supported on the radio which is working in repeater AP mode.
Log	Select an AP and click this button to go to the **Monitor > Log > View AP Log** screen to view the selected AP's current log messages.
Suppression On	Select an AP and click this button to enable the AP's LED suppression mode. All the LEDs of the AP will turn off after the AP is ready. This button is not available if the selected AP doesn't support suppression mode.
Suppression Off	Select an AP and click this button to disable the AP's LED suppression mode. The AP LEDs stay lit after the AP is ready. This button is not available if the selected AP doesn't support suppression mode.
#	This field is a sequential value, and it is not associated with any entry.
IP Address	This field displays the IP address of the AP.
MAC Address	This field displays the MAC address of the AP.
Model	This field displays the AP's hardware model information. It displays **N/A** (not applicable) only when the AP disconnects from the Zyxel Device and the information is unavailable as a result.
R1 Mode / Profile / ZyMesh Profile	This field displays the operating mode (**AP**, **MON**, **rootap**, or **repeater**), AP radio profile name and ZyMesh profile name for Radio 1. It displays - for the ZyMesh profile for a radio not using a ZyMesh profile.
R2 Mode / Profile / ZyMesh Profile	This field displays the operating mode (**AP**, **MON**, **rootap**, or **repeater**), AP radio profile name and ZyMesh profile name for Radio 2. It displays - for the ZyMesh profile for a radio not using a ZyMesh profile.
Group	This field displays the name of the AP group to which the AP belongs. The group becomes editable immediately upon clicking.
Mgnt. VLAN ID(AC)	This displays the Access Controller (the Zyxel Device) management VLAN ID setting for the AP.
Mgnt. VLAN ID(AP)	This displays the runtime management VLAN ID setting on the AP. **VLAN Conflict** displays if the AP's management VLAN ID does not match the **Mgnt. VLAN ID(AC)**. This field displays **n/a** if the Zyxel Device cannot get VLAN information from the AP.
Description	This field displays the AP's description, which you can configure by selecting the AP's entry and clicking the **Edit** button.

8.3.1.1 Edit AP List

Select an AP and click the **Edit** button in the **Configuration > Wireless > AP Management** table to display this screen.

Figure 150 Configuration > Wireless > AP Management > Mgnt. AP List > Edit AP List



Each field is described in the following table.

Table 75 Configuration > Wireless > AP Management > Mgnt. AP List > Edit AP List

LABEL	DESCRIPTION
Create new Object	Use this menu to create a new **Radio Profile** object to associate with this AP.
MAC	This displays the MAC address of the selected AP.
Model	This field displays the AP's hardware model information. It displays **N/A** (not applicable) only when the AP disconnects from the Zyxel Device and the information is unavailable as a result.
Description	Enter a description for this AP. You can use up to 31 characters, spaces and underscores allowed.
Group Setting	Select an AP group to which you want this AP to belong.
Radio 1/2 Setting	
Override Group Radio Setting	Select this option to overwrite the AP radio settings with the settings you configure here.
OP Mode	Select the operating mode for radio 1 or radio 2. **AP Mode** means the AP can receive connections from wireless clients and pass their data traffic through to the Zyxel Device to be managed (or subsequently passed on to an upstream gateway for managing). **MON Mode** means the AP monitors the broadcast area for other APs, then passes their information on to the Zyxel Device where it can be determined if those APs are friendly or rogue. If an AP is set to this mode it cannot receive connections from wireless clients. **Root AP** means the radio acts as an AP and also supports the wireless connections with other APs (in repeater mode) to form a ZyMesh to extend its wireless network. **Repeater AP** means the radio can establish a wireless connection with other APs (in either root AP or repeater mode). Note: To prevent bridge loops, do NOT set both radios on a managed AP to **Repeater AP** mode. Note: The root AP and repeater AP(s) in a ZyMesh must use the same country code and AP radio profile settings in order to communicate with each other. Note: Ensure you restart the managed AP after you change its operating mode.
Radio 1/2 AP Profile	Select an AP profile from the list. If no profile exists, you can create a new one through the **Create new Object** menu.
Radio 1/2 Profile	Select a monitor profile from the list. If no profile exists, you can create a new one through the **Create new Object** menu.
Radio 1/2 ZyMesh Profile	This field is available only when the radio is in **Root AP** or **Repeater AP** mode. Select the ZyMesh profile the radio uses to connect to a root AP or repeater.
Enable Wireless Bridging	This field is available only when the radio is in **Repeater AP** mode. Select this option to enable wireless bridging on the radio. The managed AP must support LAN provision and the radio should be in repeater mode. VLAN and bridge interfaces are created automatically according to the LAN port's VLAN settings. When wireless bridging is enabled, the managed repeater AP can still transmit data through its Ethernet port(s) after the ZyMesh link is up. Be careful to avoid bridge loops. The managed APs in the same ZyMesh must use the same static VLAN ID.
Override Group Output Power Setting	Select this option to overwrite the AP output power setting with the setting you configure here.

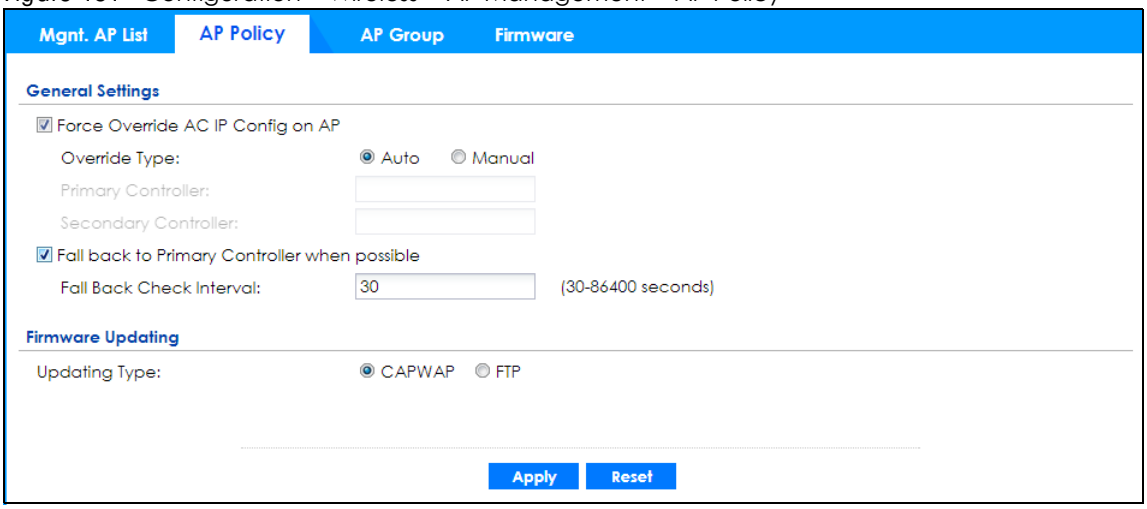
Table 75 Configuration > Wireless > AP Management > Mgnt. AP List > Edit AP List (continued)

LABEL	DESCRIPTION
Output Power	Set the output power of the AP.
Override Group SSID Setting	Select this option to overwrite the AP SSID profile setting with the setting you configure here. This section allows you to associate an SSID profile with the radio.
Edit	Select an SSID and click this button to reassign it. The selected SSID becomes editable immediately upon clicking.
#	This is the index number of the SSID profile. You can associate up to eight SSID profiles with an AP radio.
SSID Profile	Indicates which SSID profile is associated with this radio profile.
Override Group VLAN Setting	Select this option to overwrite the AP VLAN setting with the setting you configure here.
Force Overwrite VLAN Config	Select this to have the Zyxel Device change the AP's management VLAN to match the configuration in this screen.
Management VLAN ID	Enter a VLAN ID for this AP.
As Native VLAN	Select this option to treat this VLAN ID as a VLAN created on the Zyxel Device and not one assigned to it from outside the network.
Suppression On	Select this option to enable the AP's LED suppression mode. All the LEDs of the AP will turn off after the AP is ready. If the check box is unchecked, it means the LEDs will stay lit after the AP is ready.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to close the window with changes unsaved.

8.3.2 AP Policy

Use this screen to configure the AP controller's IP address on the managed APs and determine the action the managed APs take if the current AP controller fails. Click **Configuration** > **Wireless** > **AP Management** > **AP Policy** to access this screen.

Figure 151 Configuration > Wireless > AP Management > AP Policy



Each field is described in the following table.

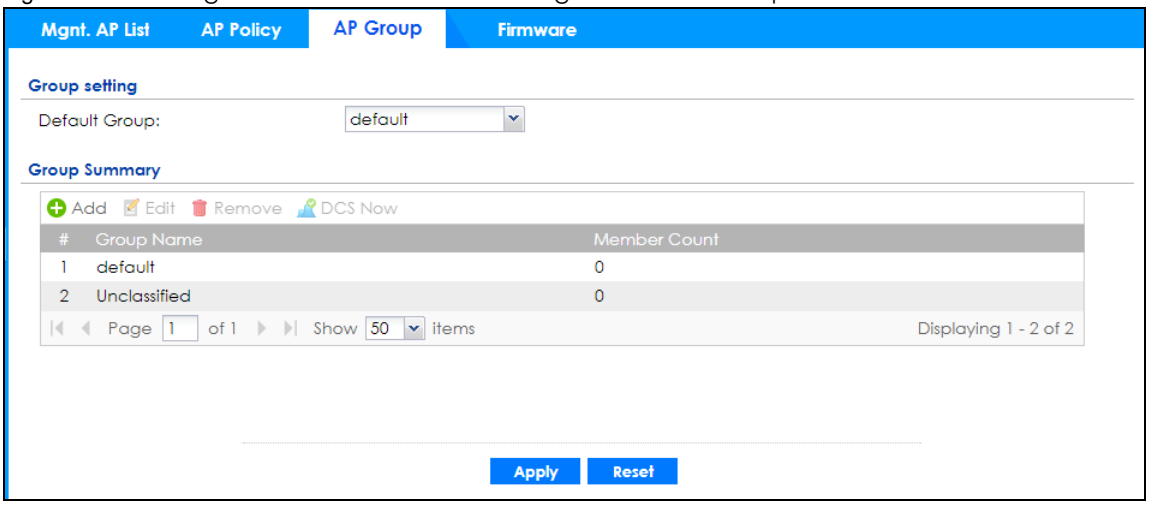
Table 76 Configuration > Wireless > AP Management > AP Policy

LABEL	DESCRIPTION
Force Override AC IP Config on AP	Select this to have the Zyxel Device change the AP controller's IP address on the managed AP(s) to match the configuration in this screen.
Override Type	Select **Auto** to have the managed AP(s) automatically send broadcast packets to find any other available AP controllers. Select **Manual** to replace the AP controller's IP address configured on the managed AP(s) with the one(s) you specified below.
Primary Controller	Specify the IP address of the primary AP controller if you set **Override Type** to **Manual**.
Secondary Controller	Specify the IP address of the secondary AP controller if you set **Override Type** to **Manual**.
Fall back to Primary Controller when possible	Select this option to have the managed AP(s) change back to associate with the primary AP controller as soon as the primary AP controller is available.
Fall Back Check Interval	Set how often the managed AP(s) check whether the primary AP controller is available.
Firmware Updating	
Updating Type	Specify how you want the Zyxel Device to upgrade AP firmware. Select **CAPWAP** to have the Zyxel Device use CAPWAP (Control and Provisioning of Wireless Access Points protocol) to automatically update firmware on the managed APs. Select **FTP** to allow the managed APs to download the latest firmware from the Zyxel Device using FTP.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

8.3.3 AP Group

Use this screen to configure AP groups, which define the radio, port, VLAN and load balancing settings and apply the settings to all APs in the group. An AP can belong to one AP group at a time. Click **Configuration** > **Wireless** > **AP Management** > **AP Group** to access this screen.

Figure 152 Configuration > Wireless > AP Management > AP Group



Each field is described in the following table.

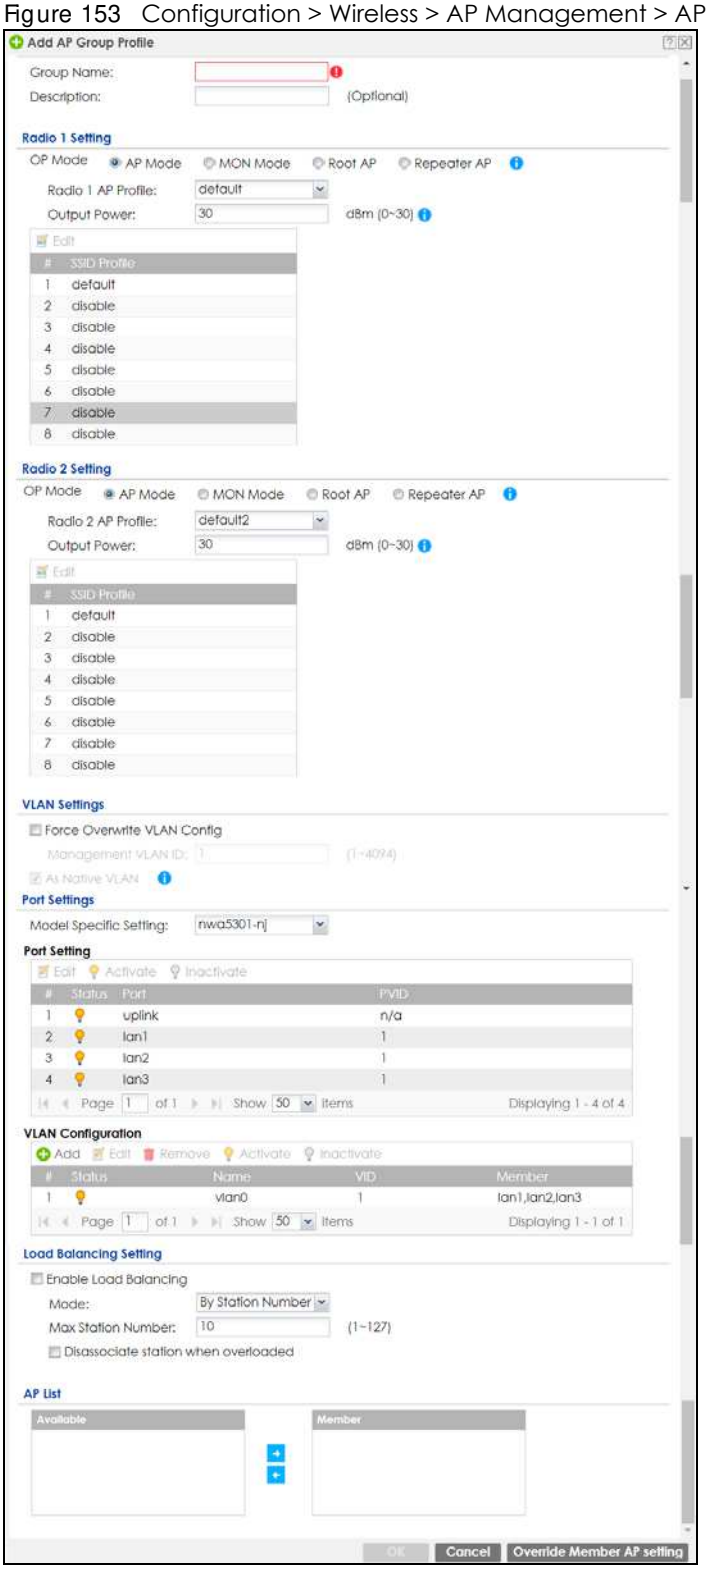
Table 77 Configuration > Wireless > AP Management > AP Group

LABEL	DESCRIPTION
Group Setting	
Default Group	Select a group that is used as the default group. Any AP that is not configured to associate with a specific AP group belongs to the default group automatically.
Group Summary	
Add	Click this button to create a new AP group.
Edit	Select an entry and click this button to edit its properties.
Remove	Select an entry and click this button to remove it from the list. Note: You cannot remove a group with which an AP is associated.
DCS Now	Select one or multiple groups and click this button to use DCS (Dynamic Channel Selection) to allow the APs in the group(s) to automatically find a less-used channel in an environment where there are many APs and there may be interference. Note: You should have enabled DCS in the applied AP radio profile before the APs can use DCS. Note: DCS is not supported on the radio which is working in repeater AP mode.
#	This is the index number of the group in the list.
Group Name	This is the name of the group.
Member Count	This is the total number of APs which belong to this group.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

8.3.3.1 Add/Edit AP Group

Click **Add** or select an AP group and click the **Edit** button in the **Configuration** > **Wireless** > **AP Management** > **AP Group** table to display this screen.

Figure 153 Configuration > Wireless > AP Management > AP Group > Add/Edit



Each field is described in the following table.

Table 78 Configuration > Wireless > AP Management > AP Group > Add/Edit

LABEL	DESCRIPTION
General Settings	
Group Name	Enter a name for this group. You can use up to 31 alphanumeric characters. Dashes and underscores are also allowed. The name should start with a letter.
Description	Enter a description for this group. You can use up to 31 characters, spaces and underscores allowed.
Radio 1/2 Setting	
OP Mode	Select the operating mode for radio 1 or radio 2. **AP Mode** means the AP can receive connections from wireless clients and pass their data traffic through to the Zyxel Device to be managed (or subsequently passed on to an upstream gateway for managing). **MON Mode** means the AP monitors the broadcast area for other APs, then passes their information on to the Zyxel Device where it can be determined if those APs are friendly or rogue. If an AP is set to this mode it cannot receive connections from wireless clients. **Root AP** means the radio acts as an AP and also supports the wireless connections with other APs (in repeater mode) to form a ZyMesh to extend its wireless network. **Repeater AP** means the radio can establish a wireless connection with other APs (in either root AP or repeater mode). Note: To prevent bridge loops, do NOT set both radios on a managed AP to **Repeater AP** mode. Note: The root AP and repeater AP(s) in a ZyMesh must use the same country code and AP radio profile settings in order to communicate with each other. Note: Ensure you restart the managed AP after you change its operating mode.
Radio 1/2 AP Profile	Select an AP profile from the list. If no profile exists, you can create a new one through the **Create new Object** menu.
Radio 1/2 Profile	Select a monitor profile from the list. If no profile exists, you can create a new one through the **Create new Object** menu.
Radio 1/2 ZyMesh Profile	This field is available only when the radio is in **Root AP** or **Repeater AP** mode. Select the ZyMesh profile the radio uses to connect to a root AP or repeater.
Enable Wireless Bridging	This field is available only when the radio is in **Repeater AP** mode. Select this option to enable wireless bridging on the radio. The managed AP must support LAN provision and the radio should be in repeater mode. VLAN and bridge interfaces are created automatically according to the LAN port's VLAN settings. When wireless bridging is enabled, the managed repeater AP can still transmit data through its Ethernet port(s) after the ZyMesh link is up. Be careful to avoid bridge loops. The managed APs in the same ZyMesh must use the same static VLAN ID.
Output Power	Set the maximum output power of the AP. If there is a high density of APs in an area, decrease the output power of the managed AP to reduce interference with other APs. Note: Reducing the output power also reduces the Zyxel Device's effective broadcast radius.
Edit	Select an SSID and click this button to reassign it. The selected SSID becomes editable immediately upon clicking.

Table 78 Configuration > Wireless > AP Management > AP Group > Add/Edit (continued)

LABEL	DESCRIPTION
#	This is the index number of the SSID profile. You can associate up to eight SSID profiles with an AP radio.
SSID Profile	Indicates which SSID profile is associated with this radio profile.
VLAN Settings	
Force Overwrite VLAN Config	Select this to have the Zyxel Device change the AP's management VLAN to match the configuration in this screen.
Management VLAN ID	Enter a VLAN ID for this AP.
As Native VLAN	Select this option to treat this VLAN ID as a VLAN created on the Zyxel Device and not one assigned to it from outside the network.
Port Settings	
Model Specific Setting	Select the model of the managed AP to display the model-specific port and VLAN settings in the tables below.
Port Setting	You can activate or deactivate a non-uplink port.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Activate/Inactivate	To turn on an entry, select it and click **Activate**. To turn off an entry, select it and click **Inactivate**.
#	This is the port's index number in this list.
Status	This displays whether or not the port is activated.
Port	This shows the name of the physical Ethernet port on the managed AP.
PVID	This shows the port's PVID. A PVID (Port VLAN ID) is a tag that adds to incoming untagged frames received on a port so that the frames are forwarded to the VLAN group that the tag defines.
VLAN Configuration	Use **Add** to create a new VLAN Configuration. Select a VLAN Configuration first to use the **Edit**, **Remove**, **Activate** and **Inactivate** buttons.
#	This is the VLAN's index number in this list.
Status	This displays whether or not the VLAN is activated.
Name	This shows the name of the VLAN.
VID	This shows the VLAN ID number.
Member	This field displays the Ethernet port(s) that is a member of this VLAN.
Load Balancing Setting	
Enable Load Balancing	Select this to enable load balancing on the Zyxel Device. Use this section to configure wireless network traffic load balancing between the managed APs in this group. Note: Load balancing is not supported on the radio which is working in root AP or repeater AP mode.

Table 78 Configuration > Wireless > AP Management > AP Group > Add/Edit (continued)

LABEL	DESCRIPTION
Mode	Select a mode by which load balancing is carried out. Select **By Station Number** to balance network traffic based on the number of specified stations connected to an AP. Select **By Traffic Level** to balance network traffic based on the volume generated by the stations connected to an AP. Select **By Smart Classroom** to balance network traffic based on the number of specified stations connected to an AP. The AP ignores association request and authentication request packets from any new station when the maximum number of stations is reached. If you select **By Station Number** or **By Traffic Level**, once the threshold is crossed (either the maximum station numbers or with network traffic), the AP delays association request and authentication request packets from any new station that attempts to make a connection. This allows the station to automatically attempt to connect to another, less burdened AP if one is available.
Max Station Number	Enter the threshold number of stations at which an AP begins load balancing its connections.
Traffic Level	Select the threshold traffic level at which the AP begins load balancing its connections (**Low**, **Medium**, **High**). The maximum bandwidth allowed for each level is: • **Low** - 11 Mbps, • **Medium** - 23 Mbps • **High** - 35M bps
Disassociate station when overloaded	This function is enabled by default and the disassociation priority is always **Signal Strength** when you set **Mode** to **By Smart Classroom**. Select this option to disassociate wireless clients connected to the AP when it becomes overloaded. If you do not enable this option, then the AP simply delays the connection until it can afford the bandwidth it requires, or it transfers the connection to another AP within its broadcast radius. The disassociation priority is determined automatically by the Zyxel Device and is as follows: • **Idle Timeout** - Devices that have been idle the longest will be disassociated first. If none of the connected devices are idle, then the priority shifts to **Signal Strength**. • **Signal Strength** - Devices with the weakest signal strength will be disassociated first. Note: If you enable this function, you should ensure that there are multiple APs within the broadcast radius that can accept any rejected or kicked wireless clients; otherwise, a wireless client attempting to connect to an overloaded AP will be kicked continuously and never be allowed to connect.
AP List	
Available	This lists the APs that do not belong to this group. Select the APs that you want to add to the group you are editing, and click the right arrow button to add them.
Member	This lists the APs that belong to this group. Select any APs that you want to remove from the group, and click the left arrow button to remove them.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to close the window with changes unsaved.
Override Member AP Setting	Click this button to overwrite the settings of all managed APs in this group with the settings you configure here. All **Override Group** check boxes on the **AP Management** > **Mgnt. AP List** > **Edit AP List** screen for the APs in this group will be deselected.

8.3.4 Firmware

The Zyxel Device stores an AP firmware in order to manage supported APs. This screen allows the Zyxel Device to check for and download new AP firmware when it becomes available on the firmware server. All APs managed by the Zyxel Device must have the same firmware version as the AP firmware on the Zyxel Device.

When an AP connects to the Zyxel Device wireless controller, the Zyxel Device will check if the AP has the same firmware version as the AP firmware on the Zyxel Device. If yes, then the Zyxel Device can manage it. If no, then the AP must upgrade (or downgrade) its firmware to be the same version as the AP firmware on the Zyxel Device (and reboot).

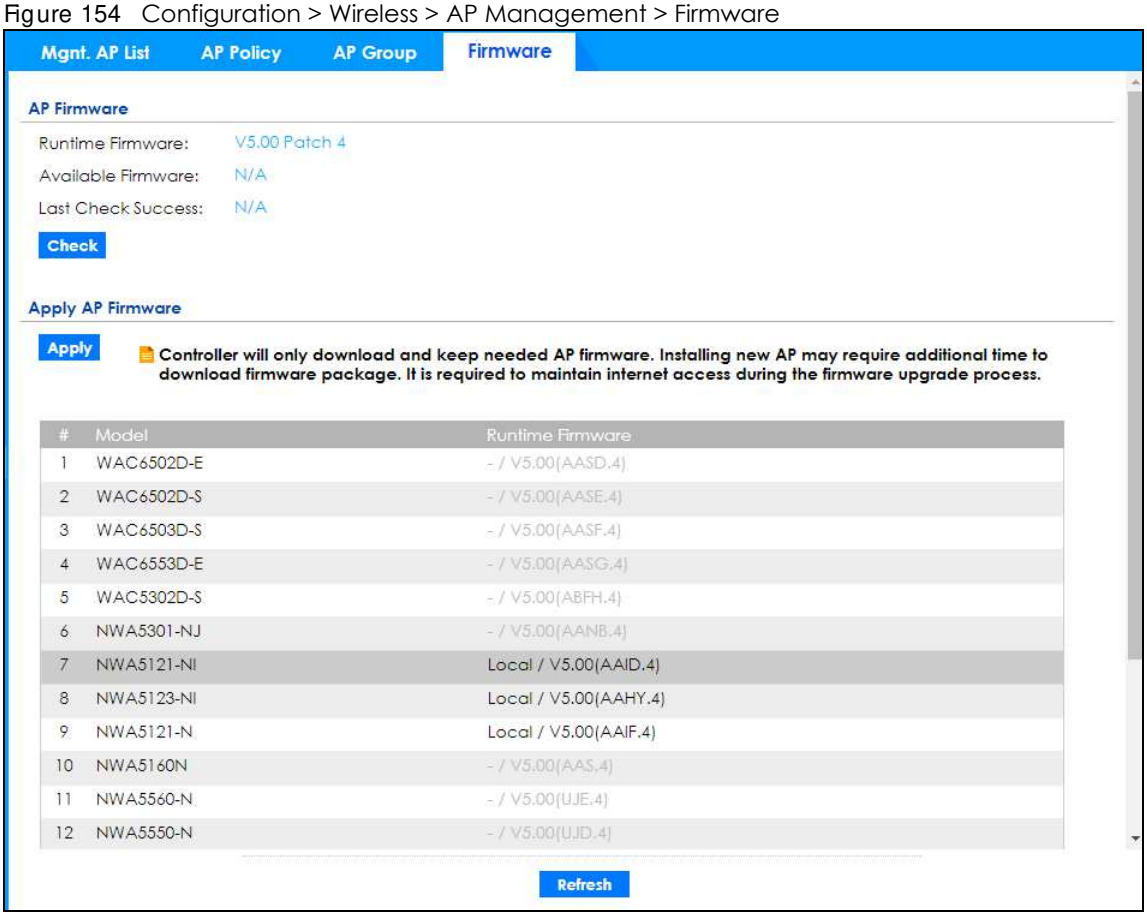
The Zyxel Device should always have the latest AP firmware so that:

- APs don't have to downgrade firmware in order to be managed
- All new APs are supported.

Use **Check** to see if the Zyxel Device has the latest AP firmware. Use **Apply** to have the Zyxel Device download the latest AP firmware (see **More Details** for more information on the firmware) from the firmware server. If the Zyxel Device does not have enough space for the latest AP firmware, then the Zyxel Device will delete an existing firmware that no AP is using before downloading the new AP firmware.

Click **Configuration** > **Wireless** > **AP Management** > **Firmware** to access this screen.

Figure 154 Configuration > Wireless > AP Management > Firmware



Each field is described in the following table.

Table 79 Configuration > Wireless > AP Management > Firmware

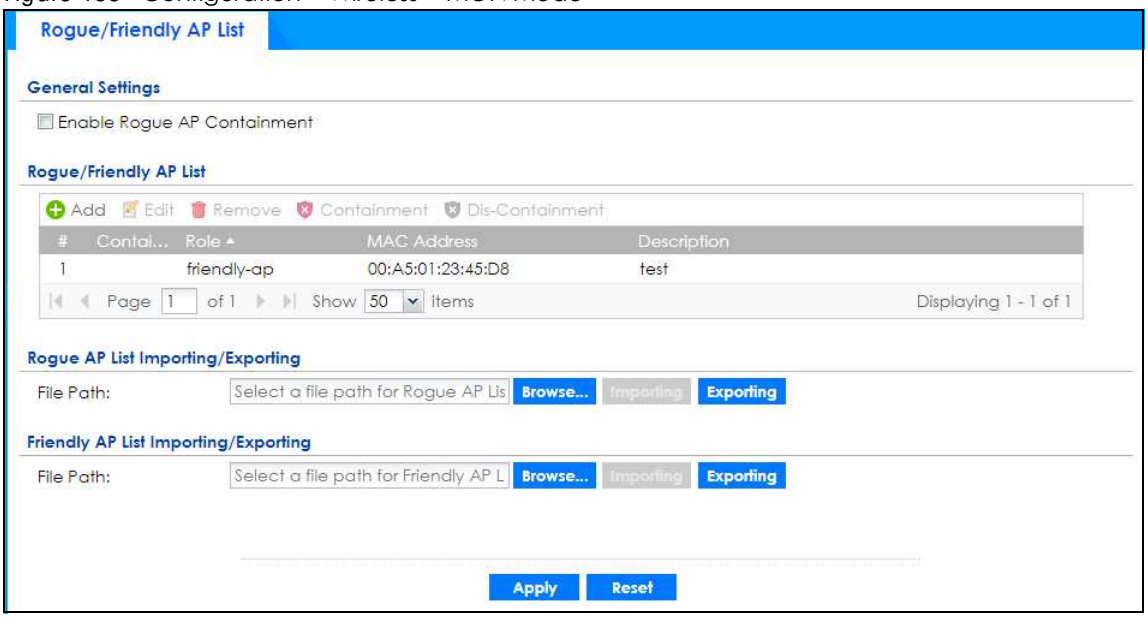
LABEL	DESCRIPTION
AP Firmware	
Runtime Firmware	This displays the current AP firmware version on the Zyxel Device. The Zyxel Device must have the latest AP firmware to manage all supported APs.
Available Firmware	This field displays if there is a later AP firmware version available on the firmware server. It displays **N/A** if the Zyxel Device cannot connect with the firmware server. Check that the Zyxel Device has Internet access if **N/A** displays and then click the **Check** button below. If a newer Zyxel Device AP firmware is available, its version number and a **More Details** icon displays here.
Last Check Success	This displays the date and time the last check for new firmware was made and whether the check is in progress (**checking**), was successful (**success**), or has failed (**fail**).
Check	Click this button to have the Zyxel Device display the latest AP firmware version available on the firmware server.
Apply AP Firmware	Due to space limitations, the Zyxel Device only downloads and keeps AP firmware for APs it is currently managing. If you connect a new AP to the Zyxel Device, the Zyxel Device may need to download a new AP firmware. Please wait while downloading new firmware as the speed depends on your Internet connection speed. Make sure to maintain the Internet connection while downloading new firmware.
Apply	Click this to download newer **Available Firmware** from the firmware server and update the **Runtime Firmware** version.
#	This is an index number of a managed AP.
Model	This displays the name of all manageable AP models.
Runtime Firmware	This displays the firmware version that the managed AP must have in order to be managed by the Zyxel Device. Firmware for APs that the Zyxel Device already has displays in bold; firmware that the Zyxel Device doesn't have or is still downloading is grayed out. Firmware that is in the download queue will show **To be downloaded**.
Refresh	Click this to update the model firmware table.

8.4 MON Mode

Use this screen to assign APs either to the rogue AP list or the friendly AP list. A rogue AP is a wireless access point operating in a network's coverage area that is not under the control of the network administrator, and which can potentially open up holes in a network's security.

Click **Configuration** > **Wireless** > **MON Mode** to access this screen.

Figure 155 Configuration > Wireless > MON Mode



Each field is described in the following table.

Table 80 Configuration > Wireless > MON Mode

LABEL	DESCRIPTION
General Settings	
Enable Rogue AP Containment	Select this to enable rogue AP containment.
Rogue/Friendly AP List	
Add	Click this button to add an AP to the list and assign it either friendly or rogue status.
Edit	Select an AP in the list to edit and reassign its status.
Remove	Select an AP in the list to remove.
Containment	Click this button to quarantine the selected AP. A quarantined AP cannot grant access to any network services. Any stations that attempt to connect to a quarantined AP are disconnected automatically.
Dis-Containment	Click this button to take the selected AP out of quarantine. An unquarantined AP has normal access to the network.
#	This field is a sequential value, and it is not associated with any interface.
Containment	This field indicates the selected AP's containment status.
Role	This field indicates whether the selected AP is a **rogue-ap** or a **friendly-ap**. To change the AP's role, click the **Edit** button.
MAC Address	This field indicates the AP's radio MAC address.
Description	This field displays the AP's description. You can modify this by clicking the **Edit** button.
Rogue/Friendly AP List Importing/Exporting	These controls allow you to export the current list of rogue and friendly APs or import existing lists.
File Path / Browse / Importing	Enter the file name and path of the list you want to import or click the **Browse** button to locate it. Once the **File Path** field has been populated, click **Importing** to bring the list into the Zyxel Device.
Exporting	Click this button to export the current list of either rogue APs or friendly APS.

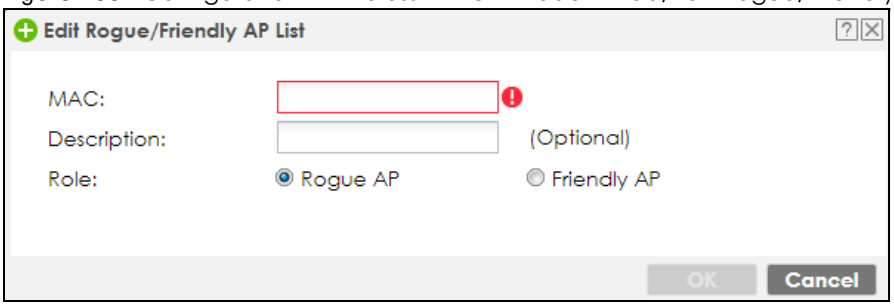
Table 80 Configuration > Wireless > MON Mode (continued)

LABEL	DESCRIPTION
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

8.4.1 Add/Edit Rogue/Friendly List

Select an AP and click the **Edit** button in the **Configuration > Wireless > MON Mode** table to display this screen.

Figure 156 Configuration > Wireless > MON Mode > Add/Edit Rogue/Friendly



Each field is described in the following table.

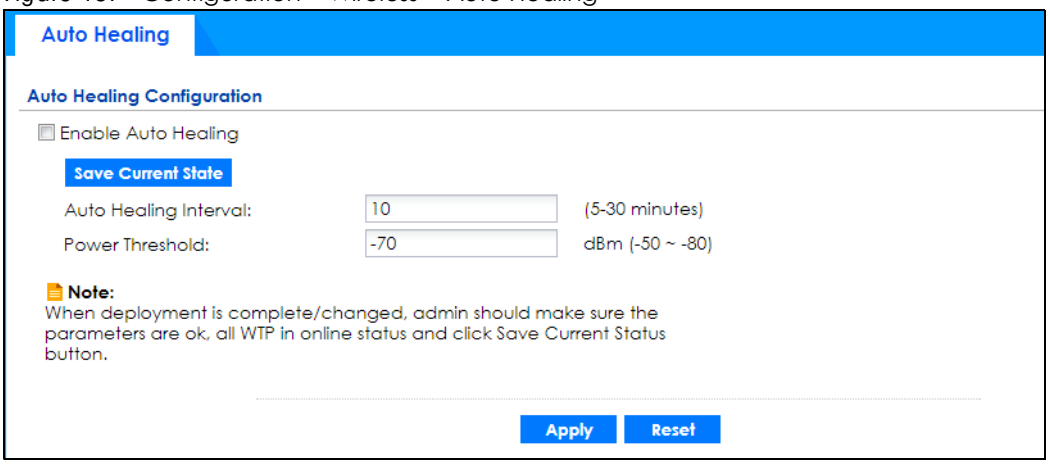
Table 81 Configuration > Wireless > MON Mode > Add/Edit Rogue/Friendly

LABEL	DESCRIPTION
MAC	Enter the MAC address of the AP you want to add to the list. A MAC address is a unique hardware identifier in the following hexadecimal format: xx:xx:xx:xx:xx:xx where xx is a hexadecimal number separated by colons.
Description	Enter up to 60 characters for the AP's description. Spaces and underscores are allowed.
Role	Select either **Rogue AP** or **Friendly AP** for the AP's role.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to close the window with changes unsaved.

8.5 Auto Healing

Use this screen to enable auto healing, which allows you to extend the wireless service coverage area of the managed APs when one of the APs fails. Click **Configuration** > **Wireless** > **Auto Healing** to access this screen.

Figure 157 Configuration > Wireless > Auto Healing



Each field is described in the following table.

Table 82 Configuration > Wireless > Auto Healing

LABEL	DESCRIPTION
Enable Auto Healing	Select this option to turn on the auto healing feature.
Save Current State	Click this button to have all manged APs immediately scan their neighborhoods three times in a row and update their neighbor lists to the AP controller (Zyxel Device).
Auto Healing Interval	Set the time interval (in minutes) at which the managed APs scan their neighborhoods and report the status of neighbor APs to the AP controller (Zyxel Device). An AP is considered "failed" if the AP controller obtains the same scan result that the AP is missing from the neighbor list of other APs three times.
Power Threshold	Set the power level (in dBm) to which the neighbor APs of the failed AP increase their output power in order to extend their wireless service coverage areas. When the failed AP is working again, its neighbor APs return their output power to the original level.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

8.6 RTLS Overview

Ekahau RTLS (Real Time Location Service) tracks battery-powered Wi-Fi tags attached to APs managed by the Zyxel Device to create maps, alerts, and reports.

The Ekahau RTLS Controller is the centerpiece of the RTLS system. This server software runs on a Windows computer to track and locate Ekahau tags from Wi-Fi signal strength measurements. Use the Zyxel

Device with the Ekahau RTLS system to take signal strength measurements at the APs (Integrated Approach / Blink Mode).

The following example shows the Ekahau RTLS Integrated Approach (Blink Mode).

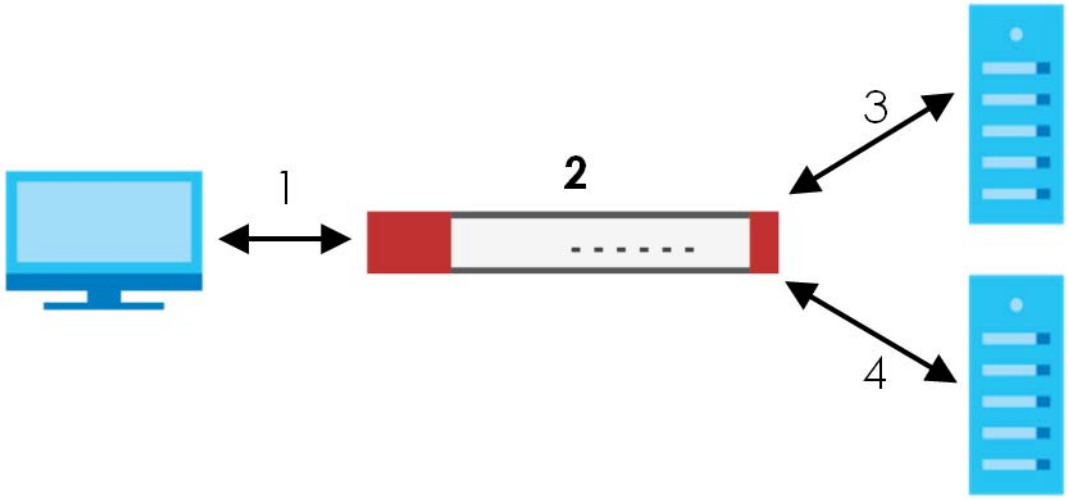
1 The Wi-Fi tag sends blink packets at specified intervals (or triggered by something like motion or button presses).

2 The APs pick up the blink packets, measure the signal strength, and send it to the Zyxel Device.

3 The Zyxel Device forwards the signal measurements to the Ekahau RTLS Controller.

4 The Ekahau RTLS Controller calculates the tag positions.

Figure 158 RTLS Example



8.6.1 What You Can Do in this Chapter

Use the **RTLS** screen (Section 8.6.3 on page 202) to use the managed APs as part of an Ekahau RTLS (Real Time Location Service) to track the location of Ekahau Wi-Fi tags.

8.6.2 Before You Begin

You need:

- At least three APs managed by the Zyxel Device (the more APs the better since it increases the amount of information the Ekahau RTLS Controller has for calculating the location of the tags)
- IP addresses for the Ekahau Wi-Fi tags
- A dedicated RTLS SSID is recommended
- Ekahau RTLS Controller in blink mode with TZSP Updater enabled
- Security policies to allow RTLS traffic if the Zyxel Device security policy control is enabled or the Ekahau RTLS Controller is behind a firewall.

For example, if the Ekahau RTLS Controller is behind a firewall, open ports 8550, 8553, and 8569 to allow traffic the APs send to reach the Ekahau RTLS Controller.

The following table lists default port numbers and types of packets RTLS uses.

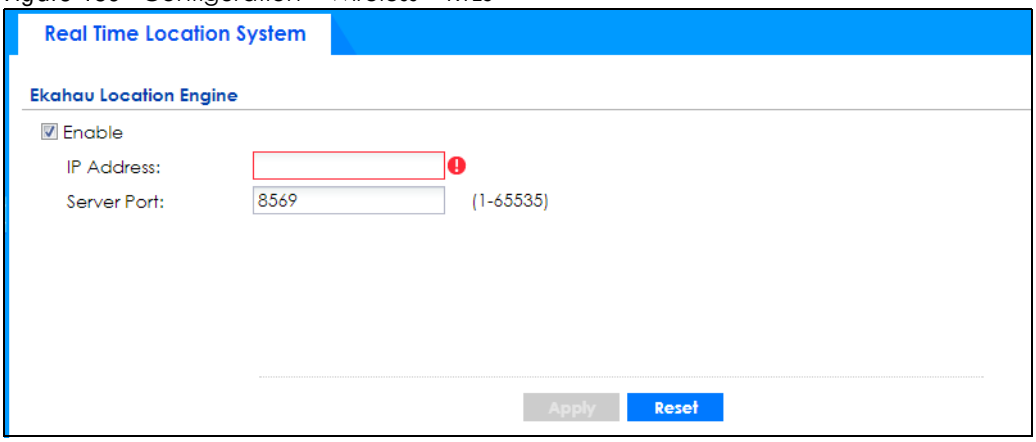
Table 83 RTLS Traffic Port Numbers

PORT NUMBER	TYPE	DESCRIPTION
8548	TCP	Ekahau T201 location update.
8549	UDP	Ekahau T201 location update.
8550	TCP	Ekahau T201 tag maintenance protocol and Ekahau RTLS Controller user interface.
8552	UDP	Ekahau Location Protocol
8553	UDP	Ekahau Maintenance Protocol
8554	UDP	Ekahau T301 firmware update.
8560	TCP	Ekahau Vision web interface
8562	UDP	Ekahau T301W firmware update.
8569	UDP	Ekahau TZSP Listener Port

8.6.3 Configuring RTLS

Click **Configuration** > **Wireless** > **RTLS** to open this screen. Use this screen to turn RTLS (Real Time Location System) on or off and specify the IP address and server port of the Ekahau RTLS Controller.

Figure 159 Configuration > Wireless > RTLS



The following table describes the labels in this screen.

Table 84 Configuration > Wireless > RTLS

LABEL	DESCRIPTION
Enable	Select this to use Wi-Fi to track the location of Ekahau Wi-Fi tags.
IP Address	Specify the IP address of the Ekahau RTLS Controller.
Server Port	Specify the server port number of the Ekahau RTLS Controller.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

8.7 Technical Reference

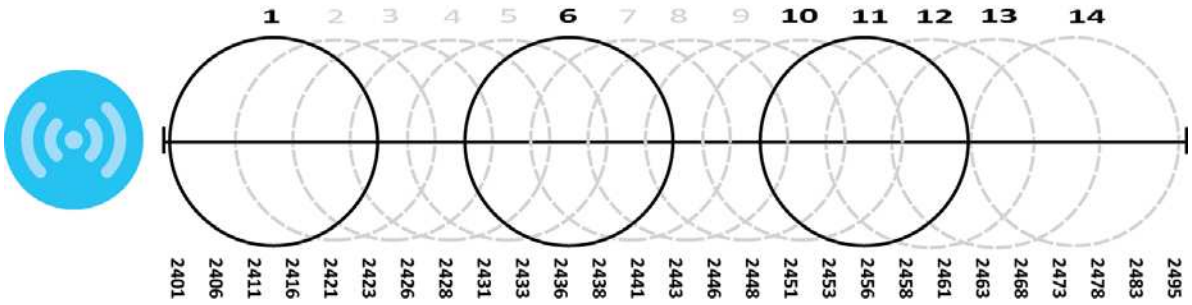
The following section contains additional technical information about wireless features.

8.7.1 Dynamic Channel Selection

When numerous APs broadcast within a given area, they introduce the possibility of heightened radio interference, especially if some or all of them are broadcasting on the same radio channel. If the interference becomes too great, then the network administrator must open his AP configuration options and manually change the channel to one that no other AP is using (or at least a channel that has a lower level of interference) in order to give the connected stations a minimum degree of interference. Dynamic channel selection frees the network administrator from this task by letting the AP do it automatically. The AP can scan the area around it looking for the channel with the least amount of interference.

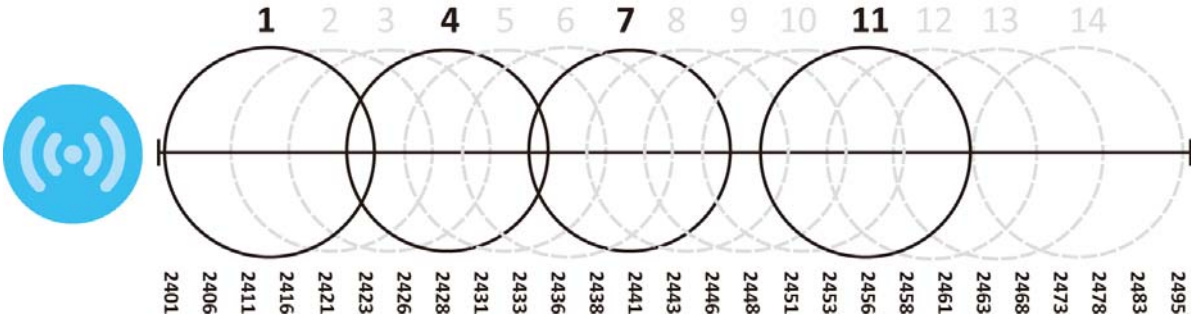
In the 2.4 GHz spectrum, each channel from 1 to 13 is broken up into discrete 22 MHz segments that are spaced 5 MHz apart. Channel 1 is centered on 2.412 GHz while channel 13 is centered on 2.472 GHz.

Figure 160 An Example Three-Channel Deployment



Three channels are situated in such a way as to create almost no interference with one another if used exclusively: 1, 6 and 11. When an AP broadcasts on any of these three channels, it should not interfere with neighboring APs as long as they are also limited to same trio.

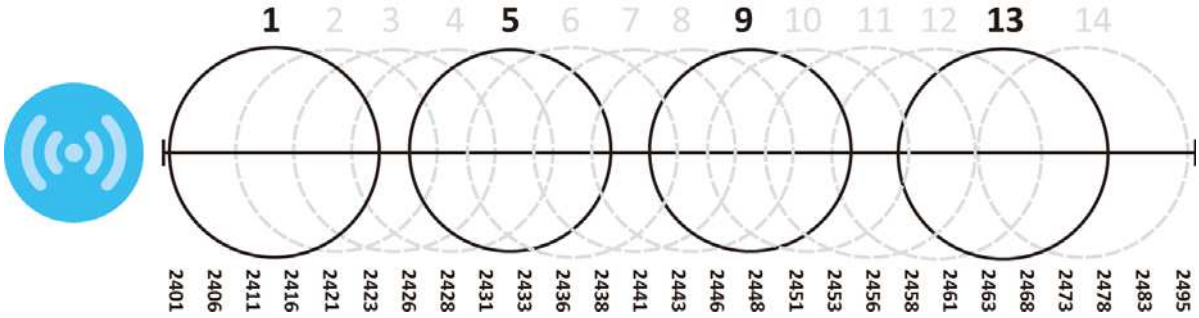
Figure 161 An Example Four-Channel Deployment



However, some regions require the use of other channels and often use a safety scheme with the following four channels: 1, 4, 7 and 11. While they are situated sufficiently close to both each other and the three so-called "safe" channels (1,6 and 11) that interference becomes inevitable, the severity of it is dependent upon other factors: proximity to the affected AP, signal strength, activity, and so on.

Finally, there is an alternative four channel scheme for ETSI, consisting of channels 1, 5, 9, 13. This offers significantly less overlap that the other one.

Figure 162 An Alternative Four-Channel Deployment



8.7.2 Load Balancing

Because there is a hard upper limit on an AP's wireless bandwidth, load balancing can be crucial in areas crowded with wireless users. Rather than let every user connect and subsequently dilute the available bandwidth to the point where each connecting device receives a meager trickle, the load balanced AP instead limits the incoming connections as a means to maintain bandwidth integrity.

There are two kinds of wireless load balancing available on the Zyxel Device:

Load balancing by station number limits the number of devices allowed to connect to your AP. If you know exactly how many stations you want to let connect, choose this option.

For example, if your company's graphic design team has their own AP and they have 10 computers, you can load balance for 10. Later, if someone from the sales department visits the graphic design team's offices for a meeting and he tries to access the network, his computer's connection is delayed, giving it the opportunity to connect to a different, neighboring AP. If he still connects to the AP regardless of the delay, then the AP may boot other people who are already connected in order to associate with the new connection.

Load balancing by traffic level limits the number of connections to the AP based on maximum bandwidth available. If you are uncertain as to the exact number of wireless connections you will have then choose this option. By setting a maximum bandwidth cap, you allow any number of devices to connect as long as their total bandwidth usage does not exceed the configured bandwidth cap associated with this setting. Once the cap is hit, any new connections are rejected or delayed provided that there are other APs in range.

Imagine a coffee shop in a crowded business district that offers free wireless connectivity to its customers. The coffee shop owner can't possibly know how many connections his AP will have at any given moment. As such, he decides to put a limit on the bandwidth that is available to his customers but not on the actual number of connections he allows. This means anyone can connect to his wireless network as long as the AP has the bandwidth to spare. If too many people connect and the AP hits its bandwidth cap then all new connections must basically wait for their turn or get shunted to the nearest identical AP.

CHAPTER 9
Interfaces

9.1 Interface Overview

Use the **Interface** screens to configure the Zyxel Device's interfaces. You can also create interfaces on top of other interfaces.

- **Ports** are the physical ports to which you connect cables.
- **Interfaces** are used within the system operationally. You use them in configuring various features. An interface also describes a network that is directly connected to the Zyxel Device. For example, You connect the LAN network to the LAN interface.
- **Zones** are groups of interfaces used to ease security policy configuration.

9.1.1 What You Can Do in this Chapter

- Use the **Port Role** screen (Section 9.2 on page 210) to create port groups and to assign physical ports and port groups to Ethernet interfaces.
- Use the **Ethernet** screens (Section 9.3 on page 211) to configure the Ethernet interfaces. Ethernet interfaces are the foundation for defining other interfaces and network policies. RIP and OSPF are also configured in these interfaces.
- Use the **PPP** screens (Section 9.4 on page 233) for PPPoE, PPTP or L2TP Internet connections.
- Use the **Cellular** screens (Section 9.5 on page 240) to configure settings for interfaces for Internet connections through an installed mobile broadband card.
- Use the **Tunnel** screens (Section 9.6 on page 249) to configure tunnel interfaces to be used in Generic Routing Encapsulation (GRE), IPv6 in IPv4, and 6to4 tunnels.
- Use the **VLAN** screens (Section 9.7 on page 256) to divide the physical network into multiple logical networks. VLAN interfaces receive and send tagged frames. The Zyxel Device automatically adds or removes the tags as needed. Each VLAN can only be associated with one Ethernet interface.
- Use the **Bridge** screens (Section 9.8 on page 269) to combine two or more network segments into a single network.
- Use the **VTI** screens (Section 9.9 on page 282) to encrypt or decrypt IPv4 traffic from or to the interface according to the IP routing table.
- Use the **Trunk** screens (Section 9.10 on page 287) to configure load balancing.

9.1.2 What You Need to Know

Interface Characteristics

Interfaces generally have the following characteristics (although not all characteristics apply to each type of interface).

- An interface is a logical entity through which (layer-3) packets pass.

- An interface is bound to a physical port or another interface.
- Many interfaces can share the same physical port.
- An interface belongs to at most one zone.
- Many interfaces can belong to the same zone.
- Layer-3 virtualization (IP alias, for example) is a kind of interface.

Types of Interfaces

You can create several types of interfaces in the Zyxel Device.

- Setting interfaces to the same port role forms a port group. Port groups creates a hardware connection between physical ports at the layer-2 (data link, MAC address) level. Port groups are created when you use the **Interface > Port Roles** or **Interface > Port Groups** screen to set multiple physical ports to be part of the same interface.
- **Ethernet interfaces** are the foundation for defining other interfaces and network policies. RIP and OSPF are also configured in these interfaces.
- **Tunnel interfaces** send IPv4 or IPv6 packets from one network to a specific network through the Internet or a public network.
- **VLAN interfaces** receive and send tagged frames. The Zyxel Device automatically adds or removes the tags as needed. Each VLAN can only be associated with one Ethernet interface.
- **Bridge interfaces** create a software connection between Ethernet or VLAN interfaces at the layer-2 (data link, MAC address) level. Unlike port groups, bridge interfaces can take advantage of some security features in the Zyxel Device. You can also assign an IP address and subnet mask to the bridge.
- **PPP interfaces** support Point-to-Point Protocols (PPP). ISP accounts are required for PPPoE/PPTP/L2TP interfaces.
- **Cellular interfaces** are for mobile broadband WAN connections via a connected mobile broadband device.
- **Virtual interfaces** provide additional routing information in the Zyxel Device. There are three types: **virtual Ethernet interfaces**, **virtual VLAN interfaces**, and **virtual bridge interfaces**.
- **Trunk interfaces** manage load balancing between interfaces.

Port groups and trunks have a lot of characteristics that are specific to each type of interface. The other types of interfaces--Ethernet, PPP, cellular, VLAN, bridge, and virtual--have a lot of similar characteristics. These characteristics are listed in the following table and discussed in more detail below.

Table 85 Ethernet, PPP, Cellular, VLAN, Bridge, and Virtual Interface Characteristics

CHARACTERISTICS	ETHERNET	ETHERNET	PPP	CELLULAR	VLAN	BRIDGE	VIRTUAL
Name*	wan1, wan2	lan1, lan2, dmz	ppp*x*	cellular*x*	vlan*x*	br*x*	**
Configurable Zone	No	No	Yes	Yes	Yes	Yes	No
IP Address Assignment							
Static IP address	Yes	Yes	Yes	Yes	Yes	Yes	Yes
DHCP client	Yes	No	Yes	Yes	Yes	Yes	No
Routing metric	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Interface Parameters							

Table 85 Ethernet, PPP, Cellular, VLAN, Bridge, and Virtual Interface Characteristics (continued)

CHARACTERISTICS	ETHERNET	ETHERNET	PPP	CELLULAR	VLAN	BRIDGE	VIRTUAL
Bandwidth restrictions	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Packet size (MTU)	Yes	Yes	Yes	Yes	Yes	Yes	No
DHCP							
DHCP server	No	Yes	No	No	Yes	Yes	No
DHCP relay	No	Yes	No	No	Yes	Yes	No
Connectivity Check	Yes	No	Yes	Yes	Yes	Yes	No

Note: - * The format of interface names other than the Ethernet and ppp interface names is strict. Each name consists of 2-4 letters (interface type), followed by a number (*x*). For most interfaces, x is limited by the maximum number of the type of interface. For VLAN interfaces, x is defined by the number you enter in the VLAN name field. For example, Ethernet interface names are wan1, wan2, lan1, lan2, dmz; VLAN interfaces are vlan0, vlan1, vlan2,...; and so on.

** - The names of virtual interfaces are derived from the interfaces on which they are created. For example, virtual interfaces created on Ethernet interface wan1 are called wan1:1, wan1:2, and so on. Virtual interfaces created on VLAN interface vlan2 are called vlan2:1, vlan2:2, and so on. You cannot specify the number after the colon(:) in the Web Configurator; it is a sequential number. You can specify the number after the colon if you use the CLI to set up a virtual interface.

Relationships Between Interfaces

In the Zyxel Device, interfaces are usually created on top of other interfaces. Only Ethernet interfaces are created directly on top of the physical ports or port groups. The relationships between interfaces are explained in the following table.

Table 86 Relationships Between Different Types of Interfaces

INTERFACE	REQUIRED PORT / INTERFACE
Ethernet interface	physical port
VLAN interface	Ethernet interface
bridge interface	Ethernet interface* VLAN interface*
PPP interface	Ethernet interface* VLAN interface* bridge interface WAN1, WAN2, OPT*

Table 86 Relationships Between Different Types of Interfaces (continued)

INTERFACE	REQUIRED PORT/ INTERFACE
virtual interface	
(virtual Ethernet interface)	Ethernet interface*
(virtual VLAN interface)	VLAN interface*
(virtual bridge interface)	bridge interface
trunk	Ethernet interface
	Cellular interface
	VLAN interface
	bridge interface
	PPP interface

Note: * You cannot set up a PPP interface, virtual Ethernet interface or virtual VLAN interface if the underlying interface is a member of a bridge. You also cannot add an Ethernet interface or VLAN interface to a bridge if the member interface has a virtual interface or PPP interface on top of it.

IPv6 Overview

IPv6 (Internet Protocol version 6), is designed to enhance IP address size and features. The increase in IPv6 address size to 128 bits (from the 32-bit IPv4 address) allows up to 3.4 x 10^{38} IP addresses.

IPv6 Addressing

An 128-bit IPv6 address is written as eight 16-bit hexadecimal blocks separated by colons (:). This is an example IPv6 address `2001:0db8:1a2b:0015:0000:0000:1a2f:0000`.

IPv6 addresses can be abbreviated in two ways:

- Leading zeros in a block can be omitted. So `2001:0db8:1a2b:0015:0000:0000:1a2f:0000` can be written as `2001:db8:1a2b:15:0:0:1a2f:0`.
- Any number of consecutive blocks of zeros can be replaced by a double colon. A double colon can only appear once in an IPv6 address. So `2001:0db8:0000:0000:1a2f:0000:0000:0015` can be written as `2001:0db8::1a2f:0000:0000:0015`, `2001:0db8:0000:0000:1a2f::0015`, `2001:db8::1a2f:0:0:15` or `2001:db8:0:0:1a2f::15`.

Prefix and Prefix Length

Similar to an IPv4 subnet mask, IPv6 uses an address prefix to represent the network address. An IPv6 prefix length specifies how many most significant bits (start from the left) in the address compose the network address. The prefix length is written as "/x" where x is a number. For example,

```
2001:db8:1a2b:15::1a2f:0/32
```

means that the first 32 bits (`2001:db8`) from the left is the network prefix.

Link-local Address

A link-local address uniquely identifies a device on the local network (the LAN). It is similar to a "private IP address" in IPv4. You can have the same link-local address on multiple interfaces on a device. A link-local unicast address has a predefined prefix of fe80::/10. The link-local unicast address format is as follows.

Table 87 Link-local Unicast Address Format

1111 1110 10	0	Interface ID
10 bits	54 bits	64 bits

Subnet Masking

Both an IPv6 address and IPv6 subnet mask compose of 128-bit binary digits, which are divided into eight 16-bit blocks and written in hexadecimal notation. Hexadecimal uses four bits for each character (1 ~ 10, A ~ F). Each block's 16 bits are then represented by four hexadecimal characters. For example, FFFF:FFFF:FFFF:FFFF:FC00:0000:0000:0000.

Stateless Autoconfiguration

With stateless autoconfiguration in IPv6, addresses can be uniquely and automatically generated. Unlike DHCPv6 (Dynamic Host Configuration Protocol version six) which is used in IPv6 stateful autoconfiguration, the owner and status of addresses don't need to be maintained by a DHCP server. Every IPv6 device is able to generate its own and unique IP address automatically when IPv6 is initiated on its interface. It combines the prefix and the interface ID (generated from its own Ethernet MAC address) to form a complete IPv6 address.

When IPv6 is enabled on a device, its interface automatically generates a link-local address (beginning with fe80).

When the Zyxel Device's WAN interface is connected to an ISP with a router and the Zyxel Device is set to automatically obtain an IPv6 network prefix from the router for the interface, it generates another address which combines its interface ID and global and subnet information advertised from the router. (In IPv6, all network interfaces can be associated with several addresses.) This is a routable global IP address.

Prefix Delegation

Prefix delegation enables an IPv6 router (the Zyxel Device) to use the IPv6 prefix (network address) received from the ISP (or a connected uplink router) for its LAN. The Zyxel Device uses the received IPv6 prefix (for example, 2001:db2::/48) to generate its LAN IP address. Through sending Router Advertisements (RAs) regularly by multicast, the router passes the IPv6 prefix information to its LAN hosts. The hosts then can use the prefix to generate their IPv6 addresses.

IPv6 Router Advertisement

An IPv6 router sends router advertisement messages periodically to advertise its presence and other parameters to the hosts in the same network.

DHCPv6

The Dynamic Host Configuration Protocol for IPv6 (DHCPv6, RFC 3315) is a server-client protocol that allows a DHCP server to assign and pass IPv6 network addresses, prefixes and other configuration information to DHCP clients. DHCPv6 servers and clients exchange DHCP messages using UDP.

Each DHCP client and server has a unique DHCP Unique IDentifier (DUID), which is used for identification when they are exchanging DHCPv6 messages. The DUID is generated from the MAC address, time, vendor assigned ID and/or the vendor's private enterprise number registered with the IANA. It should not change over time even after you reboot the device.

9.1.3 What You Need to Do First

For IPv6 settings, go to the **Configuration** > **System** > **IPv6** screen to enable IPv6 support on the Zyxel Device first.

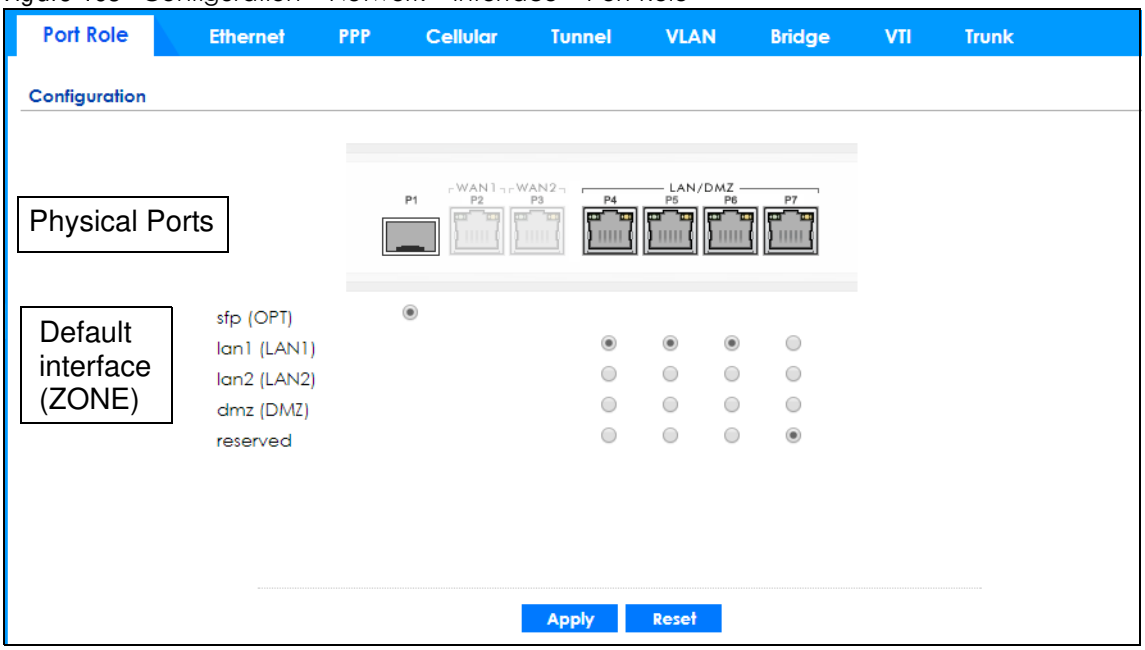
9.2 Port Role

To access this screen, click **Configuration** > **Network** > **Interface** > **Port Role**. Use the **Port Role** screen to set the Zyxel Device's flexible ports as part of the **lan1**, **lan2**, **ext-wlan**, **ext-lan** or **dmz** interfaces. This creates a hardware connection between the physical ports at the layer-2 (data link, MAC address) level. This provides wire-speed throughput but no security.

Note the following if you are configuring from a computer connected to a **lan1**, **lan2**, **ext-wlan**, **ext-lan** or **dmz** port and change the port's role:

- A port's IP address varies as its role changes, make sure your computer's IP address is in the same subnet as the Zyxel Device's **lan1**, **lan2**, **ext-wlan**, **ext-lan** or **dmz** IP address.
- Use the appropriate **lan1**, **lan2**, **ext-wlan**, **ext-lan** or **dmz** IP address to access the Zyxel Device.

Figure 163 Configuration > Network > Interface > Port Role



The physical Ethernet ports are shown at the top and the Ethernet interfaces and zones are shown at the bottom of the screen. Use the radio buttons to select for which interface (network) you want to use each physical port. For example, select a port's LAN radio button to use the port as part of the LAN interface. The port will use the Zyxel Device's LAN IP address and MAC address.

When you assign more than one physical port to a network, you create a port group. Port groups have the following characteristics:

- There is a layer-2 Ethernet switch between physical ports in the port group. This provides wire-speed throughput but no security.
- It can increase the bandwidth between the port group and other interfaces.
- The port group uses a single MAC address.

Click **Apply** to save your changes and apply them to the Zyxel Device.

Click **Reset** to change the port groups to their current configuration (last-saved values).

9.3 Ethernet Summary Screen

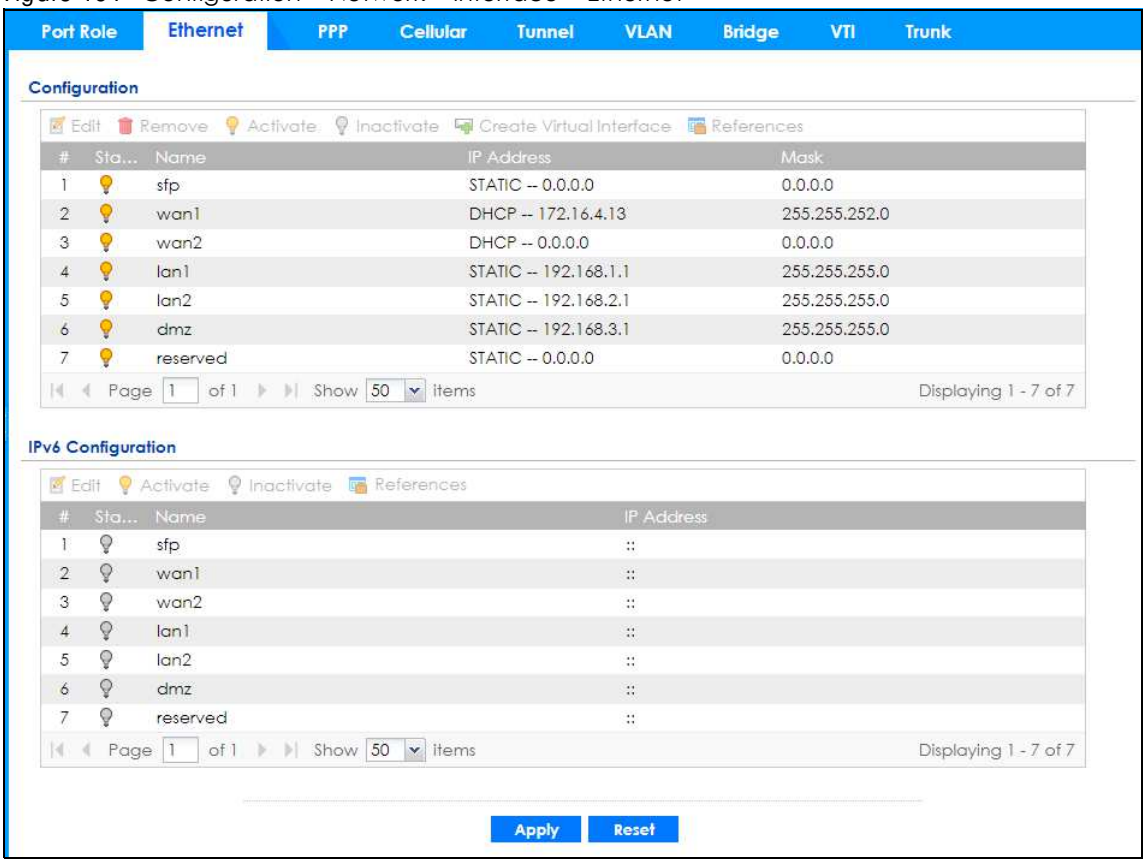
This screen lists every Ethernet interface and virtual interface created on top of Ethernet interfaces. If you enabled IPv6 in the **Configuration** > **System** > **IPv6** screen, you can also configure Ethernet interfaces used for your IPv6 networks on this screen. To access this screen, click **Configuration** > **Network** > **Interface** > **Ethernet**.

Unlike other types of interfaces, you cannot create new Ethernet interfaces nor can you delete any of them. If an Ethernet interface does not have any physical ports assigned to it, the Ethernet interface is effectively removed from the Zyxel Device, but you can still configure it.

Ethernet interfaces are similar to other types of interfaces in many ways. They have an IP address, subnet mask, and gateway used to make routing decisions. They restrict the amount of bandwidth and packet size. They can provide DHCP services, and they can verify the gateway is available.

Use Ethernet interfaces to control which physical ports exchange routing information with other routers and how much information is exchanged through each one. The more routing information is exchanged, the more efficient the routers should be. However, the routers also generate more network traffic, and some routing protocols require a significant amount of configuration and management. The Zyxel Device supports the following routing protocols: RIP, OSPF and BGP. See Chapter 10 on page 310 for background information about these routing protocols.

Figure 164 Configuration > Network > Interface > Ethernet



Each field is described in the following table.

Table 88 Configuration > Network > Interface > Ethernet

LABEL	DESCRIPTION
Configuration / IPv6 Configuration	Use the **Configuration** section for IPv4 network settings. Use the **IPv6 Configuration** section for IPv6 network settings if you connect your Zyxel Device to an IPv6 network. Both sections have similar fields as described below.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove a virtual interface, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an interface, select it and click **Activate**.
Inactivate	To turn off an interface, select it and click **Inactivate**.
Create Virtual Interface	To open the screen where you can create a virtual Ethernet interface, select an Ethernet interface and click **Create Virtual Interface**.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
#	This field is a sequential value, and it is not associated with any interface.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Name	This field displays the name of the interface.

Table 88 Configuration > Network > Interface > Ethernet (continued)

LABEL	DESCRIPTION
IP Address	This field displays the current IP address of the interface. If the IP address is 0.0.0.0 (in the IPv4 network) or :: (in the IPv6 network), the interface does not have an IP address yet. In the IPv4 network, this screen also shows whether the IP address is a static IP address (STATIC) or dynamically assigned (DHCP). IP addresses are always static in virtual interfaces. In the IPv6 network, this screen also shows whether the IP address is a static IP address (STATIC), link-local IP address (LINK LOCAL), dynamically assigned (DHCP), or an IPv6 StateLess Address AutoConfiguration IP address (SLAAC). See Section 9.1.2 on page 205 for more information about IPv6.
Mask	This field displays the interface's subnet mask in dot decimal notation.
Apply	Click Apply to save your changes back to the Zyxel Device.
Reset	Click Reset to return the screen to its last-saved settings.

9.3.1 Ethernet Edit

The Ethernet Edit screen lets you configure IP address assignment, interface parameters, RIP settings, OSPF settings, DHCP settings, connectivity check, and MAC address settings. To access this screen, click an Edit icon in the Ethernet Summary screen. (See Section 9.3 on page 211.)

The OPT interface's Edit > Configuration screen is shown here as an example. The screens for other interfaces are similar and contain a subset to the OPT interface screen's fields.

Note: If you create IP address objects based on an interface's IP address, subnet, or gateway, the Zyxel Device automatically updates every rule or setting that uses the object whenever the interface's IP address settings change. For example, if you change the VLAN's IP address, the Zyxel Device automatically updates the corresponding interface-based, LAN subnet address object.

With RIP, you can use Ethernet interfaces to do the following things.

- Enable and disable RIP in the underlying physical port or port group.
- Select which direction(s) routing information is exchanged - The Zyxel Device can receive routing information, send routing information, or do both.
- Select which version of RIP to support in each direction - The Zyxel Device supports RIP-1, RIP-2, and both versions.
- Select the broadcasting method used by RIP-2 packets - The Zyxel Device can use subnet broadcasting or multicasting.

With OSPF, you can use Ethernet interfaces to do the following things.

- Enable and disable OSPF in the underlying physical port or port group.
- Select the area to which the interface belongs.
- Override the default link cost and authentication method for the selected area.
- Select in which direction(s) routing information is exchanged - The Zyxel Device can receive routing information, send routing information, or do both.

Set the priority used to identify the DR or BDR if one does not exist.

9.3.1.1 IGMP Proxy

Internet Group Management Protocol (IGMP) proxy is used for multicast routing. IGMP proxy enables the Zyxel Device to issue IGMP host messages on behalf of hosts that the Zyxel Device discovered on its IGMP-enabled interfaces. The Zyxel Device acts as a proxy for its hosts. Refer to the following figure.

- DS: Downstream traffic
- US: Upstream traffic
- R: Router
- MS: Multicast Server
- Enable IGMP Upstream (US) on the Zyxel Device interface that connects to a router (R) running IGMP that is closer to the multicast server (MS).
- Enable IGMP Downstream on the Zyxel Device interface which connects to the multicast hosts.

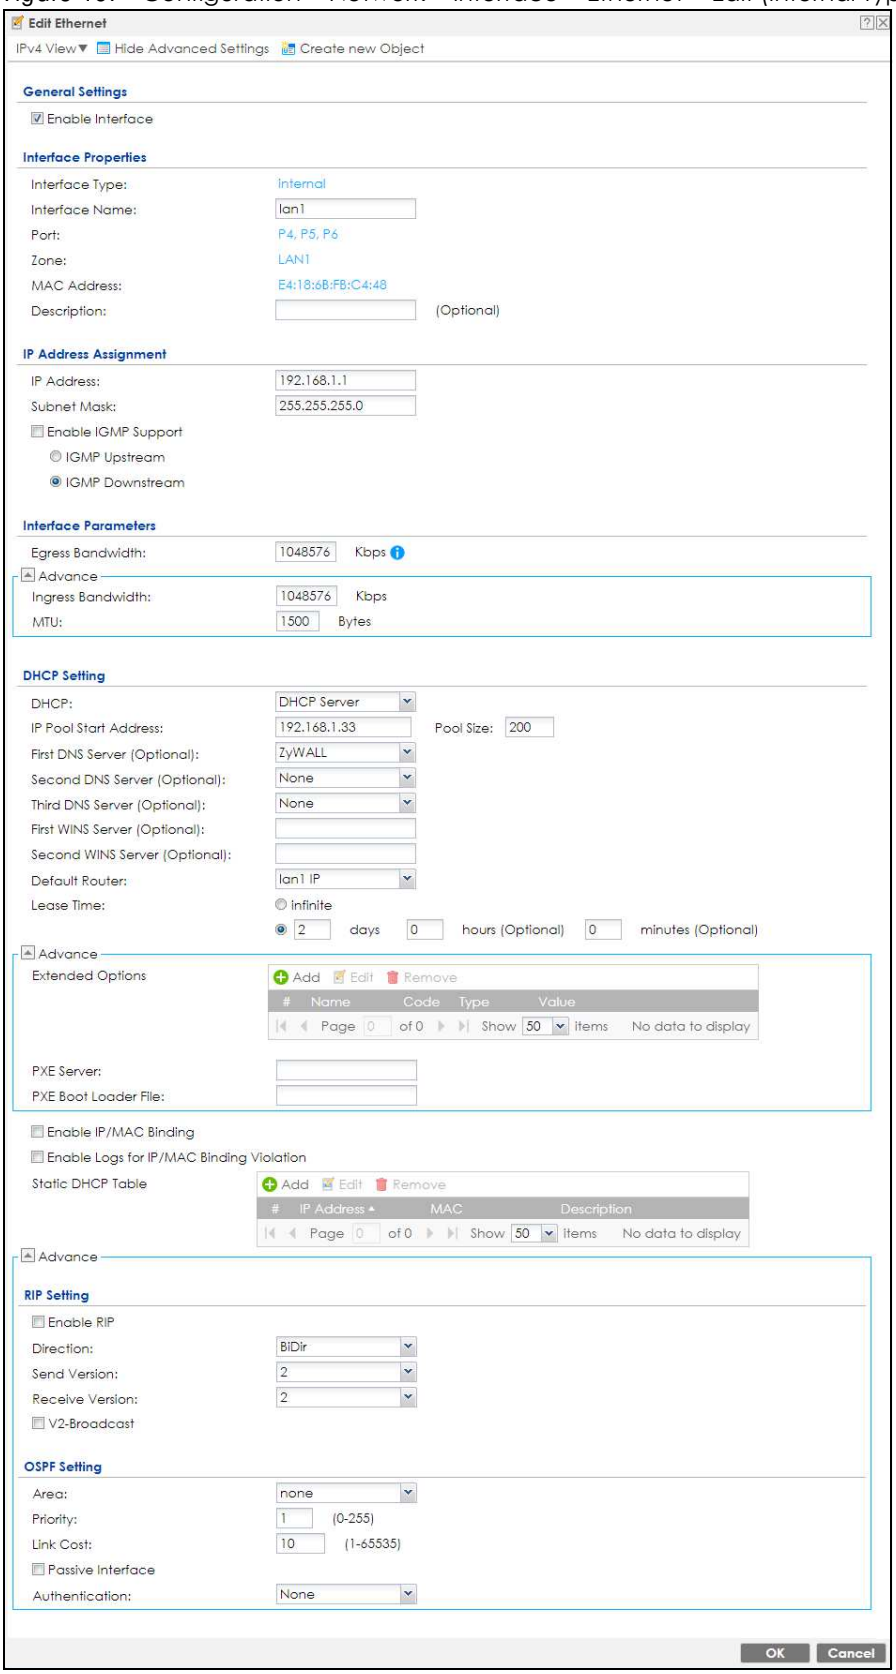

Figure 168 Configuration > Network > Interface > Ethernet > Edit (OPT)

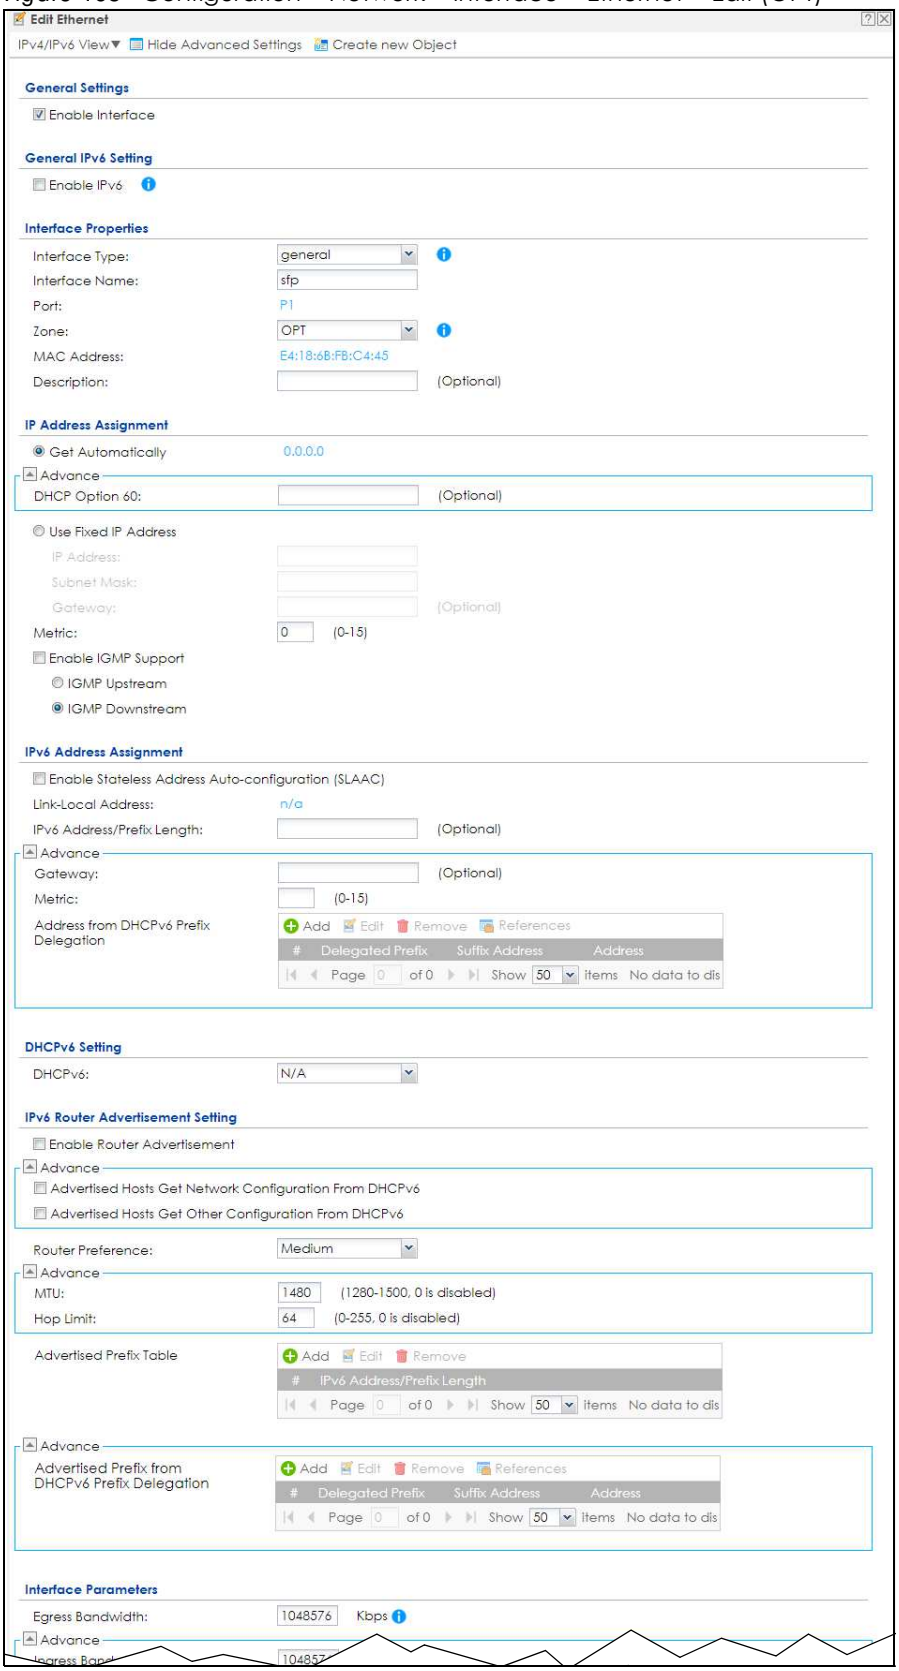

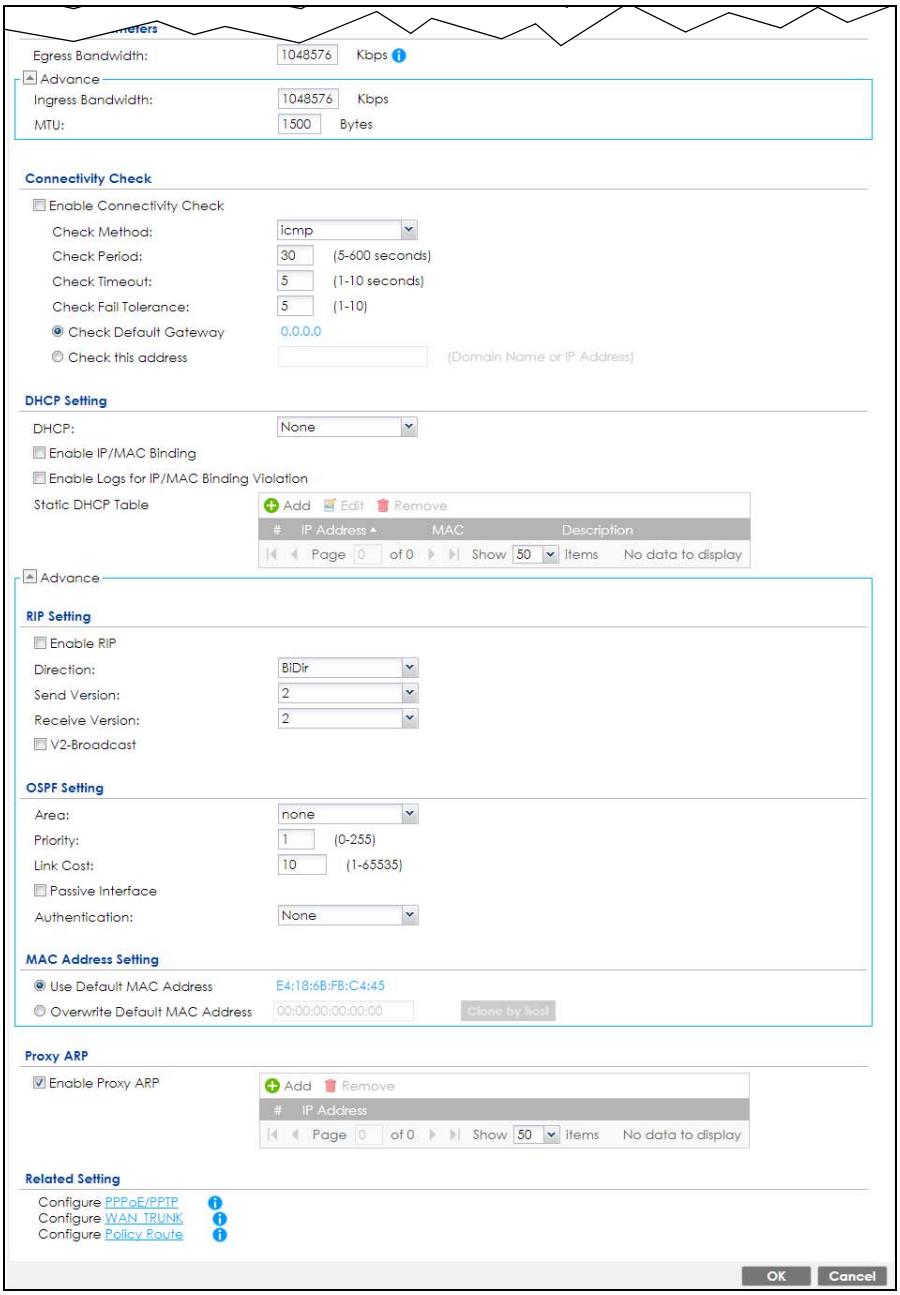

This screen's fields are described in the table below.

Table 89 Configuration > Network > Interface > Ethernet > Edit

LABEL	DESCRIPTION
IPv4/IPv6 View / IPv4 View / IPv6 View	Use this button to display both IPv4 and IPv6, IPv4-only, or IPv6-only configuration fields.
Show Advanced Settings / Hide Advanced Settings	Click this button to display a greater or lesser number of configuration fields.
Create New Object	Click this button to create a DHCPv6 lease or DHCPv6 request object that you may use for the DHCPv6 settings in this screen.
General Settings	

Table 89 Configuration > Network > Interface > Ethernet > Edit (continued)

LABEL	DESCRIPTION
Enable Interface	Select this to enable this interface. Clear this to disable this interface.
General IPv6 Setting	
Enable IPv6	Select this to enable IPv6 on this interface. Otherwise, clear this to disable it.
Interface Properties	
Interface Type	This field is configurable for the **OPT** interface only. Select to which type of network you will connect this interface. When you select **internal** or **external** the rest of the screen's options automatically adjust to correspond. The Zyxel Device automatically adds default route and SNAT settings for traffic it routes from internal interfaces to external interfaces; for example LAN to WAN traffic. **internal** is for connecting to a local network. Other corresponding configuration options: DHCP server and DHCP relay. The Zyxel Device automatically adds default SNAT settings for traffic flowing from this interface to an external interface. **external** is for connecting to an external network (like the Internet). The Zyxel Device automatically adds this interface to the default WAN trunk. For **general**, the rest of the screen's options do not automatically adjust and you must manually configure a policy route to add routing and SNAT settings for the interface.
Interface Name	Specify a name for the interface. It can use alphanumeric characters, hyphens, and underscores, and it can be up to 11 characters long.
Port	This is the name of the Ethernet interface's physical port.
Zone	Select the zone to which this interface is to belong. You use zones to apply security settings such as security policy, IDP, remote management, anti-malware, and application patrol. Make sure to select the correct zone as otherwise traffic may be blocked by a security policy.
MAC Address	This field is read-only. This is the MAC address that the Ethernet interface uses.
Description	Enter a description of this interface. It is not used elsewhere. You can use alphanumeric and `()+/:=?!*#@$_%-` characters, and it can be up to 60 characters long.
IP Address Assignment	These IP address fields configure an IPv4 IP address on the interface itself. If you change this IP address on the interface, you may also need to change a related address object for the network connected to the interface. For example, if you use this screen to change the IP address of your LAN interface, you should also change the corresponding LAN subnet address object.
Get Automatically	This option appears when **Interface Type** is **external** or **general**. Select this to make the interface a DHCP client and automatically get the IP address, subnet mask, and gateway address from a DHCP server. You should not select this if the interface is assigned to a VRRP group. See Chapter 35 on page 675.
DHCP Option 60	DHCP Option 60 is used by the Zyxel Device for identification to the DHCP server using the VCI (Vendor Class Identifier) on the DHCP server. The Zyxel Device adds it in the initial DHCP discovery message that a DHCP client broadcasts in search of an IP address. The DHCP server can assign different IP addresses or options to clients with the specific VCI or reject the request from clients without the specific VCI. Type a string using up to 64 of these characters [a-zA-Z0-9!\"#$%&\'()*+,-./:;<=>?@\[\\\]^_`{|}~] to identify this Zyxel Device to the DHCP server. For example, Zyxel-TW.
Use Fixed IP Address	This option appears when **Interface Type** is **external** or **general**. Select this if you want to specify the IP address, subnet mask, and gateway manually.
IP Address	Enter the IP address for this interface.
Subnet Mask	Enter the subnet mask of this interface in dot decimal notation. The subnet mask indicates what part of the IP address is the same for all computers in the network.

Table 89 Configuration > Network > Interface > Ethernet > Edit (continued)

LABEL	DESCRIPTION
Gateway	This option appears when **Interface Type** is **external** or **general**. Enter the IP address of the gateway. The Zyxel Device sends packets to the gateway when it does not know how to route the packet to its destination. The gateway should be on the same network as the interface.
Metric	This option appears when **Interface Type** is **external** or **general**. Enter the priority of the gateway (if any) on this interface. The Zyxel Device decides which gateway to use based on this priority. The lower the number, the higher the priority. If two or more gateways have the same priority, the Zyxel Device uses the one that was configured first.
Enable IGMP Support	Select this to allow the Zyxel Device to act as an IGMP proxy for hosts connected on the IGMP downstream interface.
IGMP Upstream	Enable **IGMP Upstream** on the interface which connects to a router running IGMP that is closer to the multicast server.
IGMP Downstream	Enable **IGMP Downstream** on the interface which connects to the multicast hosts.
IPv6 Address Assignment	These IP address fields configure an IPv6 IP address on the interface itself.
Enable Stateless Address Auto-configuration (SLAAC)	Select this to enable IPv6 stateless auto-configuration on this interface. The interface will generate an IPv6 IP address itself from a prefix obtained from an IPv6 router in the network.
Link-Local Address	This displays the IPv6 link-local address and the network prefix that the Zyxel Device generates itself for the interface.
IPv6 Address/ Prefix Length	Enter the IPv6 address and the prefix length for this interface if you want to use a static IP address. This field is optional. The prefix length indicates what the left-most part of the IP address is the same for all computers in the network, that is, the network address.
Gateway	Enter the IPv6 address of the default outgoing gateway using colon (:) hexadecimal notation.
Metric	Enter the priority of the gateway (if any) on this interface. The Zyxel Device decides which gateway to use based on this priority. The lower the number, the higher the priority. If two or more gateways have the same priority, the Zyxel Device uses the one that was configured first.
Address from DHCPv6 Prefix Delegation	Use this table to have the Zyxel Device obtain an IPv6 prefix from the ISP or a connected uplink router for an internal network, such as the LAN or DMZ. You have to also enter a suffix address which is appended to the delegated prefix to form an address for this interface. See Prefix Delegation on page 209 for more information. To use prefix delegation, you must: • Create at least one DHCPv6 request object before configuring this table. • The external interface must be a DHCPv6 client. You must configure the DHCPv6 request options using a DHCPv6 request object with the type of prefix-delegation. • Assign the prefix delegation to an internal interface and enable router advertisement on that interface.
Add	Click this to create an entry.
Edit	Select an entry and click this to change the settings.
Remove	Select an entry and click this to delete it from this table.
References	Select an entry and click **References** to check which settings use the entry.
#	This field is a sequential value, and it is not associated with any entry.
Delegated Prefix	Select the DHCPv6 request object to use from the drop-down list.

Table 89 Configuration > Network > Interface > Ethernet > Edit (continued)

LABEL	DESCRIPTION
Suffix Address	Enter the ending part of the IPv6 address, a slash (/), and the prefix length. The Zyxel Device will append it to the delegated prefix. For example, you got a delegated prefix of 2003:1234:5678/48. You want to configure an IP address of 2003:1234:5678:1111::1/128 for this interface, then enter ::1111:0:0:0:1/128 in this field.
Address	This field displays the combined IPv6 IP address for this interface. Note: This field displays the combined address after you click **OK** and reopen this screen.
DHCPv6 Setting	
DHCPv6	Select **N/A** to not use DHCPv6. Select **Client** to set this interface to act as a DHCPv6 client. Select **Server** to set this interface to act as a DHCPv6 server which assigns IP addresses and provides subnet mask, gateway, and DNS server information to clients. Select **Relay** to set this interface to route DHCPv6 requests to the DHCPv6 relay server you specify. The DHCPv6 server(s) may be on another network.
DUID	This field displays the DHCP Unique IDentifier (DUID) of the interface, which is unique and used for identification purposes when the interface is exchanging DHCPv6 messages with others. See DHCPv6 on page 210 for more information.
DUID as MAC	Select this if you want the DUID is generated from the interface's default MAC address.
Customized DUID	If you want to use a customized DUID, enter it here for the interface.
Enable Rapid Commit	Select this to shorten the DHCPv6 message exchange process from four to two steps. This function helps reduce heavy network traffic load. Note: Make sure you also enable this option in the DHCPv6 clients to make rapid commit work.
Information Refresh Time	Enter the number of seconds a DHCPv6 client should wait before refreshing information retrieved from DHCPv6.
Request Address	This field is available if you set this interface to DHCPv6 **Client**. Select this to get an IPv6 IP address for this interface from the DHCP server. Clear this to not get any IP address information through DHCPv6.
DHCPv6 Request Options / DHCPv6 Lease Options	If this interface is a DHCPv6 client, use this section to configure DHCPv6 request settings that determine what additional information to get from the DHCPv6 server. If the interface is a DHCPv6 server, use this section to configure DHCPv6 lease settings that determine what additional information to offer to the DHCPv6 clients.
Add	Click this to create an entry in this table. See Section 9.3.5 on page 231 for more information.
Remove	Select an entry and click this to delete it from this table.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
#	This field is a sequential value, and it is not associated with any entry.
Name	This field displays the name of the DHCPv6 request or lease object.
Type	This field displays the type of the object.
Value	This field displays the IPv6 prefix that the Zyxel Device obtained from an uplink router (**Server** is selected) or will advertise to its clients (**Client** is selected).
Interface	When **Relay** is selected, select this check box and an interface from the drop-down list if you want to use it as the relay server.

Table 89 Configuration > Network > Interface > Ethernet > Edit (continued)

LABEL	DESCRIPTION
Relay Server	When **Relay** is selected, select this check box and enter the IP address of a DHCPv6 server as the relay server.
IPv6 Router Advertisement Setting	
Enable Router Advertisement	Select this to enable this interface to send router advertisement messages periodically. See IPv6 Router Advertisement on page 209 for more information.
Advertised Hosts Get Network Configuration From DHCPv6	Select this to have the Zyxel Device indicate to hosts to obtain network settings (such as prefix and DNS settings) through DHCPv6. Clear this to have the Zyxel Device indicate to hosts that DHCPv6 is not available and they should use the prefix in the router advertisement message.
Advertised Hosts Get Other Configuration From DHCPv6	Select this to have the Zyxel Device indicate to hosts to obtain DNS information through DHCPv6. Clear this to have the Zyxel Device indicate to hosts that DNS information is not available in this network.
Router Preference	Select the router preference (**Low**, **Medium** or **High**) for the interface. The interface sends this preference in the router advertisements to tell hosts what preference they should use for the Zyxel Device. This helps hosts to choose their default router especially when there are multiple IPv6 router in the network. Note: Make sure the hosts also support router preference to make this function work.
MTU	The Maximum Transmission Unit. Type the maximum size of each IPv6 data packet, in bytes, that can move through this interface. If a larger packet arrives, the Zyxel Device discards the packet and sends an error message to the sender to inform this.
Hop Limit	Enter the maximum number of network segments that a packet can cross before reaching the destination. When forwarding an IPv6 packet, IPv6 routers are required to decrease the Hop Limit by 1 and to discard the IPv6 packet when the Hop Limit is 0.
Advertised Prefix Table	Configure this table only if you want the Zyxel Device to advertise a fixed prefix to the network.
Add	Click this to create an IPv6 prefix address.
Edit	Select an entry in this table and click this to modify it.
Remove	Select an entry in this table and click this to delete it.
#	This field is a sequential value, and it is not associated with any entry.
IPv6 Address/ Prefix Length	Enter the IPv6 network prefix address and the prefix length. The prefix length indicates what the left-most part of the IP address is the same for all computers in the network, that is, the network address.
Advertised Prefix from DHCPv6 Prefix Delegation	This table is available when the **Interface Type** is **internal**. Use this table to configure the network prefix if you want to use a delegated prefix as the beginning part of the network prefix.
Add	Click this to create an entry in this table.
Edit	Select an entry in this table and click this to modify it.
Remove	Select an entry in this table and click this to delete it.
#	This field is a sequential value, and it is not associated with any entry.
Delegated Prefix	Select the DHCPv6 request object to use for generating the network prefix for the network.

Table 89 Configuration > Network > Interface > Ethernet > Edit (continued)

LABEL	DESCRIPTION
Suffix Address	Enter the ending part of the IPv6 network address plus a slash (/) and the prefix length. The Zyxel Device will append it to the selected delegated prefix. The combined address is the network prefix for the network. For example, you got a delegated prefix of 2003:1234:5678/48. You want to divide it into 2003:1234:5678:1111/64 for this interface and 2003:1234:5678:2222/64 for another interface. You can use ::1111/64 and ::2222/64 for the suffix address respectively. But if you do not want to divide the delegated prefix into subnetworks, enter ::0/48 here, which keeps the same prefix length (/48) as the delegated prefix.
Address	This is the final network prefix combined by the delegated prefix and the suffix. Note: This field displays the combined address after you click OK and reopen this screen.
Interface Parameters	
Egress Bandwidth	Enter the maximum amount of traffic, in kilobits per second, the Zyxel Device can send through the interface to the network. Allowed values are 0 - 1048576.
Ingress Bandwidth	This is reserved for future use. Enter the maximum amount of traffic, in kilobits per second, the Zyxel Device can receive from the network through the interface. Allowed values are 0 - 1048576.
MTU	Maximum Transmission Unit. Type the maximum size of each data packet, in bytes, that can move through this interface. If a larger packet arrives, the Zyxel Device divides it into smaller fragments. Allowed values are 576 - 1500. Usually, this value is 1500.
Connectivity Check	These fields appear when Interface Properties is External or General. The interface can regularly check the connection to the gateway you specified to make sure it is still available. You specify how often the interface checks the connection, how long to wait for a response before the attempt is a failure, and how many consecutive failures are required before the Zyxel Device stops routing to the gateway. The Zyxel Device resumes routing to the gateway the first time the gateway passes the connectivity check.
Enable Connectivity Check	Select this to turn on the connection check.
Check Method	Select the method that the gateway allows. Select icmp to have the Zyxel Device regularly ping the gateway you specify to make sure it is still available. Select tcp to have the Zyxel Device regularly perform a TCP handshake with the gateway you specify to make sure it is still available.
Check Period	Enter the number of seconds between connection check attempts.
Check Timeout	Enter the number of seconds to wait for a response before the attempt is a failure.
Check Fail Tolerance	Enter the number of consecutive failures before the Zyxel Device stops routing through the gateway.
Check Default Gateway	Select this to use the default gateway for the connectivity check.
Check this address	Select this to specify a domain name or IP address for the connectivity check. Enter that domain name or IP address in the field next to it.
Check Port	This field only displays when you set the Check Method to tcp. Specify the port number to use for a TCP connectivity check.
DHCP Setting	This section appears when Interface Type is internal or general.

Table 89 Configuration > Network > Interface > Ethernet > Edit (continued)

LABEL	DESCRIPTION
DHCP	Select what type of DHCP service the Zyxel Device provides to the network. Choices are: **None** - the Zyxel Device does not provide any DHCP services. There is already a DHCP server on the network. **DHCP Relay** - the Zyxel Device routes DHCP requests to one or more DHCP servers you specify. The DHCP server(s) may be on another network. **DHCP Server** - the Zyxel Device assigns IP addresses and provides subnet mask, gateway, and DNS server information to the network. The Zyxel Device is the DHCP server for the network.
	These fields appear if the Zyxel Device is a **DHCP Relay**.
Relay Server 1	Enter the IP address of a DHCP server for the network.
Relay Server 2	This field is optional. Enter the IP address of another DHCP server for the network.
	These fields appear if the Zyxel Device is a **DHCP Server**.
IP Pool Start Address	Enter the IP address from which the Zyxel Device begins allocating IP addresses. If you want to assign a static IP address to a specific computer, use the **Static DHCP Table**. If this field is blank, the **Pool Size** must also be blank. In this case, the Zyxel Device can assign every IP address allowed by the interface's IP address and subnet mask, except for the first address (network address), last address (broadcast address) and the interface's IP address.
Pool Size	Enter the number of IP addresses to allocate. This number must be at least one and is limited by the interface's **Subnet Mask**. For example, if the **Subnet Mask** is 255.255.255.0 and **IP Pool Start Address** is 10.10.10.10, the Zyxel Device can allocate 10.10.10.10 to 10.10.10.254, or 245 IP addresses. If this field is blank, the **IP Pool Start Address** must also be blank. In this case, the Zyxel Device can assign every IP address allowed by the interface's IP address and subnet mask, except for the first address (network address), last address (broadcast address) and the interface's IP address.
First DNS Server, Second DNS Server, Third DNS Server	Specify the IP addresses up to three DNS servers for the DHCP clients to use. Use one of the following ways to specify these IP addresses. **Custom Defined** - enter a static IP address. **From ISP** - select the DNS server that another interface received from its DHCP server. **Zyxel Device** - the DHCP clients use the IP address of this interface and the Zyxel Device works as a DNS relay.
First WINS Server, Second WINS Server	Type the IP address of the WINS (Windows Internet Naming Service) server that you want to send to the DHCP clients. The WINS server keeps a mapping table of the computer names on your network and the IP addresses that they are currently using.
Default Router	If you set this interface to **DHCP Server**, you can select to use either the interface's IP address or another IP address as the default router. This default router will become the DHCP clients' default gateway. To use another IP address as the default router, select **Custom Defined** and enter the IP address.
Lease time	Specify how long each computer can use the information (especially the IP address) before it has to request the information again. Choices are: **infinite** - select this if IP addresses never expire. **days, hours, and minutes** - select this to enter how long IP addresses are valid.
Extended Options	This table is available if you selected **DHCP server**. Configure this table if you want to send more information to DHCP clients through DHCP packets.
Add	Click this to create an entry in this table. See Section 9.3.6 on page 232.

Table 89 Configuration > Network > Interface > Ethernet > Edit (continued)

LABEL	DESCRIPTION
Edit	Select an entry in this table and click this to modify it.
Remove	Select an entry in this table and click this to delete it.
#	This field is a sequential value, and it is not associated with any entry.
Name	This is the name of the DHCP option.
Code	This is the code number of the DHCP option.
Type	This is the type of the set value for the DHCP option.
Value	This is the value set for the DHCP option.
PXE Server	PXE (Preboot eXecution Environment) allows a client computer to use the network to boot up and install an operating system via a PXE-capable Network Interface Card (NIC). PXE is available for computers on internal interfaces to allow them to boot up using boot software on a PXE server. The Zyxel Device acts as an intermediary between the PXE server and the computers that need boot software. The PXE server must have a public IPv4 address. You must enable **DHCP Server** on the Zyxel Device so that it can receive information from the PXE server.
PXE Boot Loader File	A boot loader is a computer program that loads the operating system for the computer. Type the exact file name of the boot loader software file, including filename extension, that is on the PXE server. If the wrong filename is typed, then the client computers cannot boot.
Enable IP/MAC Binding	Select this option to have this interface enforce links between specific IP addresses and specific MAC addresses. This stops anyone else from manually using a bound IP address on another device connected to this interface. Use this to make use only the intended users get to use specific IP addresses.
Enable Logs for IP/MAC Binding Violation	Select this option to have the Zyxel Device generate a log if a device connected to this interface attempts to use an IP address that is bound to another device's MAC address.
Static DHCP Table	Configure a list of static IP addresses the Zyxel Device assigns to computers connected to the interface. Otherwise, the Zyxel Device assigns an IP address dynamically using the interface's **IP Pool Start Address** and **Pool Size**.
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
#	This field is a sequential value, and it is not associated with a specific entry.
IP Address	Enter the IP address to assign to a device with this entry's MAC address.
MAC	Enter the MAC address to which to assign this entry's IP address.
Description	Enter a description to help identify this static DHCP entry. You can use alphanumeric and `()+/:=?!*#@$_%-` characters, and it can be up to 60 characters long.
RIP Setting	See Section 10.6 on page 311 for more information about RIP.
Enable RIP	Select this to enable RIP in this interface.
Direction	This field is effective when RIP is enabled. Select the RIP direction from the drop-down list box. **BiDir** - This interface sends and receives routing information. **In-Only** - This interface receives routing information. **Out-Only** - This interface sends routing information.
Send Version	This field is effective when RIP is enabled. Select the RIP version(s) used for sending RIP packets. Choices are **1**, **2**, and **1 and 2**.
Receive Version	This field is effective when RIP is enabled. Select the RIP version(s) used for receiving RIP packets. Choices are **1**, **2**, and **1 and 2**.

Table 89 Configuration > Network > Interface > Ethernet > Edit (continued)

LABEL	DESCRIPTION
V2-Broadcast	This field is effective when RIP is enabled. Select this to send RIP-2 packets using subnet broadcasting; otherwise, the Zyxel Device uses multicasting.
OSPF Setting	See Section 10.7 on page 313 for more information about OSPF.
Area	Select the area in which this interface belongs. Select **None** to disable OSPF in this interface.
Priority	Enter the priority (between 0 and 255) of this interface when the area is looking for a Designated Router (DR) or Backup Designated Router (BDR). The highest-priority interface identifies the DR, and the second-highest-priority interface identifies the BDR. Set the priority to zero if the interface can not be the DR or BDR.
Link Cost	Enter the cost (between 1 and 65,535) to route packets through this interface.
Passive Interface	Select this to stop forwarding OSPF routing information from the selected interface. As a result, this interface only receives routing information.
Authentication	Select an authentication method, or disable authentication. To exchange OSPF routing information with peer border routers, you must use the same authentication method that they use. Choices are: **Same-as-Area** - use the default authentication method in the area **None** - disable authentication **Text** - authenticate OSPF routing information using a plain-text password **MD5** - authenticate OSPF routing information using MD5 encryption
Text Authentication Key	This field is available if the **Authentication** is **Text**. Type the password for text authentication. The key can consist of alphanumeric characters and the underscore, and it can be up to 16 characters long.
MD5 Authentication ID	This field is available if the **Authentication** is **MD5**. Type the ID for MD5 authentication. The ID can be between 1 and 255.
MD5 Authentication Key	This field is available if the **Authentication** is **MD5**. Type the password for MD5 authentication. The password can consist of alphanumeric characters and the underscore, and it can be up to 16 characters long.
MAC Address Setting	This section appears when **Interface Properties** is **External** or **General**. Have the interface use either the factory assigned default MAC address, a manually specified MAC address, or clone the MAC address of another device or computer.
Use Default MAC Address	Select this option to have the interface use the factory assigned default MAC address. By default, the Zyxel Device uses the factory assigned MAC address to identify itself.
Overwrite Default MAC Address	Select this option to have the interface use a different MAC address. Either enter the MAC address in the fields or click **Clone by host** and enter the IP address of the device or computer whose MAC you are cloning. Once it is successfully configured, the address will be copied to the configuration file. It will not change unless you change the setting or upload a different configuration file.
Proxy ARP	Proxy ARP is available for external or general interfaces on the Zyxel Device. See Section 9.3.2 on page 228 for more information on Proxy ARP.
Enable Proxy ARP	Select this to allow the Zyxel Device to answer external interface ARP requests on behalf of a device on its internal interface. Interfaces supported are: • Ethernet • VLAN • Bridge See Section 9.3.2 on page 228 for more information.

Table 89 Configuration > Network > Interface > Ethernet > Edit (continued)

LABEL	DESCRIPTION
Add	Click **Add** to create an **IPv4 Address**, an **IPv4 CIDR** (for example, 192.168.1.1/24) or an **IPv4 Range** (for example, 192.168.1.2-192.168.1.100) as the target IP address. The Zyxel Device answers external ARP requests only if they match one of these inputted target IP addresses. For example, if the **IPv4 Address** is 192.168.1.5, then the Zyxel Device will answer ARP requests coming from the WAN only if it contains 192.168.1.5 as the target IP address. Select an existing entry and click **Remove** to delete that entry. Related Setting	
Configure PPPoE/PPTP	Click **PPPoE/PPTP** if this interface's Internet connection uses PPPoE or PPTP or L2TP.
Configure VLAN	Click **VLAN** if you want to configure a VLAN interface for this Ethernet interface.
Configure WAN TRUNK	Click **WAN TRUNK** to go to a screen where you can set this interface to be part of a WAN trunk for load balancing.
Configure Policy Route	Click **Policy Route** to go to the policy route summary screen where you can manually associate traffic with this interface. You must manually configure a policy route to add routing and SNAT settings for an interface with the **Interface Type** set to **general**. You can also configure a policy route to override the default routing and SNAT behavior for an interface with an **Interface Type** of **internal** or **external**.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

9.3.2 Proxy ARP

An Address Resolution Protocol (ARP) is a protocol for mapping an IP address to a MAC address. An ARP broadcast is sent to all devices in the same Ethernet network to request the MAC address of a target IP address.

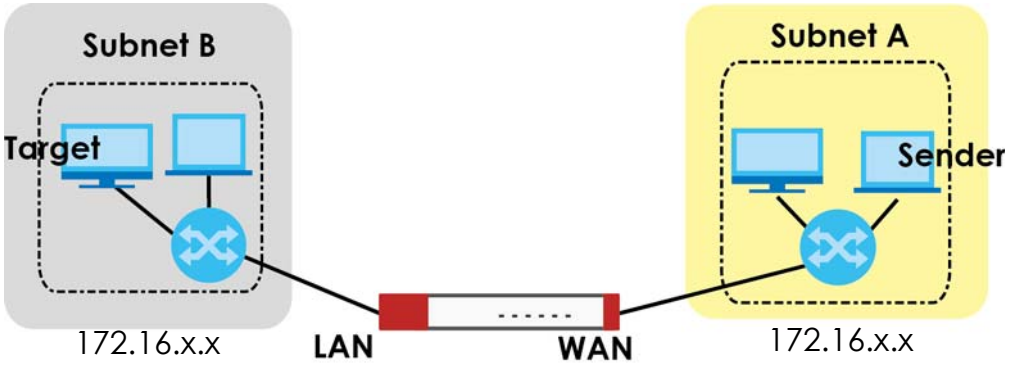
In the following figure, a host in a WAN subnet (A) broadcasts an ARP request to all devices within its network in order to find the MAC address of a target IP address (172.16.x.x). However, the target IP address may be in another subnet (B) that has the same network IP address (172.16.x.x). A router, such as the Zyxel Device, does not forward broadcasts, so the request will not reach its destination.

Enable **Proxy ARP** (RFC 1027) to allow the Zyxel Device to answer external interface ARP requests on behalf of a device on its internal interface. Interfaces supported are:

- Ethernet
- VLAN
- Bridge

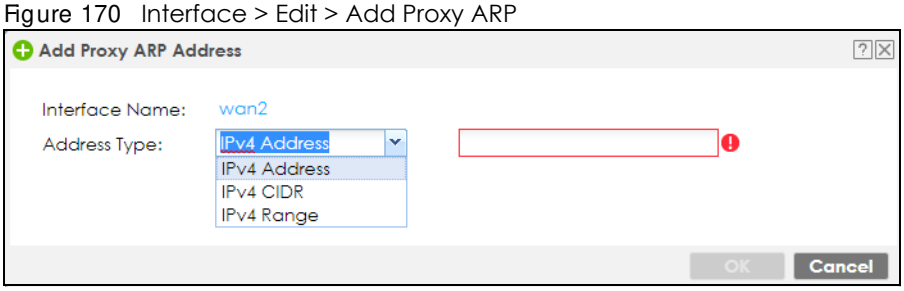
The Zyxel Device sends its external MAC address to the WAN sender as the destination for the target IP address. From then on the sender will send packets containing that target IP address directly to the external interface of the Zyxel Device. The Zyxel Device then forwards the packet to the correct target IP address in its LAN.

Figure 169 Proxy ARP



To allow the Zyxel Device to answer external interface ARP requests on behalf of a device on a supported interface, select the interface, click **Add** or **Edit**, then click **Add** in the **Proxy ARP** section of the screen.

Figure 170 Interface > Edit > Add Proxy ARP



The following table describes labels that can appear in this screen.

Table 90 Interface > Edit > Add Proxy ARP

LABEL	DESCRIPTION
Interface Name	This identifies the interface for which the configuration settings that use it are displayed.
Address Type	Choose **IPv4 Address**, or **IPv4 CIDR** (for example, 192.168.1.1/24) or an **IPv4 Range** (for example, 192.168.1.2-192.168.1.100) and then enter the target IP address information. The Zyxel Device answers external ARP requests only if they match one of these inputted target IP addresses. For example, if the **IPv4 Address** is 192.168.1.5, then the Zyxel Device will answer ARP requests coming from the WAN only if it contains 192.168.1.5 as the target IP address.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

9.3.3 Virtual Interfaces

Use virtual interfaces to tell the Zyxel Device where to route packets. Virtual interfaces can also be used in VPN gateways (see Chapter 20 on page 379) and VRRP groups (see Chapter 35 on page 675).

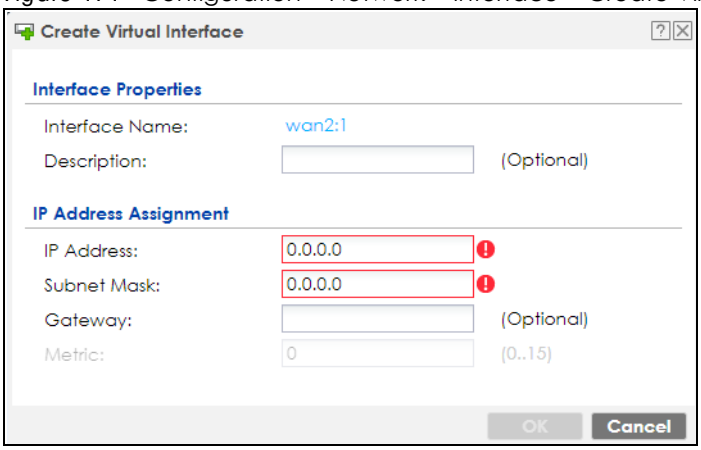
Virtual interfaces can be created on top of Ethernet interfaces, VLAN interfaces, or bridge interfaces. Virtual VLAN interfaces recognize and use the same VLAN ID. Otherwise, there is no difference between each type of virtual interface. Network policies (for example, security policies) that apply to the underlying interface automatically apply to the virtual interface as well.

Like other interfaces, virtual interfaces have an IP address, subnet mask, and gateway used to make routing decisions. However, you have to manually specify the IP address and subnet mask; virtual

interfaces cannot be DHCP clients. The virtual interface uses the same MTU and bandwidth settings that the underlying interface uses. Unlike other interfaces, virtual interfaces do not provide DHCP services, and they do not verify that the gateway is available.

This screen lets you configure IP address assignment and interface parameters for virtual interfaces. To access this screen, click the **Create Virtual Interface** icon in the Ethernet, VLAN, or bridge interface summary screen.

Figure 171 Configuration > Network > Interface > Create Virtual Interface



Each field is described in the table below.

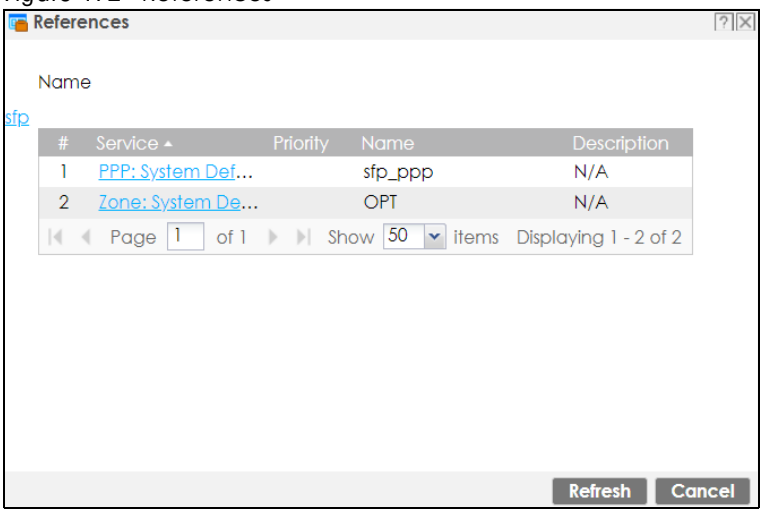
Table 91 Configuration > Network > Interface > Create Virtual Interface

LABEL	DESCRIPTION
Interface Properties	
Interface Name	This field is read-only. It displays the name of the virtual interface, which is automatically derived from the underlying Ethernet interface, VLAN interface, or bridge interface.
Description	Enter a description of this interface. It is not used elsewhere. You can use alphanumeric and `()+/:=?!*#@$_%-` characters, and it can be up to 60 characters long.
IP Address Assignment	
IP Address	Enter the IP address for this interface.
Subnet Mask	Enter the subnet mask of this interface in dot decimal notation. The subnet mask indicates what part of the IP address is the same for all computers in the network.
Gateway	Enter the IP address of the gateway. The Zyxel Device sends packets to the gateway when it does not know how to route the packet to its destination. The gateway should be on the same network as the interface.
Metric	Enter the priority of the gateway (if any) on this interface. The Zyxel Device decides which gateway to use based on this priority. The lower the number, the higher the priority. If two or more gateways have the same priority, the Zyxel Device uses the one that was configured first.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

9.3.4 References

When a configuration screen includes an **References** icon, select a configuration object and click **References** to open the **References** screen. This screen displays which configuration settings reference the selected object. The fields shown vary with the type of object.

Figure 172 References



The following table describes labels that can appear in this screen.

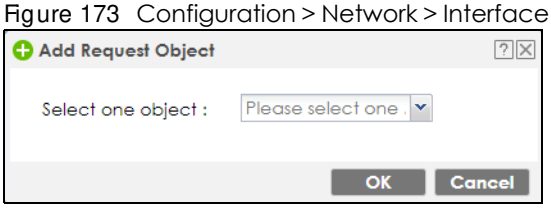
Table 92 References

LABEL	DESCRIPTION
Name	This identifies the object for which the configuration settings that use it are displayed. Click the object's name to display the object's configuration screen in the main window.
#	This field is a sequential value, and it is not associated with any entry.
Service	This is the type of setting that references the selected object. Click a service's name to display the service's configuration screen in the main window.
Priority	If it is applicable, this field lists the referencing configuration item's position in its list, otherwise N/A displays.
Name	This field identifies the configuration item that references the object.
Description	If the referencing configuration item has a description configured, it displays here.
Refresh	Click this to update the information in this screen.
Cancel	Click Cancel to close the screen.

9.3.5 Add/Edit DHCPv6 Request/Release Options

When you configure an interface as a DHCPv6 server or client, you can additionally add DHCPv6 request or lease options which have the Zyxel Device to add more information in the DHCPv6 packets. To open the screen, click Configuration > Network > Interface > Ethernet > Edit, select DHCPv6 Server or DHCPv6 Client in the DHCPv6 Setting section, and then click Add in the DHCPv6 Request Options or DHCPv6 Lease Options table.

Figure 173 Configuration > Network > Interface > Ethernet > Edit > Add DHCPv6 Request/Lease Options

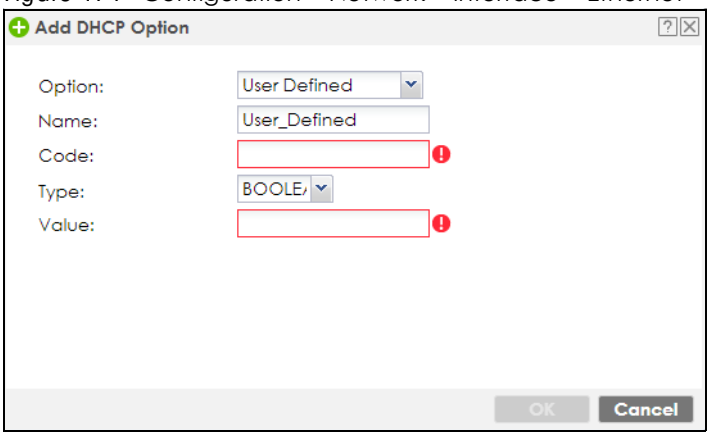


Select a DHCPv6 request or lease object in the Select one object field and click OK to save it. Click Cancel to exit without saving the setting.

9.3.6 Add/Edit DHCP Extended Options

When you configure an interface as a DHCPv4 server, you can additionally add DHCP extended options which have the Zyxel Device to add more information in the DHCP packets. The available fields vary depending on the DHCP option you select in this screen. To open the screen, click **Configuration** > **Network** > **Interface** > **Ethernet** > **Edit**, select **DHCP Server** in the **DHCP Setting** section, and then click **Add** or **Edit** in the **Extended Options** table.

Figure 174 Configuration > Network > Interface > Ethernet > Edit > Add/Edit Extended Options



The following table describes labels that can appear in this screen.

Table 93 Configuration > Network > Interface > Ethernet > Edit > Add/Edit Extended Options

LABEL	DESCRIPTION
Option	Select which DHCP option that you want to add in the DHCP packets sent through the interface. See the next table for more information.
Name	This field displays the name of the selected DHCP option. If you selected **User Defined** in the **Option** field, enter a descriptive name to identify the DHCP option. You can enter up to 16 characters ("a-z", "A-Z, "0-9", "-", and "_") with no spaces allowed. The first character must be alphabetical (a-z, A-Z).
Code	This field displays the code number of the selected DHCP option. If you selected **User Defined** in the **Option** field, enter a number for the option. This field is mandatory.
Type	This is the type of the selected DHCP option. If you selected **User Defined** in the **Option** field, select an appropriate type for the value that you will enter in the next field. Only advanced users should configure **User Defined**. Misconfiguration could result in interface lockout.
Value	Enter the value for the selected DHCP option. For example, if you selected **TFTP Server Name** (66) and the type is **TEXT**, enter the DNS domain name of a TFTP server here. This field is mandatory.
First IP Address, Second IP Address, Third IP Address	If you selected **Time Server** (4), **NTP Server** (41), **SIP Server** (120), **CAPWAP AC** (138), or **TFTP Server** (150), you have to enter at least one IP address of the corresponding servers in these fields. The servers should be listed in order of your preference.
First Enterprise ID, Second Enterprise ID	If you selected **VIVC** (124) or **VIVS** (125), you have to enter at least one vendor's 32-bit enterprise number in these fields. An enterprise number is a unique number that identifies a company.
First Class, Second Class	If you selected **VIVC** (124), enter the details of the hardware configuration of the host on which the client is running, or of industry consortium compliance.
First Information, Second Information	If you selected **VIVS** (125), enter additional information for the corresponding enterprise number in these fields.

Table 93 Configuration > Network > Interface > Ethernet > Edit > Add/Edit Extended Options

LABEL	DESCRIPTION
OK	Click this to close this screen and update the settings to the previous Edit screen.
Cancel	Click **Cancel** to close the screen.

The following table lists the available DHCP extended options (defined in RFCs) on the Zyxel Device. See RFCs for more information.

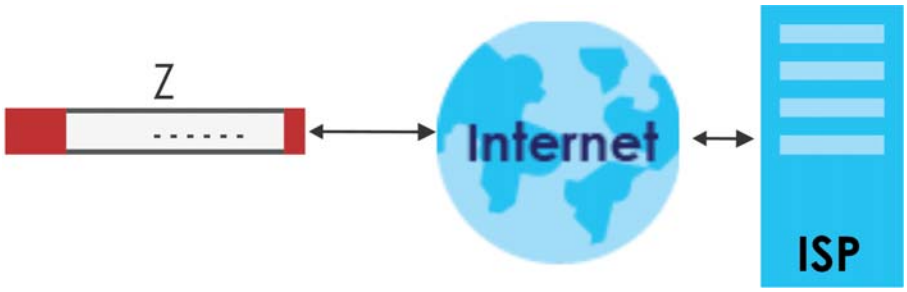
Table 94 DHCP Extended Options

OPTION NAME	CODE	DESCRIPTION
Time Offset	2	This option specifies the offset of the client's subnet in seconds from Coordinated Universal Time (UTC).
Time Server	4	This option specifies a list of Time servers available to the client.
NTP Server	42	This option specifies a list of the NTP servers available to the client by IP address.
TFTP Server Name	66	This option is used to identify a TFTP server when the "sname" field in the DHCP header has been used for DHCP options. The minimum length of the value is 1.
Bootfile	67	This option is used to identify a bootfile when the "file" field in the DHCP header has been used for DHCP options. The minimum length of the value is 1.
SIP Server	120	This option carries either an IPv4 address or a DNS domain name to be used by the SIP client to locate a SIP server.
VIVC	124	Vendor-Identifying Vendor Class option A DHCP client may use this option to unambiguously identify the vendor that manufactured the hardware on which the client is running, the software in use, or an industry consortium to which the vendor belongs.
VIVS	125	Vendor-Identifying Vendor-Specific option DHCP clients and servers may use this option to exchange vendor-specific information.
CAPWAP AC	138	CAPWAP Access Controller addresses option The Control And Provisioning of Wireless Access Points Protocol allows a Wireless Termination Point (WTP) to use DHCP to discover the Access Controllers to which it is to connect. This option carries a list of IPv4 addresses indicating one or more CAPWAP ACs available to the WTP.
TFTP Server	150	The option contains one or more IPv4 addresses that the client may use. The current use of this option is for downloading configuration from a VoIP server via TFTP; however, the option may be used for purposes other than contacting a VoIP configuration server.

9.4 PPP Interfaces

Use PPPoE/PPTP/L2TP interfaces to connect to your ISP. This way, you do not have to install or manage PPPoE/PPTP/L2TP software on each computer in the network.

Figure 175 Example: PPPoE/PPTP/L2TP Interfaces



PPPoE/PPTP/L2TP interfaces are similar to other interfaces in some ways. They have an IP address, subnet mask, and gateway used to make routing decisions; they restrict bandwidth and packet size; and they can verify the gateway is available. There are two main differences between PPPoE/PPTP/L2TP interfaces and other interfaces.

- You must also configure an ISP account object for the PPPoE/PPTP/L2TP interface to use.

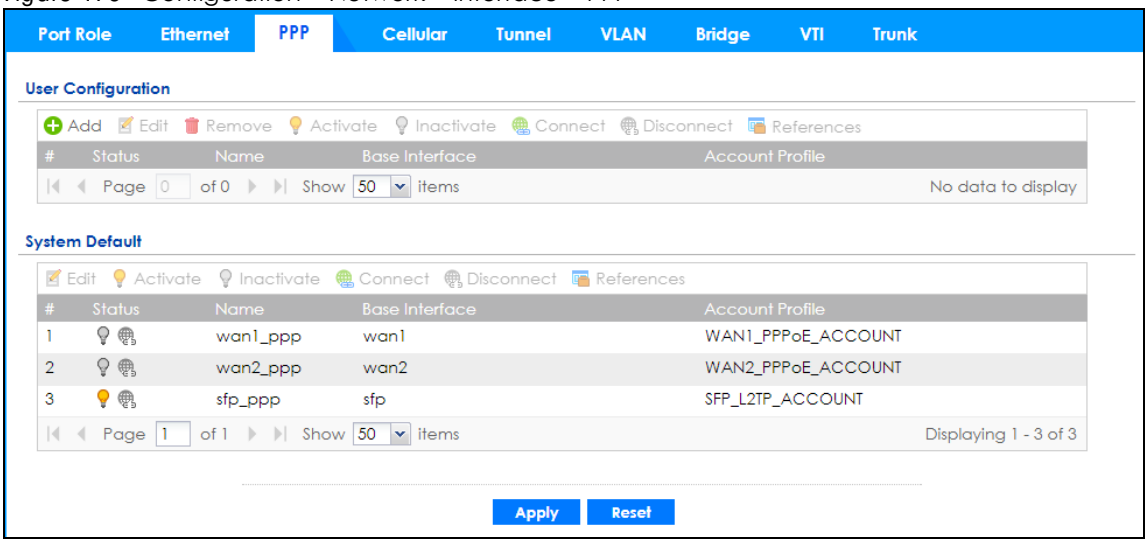
  Each ISP account specifies the protocol (PPPoE or PPTP or L2TP), as well as your ISP account information. If you change ISPs later, you only have to create a new ISP account, not a new PPPoE/PPTP/L2TP interface. You should not have to change any network policies.
- You do not set up the subnet mask or gateway.

  PPPoE/PPTP/L2TP interfaces are interfaces between the Zyxel Device and only one computer. Therefore, the subnet mask is always 255.255.255.255. In addition, the Zyxel Device always treats the ISP as a gateway.

9.4.1 PPP Interface Summary

This screen lists every PPPoE/PPTP/L2TP interface. To access this screen, click **Configuration** > **Network** > **Interface** > **PPP**.

Figure 176 Configuration > Network > Interface > PPP



Each field is described in the table below.

Table 95 Configuration > Network > Interface > PPP

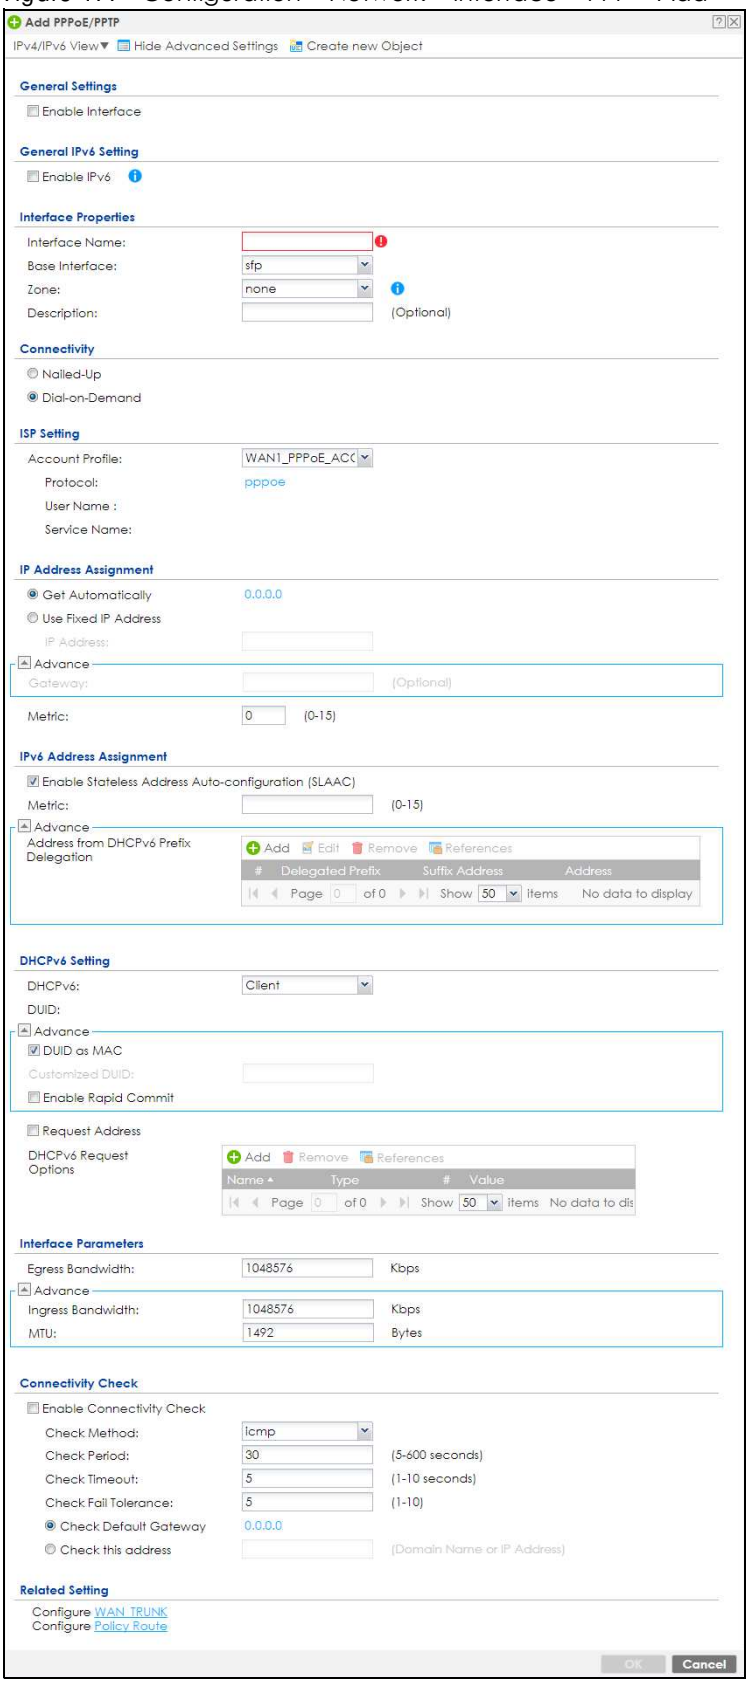
LABEL	DESCRIPTION
User Configuration / System Default	The Zyxel Device comes with the (non-removable) **System Default** PPP interfaces pre-configured. You can create (and delete) **User Configuration** PPP interfaces. **System Default** PPP interfaces vary by model.
Add	Click this to create a new user-configured PPP interface.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove a user-configured PPP interface, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Connect	To connect an interface, select it and click **Connect**. You might use this in testing the interface or to manually establish the connection for a **Dial-on-Demand** PPPoE/PPTP interface.
Disconnect	To disconnect an interface, select it and click **Disconnect**. You might use this in testing the interface.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
#	This field is a sequential value, and it is not associated with any interface.
Status	The activate (light bulb) icon is lit when the entry is active and dimmed when the entry is inactive. The connect icon is lit when the interface is connected and dimmed when it is disconnected.
Name	This field displays the name of the interface.
Base Interface	This field displays the interface on the top of which the PPPoE/PPTP/L2TP interface is.
Account Profile	This field displays the ISP account used by this PPPoE/PPTP interface.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

9.4.2 PPP Interface Add or Edit

Note: You have to set up an ISP account before you create a PPPoE/PPTP/L2TP interface.

This screen lets you configure a PPPoE or PPTP or L2TP interface. If you enabled IPv6 in the **Configuration** > **System** > **IPv6** screen, you can also configure PPP interfaces used for your IPv6 networks on this screen. To access this screen, click the **Add** icon or an **Edit** icon in the PPP Interface screen.

Figure 177 Configuration > Network > Interface > PPP > Add



Each field is explained in the following table.

Table 96 Configuration > Network > Interface > PPP > Add

LABEL	DESCRIPTION
IPv4/IPv6 View / IPv4 View / IPv6 View	Use this button to display both IPv4 and IPv6, IPv4-only, or IPv6-only configuration fields.
Show Advanced Settings / Hide Advanced Settings	Click this button to display a greater or lesser number of configuration fields.
Create New Object	Click this button to create an ISP Account or a DHCPv6 request object that you may use for the ISP or DHCPv6 settings in this screen.
General Settings	
Enable Interface	Select this to enable this interface. Clear this to disable this interface.
General IPv6 Setting	
Enable IPv6	Select this to enable IPv6 on this interface. Otherwise, clear this to disable it.
Interface Properties	
Interface Name	Specify a name for the interface. It can use alphanumeric characters, hyphens, and underscores, and it can be up to 11 characters long.
Base Interface	Select the interface upon which this PPP interface is built. Note: Multiple PPP interfaces can use the same base interface.
Zone	Select the zone to which this PPP interface belongs. The zone determines the security settings the Zyxel Device uses for the interface.
Description	Enter a description of this interface. It is not used elsewhere. You can use alphanumeric and `()+/:=?!*#@$_%-` characters, and it can be up to 60 characters long.
Connectivity	
Nailed-Up	Select this if the PPPoE/PPTP/L2TP connection should always be up. Clear this to have the Zyxel Device establish the PPPoE/PPTP/L2TP connection only when there is traffic. You might use this option if a lot of traffic needs to go through the interface or it does not cost extra to keep the connection up all the time.
Dial-on-Demand	Select this to have the Zyxel Device establish the PPPoE/PPTP/L2TP connection only when there is traffic. You might use this option if there is little traffic through the interface or if it costs money to keep the connection available.
ISP Setting	
Account Profile	Select the ISP account that this PPPoE/PPTP/L2TP interface uses. The drop-down box lists ISP accounts by name. Use **Create new Object** if you need to configure a new ISP account (see Chapter 34 on page 668 for details).
Protocol	This field is read-only. It displays the protocol specified in the ISP account.
User Name	This field is read-only. It displays the user name for the ISP account.
Service Name	This field is read-only. It displays the PPPoE service name specified in the ISP account. This field is blank if the ISP account uses PPTP.
IP Address Assignment	Click **Show Advanced Settings** to display more settings. Click **Hide Advanced Settings** to display fewer settings.
Get Automatically	Select this if this interface is a DHCP client. In this case, the DHCP server configures the IP address automatically. The subnet mask and gateway are always defined automatically in PPPoE/PPTP/L2TP interfaces.
Use Fixed IP Address	Select this if you want to specify the IP address manually.
IP Address	This field is enabled if you select **Use Fixed IP Address**. Enter the IP address for this interface.

Table 96 Configuration > Network > Interface > PPP > Add (continued)

LABEL	DESCRIPTION
Gateway	This field is enabled if you select **Use Fixed IP Address**. Enter the IP address of the gateway. The Zyxel Device sends packets to the gateway when it does not know how to route the packet to its destination. The gateway should be on the same network as the interface.
Metric	Enter the priority of the gateway (the ISP) on this interface. The Zyxel Device decides which gateway to use based on this priority. The lower the number, the higher the priority. If two or more gateways have the same priority, the Zyxel Device uses the one that was configured first.
IPv6 Address Assignment	These IP address fields configure an IPv6 IP address on the interface itself.
Enable Stateless Address Auto-configuration (SLAAC)	Select this to enable IPv6 stateless auto-configuration on this interface. The interface will generate an IPv6 IP address itself from a prefix obtained from an IPv6 router in the network.
Metric	Enter the priority of the gateway (if any) on this interface. The Zyxel Device decides which gateway to use based on this priority. The lower the number, the higher the priority. If two or more gateways have the same priority, the Zyxel Device uses the one that was configured first.
Address from DHCPv6 Prefix Delegation	Use this table to have the Zyxel Device obtain an IPv6 prefix from the ISP or a connected uplink router for an internal network, such as the LAN or DMZ. You have to also enter a suffix address which is appended to the delegated prefix to form an address for this interface. See Prefix Delegation on page 209 for more information. To use prefix delegation, you must: • Create at least one DHCPv6 request object before configuring this table. • The external interface must be a DHCPv6 client. You must configure the DHCPv6 request options using a DHCPv6 request object with the type of prefix-delegation. • Assign the prefix delegation to an internal interface and enable router advertisement on that interface.
Add	Click this to create an entry.
Edit	Select an entry and click this to change the settings.
Remove	Select an entry and click this to delete it from this table.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with any entry.
Delegated Prefix	Select the DHCPv6 request object to use from the drop-down list.
Suffix Address	Enter the ending part of the IPv6 address, a slash (/), and the prefix length. The Zyxel Device will append it to the delegated prefix. For example, you got a delegated prefix of 2003:1234:5678/48. You want to configure an IP address of 2003:1234:5678:1111::1/128 for this interface, then enter ::1111:0:0:0:1/128 in this field.
Address	This field displays the combined IPv6 IP address for this interface. Note: This field displays the combined address after you click **OK** and reopen this screen.
DHCPv6 Setting	
DHCPv6	Select **Client** to obtain an IP address and DNS information from the service provider for the interface. Otherwise, select **N/A** to disable the function.
DUID	This field displays the DHCP Unique IDentifier (DUID) of the interface, which is unique and used for identification purposes when the interface is exchanging DHCPv6 messages with others. See DHCPv6 on page 210 for more information.

Table 96 Configuration > Network > Interface > PPP > Add (continued)

LABEL	DESCRIPTION
DUID as MAC	Select this if you want the DUID is generated from the interface's default MAC address.
Customized DUID	If you want to use a customized DUID, enter it here for the interface.
Enable Rapid Commit	Select this to shorten the DHCPv6 message exchange process from four to two steps. This function helps reduce heavy network traffic load. Note: Make sure you also enable this option in the DHCPv6 clients to make rapid commit work.
Request Address	Select this to get an IPv6 IP address for this interface from the DHCP server. Clear this to not get any IP address information through DHCPv6.
DHCPv6 Request Options	Use this section to configure DHCPv6 request settings that determine what additional information to get from the DHCPv6 server.
Add	Click this to create an entry in this table. See Section 9.3.6 on page 232 for more information.
Remove	Select an entry and click this to delete it from this table.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
Name	This field displays the name of the DHCPv6 request object.
Type	This field displays the type of the object.
Value	This field displays the IPv6 prefix that the Zyxel Device will advertise to its clients.
Interface Parameters	
Egress Bandwidth	Enter the maximum amount of traffic, in kilobits per second, the Zyxel Device can send through the interface to the network. Allowed values are 0 - 1048576.
Ingress Bandwidth	This is reserved for future use. Enter the maximum amount of traffic, in kilobits per second, the Zyxel Device can receive from the network through the interface. Allowed values are 0 - 1048576.
MTU	Maximum Transmission Unit. Type the maximum size of each data packet, in bytes, that can move through this interface. If a larger packet arrives, the Zyxel Device divides it into smaller fragments. Allowed values are 576 - 1492. Usually, this value is 1492.
Connectivity Check	The interface can regularly check the connection to the gateway you specified to make sure it is still available. You specify how often the interface checks the connection, how long to wait for a response before the attempt is a failure, and how many consecutive failures are required before the Zyxel Device stops routing to the gateway. The Zyxel Device resumes routing to the gateway the first time the gateway passes the connectivity check.
Enable Connectivity Check	Select this to turn on the connection check.
Check Method	Select the method that the gateway allows. Select **icmp** to have the Zyxel Device regularly ping the gateway you specify to make sure it is still available. Select **tcp** to have the Zyxel Device regularly perform a TCP handshake with the gateway you specify to make sure it is still available.
Check Period	Enter the number of seconds between connection check attempts.
Check Timeout	Enter the number of seconds to wait for a response before the attempt is a failure.
Check Fail Tolerance	Enter the number of consecutive failures before the Zyxel Device stops routing through the gateway.
Check Default Gateway	Select this to use the default gateway for the connectivity check.

Table 96 Configuration > Network > Interface > PPP > Add (continued)

LABEL	DESCRIPTION
Check this address	Select this to specify a domain name or IP address for the connectivity check. Enter that domain name or IP address in the field next to it.
Check Port	This field only displays when you set the **Check Method** to **tcp**. Specify the port number to use for a TCP connectivity check.
Related Setting	
Configure WAN TRUNK	Click **WAN TRUNK** to go to a screen where you can configure the interface as part of a WAN trunk for load balancing.
Policy Route	Click **Policy Route** to go to the screen where you can manually configure a policy route to associate traffic with this interface.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

9.5 Cellular Configuration Screen

Mobile broadband is a digital, packet-switched wireless technology. Bandwidth usage is optimized as multiple users share the same channel and bandwidth is only allocated to users when they send data. It allows fast transfer of voice and non-voice data and provides broadband Internet access to mobile devices.

Note: The actual data rate you obtain varies depending on the mobile broadband device you use, the signal strength to the service provider's base station, and so on.

You can configure how the Zyxel Device's mobile broadband device connects to a network (refer to Section 9.5.1 on page 243):

- You can set the mobile broadband device to connect only to the home network, which is the network to which you are originally subscribed.
- You can set the mobile broadband device to connect to other networks if the signal strength of the home network is too low or it is unavailable.

3G

3G (Third Generation) is a digital, packet-switched wireless technology. Bandwidth usage is optimized as multiple users share the same channel and bandwidth is only allocated to users when they send data. It allows fast transfer of voice and non-voice data and provides broadband Internet access to mobile devices.

4G

4G is the fourth generation of the mobile telecommunications technology and a successor of 3G. Both the WiMAX and Long Term Evolution (LTE) standards are the 4G candidate systems. 4G only supports all-IP-based packet-switched telephony services and is required to offer Gigabit speed access.

Note: The actual data rate you obtain varies depending on your mobile environment. The environmental factors may include the number of mobile devices which are currently connected to the mobile network, the signal strength to the mobile network, and so on.

See the following table for a comparison between 2G, 2.5G, 2.75G, 3G and 4G wireless technologies.

Table 97 2G, 2.5G, 2.75G, 3G, 3.5G and 4G Wireless Technologies

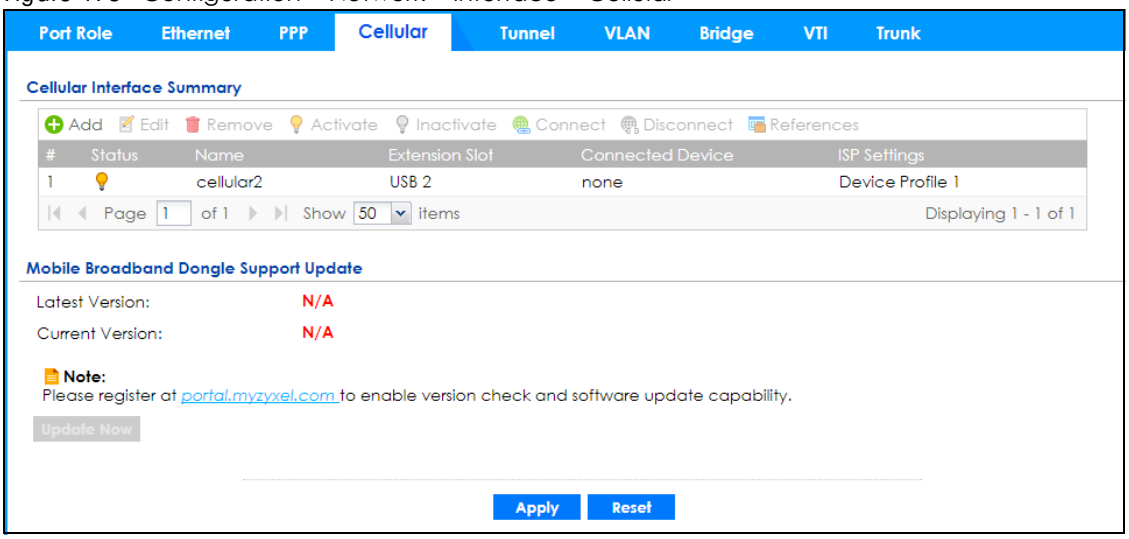
NAME	TYPE	MOBILE PHONE AND DATA STANDARDS		DATA SPEED
		GSM-BASED	CDMA-BASED	
2G	Circuit-switched	GSM (Global System for Mobile Communications), Personal Handy-phone System (PHS), etc.	Interim Standard 95 (IS-95), the first CDMA-based digital cellular standard pioneered by Qualcomm. The brand name for IS-95 is cdmaOne. IS-95 is also known as TIA-EIA-95.	Slow
2.5G	Packet-switched	GPRS (General Packet Radio Services), High-Speed Circuit-Switched Data (HSCSD), etc.	CDMA2000 is a hybrid 2.5G / 3G protocol of mobile telecommunications standards that use CDMA, a multiple access scheme for digital radio.	
2.75G	Packet-switched	Enhanced Data rates for GSM Evolution (EDGE), Enhanced GPRS (EGPRS), etc.	CDMA2000 1xRTT (1 times Radio Transmission Technology) is the core CDMA2000 wireless air interface standard. It is also known as 1x, 1xRTT, or IS-2000 and considered to be a 2.5G or 2.75G technology.	
3G	Packet-switched	UMTS (Universal Mobile Telecommunications System), a third-generation (3G) wireless standard defined in ITU specification, is sometimes marketed as 3GSM. The UMTS uses GSM infrastructures and W-CDMA (Wideband Code Division Multiple Access) as the air interface. The International Telecommunication Union (ITU) is an international organization within which governments and the private sector coordinate global telecom networks and services.	CDMA2000 EV-DO (Evolution-Data Optimized, originally 1x Evolution-Data Only), also referred to as EV-DO, EVDO, or just EV, is an evolution of CDMA2000 1xRTT and enables high-speed wireless connectivity. It is also denoted as IS-856 or High Data Rate (HDR).	
3.5G	Packet-switched	HSDPA (High-Speed Downlink Packet Access) is a mobile telephony protocol, used for UMTS-based 3G networks and allows for higher data transfer speeds.		
4G/LTE	Packet-switched	The LTE (Long Term Evolution) standard is based on the GSM and UMTS network technologies.		Fast

To change your mobile broadband WAN settings, click **Configuration** > **Network** > **Interface** > **Cellular**.

Note: Install (or connect) a compatible mobile broadband USB device to use a cellular connection.

Note: The WAN IP addresses of a Zyxel Device with multiple WAN interfaces must be on different subnets.

Figure 178 Configuration > Network > Interface > Cellular



The following table describes the labels in this screen.

Table 98 Configuration > Network > Interface > Cellular

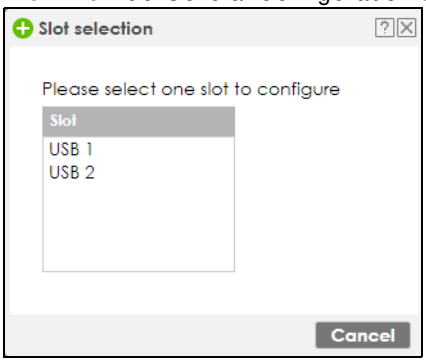
LABEL	DESCRIPTION
Add	Click this to create a new cellular interface.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Connect	To connect an interface, select it and click **Connect**. You might use this in testing the interface or to manually establish the connection.
Disconnect	To disconnect an interface, select it and click **Disconnect**. You might use this in testing the interface.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
#	This field is a sequential value, and it is not associated with any interface.
Status	The activate (light bulb) icon is lit when the entry is active and dimmed when the entry is inactive. The connect icon is lit when the interface is connected and dimmed when it is disconnected.
Name	This field displays the name of the interface.
Extension Slot	This field displays where the entry's cellular card is located.
Connected Device	This field displays the name of the cellular card.
ISP Settings	This field displays the profile of ISP settings that this cellular interface is set to use.
Mobile Broadband Dongle Support	You should have registered your Zyxel Device at myZyxel. myZyxel hosts a list of supported mobile broadband dongle devices. You should have an Internet connection to access this website.
Latest Version	This displays the latest supported mobile broadband dongle list version number.
Current Version	This displays the currently supported (by the Zyxel Device) mobile broadband dongle list version number.

Table 98 Configuration > Network > Interface > Cellular (continued)

LABEL	DESCRIPTION
Update Now	If the latest version number is greater than the current version number, then click this button to download the latest list of supported mobile broadband dongle devices to the Zyxel Device.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

9.5.1 Cellular Choose Slot

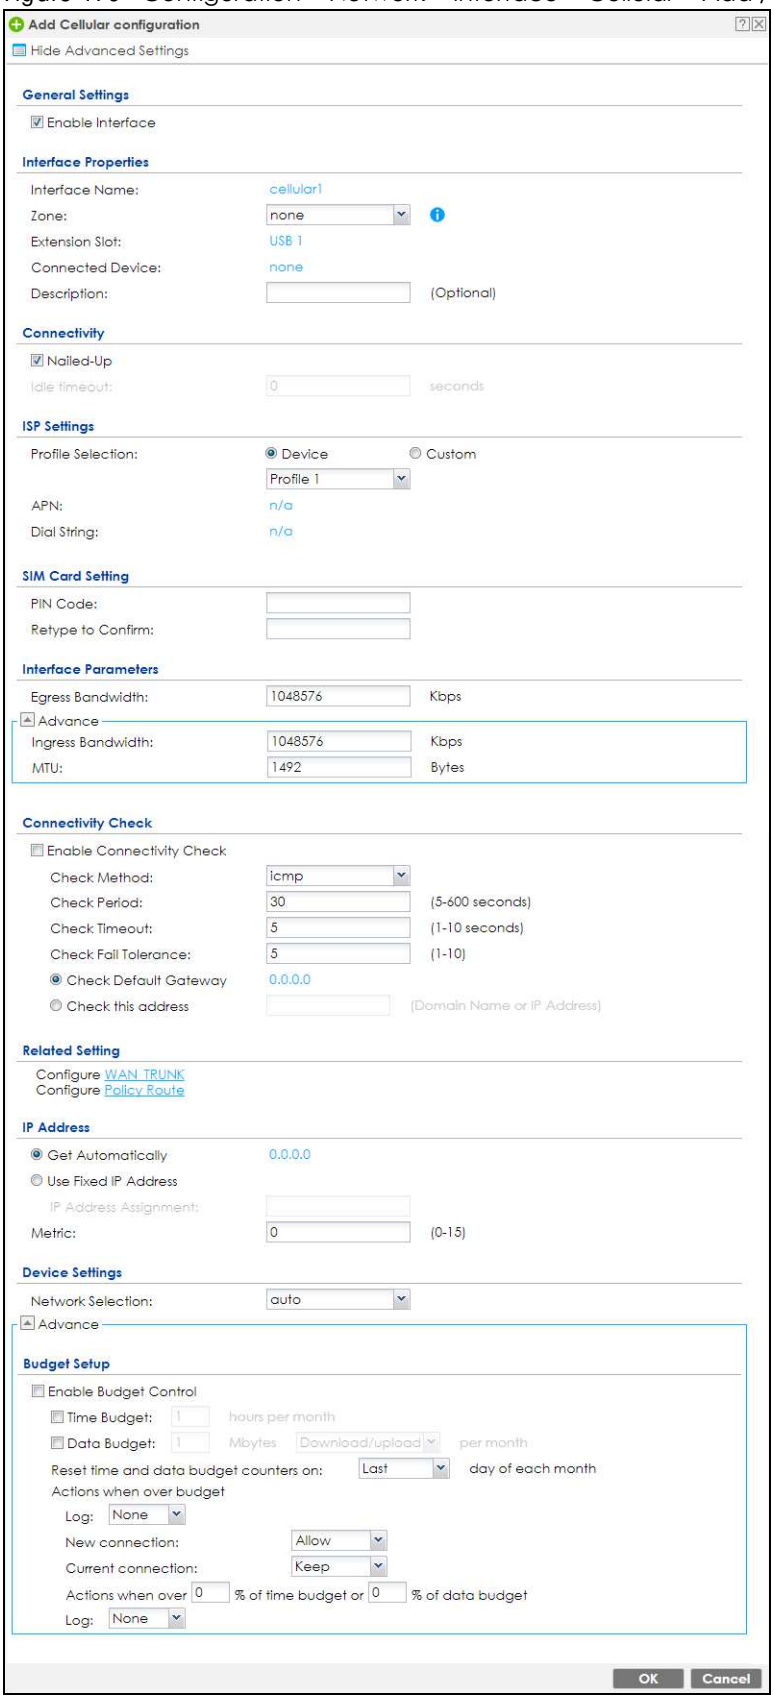
To change your mobile broadband settings, click **Configuration** > **Network** > **Interface** > **Cellular** > **Add** (or **Edit**). In the pop-up window that displays, select the slot that contains the mobile broadband device, then the **Add Cellular configuration** screen displays.



9.5.2 Add / Edit Cellular Configuration

This screen displays after you select the slot that contains the mobile broadband device in the previous pop-up window.

Figure 179 Configuration > Network > Interface > Cellular > Add / Edit



The following table describes the labels in this screen.

Table 99 Configuration > Network > Interface > Cellular > Add / Edit

LABEL	DESCRIPTION
Show Advanced Settings / Hide Advanced Settings	Click this button to display a greater or lesser number of configuration fields.
General Settings	
Enable Interface	Select this option to turn on this interface.
Interface Properties	
Interface Name	Select a name for the interface.
Zone	Select the zone to which you want the cellular interface to belong. The zone determines the security settings the Zyxel Device uses for the interface.
Extension Slot	This is the USB slot that you are configuring for use with a mobile broadband card.
Connected Device	This displays the manufacturer and model name of your mobile broadband card if you inserted one in the Zyxel Device. Otherwise, it displays **none**.
Description	Enter a description of this interface. It is not used elsewhere. You can use alphanumeric and `()+/:=?!*#@$_%-` characters, and it can be up to 60 characters long.
Connectivity	
Nailed-Up	Select this if the connection should always be up. Clear this to have the Zyxel Device to establish the connection only when there is traffic. You might not nail up the connection if there is little traffic through the interface or if it costs money to keep the connection available.
Idle timeout	This value specifies the time in seconds (0~360) that elapses before the Zyxel Device automatically disconnects from the ISP's server. Zero disables the idle timeout.
ISP Settings	
Profile Selection	Select **Device** to use one of the mobile broadband device's profiles of device settings. Then select the profile (use **Profile 1** unless your ISP instructed you to do otherwise). Select **Custom** to configure your device settings yourself.
APN	This field is read-only if you selected **Device** in the profile selection. Select **Custom** in the profile selection to be able to manually input the APN (Access Point Name) provided by your service provider. This field applies with a GSM or HSDPA mobile broadband card. Enter the APN from your service provider. Connections with different APNs may provide different services (such as Internet access or MMS (Multi-Media Messaging Service)) and charge method. You can enter up to 63 ASCII printable characters. Spaces are allowed.
Dial String	Enter the dial string if your ISP provides a string, which would include the APN, to initialize the mobile broadband card. You can enter up to 63 ASCII printable characters. Spaces are allowed. This field is available only when you insert a GSM mobile broadband card.
Authentication Type	The Zyxel Device supports PAP (Password Authentication Protocol) and CHAP (Challenge Handshake Authentication Protocol). CHAP is more secure than PAP; however, PAP is readily available on more platforms. Use the drop-down list box to select an authentication protocol for outgoing calls. Options are: **None**: No authentication for outgoing calls. **CHAP** - Your Zyxel Device accepts CHAP requests only. **PAP** - Your Zyxel Device accepts PAP requests only.

Table 99 Configuration > Network > Interface > Cellular > Add / Edit (continued)

LABEL	DESCRIPTION
User Name	This field displays when you select an authentication type other than **None**. This field is read-only if you selected **Device** in the profile selection. If this field is configurable, enter the user name for this mobile broadband card exactly as the service provider gave it to you. You can use 1 ~ 64 alphanumeric and `#:%-_@$./` characters. The first character must be alphanumeric or `-_@$./`. Spaces are not allowed.
Password	This field displays when you select an authentication type other than **None**. This field is read-only if you selected **Device** in the profile selection and the password is included in the mobile broadband card's profile. If this field is configurable, enter the password for this SIM card exactly as the service provider gave it to you. You can use 0 ~ 63 alphanumeric and `` `~!@#$%^&*()_-+={}|;:'<,>./ `` characters. Spaces are not allowed.
Retype to Confirm	This field displays when you select an authentication type other than **None**. This field is read-only if you selected **Device** in the profile selection and the password is included in the mobile broadband card's profile. If this field is configurable, re-enter the password for this SIM card exactly as the service provider gave it to you.
SIM Card Setting	
PIN Code	This field displays with a GSM or HSDPA mobile broadband card. A PIN (Personal Identification Number) code is a key to a mobile broadband card. Without the PIN code, you cannot use the mobile broadband card. Enter the 4-digit PIN code (0000 for example) provided by your ISP. If you enter the PIN code incorrectly, the mobile broadband card may be blocked by your ISP and you cannot use the account to access the Internet. If your ISP disabled PIN code authentication, enter an arbitrary number.
Retype to Confirm	Type the PIN code again to confirm it.
Interface Parameters	
Egress Bandwidth	Enter the maximum amount of traffic, in kilobits per second, the Zyxel Device can send through the interface to the network. Allowed values are 0 - 1048576. This setting is used in WAN load balancing and bandwidth management.
Ingress Bandwidth	This is reserved for future use. Enter the maximum amount of traffic, in kilobits per second, the Zyxel Device can receive from the network through the interface. Allowed values are 0 - 1048576.
MTU	Maximum Transmission Unit. Type the maximum size of each data packet, in bytes, that can move through this interface. If a larger packet arrives, the Zyxel Device divides it into smaller fragments. Allowed values are 576 - 1492. Usually, this value is 1492.
Connectivity Check	The interface can regularly check the connection to the gateway you specified to make sure it is still available. You specify how often the interface checks the connection, how long to wait for a response before the attempt is a failure, and how many consecutive failures are required before the Zyxel Device stops routing to the gateway. The Zyxel Device resumes routing to the gateway the first time the gateway passes the connectivity check.
Enable Connectivity Check	Select this to turn on the connection check.
Check Method	Select the method that the gateway allows. Select **icmp** to have the Zyxel Device regularly ping the gateway you specify to make sure it is still available. Select **tcp** to have the Zyxel Device regularly perform a TCP handshake with the gateway you specify to make sure it is still available.
Check Period	Enter the number of seconds between connection check attempts.
Check Timeout	Enter the number of seconds to wait for a response before the attempt is a failure.

Table 99 Configuration > Network > Interface > Cellular > Add / Edit (continued)

LABEL	DESCRIPTION
Check Fail Tolerance	Enter the number of consecutive failures before the Zyxel Device stops routing through the gateway.
Check Default Gateway	Select this to use the default gateway for the connectivity check.
Check this address	Select this to specify a domain name or IP address for the connectivity check. Enter that domain name or IP address in the field next to it.
Check Port	This field only displays when you set the **Check Method** to **tcp**. Specify the port number to use for a TCP connectivity check.
Related Setting	
Configure WAN TRUNK	Click **WAN TRUNK** to go to a screen where you can configure the interface as part of a WAN trunk for load balancing.
Configure Policy Route	Click **Policy Route** to go to the policy route summary screen where you can configure a policy route to override the default routing and SNAT behavior for the interface.
IP Address Assignment	
Get Automatically	Select this option If your ISP did not assign you a fixed IP address. This is the default selection.
Use Fixed IP Address	Select this option If the ISP assigned a fixed IP address.
IP Address Assignment	Enter the cellular interface's WAN IP address in this field if you selected **Use Fixed IP Address**.
Metric	Enter the priority of the gateway (if any) on this interface. The Zyxel Device decides which gateway to use based on this priority. The lower the number, the higher the priority. If two or more gateways have the same priority, the Zyxel Device uses the one that was configured first.
Device Settings	
Band Selection	This field appears if you selected a mobile broadband device that allows you to select the type of network to use. Select the type of mobile broadband service for your mobile broadband connection. If you are unsure what to select, check with your mobile broadband service provider to find the mobile broadband service available to you in your region. Select **auto** to have the card connect to an available network. Choose this option if you do not know what networks are available. You may want to manually specify the type of network to use if you are charged differently for different types of network or you only have one type of network available to you. Select **GPRS / EDGE (GSM) only** to have this interface only use a 2.5G or 2.75G network (respectively). If you only have a GSM network available to you, you may want to select this so the Zyxel Device does not spend time looking for a WCDMA network. Select **UMTS / HSDPA (WCDMA) only** to have this interface only use a 3G or 3.5G network (respectively). You may want to do this if you want to make sure the interface does not use the GSM network. Select **LTE only** to have this interface only use a 4G LTE network. This option only appears when a USG dongle for 4G technology is inserted.

Table 99 Configuration > Network > Interface > Cellular > Add / Edit (continued)

LABEL	DESCRIPTION
Network Selection	Home network is the network to which you are originally subscribed. Select **Home** to have the mobile broadband device connect only to the home network. If the home network is down, the Zyxel Device's mobile broadband Internet connection is also unavailable. Select **Auto** (Default) to allow the mobile broadband device to connect to a network to which you are not subscribed when necessary, for example when the home network is down or another mobile broadband base station's signal is stronger. This is recommended if you need continuous Internet connectivity. If you select this, you may be charged using the rate of a different network.
Budget Setup	
Enable Budget Control	Select this to set a monthly limit for the user account of the installed mobile broadband card. You can set a limit on the total traffic and/or call time. The Zyxel Device takes the actions you specified when a limit is exceeded during the month.
Time Budget	Select this and specify the amount of time (in hours) that the mobile broadband connection can be used within one month. If you change the value after you configure and enable budget control, the Zyxel Device resets the statistics.
Data Budget	Select this and specify how much downstream and/or upstream data (in Mega bytes) can be transmitted via the mobile broadband connection within one month. Select **Download** to set a limit on the downstream traffic (from the ISP to the Zyxel Device). Select **Upload** to set a limit on the upstream traffic (from the Zyxel Device to the ISP). Select **Download/Upload** to set a limit on the total traffic in both directions. If you change the value after you configure and enable budget control, the Zyxel Device resets the statistics.
Reset time and data budget counters on	Select the date on which the Zyxel Device resets the budget every month. If the date you selected is not available in a month, such as 30th or 31st, the Zyxel Device resets the budget on the last day of the month.
Reset time and data budget counters	This button is available only when you enable budget control in this screen. Click this button to reset the time and data budgets immediately. The count starts over with the mobile broadband connection's full configured monthly time and data budgets. This does not affect the normal monthly budget restart; so if you configured the time and data budget counters to reset on the second day of the month and you use this button on the first, the time and data budget counters will still reset on the second.
Actions when over budget	Specify the actions the Zyxel Device takes when the time or data limit is exceeded.
Log	Select **None** to not create a log, **Log** to create a log, or **Log-alert** to create an alert log. If you select **Log** or **Log-alert** you can also select **recurring every** to have the Zyxel Device send a log or alert for this event periodically. Specify how often (from 1 to 65535 minutes) to send the log or alert.
New connection	Select **Allow** to permit new mobile broadband connections or **Disallow** to drop/block new mobile broadband connections.
Current connection	Select **Keep** to maintain an existing mobile broadband connection or **Drop** to disconnect it. You cannot set **New connection** to **Allow** and **Current connection** to **Drop** at the same time. If you set **New connection** to **Disallow** and **Current connection** to **Keep**, the Zyxel Device allows you to transmit data using the current connection, but you cannot build a new connection if the existing connection is disconnected.
Actions when over % of time budget or % of data budget	Specify the actions the Zyxel Device takes when the specified percentage of time budget or data limit is exceeded. Enter a number from 1 to 99 in the percentage fields. If you change the value after you configure and enable budget control, the Zyxel Device resets the statistics.

Table 99 Configuration > Network > Interface > Cellular > Add / Edit (continued)

LABEL	DESCRIPTION
Log	Select **None** to not create a log when the Zyxel Device takes this action, **Log** to create a log, or **Log-alert** to create an alert log. If you select **Log** or **Log-alert** you can also select **recurring every** to have the Zyxel Device send a log or alert for this event periodically. Specify how often (from 1 to 65535 minutes) to send the log or alert.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

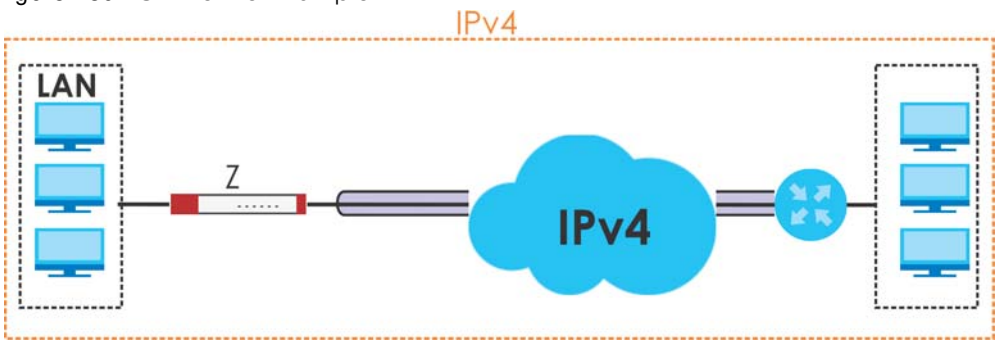
9.6 Tunnel Interfaces

The Zyxel Device uses tunnel interfaces in Generic Routing Encapsulation (GRE), IPv6 in IPv4, and 6to4 tunnels.

GRE Tunneling

GRE tunnels encapsulate a wide variety of network layer protocol packet types inside IP tunnels. A GRE tunnel serves as a virtual point-to-point link between the Zyxel Device and another router over an IPv4 network. At the time of writing, the Zyxel Device only supports GRE tunneling in IPv4 networks.

Figure 180 GRE Tunnel Example



IPv6 Over IPv4 Tunnels

To route traffic between two IPv6 networks over an IPv4 network, an IPv6 over IPv4 tunnel has to be used.

Figure 181 IPv6 over IPv4 Network

On the Zyxel Device, you can either set up a manual IPv6-in-IPv4 tunnel or an automatic 6to4 tunnel. The following describes each method:

IPv6-in-IPv4 Tunneling

Use this mode on the WAN of the Zyxel Device if

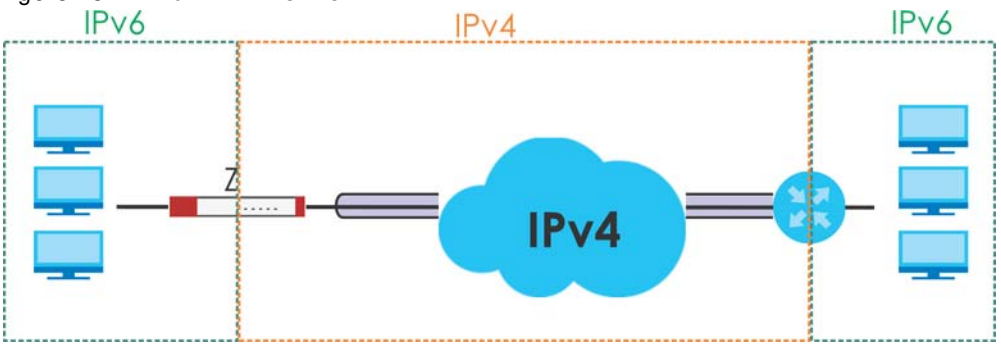
- your Zyxel Device has a public IPv4 IP address given from your ISP,

and

- you want to transmit your IPv6 packets to one and only one remote site whose LAN network is also an IPv6 network.

With this mode, the Zyxel Device encapsulates IPv6 packets within IPv4 packets across the Internet. You must know the WAN IP address of the remote gateway device. This mode is normally used for a site-to-site application such as two branch offices.

Figure 182 IPv6-in-IPv4 Tunnel



In the Zyxel Device, you must also manually configure a policy route for an IPv6-in-IPv4 tunnel to make the tunnel work.

6to4 Tunneling

This mode also enables IPv6 packets to cross IPv4 networks. Unlike IPv6-in-IPv4 tunneling, you do not need to configure a policy route for a 6to4 tunnel. Through your properly pre-configuring the destination router's IP address in the IP address assignments to hosts, the Zyxel Device can automatically forward 6to4 packets to the destination they want to go. A 6to4 relay router is required to route 6to4 packets to a native IPv6 network if the packet's destination do not match your specified criteria.

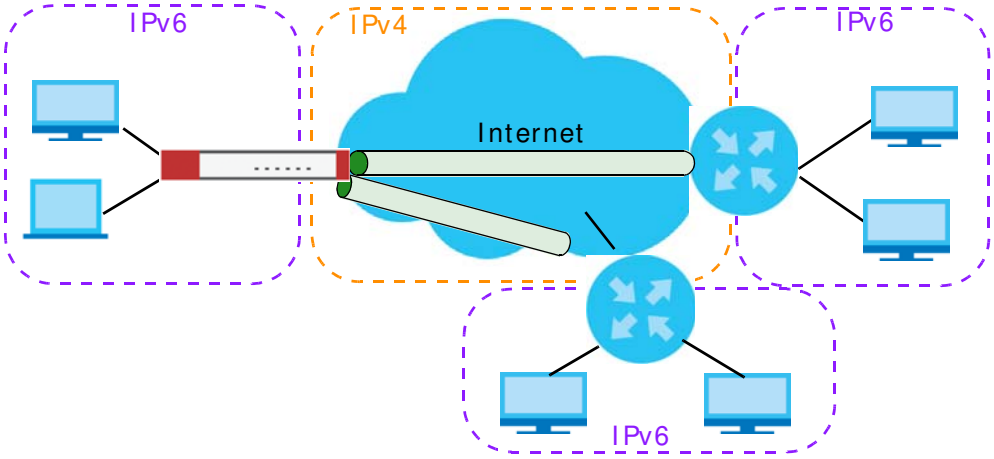
In this mode, the Zyxel Device should get a public IPv4 address for the WAN. The Zyxel Device adds an IPv4 IP header to an IPv6 packet when transmitting the packet to the Internet. In reverse, the Zyxel Device removes the IPv4 header from an IPv6 packet when receiving it from the Internet.

An IPv6 address using the 6to4 mode consists of an IPv4 address, the format is as the following:

2002:[a public IPv4 address in hexadecimal]::/48

For example, a public IPv4 address is 202.156.30.41. The converted hexadecimal IP string is ca.9c.1Ee.29. The IPv6 address prefix becomes 2002:ca9c:1e29::/48.

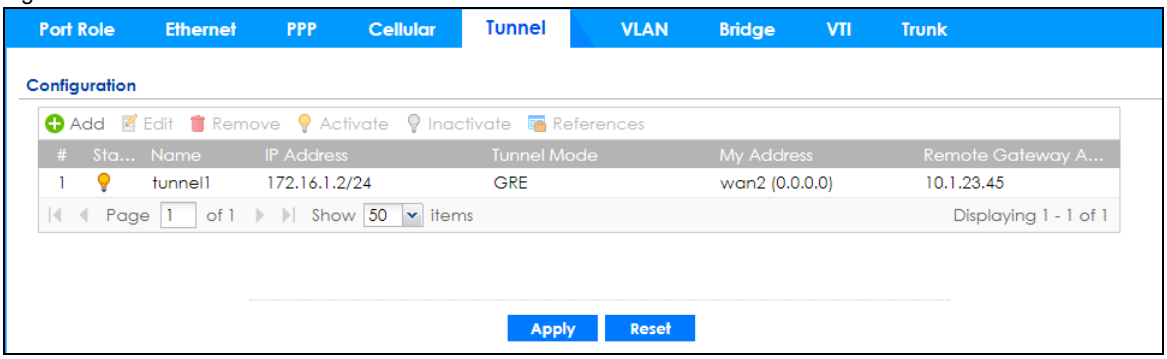
Figure 183 6to4 Tunnel



9.6.1 Configuring a Tunnel

This screen lists the Zyxel Device's configured tunnel interfaces. To access this screen, click **Network** > **Interface** > **Tunnel**.

Figure 184 Network > Interface > Tunnel



Each field is explained in the following table.

Table 100 Network > Interface > Tunnel

LABEL	DESCRIPTION
Add	Click this to create a new GRE tunnel interface.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
#	This field is a sequential value, and it is not associated with any interface.
Status	The activate (light bulb) icon is lit when the entry is active and dimmed when the entry is inactive.
Name	This field displays the name of the interface.

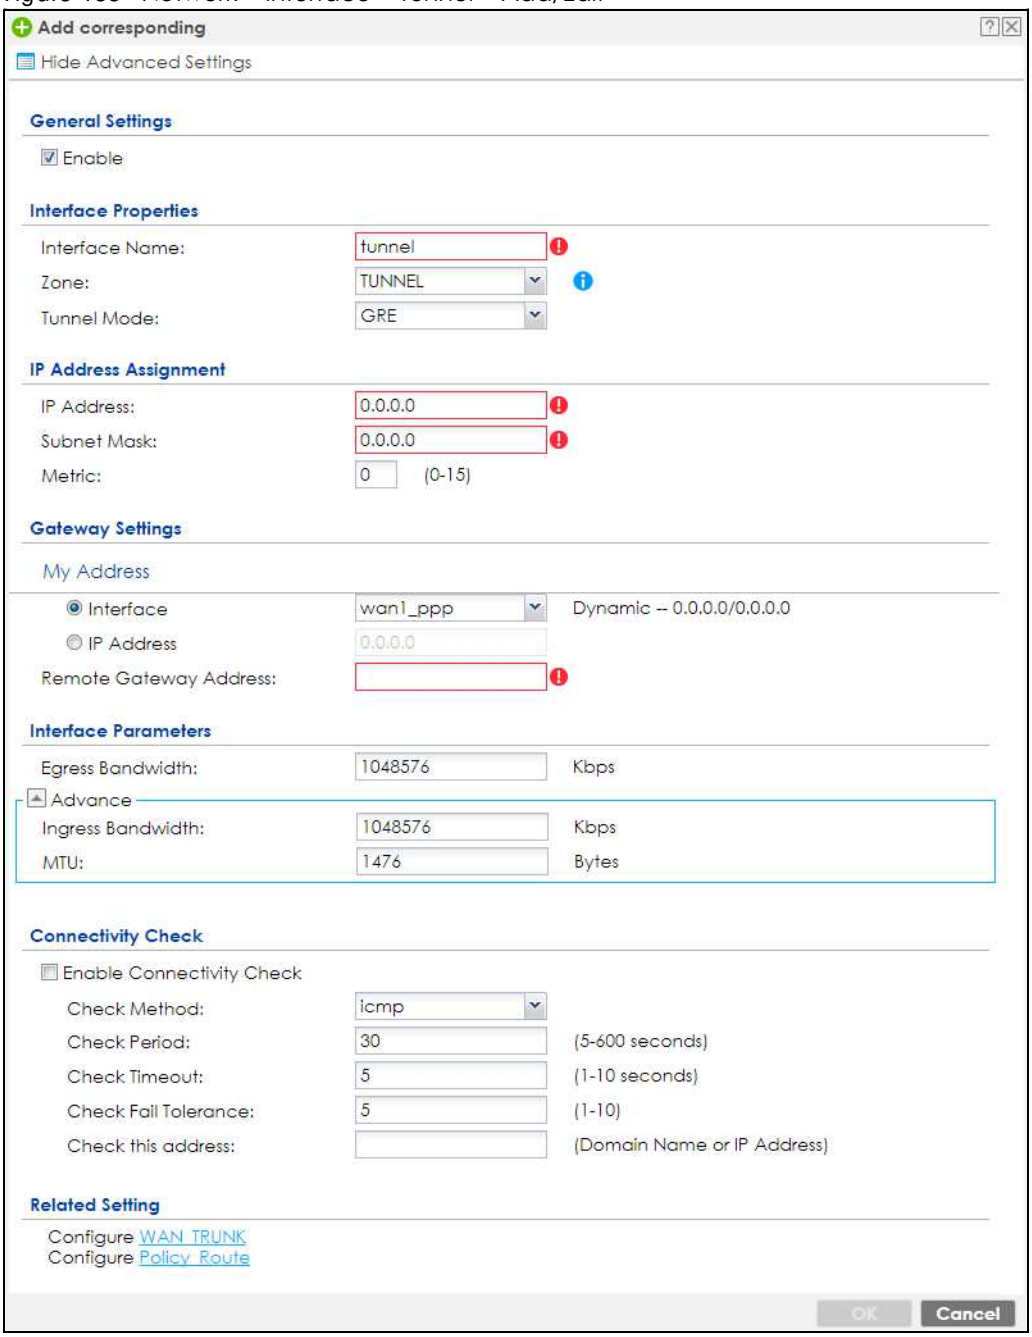
Table 100 Network > Interface > Tunnel (continued)

LABEL	DESCRIPTION
IP Address	This is the IP address of the interface. If the interface is active (and connected), the Zyxel Device tunnels local traffic sent to this IP address to the **Remote Gateway Address**.
Tunnel Mode	This is the tunnel mode of the interface (**GRE**, **IPv6-in-IPv4** or **6to4**). This field also displays the interface's IPv4 IP address and subnet mask if it is a GRE tunnel. Otherwise, it displays the interface's IPv6 IP address and prefix length.
My Address	This is the interface or IP address uses to identify itself to the remote gateway. The Zyxel Device uses this as the source for the packets it tunnels to the remote gateway.
Remote Gateway Address	This is the IP address or domain name of the remote gateway to which this interface tunnels traffic.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to begin configuring this screen afresh.

9.6.2 Tunnel Add or Edit Screen

This screen lets you configure a tunnel interface. Click **Configuration** > **Network** > **Interface** > **Tunnel** > **Add** (or **Edit**) to open the following screen.

Figure 185 Network > Interface > Tunnel > Add/Edit



Each field is explained in the following table.

Table 101 Network > Interface > Tunnel > Add/Edit

LABEL	DESCRIPTION
Show Advanced Settings / Hide Advanced Settings	Click this button to display a greater or lesser number of configuration fields.
General Settings	
Enable	Select this to enable this interface. Clear this to disable this interface.
Interface Properties	

Table 101 Network > Interface > Tunnel > Add/Edit (continued)

LABEL	DESCRIPTION
Interface Name	This field is read-only if you are editing an existing tunnel interface. Enter the name of the tunnel interface. The format is tunnel*x*, where *x* is 0 - 3. For example, tunnel0.
Zone	Use this field to select the zone to which this interface belongs. This controls what security settings the Zyxel Device applies to this interface.
Tunnel Mode	Select the tunneling protocol of the interface (**GRE**, **IPv6-in-IPv4** or **6to4**). See Section 9.6 on page 249 for more information.
IP Address Assignment	This section is available if you are configuring a GRE tunnel.
IP Address	Enter the IP address for this interface.
Subnet Mask	Enter the subnet mask of this interface in dot decimal notation. The subnet mask indicates what part of the IP address is the same for all computers in the network.
Metric	Enter the priority of the gateway (if any) on this interface. The Zyxel Device decides which gateway to use based on this priority. The lower the number, the higher the priority. If two or more gateways have the same priority, the Zyxel Device uses the one that was configured first.
IPv6 Address Assignment	This section is available if you are configuring an IPv6-in-IPv4 or a 6to4 tunnel.
IPv6 Address/ Prefix Length	Enter the IPv6 address and the prefix length for this interface if you want to use a static IP address. This field is optional. The prefix length indicates what the left-most part of the IP address is the same for all computers in the network, that is, the network address.
Metric	Enter the priority of the gateway (if any) on this interface. The Zyxel Device decides which gateway to use based on this priority. The lower the number, the higher the priority. If two or more gateways have the same priority, the Zyxel Device uses the one that was configured first.
6to4 Tunnel Parameter	This section is available if you are configuring a 6to4 tunnel which encapsulates IPv6 to IPv4 packets.
6to4 Prefix	Enter the IPv6 prefix of a destination network. The Zyxel Device forwards IPv6 packets to the hosts in the matched network. If you enter a prefix starting with 2002, the Zyxel Device will forward the matched packets to the IPv4 IP address converted from the packets' destination address. The IPv4 IP address can be converted from the next 32 bits after the prefix you specified in this field. See 6to4 Tunneling on page 250 for an example. The Zyxel Device forwards the unmatched packets to the specified **Relay Router**.
Relay Router	Enter the IPv4 address of a 6to4 relay router which helps forward packets between 6to4 networks and native IPv6 networks.
Remote Gateway Prefix	Enter the IPv4 network address and network bits of a remote 6to4 gateway, for example, 14.15.0.0/16. This field works if you enter a **6to4 Prefix** not starting with 2002 (2003 for example). The Zyxel Device forwards the matched packets to a remote gateway with the network address you specify here, and the bits converted after the **6to4 Prefix** in the packets. For example, you configure the 6to4 prefix to 2003:A0B::/32 and the remote gateway prefix to 14.15.0.0/16. If a packet's destination is 2003:A0B:1011:5::8, the Zyxel Device forwards the packet to 14.15.16.17, where the network address is 14.15.0.0 and the host address is the remain bits converted from 1011 after the packet's 6to4 prefix (2003:A0B).
Gateway Settings	
My Address	Specify the interface or IP address to use as the source address for the packets this interface tunnels to the remote gateway. The remote gateway sends traffic to this interface or IP address.

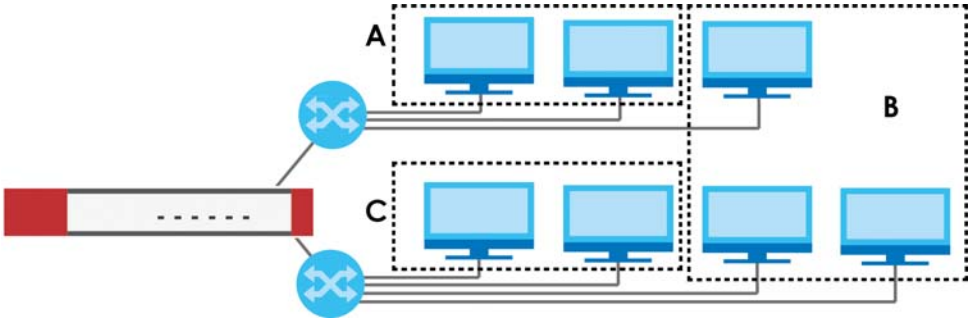
Table 101 Network > Interface > Tunnel > Add/Edit (continued)

LABEL	DESCRIPTION
Remote Gateway Address	Enter the IP address or domain name of the remote gateway to which this interface tunnels traffic. Automatic displays in this field if you are configuring a 6to4 tunnel. It means the 6to4 tunnel will help forward packets to the corresponding remote gateway automatically by looking at the packet's destination address.
Interface Parameters	
Egress Bandwidth	Enter the maximum amount of traffic, in kilobits per second, the Zyxel Device can send through the interface to the network. Allowed values are 0 - 1048576. This setting is used in WAN load balancing and bandwidth management.
Ingress Bandwidth	This is reserved for future use. Enter the maximum amount of traffic, in kilobits per second, the Zyxel Device can receive from the network through the interface. Allowed values are 0 - 1048576.
MTU	Maximum Transmission Unit. Type the maximum size of each data packet, in bytes, that can move through this interface. If a larger packet arrives, the Zyxel Device divides it into smaller fragments. Allowed values are 576 - 1500. Usually, this value is 1500.
Connectivity Check	This section is available if you are configuring a GRE tunnel. The interface can regularly check the connection to the gateway you specified to make sure it is still available. You specify how often the interface checks the connection, how long to wait for a response before the attempt is a failure, and how many consecutive failures are required before the Zyxel Device stops routing to the gateway. The Zyxel Device resumes routing to the gateway the first time the gateway passes the connectivity check.
Enable Connectivity Check	Select this to turn on the connection check.
Check Method	Select the method that the gateway allows. Select icmp to have the Zyxel Device regularly ping the gateway you specify to make sure it is still available. Select tcp to have the Zyxel Device regularly perform a TCP handshake with the gateway you specify to make sure it is still available.
Check Period	Enter the number of seconds between connection check attempts.
Check Timeout	Enter the number of seconds to wait for a response before the attempt is a failure.
Check Fail Tolerance	Enter the number of consecutive failures before the Zyxel Device stops routing through the gateway.
Check Default Gateway	Select this to use the default gateway for the connectivity check.
Check this address	Select this to specify a domain name or IP address for the connectivity check. Enter that domain name or IP address in the field next to it.
Check Port	This field displays when you set the Check Method to tcp. Specify the port number to use for a TCP connectivity check.
Related Setting	
WAN TRUNK	Click this link to go to a screen where you can configure WAN trunk load balancing.
Policy Route	Click this link to go to the screen where you can manually configure a policy route to associate traffic with this interface.
OK	Click OK to save your changes back to the Zyxel Device.
Cancel	Click Cancel to exit this screen without saving.

9.7 VLAN Interfaces

A Virtual Local Area Network (VLAN) divides a physical network into multiple logical networks. The standard is defined in IEEE 802.1q.

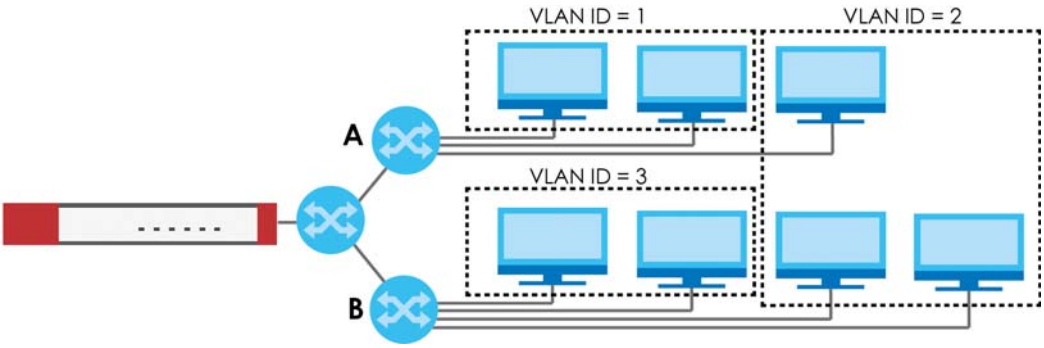
Figure 186 Example: Before VLAN



In this example, there are two physical networks and three departments A, B, and C. The physical networks are connected to hubs, and the hubs are connected to the router.

Alternatively, you can divide the physical networks into three VLANs.

Figure 187 Example: After VLAN



Each VLAN is a separate network with separate IP addresses, subnet masks, and gateways. Each VLAN also has a unique identification number (ID). The ID is a 12-bit value that is stored in the MAC header. The VLANs are connected to switches, and the switches are connected to the router. (If one switch has enough connections for the entire network, the network does not need switches A and B.)

- Traffic inside each VLAN is layer-2 communication (data link layer, MAC addresses). It is handled by the switches. As a result, the new switch is required to handle traffic inside VLAN 2. Traffic is only broadcast inside each VLAN, not each physical network.
- Traffic between VLANs (or between a VLAN and another type of network) is layer-3 communication (network layer, IP addresses). It is handled by the router.

This approach provides a few advantages.

- Increased performance - In VLAN 2, the extra switch should route traffic inside the sales department faster than the router does. In addition, broadcasts are limited to smaller, more logical groups of users.
- Higher security - If each computer has a separate physical connection to the switch, then broadcast traffic in each VLAN is never sent to computers in another VLAN.

- Better manageability - You can align network policies more appropriately for users. For example, you can create different content filtering rules for each VLAN (each department in the example above), and you can set different bandwidth limits for each VLAN. These rules are also independent of the physical network, so you can change the physical network without changing policies.

In this example, the new switch handles the following types of traffic:

- Inside VLAN 2.
- Between the router and VLAN 1.
- Between the router and VLAN 2.
- Between the router and VLAN 3.

VLAN Interfaces Overview

In the Zyxel Device, each VLAN is called a VLAN interface. As a router, the Zyxel Device routes traffic between VLAN interfaces, but it does not route traffic within a VLAN interface. All traffic for each VLAN interface can go through only one Ethernet interface, though each Ethernet interface can have one or more VLAN interfaces.

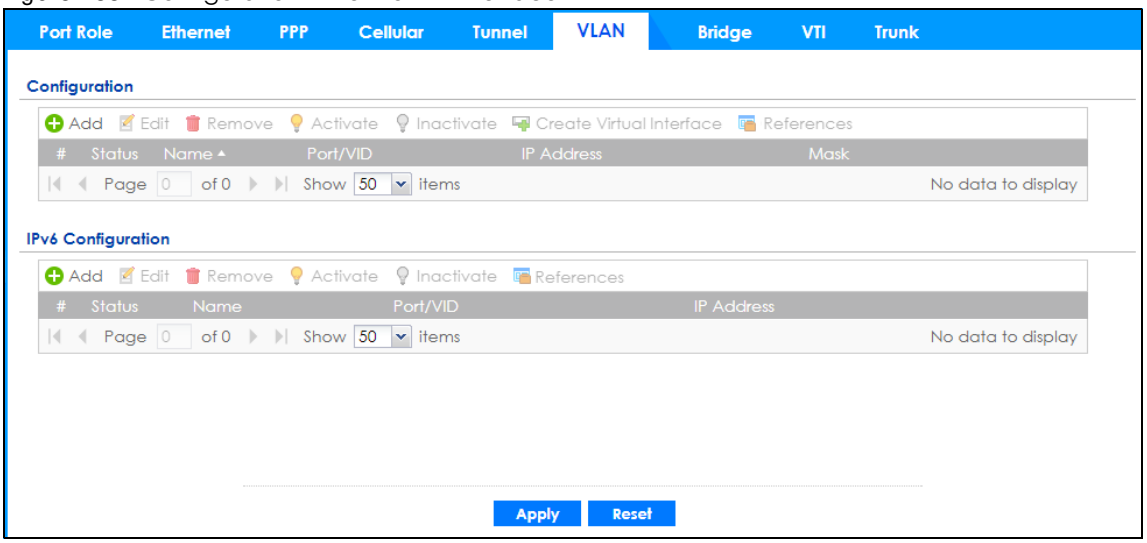
Note: Each VLAN interface is created on top of only one Ethernet interface.

Otherwise, VLAN interfaces are similar to other interfaces in many ways. They have an IP address, subnet mask, and gateway used to make routing decisions. They restrict bandwidth and packet size. They can provide DHCP services, and they can verify the gateway is available.

9.7.1 VLAN Summary Screen

This screen lists every VLAN interface and virtual interface created on top of VLAN interfaces. If you enabled IPv6 in the **Configuration** > **System** > **IPv6** screen, you can also configure VLAN interfaces used for your IPv6 networks on this screen. To access this screen, click **Configuration** > **Network** > **Interface** > **VLAN**.

Figure 188 Configuration > Network > Interface > VLAN



Each field is explained in the following table.

Table 102 Configuration > Network > Interface > VLAN

LABEL	DESCRIPTION
Configuration / IPv6 Configuration	Use the **Configuration** section for IPv4 network settings. Use the **IPv6 Configuration** section for IPv6 network settings if you connect your Zyxel Device to an IPv6 network. Both sections have similar fields as described below.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Create Virtual Interface	To open the screen where you can create a virtual interface, select an interface and click **Create Virtual Interface**.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
#	This field is a sequential value, and it is not associated with any interface.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Name	This field displays the name of the interface.
Port/VID	For VLAN interfaces, this field displays • the Ethernet interface on which the VLAN interface is created • the VLAN ID For virtual interfaces, this field is blank.
IP Address	This field displays the current IP address of the interface. If the IP address is 0.0.0.0, the interface does not have an IP address yet. This screen also shows whether the IP address is a static IP address (**STATIC**) or dynamically assigned (**DHCP**). IP addresses are always static in virtual interfaces.
Mask	This field displays the interface's subnet mask in dot decimal notation.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

9.7.2 VLAN Add/Edit

Select an existing entry in the previous screen and click **Edit** or click **Add** to create a new entry. The following screen appears.

Each field is explained in the following table.

Table 103 Configuration > Network > Interface > VLAN > Add / Edit

LABEL	DESCRIPTION
IPv4/IPv6 View / IPv4 View / IPv6 View	Use this button to display both IPv4 and IPv6, IPv4-only, or IPv6-only configuration fields.
Show Advanced Settings / Hide Advanced Settings	Click this button to display a greater or lesser number of configuration fields.
Create New Object	Click this button to create a DHCPv6 lease or DHCPv6 request object that you may use for the DHCPv6 settings in this screen.
General Settings	
Enable Interface	Select this to turn this interface on. Clear this to disable this interface.
General IPv6 Setting	
Enable IPv6	Select this to enable IPv6 on this interface. Otherwise, clear this to disable it.
Interface Properties	
Interface Type	Select one of the following option depending on the type of network to which the Zyxel Device is connected or if you want to additionally manually configure some related settings. **internal** is for connecting to a local network. Other corresponding configuration options: DHCP server and DHCP relay. The Zyxel Device automatically adds default SNAT settings for traffic flowing from this interface to an external interface. **external** is for connecting to an external network (like the Internet). The Zyxel Device automatically adds this interface to the default WAN trunk. For **general**, the rest of the screen's options do not automatically adjust and you must manually configure a policy route to add routing and SNAT settings for the interface.
Interface Name	This field is read-only if you are editing an existing VLAN interface. Enter the number of the VLAN interface. You can use a number from 0~4094. For example, use vlan0, vlan8, and so on. The total number of VLANs you can configure on the Zyxel Device depends on the model.
Zone	Select the zone to which the VLAN interface belongs.
Base Port	Select the Ethernet interface on which the VLAN interface runs.
VLAN ID	Enter the VLAN ID. This 12-bit number uniquely identifies each VLAN. Allowed values are 1 - 4094. (0 and 4095 are reserved.)
Priority Code	This is a 3-bit field within a 802.1Q VLAN tag that's used to prioritize associated outgoing VLAN traffic. "0" is the lowest priority level and "7" is the highest. See Table 174 on page 433. The setting configured in **Configuration > BWM** overwrites the priority setting here.
Description	Enter a description of this interface. It is not used elsewhere. You can use alphanumeric and `()+/:=?!*#@$_%-` characters, and it can be up to 60 characters long.
IP Address Assignment	
Get Automatically	Select this if this interface is a DHCP client. In this case, the DHCP server configures the IP address, subnet mask, and gateway automatically. You should not select this if the interface is assigned to a VRRP group.

Table 103 Configuration > Network > Interface > VLAN > Add / Edit (continued)

LABEL	DESCRIPTION
DHCP Option 60	DHCP Option 60 is used by the Zyxel Device for identification to the DHCP server using the VCI (Vendor Class Identifier) on the DHCP server. The Zyxel Device adds it in the initial DHCP discovery message that a DHCP client broadcasts in search of an IP address. The DHCP server can assign different IP addresses or options to clients with the specific VCI or reject the request from clients without the specific VCI. Type a string using up to 64 of these characters [a-zA-Z0-9!\"#$%&\'()*+,-./ :;<=>?@\[\\\]^_`{|}~] to identify this Zyxel Device to the DHCP server. For example, Zyxel-TW.
Use Fixed IP Address	Select this if you want to specify the IP address, subnet mask, and gateway manually.
IP Address	This field is enabled if you select **Use Fixed IP Address**. Enter the IP address for this interface.
Subnet Mask	This field is enabled if you select **Use Fixed IP Address**. Enter the subnet mask of this interface in dot decimal notation. The subnet mask indicates what part of the IP address is the same for all computers in the network.
Gateway	This field is enabled if you select **Use Fixed IP Address**. Enter the IP address of the gateway. The Zyxel Device sends packets to the gateway when it does not know how to route the packet to its destination. The gateway should be on the same network as the interface.
Metric	Enter the priority of the gateway (if any) on this interface. The Zyxel Device decides which gateway to use based on this priority. The lower the number, the higher the priority. If two or more gateways have the same priority, the Zyxel Device uses the one that was configured first.
Enable IGMP Support	Select this to allow the Zyxel Device to act as an IGMP proxy for hosts connected on the IGMP downstream interface.
IGMP Upstream	Enable **IGMP Upstream** on the interface which connects to a router running IGMP that is closer to the multicast server.
IGMP Downstream	Enable **IGMP Downstream** on the interface which connects to the multicast hosts.
IPv6 Address Assignment	These IP address fields configure an IPv6 IP address on the interface itself.
Enable Stateless Address Auto-configuration (SLAAC)	Select this to enable IPv6 stateless auto-configuration on this interface. The interface will generate an IPv6 IP address itself from a prefix obtained from an IPv6 router in the network.
Link-Local address	This displays the IPv6 link-local address and the network prefix that the Zyxel Device generates itself for the interface.
IPv6 Address/ Prefix Length	Enter the IPv6 address and the prefix length for this interface if you want to configure a static IP address for this interface. This field is optional. The prefix length indicates what the left-most part of the IP address is the same for all computers in the network, that is, the network address.
Gateway	Enter the IPv6 address of the default outgoing gateway using colon (:) hexadecimal notation.
Metric	Enter the priority of the gateway (if any) on this interface. The Zyxel Device decides which gateway to use based on this priority. The lower the number, the higher the priority. If two or more gateways have the same priority, the Zyxel Device uses the one that was configured first.

Table 103 Configuration > Network > Interface > VLAN > Add / Edit (continued)

LABEL	DESCRIPTION
Address from DHCPv6 Prefix Delegation	Use this table to have the Zyxel Device obtain an IPv6 prefix from the ISP or a connected uplink router for an internal network, such as the LAN or DMZ. You have to also enter a suffix address which is appended to the delegated prefix to form an address for this interface. See Prefix Delegation on page 209 for more information. To use prefix delegation, you must: • Create at least one DHCPv6 request object before configuring this table. • The external interface must be a DHCPv6 client. You must configure the DHCPv6 request options using a DHCPv6 request object with the type of prefix-delegation. • Assign the prefix delegation to an internal interface and enable router advertisement on that interface.
Add	Click this to create an entry.
Edit	Select an entry and click this to change the settings.
Remove	Select an entry and click this to delete it from this table.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
#	This field is a sequential value, and it is not associated with any entry.
Delegated Prefix	Select the DHCPv6 request object to use from the drop-down list.
Suffix Address	Enter the ending part of the IPv6 address, a slash (/), and the prefix length. The Zyxel Device will append it to the delegated prefix. For example, you got a delegated prefix of 2003:1234:5678/48. You want to configure an IP address of 2003:1234:5678:1111::1/128 for this interface, then enter ::1111:0:0:0:1/128 in this field.
Address	This field displays the combined IPv6 IP address for this interface. Note: This field displays the combined address after you click **OK** and reopen this screen.
DHCPv6 Setting	
DHCPv6	Select **N/A** to not use DHCPv6. Select **Client** to set this interface to act as a DHCPv6 client. Select **Server** to set this interface to act as a DHCPv6 server which assigns IP addresses and provides subnet mask, gateway, and DNS server information to clients. Select **Relay** to set this interface to route DHCPv6 requests to the DHCPv6 relay server you specify. The DHCPv6 server(s) may be on another network.
DUID	This field displays the DHCP Unique IDentifier (DUID) of the interface, which is unique and used for identification purposes when the interface is exchanging DHCPv6 messages with others. See DHCPv6 on page 210 for more information.
DUID as MAC	Select this to have the DUID generated from the interface's default MAC address.
Customized DUID	If you want to use a customized DUID, enter it here for the interface.
Enable Rapid Commit	Select this to shorten the DHCPv6 message exchange process from four to two steps. This function helps reduce heavy network traffic load. Note: Make sure you also enable this option in the DHCPv6 clients to make rapid commit work.
Information Refresh Time	Enter the number of seconds a DHCPv6 client should wait before refreshing information retrieved from DHCPv6.
Request Address	This field is available if you set this interface to DHCPv6 **Client**. Select this to get an IPv6 IP address for this interface from the DHCP server. Clear this to not get any IP address information through DHCPv6.

Table 103 Configuration > Network > Interface > VLAN > Add / Edit (continued)

LABEL	DESCRIPTION
DHCPv6 Request Options / DHCPv6 Lease Options	If this interface is a DHCPv6 client, use this section to configure DHCPv6 request settings that determine what additional information to get from the DHCPv6 server. If this interface is a DHCPv6 server, use this section to configure DHCPv6 lease settings that determine what to offer to the DHCPv6 clients.
Add	Click this to create an entry in this table. See Section 9.3.5 on page 231 for more information.
Remove	Select an entry and click this to delete it from this table.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
#	This field is a sequential value, and it is not associated with any entry.
Name	This field displays the name of the DHCPv6 request or lease object.
Type	This field displays the type of the object.
Value	This field displays the IPv6 prefix that the Zyxel Device obtained from an uplink router (**Server** is selected) or will advertise to its clients (**Client** is selected).
Interface	When **Relay** is selected, select this check box and an interface from the drop-down list if you want to use it as the relay server.
Relay Server	When **Relay** is selected, select this check box and enter the IP address of a DHCPv6 server as the relay server.
IPv6 Router Advertisement Setting	
Enable Router Advertisement	Select this to enable this interface to send router advertisement messages periodically. See IPv6 Router Advertisement on page 209 for more information.
Advertised Hosts Get Network Configuration From DHCPv6	Select this to have the Zyxel Device indicate to hosts to obtain network settings (such as prefix and DNS settings) through DHCPv6. Clear this to have the Zyxel Device indicate to hosts that DHCPv6 is not available and they should use the prefix in the router advertisement message.
Advertised Hosts Get Other Configuration From DHCPv6	Select this to have the Zyxel Device indicate to hosts to obtain DNS information through DHCPv6. Clear this to have the Zyxel Device indicate to hosts that DNS information is not available in this network.
Router Preference	Select the router preference (**Low**, **Medium** or **High**) for the interface. The interface sends this preference in the router advertisements to tell hosts what preference they should use for the Zyxel Device. This helps hosts to choose their default router especially when there are multiple IPv6 router in the network. Note: Make sure the hosts also support router preference to make this function work.
MTU	The Maximum Transmission Unit. Type the maximum size of each IPv6 data packet, in bytes, that can move through this interface. If a larger packet arrives, the Zyxel Device divides it into smaller fragments.
Hop Limit	Enter the maximum number of network segments that a packet can cross before reaching the destination. When forwarding an IPv6 packet, IPv6 routers are required to decrease the Hop Limit by 1 and to discard the IPv6 packet when the Hop Limit is 0.
Advertised Prefix Table	Configure this table only if you want the Zyxel Device to advertise a fixed prefix to the network.
Add	Click this to create an IPv6 prefix address.
Edit	Select an entry in this table and click this to modify it.
Remove	Select an entry in this table and click this to delete it.

Table 103 Configuration > Network > Interface > VLAN > Add / Edit (continued)

LABEL	DESCRIPTION
#	This field is a sequential value, and it is not associated with any entry.
IPv6 Address/ Prefix Length	Enter the IPv6 network prefix address and the prefix length. The prefix length indicates what the left-most part of the IP address is the same for all computers in the network, that is, the network address.
Advertised Prefix from DHCPv6 Prefix Delegation	Use this table to configure the network prefix if you want to use a delegated prefix as the beginning part of the network prefix.
Add	Click this to create an entry in this table.
Edit	Select an entry in this table and click this to modify it.
Remove	Select an entry in this table and click this to delete it.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
#	This field is a sequential value, and it is not associated with any entry.
Delegated Prefix	Select the DHCPv6 request object to use for generating the network prefix for the network.
Suffix Address	Enter the ending part of the IPv6 network address plus a slash (/) and the prefix length. The Zyxel Device will append it to the selected delegated prefix. The combined address is the network prefix for the network. For example, you got a delegated prefix of 2003:1234:5678/48. You want to divide it into 2003:1234:5678:1111/64 for this interface and 2003:1234:5678:2222/64 for another interface. You can use ::1111/64 and ::2222/64 for the suffix address respectively. But if you do not want to divide the delegated prefix into subnetworks, enter ::0/48 here, which keeps the same prefix length (/48) as the delegated prefix.
Address	This is the final network prefix combined by the delegated prefix and the suffix. Note: This field displays the combined address after you click **OK** and reopen this screen.
Interface Parameters	
Egress Bandwidth	Enter the maximum amount of traffic, in kilobits per second, the Zyxel Device can send through the interface to the network. Allowed values are 0 - 1048576.
Ingress Bandwidth	This is reserved for future use. Enter the maximum amount of traffic, in kilobits per second, the Zyxel Device can receive from the network through the interface. Allowed values are 0 - 1048576.
MTU	Maximum Transmission Unit. Type the maximum size of each data packet, in bytes, that can move through this interface. If a larger packet arrives, the Zyxel Device divides it into smaller fragments. Allowed values are 576 - 1500. Usually, this value is 1500.
Connectivity Check	The Zyxel Device can regularly check the connection to the gateway you specified to make sure it is still available. You specify how often to check the connection, how long to wait for a response before the attempt is a failure, and how many consecutive failures are required before the Zyxel Device stops routing to the gateway. The Zyxel Device resumes routing to the gateway the first time the gateway passes the connectivity check.
Enable Connectivity Check	Select this to turn on the connection check.
Check Method	Select the method that the gateway allows. Select **icmp** to have the Zyxel Device regularly ping the gateway you specify to make sure it is still available. Select **tcp** to have the Zyxel Device regularly perform a TCP handshake with the gateway you specify to make sure it is still available.

Table 103 Configuration > Network > Interface > VLAN > Add / Edit (continued)

LABEL	DESCRIPTION
Check Period	Enter the number of seconds between connection check attempts.
Check Timeout	Enter the number of seconds to wait for a response before the attempt is a failure.
Check Fail Tolerance	Enter the number of consecutive failures before the Zyxel Device stops routing through the gateway.
Check Default Gateway	Select this to use the default gateway for the connectivity check.
Check this address	Select this to specify a domain name or IP address for the connectivity check. Enter that domain name or IP address in the field next to it.
Check Port	This field only displays when you set the **Check Method** to **tcp**. Specify the port number to use for a TCP connectivity check.
DHCP Setting	The DHCP settings are available for the OPT, LAN and DMZ interfaces.
DHCP	Select what type of DHCP service the Zyxel Device provides to the network. Choices are: **None** - the Zyxel Device does not provide any DHCP services. There is already a DHCP server on the network. **DHCP Relay** - the Zyxel Device routes DHCP requests to one or more DHCP servers you specify. The DHCP server(s) may be on another network. **DHCP Server** - the Zyxel Device assigns IP addresses and provides subnet mask, gateway, and DNS server information to the network. The Zyxel Device is the DHCP server for the network.
	These fields appear if the Zyxel Device is a **DHCP Relay**.
Relay Server 1	Enter the IP address of a DHCP server for the network.
Relay Server 2	This field is optional. Enter the IP address of another DHCP server for the network.
	These fields appear if the Zyxel Device is a **DHCP Server**.
IP Pool Start Address	Enter the IP address from which the Zyxel Device begins allocating IP addresses. If you want to assign a static IP address to a specific computer, click **Add Static DHCP**. If this field is blank, the **Pool Size** must also be blank. In this case, the Zyxel Device can assign every IP address allowed by the interface's IP address and subnet mask, except for the first address (network address), last address (broadcast address) and the interface's IP address.
Pool Size	Enter the number of IP addresses to allocate. This number must be at least one and is limited by the interface's **Subnet Mask**. For example, if the **Subnet Mask** is 255.255.255.0 and **IP Pool Start Address** is 10.10.10.10, the Zyxel Device can allocate 10.10.10.10 to 10.10.10.254, or 245 IP addresses. If this field is blank, the **IP Pool Start Address** must also be blank. In this case, the Zyxel Device can assign every IP address allowed by the interface's IP address and subnet mask, except for the first address (network address), last address (broadcast address) and the interface's IP address.
First DNS Server Second DNS Server Third DNS Server	Specify the IP addresses up to three DNS servers for the DHCP clients to use. Use one of the following ways to specify these IP addresses. **Custom Defined** - enter a static IP address. **From ISP** - select the DNS server that another interface received from its DHCP server. **Zyxel Device** - the DHCP clients use the IP address of this interface and the Zyxel Device works as a DNS relay.
First WINS Server, Second WINS Server	Type the IP address of the WINS (Windows Internet Naming Service) server that you want to send to the DHCP clients. The WINS server keeps a mapping table of the computer names on your network and the IP addresses that they are currently using.

Table 103 Configuration > Network > Interface > VLAN > Add / Edit (continued)

LABEL	DESCRIPTION
Default Router	If you set this interface to **DHCP Server**, you can select to use either the interface's IP address or another IP address as the default router. This default router will become the DHCP clients' default gateway. To use another IP address as the default router, select **Custom Defined** and enter the IP address.
Lease time	Specify how long each computer can use the information (especially the IP address) before it has to request the information again. Choices are: **infinite** - select this if IP addresses never expire **days, hours, and minutes** - select this to enter how long IP addresses are valid. The default is 2 days.
Extended Options	This table is available if you selected **DHCP server**. Configure this table if you want to send more information to DHCP clients through DHCP packets.
Add	Click this to create an entry in this table. See Section 9.3.6 on page 232.
Edit	Select an entry in this table and click this to modify it.
Remove	Select an entry in this table and click this to delete it.
#	This field is a sequential value, and it is not associated with any entry.
Name	This is the option's name.
Code	This is the option's code number.
Type	This is the option's type.
Value	This is the option's value.
Enable IP/MAC Binding	Select this option to have the Zyxel Device enforce links between specific IP addresses and specific MAC addresses for this VLAN. This stops anyone else from manually using a bound IP address on another device connected to this interface. Use this to make use only the intended users get to use specific IP addresses.
Enable Logs for IP/MAC Binding Violation	Select this option to have the Zyxel Device generate a log if a device connected to this VLAN attempts to use an IP address that is bound to another device's MAC address.
Static DHCP Table	Configure a list of static IP addresses the Zyxel Device assigns to computers connected to the interface. Otherwise, the Zyxel Device assigns an IP address dynamically using the interface's **IP Pool Start Address** and **Pool Size**.
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
#	This field is a sequential value, and it is not associated with a specific entry.
IP Address	Enter the IP address to assign to a device with this entry's MAC address.
MAC Address	Enter the MAC address to which to assign this entry's IP address.
Description	Enter a description to help identify this static DHCP entry. You can use alphanumeric and `()+/:=?!*#@$_%-` characters, and it can be up to 60 characters long.
RIP Setting	See Section 10.6 on page 311 for more information about RIP.
Enable RIP	Select this to enable RIP on this interface.

Table 103 Configuration > Network > Interface > VLAN > Add / Edit (continued)

LABEL	DESCRIPTION
Direction	This field is effective when RIP is enabled. Select the RIP direction from the drop-down list box. **BiDir** - This interface sends and receives routing information. **In-Only** - This interface receives routing information. **Out-Only** - This interface sends routing information.
Send Version	This field is effective when RIP is enabled. Select the RIP version(s) used for sending RIP packets. Choices are **1**, **2**, and **1 and 2**.
Receive Version	This field is effective when RIP is enabled. Select the RIP version(s) used for receiving RIP packets. Choices are **1**, **2**, and **1 and 2**.
V2-Broadcast	This field is effective when RIP is enabled. Select this to send RIP-2 packets using subnet broadcasting; otherwise, the Zyxel Device uses multicasting.
OSPF Setting	See Section 10.7 on page 313 for more information about OSPF.
Area	Select the area in which this interface belongs. Select **None** to disable OSPF in this interface.
Priority	Enter the priority (between 0 and 255) of this interface when the area is looking for a Designated Router (DR) or Backup Designated Router (BDR). The highest-priority interface identifies the DR, and the second-highest-priority interface identifies the BDR. Set the priority to zero if the interface can not be the DR or BDR.
Link Cost	Enter the cost (between 1 and 65,535) to route packets through this interface.
Passive Interface	Select this to stop forwarding OSPF routing information from the selected interface. As a result, this interface only receives routing information.
Authentication	Select an authentication method, or disable authentication. To exchange OSPF routing information with peer border routers, you must use the same authentication method that they use. Choices are: **Same-as-Area** - use the default authentication method in the area **None** - disable authentication **Text** - authenticate OSPF routing information using a plain-text password **MD5** - authenticate OSPF routing information using MD5 encryption
Text Authentication Key	This field is available if the **Authentication** is **Text**. Type the password for text authentication. The key can consist of alphanumeric characters and the underscore, and it can be up to 16 characters long.
MD5 Authentication ID	This field is available if the **Authentication** is **MD5**. Type the ID for MD5 authentication. The ID can be between 1 and 255.
MD5 Authentication Key	This field is available if the **Authentication** is **MD5**. Type the password for MD5 authentication. The password can consist of alphanumeric characters and the underscore, and it can be up to 16 characters long.
MAC Address Setting	This section appears when **Interface Properties** is **External** or **General**. Have the interface use either the factory assigned default MAC address, a manually specified MAC address, or clone the MAC address of another device or computer.
Use Default MAC Address	Select this option to have the interface use the factory assigned default MAC address. By default, the Zyxel Device uses the factory assigned MAC address to identify itself.
Overwrite Default MAC Address	Select this option to have the interface use a different MAC address. Either the MAC address in the field. Once it is successfully configured, the address will be copied to the configuration file. It will not change unless you change the setting or upload a different configuration file.
Proxy ARP	Proxy ARP is available for external or general interfaces on the Zyxel Device. See Section on page 219 for more information on Proxy ARP.

Table 103 Configuration > Network > Interface > VLAN > Add / Edit (continued)

LABEL	DESCRIPTION
Enable Proxy ARP	Select this to allow the Zyxel Device to answer external interface ARP requests on behalf of a device on its internal interface. Interfaces supported are: • Ethernet • VLAN • Bridge See Section 9.3.2 on page 228 for more information.
Add	Click **Add** to create an **IPv4 Address**, an **IPv4 CIDR** (for example, 192.168.1.1/24) or an **IPv4 Range** (for example, 192.168.1.2-192.168.1.100) as the target IP address. The Zyxel Device answers external ARP requests only if they match one of these inputted target IP addresses. For example, if the **IPv4 Address** is 192.168.1.5, then the Zyxel Device will answer ARP requests coming from the WAN only if it contains 192.168.1.5 as the target IP address. Select an existing entry and click **Remove** to delete that entry. Related Setting	
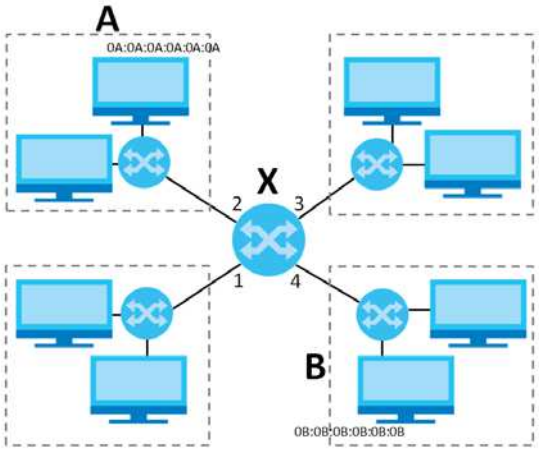
Configure WAN TRUNK	Click **WAN TRUNK** to go to a screen where you can set this VLAN to be part of a WAN trunk for load balancing.
Configure Policy Route	Click **Policy Route** to go to the screen where you can manually configure a policy route to associate traffic with this VLAN.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

9.8 Bridge Interfaces

This section introduces bridges and bridge interfaces and then explains the screens for bridge interfaces.

Bridge Overview

A bridge creates a connection between two or more network segments at the layer-2 (MAC address) level. In the following example, bridge X connects four network segments.



When the bridge receives a packet, the bridge records the source MAC address and the port on which it was received in a table. It also looks up the destination MAC address in the table. If the bridge knows on which port the destination MAC address is located, it sends the packet to that port. If the destination MAC address is not in the table, the bridge broadcasts the packet on every port (except the one on which it was received).

In the example above, computer A sends a packet to computer B. Bridge X records the source address 0A:0A:0A:0A:0A:0A and port 2 in the table. It also looks up 0B:0B:0B:0B:0B:0B in the table. There is no entry yet, so the bridge broadcasts the packet on ports 1, 3, and 4.

Table 104 Example: Bridge Table After Computer A Sends a Packet to Computer B

MAC ADDRESS	PORT
0A:0A:0A:0A:0A:0A	2

If computer B responds to computer A, bridge X records the source address 0B:0B:0B:0B:0B:0B and port 4 in the table. It also looks up 0A:0A:0A:0A:0A:0A in the table and sends the packet to port 2 accordingly.

Table 105 Example: Bridge Table After Computer B Responds to Computer A

MAC ADDRESS	PORT
0A:0A:0A:0A:0A:0A	2
0B:0B:0B:0B:0B:0B	4

Bridge Interface Overview

A bridge interface creates a software bridge between the members of the bridge interface. It also becomes the Zyxel Device's interface for the resulting network.

Unlike the device-wide bridge mode in ZyNOS-based Zyxel Devices, this Zyxel Device can bridge traffic between some interfaces while it routes traffic for other interfaces. The bridge interfaces also support more functions, like interface bandwidth parameters, DHCP settings, and connectivity check. To use the whole Zyxel Device as a transparent bridge, add all of the Zyxel Device's interfaces to a bridge interface.

A bridge interface may consist of the following members:

- Zero or one VLAN interfaces (and any associated virtual VLAN interfaces)
- Any number of Ethernet interfaces (and any associated virtual Ethernet interfaces)

When you create a bridge interface, the Zyxel Device removes the members' entries from the routing table and adds the bridge interface's entries to the routing table. For example, this table shows the routing table before and after you create bridge interface br0 (250.250.250.0/23) between lan1 and vlan1.

Table 106 Example: Routing Table Before and After Bridge Interface br0 Is Created

IP ADDRESS(ES)	DESTINATION
210.210.210.0/24	lan1
210.211.1.0/24	lan1:1
221.221.221.0/24	vlan0
222.222.222.0/24	vlan1
230.230.230.192/26	wan2
241.241.241.241/32	dmz
242.242.242.242/32	dmz

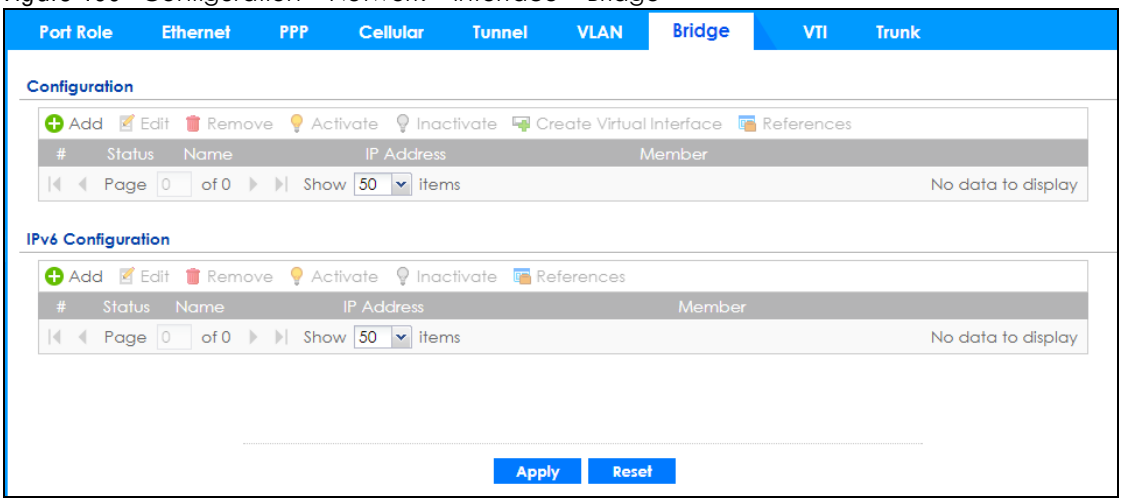
IP ADDRESS(ES)	DESTINATION
221.221.221.0/24	vlan0
230.230.230.192/26	wan2
241.241.241.241/32	dmz
242.242.242.242/32	dmz
250.250.250.0/23	br0

In this example, virtual Ethernet interface lan1:1 is also removed from the routing table when lan1 is added to br0. Virtual interfaces are automatically added to or remove from a bridge interface when the underlying interface is added or removed.

9.8.1 Bridge Summary

This screen lists every bridge interface and virtual interface created on top of bridge interfaces. If you enabled IPv6 in the **Configuration** > **System** > **IPv6** screen, you can also configure bridge interfaces used for your IPv6 network on this screen. To access this screen, click **Configuration** > **Network** > **Interface** > **Bridge**.

Figure 190 Configuration > Network > Interface > Bridge



Each field is described in the following table.

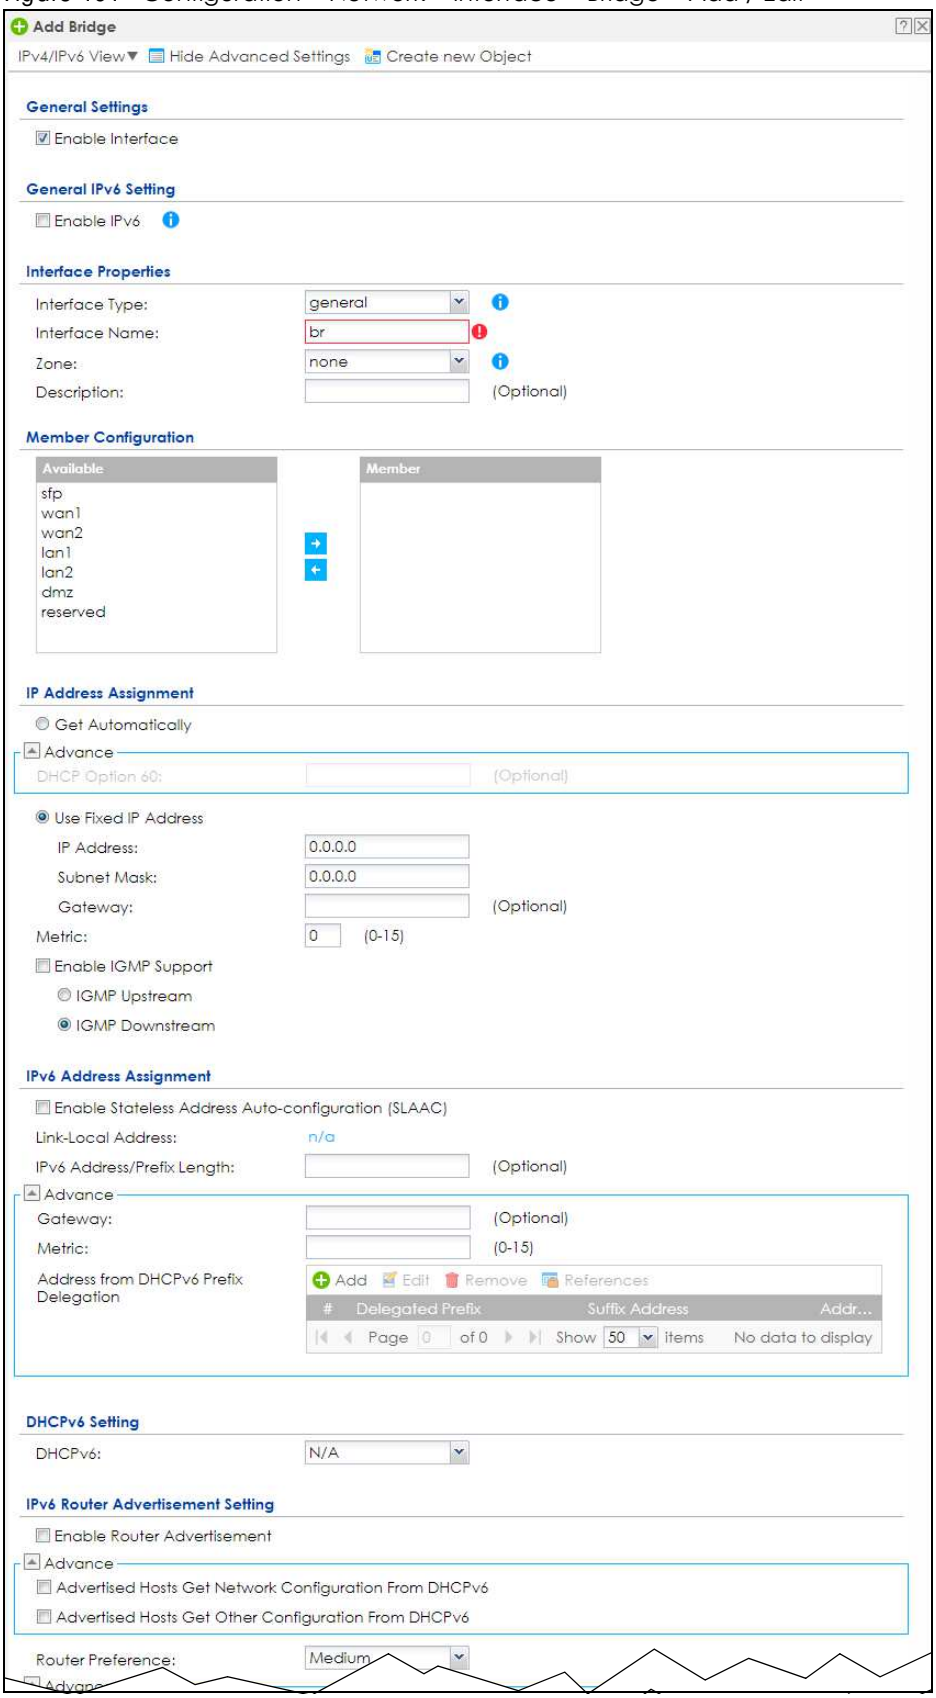
Table 107 Configuration > Network > Interface > Bridge

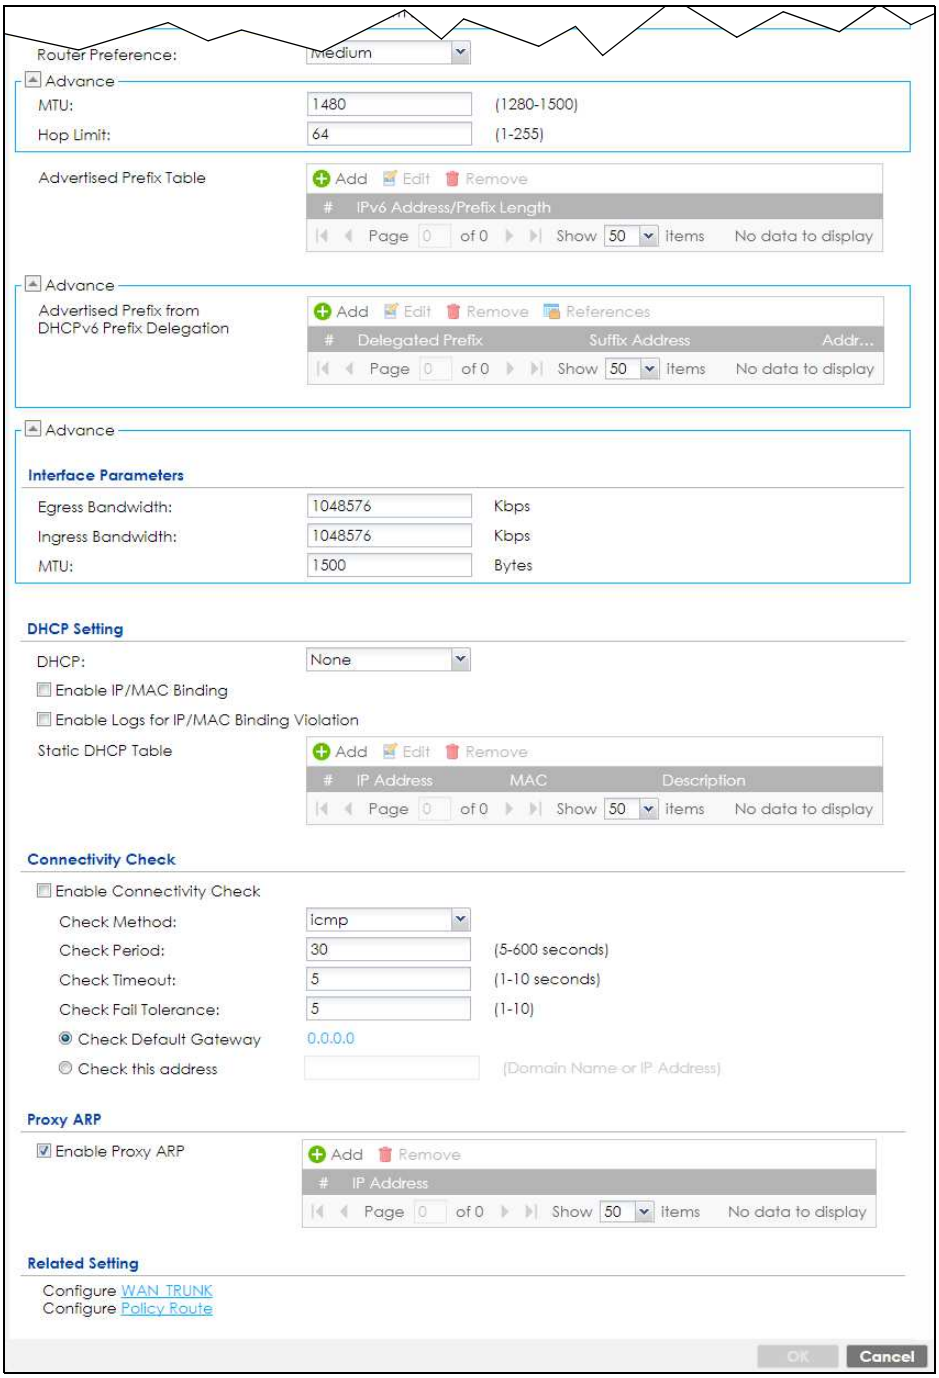
LABEL	DESCRIPTION
Configuration / IPv6 Configuration	Use the **Configuration** section for IPv4 network settings. Use the **IPv6 Configuration** section for IPv6 network settings if you connect your Zyxel Device to an IPv6 network. Both sections have similar fields as described below.
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Create Virtual Interface	To open the screen where you can create a virtual interface, select an interface and click **Create Virtual Interface**.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
#	This field is a sequential value, and it is not associated with any interface.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Name	This field displays the name of the interface.
IP Address	This field displays the current IP address of the interface. If the IP address is 0.0.0.0, the interface does not have an IP address yet. This screen also shows whether the IP address is a static IP address (**STATIC**) or dynamically assigned (**DHCP**). IP addresses are always static in virtual interfaces.
Member	This field displays the Ethernet interfaces and VLAN interfaces in the bridge interface. It is blank for virtual interfaces.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

9.8.2 Bridge Add/Edit

This screen lets you configure IP address assignment, interface bandwidth parameters, DHCP settings, and connectivity check for each bridge interface. To access this screen, click the **Add** or **Edit** icon in the **Bridge Summary** screen. The following screen appears.

Figure 191 Configuration > Network > Interface > Bridge > Add / Edit





Each field is described in the table below.

Table 108 Configuration > Network > Interface > Bridge > Add / Edit

LABEL	DESCRIPTION
IPv4/IPv6 View / IPv4 View / IPv6 View	Use this button to display both IPv4 and IPv6, IPv4-only, or IPv6-only configuration fields.
Show Advanced Settings / Hide Advanced Settings	Click this button to display a greater or lesser number of configuration fields.

Table 108 Configuration > Network > Interface > Bridge > Add / Edit (continued)

LABEL	DESCRIPTION
Create New Object	Click this button to create a DHCPv6 lease or DHCPv6 request object that you may use for the DHCPv6 settings in this screen.
General Settings	
Enable Interface	Select this to enable this interface. Clear this to disable this interface.
General IPv6 Setting	
Enable IPv6	Select this to enable IPv6 on this interface. Otherwise, clear this to disable it.
Interface Properties	
Interface Type	Select one of the following option depending on the type of network to which the Zyxel Device is connected or if you want to additionally manually configure some related settings. **internal** is for connecting to a local network. Other corresponding configuration options: DHCP server and DHCP relay. The Zyxel Device automatically adds default SNAT settings for traffic flowing from this interface to an external interface. **external** is for connecting to an external network (like the Internet). The Zyxel Device automatically adds this interface to the default WAN trunk. For **general**, the rest of the screen's options do not automatically adjust and you must manually configure a policy route to add routing and SNAT settings for the interface.
Interface Name	This field is read-only if you are editing the interface. Enter the name of the bridge interface. The format is br*x*, where *x* is 0 - 11. For example, br0, br3, and so on.
Zone	Select the zone to which the interface is to belong. You use zones to apply security settings such as security policy, IDP, remote management, anti-malware, and application patrol.
Description	Enter a description of this interface. It is not used elsewhere. You can use alphanumeric and `()+/:=?!*#@$_%-` characters, and it can be up to 60 characters long.
Member Configuration	
Available	This field displays Ethernet interfaces and VLAN interfaces that can become part of the bridge interface. An interface is not available in the following situations: • There is a virtual interface on top of it • It is already used in a different bridge interface Select one, and click the >> arrow to add it to the bridge interface. Each bridge interface can only have one VLAN interface.
Member	This field displays the interfaces that are part of the bridge interface. Select one, and click the << arrow to remove it from the bridge interface.
IP Address Assignment	
Get Automatically	Select this if this interface is a DHCP client. In this case, the DHCP server configures the IP address, subnet mask, and gateway automatically.
DHCP Option 60	DHCP Option 60 is used by the Zyxel Device for identification to the DHCP server using the VCI (Vendor Class Identifier) on the DHCP server. The Zyxel Device adds it in the initial DHCP discovery message that a DHCP client broadcasts in search of an IP address. The DHCP server can assign different IP addresses or options to clients with the specific VCI or reject the request from clients without the specific VCI. Type a string using up to 64 of these characters [a-zA-Z0-9!\"#$%&\'()*+,-./:;<=>?@\[\\\]^_`{|}~] to identify this Zyxel Device to the DHCP server. For example, Zyxel-TW.
Use Fixed IP Address	Select this if you want to specify the IP address, subnet mask, and gateway manually.

Table 108 Configuration > Network > Interface > Bridge > Add / Edit (continued)

LABEL	DESCRIPTION
IP Address	This field is enabled if you select **Use Fixed IP Address**. Enter the IP address for this interface.
Subnet Mask	This field is enabled if you select **Use Fixed IP Address**. Enter the subnet mask of this interface in dot decimal notation. The subnet mask indicates what part of the IP address is the same for all computers in the network.
Gateway	This field is enabled if you select **Use Fixed IP Address**. Enter the IP address of the gateway. The Zyxel Device sends packets to the gateway when it does not know how to route the packet to its destination. The gateway should be on the same network as the interface.
Metric	Enter the priority of the gateway (if any) on this interface. The Zyxel Device decides which gateway to use based on this priority. The lower the number, the higher the priority. If two or more gateways have the same priority, the Zyxel Device uses the one that was configured first.
Enable IGMP Support	Select this to allow the Zyxel Device to act as an IGMP proxy for hosts connected on the IGMP downstream interface.
IGMP Upstream	Enable **IGMP Upstream** on the interface which connects to a router running IGMP that is closer to the multicast server.
IGMP Downstream	Enable **IGMP Downstream** on the interface which connects to the multicast hosts.
IPv6 Address Assignment	These IP address fields configure an IPv6 IP address on the interface itself.
Enable Stateless Address Auto-configuration (SLAAC)	Select this to enable IPv6 stateless auto-configuration on this interface. The interface will generate an IPv6 IP address itself from a prefix obtained from an IPv6 router in the network.
Link-Local address	This displays the IPv6 link-local address and the network prefix that the Zyxel Device generates itself for the interface.
IPv6 Address/ Prefix Length	Enter the IPv6 address and the prefix length for this interface if you want to use a static IP address. This field is optional. The prefix length indicates what the left-most part of the IP address is the same for all computers in the network, that is, the network address.
Gateway	Enter the IPv6 address of the default outgoing gateway using colon (:) hexadecimal notation.
Metric	Enter the priority of the gateway (if any) on this interface. The Zyxel Device decides which gateway to use based on this priority. The lower the number, the higher the priority. If two or more gateways have the same priority, the Zyxel Device uses the one that was configured first.
Address from DHCPv6 Prefix Delegation	Use this table to have the Zyxel Device obtain an IPv6 prefix from the ISP or a connected uplink router for an internal network, such as the LAN or DMZ. You have to also enter a suffix address which is appended to the delegated prefix to form an address for this interface. See Prefix Delegation on page 209 for more information. To use prefix delegation, you must: • Create at least one DHCPv6 request object before configuring this table. • The external interface must be a DHCPv6 client. You must configure the DHCPv6 request options using a DHCPv6 request object with the type of prefix-delegation. • Assign the prefix delegation to an internal interface and enable router advertisement on that interface.
Add	Click this to create an entry.
Edit	Select an entry and click this to change the settings.
Remove	Select an entry and click this to delete it from this table.

Table 108 Configuration > Network > Interface > Bridge > Add / Edit (continued)

LABEL	DESCRIPTION
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
#	This field is a sequential value, and it is not associated with any entry.
Delegated Prefix	Select the DHCPv6 request object to use from the drop-down list.
Suffix Address	Enter the ending part of the IPv6 address, a slash (/), and the prefix length. The Zyxel Device will append it to the delegated prefix. For example, you got a delegated prefix of 2003:1234:5678/48. You want to configure an IP address of 2003:1234:5678:1111:1/128 for this interface, then enter ::1111:0:0:0:1/128 in this field.
Address	This field displays the combined IPv6 IP address for this interface. Note: This field displays the combined address after you click **OK** and reopen this screen.
DHCPv6 Setting	
DHCPv6	Select **N/A** to not use DHCPv6. Select **Client** to set this interface to act as a DHCPv6 client. Select **Server** to set this interface to act as a DHCPv6 server which assigns IP addresses and provides subnet mask, gateway, and DNS server information to clients. Select **Relay** to set this interface to route DHCPv6 requests to the DHCPv6 relay server you specify. The DHCPv6 server(s) may be on another network.
DUID	This field displays the DHCP Unique IDentifier (DUID) of the interface, which is unique and used for identification purposes when the interface is exchanging DHCPv6 messages with others. See DHCPv6 on page 210 for more information.
DUID as MAC	Select this if you want the DUID is generated from the interface's default MAC address.
Customized DUID	If you want to use a customized DUID, enter it here for the interface.
Enable Rapid Commit	Select this to shorten the DHCPv6 message exchange process from four to two steps. This function helps reduce heavy network traffic load. Note: Make sure you also enable this option in the DHCPv6 clients to make rapid commit work.
Information Refresh Time	Enter the number of seconds a DHCPv6 client should wait before refreshing information retrieved from DHCPv6.
Request Address	This field is available if you set this interface to DHCPv6 **Client**. Select this to get an IPv6 IP address for this interface from the DHCP server. Clear this to not get any IP address information through DHCPv6.
DHCPv6 Request Options / DHCPv6 Lease Options	If this interface is a DHCPv6 client, use this section to configure DHCPv6 request settings that determine what additional information to get from the DHCPv6 server. If the interface is a DHCPv6 server, use this section to configure DHCPv6 lease settings that determine what to offer to the DHCPv6 clients.
Add	Click this to create an entry in this table. See Section 9.3.5 on page 231 for more information.
Edit	Select an entry and click this to change the settings.
Remove	Select an entry and click this to delete it from this table.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
#	This field is a sequential value, and it is not associated with any entry.
Name	This field displays the name of the DHCPv6 request or lease object.

Table 108 Configuration > Network > Interface > Bridge > Add / Edit (continued)

LABEL	DESCRIPTION
Type	This field displays the type of the object.
Value	This field displays the IPv6 prefix that the Zyxel Device obtained from an uplink router (**Server** is selected) or will advertise to its clients (**Client** is selected).
Interface	When **Relay** is selected, select this check box and an interface from the drop-down list if you want to use it as the relay server.
Relay Server	When **Relay** is selected, select this check box and enter the IP address of a DHCPv6 server as the relay server.
IPv6 Router Advertisement Setting	
Enable Router Advertisement	Select this to enable this interface to send router advertisement messages periodically. See IPv6 Router Advertisement on page 209 for more information.
Advertised Hosts Get Network Configuration From DHCPv6	Select this to have the Zyxel Device indicate to hosts to obtain network settings (such as prefix and DNS settings) through DHCPv6. Clear this to have the Zyxel Device indicate to hosts that DHCPv6 is not available and they should use the prefix in the router advertisement message.
Advertised Hosts Get Other Configuration From DHCPv6	Select this to have the Zyxel Device indicate to hosts to obtain DNS information through DHCPv6. Clear this to have the Zyxel Device indicate to hosts that DNS information is not available in this network.
Router Preference	Select the router preference (**Low**, **Medium** or **High**) for the interface. The interface sends this preference in the router advertisements to tell hosts what preference they should use for the Zyxel Device. This helps hosts to choose their default router especially when there are multiple IPv6 router in the network. Note: Make sure the hosts also support router preference to make this function work.
MTU	The Maximum Transmission Unit. Type the maximum size of each IPv6 data packet, in bytes, that can move through this interface. If a larger packet arrives, the Zyxel Device divides it into smaller fragments.
Hop Limit	Enter the maximum number of network segments that a packet can cross before reaching the destination. When forwarding an IPv6 packet, IPv6 routers are required to decrease the Hop Limit by 1 and to discard the IPv6 packet when the Hop Limit is 0.
Advertised Prefix Table	Configure this table only if you want the Zyxel Device to advertise a fixed prefix to the network.
Add	Click this to create an IPv6 prefix address.
Edit	Select an entry in this table and click this to modify it.
Remove	Select an entry in this table and click this to delete it.
#	This field is a sequential value, and it is not associated with any entry.
IPv6 Address/ Prefix Length	Enter the IPv6 network prefix address and the prefix length. The prefix length indicates what the left-most part of the IP address is the same for all computers in the network, that is, the network address.
Advertised Prefix from DHCPv6 Prefix Delegation	Use this table to configure the network prefix if you want to use a delegated prefix as the beginning part of the network prefix.
Add	Click this to create an entry in this table.
Edit	Select an entry in this table and click this to modify it.
Remove	Select an entry in this table and click this to delete it.

Table 108 Configuration > Network > Interface > Bridge > Add / Edit (continued)

LABEL	DESCRIPTION
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
#	This field is a sequential value, and it is not associated with any entry.
Delegated Prefix	Select the DHCPv6 request object to use for generating the network prefix for the network.
Suffix Address	Enter the ending part of the IPv6 network address plus a slash (/) and the prefix length. The Zyxel Device will append it to the selected delegated prefix. The combined address is the network prefix for the network. For example, you got a delegated prefix of 2003:1234:5678/48. You want to divide it into 2003:1234:5678:1111/64 for this interface and 2003:1234:5678:2222/64 for another interface. You can use ::1111/64 and ::2222/64 for the suffix address respectively. But if you do not want to divide the delegated prefix into subnetworks, enter ::0/48 here, which keeps the same prefix length (/48) as the delegated prefix.
Address	This is the final network prefix combined by the selected delegated prefix and the suffix. Note: This field displays the combined address after you click **OK** and reopen this screen.
Interface Parameters	
Egress Bandwidth	Enter the maximum amount of traffic, in kilobits per second, the Zyxel Device can send through the interface to the network. Allowed values are 0 - 1048576.
Ingress Bandwidth	This is reserved for future use. Enter the maximum amount of traffic, in kilobits per second, the Zyxel Device can receive from the network through the interface. Allowed values are 0 - 1048576.
MTU	Maximum Transmission Unit. Type the maximum size of each data packet, in bytes, that can move through this interface. If a larger packet arrives, the Zyxel Device divides it into smaller fragments. Allowed values are 576 - 1500. Usually, this value is 1500.
DHCP Setting	
DHCP	Select what type of DHCP service the Zyxel Device provides to the network. Choices are: **None** - the Zyxel Device does not provide any DHCP services. There is already a DHCP server on the network. **DHCP Relay** - the Zyxel Device routes DHCP requests to one or more DHCP servers you specify. The DHCP server(s) may be on another network. **DHCP Server** - the Zyxel Device assigns IP addresses and provides subnet mask, gateway, and DNS server information to the network. The Zyxel Device is the DHCP server for the network.
	These fields appear if the Zyxel Device is a **DHCP Relay**.
Relay Server 1	Enter the IP address of a DHCP server for the network.
Relay Server 2	This field is optional. Enter the IP address of another DHCP server for the network.
	These fields appear if the Zyxel Device is a **DHCP Server**.
IP Pool Start Address	Enter the IP address from which the Zyxel Device begins allocating IP addresses. If you want to assign a static IP address to a specific computer, click **Add Static DHCP**. If this field is blank, the **Pool Size** must also be blank. In this case, the Zyxel Device can assign every IP address allowed by the interface's IP address and subnet mask, except for the first address (network address), last address (broadcast address) and the interface's IP address.

Table 108 Configuration > Network > Interface > Bridge > Add / Edit (continued)

LABEL	DESCRIPTION
Pool Size	Enter the number of IP addresses to allocate. This number must be at least one and is limited by the interface's **Subnet Mask**. For example, if the **Subnet Mask** is 255.255.255.0 and **IP Pool Start Address** is 10.10.10.10, the Zyxel Device can allocate 10.10.10.10 to 10.10.10.254, or 245 IP addresses. If this field is blank, the **IP Pool Start Address** must also be blank. In this case, the Zyxel Device can assign every IP address allowed by the interface's IP address and subnet mask, except for the first address (network address), last address (broadcast address) and the interface's IP address.
First DNS Server Second DNS Server Third DNS Server	Specify the IP addresses up to three DNS servers for the DHCP clients to use. Use one of the following ways to specify these IP addresses. **Custom Defined** - enter a static IP address. **From ISP** - select the DNS server that another interface received from its DHCP server. **Zyxel Device** - the DHCP clients use the IP address of this interface and the Zyxel Device works as a DNS relay.
First WINS Server, Second WINS Server	Type the IP address of the WINS (Windows Internet Naming Service) server that you want to send to the DHCP clients. The WINS server keeps a mapping table of the computer names on your network and the IP addresses that they are currently using.
Default Router	If you set this interface to **DHCP Server**, you can select to use either the interface's IP address or another IP address as the default router. This default router will become the DHCP clients' default gateway. To use another IP address as the default router, select **Custom Defined** and enter the IP address.
Lease time	Specify how long each computer can use the information (especially the IP address) before it has to request the information again. Choices are: **infinite** - select this if IP addresses never expire **days, hours, and minutes** - select this to enter how long IP addresses are valid.
Extended Options	This table is available if you selected **DHCP server**. Configure this table if you want to send more information to DHCP clients through DHCP packets.
Add	Click this to create an entry in this table. See Section 9.3.6 on page 232.
Edit	Select an entry in this table and click this to modify it.
Remove	Select an entry in this table and click this to delete it.
#	This field is a sequential value, and it is not associated with any entry.
Name	This is the option's name.
Code	This is the option's code number.
Type	This is the option's type.
Value	This is the option's value.
PXE Server	PXE (Preboot eXecution Environment) allows a client computer to use the network to boot up and install an operating system via a PXE-capable Network Interface Card (NIC). PXE is available for computers on internal interfaces to allow them to boot up using boot software on a PXE server. The Zyxel Device acts as an intermediary between the PXE server and the computers that need boot software. The PXE server must have a public IPv4 address. You must enable **DHCP Server** on the Zyxel Device so that it can receive information from the PXE server.
PXE Boot Loader File	A boot loader is a computer program that loads the operating system for the computer. Type the exact file name of the boot loader software file, including filename extension, that is on the PXE server. If the wrong filename is typed, then the client computers cannot boot.

Table 108 Configuration > Network > Interface > Bridge > Add / Edit (continued)

LABEL	DESCRIPTION
Enable IP/MAC Binding	Select this option to have this interface enforce links between specific IP addresses and specific MAC addresses. This stops anyone else from manually using a bound IP address on another device connected to this interface. Use this to make use only the intended users get to use specific IP addresses.
Enable Logs for IP/MAC Binding Violation	Select this option to have the Zyxel Device generate a log if a device connected to this interface attempts to use an IP address that is bound to another device's MAC address.
Static DHCP Table	Configure a list of static IP addresses the Zyxel Device assigns to computers connected to the interface. Otherwise, the Zyxel Device assigns an IP address dynamically using the interface's **IP Pool Start Address** and **Pool Size**.
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
#	This field is a sequential value, and it is not associated with a specific entry.
IP Address	Enter the IP address to assign to a device with this entry's MAC address.
MAC Address	Enter the MAC address to which to assign this entry's IP address.
Description	Enter a description to help identify this static DHCP entry. You can use alphanumeric and `()+/:=?!*#@$_%-` characters, and it can be up to 60 characters long.
Connectivity Check	The interface can regularly check the connection to the gateway you specified to make sure it is still available. You specify how often the interface checks the connection, how long to wait for a response before the attempt is a failure, and how many consecutive failures are required before the Zyxel Device stops routing to the gateway. The Zyxel Device resumes routing to the gateway the first time the gateway passes the connectivity check.
Enable Connectivity Check	Select this to turn on the connection check.
Check Method	Select the method that the gateway allows. Select **icmp** to have the Zyxel Device regularly ping the gateway you specify to make sure it is still available. Select **tcp** to have the Zyxel Device regularly perform a TCP handshake with the gateway you specify to make sure it is still available.
Check Period	Enter the number of seconds between connection check attempts.
Check Timeout	Enter the number of seconds to wait for a response before the attempt is a failure.
Check Fail Tolerance	Enter the number of consecutive failures before the Zyxel Device stops routing through the gateway.
Check Default Gateway	Select this to use the default gateway for the connectivity check.
Check this address	Select this to specify a domain name or IP address for the connectivity check. Enter that domain name or IP address in the field next to it.
Check Port	This field only displays when you set the **Check Method** to **tcp**. Specify the port number to use for a TCP connectivity check.
Proxy ARP	Proxy ARP is available for external or general interfaces on the Zyxel Device. See Section on page 219 for more information on Proxy ARP.
Enable Proxy ARP	Select this to allow the Zyxel Device to answer external interface ARP requests on behalf of a device on its internal interface. Interfaces supported are: • Ethernet • VLAN • Bridge See Section 9.3.2 on page 228 for more information.

Table 108 Configuration > Network > Interface > Bridge > Add / Edit (continued)

LABEL	DESCRIPTION
Add	Click **Add** to create an **IPv4 Address**, an **IPv4 CIDR** (for example, 192.168.1.1/24) or an **IPv4 Range** (for example, 192.168.1.2-192.168.1.100) as the target IP address. The Zyxel Device answers external ARP requests only if they match one of these inputted target IP addresses. For example, if the **IPv4 Address** is 192.168.1.5, then the Zyxel Device will answer ARP requests coming from the WAN only if it contains 192.168.1.5 as the target IP address. Select an existing entry and click **Remove** to delete that entry. Related Setting	
Configure WAN TRUNK	Click **WAN TRUNK** to go to a screen where you can configure the interface as part of a WAN trunk for load balancing.
Configure Policy Route	Click **Policy Route** to go to the screen where you can manually configure a policy route to associate traffic with this bridge interface.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

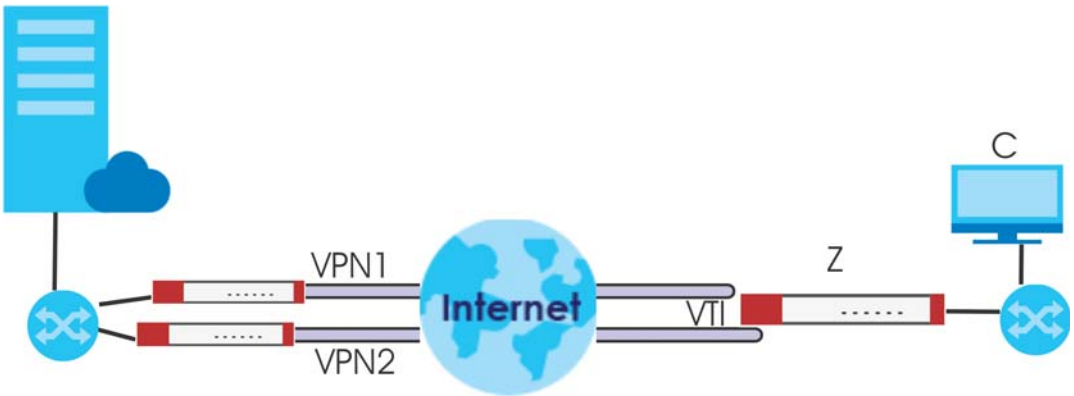
9.9 VTI

IPSec VPN Tunnel Interface (VTI) encrypts or decrypts IPv4 traffic from or to the interface according to the IP routing table.

VTI allows static routes to send traffic over the VPN. The IPSec tunnel endpoint is associated with an actual (virtual) interface. Therefore many interface capabilities such as Policy Route, Static Route, Trunk, and BWM can be applied to the IPSec tunnel as soon as the tunnel is active

IPSec VTIs simplifies network management and load balancing. Create a trunk using VPN tunnel interfaces for load balancing. In the following example configure VPN tunnels with static IP addresses or DNS on both Zyxel Devices (or IPSec routers at the end of the tunnel). Also configure VTI and a trunk on both Zyxel Devices.

Figure 192 VTI and Trunk for VPN Load Balancing



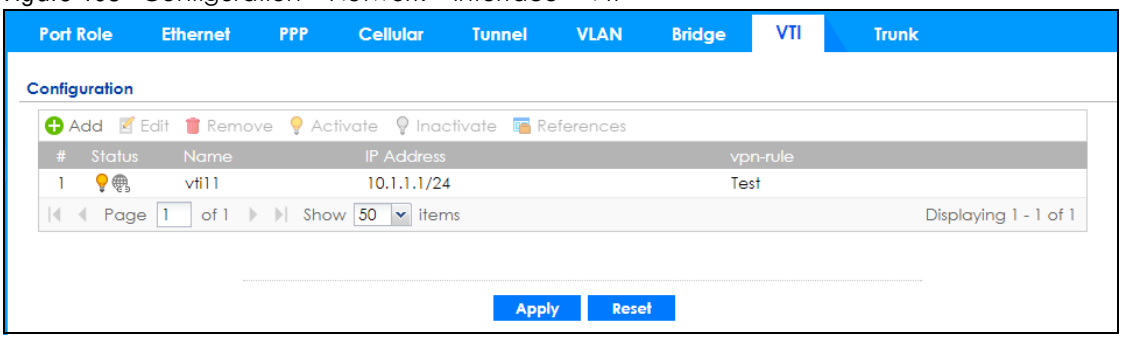
9.9.1 Restrictions for IPSec Virtual Tunnel Interface

- IPv4 traffic only
- IPSec tunnel mode only. A shared keyword must not be configured when using tunnel mode.
- With a VTI VPN you do not add local or remote LANs to your VPN configuration.
- For a VTI VPN you should only have one local and one remote WAN.
- A dynamic peer is not supported
- The IPSec VTI is limited to IP unicast and multicast traffic only.

9.9.2 VTI Screen

To access this screen, click **Configuration** > **Network** > **Interface** > **VTI**.

Figure 193 Configuration > Network > Interface > VTI



The following table describes the fields in this screen.

Table 109 Configuration > Network > Interface > VTI

LABEL	DESCRIPTION
Configuration	
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with any interface.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Name	This field displays the name of the LAG interface.
IP Address	This field displays the current IP address of the virtual interface and subnet mask in bits. If the IP address is 0.0.0.0, the interface does not have an IP address yet.
vpn-rule	This shows the name of the associated IPSec VPN rule with **VPN Tunnel Interface** application scenario.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

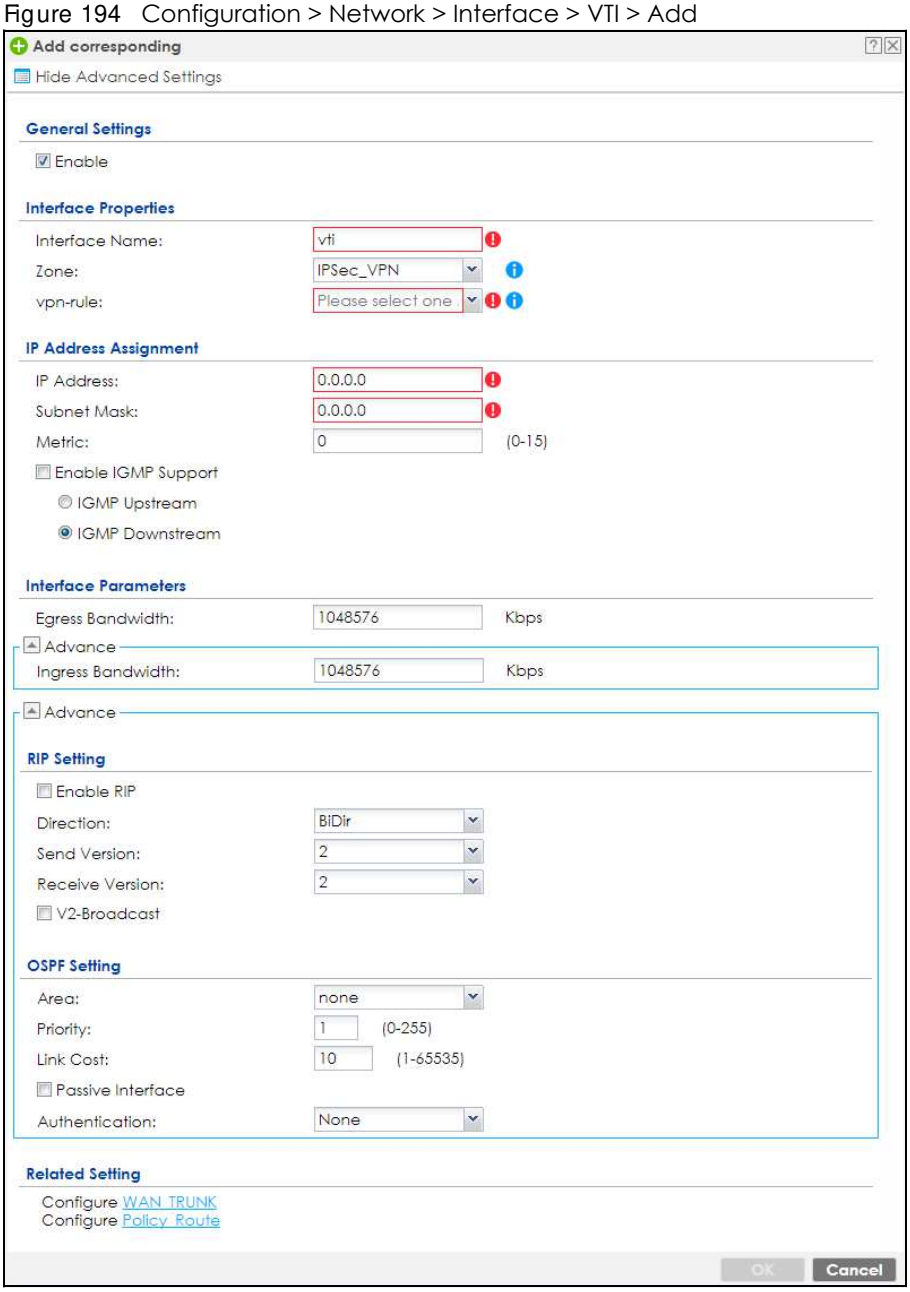
9.9.3 VTI Add/Edit

This screen lets you configure IP address assignment and interface parameters for VTI.

Note: You should have created a VPN tunnel for a **VPN Tunnel Interface** scenario first.

To access this screen, click the **Add** or **Edit** icon in **Network** > **Interface** > **VTI**. The following screen appears.

Figure 194 Configuration > Network > Interface > VTI > Add



Each field is described in the table below.

Table 110 Configuration > Network > Interface > VTI > Add

LABEL	DESCRIPTION
General Settings	
Enable	Select this to enable VTI. Clear this to disable it.
Interface Properties	
Interface Name	This field is read-only if you are editing an existing VPN tunnel interface. For a new VPN tunnel interface, enter the name of the VPN tunnel interface in vtix format, where x is a number from 0 to the maximum number of VPN connections allowed for this model. For example, enter vti10.
Zone	Select a zone. Make sure that the zone you select does not have traffic blocked by a security feature such as a security policy.
vpn-rule	You should have created a VPN tunnel first for a **VPN Tunnel Interface** scenario. Select one of the **VPN Tunnel Interface** scenario rules that you created.
IP Address Assignment	
IP Address	Enter the IP address for this interface.
Subnet Mask	Enter the subnet mask of this interface in dot decimal notation. The subnet mask indicates what part of the IP address is the same for all computers in the network.
Metric	Enter the priority of the gateway (if any) on this interface. The Zyxel Device decides which gateway to use based on this priority. The lower the number, the higher the priority. If two or more gateways have the same priority, the Zyxel Device uses the one that was configured first.
Enable IGMP Support	Select this to allow the Zyxel Device to act as an IGMP proxy for hosts connected on the IGMP downstream interface.
IGMP Upstream	Enable **IGMP Upstream** on the interface which connects to a router running IGMP that is closer to the multicast server.
IGMP Downstream	Enable **IGMP Downstream** on the interface which connects to the multicast hosts.
Interface Parameters	
Egress Bandwidth	Enter the maximum amount of traffic, in kilobits per second, the Zyxel Device can send through the interface to the network. Allowed values are 0 - 1048576.
Ingress Bandwidth	This is reserved for future use. Enter the maximum amount of traffic, in kilobits per second, the Zyxel Device can receive from the network through the interface. Allowed values are 0 - 1048576.
Connectivity Check	These fields appear when you select a **vpn-rule**. The interface can regularly check the connection to the gateway you specified to make sure it is still available. You specify how often the interface checks the connection, how long to wait for a response before the attempt is a failure, and how many consecutive failures are required before the Zyxel Device stops routing to the gateway. The Zyxel Device resumes routing to the gateway the first time the gateway passes the connectivity check.
Enable Connectivity Check	Select this to turn on the connection check.
Check Method	Select the method that the gateway allows. Select **icmp** to have the Zyxel Device regularly ping the gateway you specify to make sure it is still available. Select **tcp** to have the Zyxel Device regularly perform a TCP handshake with the gateway you specify to make sure it is still available.
Check Period	Enter the number of seconds between connection check attempts.

Table 110 Configuration > Network > Interface > VTI > Add (continued)

LABEL	DESCRIPTION
Check Timeout	Enter the number of seconds to wait for a response before the attempt is a failure.
Check Fail Tolerance	Enter the number of consecutive failures before the Zyxel Device stops routing through the gateway.
Check this address	Select this to specify a domain name or IP address for the connectivity check. Enter that domain name or IP address in the field next to it.
Check Port	This field only displays when you set the **Check Method** to **tcp**. Specify the port number to use for a TCP connectivity check.
RIP Setting	See Section 10.6 on page 311 for more information about RIP.
Enable RIP	Select this to enable RIP in this interface.
Direction	This field is effective when RIP is enabled. Select the RIP direction from the drop-down list box. **BiDir** - This interface sends and receives routing information. **In-Only** - This interface receives routing information. **Out-Only** - This interface sends routing information.
Send Version	This field is effective when RIP is enabled. Select the RIP version(s) used for sending RIP packets. Choices are **1**, **2**, and **1 and 2**.
Receive Version	This field is effective when RIP is enabled. Select the RIP version(s) used for receiving RIP packets. Choices are **1**, **2**, and **1 and 2**.
V2-Broadcast	This field is effective when RIP is enabled. Select this to send RIP-2 packets using subnet broadcasting; otherwise, the Zyxel Device uses multicasting.
OSPF Setting	See Section 10.7 on page 313 for more information about OSPF.
Area	Select the area in which this interface belongs. Select **None** to disable OSPF in this interface.
Priority	Enter the priority (between 0 and 255) of this interface when the area is looking for a Designated Router (DR) or Backup Designated Router (BDR). The highest-priority interface identifies the DR, and the second-highest-priority interface identifies the BDR. Set the priority to zero if the interface can not be the DR or BDR.
Link Cost	Enter the cost (between 1 and 65,535) to route packets through this interface.
Passive Interface	Select this to stop forwarding OSPF routing information from the selected interface. As a result, this interface only receives routing information.
Authentication	Select an authentication method, or disable authentication. To exchange OSPF routing information with peer border routers, you must use the same authentication method that they use. Choices are: **Same-as-Area** - use the default authentication method in the area **None** - disable authentication **Text** - authenticate OSPF routing information using a plain-text password **MD5** - authenticate OSPF routing information using MD5 encryption
Text Authentication Key	This field is available if the **Authentication** is **Text**. Type the password for text authentication. The key can consist of alphanumeric characters and the underscore, and it can be up to 16 characters long.
MD5 Authentication ID	This field is available if the **Authentication** is **MD5**. Type the ID for MD5 authentication. The ID can be between 1 and 255.
MD5 Authentication Key	This field is available if the **Authentication** is **MD5**. Type the password for MD5 authentication. The password can consist of alphanumeric characters and the underscore, and it can be up to 16 characters long.
Related Setting	

Table 110 Configuration > Network > Interface > VTI > Add (continued)

LABEL	DESCRIPTION
Configure WAN TRUNK	Click **WAN TRUNK** to go to a screen where you can configure the interface as part of a WAN trunk for load balancing.
Configure Policy Route	Click **Policy Route** to go to the screen where you can manually configure a policy route to associate traffic with this bridge interface.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

9.10 Trunk Overview

Use trunks for WAN traffic load balancing to increase overall network throughput and reliability. Load balancing divides traffic loads between multiple interfaces. This allows you to improve quality of service and maximize bandwidth utilization for multiple ISP links.

Maybe you have two Internet connections with different bandwidths. You could set up a trunk that uses spillover or weighted round robin load balancing so time-sensitive traffic (like video) usually goes through the higher-bandwidth interface. For other traffic, you might want to use least load first load balancing to even out the distribution of the traffic load.

Suppose ISP A has better connections to Europe while ISP B has better connections to Australia. You could use policy routes and trunks to have traffic for your European branch office primarily use ISP A and traffic for your Australian branch office primarily use ISP B.

Or maybe one of the Zyxel Device's interfaces is connected to an ISP that is also your Voice over IP (VoIP) service provider. You can use policy routing to send the VoIP traffic through a trunk with the interface connected to the VoIP service provider set to active and another interface (connected to another ISP) set to passive. This way VoIP traffic goes through the interface connected to the VoIP service provider whenever the interface's connection is up.

- Use the **Trunk** summary screen (Section 9.11 on page 290) to view the list of configured trunks and which load balancing algorithm each trunk uses.
- Use the **Add Trunk** screen (Section 9.11.1 on page 291) to configure the member interfaces for a trunk and the load balancing algorithm the trunk uses.
- Use the **Add System Default** screen (Section 9.11.2 on page 293) to configure the load balancing algorithm for the system default trunk.

9.10.1 What You Need to Know

- Add WAN interfaces to trunks to have multiple connections share the traffic load.
- If one WAN interface's connection goes down, the Zyxel Device sends traffic through another member of the trunk.
- For example, you connect one WAN interface to one ISP and connect a second WAN interface to a second ISP. The Zyxel Device balances the WAN traffic load between the connections. If one interface's connection goes down, the Zyxel Device can automatically send its traffic through another interface.

You can also use trunks with policy routing to send specific traffic types through the best WAN interface for that type of traffic.

- If that interface's connection goes down, the Zyxel Device can still send its traffic through another interface.
- You can define multiple trunks for the same physical interfaces.

1 LAN user A logs into server B on the Internet. The Zyxel Device uses wan1 to send the request to server B.

2 The Zyxel Device is using active/active load balancing. So when LAN user A tries to access something on the server, the request goes out through wan2.

3 The server finds that the request comes from wan2's IP address instead of wan1's IP address and rejects the request.

If link sticking had been configured, the Zyxel Device would have still used wan1 to send LAN user A's request to the server and server would have given the user A access.

Load Balancing Algorithms

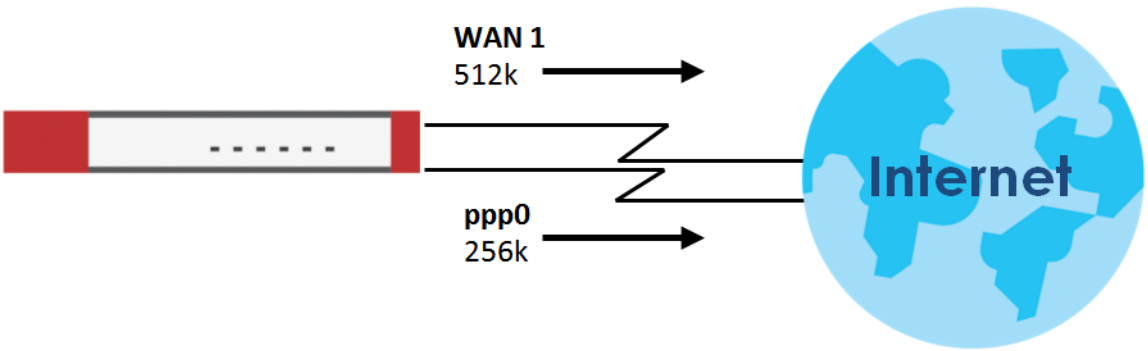
The following sections describe the load balancing algorithms the Zyxel Device can use to decide which interface the traffic (from the LAN) should use for a session. In the load balancing section, a session may refer to normal connection-oriented, UDP or SNMP2 traffic. The available bandwidth you configure on the Zyxel Device refers to the actual bandwidth provided by the ISP and the measured bandwidth refers to the bandwidth an interface is currently using.

Least Load First

The least load first algorithm uses the current (or recent) outbound bandwidth utilization of each trunk member interface as the load balancing index(es) when making decisions about to which interface a new session is to be distributed. The outbound bandwidth utilization is defined as the measured outbound throughput over the available outbound bandwidth.

Here the Zyxel Device has two WAN interfaces connected to the Internet. The configured available outbound bandwidths for WAN 1 and WAN 2 are 512K and 256K respectively.

Figure 195 Load Balancing Least Load First Example



The outbound bandwidth utilization is used as the load balancing index. In this example, the measured (current) outbound throughput of WAN 1 is 412K and WAN 2 is 198K. The Zyxel Device calculates the load balancing index as shown in the table below.

Since WAN 2 has a smaller load balancing index (meaning that it is less utilized than WAN 1), the Zyxel Device will send the subsequent new session traffic through WAN 2.

Table 111 Least Load First Example

INTERFACE	OUTBOUND		LOAD BALANCING INDEX (M/A)
	AVAILABLE (A)	MEASURED (M)	
WAN 1	512 K	412 K	0.8
WAN 2	256 K	198 K	0.77

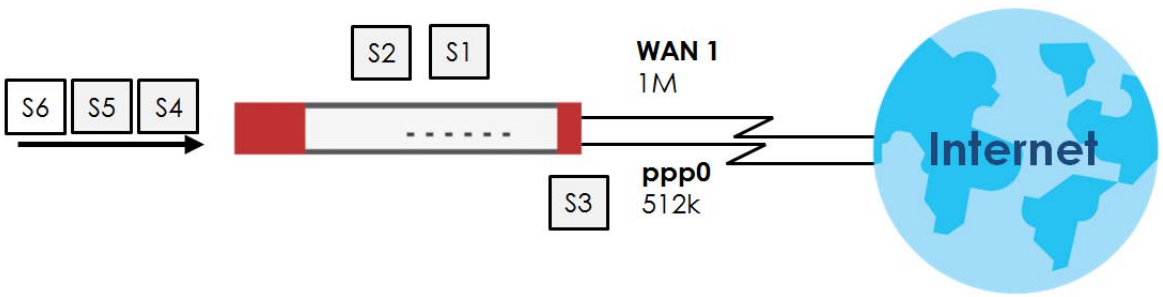
Weighted Round Robin

Round Robin scheduling services queues on a rotating basis and is activated only when an interface has more traffic than it can handle. A queue is given an amount of bandwidth irrespective of the incoming traffic on that interface. This queue then moves to the back of the list. The next queue is given an equal amount of bandwidth, and then moves to the end of the list; and so on, depending on the number of queues being used. This works in a looping fashion until a queue is empty.

The Weighted Round Robin (WRR) algorithm is best suited for situations when the bandwidths set for the two WAN interfaces are different. Similar to the Round Robin (RR) algorithm, the Weighted Round Robin (WRR) algorithm sets the Zyxel Device to send traffic through each WAN interface in turn. In addition, the WAN interfaces are assigned weights. An interface with a larger weight gets more chances to transmit traffic than an interface with a smaller weight.

For example, in the figure below, the configured available bandwidth of WAN1 is 1M and WAN2 is 512K. You can set the Zyxel Device to distribute the network traffic between the two interfaces by setting the weight of wan1 and wan2 to 2 and 1 respectively. The Zyxel Device assigns the traffic of two sessions to wan1 and one session's traffic to wan2 in each round of 3 new sessions.

Figure 196 Weighted Round Robin Algorithm Example



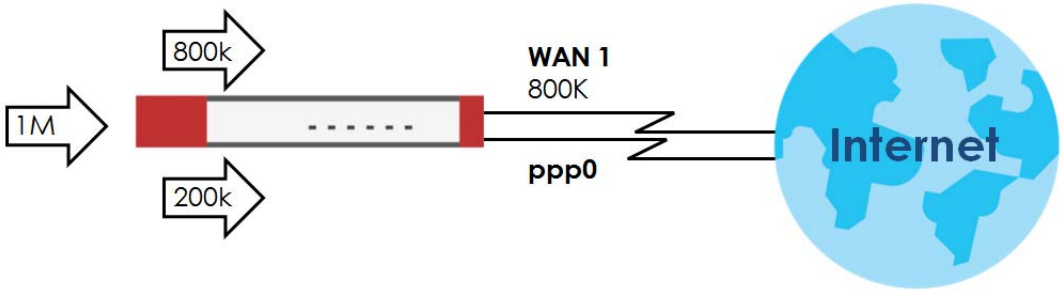
Spillover

The spillover load balancing algorithm sends network traffic to the first interface in the trunk member list until the interface's maximum allowable load is reached, then sends the excess network traffic of new sessions to the next interface in the trunk member list. This continues as long as there are more member interfaces and traffic to be sent through them.

Suppose the first trunk member interface uses an unlimited access Internet connection and the second is billed by usage. Spillover load balancing only uses the second interface when the traffic load exceeds the threshold on the first interface. This fully utilizes the bandwidth of the first interface to reduce Internet usage fees and avoid overloading the interface.

In this example figure, the upper threshold of the first interface is set to 800K. The Zyxel Device sends network traffic of new sessions that exceed this limit to the secondary WAN interface.

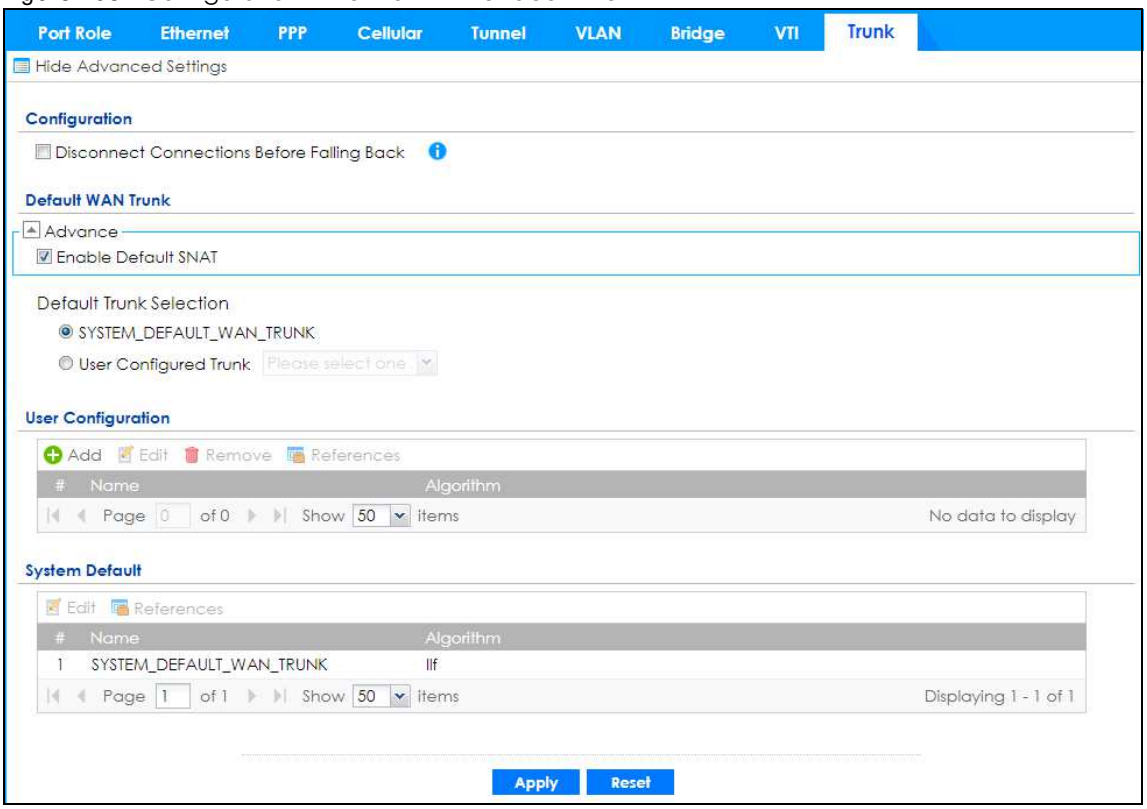
Figure 197 Spillover Algorithm Example



9.11 The Trunk Summary Screen

Click **Configuration** > **Network** > **Interface** > **Trunk** to open the **Trunk** screen. The Trunk Summary screen lists the configured trunks and the load balancing algorithm that each is configured to use.

Figure 198 Configuration > Network > Interface > Trunk



The following table describes the items in this screen.

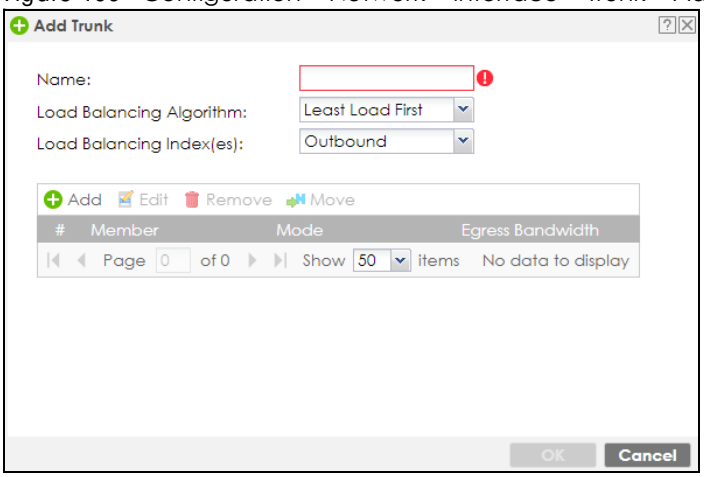
Table 112 Configuration > Network > Interface > Trunk

LABEL	DESCRIPTION
Show Advanced Settings / Hide Advanced Settings	Click this button to display a greater or lesser number of configuration fields.
Configuration	Configure what to do with existing passive mode interface connections when an interface set to active mode in the same trunk comes back up.
Disconnect Connections Before Falling Back	Select this to terminate existing connections on an interface which is set to passive mode when any interface set to active mode in the same trunk comes back up.
Enable Default SNAT	Select this to have the Zyxel Device use the IP address of the outgoing interface as the source IP address of the packets it sends out through its WAN trunks. The Zyxel Device automatically adds SNAT settings for traffic it routes from internal interfaces to external interfaces.
Default Trunk Selection	Select whether the Zyxel Device is to use the default system WAN trunk or one of the user configured WAN trunks as the default trunk for routing traffic from internal interfaces to external interfaces.
User Configuration / System Default	The Zyxel Device automatically adds all external interfaces into the pre-configured system default **SYSTEM_DEFAULT_WAN_TRUNK**. You cannot delete it. You can create your own **User Configuration** trunks and customize the algorithm, member interfaces and the active/passive mode.
Add	Click this to create a new user-configured trunk.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove a user-configured trunk, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
#	This field is a sequential value, and it is not associated with any interface.
Name	This field displays the label that you specified to identify the trunk.
Algorithm	This field displays the load balancing method the trunk is set to use.
Apply	Click this button to save your changes to the Zyxel Device.
Reset	Click this button to return the screen to its last-saved settings.

9.11.1 Configuring a User-Defined Trunk

Click **Configuration** > **Network** > **Interface** > **Trunk**, in the **User Configuration** table click the **Add** (or **Edit**) icon to open the following screen. Use this screen to create or edit a WAN trunk entry.

Figure 199 Configuration > Network > Interface > Trunk > Add (or Edit)



Each field is described in the table below.

Table 113 Configuration > Network > Interface > Trunk > Add (or Edit)

LABEL	DESCRIPTION
Name	This is read-only if you are editing an existing trunk. When adding a new trunk, enter a descriptive name for this trunk. You may use 1-31 alphanumeric characters, underscores (_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Load Balancing Algorithm	Select a load balancing method to use from the drop-down list box. Select **Weighted Round Robin** to balance the traffic load between interfaces based on their respective weights. An interface with a larger weight gets more chances to transmit traffic than an interface with a smaller weight. For example, if the weight ratio of wan1 and wan2 interfaces is 2:1, the Zyxel Device chooses wan1 for 2 sessions' traffic and wan2 for 1 session's traffic in each round of 3 new sessions. Select **Least Load First** to send new session traffic through the least utilized trunk member. Select **Spillover** to send network traffic through the first interface in the group member list until there is enough traffic that the second interface needs to be used (and so on).
Load Balancing Index(es)	This field is available if you selected to use the **Least Load First** or **Spillover** method. Select **Outbound**, **Inbound**, or **Outbound + Inbound** to set the traffic to which the Zyxel Device applies the load balancing method. Outbound means the traffic traveling from an internal interface (ex. LAN) to an external interface (ex. WAN). Inbound means the opposite.
	The table lists the trunk's member interfaces. You can add, edit, remove, or move entries for user configured trunks.
Add	Click this to add a member interface to the trunk. Select an interface and click **Add** to add a new member interface after the selected member interface.
Edit	Select an entry and click **Edit** to modify the entry's settings.
Remove	To remove a member interface, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Move	To move an interface to a different number in the list, click the **Move** icon. In the field that appears, specify the number to which you want to move the interface.
#	This column displays the priorities of the group's interfaces. The order of the interfaces in the list is important since they are used in the order they are listed.

Table 113 Configuration > Network > Interface > Trunk > Add (or Edit) (continued)

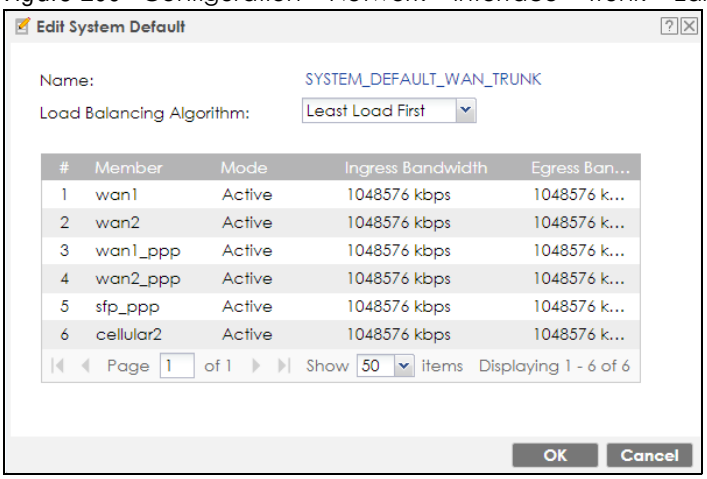
LABEL	DESCRIPTION
Member	Click this table cell and select an interface to be a group member. If you select an interface that is part of another Ethernet interface, the Zyxel Device does not send traffic through the interface as part of the trunk. For example, if you have physical port 5 in the ge2 representative interface, you must select interface ge2 in order to send traffic through port 5 as part of the trunk. If you select interface ge5 as a member here, the Zyxel Device will not send traffic through port 5 as part of the trunk.
Mode	Click this table cell and select **Active** to have the Zyxel Device always attempt to use this connection. Select **Passive** to have the Zyxel Device only use this connection when all of the connections set to active are down. You can only set one of a group's interfaces to passive mode.
Weight	This field displays with the weighted round robin load balancing algorithm. Specify the weight (1~10) for the interface. The weights of the different member interfaces form a ratio. This ratio determines how much traffic the Zyxel Device assigns to each member interface. The higher an interface's weight is (relative to the weights of the interfaces), the more sessions that interface should handle.
Ingress Bandwidth	This is reserved for future use. This field displays with the least load first load balancing algorithm. It displays the maximum number of kilobits of data the Zyxel Device is to allow to come in through the interface per second. Note: You can configure the bandwidth of an interface in the corresponding interface edit screen.
Egress Bandwidth	This field displays with the least load first or spillover load balancing algorithm. It displays the maximum number of kilobits of data the Zyxel Device is to send out through the interface per second. Note: You can configure the bandwidth of an interface in the corresponding interface edit screen.
Spillover	This field displays with the spillover load balancing algorithm. Specify the maximum bandwidth of traffic in kilobits per second (1~1048576) to send out through the interface before using another interface. When this spillover bandwidth limit is exceeded, the Zyxel Device sends new session traffic through the next interface. The traffic of existing sessions still goes through the interface on which they started. The Zyxel Device uses the group member interfaces in the order that they are listed.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

9.11.2 Configuring the System Default Trunk

In the **Configuration > Network > Interface > Trunk** screen and the **System Default** section, select the default trunk entry and click **Edit** to open the **following** screen. Use this screen to change the load balancing algorithm and view the bandwidth allocations for each member interface.

Note: The available bandwidth is allocated to each member interface equally and is not allowed to be changed for the default trunk.

Figure 200 Configuration > Network > Interface > Trunk > Edit (System Default)



Each field is described in the table below.

Table 114 Configuration > Network > Interface > Trunk > Edit (System Default)

LABEL	DESCRIPTION
Name	This field displays the name of the selected system default trunk.
Load Balancing Algorithm	Select the load balancing method to use for the trunk. Select **Weighted Round Robin** to balance the traffic load between interfaces based on their respective weights. An interface with a larger weight gets more chances to transmit traffic than an interface with a smaller weight. For example, if the weight ratio of wan1 and wan2 interfaces is 2:1, the Zyxel Device chooses wan1 for 2 sessions' traffic and wan2 for 1 session's traffic in each round of 3 new sessions. Select **Least Load First** to send new session traffic through the least utilized trunk member. Select **Spillover** to send network traffic through the first interface in the group member list until there is enough traffic that the second interface needs to be used (and so on).
	The table lists the trunk's member interfaces. This table is read-only.
#	This column displays the priorities of the group's interfaces. The order of the interfaces in the list is important since they are used in the order they are listed.
Member	This column displays the name of the member interfaces.
Mode	This field displays **Active** if the Zyxel Device always attempt to use this connection. This field displays **Passive** if the Zyxel Device only use this connection when all of the connections set to active are down. Only one of a group's interfaces can be set to passive mode.
Weight	This field displays with the weighted round robin load balancing algorithm. Specify the weight (1~10) for the interface. The weights of the different member interfaces form a ratio. s
Ingress Bandwidth	This is reserved for future use. This field displays with the least load first load balancing algorithm. It displays the maximum number of kilobits of data the Zyxel Device is to allow to come in through the interface per second.
Egress Bandwidth	This field displays with the least load first or spillover load balancing algorithm. It displays the maximum number of kilobits of data the Zyxel Device is to send out through the interface per second.

Table 114 Configuration > Network > Interface > Trunk > Edit (System Default) (continued)

LABEL	DESCRIPTION
Spillover	This field displays with the spillover load balancing algorithm. Specify the maximum bandwidth of traffic in kilobits per second (1~1048576) to send out through the interface before using another interface. When this spillover bandwidth limit is exceeded, the Zyxel Device sends new session traffic through the next interface. The traffic of existing sessions still goes through the interface on which they started. The Zyxel Device uses the group member interfaces in the order that they are listed.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

9.12 Interface Technical Reference

Here is more detailed information about interfaces on the Zyxel Device.

IP Address Assignment

Most interfaces have an IP address and a subnet mask. This information is used to create an entry in the routing table.

Figure 201 Example: Entry in the Routing Table Derived from Interfaces

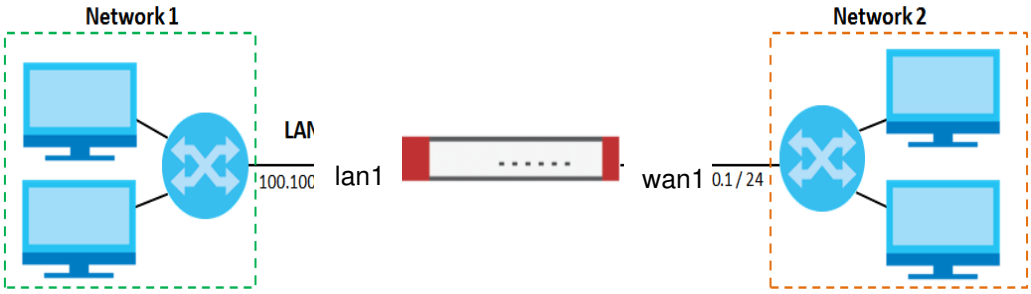


Table 115 Example: Routing Table Entries for Interfaces

IP ADDRESS(ES)	DESTINATION
100.100.1.1/16	lan1
200.200.200.1/24	wan1

For example, if the Zyxel Device gets a packet with a destination address of 100.100.25.25, it routes the packet to interface lan1. If the Zyxel Device gets a packet with a destination address of 200.200.200.200, it routes the packet to interface wan1.

In most interfaces, you can enter the IP address and subnet mask manually. In PPPoE/PPTP/L2TP interfaces, however, the subnet mask is always 255.255.255.255 because it is a point-to-point interface. For these interfaces, you can only enter the IP address.

In many interfaces, you can also let the IP address and subnet mask be assigned by an external DHCP server on the network. In this case, the interface is a DHCP client. Virtual interfaces, however, cannot be DHCP clients. You have to assign the IP address and subnet mask manually.

In general, the IP address and subnet mask of each interface should not overlap, though it is possible for this to happen with DHCP clients.

In the example above, if the Zyxel Device gets a packet with a destination address of 5.5.5.5, it might not find any entries in the routing table. In this case, the packet is dropped. However, if there is a default router to which the Zyxel Device should send this packet, you can specify it as a gateway in one of the interfaces. For example, if there is a default router at 200.200.200.100, you can create a gateway at 200.200.200.100 on ge2. In this case, the Zyxel Device creates the following entry in the routing table.

Table 116 Example: Routing Table Entry for a Gateway

IP ADDRESS(ES)	DESTINATION
0.0.0.0/0	200.200.200.100

The gateway is an optional setting for each interface. If there is more than one gateway, the Zyxel Device uses the gateway with the lowest metric, or cost. If two or more gateways have the same metric, the Zyxel Device uses the one that was set up first (the first entry in the routing table). In PPPoE/PPTP/L2TP interfaces, the other computer is the gateway for the interface by default. In this case, you should specify the metric.

If the interface gets its IP address and subnet mask from a DHCP server, the DHCP server also specifies the gateway, if any.

Interface Parameters

The Zyxel Device restricts the amount of traffic into and out of the Zyxel Device through each interface.

- Egress bandwidth sets the amount of traffic the Zyxel Device sends out through the interface to the network.
- Ingress bandwidth sets the amount of traffic the Zyxel Device allows in through the interface from the network.At the time of writing, the Zyxel Device does not support ingress bandwidth management.

If you set the bandwidth restrictions very high, you effectively remove the restrictions.

The Zyxel Device also restricts the size of each data packet. The maximum number of bytes in each packet is called the maximum transmission unit (MTU). If a packet is larger than the MTU, the Zyxel Device divides it into smaller fragments. Each fragment is sent separately, and the original packet is re-assembled later. The smaller the MTU, the more fragments sent, and the more work required to re-assemble packets correctly. On the other hand, some communication channels, such as Ethernet over ATM, might not be able to handle large data packets.

DHCP Settings

Dynamic Host Configuration Protocol (DHCP, RFC 2131, RFC 2132) provides a way to automatically set up and maintain IP addresses, subnet masks, gateways, and some network information (such as the IP addresses of DNS servers) on computers in the network. This reduces the amount of manual configuration you have to do and usually uses available IP addresses more efficiently.

In DHCP, every network has at least one DHCP server. When a computer (a DHCP client) joins the network, it submits a DHCP request. The DHCP servers get the request; assign an IP address; and provide the IP address, subnet mask, gateway, and available network information to the DHCP client. When the DHCP client leaves the network, the DHCP servers can assign its IP address to another DHCP client.

In the Zyxel Device, some interfaces can provide DHCP services to the network. In this case, the interface can be a DHCP relay or a DHCP server.

As a DHCP relay, the interface routes DHCP requests to DHCP servers on different networks. You can specify more than one DHCP server. If you do, the interface routes DHCP requests to all of them. It is possible for an interface to be a DHCP relay and a DHCP client simultaneously.

As a DHCP server, the interface provides the following information to DHCP clients.

- IP address - If the DHCP client's MAC address is in the Zyxel Device's static DHCP table, the interface assigns the corresponding IP address. If not, the interface assigns IP addresses from a pool, defined by the starting address of the pool and the pool size.

Table 117 Example: Assigning IP Addresses from a Pool

START IP ADDRESS	POOL SIZE	RANGE OF ASSIGNED IP ADDRESS
50.50.50.33	5	50.50.50.33 - 50.50.50.37
75.75.75.1	200	75.75.75.1 - 75.75.75.200
99.99.1.1	1023	99.99.1.1 - 99.99.4.255
120.120.120.100	100	120.120.120.100 - 120.120.120.199

  The Zyxel Device cannot assign the first address (network address) or the last address (broadcast address) in the subnet defined by the interface's IP address and subnet mask. For example, in the first entry, if the subnet mask is 255.255.255.0, the Zyxel Device cannot assign 50.50.50.0 or 50.50.50.255. If the subnet mask is 255.255.0.0, the Zyxel Device cannot assign 50.50.0.0 or 50.50.255.255. Otherwise, it can assign every IP address in the range, except the interface's IP address.

  If you do not specify the starting address or the pool size, the interface the maximum range of IP addresses allowed by the interface's IP address and subnet mask. For example, if the interface's IP address is 9.9.9.1 and subnet mask is 255.255.255.0, the starting IP address in the pool is 9.9.9.2, and the pool size is 253.

- Subnet mask - The interface provides the same subnet mask you specify for the interface. See IP Address Assignment on page 295.
- Gateway - The interface provides the same gateway you specify for the interface. See IP Address Assignment on page 295.
- DNS servers - The interface provides IP addresses for up to three DNS servers that provide DNS services for DHCP clients. You can specify each IP address manually (for example, a company's own DNS server), or you can refer to DNS servers that other interfaces received from DHCP servers (for example, a DNS server at an ISP). These other interfaces have to be DHCP clients.

It is not possible for an interface to be the DHCP server and a DHCP client simultaneously.

WINS

WINS (Windows Internet Naming Service) is a Windows implementation of NetBIOS Name Server (NBNS) on Windows. It keeps track of NetBIOS computer names. It stores a mapping table of your network's computer names and IP addresses. The table is dynamically updated for IP addresses assigned by DHCP. This helps reduce broadcast traffic since computers can query the server instead of broadcasting a request for a computer name's IP address. In this way WINS is similar to DNS, although WINS does not use a hierarchy (unlike DNS). A network can have more than one WINS server. Samba can also serve as a WINS server.

PPPoE/ PPTP/ L2TP Overview

Point-to-Point Protocol over Ethernet (PPPoE, RFC 2516) and Point-to-Point Tunneling Protocol (PPTP, RFC 2637) are usually used to connect two computers over phone lines or broadband connections. PPPoE is often used with cable modems and DSL connections. It provides the following advantages:

- The access and authentication method works with existing systems, including RADIUS.
- You can access one of several network services. This makes it easier for the service provider to offer the service
- PPPoE does not usually require any special configuration of the modem.

PPTP is used to set up virtual private networks (VPN) in unsecured TCP/IP environments. It sets up two sessions.

1 The first one runs on TCP port 1723. It is used to start and manage the second one.

2 The second one uses Generic Routing Encapsulation (GRE, RFC 2890) to transfer information between the computers.

PPTP is convenient and easy-to-use, but you have to make sure that firewalls support both PPTP sessions.

Layer 2 Tunneling Protocol (L2TP) was taken from PPTP of Microsoft and Cisco's L2F (Layer 2 Forwarding technology), so LT2P combines PPTP's control and runs over a faster transport protocol, UDP, although it may be a bit more complicated to set up.

It supports up to 256 bit session keys using the IPSec protocol. When security is a priority, L2TP is a good option as it requires certificates unlike PPTP.

It uses the following ports: UDP 500, Protocol 50, UDP 1701 and UDP 4500.

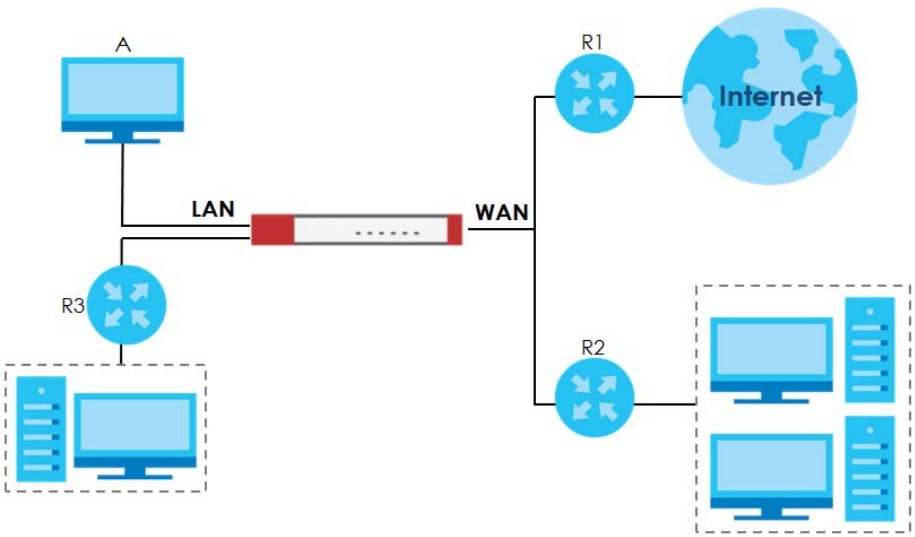
CHAPTER 10
Routing

10.1 Policy and Static Routes Overview

Use policy routes and static routes to override the Zyxel Device's default routing behavior in order to send packets through the appropriate interface or VPN tunnel.

For example, the next figure shows a computer (A) connected to the Zyxel Device's LAN interface. The Zyxel Device routes most traffic from A to the Internet through the Zyxel Device's default gateway (R1). You create one policy route to connect to services offered by your ISP behind router R2. You create another policy route to communicate with a separate network behind another router (R3) connected to the LAN.

Figure 202 Example of Policy Routing Topology



Note: You can generally just use policy routes. You only need to use static routes if you have a large network with multiple routers where you use RIP or OSPF to propagate routing information to other routers.

10.1.1 What You Can Do in this Chapter

- Use the **Policy Route** screens (see Section 10.2 on page 301) to list and configure policy routes.
- Use the **Static Route** screens (see Section 10.3 on page 308) to list and configure static routes.

10.1.2 What You Need to Know

Policy Routing

Traditionally, routing is based on the destination address only and the Zyxel Device takes the shortest path to forward a packet. IP Policy Routing (IPPR) provides a mechanism to override the default routing behavior and alter the packet forwarding based on the policy defined by the network administrator. Policy-based routing is applied to incoming packets on a per interface basis, prior to the normal routing.

How You Can Use Policy Routing

- Source-Based Routing – Network administrators can use policy-based routing to direct traffic from different users through different connections.
- Bandwidth Shaping – You can allocate bandwidth to traffic that matches routing policies and prioritize traffic (however the application patrol's bandwidth management is more flexible and recommended for TCP and UDP traffic). You can also use policy routes to manage other types of traffic (like ICMP traffic) and send traffic through VPN tunnels.

Note: Bandwidth management in policy routes has priority over application patrol bandwidth management.

- Cost Savings – IPPR allows organizations to distribute interactive traffic on high-bandwidth, high-cost paths while using low-cost paths for batch traffic.
- Load Sharing – Network administrators can use IPPR to distribute traffic among multiple paths.
- NAT - The Zyxel Device performs NAT by default for traffic going to or from the **WAN** interfaces. A routing policy's SNAT allows network administrators to have traffic received on a specified interface use a specified IP address as the source IP address.

Note: The Zyxel Device automatically uses SNAT for traffic it routes from internal interfaces to external interfaces. For example LAN to WAN traffic.

Static Routes

The Zyxel Device usually uses the default gateway to route outbound traffic from computers on the LAN to the Internet. To have the Zyxel Device send data to devices not reachable through the default gateway, use static routes. Configure static routes if you need to use RIP or OSPF to propagate the routing information to other routers. See Chapter 10 on page 310 for more on RIP and OSPF.

Policy Routes Versus Static Routes

- Policy routes are more flexible than static routes. You can select more criteria for the traffic to match and can also use schedules, NAT, and bandwidth management.
- Policy routes are only used within the Zyxel Device itself. Static routes can be propagated to other routers using RIP or OSPF.
- Policy routes take priority over static routes. If you need to use a routing policy on the Zyxel Device and propagate it to other routers, you could configure a policy route and an equivalent static route.

DiffServ

QoS is used to prioritize source-to-destination traffic flows. All packets in the same flow are given the same priority. CoS (class of service) is a way of managing traffic in a network by grouping similar types of

traffic together and treating each type as a class. You can use CoS to give different priorities to different packet types.

DiffServ (Differentiated Services) is a class of service (CoS) model that marks packets so that they receive specific per-hop treatment at DiffServ-compliant network devices along the route based on the application types and traffic flow. Packets are marked with DiffServ Code Points (DSCPs) indicating the level of service desired. This allows the intermediary DiffServ-compliant network devices to handle the packets differently depending on the code points without the need to negotiate paths or remember state information for every flow. In addition, applications do not have to request a particular service or give advanced notice of where the traffic is going.

DSCP Marking and Per-Hop Behavior

DiffServ defines a new DS (Differentiated Services) field to replace the Type of Service (TOS) field in the IP header. The DS field contains a 2-bit unused field and a 6-bit DSCP field which can define up to 64 service levels. The following figure illustrates the DS field.

DSCP (6 bits)	Unused (2 bits)

DSCP is backward compatible with the three precedence bits in the ToS octet so that non-DiffServ compliant, ToS-enabled network device will not conflict with the DSCP mapping.

The DSCP value determines the forwarding behavior, the PHB (Per-Hop Behavior), that each packet gets across the DiffServ network. Based on the marking rule, different kinds of traffic can be marked for different kinds of forwarding. Resources can then be allocated according to the DSCP values and the configured policies.

10.2 Policy Route Screen

Click **Configuration** > **Network** > **Routing** to open the **Policy Route** screen. Use this screen to see the configured policy routes and turn policy routing based bandwidth management on or off.

A policy route defines the matching criteria and the action to take when a packet meets the criteria. The action is taken only when all the criteria are met. The criteria can include the user name, source address and incoming interface, destination address, schedule, IP protocol (ICMP, UDP, TCP, etc.) and port.

The actions that can be taken include:

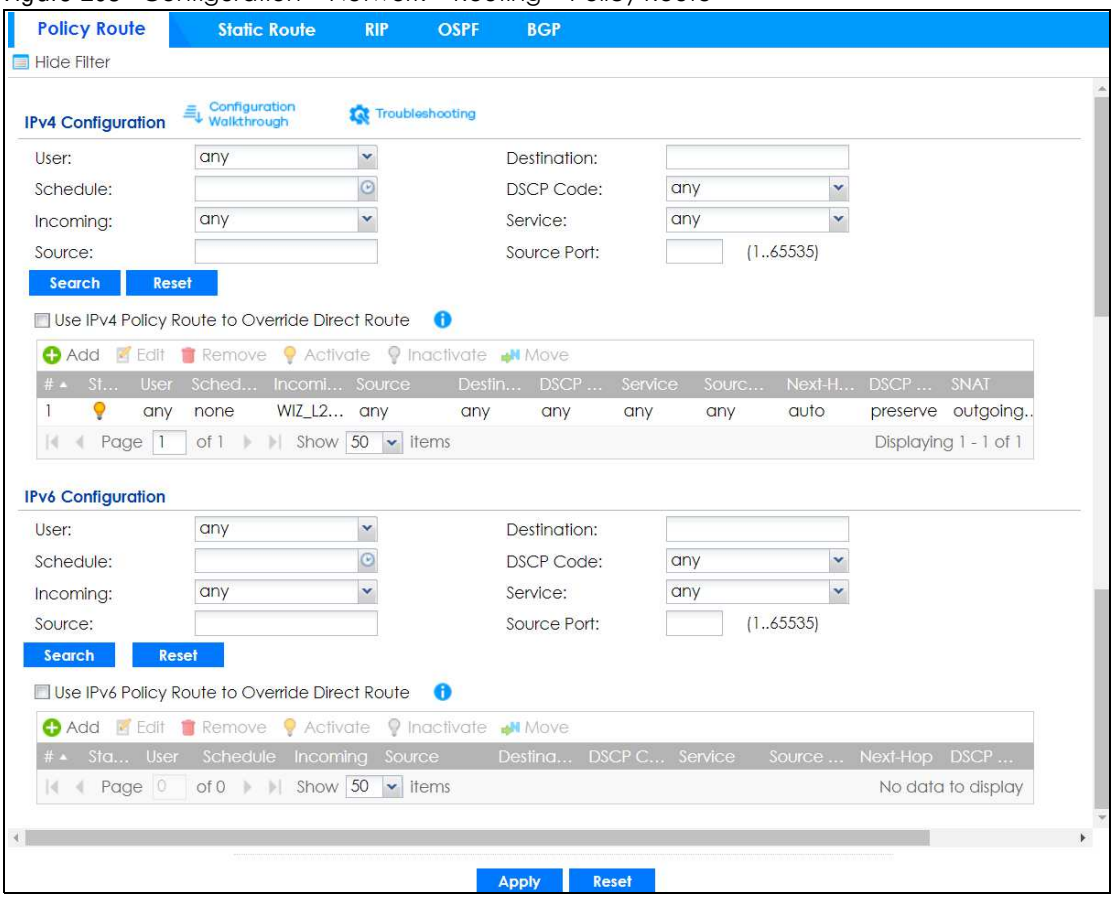
- Routing the packet to a different gateway, outgoing interface, VPN tunnel, or trunk.
- Limiting the amount of bandwidth available and setting a priority for traffic.

IPPR follows the existing packet filtering facility of RAS in style and in implementation.

If you enabled IPv6 in the **Configuration** > **System** > **IPv6** screen, you can also configure policy routes used for your IPv6 networks on this screen.

Click on the icons to go to the OneSecurity website where there is guidance on configuration walkthroughs, troubleshooting, and other information.

Figure 203 Configuration > Network > Routing > Policy Route



The following table describes the labels in this screen.

Table 118 Configuration > Network > Routing > Policy Route

LABEL	DESCRIPTION
Show Filter / Hide Filter	Click this button to display a greater or lesser number of configuration fields.
IPv4 Configuration / IPv6 Configuration	Use the **IPv4 Configuration** section for IPv4 network settings. Use the **IPv6 Configuration** section for IPv6 network settings if you connect your Zyxel Device to an IPv6 network. Both sections have similar fields as described below.
Use IPv4/IPv6 Policy Route to Override Direct Route	Select this to have the Zyxel Device forward packets that match a policy route according to the policy route instead of sending the packets directly to a connected network.
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Move	To change a rule's position in the numbered list, select the rule and click **Move** to display a field to type a number for where you want to put that rule and press [ENTER] to move the rule to the number that you typed. The ordering of your rules is important as they are applied in order of their numbering.

Table 118 Configuration > Network > Routing > Policy Route (continued)

LABEL	DESCRIPTION
#	This is the number of an individual policy route.
Status	This icon is lit when the entry is active, red when the next hop's connection is down, and dimmed when the entry is inactive.
User	This is the name of the user (group) object from which the packets are sent. **any** means all users.
Schedule	This is the name of the schedule object. **none** means the route is active at all times if enabled.
Incoming	This is the interface on which the packets are received.
Source	This is the name of the source IP address (group) object, including geographic address and FQDN (group) objects. **any** means all IP addresses.
Destination	This is the name of the destination IP address (group) object, including geographic and FQDN (group) address objects. **any** means all IP addresses.
DSCP Code	This is the DSCP value of incoming packets to which this policy route applies. **any** means all DSCP values or no DSCP marker. **default** means traffic with a DSCP value of 0. This is usually best effort traffic The "**af**" entries stand for Assured Forwarding. The number following the "**af**" identifies one of four classes and one of three drop preferences. See Assured Forwarding (AF) PHB for DiffServ for more details.
Service	This is the name of the service object. **any** means all services.
Source Port	This is the name of a service object. The Zyxel Device applies the policy route to the packets sent from the corresponding service port. **any** means all service ports.
Next-Hop	This is the next hop to which packets are directed. It helps forward packets to their destinations and can be a router, VPN tunnel, outgoing interface or trunk.
DSCP Marking	This is how the Zyxel Device handles the DSCP value of the outgoing packets that match this route. If this field displays a DSCP value, the Zyxel Device applies that DSCP value to the route's outgoing packets. **preserve** means the Zyxel Device does not modify the DSCP value of the route's outgoing packets. **default** means the Zyxel Device sets the DSCP value of the route's outgoing packets to 0. The "**af**" choices stand for Assured Forwarding. The number following the "**af**" identifies one of four classes and one of three drop preferences. See Assured Forwarding (AF) PHB for DiffServ for more details.
SNAT	This is the source IP address that the route uses. It displays **none** if the Zyxel Device does not perform NAT for this route.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

10.2.1 Policy Route Edit Screen

Click **Configuration** > **Network** > **Routing** to open the **Policy Route** screen. Then click the **Add** or **Edit** icon in the **IPv4 Configuration** or **IPv6 Configuration** section. The **Add Policy Route** or **Policy Route Edit** screen opens. Use this screen to configure or edit a policy route. Both IPv4 and IPv6 policy route have similar settings except the **Address Translation** (SNAT) settings.

Figure 204 Configuration > Network > Routing > Policy Route > Add/Edit (IPv4 Configuration)

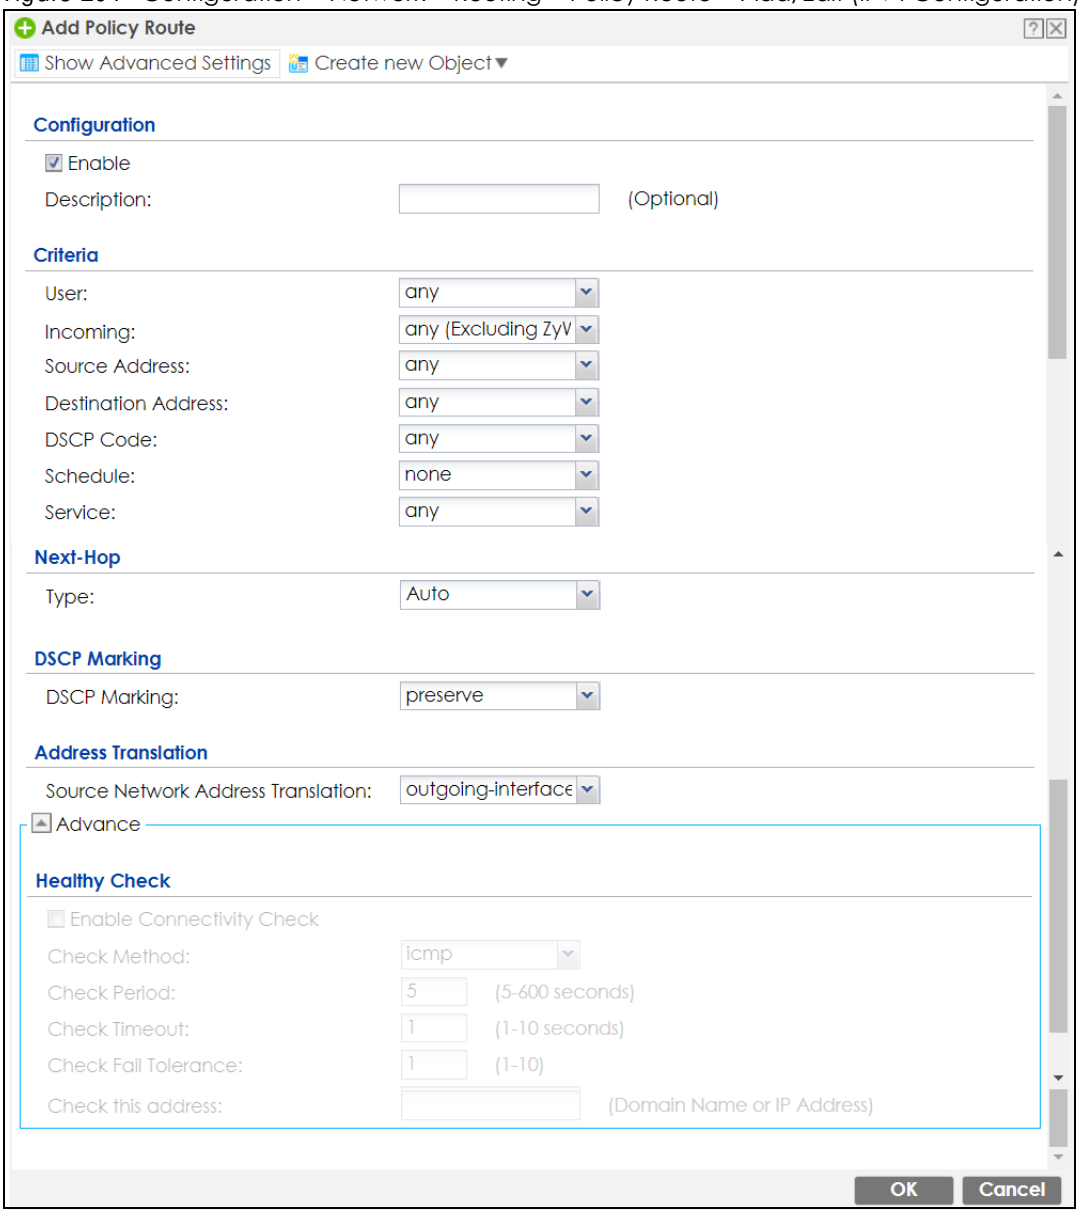


Figure 205 Configuration > Network > Routing > Policy Route > Add/Edit (IPv6 Configuration)

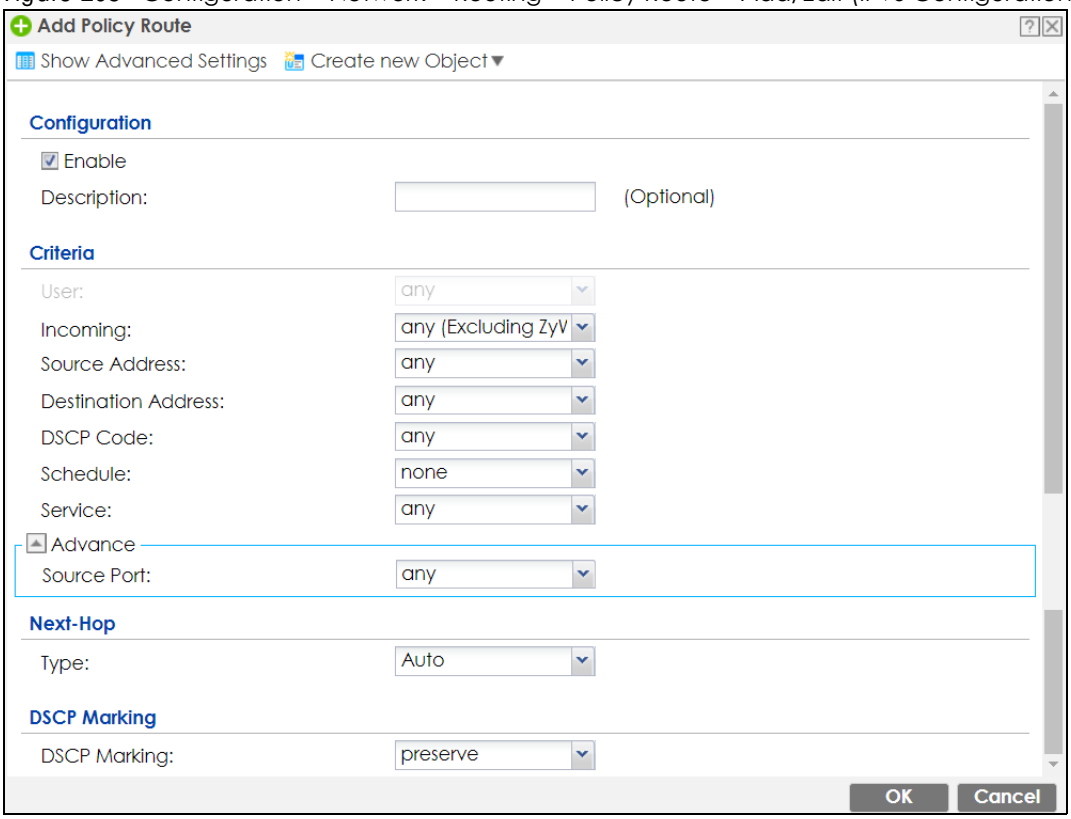


The following table describes the labels in this screen.

Table 119 Configuration > Network > Routing > Policy Route > Add/Edit

LABEL	DESCRIPTION
Show Advanced Settings / Hide Advanced Settings	Click this button to display a greater or lesser number of configuration fields.
Create new Object	Use this to configure any new settings objects that you need to use in this screen.
Configuration	
Enable	Select this to activate the policy.
Description	Enter a descriptive name of up to 31 printable ASCII characters for the policy.
Criteria	
User	Select a user name or user group from which the packets are sent.
Incoming	Select where the packets are coming from; any, an interface, a tunnel, an SSL VPN, or the Zyxel Device itself. For an interface, a tunnel, or an SSL VPN, you also need to select the individual interface, VPN tunnel, or SSL VPN connection.
Source Address	Select a source IP address object, including geographic address and FQDN (group) objects, from which the packets are sent.
Destination Address	Select a destination IP address object, including geographic address and FQDN (group) objects, to which the traffic is being sent. If the next hop is a dynamic VPN tunnel and you enable **Auto Destination Address**, the Zyxel Device uses the local network of the peer router that initiated an incoming dynamic IPSec tunnel as the destination address of the policy instead of your configuration here.

Table 119 Configuration > Network > Routing > Policy Route > Add/Edit (continued)

LABEL	DESCRIPTION
DSCP Code	Select a DSCP code point value of incoming packets to which this policy route applies or select **User Define** to specify another DSCP code point. The lower the number the higher the priority with the exception of 0 which is usually given only best-effort treatment. **any** means all DSCP value or no DSCP marker. **default** means traffic with a DSCP value of 0. This is usually best effort traffic The "**af**" choices stand for Assured Forwarding. The number following the "**af**" identifies one of four classes and one of three drop preferences. See Assured Forwarding (AF) PHB for DiffServ for more details.
User-Defined DSCP Code	Use this field to specify a custom DSCP code point when you select **User Define** in the previous field.
Schedule	Select a schedule to control when the policy route is active. **none** means the route is active at all times if enabled.
Service	Select a service or service group to identify the type of traffic to which this policy route applies.
Source Port	Select a service or service group to identify the source port of packets to which the policy route applies.
Next-Hop	
Type	Select **Auto** to have the Zyxel Device use the routing table to find a next-hop and forward the matched packets automatically. Select **Gateway** to route the matched packets to the next-hop router or switch you specified in the **Gateway** field. You have to set up the next-hop router or switch as a HOST address object first. Select **VPN Tunnel** to route the matched packets via the specified VPN tunnel. Select **Trunk** to route the matched packets through the interfaces in the trunk group based on the load balancing algorithm. Select **Interface** to route the matched packets through the specified outgoing interface to a gateway (which is connected to the interface).
Gateway	This field displays when you select **Gateway** in the **Type** field. Select a HOST address object. The gateway is an immediate neighbor of your Zyxel Device that will forward the packet to the destination. The gateway must be a router or switch on the same segment as your Zyxel Device's interface(s).
VPN Tunnel	This field displays when you select **VPN Tunnel** in the **Type** field. Select a VPN tunnel through which the packets are sent to the remote network that is connected to the Zyxel Device directly.
Auto Destination Address	This field displays when you select **VPN Tunnel** in the **Type** field. Select this to have the Zyxel Device use the local network of the peer router that initiated an incoming dynamic IPSec tunnel as the destination address of the policy. Leave this cleared if you want to manually specify the destination address.
Trunk	This field displays when you select **Trunk** in the **Type** field. Select a trunk group to have the Zyxel Device send the packets via the interfaces in the group.
Interface	This field displays when you select **Interface** in the **Type** field. Select an interface to have the Zyxel Device send traffic that matches the policy route through the specified interface.

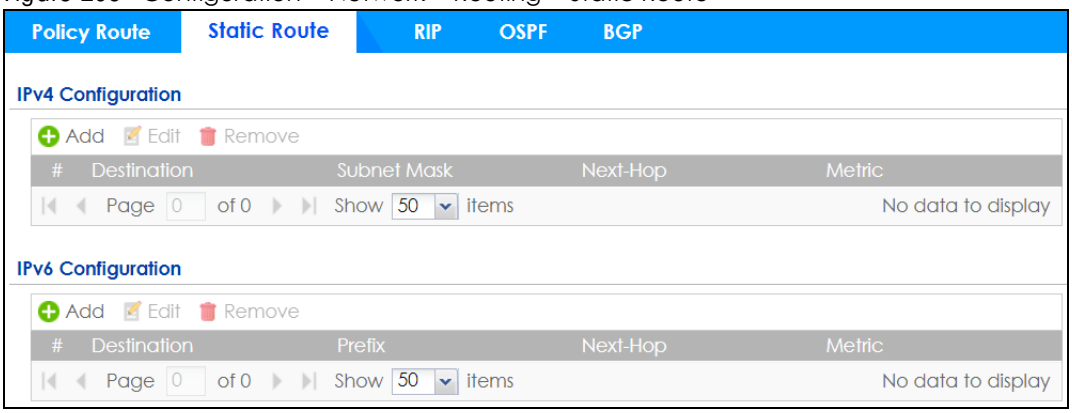
Table 119 Configuration > Network > Routing > Policy Route > Add/Edit (continued)

LABEL	DESCRIPTION
DSCP Marking	Set how the Zyxel Device handles the DSCP value of the outgoing packets that match this route. Select one of the pre-defined DSCP values to apply or select **User Define** to specify another DSCP value. The "af" choices stand for Assured Forwarding. The number following the "af" identifies one of four classes and one of three drop preferences. See Assured Forwarding (AF) PHB for DiffServ for more details. Select **preserve** to have the Zyxel Device keep the packets' original DSCP value. Select **default** to have the Zyxel Device set the DSCP value of the packets to 0.
User-Defined DSCP Marking	Use this field to specify a custom DSCP value.
Address Translation	Use this section to configure NAT for the policy route. This section does not apply to policy routes that use a VPN tunnel as the next hop.
Source Network Address Translation	Select **none** to not use NAT for the route. Select **outgoing-interface** to use the IP address of the outgoing interface as the source IP address of the packets that matches this route. To use SNAT for a virtual interface that is in the same WAN trunk as the physical interface to which the virtual interface is bound, the virtual interface and physical interface must be in different subnets. Otherwise, select a pre-defined address (group) to use as the source IP address(es) of the packets that match this route. Use **Create new Object** if you need to configure a new address (group) to use as the source IP address(es) of the packets that match this route.
Healthy Check	Use this part of the screen to configure a route connectivity check and disable the policy if the interface is down.
Disable policy route automatically while Interface link down	Select this to disable the policy if the interface is down or disabled. This is available for **Interface** and **Trunk** in the **Type** field above.
Enable Connectivity Check	Select this to turn on the connection check. This is available for **Interface** and **Gateway** in the **Type** field above.
Check Method:	Select the method that the gateway allows. Select icmp to have the Zyxel Device regularly ping the gateway you specify to make sure it is still available. Select tcp to have the Zyxel Device regularly perform a TCP handshake with the gateway you specify to make sure it is still available.
Check Period:	Enter the number of seconds between connection check attempts (5-600 seconds).
Check Timeout:	Enter the number of seconds to wait for a response before the attempt is a failure (1-10 seconds).
Check Fail Tolerance:	Enter the number of consecutive failures before the Zyxel Device stops routing using this policy (1-10).
Check Port:	This field only displays when you set the Check Method to tcp. Specify the port number to use for a TCP connectivity check (1-65535).
Check this address:	Select this to specify a domain name or IP address for the connectivity check. Enter that domain name or IP address in the field next to it.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

10.3 IP Static Route Screen

Click **Configuration** > **Network** > **Routing** > **Static Route** to open the **Static Route** screen. This screen displays the configured static routes. Configure static routes to be able to use RIP or OSPF to propagate the routing information to other routers. If you enabled IPv6 in the **Configuration** > **System** > **IPv6** screen, you can also configure static routes used for your IPv6 networks on this screen.

Figure 206 Configuration > Network > Routing > Static Route



The following table describes the labels in this screen.

Table 120 Configuration > Network > Routing > Static Route

LABEL	DESCRIPTION
IPv4 Configuration / IPv6 Configuration	Use the **IPv4 Configuration** section for IPv4 network settings. Use the **IPv6 Configuration** section for IPv6 network settings if you connect your Zyxel Device to an IPv6 network. Both sections have similar fields as described below.
Add	Click this to create a new static route.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
#	This is the number of an individual static route.
Destination	This is the destination IP address.
Subnet Mask	This is the IP subnet mask.
Prefix	This is the IPv6 prefix for the destination IP address.
Next-Hop	This is the IP address of the next-hop gateway or the interface through which the traffic is routed. The gateway is a router or switch on the same segment as your Zyxel Device's interface(s). The gateway helps forward packets to their destinations.
Metric	This is the route's priority among the Zyxel Device's routes. The smaller the number, the higher priority the route has.

10.3.1 Static Route Add/Edit Screen

Select a static route index number and click **Add** or **Edit**. The screen shown next appears. Use this screen to configure the required information for a static route.

Figure 207 Configuration > Network > Routing > Static Route > Add (IPv4 Configuration)

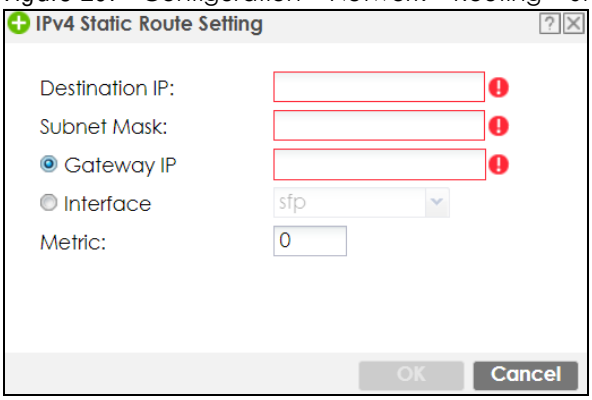


Figure 208 Configuration > Network > Routing > Static Route > Add (IPv6 Configuration)

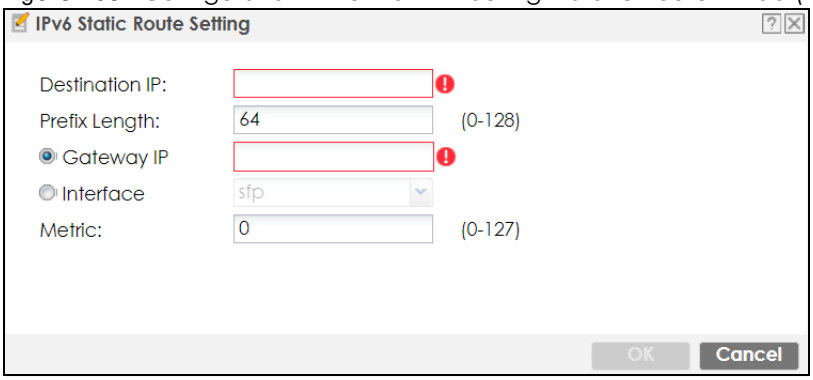


The following table describes the labels in this screen.

Table 121 Configuration > Network > Routing > Static Route > Add

LABEL	DESCRIPTION
Destination IP	This parameter specifies the IP network address of the final destination. Routing is always based on network number. If you need to specify a route to a single host, enter the specific IP address here and use a subnet mask of 255.255.255.255 (for IPv4) in the **Subnet Mask** field or a prefix of 128 (for IPv6) in the **Prefix Length** field to force the network number to be identical to the host ID. For IPv6, if you want to send all traffic to the gateway or interface specified in the **Gateway IP** or **Interface** field, enter :: in this field and 0 in the **Prefix Length** field.
Subnet Mask	Enter the IP subnet mask here.
Prefix Length	Enter the number of left-most digits in the destination IP address, which indicates the network prefix. Enter :: in the **Destination IP** field and 0 in this field if you want to send all traffic to the gateway or interface specified in the **Gateway IP** or **Interface** field.
Gateway IP	Select the radio button and enter the IP address of the next-hop gateway. The gateway is a router or switch on the same segment as your Zyxel Device's interface(s). The gateway helps forward packets to their destinations.
Interface	Select the radio button and a predefined interface through which the traffic is sent.
Metric	Metric represents the "cost" of transmission for routing purposes. IP routing uses hop count as the measurement of cost, with a minimum of 1 for directly connected networks. Enter a number that approximates the cost for this link. The number need not be precise, but it must be 0~127. In practice, 2 or 3 is usually a good number.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

10.4 Policy Routing Technical Reference

Here is more detailed information about some of the features you can configure in policy routing.

NAT and SNAT

NAT (Network Address Translation - NAT, RFC 1631) is the translation of the IP address in a packet in one network to a different IP address in another network. Use SNAT (Source NAT) to change the source IP address in one network to a different IP address in another network.

Assured Forwarding (AF) PHB for DiffServ

Assured Forwarding (AF) behavior is defined in RFC 2597. The AF behavior group defines four AF classes. Inside each class, packets are given a high, medium or low drop precedence. The drop precedence determines the probability that routers in the network will drop packets when congestion occurs. If congestion occurs between classes, the traffic in the higher class (smaller numbered class) is generally given priority. Combining the classes and drop precedence produces the following twelve DSCP encodings from AF11 through AF43. The decimal equivalent is listed in brackets.

Table 122 Assured Forwarding (AF) Behavior Group

	CLASS 1	CLASS 2	CLASS 3	CLASS 4
Low Drop Precedence	AF11 (10)	AF21 (18)	AF31 (26)	AF41 (34)
Medium Drop Precedence	AF12 (12)	AF22 (20)	AF32 (28)	AF42 (36)
High Drop Precedence	AF13 (14)	AF23 (22)	AF33 (30)	AF43 (38)

Maximize Bandwidth Usage

The maximize bandwidth usage option allows the Zyxel Device to divide up any available bandwidth on the interface (including unallocated bandwidth and any allocated bandwidth that a policy route is not using) among the policy routes that require more bandwidth.

When you enable maximize bandwidth usage, the Zyxel Device first makes sure that each policy route gets up to its bandwidth allotment. Next, the Zyxel Device divides up an interface's available bandwidth (bandwidth that is unbudgeted or unused by the policy routes) depending on how many policy routes require more bandwidth and on their priority levels. When only one policy route requires more bandwidth, the Zyxel Device gives the extra bandwidth to that policy route.

When multiple policy routes require more bandwidth, the Zyxel Device gives the highest priority policy routes the available bandwidth first (as much as they require, if there is enough available bandwidth), and then to lower priority policy routes if there is still bandwidth available. The Zyxel Device distributes the available bandwidth equally among policy routes with the same priority level.

10.5 Routing Protocols Overview

Routing protocols give the Zyxel Device routing information about the network from other routers. The Zyxel Device stores this routing information in the routing table it uses to make routing decisions. In turn, the Zyxel Device can also use routing protocols to propagate routing information to other routers.

Routing protocols are usually only used in networks using multiple routers like campuses or large enterprises.

- Use the **RIP** screen (see Section 10.6 on page 311) to configure the Zyxel Device to use RIP to receive and/or send routing information.
- Use the **OSPF** screen (see Section 10.7 on page 313) to configure general OSPF settings and manage OSPF areas.
- Use the **OSPF Area Add/Edit** screen (see Section 10.7.2 on page 317) to create or edit an OSPF area.
- Use the **BGP** screen (see Section 10.8 on page 320) to configure eBGP (exterior Border Gate Protocol).

10.5.1 What You Need to Know

The Zyxel Device supports two standards, RIP and OSPF, for routing protocols. RIP and OSPF are compared here and discussed further in the rest of the chapter.

Table 123 RIP vs. OSPF

	RIP	OSPF
Network Size	Small (with up to 15 routers)	Large
Metric	Hop count	Bandwidth, hop count, throughput, round trip time and reliability.
Convergence	Slow	Fast

10.6 The RIP Screen

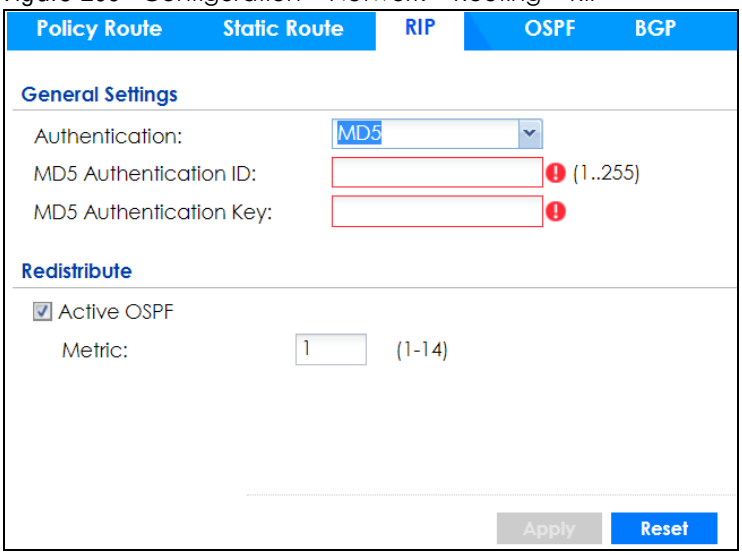
RIP (Routing Information Protocol, RFC 1058 and RFC 1389) allows a device to exchange routing information with other routers. RIP is a vector-space routing protocol, and, like most such protocols, it uses hop count to decide which route is the shortest. Unfortunately, it also broadcasts its routes asynchronously to the network and converges slowly. Therefore, RIP is more suitable for small networks (up to 15 routers).

- In the Zyxel Device, you can configure two sets of RIP settings before you can use it in an interface.
- First, the **Authentication** field specifies how to verify that the routing information that is received is the same routing information that is sent.
- Second, the Zyxel Device can also **redistribute** routing information from non-RIP networks, specifically OSPF networks and static routes, to the RIP network. Costs might be calculated differently, however, so you use the **Metric** field to specify the cost in RIP terms.
- RIP uses UDP port 520.

Use the **RIP** screen to specify the authentication method and maintain the policies for redistribution.

Click **Configuration** > **Network** > **Routing** > **RIP** to open the following screen.

Figure 209 Configuration > Network > Routing > RIP



The following table describes the labels in this screen.

Table 124 Configuration > Network > Routing Protocol > RIP

LABEL	DESCRIPTION
Authentication	The transmitting and receiving routers must have the same key. For RIP, authentication is not available in RIP version 1. In RIP version 2, you can only select one authentication type for all interfaces.
Authentication	Select the authentication method used in the RIP network. This authentication protects the integrity, but not the confidentiality, of routing updates. • **None** uses no authentication. • **Text** uses a plain text password that is sent over the network (not very secure). • **MD5** uses an MD5 password and authentication ID (most secure).
Text Authentication Key	This field is available if the **Authentication** is **Text**. Type the password for text authentication. The key can consist of alphanumeric characters and the underscore, and it can be up to 16 characters long.
MD5 Authentication ID	This field is available if the **Authentication** is **MD5**. Type the ID for MD5 authentication. The ID can be between 1 and 255.
MD5 Authentication Key	This field is available if the **Authentication** is **MD5**. Type the password for MD5 authentication. The password can consist of alphanumeric characters and the underscore, and it can be up to 16 characters long.
Redistribute	
Active OSPF	Select this to use RIP to advertise routes that were learned through OSPF.
Metric	Type the cost for routes provided by OSPF. The metric represents the "cost" of transmission for routing purposes. RIP routing uses hop count as the measurement of cost, with 1 usually used for directly connected networks. The number does not have to be precise, but it must be between 0 and 16. In practice, 2 or 3 is usually used.
Apply	Click this button to save your changes to the Zyxel Device.
Reset	Click this button to return the screen to its last-saved settings.

10.7 The OSPF Screen

OSPF (Open Shortest Path First, RFC 2328) is a link-state protocol designed to distribute routing information within a group of networks, called an Autonomous System (AS). OSPF offers some advantages over vector-space routing protocols like RIP.

- OSPF supports variable-length subnet masks, which can be set up to use available IP addresses more efficiently.
- OSPF filters and summarizes routing information, which reduces the size of routing tables throughout the network.
- OSPF responds to changes in the network, such as the loss of a router, more quickly.
- OSPF considers several factors, including bandwidth, hop count, throughput, round trip time, and reliability, when it calculates the shortest path.
- OSPF converges more quickly than RIP.

Naturally, OSPF is also more complicated than RIP, so OSPF is usually more suitable for large networks.

OSPF uses IP protocol 89.

OSPF Areas

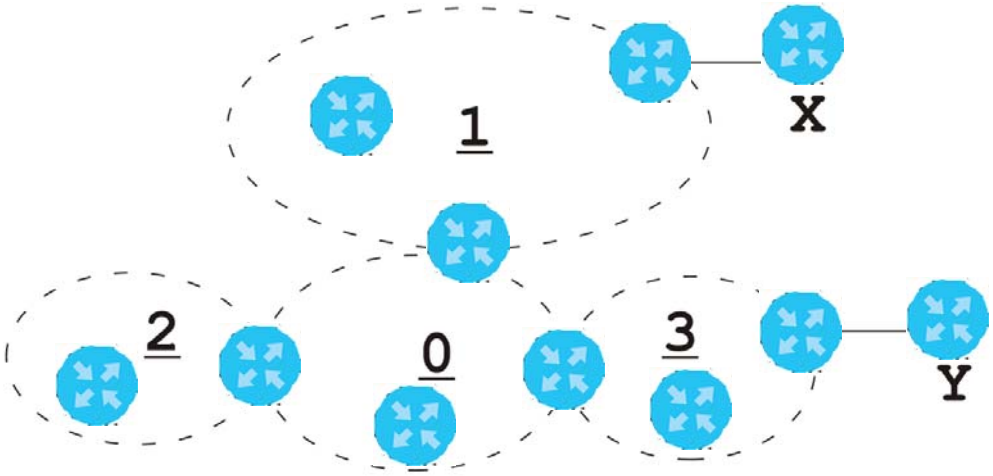
An OSPF Autonomous System (AS) is divided into one or more areas. Each area represents a group of adjacent networks and is identified by a 32-bit ID. In OSPF, this number may be expressed as an integer or as an IP address.

There are several types of areas.

- The backbone is the transit area that routes packets between other areas. All other areas are connected to the backbone.
- A normal area is a group of adjacent networks. A normal area has routing information about the OSPF AS, any networks outside the OSPF AS to which it is directly connected, and any networks outside the OSPF AS that provide routing information to any area in the OSPF AS.
- A stub area has routing information about the OSPF AS. It does not have any routing information about any networks outside the OSPF AS, including networks to which it is directly connected. It relies on a default route to send information outside the OSPF AS.
- A Not So Stubby Area (NSSA, RFC 1587) has routing information about the OSPF AS and networks outside the OSPF AS to which the NSSA is directly connected. It does not have any routing information about other networks outside the OSPF AS.

Each type of area is illustrated in the following figure.

Figure 210 OSPF: Types of Areas



This OSPF AS consists of four areas, areas 0-3. Area 0 is always the backbone. In this example, areas 1, 2, and 3 are all connected to it. Area 1 is a normal area. It has routing information about the OSPF AS and networks X and Y. Area 2 is a stub area. It has routing information about the OSPF AS, but it depends on a default route to send information to networks X and Y. Area 3 is a NSSA. It has routing information about the OSPF AS and network Y but not about network X.

OSPF Routers

Every router in the same area has the same routing information. They do this by exchanging Hello messages to confirm which neighbor (layer-3) devices exist, and then they exchange database descriptions (DDs) to create a synchronized link-state database. The link-state database contains records of router IDs, their associated links and path costs. The link-state database is then constantly updated through Link State Advertisements (LSA). Each router uses the link state database and the Dijkstra algorithm to compute the least cost paths to network destinations.

Like areas, each router has a unique 32-bit ID in the OSPF AS, and there are several types of routers. Each type is really just a different role, and it is possible for one router to play multiple roles at one time.

- An internal router (IR) only exchanges routing information with other routers in the same area.
- An Area Border Router (ABR) connects two or more areas. It is a member of all the areas to which it is connected, and it filters, summarizes, and exchanges routing information between them.
- An Autonomous System Boundary Router (ASBR) exchanges routing information with routers in networks outside the OSPF AS. This is called redistribution in OSPF.

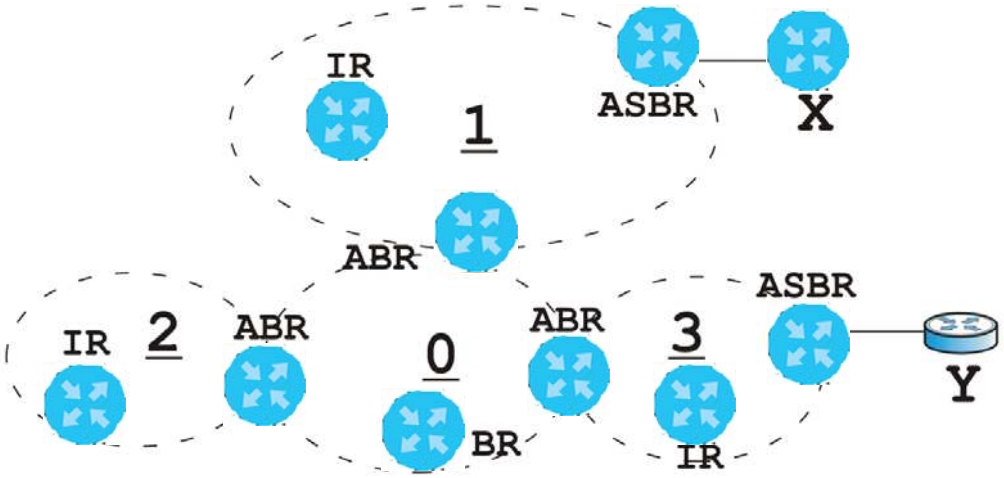
Table 125 OSPF: Redistribution from Other Sources to Each Type of Area

SOURCE \ TYPE OF AREA	NORMAL	NSSA	STUB
Static routes	Yes	Yes	No
RIP	Yes	Yes	Yes

- A backbone router (BR) has at least one interface with area 0. By default, every router in area 0 is a backbone router, and so is every ABR.

Each type of router is illustrated in the following example.

Figure 211 OSPF: Types of Routers



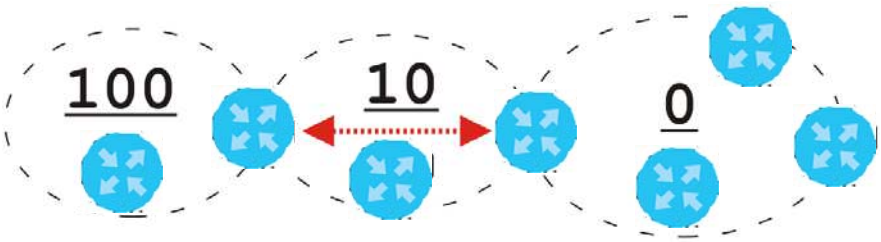
In order to reduce the amount of traffic between routers, a group of routers that are directly connected to each other selects a designated router (DR) and a backup designated router (BDR). All of the routers only exchange information with the DR and the BDR, instead of exchanging information with all of the other routers in the group. The DR and BDR are selected by priority; if two routers have the same priority, the highest router ID is used.

The DR and BDR are selected in each group of routers that are directly connected to each other. If a router is directly connected to several groups, it might be a DR in one group, a BDR in another group, and neither in a third group all at the same time.

Virtual Links

In some OSPF AS, it is not possible for an area to be directly connected to the backbone. In this case, you can create a virtual link through an intermediate area to logically connect the area to the backbone. This is illustrated in the following example.

Figure 212 OSPF: Virtual Link



In this example, area 100 does not have a direct connection to the backbone. As a result, you should set up a virtual link on both ABR in area 10. The virtual link becomes the connection between area 100 and the backbone.

You cannot create a virtual link to a router in a different area.

OSPF Configuration

Follow these steps when you configure OSPF on the Zyxel Device.

1 Enable OSPF.

2 Set up the OSPF areas.

3 Configure the appropriate interfaces. See Section 9.3.1 on page 213.

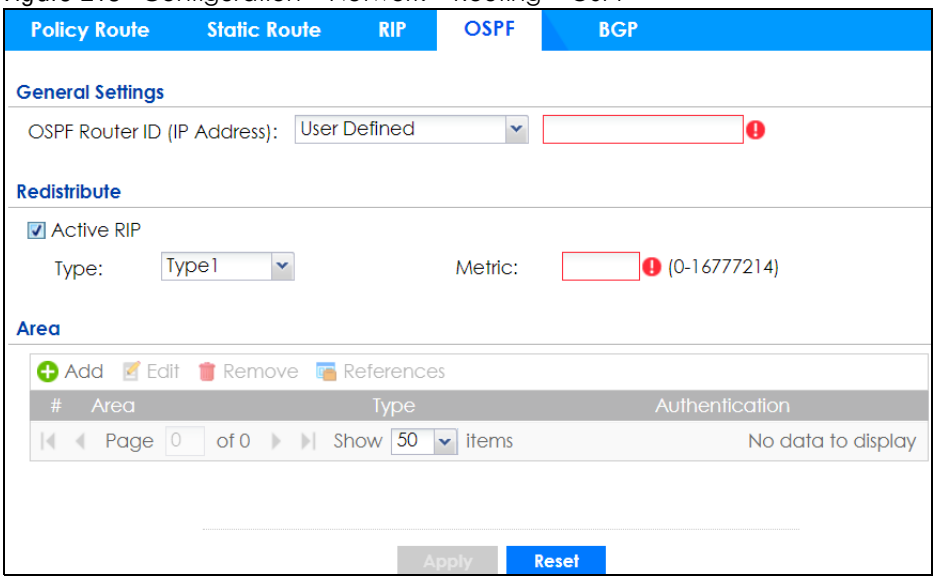
4 Set up virtual links, as needed.

10.7.1 Configuring the OSPF Screen

Use the first OSPF screen to specify the OSPF router the Zyxel Device uses in the OSPF AS and maintain the policies for redistribution. In addition, it provides a summary of OSPF areas, allows you to remove them, and opens the **OSPF Add/Edit** screen to add or edit them.

Click **Configuration** > **Network** > **Routing** > **OSPF** to open the following screen.

Figure 213 Configuration > Network > Routing > OSPF



The following table describes the labels in this screen. See Section 10.7.2 on page 317 for more information as well.

Table 126 Configuration > Network > Routing Protocol > OSPF

LABEL	DESCRIPTION
OSPF Router ID	Select the 32-bit ID the Zyxel Device uses in the OSPF AS. **Default** - the first available interface IP address is the Zyxel Device's ID. **User Defined** - enter the ID (in IP address format) in the field that appears when you select **User Define**.
Redistribute	
Active RIP	Select this to advertise routes that were learned from RIP. The Zyxel Device advertises routes learned from RIP to **Normal** and **NSSA** areas but not to **Stub** areas.
Type	Select how OSPF calculates the cost associated with routing information from RIP. Choices are: **Type 1** and **Type 2**. **Type 1** - cost = OSPF AS cost + external cost (**Metric**) **Type 2** - cost = external cost (**Metric**); the OSPF AS cost is ignored.

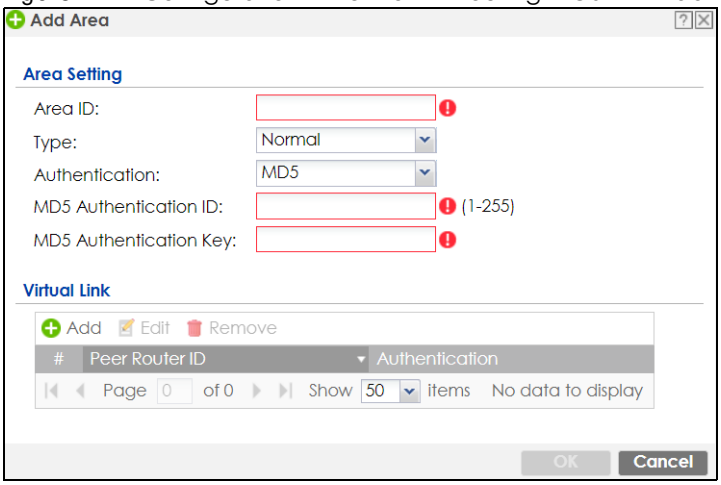
Table 126 Configuration > Network > Routing Protocol > OSPF (continued)

LABEL	DESCRIPTION
Metric	Type the external cost for routes provided by RIP. The metric represents the "cost" of transmission for routing purposes. The way this is used depends on the **Type** field. This value is usually the average cost in the OSPF AS, and it can be between 1 and 16777214.
Area	This section displays information about OSPF areas in the Zyxel Device.
Add	Click this to create a new OSPF area.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. Click **Refresh** to update information on this screen.
#	This field is a sequential value, and it is not associated with a specific area.
Area	This field displays the 32-bit ID for each area in IP address format.
Type	This field displays the type of area. This type is different from the **Type** field above.
Authentication	This field displays the default authentication method in the area.
Apply	Click this button to save your changes to the Zyxel Device.
Reset	Click this button to return the screen to its last-saved settings.

10.7.2 OSPF Area Add/Edit Screen

The **OSPF Area Add/Edit** screen allows you to create a new area or edit an existing one. To access this screen, go to the **OSPF** summary screen (see Section 10.7 on page 313), and click either the **Add** icon or an **Edit** icon.

Figure 214 Configuration > Network > Routing > OSPF > Add



The following table describes the labels in this screen.

Table 127 Configuration > Network > Routing > OSPF > Add

LABEL	DESCRIPTION
Area ID	Type the unique, 32-bit identifier for the area in IP address format.
Type	Select the type of OSPF area. **Normal** - This area is a normal area. It has routing information about the OSPF AS and about networks outside the OSPF AS. **Stub** - This area is an stub area. It has routing information about the OSPF AS but not about networks outside the OSPF AS. It depends on a default route to send information outside the OSPF AS. **NSSA** - This area is a Not So Stubby Area (NSSA), per RFC 1587. It has routing information about the OSPF AS and networks that are outside the OSPF AS and are directly connected to the NSSA. It does not have information about other networks outside the OSPF AS.
Authentication	Select the default authentication method used in the area. This authentication protects the integrity, but not the confidentiality, of routing updates. **None** uses no authentication. **Text** uses a plain text password that is sent over the network (not very secure). **MD5** uses an MD5 password and authentication ID (most secure).
Text Authentication Key	This field is available if the **Authentication** is **Text**. Type the password for text authentication. The key can consist of alphanumeric characters and the underscore, and it can be up to 16 characters long.
MD5 Authentication ID	This field is available if the **Authentication** is **MD5**. Type the default ID for MD5 authentication in the area. The ID can be between 1 and 255.
MD5 Authentication Key	This field is available if the **Authentication** is **MD5**. Type the default password for MD5 authentication in the area. The password can consist of alphanumeric characters and the underscore, and it can be up to 16 characters long.
Virtual Link	This section is displayed if the **Type** is **Normal**. Create a virtual link if you want to connect a different area (that does not have a direct connection to the backbone) to the backbone. You should set up the virtual link on the ABR that is connected to the other area and on the ABR that is connected to the backbone.
Add	Click this to create a new virtual link.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
#	This field is a sequential value, and it is not associated with a specific area.
Peer Router ID	This is the 32-bit ID (in IP address format) of the other ABR in the virtual link.

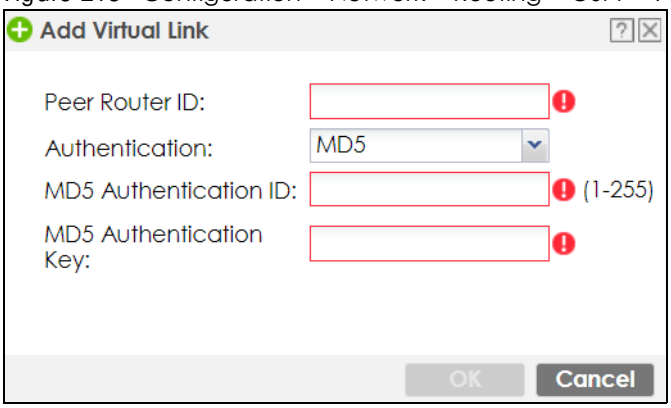
Table 127 Configuration > Network > Routing > OSPF > Add (continued)

LABEL	DESCRIPTION
Authentication	This is the authentication method the virtual link uses. This authentication protects the integrity, but not the confidentiality, of routing updates. For OSPF, the Zyxel Device supports a default authentication type by area. If you want to use this default in an interface or virtual link, you set the associated Authentication Type field to **Same as Area**. As a result, you only have to update the authentication information for the area to update the authentication type used by these interfaces and virtual links. Alternatively, you can override the default in any interface or virtual link by selecting a specific authentication method. Please see the respective interface sections for more information. **None** uses no authentication. **Text** uses a plain text password that is sent over the network (not very secure). Hover your cursor over this label to display the password. **MD5** uses an MD5 password and authentication ID (most secure). Hover your cursor over this label to display the authentication ID and key. **Same as Area** has the virtual link also use the **Authentication** settings above.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

10.7.3 Virtual Link Add/Edit Screen

The **Virtual Link Add/Edit** screen allows you to create a new virtual link or edit an existing one. When the OSPF add or edit screen (see Section 10.7.2 on page 317) has the Type set to Normal, a Virtual Link table displays. Click either the **Add** icon or an entry and the **Edit** icon to display a screen like the following.

Figure 215 Configuration > Network > Routing > OSPF > Add > Add



The following table describes the labels in this screen.

Table 128 Configuration > Network > Routing > OSPF > Add > Add

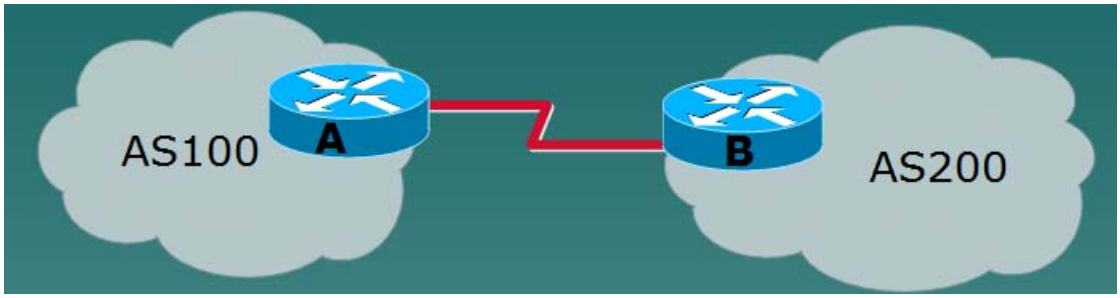
LABEL	DESCRIPTION
Peer Router ID	Enter the 32-bit ID (in IP address format) of the other ABR in the virtual link.
Authentication	Select the authentication method the virtual link uses. This authentication protects the integrity, but not the confidentiality, of routing updates. For OSPF, the Zyxel Device supports a default authentication type by area. If you want to use this default in an interface or virtual link, you set the associated Authentication Type field to **Same as Area**. As a result, you only have to update the authentication information for the area to update the authentication type used by these interfaces and virtual links. Alternatively, you can override the default in any interface or virtual link by selecting a specific authentication method. Please see the respective interface sections for more information. **None** uses no authentication. **Text** uses a plain text password that is sent over the network (not very secure). **MD5** uses an MD5 password and authentication ID (most secure). **Same as Area** has the virtual link also use the **Authentication** settings above.
Text Authentication Key	This field is available if the **Authentication** is **Text**. Type the password for text authentication. The key can consist of alphanumeric characters and the underscore, and it can be up to 16 characters long.
MD5 Authentication ID	This field is available if the **Authentication** is **MD5**. Type the default ID for MD5 authentication in the area. The ID can be between 1 and 255.
MD5 Authentication Key	This field is available if the **Authentication** is **MD5**. Type the default password for MD5 authentication in the area. The password can consist of alphanumeric characters and the underscore, and it can be up to 16 characters long.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

10.8 BGP (Border Gateway Protocol)

The Zyxel Device supports eBGP (exterior Border Gate Protocol) to route IPv4 traffic between routers in different Autonomous Systems (AS). An AS number is a number from 1 to 4294967295), that identifies an autonomous system. 4200000000 – 4294967294 are private AS numbers.

See Section 10.7 on page 313 for more information on autonomous systems.

Figure 216 eBGP Concept



10.8.1 Allow BGP Packets to Enter the Zyxel Device

You must first allow BGP packets to enter the Zyxel Device from the WAN.

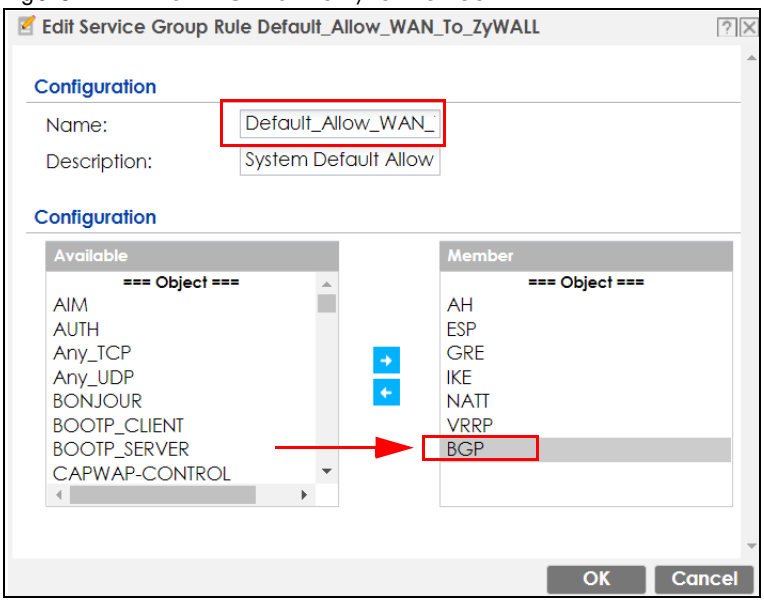
1 Go to **Configuration** > **Object** > **Service** > **Service Group**

2 Select the **Default_Allow_WAN_To_ZyWALL** rule and click **Edit**.

3 Move BGP from **Available** to **Member**.

4 Click **OK**.

Figure 217 Allow BGP to the Zyxel Device

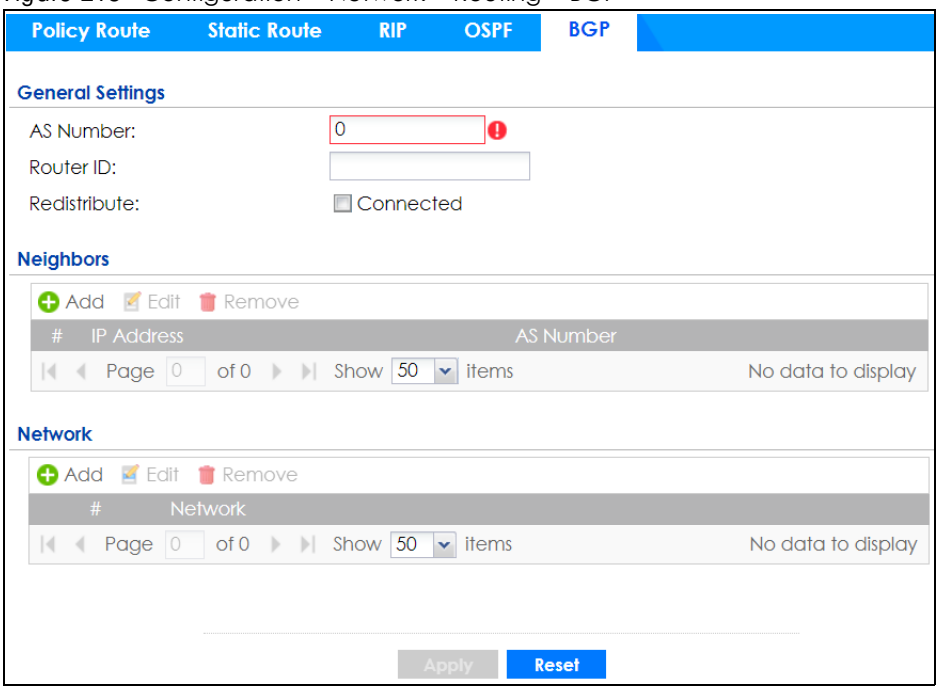


10.8.2 Configuring the BGP Screen

Use this screen to configure BGP information about the Zyxel Device and its peer BGP routers.

Click **Configuration** > **Network** > **Routing** > **BGP** to open the following screen.

Figure 218 Configuration > Network > Routing > BGP



The following table describes the labels in this screen.

Table 129 Configuration > Network > Routing Protocol > BGP

LABEL	DESCRIPTION
AS Number	Type a number from 1 to 4294967295 in this field. Note: The Zyxel Device can only belong to one AS at a time.
Router ID	Type the IP address of the interface on the Zyxel Device. This field is optional.
Redistribute	Select **Connected** to redistribute routes of directly attached devices to the Zyxel Device into the BGP Routing Information Base (RIB).
Neighbors	This section displays information about peer BGP routers in neighboring AS'. Note: The maximum number of neighboring BGP routers supported by the Zyxel Device is 5.
Add	Click this to configure BGP criteria for a new peer BGP router.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
#	This field is a sequential value, and it is not associated with a specific area.
IP Address	This displays the IPv4 address of the peer BGP router in a neighboring AS.
AS Number	This displays the AS Number of the peer BGP router in a neighboring AS.
Network	Use this section to add routes that will be announced to all BGP neighbors. Note: You may configure up to 16 network routes.
Add	Click this to configure network information for a new route.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.

Table 129 Configuration > Network > Routing Protocol > BGP (continued)

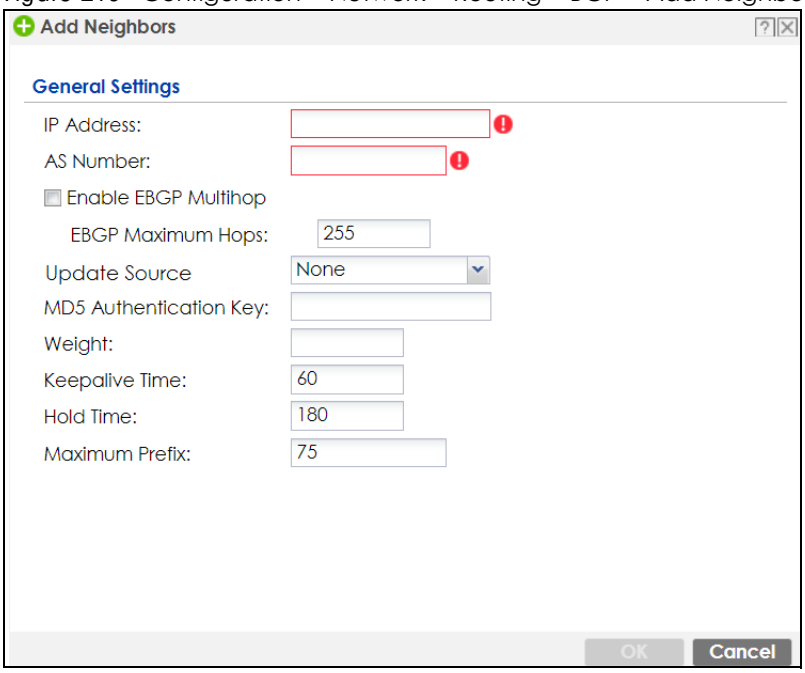
LABEL	DESCRIPTION
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
#	This field is a sequential value, and it is not associated with a specific area.
Network	This displays the IP address and the number of subnet mask bits for the peer BGP route.
Apply	Click this button to save your changes to the Zyxel Device.
Reset	Click this button to return the screen to its last-saved settings.

10.8.3 The BGP Neighbors Screen

Use this screen to configure BGP information about a peer BGP router.

Click **Configuration** > **Network** > **Routing** > **BGP** > **Add Neighbors** to open the following screen.

Figure 219 Configuration > Network > Routing > BGP > Add Neighbors



The following table describes the labels in this screen.

Table 130 Configuration > Network > Routing Protocol > BGP

LABEL	DESCRIPTION
IP Address	Type the IP address of the interface on the peer BGP router.
AS Number	Type a number from 1 to 4294967295 in this field. Get the number from your service provider.
Enable EBGP Multihop	Select this to allow the Zyxel Device to attempt BGP connections to external peers on indirectly connected networks. eBGP neighbors must also perform multihop. Multihop is not established if the only route to the multihop peer is a default route. This avoids loop formation.
EBGP Maximum Hops	Enter a maximum hop count from <1-255>. The default is 255.

Table 130 Configuration > Network > Routing Protocol > BGP (continued)

LABEL	DESCRIPTION
Update Source	Use this to allow BGP sessions use the selected interface for TCP connections. • Choose **Gateway** and then enter the gateway IP address • Choose **Interface** and then select a Zyxel Device interface. • Choose **None** to use the closest interface.
MDS authentication key	Type the default password for MD5 authentication of communication between the Zyxel Device and the peer BGP router. The password can consist of alphanumeric characters and the underscore, and it can be up to 16 characters long.
Weight	Specify a weight value for all routes learned from this peer BGP router in the specified network. The route with the highest weight gets preference.
Keepalive Time	Keepalive messages are sent by the Zyxel Device to a peer BGP router to inform it that the BGP connection between the two is still active. The **Keepalive Time** is the interval between each Keepalive message sent by the Zyxel Device. We recommend **Keepalive Time** is 1/3 of the **Hold Time** time.
Hold Time	This is the maximum time the Zyxel Device waits to receive a Keepalive message from a peer BGP router before it declares that the peer BGP router is dead. **Hold Time** must be greater than the **Keepalive Time**.
Maximum Prefix	A prefix is a network address (IP/subnet mask) that a BGP router can reach and that it shares with its neighbors. Set the maximum number, from 1 to 4294967295, of prefixes that can be received from a neighbor. This limits the number of prefixes that the Zyxel Device is allowed to receive from a neighbor. If extra prefixes are received, the Zyxel Device ends the connection with the peer BGP router. You need to edit the peer BGP router configuration to bring the connection back.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

10.8.4 Example Scenario

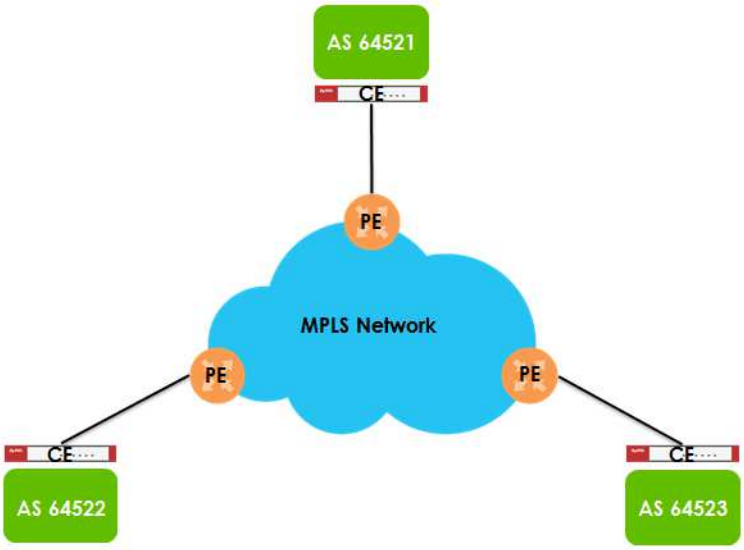
This is an example scenario for using BGP on the Zyxel Device.

10.8.4.1 Scenario: CE - PE (MLPS)

In this scenario, you want to transmit BGP packets from a **CE** router (Zyxel Device) to a peer BGP **PE** router in an **MPLS** network.

- **CE**: The Zyxel Device is the customer edge router located on the customer premises and connects to a PE router in the service provider MPLS network.
- **PE**: The provider edge router is located at the edge of the service provider MPLS network.
- **MPLS**: MultiProtocol Label Switching (MPLS) forwards data from one network node to the next based on path labels rather than network addresses.

Figure 220 Scenario 1: CE Router - to - MPLS



10.8.4.2 CE - PE Configuration Process

The process for configuring BGP in this scenario is:

1. Configure the AS number for BGP on the Zyxel Device (CE) in **Configuration** > **Network** > **Routing** > **BGP**.

   Note: The Zyxel Device can only belong to one AS at a time.

2. Configure the AS number and BGP criteria of the peer BGP routers (PE) in the neighboring AS in **Configuration** > **Network** > **Routing** > **BGP** > **Add Neighbors**.

   Note: The maximum number of neighboring BGP routers supported by the Zyxel Device is 5.

3. Configure the network for BGP routes in the neighboring AS.

   Note: You may configure up to 16 network routes.

CHAPTER 11
DDNS

11.1 DDNS Overview

Dynamic DNS (DDNS) services let you use a domain name with a dynamic IP address.

11.1.1 What You Can Do in this Chapter

- Use the **DDNS** screen (see Section 11.2 on page 327) to view a list of the configured DDNS domain names and their details.
- Use the **DDNS Add/Edit** screen (see Section 11.2.1 on page 328) to add a domain name to the Zyxel Device or to edit the configuration of an existing domain name.

11.1.2 What You Need to Know

DNS maps a domain name to a corresponding IP address and vice versa. Similarly, Dynamic DNS (DDNS) maps a domain name to a dynamic IP address. As a result, anyone can use the domain name to contact you (in NetMeeting, CU-SeeMe, etc.) or to access your FTP server or Web site, regardless of the current (dynamic) IP address.

Note: You must have a public WAN IP address to use Dynamic DNS.

You must set up a dynamic DNS account with a supported DNS service provider before you can use Dynamic DNS services with the Zyxel Device. When registration is complete, the DNS service provider gives you a password or key. At the time of writing, the Zyxel Device supports the following DNS service providers. See the listed websites for details about the DNS services offered by each.

Table 131 DDNS Service Providers

PROVIDER	SERVICE TYPES SUPPORTED	WEBSITE
DynDNS	Dynamic DNS, Static DNS, and Custom DNS	www.dyndns.com
Dynu	Basic, Premium	www.dynu.com
No-IP	No-IP	www.no-ip.com
Peanut Hull	Peanut Hull	www.oray.cn
3322	3322 Dynamic DNS, 3322 Static DNS	www.3322.org
Selfhost	Selfhost	selfhost.de

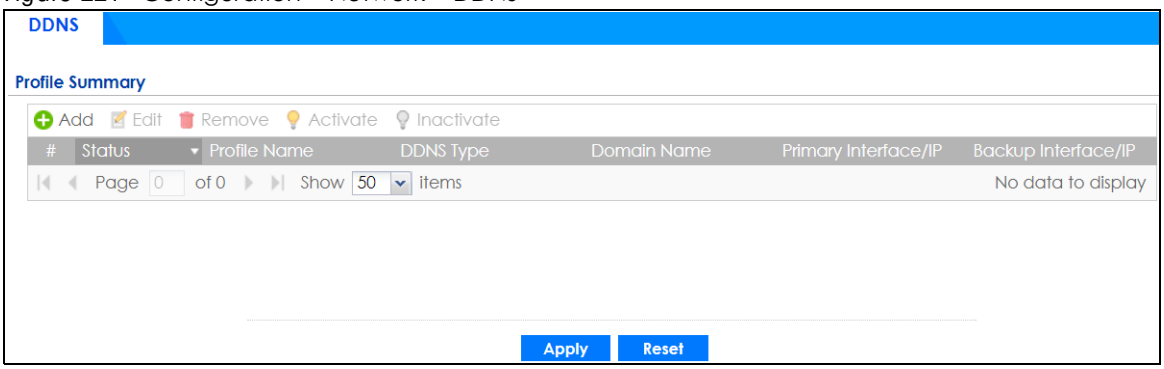
Note: Record your DDNS account's user name, password, and domain name to use to configure the Zyxel Device.

After you configure the Zyxel Device, it automatically sends updated IP addresses to the DDNS service provider, which helps redirect traffic accordingly.

11.2 The DDNS Screen

The **DDNS** screen provides a summary of all DDNS domain names and their configuration. In addition, this screen allows you to add new domain names, edit the configuration for existing domain names, and delete domain names. Click **Configuration** > **Network** > **DDNS** to open the following screen.

Figure 221 Configuration > Network > DDNS



The following table describes the labels in this screen.

Table 132 Configuration > Network > DDNS

LABEL	DESCRIPTION
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
#	This is the number of an individual DDNS profile.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Profile Name	This field displays the descriptive profile name for this entry.
DDNS Type	This field displays which DDNS service you are using.
Domain Name	This field displays each domain name the Zyxel Device can route.
Primary Interface/IP	This field displays the interface to use for updating the IP address mapped to the domain name followed by how the Zyxel Device determines the IP address for the domain name. **from interface** - The IP address comes from the specified interface. **auto detected** -The DDNS server checks the source IP address of the packets from the Zyxel Device for the IP address to use for the domain name. **custom** - The IP address is static.
Backup Interface/IP	This field displays the alternate interface to use for updating the IP address mapped to the domain name followed by how the Zyxel Device determines the IP address for the domain name. The Zyxel Device uses the backup interface and IP address when the primary interface is disabled, its link is down or its connectivity check fails. **from interface** - The IP address comes from the specified interface. **auto detected** -The DDNS server checks the source IP address of the packets from the Zyxel Device for the IP address to use for the domain name. **custom** - The IP address is static.

Table 132 Configuration > Network > DDNS (continued)

LABEL	DESCRIPTION
Apply	Click this button to save your changes to the Zyxel Device.
Reset	Click this button to return the screen to its last-saved settings.

11.2.1 The Dynamic DNS Add/Edit Screen

The **DDNS Add/Edit** screen allows you to add a domain name to the Zyxel Device or to edit the configuration of an existing domain name. Click **Configuration** > **Network** > **DDNS** and then an **Add** or **Edit** icon to open this screen.

Figure 222 Configuration > Network > DDNS > Add

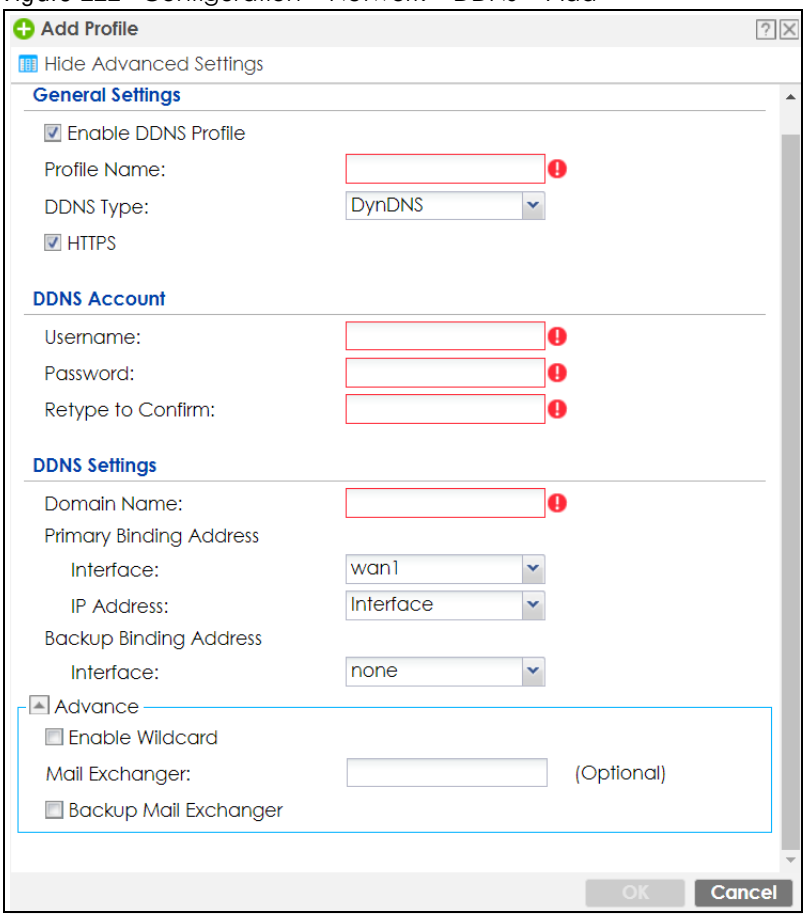


Figure 223 Configuration > Network > DDNS > Add - Custom

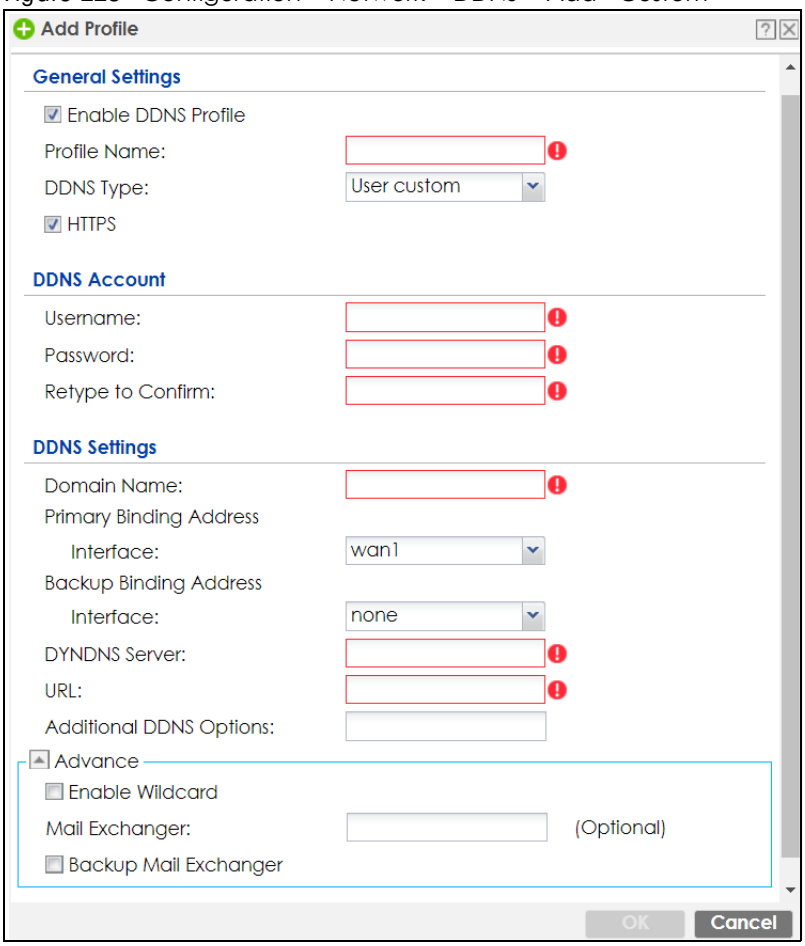


The following table describes the labels in this screen.

Table 133 Configuration > Network > DDNS > Add

LABEL	DESCRIPTION
Show Advanced Settings / Hide Advanced Settings	Click this button to display a greater or lesser number of configuration fields.
Enable DDNS Profile	Select this check box to use this DDNS entry.
Profile Name	When you are adding a DDNS entry, type a descriptive name for this DDNS entry in the Zyxel Device. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive. This field is read-only when you are editing an entry.
DDNS Type	Select the type of DDNS service you are using. Select **User custom** to create your own DDNS service and configure the **DYNDNS Server**, **URL**, and **Additional DDNS Options** fields below.
HTTPS	Select this to encrypt traffic using SSL (port 443), including traffic with username and password, to the DDNS server. Not all DDNS providers support this option.
Username	Type the user name used when you registered your domain name. You can use up to 31 alphanumeric characters and the underscore. Spaces are not allowed. For a Dynu DDNS entry, this user name is the one you use for logging into the service, not the name recorded in your personal information in the Dynu website.

Table 133 Configuration > Network > DDNS > Add (continued)

LABEL	DESCRIPTION
Password	Type the password provided by the DDNS provider. You can use up to 64 alphanumeric characters and the underscore. Spaces are not allowed.
Retype to Confirm	Type the password again to confirm it.
DDNS Settings	
Domain name	Type the domain name you registered. You can use up to 255 characters.
Primary Binding Address	Use these fields to set how the Zyxel Device determines the IP address that is mapped to your domain name in the DDNS server. The Zyxel Device uses the **Backup Binding Address** if the interface specified by these settings is not available.
Interface	Select the interface to use for updating the IP address mapped to the domain name. Select **Any** to let the domain name be used with any interface.
IP Address	The options available in this field vary by DDNS provider. **Interface** -The Zyxel Device uses the IP address of the specified interface. This option appears when you select a specific interface in the **Primary Binding Address Interface** field. **Auto** - If the interface has a dynamic IP address, the DDNS server checks the source IP address of the packets from the Zyxel Device for the IP address to use for the domain name. You may want to use this if there are one or more NAT routers between the Zyxel Device and the DDNS server. Note: The Zyxel Device may not determine the proper IP address if there is an HTTP proxy server between the Zyxel Device and the DDNS server. **Custom** - If you have a static IP address, you can select this to use it for the domain name. The Zyxel Device still sends the static IP address to the DDNS server.
Custom IP	This field is only available when the **IP Address** is **Custom**. Type the IP address to use for the domain name.
Backup Binding Address	Use these fields to set an alternate interface to map the domain name to when the interface specified by the **Primary Binding Interface** settings is not available.
Interface	Select the interface to use for updating the IP address mapped to the domain name. Select **Any** to let the domain name be used with any interface. Select **None** to not use a backup address.
IP Address	The options available in this field vary by DDNS provider. **Interface** -The Zyxel Device uses the IP address of the specified interface. This option appears when you select a specific interface in the **Backup Binding Address Interface** field. **Auto** -The DDNS server checks the source IP address of the packets from the Zyxel Device for the IP address to use for the domain name. You may want to use this if there are one or more NAT routers between the Zyxel Device and the DDNS server. Note: The Zyxel Device may not determine the proper IP address if there is an HTTP proxy server between the Zyxel Device and the DDNS server. **Custom** - If you have a static IP address, you can select this to use it for the domain name. The Zyxel Device still sends the static IP address to the DDNS server.
Custom IP	This field is only available when the **IP Address** is **Custom**. Type the IP address to use for the domain name.
Enable Wildcard	This option is only available with a DynDNS account. Enable the wildcard feature to alias subdomains to be aliased to the same IP address as your (dynamic) domain name. This feature is useful if you want to be able to use, for example, www.yourhost.dyndns.org and still reach your hostname.

Table 133 Configuration > Network > DDNS > Add (continued)

LABEL	DESCRIPTION
Mail Exchanger	This option is only available with a DynDNS account. DynDNS can route email for your domain name to a mail server (called a mail exchanger). For example, DynDNS routes email for john-doe@yourhost.dyndns.org to the host record specified as the mail exchanger. If you are using this service, type the host record of your mail server here. Otherwise leave the field blank. See www.dyndns.org for more information about mail exchangers.
Backup Mail Exchanger	This option is only available with a DynDNS account. Select this check box if you are using DynDNS's backup service for email. With this service, DynDNS holds onto your email if your mail server is not available. Once your mail server is available again, the DynDNS server delivers the mail to you. See www.dyndns.org for more information about this service.
DYNDNS Server	This field displays when you select **User custom** from the **DDNS Type** field above. Type the IP address of the server that will host the DDSN service.
URL	This field displays when you select **User custom** from the **DDNS Type** field above. Type the URL that can be used to access the server that will host the DDSN service.
Additional DDNS Options	This field displays when you select **User custom** from the **DDNS Type** field above. These are the options supported at the time of writing: • dyndns_system to specify the DYNDNS Server type - for example, dyndns@dyndns.org • ip_server_name which should be the URL to get the server's public IP address - for example, http://myip.easylife.tw/
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

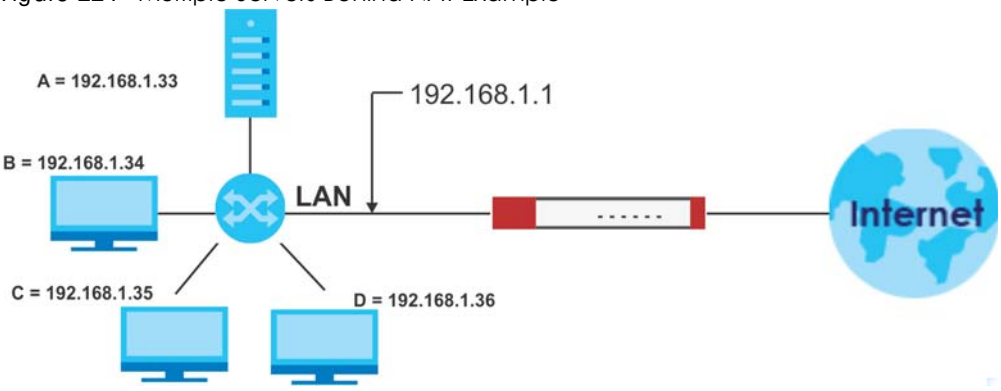
CHAPTER 12
NAT

12.1 NAT Overview

NAT (Network Address Translation - NAT, RFC 1631) is the translation of the IP address of a host in a packet. For example, the source address of an outgoing packet, used within one network is changed to a different IP address known within another network. Use Network Address Translation (NAT) to make computers on a private network behind the Zyxel Device available outside the private network. If the Zyxel Device has only one public IP address, you can make the computers in the private network available by using ports to forward packets to the appropriate private IP address.

Suppose you want to assign ports 21-25 to one FTP, Telnet and SMTP server (**A** in the example), port 80 to another (**B** in the example) and assign a default server IP address of 192.168.1.35 to a third (**C** in the example). You assign the LAN IP addresses and the ISP assigns the WAN IP address. The NAT network appears as a single host on the Internet.

Figure 224 Multiple Servers Behind NAT Example



12.1.1 What You Can Do in this Chapter

Use the **NAT** screens (see Section 12.2 on page 333) to view and manage the list of NAT rules and see their configuration details. You can also create new NAT rules and edit or delete existing ones.

12.1.2 What You Need to Know

NAT is also known as virtual server, port forwarding, or port translation.

Well-known Ports

Port numbers range from 0 to 65535, but only port numbers 0 to 1023 are reserved for privileged services and designated as well-known ports. The following list specifies the ports used by the server process as its contact ports. See Section 34.7 on page 628 (Configuration > Object > Service) for more information about service objects.

- Well-known ports range from 0 to 1023.
- Registered ports range from 1024 to 49151.
- Dynamic ports (also called private ports) range from 49152 to 65535.

Table 134 Well-known Ports

PORT	TCP/UDP	DESCRIPTION
1	TCP	TCP Port Service Multiplexer (TCPMUX)
20	TCP	FTP - Data
21	TCP	FTP - Control
22	TCP	SSH Remote Login Protocol
23	TCP	Telnet
25	TCP	Simple Mail Transfer Protocol (SMTP)
42	UDP	Host Name Server (Nameserv)
43	TCP	Whois
53	TCP/UDP	Domain Name System (DNS)
67	UDP	BOOTP/DHCP server
68	UDP	BOOTP/DHCP client
69	UDP	Trivial File Transfer Protocol (TFTP)
79	TCP	Finger
80	TCP	HTTP
110	TCP	POP3
119	TCP	Newsgroup (NNTP)
123	UDP	Network Time Protocol (NTP)
135	TCP/UDP	RPC Locator service
137	TCP/UDP	NetBIOS Name Service
138	UDP	NetBIOS Datagram Service
139	TCP	NetBIOS Datagram Service
143	TCP	Interim Mail Access Protocol (IMAP)
161	UDP	SNMP
179	TCP	Border Gateway Protocol (BGP)
389	TCP/UDP	Lightweight Directory Access Protocol (LDAP)
443	TCP	HTTPS
445	TCP	Microsoft - DS
636	TCP	LDAP over TLS/SSL (LDAPS)
953	TCP	BIND DNS
990	TCP	FTP over TLS/SSL (FTPS)
995	TCP	POP3 over TLS/SSL (POP3S)

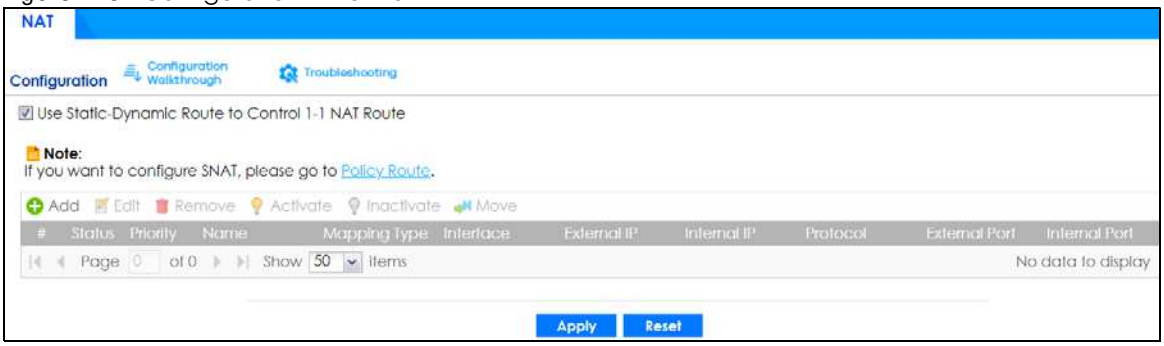
12.2 The NAT Screen

The **NAT** summary screen provides a summary of all NAT rules and their configuration. In addition, this screen allows you to create new NAT rules and edit and delete existing NAT rules. To access this screen,

login to the Web Configurator and click **Configuration** > **Network** > **NAT**. The following screen appears, providing a summary of the existing NAT rules.

Click on the icons to go to the OneSecurity website where there is guidance on configuration walkthroughs, troubleshooting, and other information.

Figure 225 Configuration > Network > NAT



The following table describes the labels in this screen.

Table 135 Configuration > Network > NAT

LABEL	DESCRIPTION
Use Static-Dynamic Route to Control 1-1 NAT Route	If you are using **Site To Site VPN** and **1-1 SNAT**, it's recommended that you select this check box. Otherwise, you'll need to create policy route rules for VPN and Destination NAT traffic. Note that the selection of this check box will change the priority of the routing flow (**Site To Site VPN**, **Static-Dynamic Route**, and **1-1 SNAT**). See Chapter 41 on page 794 for more information about the routing flow.
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Move	To change a rule's position in the numbered list, select the rule and click **Move** to display a field to type a number for where you want to put that rule and press [ENTER] to move the rule to the number that you typed. The ordering of your rules is important as they are applied in order of their numbering.
#	This field is a sequential value, and it is not associated with a specific entry.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Priority	This field displays the priority for the entry. The smaller the number, the higher the priority.
Name	This field displays the name of the entry.
Mapping Type	This field displays what kind of NAT this entry performs: **Virtual Server**, **1:1 NAT**, or **Many 1:1 NAT**.
Interface	This field displays the interface on which packets for the NAT entry are received.
External IP	This field displays the original destination IP address (or address object) of traffic that matches this NAT entry. It displays **any** if there is no restriction on the original destination IP address.
Internal IP	This field displays the new destination IP address for the packet.

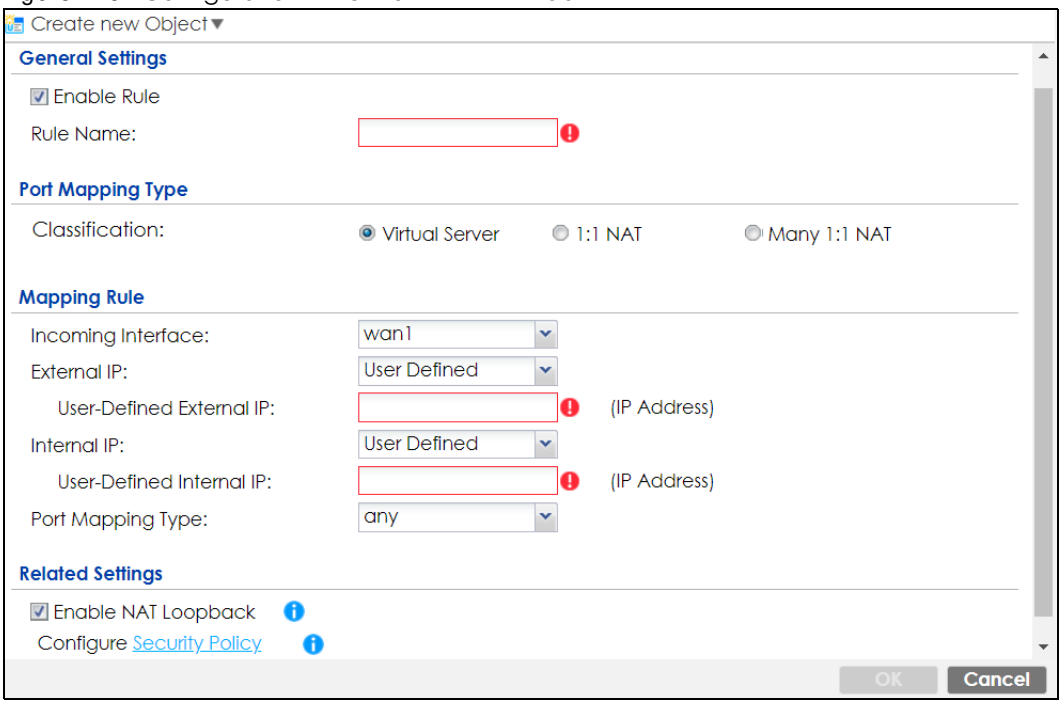
Table 135 Configuration > Network > NAT (continued)

LABEL	DESCRIPTION
Protocol	This field displays the service used by the packets for this NAT entry. It displays **any** if there is no restriction on the services.
External Port	This field displays the original destination port(s) of packets for the NAT entry. This field is blank if there is no restriction on the original destination port.
Internal Port	This field displays the new destination port(s) for the packet. This field is blank if there is no restriction on the original destination port.
Apply	Click this button to save your changes to the Zyxel Device.
Reset	Click this button to return the screen to its last-saved settings.

12.2.1 The NAT Add/Edit Screen

The **NAT Add/Edit** screen lets you create new NAT rules and edit existing ones. To open this window, open the **NAT** summary screen. (See Section 12.2 on page 333.) Then, click on an **Add** icon or **Edit** icon to open the following screen.

Figure 226 Configuration > Network > NAT > Add



The following table describes the labels in this screen.

Table 136 Configuration > Network > NAT > Add

LABEL	DESCRIPTION
Create new Object	Use to configure any new settings objects that you need to use in this screen.
Enable Rule	Use this option to turn the NAT rule on or off.
Rule Name	Type in the name of the NAT rule. The name is used to refer to the NAT rule. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.

Table 136 Configuration > Network > NAT > Add (continued)

LABEL	DESCRIPTION
Classification	Select what kind of NAT this rule is to perform. Virtual Server - This makes computers on a private network behind the Zyxel Device available to a public network outside the Zyxel Device (like the Internet). 1:1 NAT- If the private network server will initiate sessions to the outside clients, select this to have the Zyxel Device translate the source IP address of the server's outgoing traffic to the same public IP address that the outside clients use to access the server. Many 1:1 NAT- If you have a range of private network servers that will initiate sessions to the outside clients and a range of public IP addresses, select this to have the Zyxel Device translate the source IP address of each server's outgoing traffic to the same one of the public IP addresses that the outside clients use to access the server. The private and public ranges must have the same number of IP addresses. One many 1:1 NAT rule works like multiple 1:1 NAT rules, but it eases configuration effort since you only create one rule.
Incoming Interface	Select the interface on which packets for the NAT rule must be received. It can be an Ethernet, VLAN, bridge, or PPPoE/PPTP interface.
External IP	Specify the destination IP address of the packets received by this NAT rule's specified incoming interface. any - Select this to use all of the incoming interface's IP addresses including dynamic addresses or those of any virtual interfaces built upon the selected incoming interface. User Defined - Select this to manually enter an IP address in the User Defined field. For example, you could enter a static public IP assigned by the ISP without having to create a virtual interface for it. Host address - select a host address object to use the IP address it specifies. The list also includes address objects based on interface IPs. So for example you could select an address object based on a WAN interface even if it has a dynamic IP address.
User Defined External IP	This field is available if External IP is User Defined. Type the destination IP address that this NAT rule supports.
External IP Subnet/ Range	This field displays for Many 1:1 NAT. Select the destination IP address subnet or IP address range that this NAT rule supports. The original and mapped IP address subnets or ranges must have the same number of IP addresses.
Internal IP	Select to which translated destination IP address this NAT rule forwards packets. User Defined - this NAT rule supports a specific IP address, specified in the User Defined field. HOST address - the drop-down box lists all the HOST address objects in the Zyxel Device. If you select one of them, this NAT rule supports the IP address specified by the address object.
User Defined Internal IP	This field is available if Internal IP is User Defined. Type the translated destination IP address that this NAT rule supports.
Internal IP Subnet/ Range	This field displays for Many 1:1 NAT. Select to which translated destination IP address subnet or IP address range this NAT rule forwards packets. The original and mapped IP address subnets or ranges must have the same number of IP addresses.

Table 136 Configuration > Network > NAT > Add (continued)

LABEL	DESCRIPTION
Port Mapping Type	Use the drop-down list box to select how many original destination ports this NAT rule supports for the selected destination IP address (**Original IP**). Choices are: **Any** - this NAT rule supports all the destination ports. **Port** - this NAT rule supports one destination port. **Ports** - this NAT rule supports a range of destination ports. You might use a range of destination ports for unknown services or when one server supports more than one service. **Service** - this NAT rule supports a service such as FTP (see **Object > Service > Service**) **Service-Group** - this NAT rule supports a group of services such as all service objects related to DNS (see **Object > Service > Service Group**)
Protocol Type	This field is available if **Mapping Type** is **Port** or **Ports**. Select the protocol (**TCP**, **UDP**, or **Any**) used by the service requesting the connection.
External Port	This field is available if **Mapping Type** is **Port**. Enter the external destination port this NAT rule supports.
Internal Port	This field is available if **Mapping Type** is **Port**. Enter the translated destination port if this NAT rule forwards the packet.
External Start Port	This field is available if **Mapping Type** is **Ports**. Enter the beginning of the range of original destination ports this NAT rule supports.
External End Port	This field is available if **Mapping Type** is **Ports**. Enter the end of the range of original destination ports this NAT rule supports.
Internal Start Port	This field is available if **Mapping Type** is **Ports**. Enter the beginning of the range of translated destination ports if this NAT rule forwards the packet.
Internal End Port	This field is available if **Mapping Type** is **Ports**. Enter the end of the range of translated destination ports if this NAT rule forwards the packet. The original port range and the mapped port range must be the same size.
Enable NAT Loopback	Enable NAT loopback to allow users connected to any interface (instead of just the specified **Incoming Interface**) to use the NAT rule's specified **External IP** address to access the **Internal IP** device. For users connected to the same interface as the **Internal IP** device, the Zyxel Device uses that interface's IP address as the source address for the traffic it sends from the users to the **Internal IP** device. For example, if you configure a NAT rule to forward traffic from the WAN to a LAN server, enabling NAT loopback allows users connected to other interfaces to also access the server. For LAN users, the Zyxel Device uses the LAN interface's IP address as the source address for the traffic it sends to the LAN server. See NAT Loopback on page 338 for more details. If you do not enable NAT loopback, this NAT rule only applies to packets received on the rule's specified incoming interface.
Security Policy	By default the security policy blocks incoming connections from external addresses. After you configure your NAT rule settings, click the **Security Policy** link to configure a security policy to allow the NAT rule's traffic to come in. The Zyxel Device checks NAT rules before it applies To-Zyxel Device security policies, so To-Zyxel Device security policies, do not apply to traffic that is forwarded by NAT rules. The Zyxel Device still checks other security policies, according to the source IP address and mapped IP address.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to return to the **NAT** summary screen without creating the NAT rule (if it is new) or saving any changes (if it already exists).

12.3 NAT Technical Reference

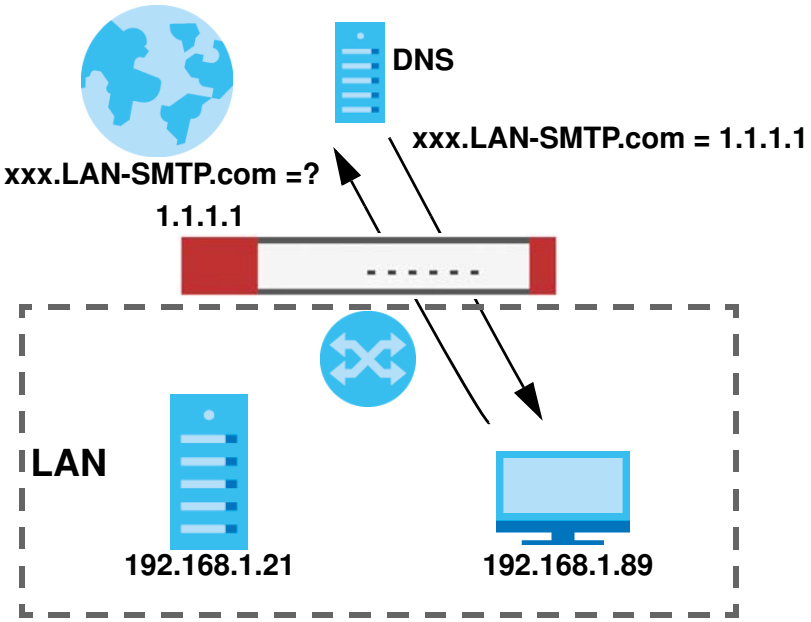
Here is more detailed information about NAT on the Zyxel Device.

NAT Loopback

Suppose an NAT 1:1 rule maps a public IP address to the private IP address of a LAN SMTP email server to give WAN users access. NAT loopback allows other users to also use the rule's original IP to access the mail server.

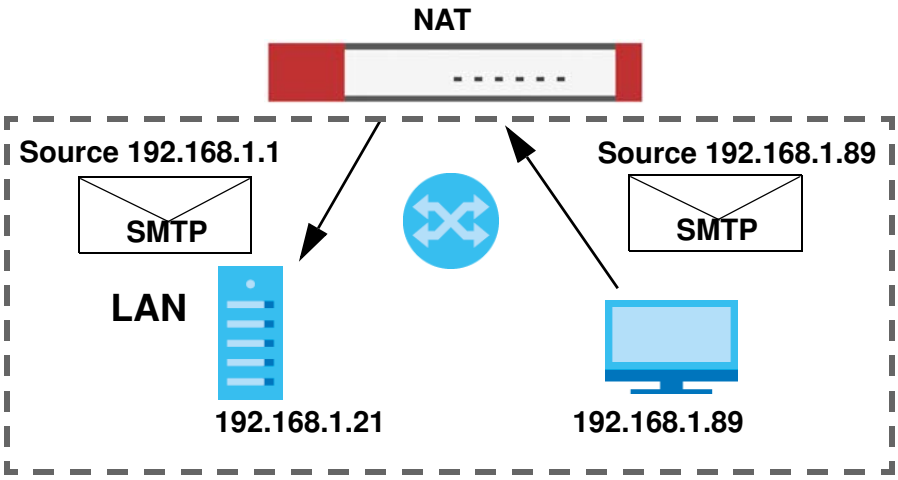
For example, a LAN user's computer at IP address 192.168.1.89 queries a public DNS server to resolve the SMTP server's domain name (xxx.LAN-SMTP.com in this example) and gets the SMTP server's mapped public IP address of 1.1.1.1.

Figure 227 LAN Computer Queries a Public DNS Server



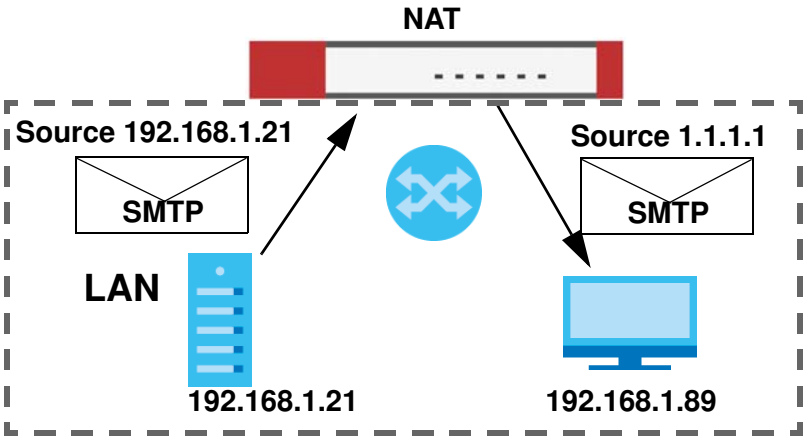
The LAN user's computer then sends traffic to IP address 1.1.1.1. NAT loopback uses the IP address of the Zyxel Device's LAN interface (192.168.1.1) as the source address of the traffic going from the LAN users to the LAN SMTP server.

Figure 228 LAN to LAN Traffic



The LAN SMTP server replies to the Zyxel Device's LAN IP address and the Zyxel Device changes the source address to 1.1.1.1 before sending it to the LAN user. The return traffic's source matches the original destination address (1.1.1.1). If the SMTP server replied directly to the LAN user without the traffic going through NAT, the source would not match the original destination address which would cause the LAN user's computer to shut down the session.

Figure 229 LAN to LAN Return Traffic



CHAPTER 13
Redirect Service

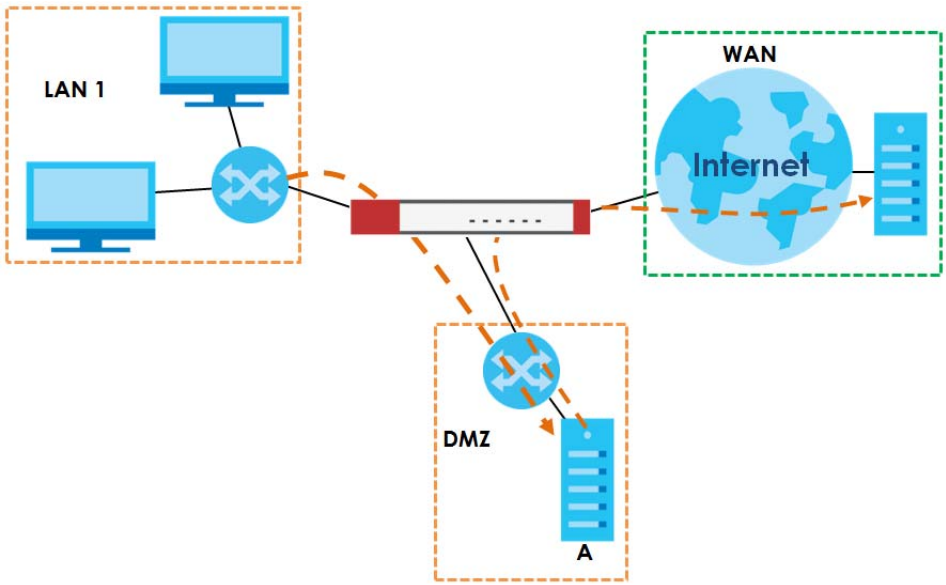
13.1 Overview

Redirect Service redirects HTTP and SMTP traffic.

13.1.1 HTTP Redirect

HTTP redirect forwards the client's HTTP request (except HTTP traffic destined for the Zyxel Device) to a web proxy server. In the following example, proxy server **A** is connected to the **DMZ** interface. When a client connected to the **LAN1** zone wants to open a web page, its HTTP request is redirected to proxy server **A** first. If proxy server **A** cannot find the web page in its cache, a policy route allows it to access the Internet to get them from a server. Proxy server **A** then forwards the response to the client.

Figure 230 HTTP Redirect Example

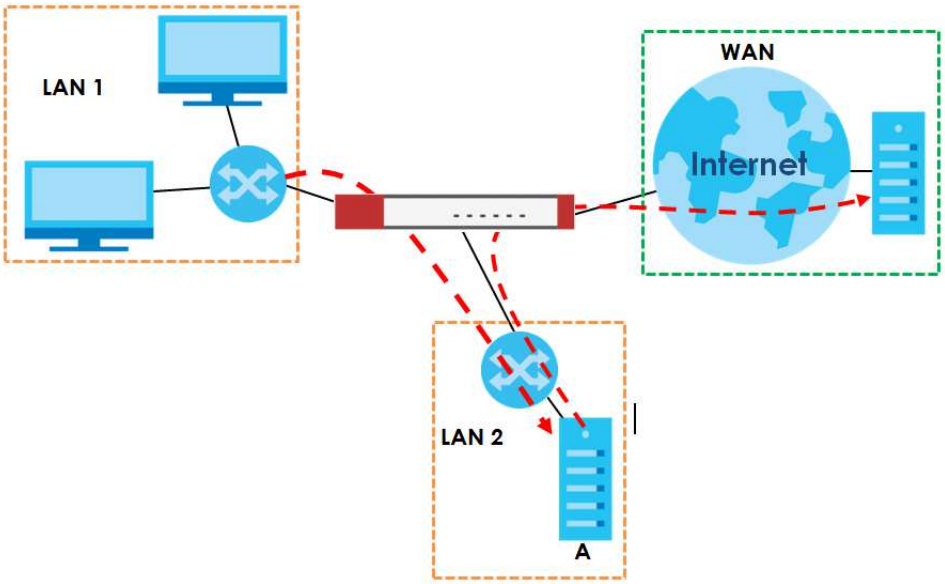


13.1.2 SMTP Redirect

SMTP redirect forwards the authenticated client's SMTP message to a SMTP server, that handles all outgoing email messages. In the following example, SMTP server **A** is connected to the **lan2** interface in the **LAN2** zone. When a client connected to the **lan1** interface in the **LAN1** zone logs into the Zyxel Device and wants to send an email, its SMTP message is redirected to SMTP server **A**. SMTP server **A** then sends it to a mail server, where the message will be delivered to the recipient.

The Zyxel Device forwards SMTP traffic using TCP port 25.

Figure 231 SMTP Redirect Example



13.1.3 What You Can Do in this Chapter

Use the **Redirect Service** screens (see Section 13.2 on page 343) to display and edit the HTTP and SMTP redirect rules.

13.1.4 What You Need to Know

Web Proxy Server

A proxy server helps client devices make indirect requests to access the Internet or outside network resources/services. A proxy server can act as a security policy or an ALG (application layer gateway) between the private network and the Internet or other networks. It also keeps hackers from knowing internal IP addresses.

A client connects to a web proxy server each time he/she wants to access the Internet. The web proxy provides caching service to allow quick access and reduce network usage. The proxy checks its local cache for the requested web resource first. If it is not found, the proxy gets it from the specified server and forwards the response to the client.

HTTP Redirect, Security Policy and Policy Route

With HTTP redirect, the relevant packet flow for HTTP traffic is:

1. Security Policy
2. Application Patrol
3. HTTP Redirect
4. Policy Route

Even if you set a policy route to the same incoming interface and service as a HTTP redirect rule, the Zyxel Device checks the HTTP redirect rules first and forwards HTTP traffic to a proxy server if matched. You need to make sure there is no security policy blocking the HTTP requests from the client to the proxy server.

You also need to manually configure a policy route to forward the HTTP traffic from the proxy server to the Internet. To make the example in Figure 230 on page 340 work, make sure you have the following settings.

For HTTP traffic between lan1 and dmz:

- a from LAN1 to DMZ security policy (default) to allow HTTP requests from lan1 to dmz. Responses to this request are allowed automatically.
- a application patrol rule to allow HTTP traffic between lan1 and dmz.
- a HTTP redirect rule to forward HTTP traffic from lan1 to proxy server A.

For HTTP traffic between dmz and wan1:

- a from DMZ to WAN security policy (default) to allow HTTP requests from dmz to wan1. Responses to these requests are allowed automatically.
- a application patrol rule to allow HTTP traffic between dmz and wan1.
- a policy route to forward HTTP traffic from proxy server A to the Internet.

SMTP

Simple Mail Transfer Protocol (SMTP) is the Internet's message transport standard. It controls the sending of email messages between servers. Email clients (also called email applications) then use mail server protocols such as POP (Post Office Protocol) or IMAP (Internet Message Access Protocol) to retrieve email. Email clients also generally use SMTP to send messages to a mail server. The older POP2 requires SMTP for sending messages while the newer POP3 can be used with or without it. This is why many email applications require you to specify both the SMTP server and the POP or IMAP server (even though they may actually be the same server).

SMTP Redirect, Firewall and Policy Route

With SMTP redirect, the relevant packet flow for SMTP traffic is:

1. Firewall
2. SMTP Redirect
3. Policy Route

Even if you set a policy route to the same incoming interface and service as a SMTP redirect rule, the Zyxel Device checks the SMTP redirect rules first and forwards SMTP traffic to a SMTP server if matched. You need to make sure there is no firewall rule(s) blocking the SMTP traffic from the client to the SMTP server.

You also need to manually configure a policy route to forward the SMTP traffic from the SMTP server to the Internet. To make the example in Figure 231 on page 341 work, make sure you have the following settings.

For SMTP traffic between lan1 and lan2:

- a from LAN1 to LAN2 firewall rule to allow SMTP messages from lan1 to lan2. Responses to this request are allowed automatically.
- a SMTP redirect rule to forward SMTP traffic from lan1 to SMTP server A.

For SMTP traffic between lan2 and wan1:

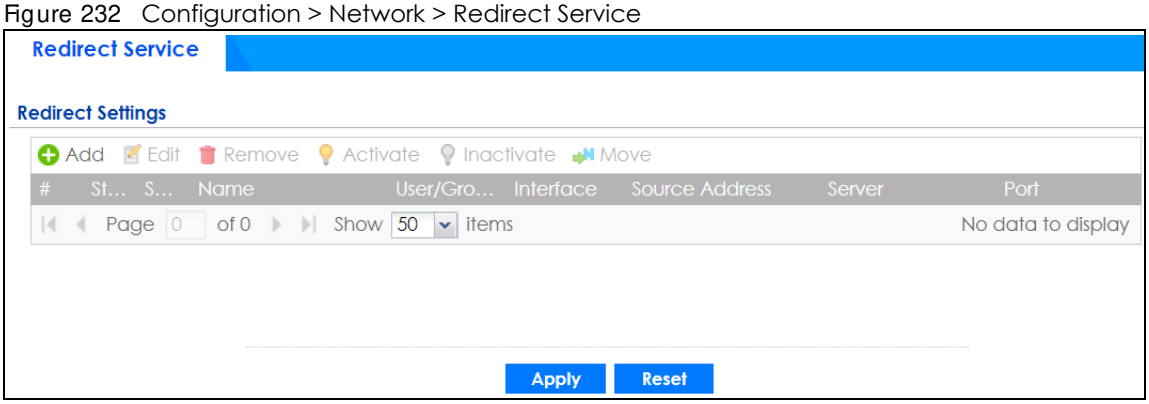
- a from LAN2 to WAN firewall rule (default) to allow SMTP messages from lan2 to wan1. Responses to these requests are allowed automatically.
- a policy route to forward SMTP messages from SMTP server A to the Internet.

13.2 The Redirect Service Screen

To configure redirection of a HTTP or SMTP request, click Configuration > Network > HTTP Redirect. This screen displays the summary of the redirect rules.

Note: You can configure up to one HTTP redirect rule and one SMTP redirect rule for each (incoming) interface.

Figure 232 Configuration > Network > Redirect Service



The following table describes the labels in this screen.

Table 137 Configuration > Network > Redirect Service

LABEL	DESCRIPTION
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click Edit to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click Remove. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click Activate.
Inactivate	To turn off an entry, select it and click Inactivate.
Move	To change a rule's position in the numbered list, select the rule and click Move to display a field to type a number for where you want to put that rule and press [ENTER] to move the rule to the number that you typed. The ordering of your rules is important as they are applied in order of their numbering.
#	This field is a sequential value, and it is not associated with a specific entry.

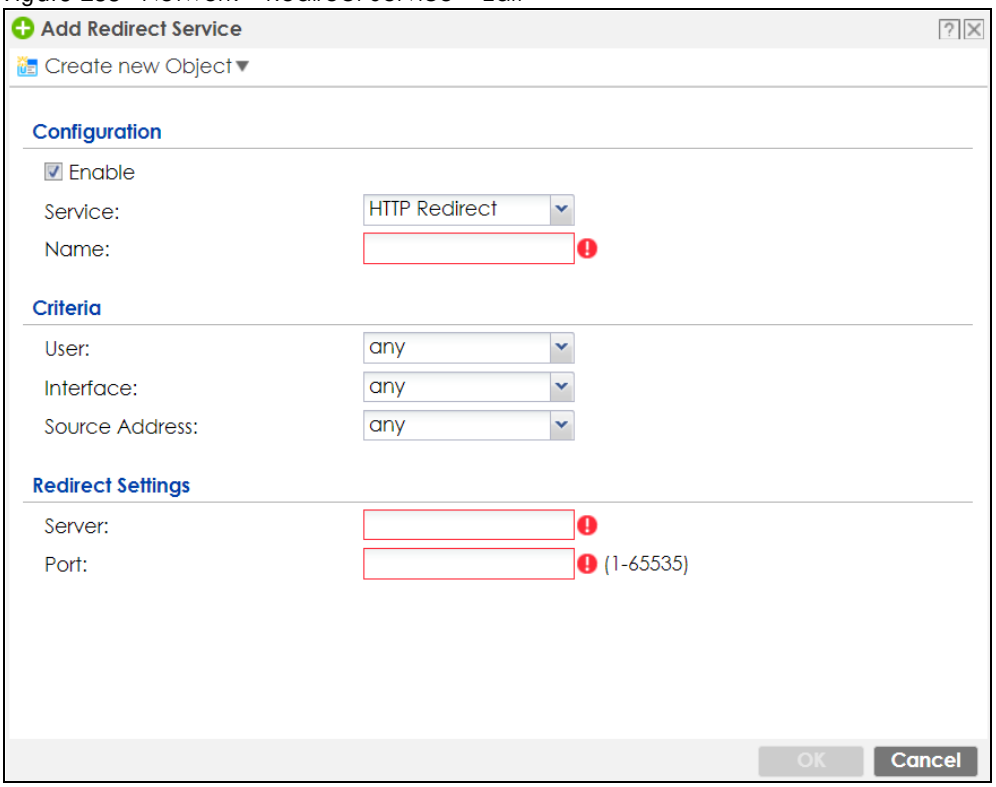
Table 137 Configuration > Network > Redirect Service (continued)

LABEL	DESCRIPTION
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Service	This is the name of the service: HTTP or SMTP.
Name	This is the descriptive name of a rule.
User/Group	This is the user account or user group name to which this rule is applied.
Interface	This is the interface on which the request must be received.
Source Address	This is the name of the source IP address object from which the traffic should be sent. If **any** displays, the rule is effective for every source.
Server	This is the IP address of the HTTP proxy server or the SMTP server to which the matched traffic is forwarded.
Port	This is the service port number used by the HTTP proxy server or SMTP server.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

13.2.1 The Redirect Service Edit Screen

Click **Network** > **Redirect Service** to open the **Redirect Service** screen. Then click the **Add** or **Edit** icon to open the **Redirect Service Edit** screen where you can configure the rule.

Figure 233 Network > Redirect Service > Edit



The following table describes the labels in this screen.

Table 138 Network > Redirect Service > Edit

LABEL	DESCRIPTION
Enable	Use this option to turn the Redirect Service rule on or off.
Service	Select the service to be redirected: **HTTP Redirect** or **SMTP redirect**.
Name	Enter a name to identify this rule. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Criteria	
User	Select the user account or user group name to which this rule is applied.
Interface	Select the interface on which the request must be received for the Zyxel Device to forward it to the specified server.
Source Address	Select the name of the source IP address object from which the traffic should be sent. Select **any** for the rule to be effective for every source.
Redirect Settings	
Server	Enter the IP address of the HTTP proxy or SMTP server.
Port	Enter the port number that the HTTP proxy or SMTP server uses.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

CHAPTER 14
ALG

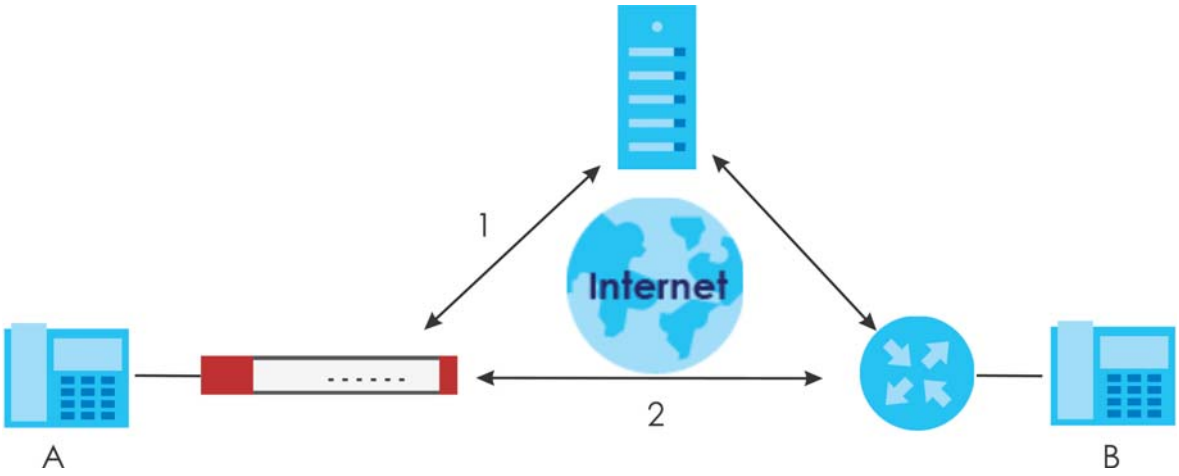
14.1 ALG Overview

Application Layer Gateway (ALG) allows the following applications to operate properly through the Zyxel Device's NAT.

- SIP - Session Initiation Protocol (SIP) - An application-layer protocol that can be used to create voice and multimedia sessions over Internet.
- H.323 - A teleconferencing protocol suite that provides audio, data and video conferencing.
- FTP - File Transfer Protocol - an Internet file transfer service.

The following example shows SIP signaling (1) and audio (2) sessions between SIP clients A and B and the SIP server.

Figure 234 SIP ALG Example



The ALG feature is only needed for traffic that goes through the Zyxel Device's NAT.

14.1.1 What You Need to Know

Application Layer Gateway (ALG), NAT and Security Policy

The Zyxel Device can function as an Application Layer Gateway (ALG) to allow certain NAT un-friendly applications (such as SIP) to operate properly through the Zyxel Device's NAT and security policy. The Zyxel Device dynamically creates an implicit NAT session and security policy session for the application's traffic from the WAN to the LAN. The ALG on the Zyxel Device supports all of the Zyxel Device's NAT mapping types.

FTP ALG

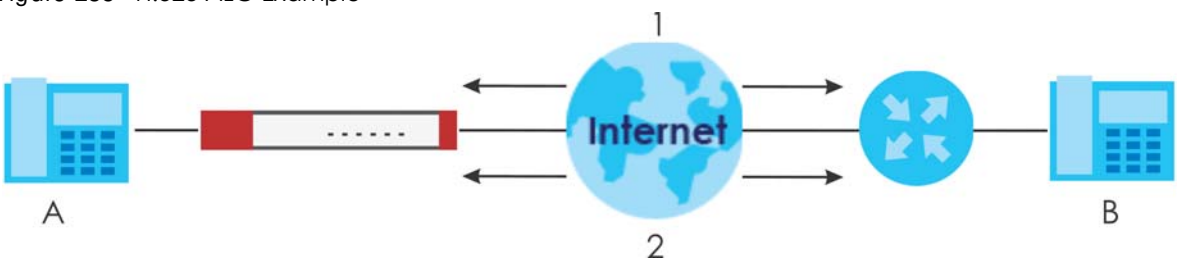
The FTP ALG allows TCP packets with a specified port destination to pass through. If the FTP server is located on the LAN, you must also configure NAT (port forwarding) and security policies if you want to allow access to the server from the WAN. Bandwidth management can be applied to FTP ALG traffic.

H.323 ALG

- The H.323 ALG supports peer-to-peer H.323 calls.
- The H.323 ALG handles H.323 calls that go through NAT or that the Zyxel Device routes. You can also make other H.323 calls that do not go through NAT or routing. Examples would be calls between LAN IP addresses that are on the same subnet.
- The H.323 ALG allows calls to go out through NAT. For example, you could make a call from a private IP address on the LAN to a peer device on the WAN.
- The H.323 ALG operates on TCP packets with a specified port destination.
- Bandwidth management can be applied to H.323 ALG traffic.
- The Zyxel Device allows H.323 audio connections.
- The Zyxel Device can also apply bandwidth management to traffic that goes through the H.323 ALG.

The following example shows H.323 signaling (1) and audio (2) sessions between H.323 devices A and B.

Figure 235 H.323 ALG Example



SIP ALG

- SIP phones can be in any zone (including LAN, DMZ, WAN), and the SIP server and SIP clients can be in the same network or different networks. The SIP server cannot be on the LAN. It must be on the WAN or the DMZ.
- There should be only one SIP server (total) on the Zyxel Device's private networks. Any other SIP servers must be on the WAN. So for example you could have a Back-to-Back User Agent such as the IPPBX x6004 or an asterisk PBX on the DMZ or on the LAN but not on both.
- Using the SIP ALG allows you to use bandwidth management on SIP traffic. Bandwidth management can be applied to FTP ALG traffic. Use the option in the **Configuration > BWM** screen to configure the highest bandwidth available for SIP traffic.
- The SIP ALG handles SIP calls that go through NAT or that the Zyxel Device routes. You can also make other SIP calls that do not go through NAT or routing. Examples would be calls between LAN IP addresses that are on the same subnet.
- The SIP ALG supports peer-to-peer SIP calls. The security policy (by default) allows peer to peer calls from the LAN zone to go to the WAN zone and blocks peer to peer calls from the WAN zone to the LAN zone.
- The SIP ALG allows UDP packets with a specified port destination to pass through.
- The Zyxel Device allows SIP audio connections.

- You do not need to use TURN (Traversal Using Relay NAT) for VoIP devices behind the Zyxel Device when you enable the SIP ALG.
- Configuring the SIP ALG to use custom port numbers for SIP traffic also configures the application patrol (see Chapter 26 on page 496) to use the same port numbers for SIP traffic. Likewise, configuring the application patrol to use custom port numbers for SIP traffic also configures SIP ALG to use the same port numbers for SIP traffic.

Peer-to-Peer Calls and the Zyxel Device

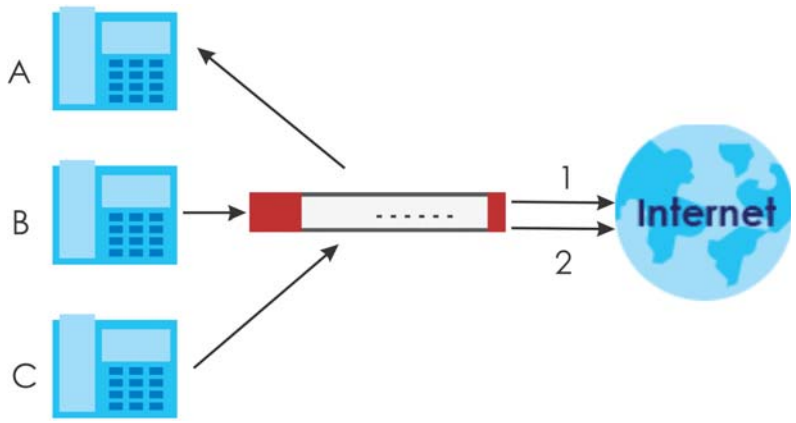
The Zyxel Device ALG can allow peer-to-peer VoIP calls for both H.323 and SIP. You must configure the security policy and NAT (port forwarding) to allow incoming (peer-to-peer) calls from the WAN to a private IP address on the LAN (or DMZ).

VoIP Calls from the WAN with Multiple Outgoing Calls

When you configure the security policy and NAT (port forwarding) to allow calls from the WAN to a specific IP address on the LAN, you can also use policy routing to have H.323 (or SIP) calls from other LAN or DMZ IP addresses go out through a different WAN IP address. The policy routing lets the Zyxel Device correctly forward the return traffic for the calls initiated from the LAN IP addresses.

For example, you configure the security policy and NAT to allow LAN IP address A to receive calls from the Internet through WAN IP address 1. You also use a policy route to have LAN IP address A make calls out through WAN IP address 1. Configure another policy route to have H.323 (or SIP) calls from LAN IP addresses B and C go out through WAN IP address 2. Even though only LAN IP address A can receive incoming calls from the Internet, LAN IP addresses B and C can still make calls out to the Internet.

Figure 236 VoIP Calls from the WAN with Multiple Outgoing Calls



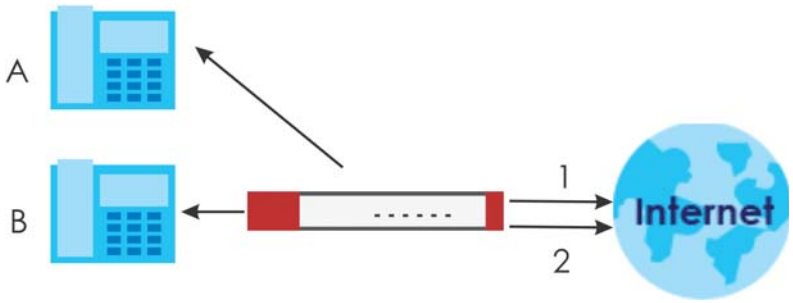
VoIP with Multiple WAN IP Addresses

With multiple WAN IP addresses on the Zyxel Device, you can configure different security policy and NAT (port forwarding) rules to allow incoming calls from each WAN IP address to go to a specific IP address on the LAN (or DMZ). Use policy routing to have the H.323 (or SIP) calls from each of those LAN or DMZ IP addresses go out through the same WAN IP address that calls come in on. The policy routing lets the Zyxel Device correctly forward the return traffic for the calls initiated from the LAN IP addresses.

For example, you configure security policy and NAT rules to allow LAN IP address A to receive calls through public WAN IP address 1. You configure different security policy and port forwarding rules to allow LAN IP address B to receive calls through public WAN IP address 2. You configure corresponding

policy routes to have calls from LAN IP address A go out through WAN IP address 1 and calls from LAN IP address B go out through WAN IP address 2.

Figure 237 VoIP with Multiple WAN IP Addresses



14.1.2 Before You Begin

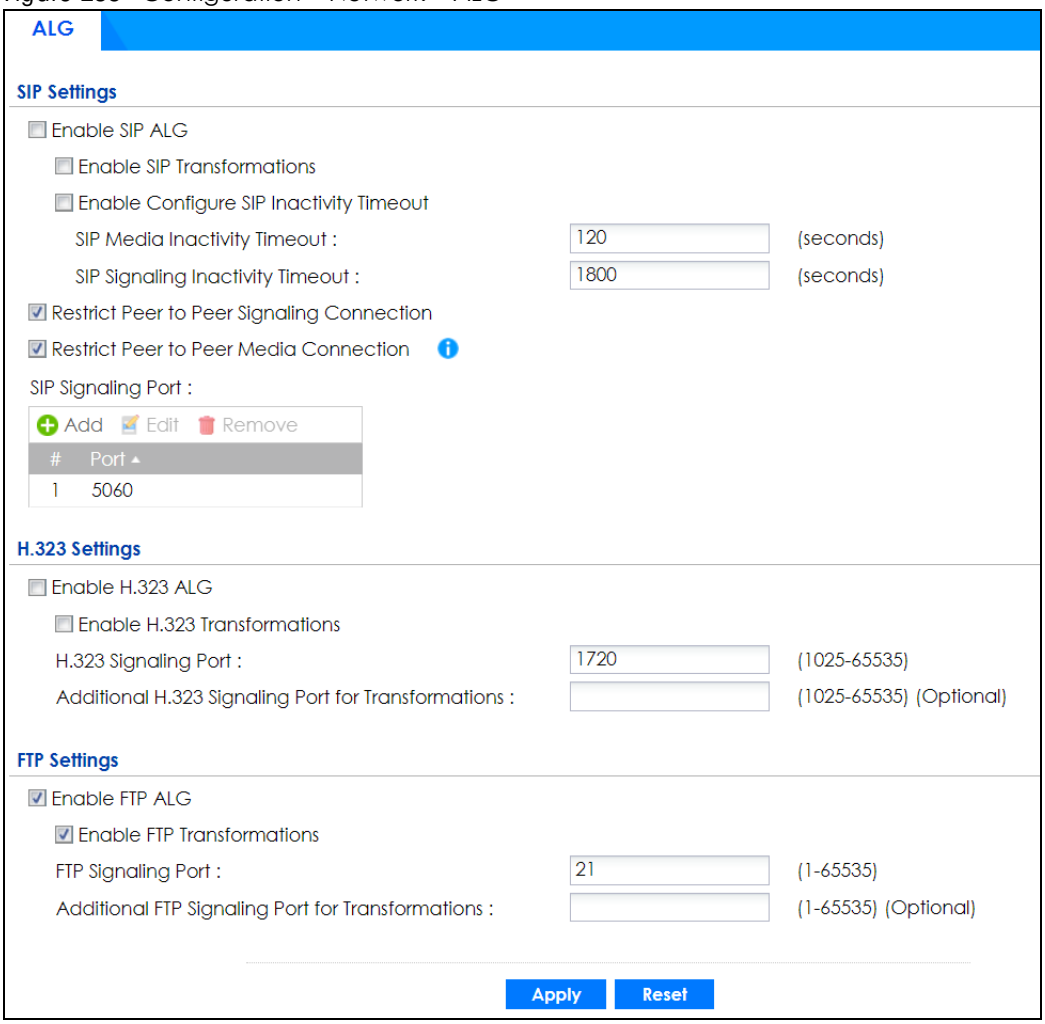
You must also configure the security policy and enable NAT in the Zyxel Device to allow sessions initiated from the WAN.

14.2 The ALG Screen

Click Configuration > Network > ALG to open the ALG screen. Use this screen to turn ALGs off or on, configure the port numbers to which they apply, and configure SIP ALG time outs.

Note: If the Zyxel Device provides an ALG for a service, you must enable the ALG in order to use the application patrol on that service's traffic.

Figure 238 Configuration > Network > ALG



The following table describes the labels in this screen.

Table 139 Configuration > Network > ALG

LABEL	DESCRIPTION
Enable SIP ALG	Turn on the SIP ALG to detect SIP traffic and help build SIP sessions through the Zyxel Device's NAT. Enabling the SIP ALG also allows you to use the application patrol to detect SIP traffic and manage the SIP traffic's bandwidth (see Chapter 26 on page 496).
Enable SIP Transformations	Select this to have the Zyxel Device modify IP addresses and port numbers embedded in the SIP data payload. You do not need to use this if you have a SIP device or server that will modify IP addresses and port numbers embedded in the SIP data payload.
Enable Configure SIP Inactivity Timeout	Select this option to have the Zyxel Device apply SIP media and signaling inactivity time out limits. These timeouts will take priority over the SIP session time out "Expires" value in a SIP registration response packet.
SIP Media Inactivity Timeout	Use this field to set how many seconds (1~86400) the Zyxel Device will allow a SIP session to remain idle (without voice traffic) before dropping it. If no voice packets go through the SIP ALG before the timeout period expires, the Zyxel Device deletes the audio session. You cannot hear anything and you will need to make a new call to continue your conversation.

Table 139 Configuration > Network > ALG (continued)

LABEL	DESCRIPTION
SIP Signaling Inactivity Timeout	Most SIP clients have an "expire" mechanism indicating the lifetime of signaling sessions. The SIP user agent sends registration packets to the SIP server periodically and keeps the session alive in the Zyxel Device. If the SIP client does not have this mechanism and makes no calls during the Zyxel Device SIP timeout, the Zyxel Device deletes the signaling session after the timeout period. Enter the SIP signaling session timeout value (1~86400).
Restrict Peer to Peer Signaling Connection	A signaling connection is used to set up the SIP connection. Enable this if you want signaling connections to only arrive from the IP address(es) you registered with. Signaling connections from other IP addresses will be dropped.
Restrict Peer to Peer Media Connection	A media connection is the audio transfer in a SIP connection. Enable this if you want media connections to only arrive from the IP address(es) you registered with. Media connections from other IP addresses will be dropped. You should disable this if have registered for cloud VoIP services.
SIP Signaling Port	If you are using a custom UDP port number (not 5060) for SIP traffic, enter it here. Use the **Add** icon to add fields if you are also using SIP on additional UDP port numbers.
Enable H.323 ALG	Turn on the H.323 ALG to detect H.323 traffic (used for audio communications) and help build H.323 sessions through the Zyxel Device's NAT. Enabling the H.323 ALG also allows you to use the application patrol to detect H.323 traffic and manage the H.323 traffic's bandwidth (see Chapter 26 on page 496).
Enable H.323 Transformations	Select this to have the Zyxel Device modify IP addresses and port numbers embedded in the H.323 data payload. You do not need to use this if you have a H.323 device or server that will modify IP addresses and port numbers embedded in the H.323 data payload.
H.323 Signaling Port	If you are using a custom TCP port number (not 1720) for H.323 traffic, enter it here.
Additional H.323 Signaling Port for Transformations	If you are also using H.323 on an additional TCP port number, enter it here.
Enable FTP ALG	Turn on the FTP ALG to detect FTP (File Transfer Program) traffic and help build FTP sessions through the Zyxel Device's NAT. Enabling the FTP ALG also allows you to use the application patrol to detect FTP traffic and manage the FTP traffic's bandwidth (see Chapter 26 on page 496).
Enable FTP Transformations	Select this option to have the Zyxel Device modify IP addresses and port numbers embedded in the FTP data payload to match the Zyxel Device's NAT environment. Clear this option if you have an FTP device or server that will modify IP addresses and port numbers embedded in the FTP data payload to match the Zyxel Device's NAT environment.
FTP Signaling Port	If you are using a custom TCP port number (not 21) for FTP traffic, enter it here.
Additional FTP Signaling Port for Transformations	If you are also using FTP on an additional TCP port number, enter it here.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

14.3 ALG Technical Reference

Here is more detailed information about the Application Layer Gateway.

ALG

Some applications cannot operate through NAT (are NAT unfriendly) because they embed IP addresses and port numbers in their packets' data payload. The Zyxel Device examines and uses IP address and port number information embedded in the VoIP traffic's data stream. When a device behind the Zyxel Device uses an application for which the Zyxel Device has VoIP pass through enabled, the Zyxel Device translates the device's private IP address inside the data stream to a public IP address. It also records session port numbers and allows the related sessions to go through the security policy so the application's traffic can come in from the WAN to the LAN.

ALG and Trunks

If you send your ALG-managed traffic through an interface trunk and all of the interfaces are set to active, you can configure routing policies to specify which interface the ALG-managed traffic uses.

You could also have a trunk with one interface set to active and a second interface set to passive. The Zyxel Device does not automatically change ALG-managed connections to the second (passive) interface when the active interface's connection goes down. When the active interface's connection fails, the client needs to re-initialize the connection through the second interface (that was set to passive) in order to have the connection go through the second interface. VoIP clients usually re-register automatically at set intervals or the users can manually force them to re-register.

FTP

File Transfer Protocol (FTP) is an Internet file transfer service that operates on the Internet and over TCP/IP networks. A system running the FTP server accepts commands from a system running an FTP client. The service allows users to send commands to the server for uploading and downloading files.

H.323

H.323 is a standard teleconferencing protocol suite that provides audio, data and video conferencing. It allows for real-time point-to-point and multipoint communication between client computers over a packet-based network that does not provide a guaranteed quality of service. NetMeeting uses H.323.

SIP

The Session Initiation Protocol (SIP) is an application-layer control (signaling) protocol that handles the setting up, altering and tearing down of voice and multimedia sessions over the Internet. SIP is used in VoIP (Voice over IP), the sending of voice signals over the Internet Protocol.

SIP signaling is separate from the media for which it handles sessions. The media that is exchanged during the session can use a different path from that of the signaling. SIP handles telephone calls and can interface with traditional circuit-switched telephone networks.

RTP

When you make a VoIP call using H.323 or SIP, the RTP (Real time Transport Protocol) is used to handle voice data transfer. See RFC 1889 for details on RTP.

CHAPTER 15
UPnP

15.1 UPnP and NAT-PMP Overview

The Zyxel Device supports both UPnP and NAT-PMP to permit networking devices to discover each other and connect seamlessly.

Universal Plug and Play (UPnP) is a distributed, open networking standard that uses TCP/IP for simple peer-to-peer network connectivity between devices. A UPnP device can dynamically join a network, obtain an IP address, convey its capabilities and learn about other devices on the network. In turn, a device can leave a network smoothly and automatically when it is no longer in use. A gateway that supports UPnP is called Internet Gateway Device (IGD). The standardized Device Control Protocol (DCP) is defined by the UPnP Forum for IGDs to configure port mapping automatically.

NAT Port Mapping Protocol (NAT-PMP), introduced by Apple and implemented in current Apple products, is used as an alternative NAT traversal solution to the UPnP IGD protocol. NAT-PMP runs over UDP port 5351. NAT-PMP is much simpler than UPnP IGD and mainly designed for small home networks. It allows a client behind a NAT router to retrieve the router's public IP address and port number and make them known to the peer device with which it wants to communicate. The client can automatically configure the NAT router to create a port mapping to allow the peer to contact it.

15.2 What You Need to Know

UPnP hardware is identified as an icon in the Network Connections folder (Windows XP). Each UPnP compatible device installed on your network will appear as a separate icon. Selecting the icon of a UPnP device will allow you to access the information and properties of that device.

15.2.1 NAT Traversal

UPnP NAT traversal automates the process of allowing an application to operate through NAT. UPnP network devices can automatically configure network addressing, announce their presence in the network to other UPnP devices and enable exchange of simple product and service descriptions. NAT traversal allows the following:

- Dynamic port mapping
- Learning public IP addresses
- Assigning lease times to mappings

Windows Messenger is an example of an application that supports NAT traversal and UPnP.

See the NAT chapter for more information on NAT.

15.2.2 Cautions with UPnP and NAT-PMP

The automated nature of NAT traversal applications in establishing their own services and opening security policy ports may present network security issues. Network information and configuration may also be obtained and modified by users in some network environments.

When a UPnP or NAT-PMP device joins a network, it announces its presence with a multicast message. For security reasons, the Zyxel Device allows multicast messages on the LAN only.

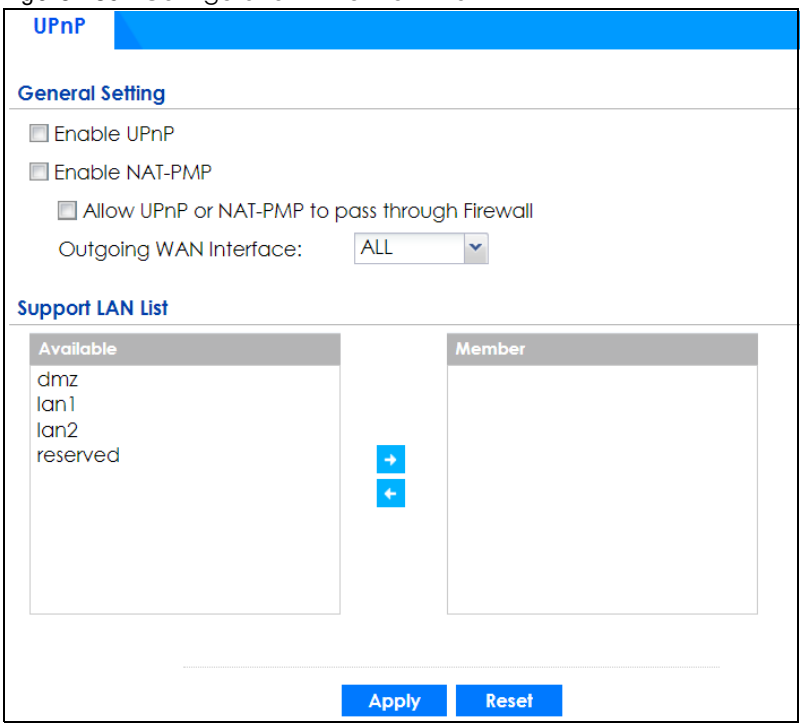
All UPnP-enabled or NAT-PMP-enabled devices may communicate freely with each other without additional configuration. Disable UPnP or NAT-PMP if this is not your intention.

15.3 UPnP Screen

Use this screen to enable UPnP and NAT-PMP on your Zyxel Device.

Click **Configuration** > **Network** > **UPnP** to display the screen shown next.

Figure 239 Configuration > Network > UPnP



The following table describes the fields in this screen.

Table 140 Configuration > Network > UPnP

LABEL	DESCRIPTION
Enable UPnP	Select this check box to activate UPnP on the Zyxel Device. Be aware that anyone could use a UPnP application to open the web configurator's login screen without entering the Zyxel Device's IP address (although you must still enter the password to access the web configurator).
Enable NAT-PMP	NAT Port Mapping Protocol (NAT-PMP) automates port forwarding to allow a computer in a private network (behind the Zyxel Device) to automatically configure the Zyxel Device to allow computers outside the private network to contact it. Select this check box to activate NAT-PMP on the Zyxel Device. Be aware that anyone could use a NAT-PMP application to open the web configurator's login screen without entering the Zyxel Device's IP address (although you must still enter the password to access the web configurator).
Allow UPnP or NAT-PMP to pass through Firewall	Select this check box to allow traffic from UPnP-enabled or NAT-PMP-enabled applications to bypass the security policy. Clear this check box to have the security policy block all UPnP or NAT-PMP application packets (for example, MSN packets).
Outgoing WAN Interface	Select through which WAN interface(s) you want to send out traffic from UPnP-enabled or NAT-PMP-enabled applications. If the WAN interface you select loses its connection, the Zyxel Device attempts to use the other WAN interface. If the other WAN interface also does not work, the Zyxel Device drops outgoing packets from UPnP-enabled or NAT-PMP-enabled applications.
Support LAN List	The **Available** list displays the name(s) of the internal interface(s) on which the Zyxel Device supports UPnP and/or NAT-PMP. To enable UPnP and/or NAT-PMP on an interface, you can double-click a single entry to move it or use the [Shift] or [Ctrl] key to select multiple entries and click the right arrow button to add to the **Member** list. To remove an interface, select the name(s) in the **Member** list and click the left arrow button.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

15.4 Technical Reference

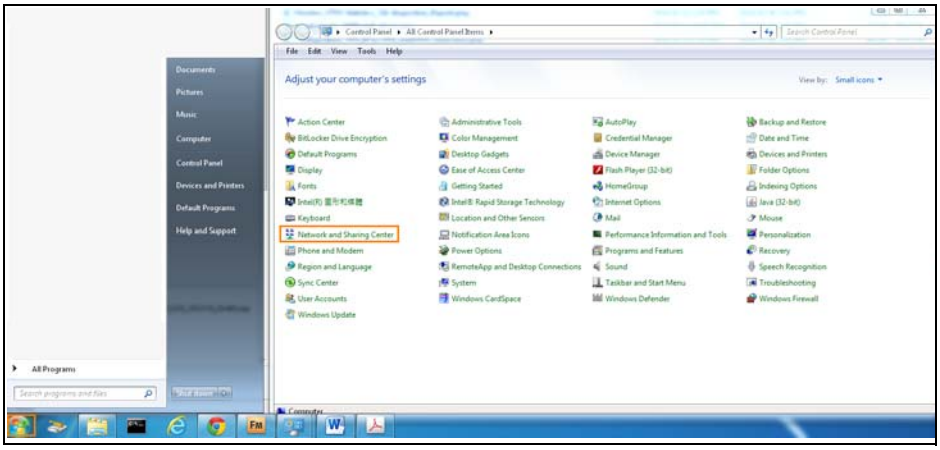
The sections show examples of using UPnP.

15.4.1 Turning on UPnP in Windows 7 Example

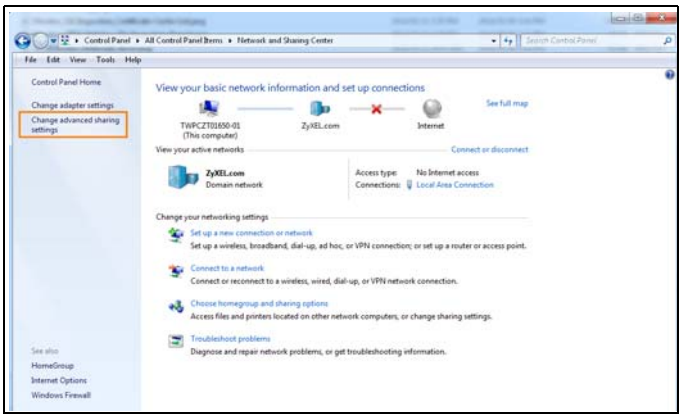
This section shows you how to use the UPnP feature in Windows 7. UPnP server is installed in Windows 7. Activate UPnP on the Zyxel Device.

Make sure the computer is connected to a LAN port of the Zyxel Device. Turn on your computer and the Zyxel Device.

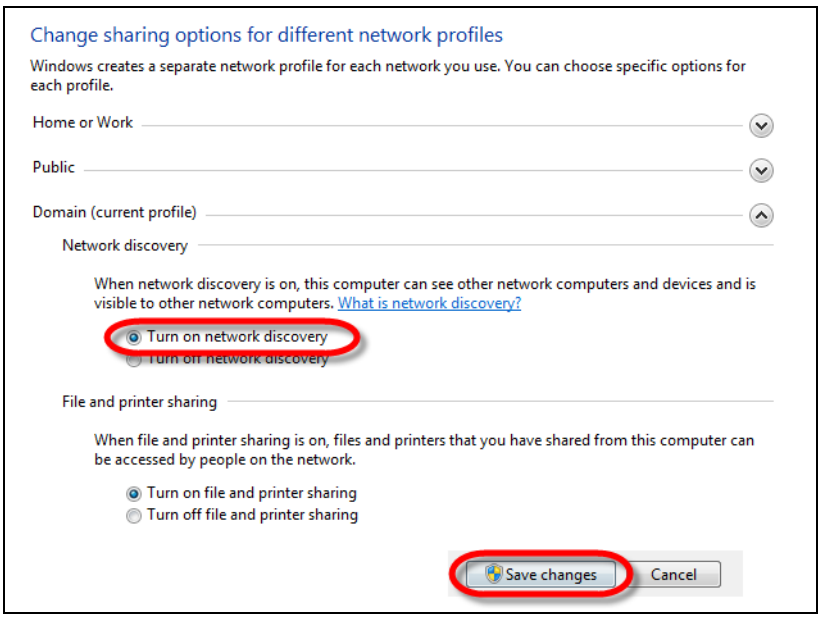
1 Click the start icon, **Control Panel** and then the **Network and Sharing Center**.



2 Click Change Advanced Sharing Settings.



3 Select Turn on network discovery and click Save Changes. Network discovery allows your computer to find other computers and devices on the network and other computers on the network to find your computer. This makes it easier to share files and printers.



15.4.2 Using UPnP in Windows XP Example

This section shows you how to use the UPnP feature in Windows XP. You must already have UPnP installed in Windows XP and UPnP activated on the Zyxel Device.

Make sure the computer is connected to a LAN port of the Zyxel Device. Turn on your computer and the Zyxel Device.

15.4.2.1 Auto-discover Your UPnP-enabled Network Device

1 Click **start** and **Control Panel**. Double-click **Network Connections**. An icon displays under Internet Gateway.

2 Right-click the icon and select **Properties**.

Figure 240 Network Connections

3 In the **Internet Connection Properties** window, click **Settings** to see the port mappings there were automatically created.

Figure 241 Internet Connection Properties

4 You may edit or delete the port mappings or click **Add** to manually add port mappings.

Figure 242 Internet Connection Properties: Advanced Settings

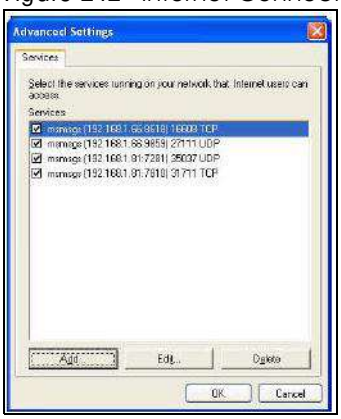


Figure 243 Internet Connection Properties: Advanced Settings: Add

Note: When the UPnP-enabled device is disconnected from your computer, all port mappings will be deleted automatically.

5 Select **Show icon in notification area when connected** option and click **OK**. An icon displays in the system tray.

Figure 244 System Tray Icon

6 Double-click on the icon to display your current Internet connection status.

Figure 245 Internet Connection Status

15.4.3 Web Configurator Easy Access

With UPnP, you can access the web-based configurator on the Zyxel Device without finding out the IP address of the Zyxel Device first. This comes helpful if you do not know the IP address of the Zyxel Device.

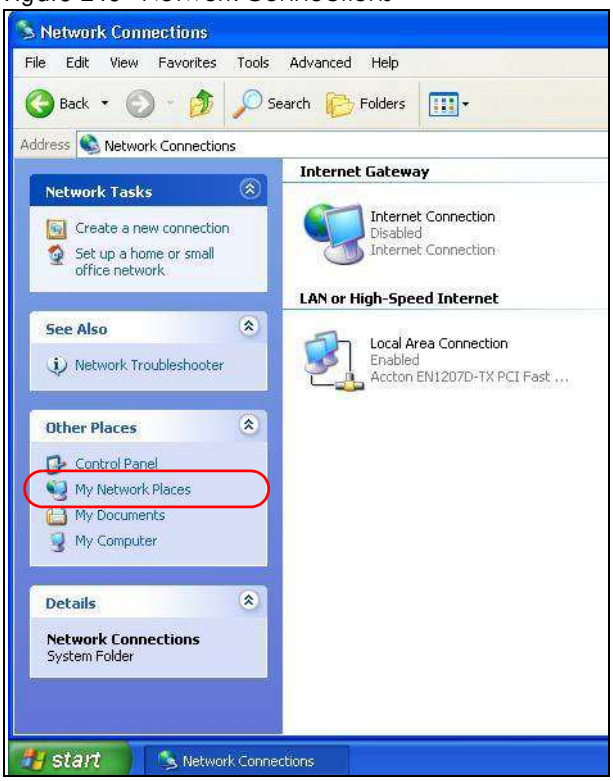
Follow the steps below to access the web configurator.

1 Click **Start** and then **Control Panel**.

2 Double-click **Network Connections**.

3 Select **My Network Places** under **Other Places**.

Figure 246 Network Connections



4 An icon with the description for each UPnP-enabled device displays under **Local Network**.

5 Right-click on the icon for your Zyxel Device and select **Invoke**. The web configurator login screen displays.

Figure 247 Network Connections: My Network Places

6 Right-click on the icon for your Zyxel Device and select **Properties**. A properties window displays with basic information about the Zyxel Device.

Figure 248 Network Connections: My Network Places: Properties: Example

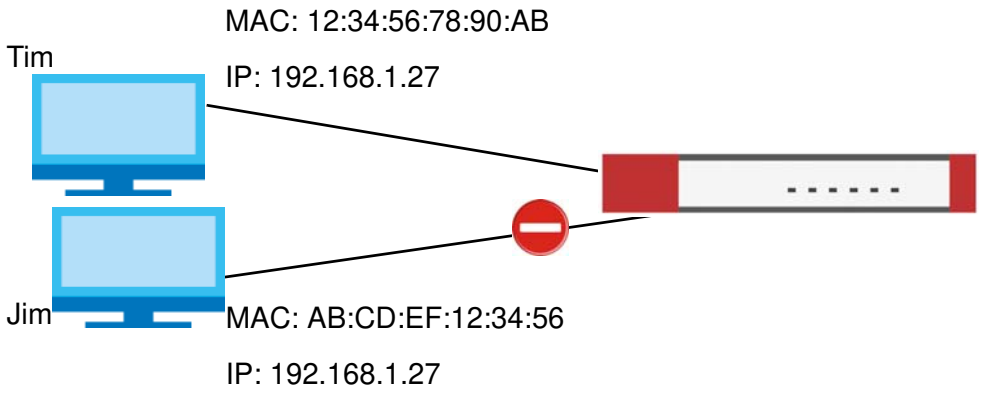
CHAPTER 16
IP/MAC Binding

16.1 IP/MAC Binding Overview

IP address to MAC address binding helps ensure that only the intended devices get to use privileged IP addresses. The Zyxel Device uses DHCP to assign IP addresses and records the MAC address it assigned to each IP address. The Zyxel Device then checks incoming connection attempts against this list. A user cannot manually assign another IP to his computer and use it to connect to the Zyxel Device.

Suppose you configure access privileges for IP address 192.168.1.27 and use static DHCP to assign it to Tim's computer's MAC address of 12:34:56:78:90:AB. IP/MAC binding drops traffic from any computer trying to use IP address 192.168.1.27 with another MAC address.

Figure 249 IP/MAC Binding Example



16.1.1 What You Can Do in this Chapter

- Use the **Summary** and **Edit** screens (Section 16.2 on page 363) to bind IP addresses to MAC addresses.
- Use the **Exempt List** screen (Section 16.3 on page 366) to configure ranges of IP addresses to which the Zyxel Device does not apply IP/MAC binding.

16.1.2 What You Need to Know

DHCP

IP/MAC address bindings are based on the Zyxel Device's dynamic and static DHCP entries.

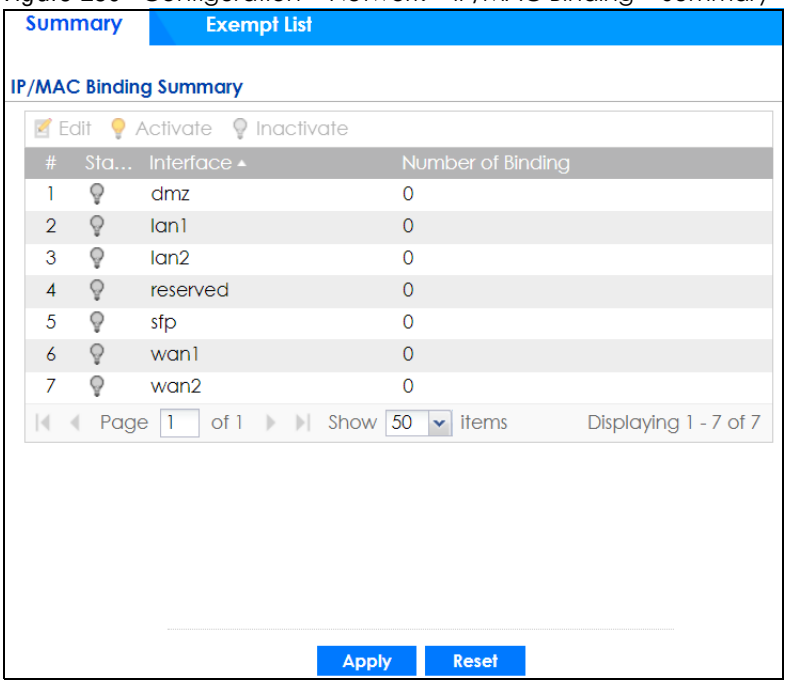
Interfaces Used With IP/MAC Binding

IP/MAC address bindings are grouped by interface. You can use IP/MAC binding with Ethernet, bridge, VLAN, and WLAN interfaces. You can also enable or disable IP/MAC binding and logging in an interface's configuration screen.

16.2 IP/MAC Binding Summary

Click **Configuration** > **Network** > **IP/MAC Binding** to open the **IP/MAC Binding Summary** screen. This screen lists the total number of IP to MAC address bindings for devices connected to each supported interface.

Figure 250 Configuration > Network > IP/MAC Binding > Summary



The following table describes the labels in this screen.

Table 141 Configuration > Network > IP/MAC Binding > Summary

LABEL	DESCRIPTION
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
#	This field is a sequential value, and it is not associated with a specific entry.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Interface	This is the name of an interface that supports IP/MAC binding.
Number of Binding	This field displays the interface's total number of IP/MAC bindings and IP addresses that the interface has assigned by DHCP.

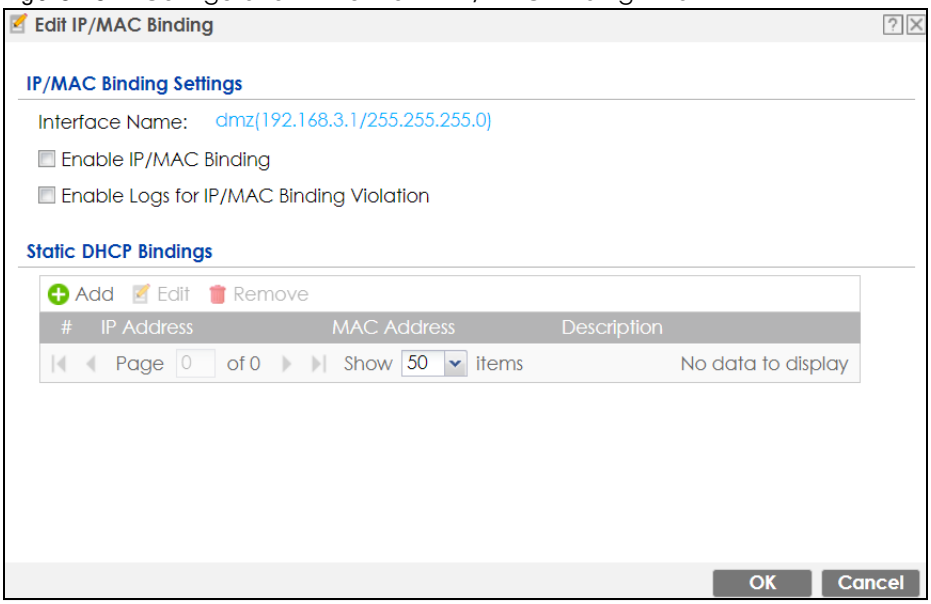
Table 141 Configuration > Network > IP/MAC Binding > Summary (continued)

LABEL	DESCRIPTION
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

16.2.1 IP/MAC Binding Edit

Click **Configuration** > **Network** > **IP/MAC Binding** > **Edit** to open the **IP/MAC Binding Edit** screen. Use this screen to configure an interface's IP to MAC address binding settings.

Figure 251 Configuration > Network > IP/MAC Binding > Edit



The following table describes the labels in this screen.

Table 142 Configuration > Network > IP/MAC Binding > Edit

LABEL	DESCRIPTION
IP/MAC Binding Settings	
Interface Name	This field displays the name of the interface within the Zyxel Device and the interface's IP address and subnet mask.
Enable IP/MAC Binding	Select this option to have this interface enforce links between specific IP addresses and specific MAC addresses. This stops anyone else from manually using a bound IP address on another device connected to this interface. Use this to make use only the intended users get to use specific IP addresses.
Enable Logs for IP/MAC Binding Violation	Select this option to have the Zyxel Device generate a log if a device connected to this interface attempts to use an IP address not assigned by the Zyxel Device.
Static DHCP Bindings	This table lists the bound IP and MAC addresses. The Zyxel Device checks this table when it assigns IP addresses. If the computer's MAC address is in the table, the Zyxel Device assigns the corresponding IP address. You can also access this table from the interface's edit screen.
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.

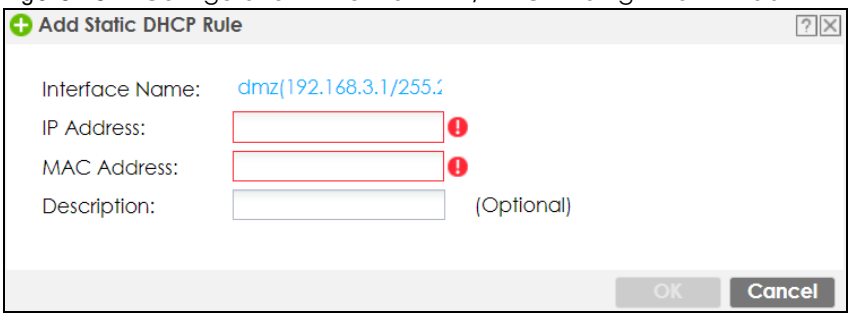
Table 142 Configuration > Network > IP/MAC Binding > Edit (continued)

LABEL	DESCRIPTION
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
#	This is the index number of the static DHCP entry.
IP Address	This is the IP address that the Zyxel Device assigns to a device with the entry's MAC address.
MAC Address	This is the MAC address of the device to which the Zyxel Device assigns the entry's IP address.
Description	This helps identify the entry.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

16.2.2 Static DHCP Edit

Click **Configuration** > **Network** > **IP/MAC Binding** > **Edit** to open the **IP/MAC Binding Edit** screen. Click the **Add** or **Edit** icon to open the following screen. Use this screen to configure an interface's IP to MAC address binding settings.

Figure 252 Configuration > Network > IP/MAC Binding > Edit > Add



The following table describes the labels in this screen.

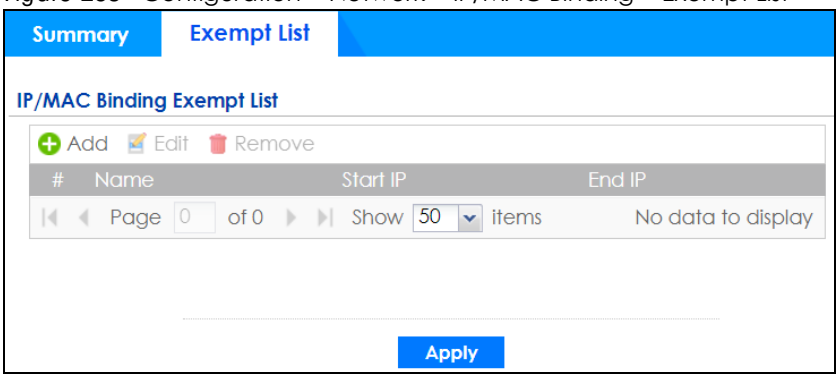
Table 143 Configuration > Network > IP/MAC Binding > Edit > Add

LABEL	DESCRIPTION
Interface Name	This field displays the name of the interface within the Zyxel Device and the interface's IP address and subnet mask.
IP Address	Enter the IP address that the Zyxel Device is to assign to a device with the entry's MAC address.
MAC Address	Enter the MAC address of the device to which the Zyxel Device assigns the entry's IP address.
Description	Enter up to 64 printable ASCII characters to help identify the entry. For example, you may want to list the computer's owner.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

16.3 IP/MAC Binding Exempt List

Click **Configuration** > **Network** > **IP/MAC Binding** > **Exempt List** to open the **IP/MAC Binding Exempt List** screen. Use this screen to configure ranges of IP addresses to which the Zyxel Device does not apply IP/MAC binding.

Figure 253 Configuration > Network > IP/MAC Binding > Exempt List



The following table describes the labels in this screen.

Table 144 Configuration > Network > IP/MAC Binding > Exempt List

LABEL	DESCRIPTION
Add	Click this to create a new entry.
Edit	Click an entry or select it and click **Edit** to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
#	This is the index number of the IP/MAC binding list entry.
Name	Enter a name to help identify this entry.
Start IP	Enter the first IP address in a range of IP addresses for which the Zyxel Device does not apply IP/MAC binding.
End IP	Enter the last IP address in a range of IP addresses for which the Zyxel Device does not apply IP/MAC binding.
Add icon	Click the **Add** icon to add a new entry. Click the **Remove** icon to delete an entry. A window displays asking you to confirm that you want to delete it.
Apply	Click **Apply** to save your changes back to the Zyxel Device.

CHAPTER 17
Layer 2 Isolation

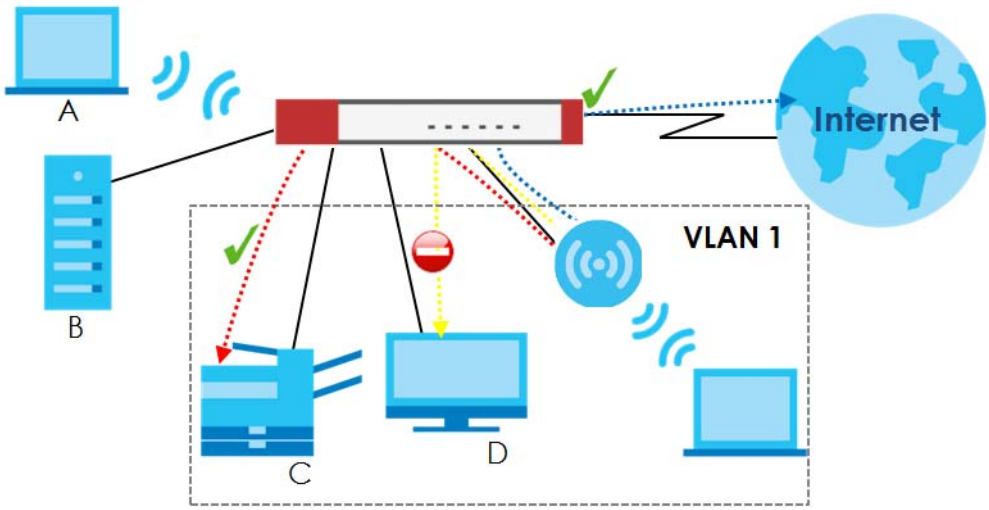
17.1 Overview

Layer-2 isolation is used to prevent connected devices from communicating with each other in the Zyxel Device's local network(s), except for the devices in the white list, when layer-2 isolation is enabled on the Zyxel Device and the local interface(s).

Note: The security policy control must be enabled before you can use layer-2 isolation.

In the following example, layer-2 isolation is enabled on the Zyxel Device's interface Vlan1. A printer, PC and AP are in the Vlan1. The IP address of network printer (C) is added to the white list. With this setting, the connected AP then cannot communicate with the PC (D), but can access the network printer (C), server (B), wireless client (A) and the Internet.

Figure 254 Layer-2 Isolation Application



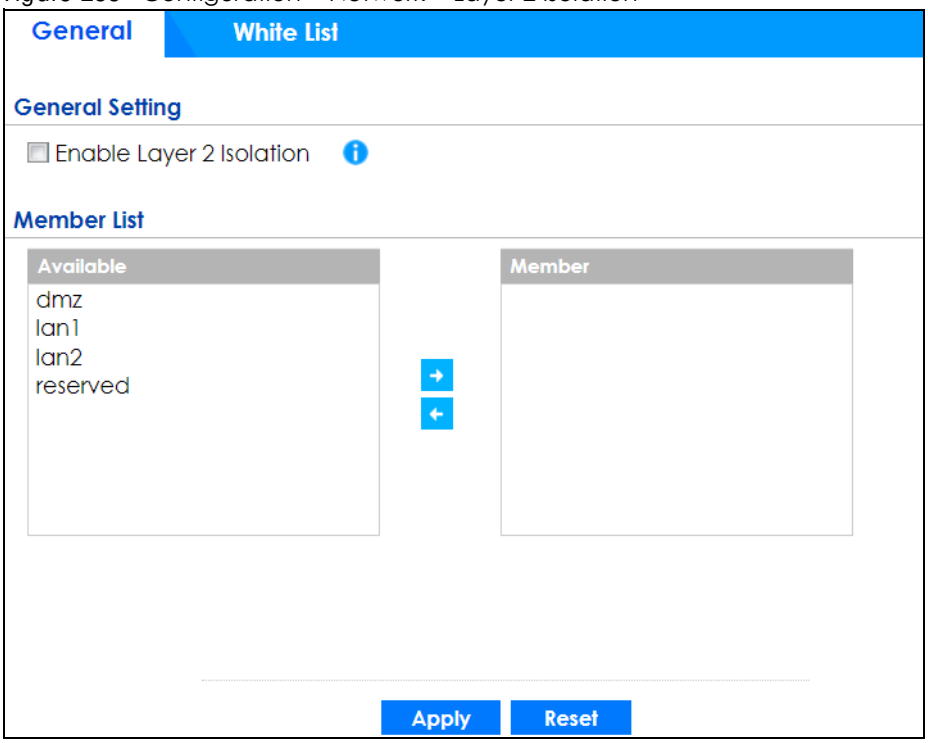
17.1.1 What You Can Do in this Chapter

- Use the **General** screen (Section 17.2 on page 367) to enable layer-2 isolation on the Zyxel Device and the internal interface(s).
- Use the **White List** screen (Section 17.3 on page 368) to enable and configures the white list.

17.2 Layer-2 Isolation General Screen

This screen allows you to enable Layer-2 isolation on the Zyxel Device and specific internal interface(s). To access this screen click **Configuration** > **Network** > **Layer 2 Isolation**.

Figure 255 Configuration > Network > Layer 2 Isolation



The following table describes the labels in this screen.

Table 145 Configuration > Network > Layer 2 Isolation

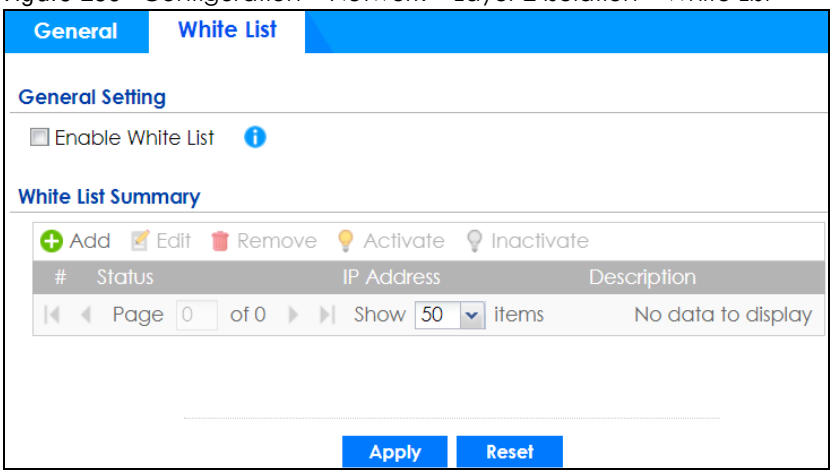
LABEL	DESCRIPTION
Enable Layer2 Isolation	Select this option to turn on the layer-2 isolation feature on the Zyxel Device. Note: You can enable this feature only when the security policy is enabled.
Member List	The **Available** list displays the name(s) of the internal interface(s) on which you can enable layer-2 isolation. To enable layer-2 isolation on an interface, you can double-click a single entry to move it or use the [Shift] or [Ctrl] key to select multiple entries and click the right arrow button to add to the **Member** list. To remove an interface, select the name(s) in the **Member** list and click the left arrow button.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

17.3 White List Screen

IP addresses that are not listed in the white list are blocked from communicating with other devices in the layer-2-isolation-enabled internal interface(s) except for broadcast packets.

To access this screen click **Configuration** > **Network** > **Layer 2 Isolation** > **White List**.

Figure 256 Configuration > Network > Layer 2 Isolation > White List



The following table describes the labels in this screen.

Table 146 Configuration > Network > Layer 2 Isolation > White List

LABEL	DESCRIPTION
Enable White List	Select this option to turn on the white list on the Zyxel Device. Note: You can enable this feature only when the security policy is enabled.
Add	Click this to add a new rule.
Edit	Click this to edit the selected rule.
Remove	Click this to remove the selected rule.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
#	This field is a sequential value, and it is not associated with a specific rule.
Status	This icon is lit when the rule is active and dimmed when the rule is inactive.
IP Address	This field displays the IP address of device that can be accessed by the devices connected to an internal interface on which layer-2 isolation is enabled.
Description	This field displays the description for the IP address in this rule.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

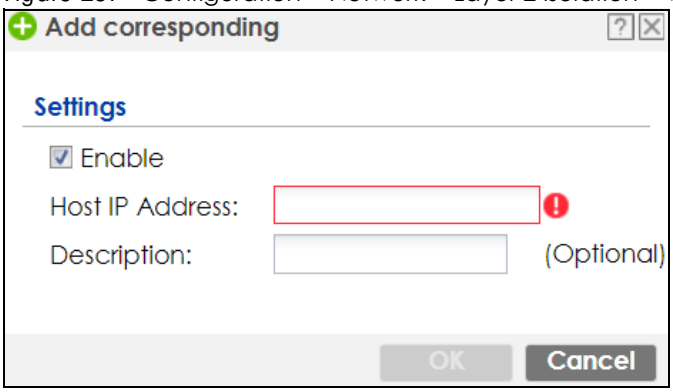
17.3.1 Add/Edit White List Rule

This screen allows you to create a new rule in the white list or edit an existing one. To access this screen, click the **Add** button or select an entry from the list and click the **Edit** button.

Note: You can configure up to 100 white list rules on the Zyxel Device.

Note: You need to know the IP address of each connected device that you want to allow to be accessed by other devices when layer-2 isolation is enabled.

Figure 257 Configuration > Network > Layer 2 Isolation > White List > Add/Edit



The following table describes the labels in this screen.

Table 147 Configuration > Network > Layer 2 Isolation > White List > Add/Edit

LABEL	DESCRIPTION
Enable	Select this option to turn on the rule.
Host IP Address	Enter an IPv4 address associated with this rule.
Description	Specify a description for the IP address associated with this rule. Enter up to 60 characters, spaces and underscores allowed.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

CHAPTER 18
DNS Inbound LB

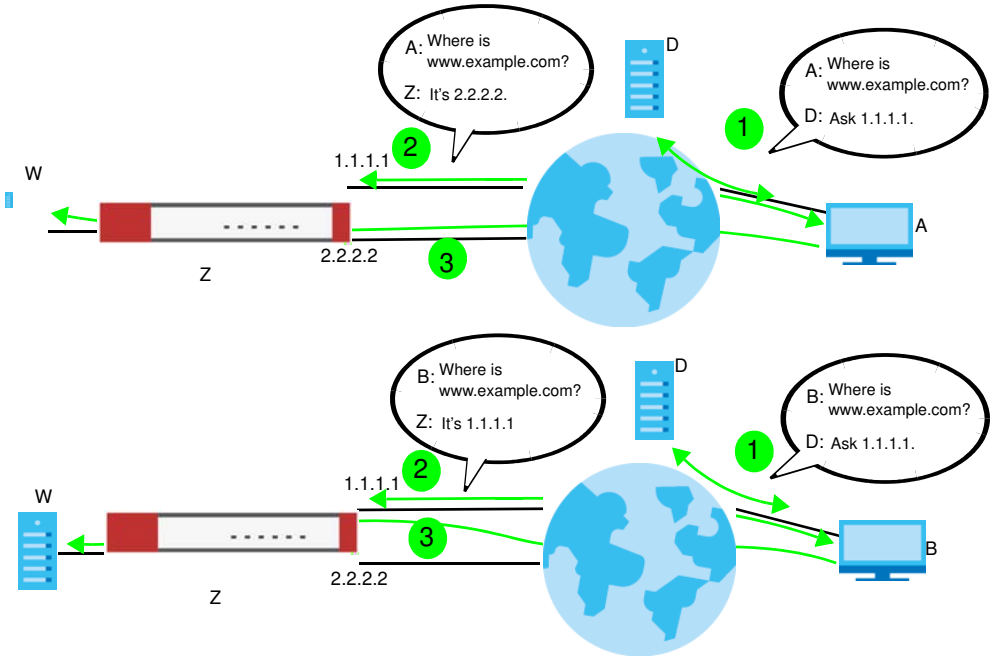
18.1 DNS Inbound Load Balancing Overview

Inbound load balancing enables the Zyxel Device to respond to a DNS query message with a different IP address for DNS name resolution. The Zyxel Device checks which member interface has the least load and responds to the DNS query message with the interface's IP address.

In the following figure, an Internet host (A) sends a DNS query message to the DNS server (D) in order to resolve a domain name of www.example.com. DNS server D redirects it to the Zyxel Device (Z)'s WAN1 with an IP address of 1.1.1.1. The Zyxel Device receives the DNS query message and responds to it with the WAN2's IP address, 2.2.2.2, because the WAN2 has the least load at that moment.

Another Internet host (B) also sends a DNS query message to ask where www.example.com is. The Zyxel Device responds to it with the WAN1's IP address, 1.1.1.1, since WAN1 has the least load this time.

Figure 258 DNS Load Balancing Example



18.1.1 What You Can Do in this Chapter

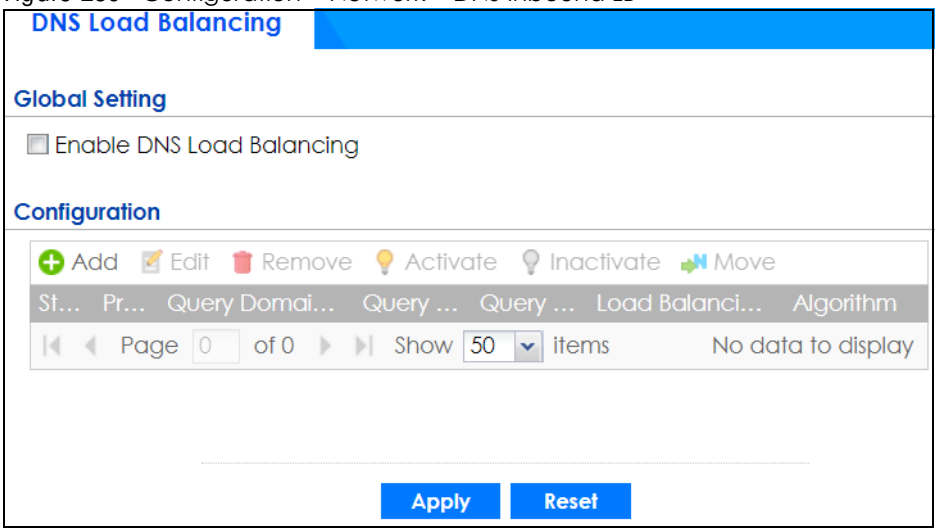
- Use the **Inbound LB** screen (see Section 18.2 on page 372) to view a list of the configured DNS load balancing rules.
- Use the **Inbound LB Add/Edit** screen (see Section 18.2.1 on page 373) to add or edit a DNS load balancing rule.

18.2 The DNS Inbound LB Screen

The **Inbound LB** screen provides a summary of all DNS load balancing rules and the details. You can also use this screen to add, edit, or remove the rules. Click **Configuration** > **Network** > **Inbound LB** to open the following screen.

Note: After you finish the inbound load balancing settings, go to security policy and NAT screens to configure the corresponding rule and virtual server to allow the Internet users to access your internal servers.

Figure 259 Configuration > Network > DNS Inbound LB



The following table describes the labels in this screen.

Table 148 Configuration > Network > DNS Inbound LB

LABEL	DESCRIPTION
Global Setting	
Enable DNS Load Balancing	Select this to enable DNS load balancing.
Configuration	
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Move	To move an entry to a different number in the list, click the **Move** icon. In the field that appears, specify the number to which you want to move the entry.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Priority	This field displays the order in which the Zyxel Device checks the member interfaces of this DNS load balancing rule.
Query Domain Name	This field displays the domain name for which the Zyxel Device manages load balancing between the specified interfaces.

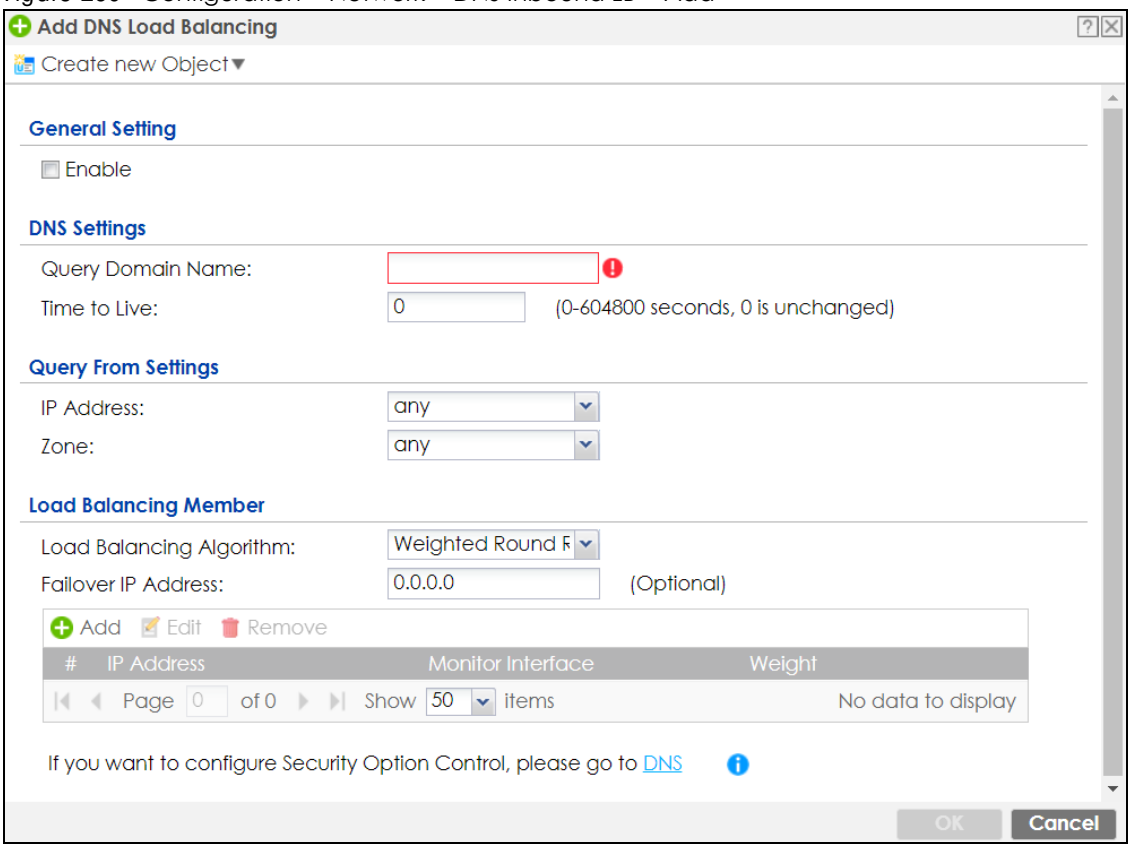
Table 148 Configuration > Network > DNS Inbound LB (continued)

LABEL	DESCRIPTION
Query From Address	This field displays the source IP address of the DNS query messages to which the Zyxel Device applies the DNS load balancing rule.
Query From Zone	The Zyxel Device applies the DNS load balancing rule to the query messages received from this zone.
Load Balancing Member	This field displays the member interfaces which the Zyxel Device manages for load balancing.
Algorithm	This field displays the load balancing method the Zyxel Device uses for this DNS load balancing rule. **Weighted Round Robin** - Each member interface is assigned a weight. An interface with a larger weight gets more chances to transmit traffic than an interface with a smaller weight. For example, if the weight ratio of wan1 and wan2 interfaces is 2:1, the Zyxel Device chooses wan1 for 2 sessions' traffic and wan2 for 1 session's traffic in each round of 3 new sessions. **Least Connection** - The Zyxel Device chooses choose a member interface which is handling the least number of sessions. **Least Load - Outbound** - The Zyxel Device chooses a member interface which is handling the least amount of outgoing traffic. **Least Load - Inbound** - The Zyxel Device chooses a member interface which is handling the least amount of incoming traffic. **Least Load - Total** - The Zyxel Device chooses a member interface which is handling the least amount of outgoing and incoming traffic.
Apply	Click this button to save your changes to the Zyxel Device.
Reset	Click this button to return the screen to its last-saved settings.

18.2.1 The DNS Inbound LB Add/Edit Screen

The **Add DNS Load Balancing** screen allows you to add a domain name for which the Zyxel Device manages load balancing between the specified interfaces. You can configure the Zyxel Device to apply DNS load balancing to some specific hosts only by configuring the **Query From** settings. Click **Configuration > Network > Inbound LB** and then the **Add** or **Edit** icon to open this screen.

Figure 260 Configuration > Network > DNS Inbound LB > Add



The following table describes the labels in this screen.

Table 149 Configuration > Network > DNS Inbound LB > Add/Edit

LABEL	DESCRIPTION
Create New Object	Use this to configure any new setting objects that you need to use in this screen.
General Settings	
Enable	Select this to enable this DNS load balancing rule.
DNS Settings	
Query Domain Name	Type up to 255 characters for a domain name for which you want the Zyxel Device to manage DNS load balancing. You can use a wildcard (*) to let multiple domains match the name. For example, use *.example.com to specify any domain name that ends with "example.com" would match.
Time to Live	Enter the number of seconds the Zyxel Device recommends DNS request hosts to keep the DNS entry in their caches before removing it. Enter 0 to have the Zyxel Device not recommend this so the DNS request hosts will follow their DNS server's TTL setting.
Query From Setting	
IP Address	Select the name of an P address object, including geographic address object, of a computer or a DNS server which makes the DNS queries upon which to apply this rule. DNS servers process client queries using recursion or iteration: • In recursion, DNS servers make recursive queries on behalf of clients. So you have to configure this field to the DNS server's IP address when recursion is used. • In iteration, a client asks the DNS server and expects the best and immediate answer without the DNS server contacting other DNS servers. If the primary DNS server cannot provide the best answer, the client makes iteration queries to other configured DNS servers to resolve the name. You have to configure this field to the client's IP address when iteration is used.

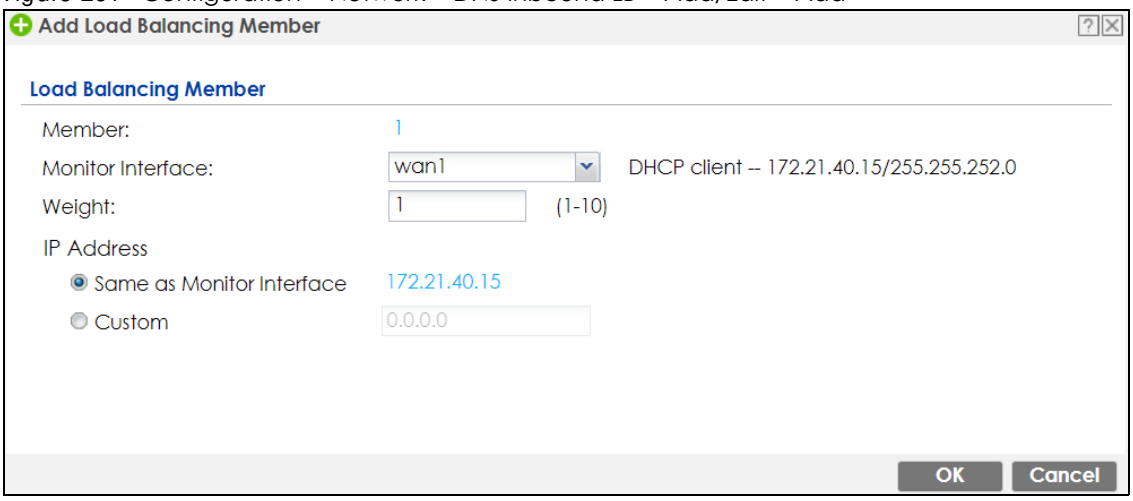
Table 149 Configuration > Network > DNS Inbound LB > Add/Edit (continued)

LABEL	DESCRIPTION
Zone	Select the zone of DNS query messages upon which to apply this rule.
Load Balancing Member	
Load Balancing Algorithm	Select a load balancing method to use from the drop-down list box. Select **Weighted Round Robin** to balance the traffic load between interfaces based on their respective weights. An interface with a larger weight gets more chances to transmit traffic than an interface with a smaller weight. For example, if the weight ratio of wan1 and wan2 interfaces is 2:1, the Zyxel Device chooses wan1 for 2 sessions' traffic and wan2 for every session's traffic in each round of 3 new sessions. Select **Least Connection** to have the Zyxel Device choose the member interface which is handling the least number of sessions. Select **Least Load - Outbound** to have the Zyxel Device choose the member interface which is handling the least amount of outgoing traffic. Select **Least Load - Inbound** to have the Zyxel Device choose the member interface which is handling the least amount of incoming traffic. Select **Least Load - Total** to have the Zyxel Device choose the member interface which is handling the least amount of outgoing and incoming traffic.
Failover IP Address	Enter an alternate IP address with which the Zyxel Device will respond to a DNS query message when the load balancing algorithm cannot find any available interface.
Add	Click this to create a new member interface for this rule.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
#	This field displays the order in which the Zyxel Device checks this rule's member interfaces.
IP Address	This field displays the IP address of the member interface.
Monitor Interface	This field displays the name of the member interface. The Zyxel Device manages load balancing between the member interfaces.
Weight	This field is available if you selected **Weighted Round Robin** as the load balancing algorithm. This field displays the weight of the member interface. An interface with a larger weight gets more chances to transmit traffic than an interface with a smaller weight.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

18.2.2 The DNS Inbound LB Add/Edit Member Screen

The **Add Load Balancing Member** screen allows you to add a member interface for the DNS load balancing rule. Click **Configuration > Network > DNS Inbound LB > Add or Edit** and then an **Add** or **Edit** icon to open this screen.

Figure 261 Configuration > Network > DNS Inbound LB > Add/Edit > Add



The following table describes the labels in this screen.

Table 150 Configuration > Network > DNS Inbound LB > Add/Edit > Add/Edit

LABEL	DESCRIPTION
Member	The Zyxel Device checks each member interface's loading in the order displayed here.
Monitor Interface	Select an interface to associate it with the DNS load balancing rule. This field also displays whether the IP address is a static IP address (**Static**), dynamically assigned (**Dynamic**) or obtained from a DHCP server (**DHCP Client**), as well as the IP address and subnet mask.
Weight	This field is available if you selected **Weighted Round Robin** for the load balancing algorithm. Specify the weight of the member interface. An interface with a larger weight gets more chances to transmit traffic than an interface with a smaller weight.
IP Address	
Same as Monitor Interface	Select this to send the IP address displayed in the **Monitor Interface** field to the DNS query senders.
Custom	Select this and enter another IP address to send to the DNS query senders.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

CHAPTER 19
IPnP

19.1 IPnP Overview

IP Plug and Play (IPnP) allows a computer to access the Internet without changing the network settings (such as IP address and subnet mask) of the computer, even when the IP addresses of the computer and the Zyxel Device are not in the same subnet.

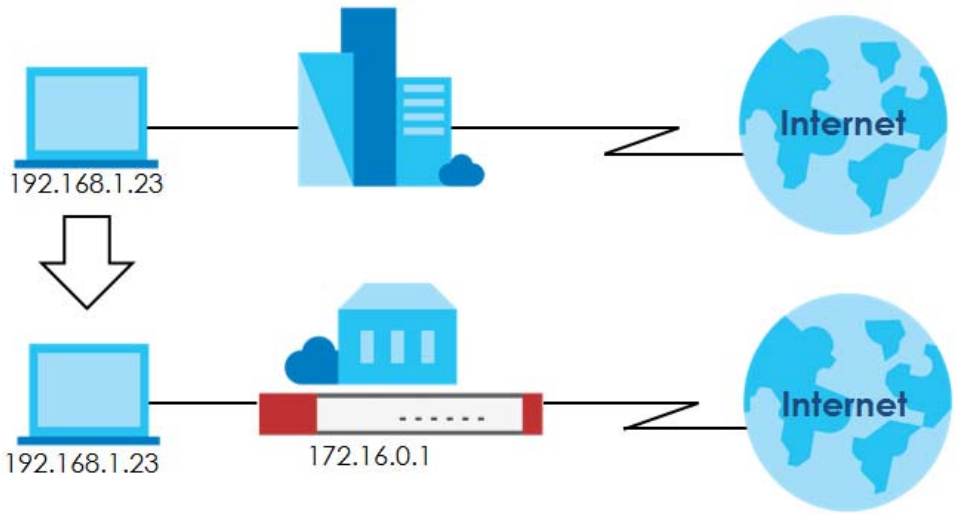
When you disable the IPnP feature, only computers with dynamic IP addresses or static IP addresses in the same subnet as the Zyxel Device's LAN IP address can connect to the Zyxel Device or access the Internet through the Zyxel Device.

The IPnP feature does not apply to a computer using either a dynamic IP address or a static IP address that is in the same subnet as the Zyxel Device's IP address.

Note: You must enable NAT to use the IPnP feature.

The following figure depicts a scenario where a computer is set to use a static private IP address in the corporate environment. In a residential house where a Zyxel Device is installed, you can still use the computer to access the Internet without changing the network settings, even when the IP addresses of the computer and the Zyxel Device are not in the same subnet.

Figure 262 IPnP Application



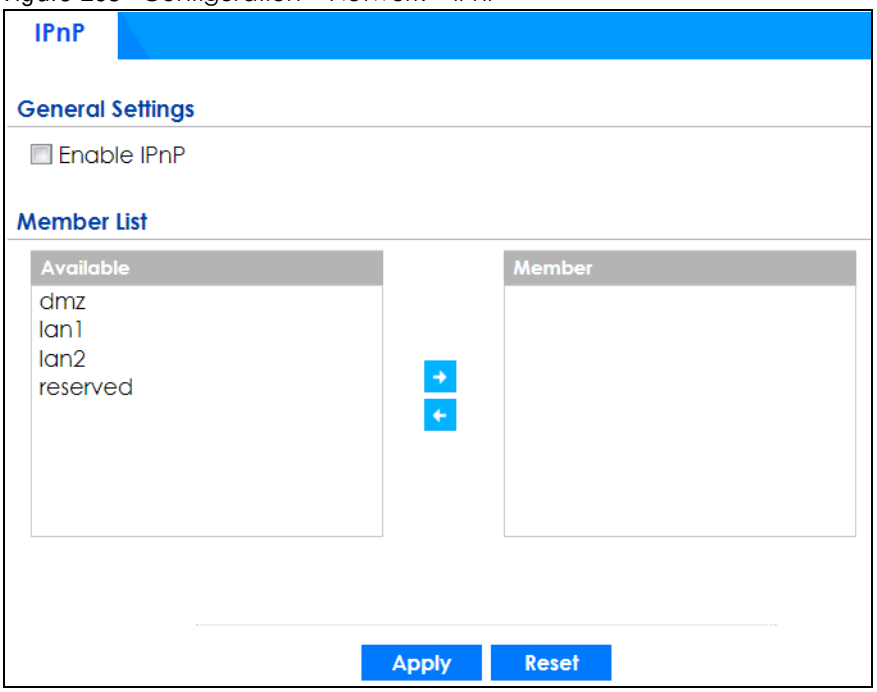
19.1.1 What You Can Do in this Chapter

Use the **IPnP** screen (Section 19.2 on page 378) to enable IPnP on the Zyxel Device and the internal interface(s).

19.2 IPnP Screen

This screen allows you to enable IPnP on the Zyxel Device and specific internal interface(s). To access this screen click **Configuration > Network > IPnP**.

Figure 263 Configuration > Network > IPnP



The following table describes the labels in this screen.

Table 151 Configuration > Network > IPnP

LABEL	DESCRIPTION
Enable IPnP	Select this option to turn on the IPnP feature on the Zyxel Device. Note: You can enable this feature only when the security policy is enabled.
Member List	The **Available** list displays the name(s) of the internal interface(s) on which you can enable IPnP. To enable IPnP on an interface, you can double-click a single entry to move it or use the [Shift] or [Ctrl] key to select multiple entries and click the right arrow button to add to the **Member** list. To remove an interface, select the name(s) in the **Member** list and click the left arrow button.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

CHAPTER 20
IPSec VPN

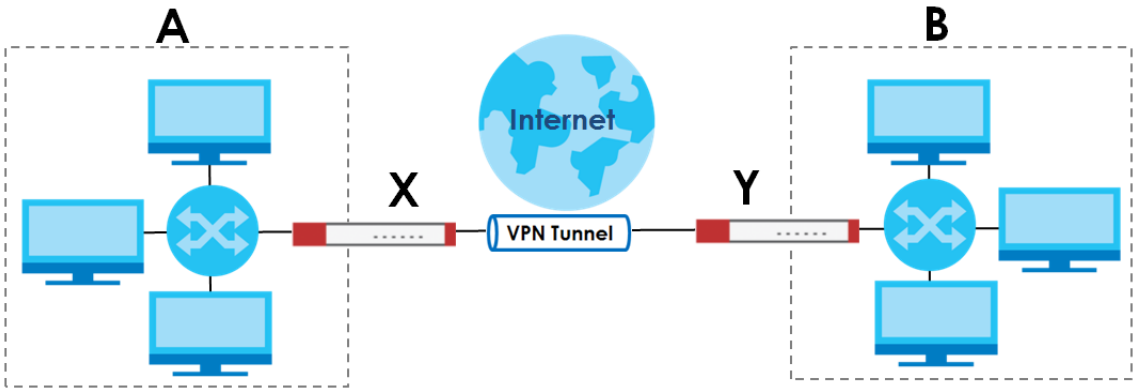
20.1 Virtual Private Networks (VPN) Overview

A virtual private network (VPN) provides secure communications between sites without the expense of leased site-to-site lines. A secure VPN is a combination of tunneling, encryption, authentication, access control and auditing. It is used to transport traffic over the Internet or any insecure network that uses TCP/IP for communication.

IPSec VPN

Internet Protocol Security (IPSec) VPN connects IPSec routers or remote users using IPSec client software. This standards-based VPN offers flexible solutions for secure data communications across a public network. IPSec is built around a number of standardized cryptographic techniques to provide confidentiality, data integrity and authentication at the IP layer. The Zyxel Device can also combine multiple IPSec VPN connections into one secure network. Here local Zyxel Device X uses an IPSec VPN tunnel to remote (peer) Zyxel Device Y to connect the local (A) and remote (B) networks.

Figure 264 IPSec VPN Example



Internet Key Exchange (IKE): IKEv1 and IKEv2

The Zyxel Device supports IKEv1 and IKEv2 for IPv4 and IPv6 traffic. IKE (Internet Key Exchange) is a protocol used in setting up security associations that allows two parties to send data securely.

IKE uses certificates or pre-shared keys for authentication and a Diffie–Hellman key exchange to set up a shared session secret from which encryption keys are derived. A security policy for each peer must be manually created.

IPSec VPN consists of two phases: Phase 1 and Phase 2. Phase 1's purpose is to establish a secure authenticated communication channel by using the Diffie–Hellman key exchange algorithm to generate a shared secret key to encrypt IKE communications. This negotiation results in one single bi-directional ISAKMP Security Association (SA). The authentication can be performed using either pre-

shared key (shared secret), signatures, or public key encryption. Phase 1 operates in either **Main Mode** or **Aggressive Mode**. **Main Mode** protects the identity of the peers, but **Aggressive Mode** does not.

During Phase 2, the remote IPSec routers use the secure channel established in Phase 1 to negotiate Security Associations for IPSec. The negotiation results in a minimum of two unidirectional security associations (one inbound and one outbound). Phase 2 uses Quick Mode (only). Quick mode occurs after IKE has established the secure tunnel in Phase 1. It negotiates a shared IPSec policy, derives shared secret keys used for the IPSec security algorithms, and establishes IPSec SAs. Quick mode is also used to renegotiate a new IPSec SA when the IPSec SA lifetime expires.

In the Zyxel Device, use the **VPN Connection** tab to set up Phase 2 and the **VPN Gateway** tab to set up Phase 1.

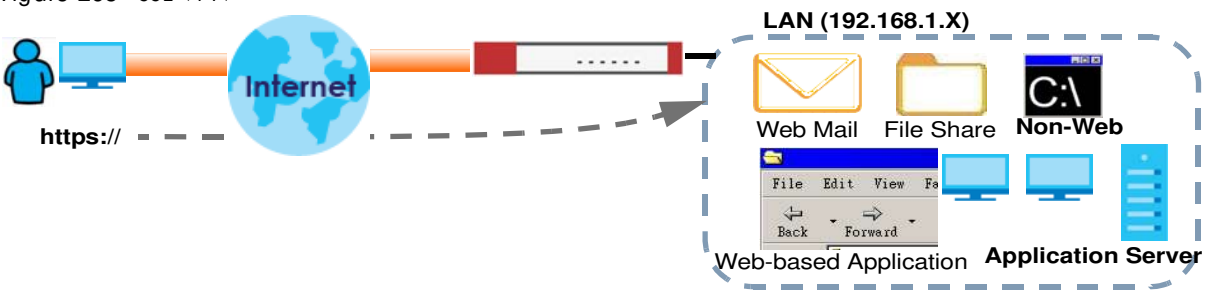
Some differences between IKEv1 and IKEv2 include:

- IKEv2 uses less bandwidth than IKEv1. IKEv2 uses one exchange procedure with 4 messages. IKEv1 uses two phases with Main Mode (9 messages) or Aggressive Mode (6 messages) in phase 1.
- IKEv2 supports Extended Authentication Protocol (EAP) authentication, and IKEv1 supports X-Auth. EAP is important when connecting to existing enterprise authentication systems.
- IKEv2 always uses NAT traversal and Dead Peer Detection (DPD), but they can be disabled in IKEv1 using Zyxel Device firmware (the default is on).
- Configuration payload (includes the IP address pool in the VPN setup data) is supported in IKEv2 (off by default), but not in IKEv1.
- Narrowed is supported in IKEv2, but not in IKEv1. Narrowed has the SA apply only to IP addresses in common between the Zyxel Device and the remote IPSec router.
- The IKEv2 protocol supports connectivity checks which is used to detect whether the tunnel is still up or not. If the check fails (the tunnel is down), IKEv2 can re-establish the connection automatically. The Zyxel Device uses firmware to perform connectivity checks when using IKEv1.

SSL VPN

SSL VPN uses remote users' web browsers to provide the easiest-to-use of the Zyxel Device's VPN solutions. A user just browses to the Zyxel Device's web address and enters his user name and password to securely connect to the Zyxel Device's network. Remote users do not need to configure security settings. Here a user uses his browser to securely connect to network resources in the same way as if he were part of the internal network. See Chapter 21 on page 415 for more on SSL VPN.

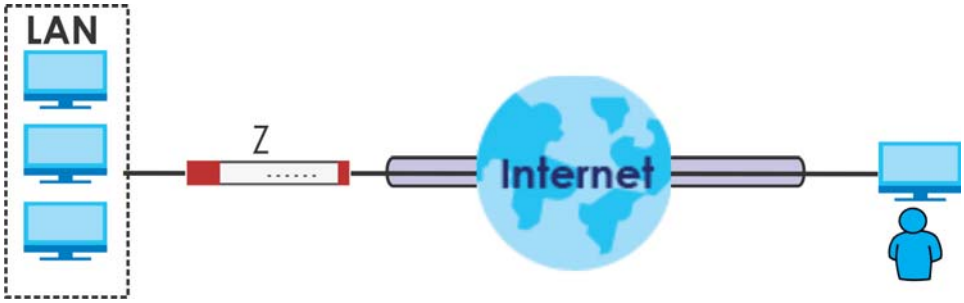
Figure 265 SSL VPN



L2TP VPN

L2TP VPN uses the L2TP and IPSec client software included in remote users' Android, iOS, or Windows operating systems for secure connections to the network behind the Zyxel Device. The remote users do not need their own IPSec gateways or third-party VPN client software. For example, configure sales representatives' laptops, tablets, or smartphones to securely connect to the Zyxel Device's network. See Chapter 22 on page 421 for more on L2TP over IPSec.

Figure 266 L2TP VPN



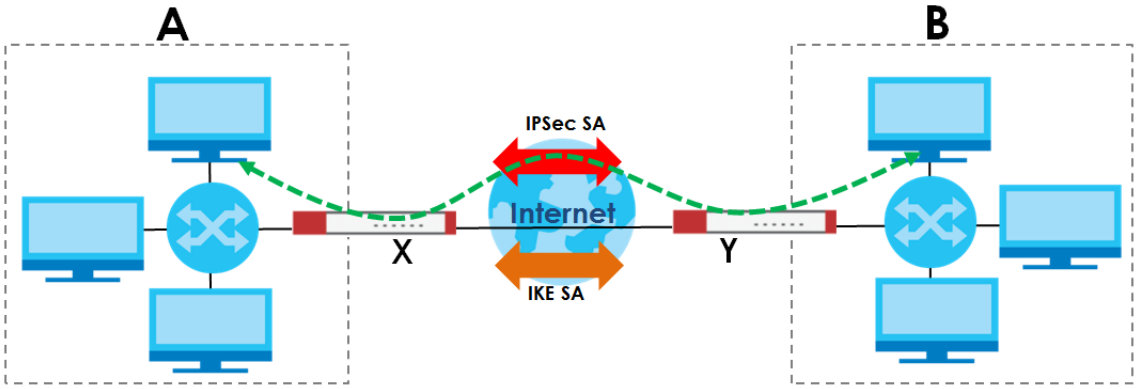
20.1.1 What You Can Do in this Chapter

- Use the **VPN Connection** screens (see Section 20.2 on page 384) to specify which IPSec VPN gateway an IPSec VPN connection policy uses, which devices behind the IPSec routers can use the VPN tunnel, and the IPSec SA settings (phase 2 settings). You can also activate or deactivate and connect or disconnect each VPN connection (each IPSec SA).
- Use the **VPN Gateway** screens (see Section 20.2.1 on page 386) to manage the Zyxel Device's VPN gateways. A VPN gateway specifies the IPSec routers at either end of a VPN tunnel and the IKE SA settings (phase 1 settings). You can also activate and deactivate each VPN gateway.
- Use the **VPN Concentrator** screens (see Section 20.4 on page 401) to combine several IPSec VPN connections into a single secure network.
- Use the **Configuration Provisioning** screen (see Section 20.5 on page 403) to set who can retrieve VPN rule settings from the Zyxel Device using the Zyxel Device IPSec VPN Client.

20.1.2 What You Need to Know

An IPSec VPN tunnel is usually established in two phases. Each phase establishes a security association (SA), a contract indicating what security parameters the Zyxel Device and the remote IPSec router will use. The first phase establishes an Internet Key Exchange (IKE) SA between the Zyxel Device and remote IPSec router. The second phase uses the IKE SA to securely establish an IPSec SA through which the Zyxel Device and remote IPSec router can send data between computers on the local network and remote network. This is illustrated in the following figure.

Figure 267 VPN: IKE SA and IPSec SA

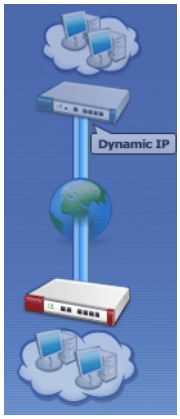


In this example, a computer in network A is exchanging data with a computer in network B. Inside networks A and B, the data is transmitted the same way data is normally transmitted in the networks. Between routers X and Y, the data is protected by tunneling, encryption, authentication, and other security features of the IPSec SA. The IPSec SA is secure because routers X and Y established the IKE SA first.

Application Scenarios

The Zyxel Device's application scenarios make it easier to configure your VPN connection settings.

Table 152 IPSec VPN Application Scenarios

SITE-TO-SITE	SITE-TO-SITE WITH DYNAMIC PEER	REMOTE ACCESS (SERVER ROLE)	REMOTE ACCESS (CLIENT ROLE)	VPN TUNNEL INTERFACE
				


Choose this if the remote IPSec router has a static IP address or a domain name. This Zyxel Device can initiate the VPN tunnel. The remote IPSec router can also initiate the VPN tunnel if this Zyxel Device has a static IP address or a domain name.	Choose this if the remote IPSec router has a dynamic IP address. You don't specify the remote IPSec router's address, but you specify the remote policy (the addresses of the devices behind the remote IPSec router). This Zyxel Device must have a static IP address or a domain name. Only the remote IPSec router can initiate the VPN tunnel.	Choose this to allow incoming connections from IPSec VPN clients. The clients have dynamic IP addresses and are also known as dial-in users. You don't specify the addresses of the client IPSec routers or the remote policy. This creates a dynamic IPSec VPN rule that can let multiple clients connect. Only the clients can initiate the VPN tunnel.	Choose this to connect to an IPSec server. This Zyxel Device is the client (dial-in user). Client role Zyxel Devices initiate IPSec VPN connections to a server role Zyxel Device. This Zyxel Device can have a dynamic IP address. The IPSec server doesn't configure this Zyxel Device's IP address or the addresses of the devices behind it. Only this Zyxel Device can initiate the VPN tunnel.	Choose this to set up a VPN tunnel interface to bind with a VPN connection. The Zyxel Device can use the interface to do load balancing using a specific Trunk. The remote IPSec router should have a static IP address or a domain name.

Finding Out More

- See Section 20.6 on page 405 for IPSec VPN background information.
- See the help in the IPSec VPN quick setup wizard screens.

20.1.3 Before You Begin

This section briefly explains the relationship between VPN tunnels and other features. It also gives some basic suggestions for troubleshooting.

You should set up the following features before you set up the VPN tunnel.

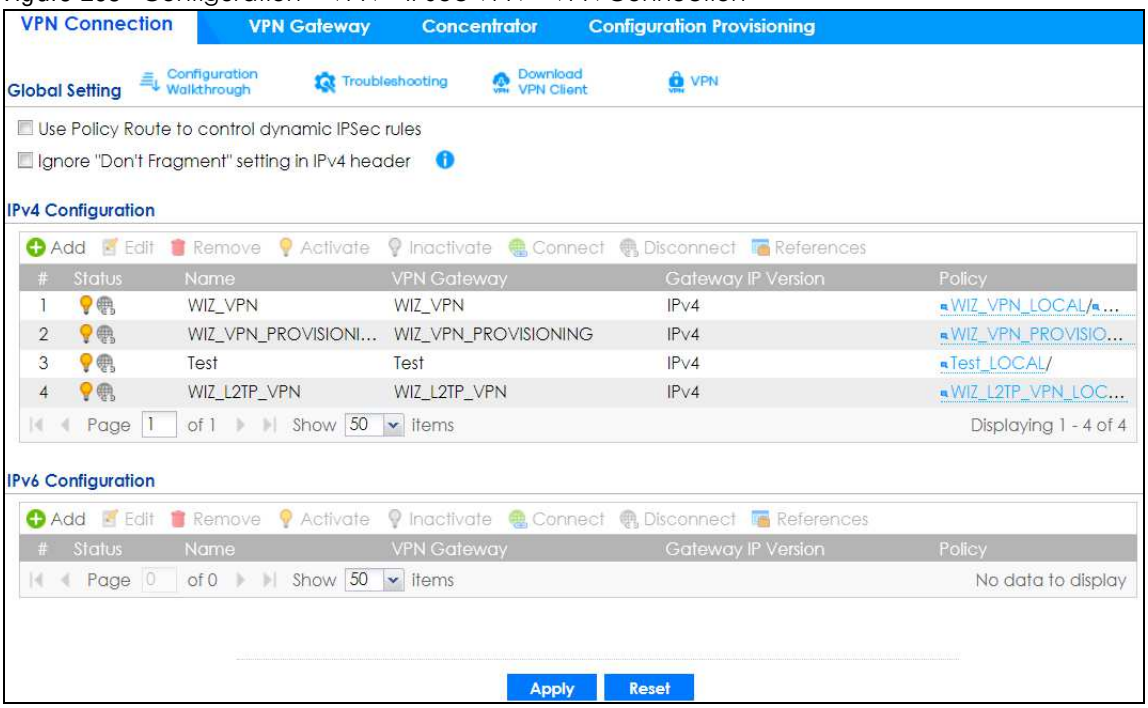
- In any VPN connection, you have to select address objects to specify the local policy and remote policy. You should set up the address objects first.
- In a VPN gateway, you can select an Ethernet interface, virtual Ethernet interface, VLAN interface, or virtual VLAN interface to specify what address the Zyxel Device uses as its IP address when it establishes the IKE SA. You should set up the interface first.
- In a VPN gateway, you can enable extended authentication. If the Zyxel Device is in server mode, you should set up the authentication method (AAA server) first. The authentication method specifies how the Zyxel Device authenticates the remote IPSec router.
- In a VPN gateway, the Zyxel Device and remote IPSec router can use certificates to authenticate each other. Make sure the Zyxel Device and the remote IPSec router will trust each other's certificates.

20.2 The VPN Connection Screen

Click **Configuration > VPN > IPSec VPN** to open the **VPN Connection** screen. The **VPN Connection** screen lists the VPN connection policies and their associated VPN gateway(s), and various settings. In addition, it also lets you activate or deactivate and connect or disconnect each VPN connection (each IPSec SA). Click a column's heading cell to sort the table entries by that column's criteria. Click the heading cell again to reverse the sort order.

Click on the icons to go to the OneSecurity website where there is guidance on configuration walkthroughs, troubleshooting and other information.

Figure 268 Configuration > VPN > IPSec VPN > VPN Connection



Each field is discussed in the following table.

Table 153 Configuration > VPN > IPSec VPN > VPN Connection

LABEL	DESCRIPTION
Global Setting	The following two fields are for all IPSec VPN policies. Click on the VPN icon to go to the Zyxel VPN Client product page at the Zyxel website.
Use Policy Route to control dynamic IPSec rules	Select this to be able to use policy routes to manually specify the destination addresses of dynamic IPSec rules. You must manually create these policy routes. The Zyxel Device automatically obtains source and destination addresses for dynamic IPSec rules that do not match any of the policy routes. Clear this to have the Zyxel Device automatically obtain source and destination addresses for all dynamic IPSec rules.
Ignore "Don't Fragment" setting in packet header	Select this to fragment packets larger than the MTU (Maximum Transmission Unit) that have the "Don't Fragment" bit in the IP header turned on. When you clear this the Zyxel Device drops packets larger than the MTU that have the "Don't Fragment" bit in the header turned on.
IPv4 / IPv6 Configuration	
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Connect	To connect an IPSec SA, select it and click **Connect**.
Disconnect	To disconnect an IPSec SA, select it and click **Disconnect**.

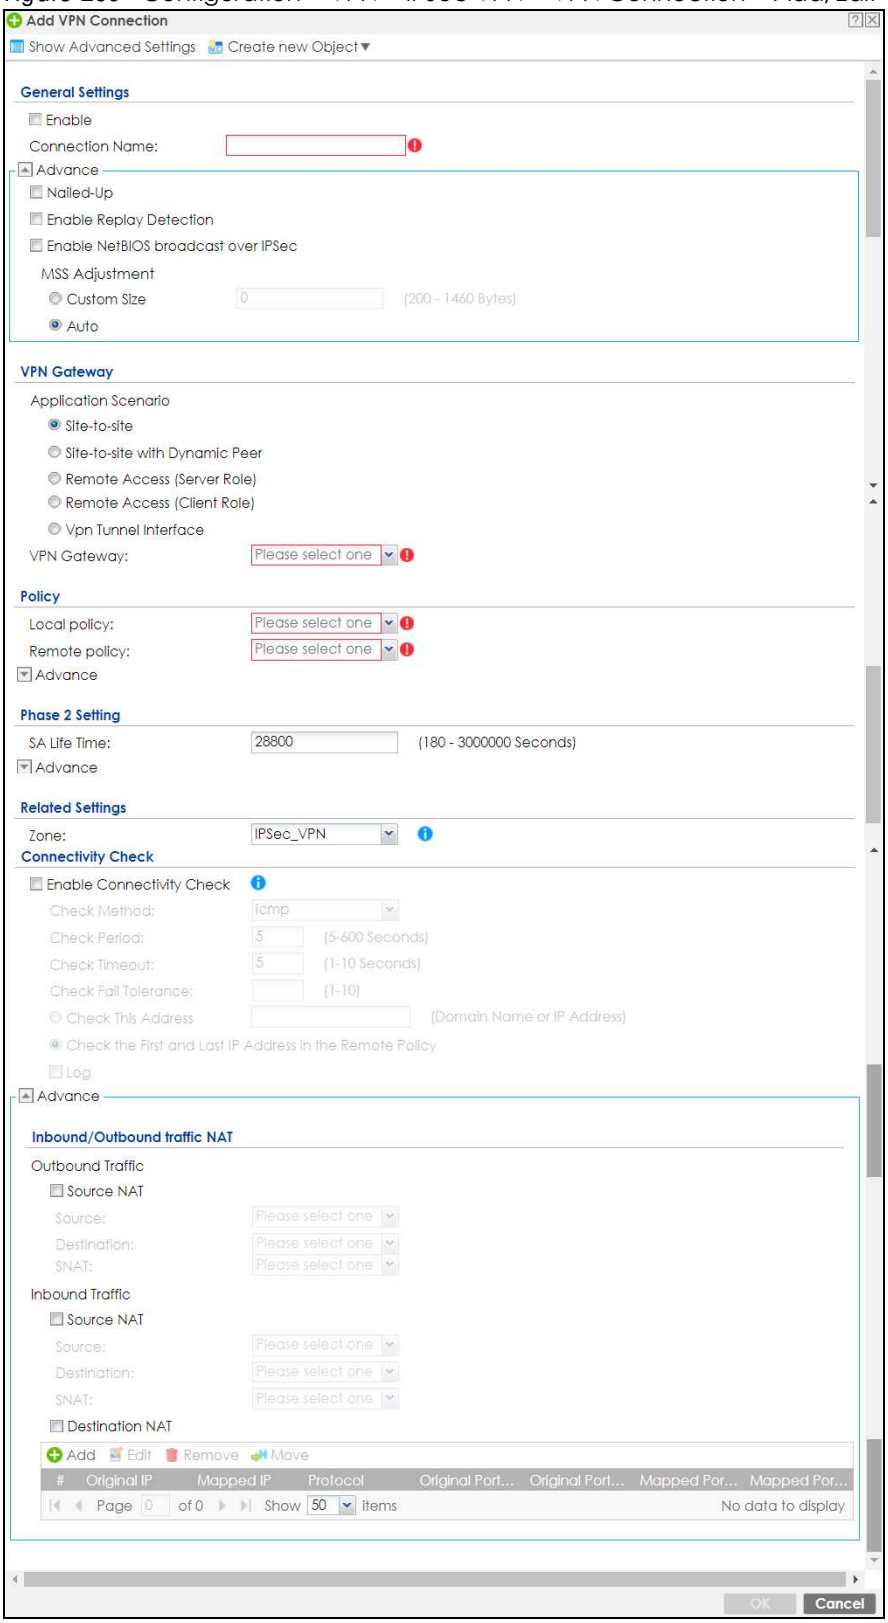
Table 153 Configuration > VPN > IPSec VPN > VPN Connection (continued)

LABEL	DESCRIPTION
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
#	This field is a sequential value, and it is not associated with a specific connection.
Status	The activate (light bulb) icon is lit when the entry is active and dimmed when the entry is inactive. The connect icon is lit when the interface is connected and dimmed when it is disconnected.
Name	This field displays the name of the IPSec SA.
VPN Gateway	This field displays the VPN gateway in use for this VPN connection.
Gateway IP Version	This field displays what IP version the associated VPN gateway(s) is using. An IPv4 gateway may use an IKEv1 or IKEv2 SA. An IPv6 gateway may use IKEv2 only.
Policy	This field displays the local policy and the remote policy, respectively.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

20.2.1 The VPN Connection Add/Edit Screen

The **VPN Connection Add/Edit Gateway** screen allows you to create a new VPN connection policy or edit an existing one. To access this screen, go to the **Configuration > VPN Connection** screen (see Section 20.2 on page 384), and click either the **Add** icon or an **Edit** icon.

Figure 269 Configuration > VPN > IPSec VPN > VPN Connection > Add/Edit



Each field is described in the following table.

Table 154 Configuration > VPN > IPSec VPN > VPN Connection > Add/Edit

LABEL	DESCRIPTION
Show Advanced Settings / Hide Advanced Settings	Click this button to display a greater or lesser number of configuration fields.
Create new Object	Use to configure any new settings objects that you need to use in this screen.
General Settings	
Enable	Select this check box to activate this VPN connection.
Connection Name	Type the name used to identify this IPSec SA. You may use 1-31 alphanumeric characters, underscores (_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Nailed-Up	Select this if you want the Zyxel Device to automatically renegotiate the IPSec SA when the SA life time expires.
Enable Replay Detection	Select this check box to detect and reject old or duplicate packets to protect against Denial-of-Service attacks.
Enable NetBIOS Broadcast over IPSec	Select this check box if you the Zyxel Device to send NetBIOS (Network Basic Input/ Output System) packets through the IPSec SA. NetBIOS packets are TCP or UDP packets that enable a computer to connect to and communicate with a LAN. It may sometimes be necessary to allow NetBIOS packets to pass through IPSec SAs in order to allow local computers to find computers on the remote network and vice versa.
MSS Adjustment	Select **Custom Size** to set a specific number of bytes for the Maximum Segment Size (MSS) meaning the largest amount of data in a single TCP segment or IP datagram for this VPN connection. Some VPN clients may not be able to use a custom MSS size if it is set too small. In that case those VPN clients will ignore the size set here and use the minimum size that they can use. Select **Auto** to have the Zyxel Device automatically set the MSS for this VPN connection.
Narrowed	This is visible when you select any options in the **VPN Gateway** section except for **VPN Tunnel Interface**. If the IP range on the Zyxel Device (local policy) and the local IP range on the remote IPSec router overlap in an IKEv2 SA, then you may select **Narrowed** to have the SA only apply to the IP addresses in common. Here are some examples. Zyxel Device (local policy) Remote IPSec router IKEv2 SA-1 192.168.20.0/24 192.168.20.1 ~ 192.168.20.20 Narrowed 192.168.20.1 ~ 192.168.20.20 IKEv2 SA- 2 192.168.30.50 ~ 192.168.30.70 192.168.30.60 ~ 192.168.30.80 Narrowed 192.168.30.60 ~ 192.168.30.70
VPN Gateway	

Table 154 Configuration > VPN > IPSec VPN > VPN Connection > Add/Edit (continued)

LABEL	DESCRIPTION
Application Scenario	Select the scenario that best describes your intended VPN connection. **Site-to-site** - Choose this if the remote IPSec router has a static IP address or a domain name. This Zyxel Device can initiate the VPN tunnel. **Site-to-site with Dynamic Peer** - Choose this if the remote IPSec router has a dynamic IP address. Only the remote IPSec router can initiate the VPN tunnel. **Remote Access (Server Role)** - Choose this to allow incoming connections from IPSec VPN clients. The clients have dynamic IP addresses and are also known as dial-in users. Only the clients can initiate the VPN tunnel. **Remote Access (Client Role)** - Choose this to connect to an IPSec server. This Zyxel Device is the client (dial-in user) and can initiate the VPN tunnel. **VPN Tunnel Interface** - Choose this to set up a VPN tunnel interface to bind with a VPN connection. The Zyxel Device can use the interface to do load balancing using a specific Trunk. The remote IPSec router should have a static IP address or a domain name. See **Configuration > Network > Interface > VTI**.
VPN Gateway	Select the VPN gateway this VPN connection is to use or select **Create Object** to add another VPN gateway for this VPN connection to use.
Policy	
Local Policy	Select the address corresponding to the local network. Use **Create new Object** if you need to configure a new one.
Remote Policy	Select the address corresponding to the remote network. Use **Create new Object** if you need to configure a new one.
Enable GRE over IPSec	Select this to allow traffic using the Generic Routing Encapsulation (GRE) tunneling protocol through an IPSec tunnel.
Policy Enforcement	Clear this to allow traffic with source and destination IP addresses that do not match the local and remote policy to use the VPN tunnel. Leave this cleared for free access between the local and remote networks. Selecting this restricts who can use the VPN tunnel. The Zyxel Device drops traffic with source and destination IP addresses that do not match the local and remote policy.
Mode Config	This is visible when you select **Remote Access (Server Role)** and a **VPN Gateway**.
Enable Mode Config	Select this to have the IPSec VPN client receive an IP address, DNS and WINS information from the Zyxel Device.
IP Address Pool	Select an address object from the drop-down list box.
First DNS Server (Optional)	The Domain Name System (DNS) maps a domain name to an IP address and vice versa. The Zyxel Device uses these (in the order you specify here) to resolve domain names for VPN. Enter a DNS server's IP address.
Second DNS Server (Optional)	Enter a secondary DNS server's IP address that is checked if the first one is unavailable.
First WINS Server (Optional)	Type the IP address of the WINS (Windows Internet Naming Service) server that you want to send to the DHCP clients. The WINS server keeps a mapping table of the computer names on your network and the IP addresses that they are currently using.
Second WINS Server (Optional)	Enter a secondary WINS server's IP address that is checked if the first one is unavailable.
Configuration Payload	This is only available when you have created an IKEv2 Gateway and are using **Remote Access (Server Role)**.
Enable Configuration Payload	Select this to have at least have the IP address pool included in the VPN setup data.
IP Address Pool:	Select an address object from the drop-down list box.

Table 154 Configuration > VPN > IPSec VPN > VPN Connection > Add/Edit (continued)

LABEL	DESCRIPTION
First DNS Server (optional)	The Domain Name System (DNS) maps a domain name to an IP address and vice versa. The Zyxel Device uses these (in the order you specify here) to resolve domain names for VPN. Enter a DNS server's IP address.
Second DNS Server (Optional)	Enter a secondary DNS server's IP address that is checked if the first one is unavailable.
First WINS Server (Optional)	Type the IP address of the WINS (Windows Internet Naming Service) server that you want to send to the DHCP clients. The WINS server keeps a mapping table of the computer names on your network and the IP addresses that they are currently using.
Second WINS Server (Optional)	Enter a secondary WINS server's IP address that is checked if the first one is unavailable.
Phase 2 Settings	
SA Life Time	Type the maximum number of seconds the IPSec SA can last. Shorter life times provide better security. The Zyxel Device automatically negotiates a new IPSec SA before the current one expires, if there are users who are accessing remote resources.
Active Protocol	Select which protocol you want to use in the IPSec SA. Choices are: **AH** (RFC 2402) - provides integrity, authentication, sequence integrity (replay resistance), and non-repudiation but not encryption. If you select **AH**, you must select an **Authentication** algorithm. **ESP** (RFC 2406) - provides encryption and the same services offered by **AH**, but its authentication is weaker. If you select **ESP**, you must select an **Encryption** algorithm and **Authentication** algorithm. Both **AH** and **ESP** increase processing requirements and latency (delay). The Zyxel Device and remote IPSec router must use the same active protocol.
Encapsulation	Select which type of encapsulation the IPSec SA uses. Choices are **Tunnel** - this mode encrypts the IP header information and the data. **Transport** - this mode only encrypts the data. The Zyxel Device and remote IPSec router must use the same encapsulation.
Proposal	Use this section to manage the encryption algorithm and authentication algorithm pairs the Zyxel Device accepts from the remote IPSec router for negotiating the IPSec SA.
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
#	This field is a sequential value, and it is not associated with a specific proposal. The sequence of proposals should not affect performance significantly.

Table 154 Configuration > VPN > IPSec VPN > VPN Connection > Add/Edit (continued)

LABEL	DESCRIPTION
Encryption	This field is applicable when the **Active Protocol** is **ESP**. Select which key size and encryption algorithm to use in the IPSec SA. Choices are: **NULL** - no encryption key or algorithm **DES** - a 56-bit key with the DES encryption algorithm **3DES** - a 168-bit key with the DES encryption algorithm **AES128** - a 128-bit key with the AES encryption algorithm **AES192** - a 192-bit key with the AES encryption algorithm **AES256** - a 256-bit key with the AES encryption algorithm The Zyxel Device and the remote IPSec router must both have at least one proposal that uses use the same encryption and the same key. Longer keys are more secure, but require more processing power, resulting in increased latency and decreased throughput.
Authentication	Select which hash algorithm to use to authenticate packet data in the IPSec SA. Choices are **SHA1**, **SHA256**, **SHA512** and **MD5**. SHA is generally considered stronger than **MD5**, but it is also slower. The Zyxel Device and the remote IPSec router must both have a proposal that uses the same authentication algorithm.
Perfect Forward Secrecy (PFS)	Select whether or not you want to enable Perfect Forward Secrecy (PFS) and, if you do, which Diffie-Hellman key group to use for encryption. Choices are: **none** - disable PFS **DH1** - enable PFS and use a 768-bit random number **DH2** - enable PFS and use a 1024-bit random number **DH5** - enable PFS and use a 1536-bit random number **DH14** - enable PFS and use a 2048 bit random number PFS changes the root key that is used to generate encryption keys for each IPSec SA. The longer the key, the more secure the encryption, but also the longer it takes to encrypt and decrypt information. Both routers must use the same DH key group. PFS is ignored in initial IKEv2 authentication but is used when re-authenticating.
Related Settings	
Zone	Select the security zone into which to add this VPN connection policy. Any security rules or settings configured for the selected zone apply to this VPN connection policy.
Connectivity Check	The Zyxel Device can regularly check the VPN connection to the gateway you specified to make sure it is still available.
Enable Connectivity Check	Select this to turn on the VPN connection check.
Check Method	Select how the Zyxel Device checks the connection. The peer must be configured to respond to the method you select. Select **icmp** to have the Zyxel Device regularly ping the address you specify to make sure traffic can still go through the connection. You may need to configure the peer to respond to pings. Select **tcp** to have the Zyxel Device regularly perform a TCP handshake with the address you specify to make sure traffic can still go through the connection. You may need to configure the peer to accept the TCP connection.

Table 154 Configuration > VPN > IPSec VPN > VPN Connection > Add/Edit (continued)

LABEL	DESCRIPTION
Check Port	This field displays when you set the **Check Method** to **tcp**. Specify the port number to use for a TCP connectivity check.
Check Period	Enter the number of seconds between connection check attempts.
Check Timeout	Enter the number of seconds to wait for a response before the attempt is a failure.
Check Fail Tolerance	Enter the number of consecutive failures allowed before the Zyxel Device disconnects the VPN tunnel. The Zyxel Device resumes using the first peer gateway address when the VPN connection passes the connectivity check.
Check this Address	Select this to specify a domain name or IP address for the connectivity check. Enter that domain name or IP address in the field next to it.
Check the First and Last IP Address in the Remote Policy	Select this to have the Zyxel Device check the connection to the first and last IP addresses in the connection's remote policy. Make sure one of these is the peer gateway's LAN IP address.
Log	Select this to have the Zyxel Device generate a log every time it checks this VPN connection.
Inbound/Outbound traffic NAT	
Outbound Traffic	
Source NAT	This translation hides the source address of computers in the local network. It may also be necessary if you want the Zyxel Device to route packets from computers outside the local network through the IPSec SA.
Source	Select the address object that represents the original source address (or select **Create Object** to configure a new one). This is the address object for the computer or network outside the local network. The size of the original source address range (**Source**) must be equal to the size of the translated source address range (**SNAT**).
Destination	Select the address object that represents the original destination address (or select **Create Object** to configure a new one). This is the address object for the remote network.
SNAT	Select the address object that represents the translated source address (or select **Create Object** to configure a new one). This is the address object for the local network. The size of the original source address range (**Source**) must be equal to the size of the translated source address range (**SNAT**).
Inbound Traffic	
Source NAT	This translation hides the source address of computers in the remote network.
Source	Select the address object that represents the original source address (or select **Create Object** to configure a new one). This is the address object for the remote network. The size of the original source address range (**Source**) must be equal to the size of the translated source address range (**SNAT**).
Destination	Select the address object that represents the original destination address (or select **Create Object** to configure a new one). This is the address object for the local network.
SNAT	Select the address object that represents the translated source address (or select **Create Object** to configure a new one). This is the address that hides the original source address. The size of the original source address range (**Source**) must be equal to the size of the translated source address range (**SNAT**).
Destination NAT	This translation forwards packets (for example, mail) from the remote network to a specific computer (for example, the mail server) in the local network.
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.

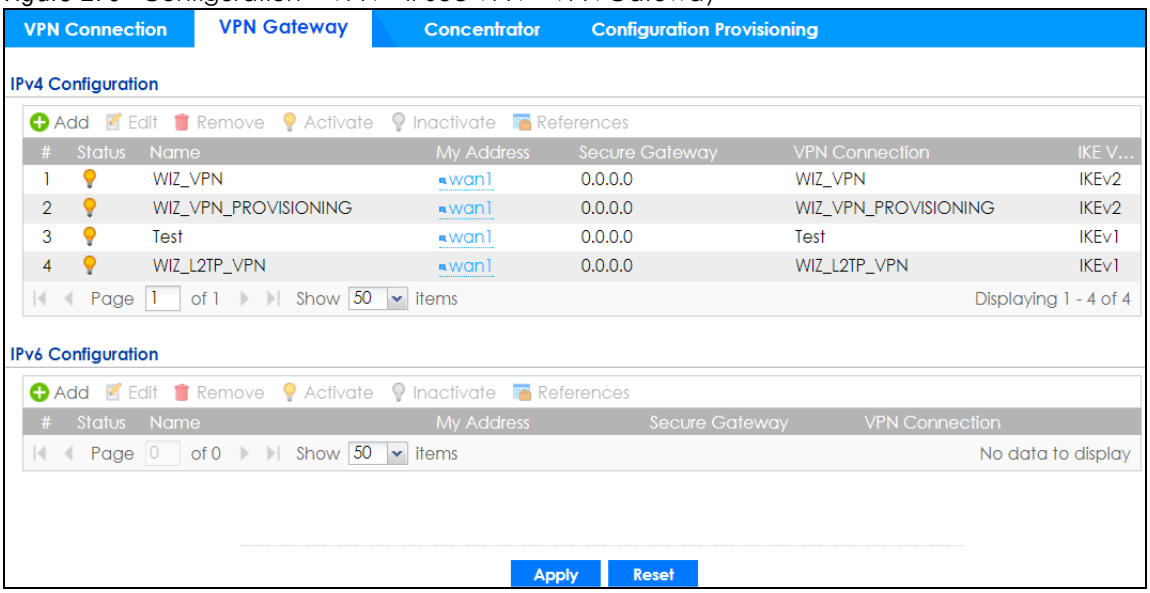
Table 154 Configuration > VPN > IPSec VPN > VPN Connection > Add/Edit (continued)

LABEL	DESCRIPTION
Move	To change an entry's position in the numbered list, select it and click **Move** to display a field to type a number for where you want to put that entry and press [ENTER] to move the entry to the number that you typed.
#	This field is a sequential value, and it is not associated with a specific NAT record. However, the order of records is the sequence in which conditions are checked and executed.
Original IP	Select the address object that represents the original destination address. This is the address object for the remote network.
Mapped IP	Select the address object that represents the desired destination address. For example, this is the address object for the mail server.
Protocol	Select the protocol required to use this translation. Choices are: **TCP**, **UDP**, or **All**.
Original Port Start / Original Port End	These fields are available if the protocol is **TCP** or **UDP**. Enter the original destination port or range of original destination ports. The size of the original port range must be the same size as the size of the mapped port range.
Mapped Port Start / Mapped Port End	These fields are available if the protocol is **TCP** or **UDP**. Enter the translated destination port or range of translated destination ports. The size of the original port range must be the same size as the size of the mapped port range.
OK	Click **OK** to save the changes.
Cancel	Click **Cancel** to discard all changes and return to the main VPN screen.

20.3 The VPN Gateway Screen

The **VPN Gateway** summary screen displays the IPSec VPN gateway policies in the Zyxel Device, as well as the Zyxel Device's address, remote IPSec router's address, and associated VPN connections for each one. In addition, it also lets you activate and deactivate each VPN gateway. To access this screen, click **Configuration** > **VPN** > **Network** > **IPSec VPN** > **VPN Gateway**. The following screen appears.

Figure 270 Configuration > VPN > IPSec VPN > VPN Gateway



Each field is discussed in the following table. See Section 20.3.1 on page 394 for more information.

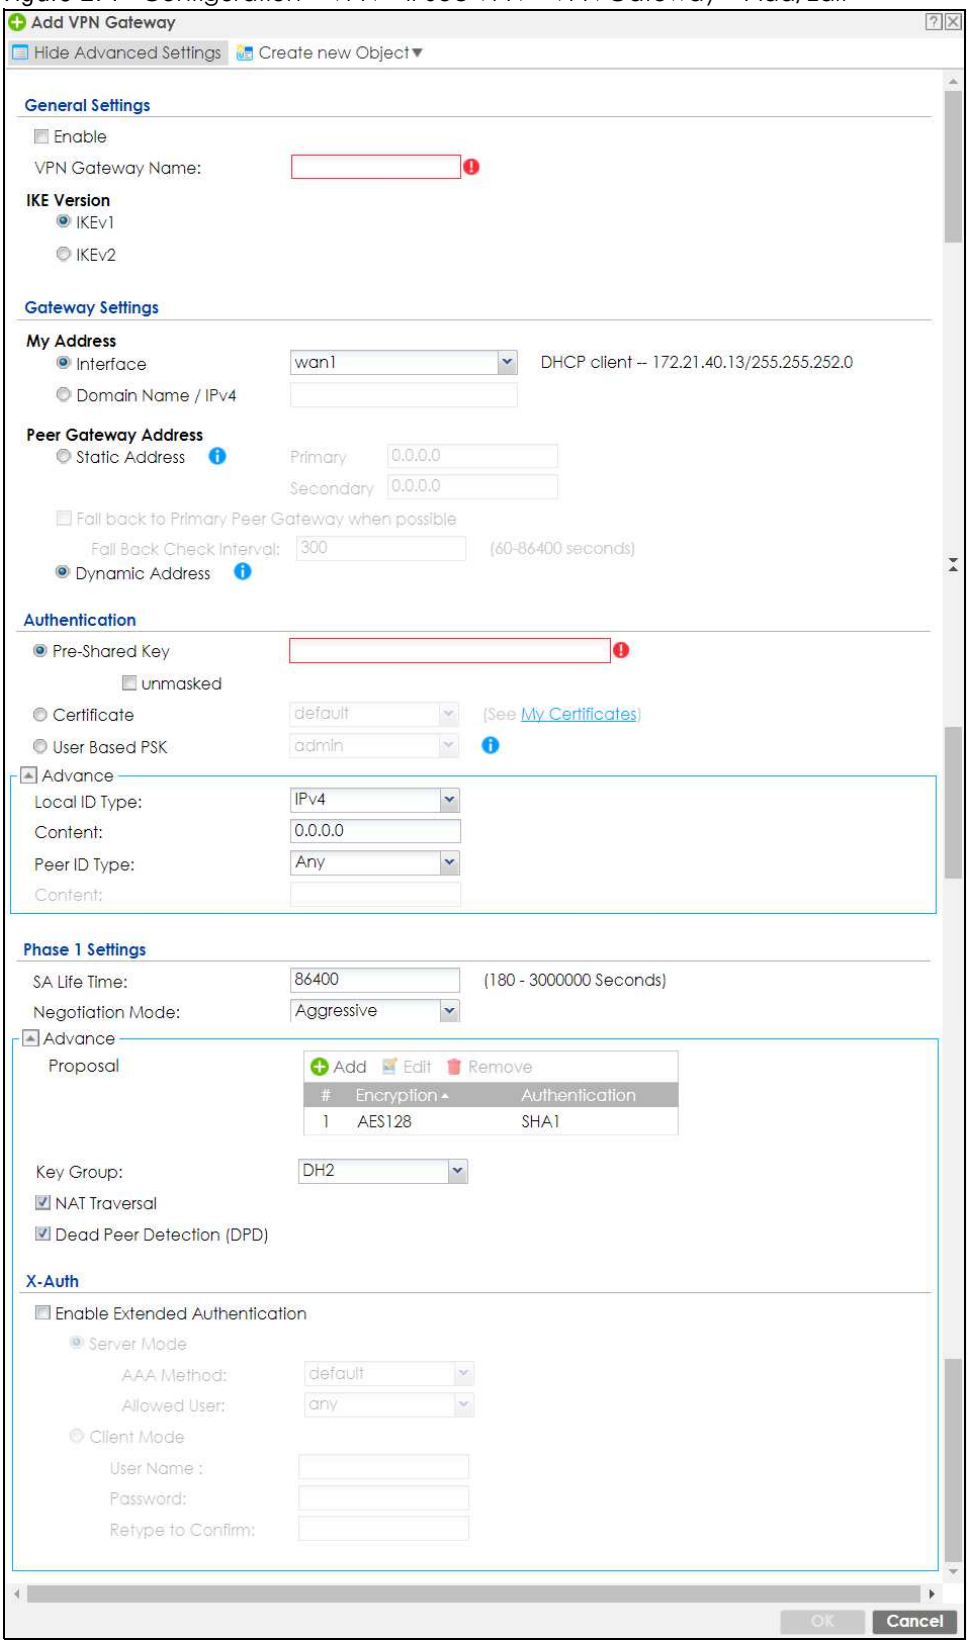
Table 155 Configuration > VPN > IPSec VPN > VPN Gateway

LABEL	DESCRIPTION
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. See Section 9.3.4 on page 230 for an example.
#	This field is a sequential value, and it is not associated with a specific VPN gateway.
Status	The activate (light bulb) icon is lit when the entry is active and dimmed when the entry is inactive.
Name	This field displays the name of the VPN gateway
My address	This field displays the interface or a domain name the Zyxel Device uses for the VPN gateway.
Secure Gateway	This field displays the IP address(es) of the remote IPSec routers.
VPN Connection	This field displays VPN connections that use this VPN gateway.
IKE Version	This field displays whether the gateway is using **IKEv1** or **IKEv2**. **IKEv1** applies to IPv4 traffic only. **IKEv2** applies to both IPv4 and IPv6 traffic. IKE (Internet Key Exchange) is a protocol used in setting up security associations that allows two parties to send data securely. See Section 20.1 on page 379 for more information on IKEv1 and IKEv2.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

20.3.1 The VPN Gateway Add/Edit Screen

The **VPN Gateway Add/Edit** screen allows you to create a new VPN gateway policy or edit an existing one. To access this screen, go to the **VPN Gateway summary** screen (see Section 20.3 on page 393), and click either the **Add** icon or an **Edit** icon.

Figure 271 Configuration > VPN > IPSec VPN > VPN Gateway > Add/Edit



Each field is described in the following table.

Table 156 Configuration > VPN > IPSec VPN > VPN Gateway > Add/Edit

LABEL	DESCRIPTION
Show Advanced Settings / Hide Advanced Settings	Click this button to display a greater or lesser number of configuration fields.
Create New Object	Use to configure any new settings objects that you need to use in this screen.
General Settings	
Enable	Select this to activate the VPN Gateway policy.
VPN Gateway Name	Type the name used to identify this VPN gateway. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
IKE Version	
IKEv1 / IKEv2	Select **IKEv1** or **IKEv2**. **IKEv1** applies to IPv4 traffic only. IKEv2 applies to both IPv4 and IPv6 traffic. IKE (Internet Key Exchange) is a protocol used in setting up security associations that allows two parties to send data securely. See Section 20.1 on page 379 for more information on IKEv1 and IKEv2.
Gateway Settings	
My Address	Select how the IP address of the Zyxel Device in the IKE SA is defined. If you select **Interface**, select the Ethernet interface, VLAN interface, virtual Ethernet interface, virtual VLAN interface or PPPoE/PPTP interface. The IP address of the Zyxel Device in the IKE SA is the IP address of the interface. If you select **Domain Name / IP**, enter the domain name or the IP address of the Zyxel Device. The IP address of the Zyxel Device in the IKE SA is the specified IP address or the IP address corresponding to the domain name. 0.0.0.0 is not generally recommended as it has the Zyxel Device accept IPSec requests destined for any interface address on the Zyxel Device.
Peer Gateway Address	Select how the IP address of the remote IPSec router in the IKE SA is defined. Select **Static Address** to enter the domain name or the IP address of the remote IPSec router. You can provide a second IP address or domain name for the Zyxel Device to try if it cannot establish an IKE SA with the first one. **Fall back to Primary Peer Gateway when possible**: When you select this, if the connection to the primary address goes down and the Zyxel Device changes to using the secondary connection, the Zyxel Device will reconnect to the primary address when it becomes available again and stop using the secondary connection. Users will lose their VPN connection briefly while the Zyxel Device changes back to the primary connection. To use this, the peer device at the secondary address cannot be set to use a nailed-up VPN connection. In the **Fallback Check Interval** field, set how often to check if the primary address is available. Select **Dynamic Address** if the remote IPSec router has a dynamic IP address (and does not use DDNS).
Authentication	Note: The Zyxel Device and remote IPSec router must use the same authentication method to establish the IKE SA.

Table 156 Configuration > VPN > IPSec VPN > VPN Gateway > Add/Edit (continued)

LABEL	DESCRIPTION
Pre-Shared Key	Select this to have the Zyxel Device and remote IPSec router use a pre-shared key (password) to identify each other when they negotiate the IKE SA. Type the pre-shared key in the field to the right. The pre-shared key can be: • alphanumeric characters or ,;. | `~!@#$%^&*()_+\{}':../<>=-" • pairs of hexadecimal (0-9, A-F) characters, preceded by "0x". Type "0x" at the beginning of a hexadecimal key. For example, "0x0123456789ABCDEF" is in hexadecimal format; "0123456789ABCDEF" is in ASCII format. If you use hexadecimal, you must enter twice as many characters since you need to enter pairs. The Zyxel Device and remote IPSec router must use the same pre-shared key. Select **unmasked** to see the pre-shared key in readable plain text.
Certificate	Select this to have the Zyxel Device and remote IPSec router use certificates to authenticate each other when they negotiate the IKE SA. Then select the certificate the Zyxel Device uses to identify itself to the remote IPSec router. This certificate is one of the certificates in **My Certificates**. If this certificate is self-signed, import it into the remote IPsec router. If this certificate is signed by a CA, the remote IPsec router must trust that CA. Note: The IPSec routers must trust each other's certificates. The Zyxel Device uses one of its **Trusted Certificates** to authenticate the remote IPSec router's certificate. The trusted certificate can be a self-signed certificate or that of a trusted CA that signed the remote IPSec router's certificate.
User-based PSK	User-based PSK (IKEv1 only) generates and manages separate pre-shared keys for every user. This enables multiple users, each with a unique key, to access the same VPN gateway policy with one-to-one authentication and strong encryption. Access can be denied on a per-user basis thus allowing VPN SA user-based policies. Click **User-Based PSK** then select a user or group object who is allowed VPN SA access using this VPN gateway policy. This is for IKEv1 only.
Local ID Type	This field is read-only if the Zyxel Device and remote IPSec router use certificates to identify each other. Select which type of identification is used to identify the Zyxel Device during authentication. Choices are: **IPv4** or **IPv6** - the Zyxel Device is identified by an IP address **DNS** - the Zyxel Device is identified by a domain name **E-mail** - the Zyxel Device is identified by the string specified in this field
Content	This field is read-only if the Zyxel Device and remote IPSec router use certificates to identify each other. Type the identity of the Zyxel Device during authentication. The identity depends on the **Local ID Type**. **IP** - type an IP address; if you type 0.0.0.0, the Zyxel Device uses the IP address specified in the **My Address** field. This is not recommended in the following situations: • There is a NAT router between the Zyxel Device and remote IPSec router. • You want the remote IPSec router to be able to distinguish between IPSec SA requests that come from IPSec routers with dynamic WAN IP addresses. In these situations, use a different IP address, or use a different **Local ID Type**. **DNS** - type the fully qualified domain name (FQDN). This value is only used for identification and can be any string that matches the peer ID string. **E-mail** - the Zyxel Device is identified by the string you specify here; you can use up to 63 ASCII characters including spaces, although trailing spaces are truncated. This value is only used for identification and can be any string.

Table 156 Configuration > VPN > IPSec VPN > VPN Gateway > Add/Edit (continued)

LABEL	DESCRIPTION
Peer ID Type	Select which type of identification is used to identify the remote IPSec router during authentication. Choices are: **IP** - the remote IPSec router is identified by an IP address **DNS** - the remote IPSec router is identified by a domain name **E-mail** - the remote IPSec router is identified by the string specified in this field **Any** - the Zyxel Device does not check the identity of the remote IPSec router If the Zyxel Device and remote IPSec router use certificates, there is one more choice. **Subject Name** - the remote IPSec router is identified by the subject name in the certificate
Content	This field is disabled if the **Peer ID Type** is **Any**. Type the identity of the remote IPSec router during authentication. The identity depends on the **Peer ID Type**. If the Zyxel Device and remote IPSec router do not use certificates, **IP** - type an IP address; see the note at the end of this description. **DNS** - type the fully qualified domain name (FQDN). This value is only used for identification and can be any string that matches the peer ID string. **E-mail** - the remote IPSec router is identified by the string you specify here; you can use up to 31 ASCII characters including spaces, although trailing spaces are truncated. This value is only used for identification and can be any string. If the Zyxel Device and remote IPSec router use certificates, type the following fields from the certificate used by the remote IPSec router. **IP** - subject alternative name field; see the note at the end of this description. **DNS** - subject alternative name field **E-mail** - subject alternative name field **Subject Name** - subject name (maximum 255 ASCII characters, including spaces) Note: If **Peer ID Type** is **IP**, please read the rest of this section. If you type 0.0.0.0, the Zyxel Device uses the IP address specified in the **Secure Gateway Address** field. This is not recommended in the following situations: • There is a NAT router between the Zyxel Device and remote IPSec router. • You want the remote IPSec router to be able to distinguish between IPSec SA requests that come from IPSec routers with dynamic WAN IP addresses. In these situations, use a different IP address, or use a different **Peer ID Type**.
Phase 1 Settings	
SA Life Time (Seconds)	Type the maximum number of seconds the IKE SA can last. When this time has passed, the Zyxel Device and remote IPSec router have to update the encryption and authentication keys and re-negotiate the IKE SA. This does not affect any existing IPSec SAs, however.
Negotiation Mode	Select the negotiation mode to use to negotiate the IKE SA. Choices are **Main** - this encrypts the Zyxel Device's and remote IPSec router's identities but takes more time to establish the IKE SA **Aggressive** - this is faster but does not encrypt the identities The Zyxel Device and the remote IPSec router must use the same negotiation mode.
Proposal	Use this section to manage the encryption algorithm and authentication algorithm pairs the Zyxel Device accepts from the remote IPSec router for negotiating the IKE SA.
Add	Click this to create a new entry.

Table 156 Configuration > VPN > IPSec VPN > VPN Gateway > Add/Edit (continued)

LABEL	DESCRIPTION
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
#	This field is a sequential value, and it is not associated with a specific proposal. The sequence of proposals should not affect performance significantly.
Encryption	Select which key size and encryption algorithm to use in the IKE SA. Choices are: **DES** - a 56-bit key with the DES encryption algorithm **3DES** - a 168-bit key with the DES encryption algorithm **AES128** - a 128-bit key with the AES encryption algorithm **AES192** - a 192-bit key with the AES encryption algorithm **AES256** - a 256-bit key with the AES encryption algorithm The Zyxel Device and the remote IPSec router must use the same key size and encryption algorithm. Longer keys require more processing power, resulting in increased latency and decreased throughput.
Authentication	Select which hash algorithm to use to authenticate packet data in the IPSec SA. Choices are **SHA1**, **SHA256**, **SHA512** and **MD5**. SHA is generally considered stronger than **MD5**, but it is also slower. The remote IPSec router must use the same authentication algorithm.
Key Group	Select which Diffie-Hellman key group (DH*x*) you want to use for encryption keys. Choices are: **DH1** - use a 768-bit random number **DH2** - use a 1024-bit random number **DH5** - use a 1536-bit random number **DH14** - use a 2048 bit random number The longer the key, the more secure the encryption, but also the longer it takes to encrypt and decrypt information. Both routers must use the same DH key group.
NAT Traversal	Select this if any of these conditions are satisfied. • This IKE SA might be used to negotiate IPSec SAs that use ESP as the active protocol. • There are one or more NAT routers between the Zyxel Device and remote IPSec router, and these routers do not support IPSec pass-thru or a similar feature. The remote IPSec router must also enable NAT traversal, and the NAT routers have to forward packets with UDP port 500 and UDP 4500 headers unchanged. This field applies for IKEv1 only. NAT Traversal is always performed when you use IKEv2.
Dead Peer Detection (DPD)	Select this check box if you want the Zyxel Device to make sure the remote IPSec router is there before it transmits data through the IKE SA. The remote IPSec router must support DPD. If there has been no traffic for at least 15 seconds, the Zyxel Device sends a message to the remote IPSec router. If the remote IPSec router responds, the Zyxel Device transmits the data. If the remote IPSec router does not respond, the Zyxel Device shuts down the IKE SA. If the remote IPSec router does not support DPD, see if you can use the VPN connection connectivity check (see Section 20.2.1 on page 386). This field applies for IKEv1 only. Dead Peer Detection (DPD) is always performed when you use IKEv2.
X Auth / Extended Authentication Protocol	This part of the screen displays **X-Auth** when using **IKEv1** and **Extended Authentication Protocol** when using **IKEv2**.

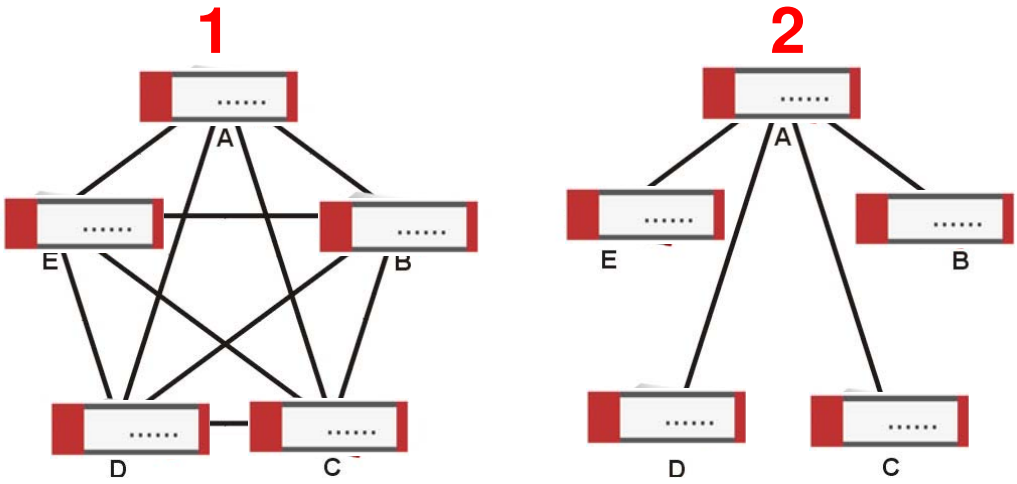
Table 156 Configuration > VPN > IPSec VPN > VPN Gateway > Add/Edit (continued)

LABEL	DESCRIPTION
X-Auth	This displays when using IKEv1. When different users use the same VPN tunnel to connect to the Zyxel Device (telecommuters sharing a tunnel for example), use X-auth to enforce a user name and password check. This way even though telecommuters all know the VPN tunnel's security settings, each still has to provide a unique user name and password.
Enable Extended Authentication	Select this if one of the routers (the Zyxel Device or the remote IPSec router) verifies a user name and password from the other router using the local user database and/or an external server.
Server Mode	Select this if the Zyxel Device authenticates the user name and password from the remote IPSec router. You also have to select the authentication method, which specifies how the Zyxel Device authenticates this information.
AAA Method	Select the authentication method, which specifies how the Zyxel Device authenticates this information.
Allowed User	Extended authentication now supports an allowed user. Select what users should be authenticated.
Client Mode	Select this radio button if the Zyxel Device provides a username and password to the remote IPSec router for authentication. You also have to provide the **User Name** and the **Password**.
User Name	This field is required if the Zyxel Device is in **Client Mode** for extended authentication. Type the user name the Zyxel Device sends to the remote IPSec router. The user name can be 1-31 ASCII characters. It is case-sensitive, but spaces are not allowed.
Password	This field is required if the Zyxel Device is in **Client Mode** for extended authentication. Type the password the Zyxel Device sends to the remote IPSec router. The password can be 1-31 ASCII characters. It is case-sensitive, but spaces are not allowed.
Retype to Confirm	Type the exact same password again here to make sure an error was not made when typing it originally.
Extended Authentication Protocol	This displays when using **IKEv2**. EAP uses a certificate for authentication.
Enable Extended Authentication Protocol	Select this if one of the routers (the Zyxel Device or the remote IPSec router) verifies a user name and password from the other router using the local user database and/or an external server or a certificate.
Allowed Auth Method	This field displays the authentication method that is used to authenticate the users.
Server Mode	Select this if the Zyxel Device authenticates the user name and password from the remote IPSec router. You also have to select an AAA method, which specifies how the Zyxel Device authenticates this information and who may be authenticated (**Allowed User**).
Client Mode	Select this radio button if the Zyxel Device provides a username and password to the remote IPSec router for authentication. You also have to provide the **User Name** and the **Password**.
User Name	This field is required if the Zyxel Device is in **Client Mode** for extended authentication. Type the user name the Zyxel Device sends to the remote IPSec router. The user name can be 1-31 ASCII characters. It is case-sensitive, but spaces are not allowed.
Password	This field is required if the Zyxel Device is in **Client Mode** for extended authentication. Type the password the Zyxel Device sends to the remote IPSec router. The password can be 1-31 ASCII characters. It is case-sensitive, but spaces are not allowed.
Retype to Confirm	Type the exact same password again here to make sure an error was not made when typing it originally.
OK	Click **OK** to save your settings and exit this screen.
Cancel	Click **Cancel** to exit this screen without saving.

20.4 VPN Concentrator

A VPN concentrator combines several IPSec VPN connections into one secure network.

Figure 272 VPN Topologies (Fully Meshed and Hub and Spoke)



In a fully-meshed VPN topology (1 in the figure), there is a VPN connection between every pair of routers. In a hub-and-spoke VPN topology (2 in the figure), there is a VPN connection between each spoke router (B, C, D, and E) and the hub router (A), which uses the VPN concentrator. The VPN concentrator routes VPN traffic between the spoke routers and itself.

A VPN concentrator reduces the number of VPN connections that you have to set up and maintain in the network. You might also be able to consolidate the policy routes in each spoke router, depending on the IP addresses and subnets of each spoke.

However a VPN concentrator is not for every situation. The hub router is a single failure point, so a VPN concentrator is not as appropriate if the connection between spoke routers cannot be down occasionally (maintenance, for example). There is also more burden on the hub router. It receives VPN traffic from one spoke, decrypts it, inspects it to find out to which spoke to route it, encrypts it, and sends it to the appropriate spoke. Therefore, a VPN concentrator is more suitable when there is a minimum amount of traffic between spoke routers.

20.4.1 VPN Concentrator Requirements and Suggestions

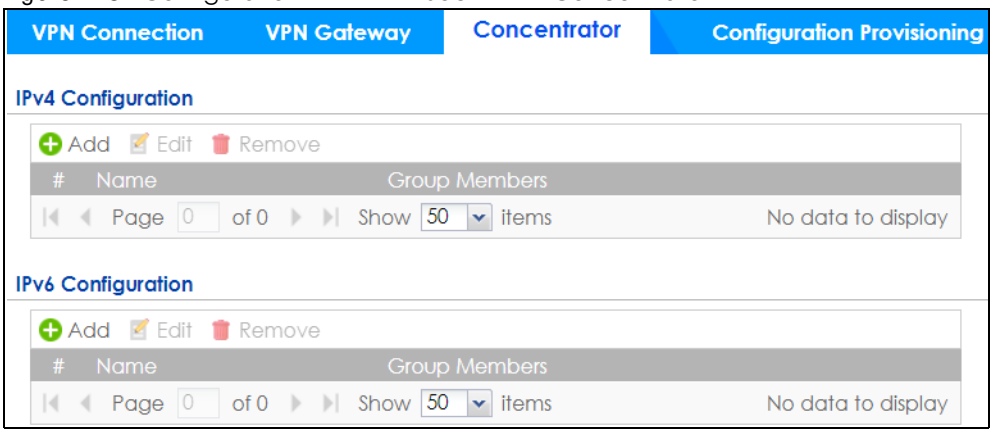
Consider the following when using the VPN concentrator.

- The local IP addresses configured in the VPN rules should not overlap.
- The concentrator must have at least one separate VPN rule for each spoke. In the local policy, specify the IP addresses of the networks with which the spoke is to be able to have a VPN tunnel. This may require you to use more than one VPN rule for each spoke.
- To have all Internet access from the spoke routers go through the VPN tunnel, set the VPN rules in the spoke routers to use 0.0.0.0 (any) as the remote IP address.
- Your security policies can still block VPN packets.

20.4.2 VPN Concentrator Screen

The **VPN Concentrator** summary screen displays the VPN concentrators in the Zyxel Device. To access this screen, click **Configuration** > **VPN** > **IPSec VPN** > **Concentrator**.

Figure 273 Configuration > VPN > IPSec VPN > Concentrator



Each field is discussed in the following table. See Section 20.4.3 on page 402 for more information.

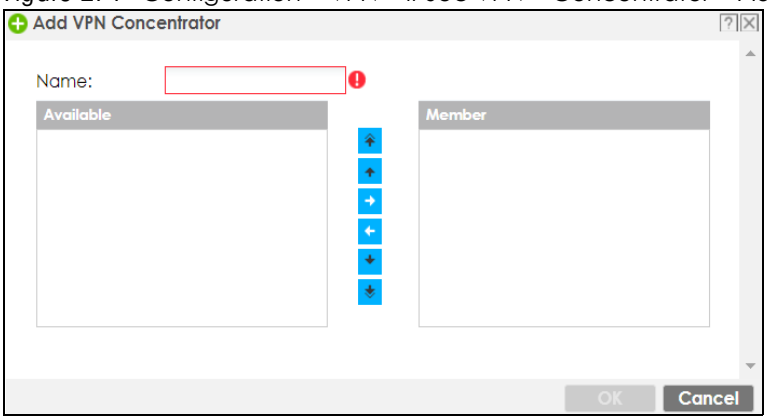
Table 157 Configuration > VPN > IPSec VPN > Concentrator

LABEL	DESCRIPTION
IPv4/IPv6 Configuration	Choose to configure for IPv4 or IPv6 traffic.
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
#	This field is a sequential value, and it is not associated with a specific concentrator.
Name	This field displays the name of the VPN concentrator.
Group Members	These are the VPN connection policies that are part of the VPN concentrator.

20.4.3 The VPN Concentrator Add/Edit Screen

Use the **VPN Concentrator Add/Edit** screen to create or edit a VPN concentrator. To access this screen, go to the **VPN Concentrator summary** screen (see Section 20.4 on page 401), and click either the **Add** icon or an **Edit** icon.

Figure 274 Configuration > VPN > IPSec VPN > Concentrator > Add/Edit



Each field is described in the following table.

Table 158 VPN > IPSec VPN > Concentrator > Add/Edit

LABEL	DESCRIPTION
Name	Enter the name of the concentrator. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Member	Select the concentrator's IPSec VPN connection policies. Note: You must disable policy enforcement in each member. See Section 20.2.1 on page 386. IPSec VPN connection policies that do not belong to a VPN concentrator appear under **Available**. Select any VPN connection policies that you want to add to the VPN concentrator and click the right arrow button to add them. The VPN concentrator's member VPN connections appear under **Member**. Select any VPN connections that you want to remove from the VPN concentrator, and click the left arrow button to remove them.
OK	Click **OK** to save your changes in the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

20.5 Zyxel Device IPSec VPN Client Configuration Provisioning

Use the **Configuration > VPN > IPSec VPN > Configuration Provisioning** screen to configure who can retrieve VPN rule settings from the Zyxel Device using the Zyxel Device IPSec VPN Client. In the Zyxel Device IPSec VPN Client, you just need to enter the IP address of the Zyxel Device to get all the VPN rule settings automatically. You do not need to manually configure all rule settings in the Zyxel Device IPSec VPN client.

VPN rules for the Zyxel Device IPSec VPN Client have certain restrictions. They must *not* contain the following settings:

- **AH** active protocol
- **NULL** encryption
- **SHA512** authentication

- A subnet or range remote policy

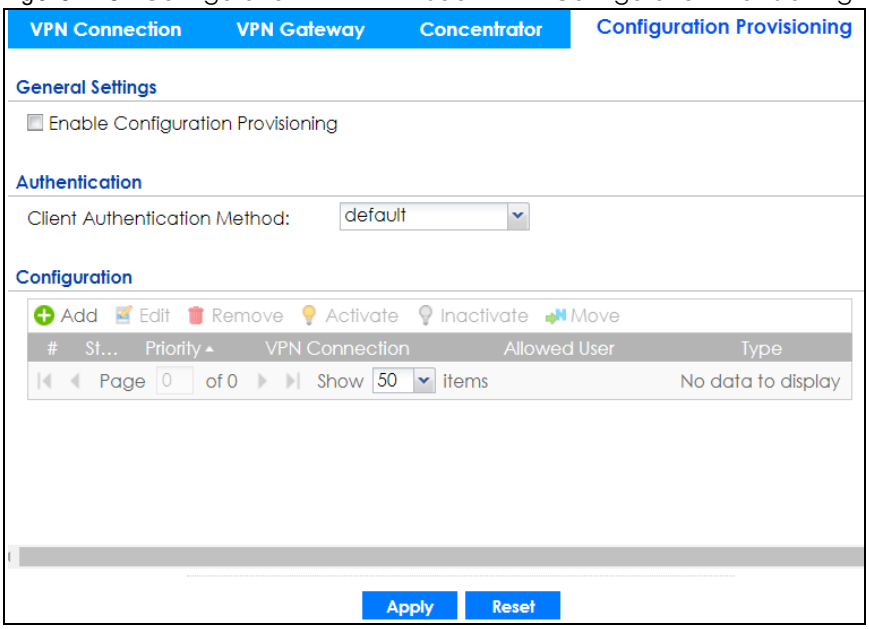
The following VPN Gateway rules configured on the Zyxel Device cannot be provisioned to the IPSec VPN Client:

- IPv4 rules with IKEv2 version
- IPv4 rules with User-based PSK authentication

Note: You must enable IPv6 in System > IPv6 to activate IPv6 VPN tunneling rules.

In the Zyxel Device **Quick Setup** wizard, you can use the **VPN Settings for Configuration Provisioning** wizard to create a VPN rule that will not violate these restrictions.

Figure 275 Configuration > VPN > IPSec VPN > Configuration Provisioning



Each field is discussed in the following table.

Table 159 Configuration > VPN > IPSec VPN > Configuration Provisioning

LABEL	DESCRIPTION
Enable Configuration Provisioning	Select this for users to be able to retrieve VPN rule settings using the Zyxel Device IPSec VPN client.
Client Authentication Method	Choose how users should be authenticated. They can be authenticated using the local database on the Zyxel Device or an external authentication database such as LDAP, Active Directory or RADIUS. **default** is a method you configured in **Object** > **Auth Method**. You may configure multiple methods there. If you choose the local database on the Zyxel Device, then configure users using the **Object** > **User/ Group** screen. If you choose LDAP, Active Directory or RADIUS authentication servers, then configure users on the respective server.
Configuration	When you add or edit a configuration provisioning entry, you are allowed to set the **VPN Connection** and **Allowed User** fields. Duplicate entries are not allowed. You cannot select the same **VPN Connection** and **Allowed User** pair in a new entry if the same pair exists in a previous entry. You can bind different rules to the same user, but the Zyxel Device will only allow VPN rule setting retrieval for the first match found.

Table 159 Configuration > VPN > IPSec VPN > Configuration Provisioning (continued)

LABEL	DESCRIPTION
Add	Click **Add** to bind a configured VPN rule to a user or group. Only that user or group may then retrieve the specified VPN rule settings. If you click **Add** without selecting an entry in advance then the new entry appears as the first entry. Entry order is important as the Zyxel Device searches entries in the order listed here to find a match. After a match is found, the Zyxel Device stops searching. If you want to add an entry as number three for example, then first select entry 2 and click **Add**. To reorder an entry, use **Move**.
Edit	Select an existing entry and click **Edit** to change its settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**. Make sure that **Enable Configuration Provisioning** is also selected.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Move	Use **Move** to reorder a selected entry. Select an entry, click **Move**, type the number where the entry should be moved, press <ENTER>, then click **Apply**.
Status	This icon shows if the entry is active (yellow) or not (gray). VPN rule settings can only be retrieved when the entry is activated (and **Enable Configuration Provisioning** is also selected).
Priority	Priority shows the order of the entry in the list. Entry order is important as the Zyxel Device searches entries in the order listed here to find a match. After a match is found the Zyxel Device stops searching.
VPN Connection	This field shows all configured VPN rules that match the rule criteria for the Zyxel Device IPSec VPN client. Select a rule to bind to the associated user or group.
Allowed User	Select which user or group of users is allowed to retrieve the associated VPN rule settings using the Zyxel Device IPSec VPN client. A user may belong to a number of groups. If entries are configured for different groups, the Zyxel Device will allow VPN rule setting retrieval based on the first match found. Users of type **admin** or **limited-admin** are not allowed.
Type	This field shows how traffic is tunneled from the Zyxel Device to the Zyxel VPN client: • **6in4** (tunnel IPv6 traffic from the Zyxel Device to the Zyxel client in an IPv4 network); • **4in6** (tunnel IPv4 traffic from the Zyxel Device to the Zyxel VPN client in an IPv6 network); • **4in4** (tunnel IPv4 traffic from the Zyxel Device to the Zyxel VPN client in an IPv4 network).
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

20.6 IPSec VPN Background Information

Here is some more detailed IPSec VPN background information.

IKE SA Overview

The IKE SA provides a secure connection between the Zyxel Device and remote IPSec router.

It takes several steps to establish an IKE SA. The negotiation mode determines how many. There are two negotiation modes--main mode and aggressive mode. Main mode provides better security, while aggressive mode is faster.

Note: Both routers must use the same negotiation mode.

These modes are discussed in more detail in Negotiation Mode. Main mode is used in various examples in the rest of this section.

The Zyxel Device supports IKEv1 and IKEv2. See Section 20.1 on page 379 for more information.

IP Addresses of the Zyxel Device and Remote IPSec Router

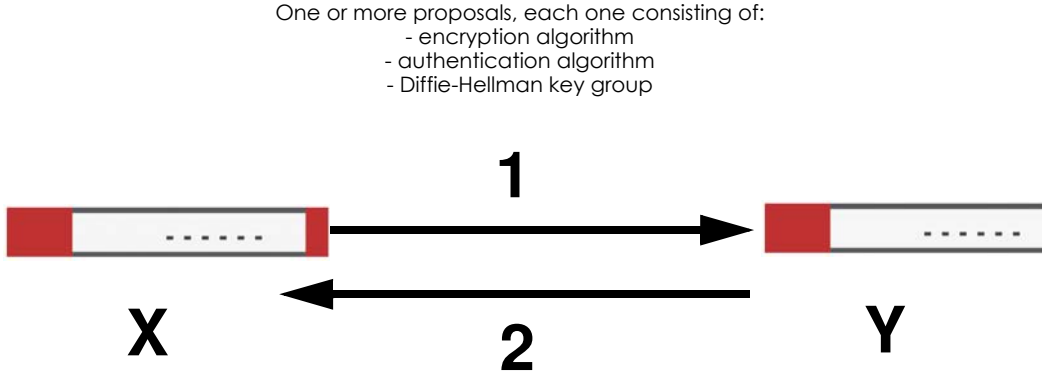
To set up an IKE SA, you have to specify the IP addresses of the Zyxel Device and remote IPSec router. You can usually enter a static IP address or a domain name for either or both IP addresses. Sometimes, your Zyxel Device might offer another alternative, such as using the IP address of a port or interface, as well.

You can also specify the IP address of the remote IPSec router as 0.0.0.0. This means that the remote IPSec router can have any IP address. In this case, only the remote IPSec router can initiate an IKE SA because the Zyxel Device does not know the IP address of the remote IPSec router. This is often used for telecommuters.

IKE SA Proposal

The IKE SA proposal is used to identify the encryption algorithm, authentication algorithm, and Diffie-Hellman (DH) key group that the Zyxel Device and remote IPSec router use in the IKE SA. In main mode, this is done in steps 1 and 2, as illustrated next.

Figure 276 IKE SA: Main Negotiation Mode, Steps 1 - 2: IKE SA Proposal



The Zyxel Device sends one or more proposals to the remote IPSec router. (In some devices, you can only set up one proposal.) Each proposal consists of an encryption algorithm, authentication algorithm, and DH key group that the Zyxel Device wants to use in the IKE SA. The remote IPSec router selects an acceptable proposal and sends the accepted proposal back to the Zyxel Device. If the remote IPSec router rejects all of the proposals, the Zyxel Device and remote IPSec router cannot establish an IKE SA.

Note: Both routers must use the same encryption algorithm, authentication algorithm, and DH key group.

In most Zyxel Devices, you can select one of the following encryption algorithms for each proposal. The algorithms are listed in order from weakest to strongest.

- Data Encryption Standard (DES) is a widely used method of data encryption. It applies a 56-bit key to each 64-bit block of data.

- Triple DES (3DES) is a variant of DES. It iterates three times with three separate keys, effectively tripling the strength of DES.
- Advanced Encryption Standard (AES) is a newer method of data encryption that also uses a secret key. AES applies a 128-bit key to 128-bit blocks of data. It is faster than 3DES.

Some Zyxel Devices also offer stronger forms of AES that apply 192-bit or 256-bit keys to 128-bit blocks of data.

In most Zyxel Devices, you can select one of the following authentication algorithms for each proposal. The algorithms are listed in order from weakest to strongest.

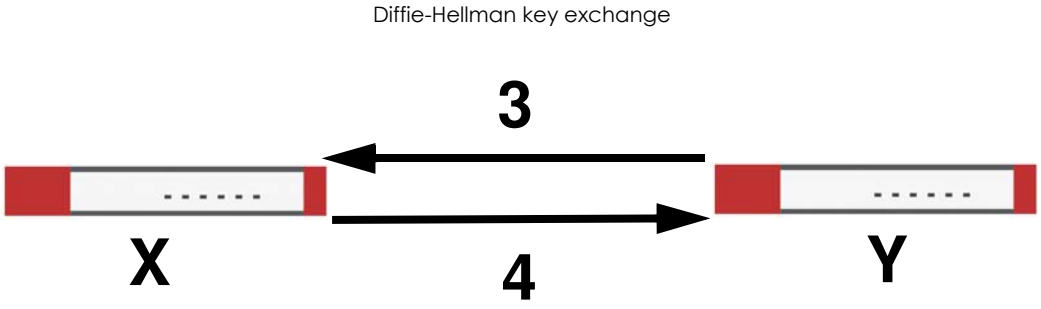
- MD5 (Message Digest 5) produces a 128-bit digest to authenticate packet data.
- SHA1 (Secure Hash Algorithm) produces a 160-bit digest to authenticate packet data.
- SHA256 (Secure Hash Algorithm) produces a 256-bit digest to authenticate packet data.
- SHA512 (Secure Hash Algorithm) produces a 512-bit digest to authenticate packet data.

See Diffie-Hellman (DH) Key Exchange on page 407 for more information about DH key groups.

Diffie-Hellman (DH) Key Exchange

The Zyxel Device and the remote IPSec router use DH public-key cryptography to establish a shared secret. The shared secret is then used to generate encryption keys for the IKE SA and IPSec SA. In main mode, this is done in steps 3 and 4, as illustrated next.

Figure 277 IKE SA: Main Negotiation Mode, Steps 3 - 4: DH Key Exchange



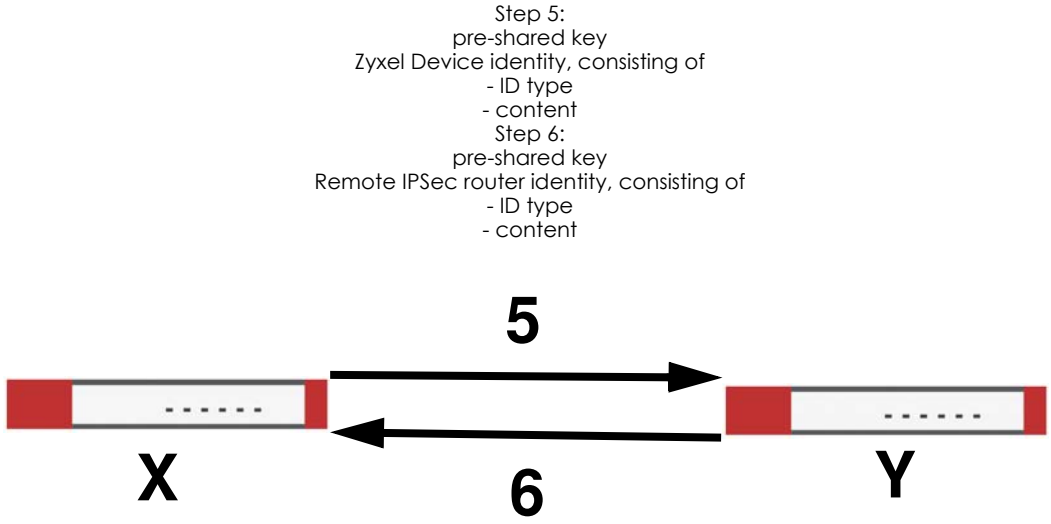
DH public-key cryptography is based on DH key groups. Each key group is a fixed number of bits long. The longer the key, the more secure the encryption, but also the longer it takes to encrypt and decrypt information. For example, DH2 keys (1024 bits) are more secure than DH1 keys (768 bits), but DH2 keys take longer to encrypt and decrypt.

Authentication

Before the Zyxel Device and remote IPSec router establish an IKE SA, they have to verify each other's identity. This process is based on pre-shared keys and router identities.

In main mode, the Zyxel Device and remote IPSec router authenticate each other in steps 5 and 6, as illustrated below. The identities are also encrypted using the encryption algorithm and encryption key the Zyxel Device and remote IPSec router selected in previous steps.

Figure 278 IKE SA: Main Negotiation Mode, Steps 5 - 6: Authentication (continued)



You have to create (and distribute) a pre-shared key. The Zyxel Device and remote IPSec router use it in the authentication process, though it is not actually transmitted or exchanged.

Note: The Zyxel Device and the remote IPSec router must use the same pre-shared key.

Router identity consists of ID type and content. The ID type can be domain name, IP address, or email address, and the content is a (properly-formatted) domain name, IP address, or email address. The content is only used for identification. Any domain name or email address that you enter does not have to actually exist. Similarly, any domain name or IP address that you enter does not have to correspond to the Zyxel Device's or remote IPSec router's properties.

The Zyxel Device and the remote IPSec router have their own identities, so both of them must store two sets of information, one for themselves and one for the other router. Local ID type and content refers to the ID type and content that applies to the router itself, and peer ID type and content refers to the ID type and content that applies to the other router.

Note: The Zyxel Device's local and peer ID type and content must match the remote IPSec router's peer and local ID type and content, respectively.

For example, in the next table, the Zyxel Device and the remote IPSec router authenticate each other successfully. In contrast, in the following table, the Zyxel Device and the remote IPSec router cannot authenticate each other and, therefore, cannot establish an IKE SA.

Table 160 VPN Example: Matching ID Type and Content

ZYXEL DEVICE	REMOTE IPSEC ROUTER
Local ID type: E-mail	Local ID type: IP
Local ID content: tom@yourcompany.com	Local ID content: 1.1.1.2
Peer ID type: IP	Peer ID type: E-mail
Peer ID content: 1.1.1.2	Peer ID content: tom@yourcompany.com

Table 161 VPN Example: Mismatching ID Type and Content

ZYXEL DEVICE	REMOTE IPSEC ROUTER
Local ID type: E-mail	Local ID type: IP
Local ID content: tom@yourcompany.com	Local ID content: 1.1.1.2
Peer ID type: IP	Peer ID type: E-mail
Peer ID content: 1.1.1.20	Peer ID content: tom@yourcompany.com

It is also possible to configure the Zyxel Device to ignore the identity of the remote IPSec router. In this case, you usually set the peer ID type to **Any**. This is less secure, so you should only use this if your Zyxel Device provides another way to check the identity of the remote IPSec router (for example, extended authentication) or if you are troubleshooting a VPN tunnel.

Additional Topics for IKE SA

This section provides more information about IKE SA.

Negotiation Mode

There are two negotiation modes--main mode and aggressive mode. Main mode provides better security, while aggressive mode is faster.

Main mode takes six steps to establish an IKE SA.

Steps 1 - 2: The Zyxel Device sends its proposals to the remote IPSec router. The remote IPSec router selects an acceptable proposal and sends it back to the Zyxel Device.

Steps 3 - 4: The Zyxel Device and the remote IPSec router exchange pre-shared keys for authentication and participate in a Diffie-Hellman key exchange, based on the accepted DH key group, to establish a shared secret.

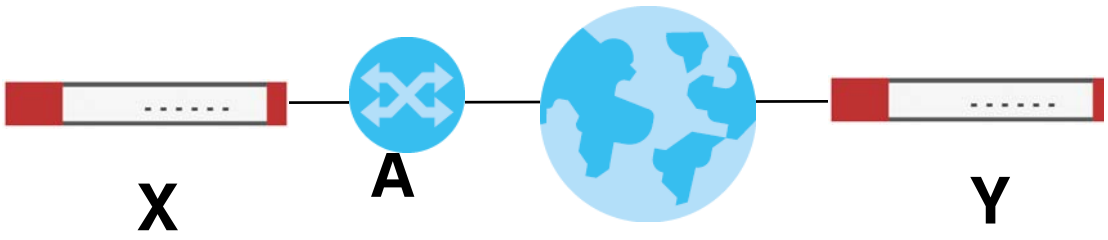
Steps 5 - 6: Finally, the Zyxel Device and the remote IPSec router generate an encryption key (from the shared secret), encrypt their identities, and exchange their encrypted identity information for authentication.

In contrast, aggressive mode only takes three steps to establish an IKE SA. Aggressive mode does not provide as much security because the identity of the Zyxel Device and the identity of the remote IPSec router are not encrypted. It is usually used in remote-access situations, where the address of the initiator is not known by the responder and both parties want to use pre-shared keys for authentication. For example, the remote IPSec router may be a telecommuter who does not have a static IP address.

VPN, NAT, and NAT Traversal

In the following example, there is another router (**A**) between router **X** and router **Y**.

Figure 279 VPN/NAT Example



If router A does NAT, it might change the IP addresses, port numbers, or both. If router X and router Y try to establish a VPN tunnel, the authentication fails because it depends on this information. The routers cannot establish a VPN tunnel.

Most routers like router A now have an IPSec pass-thru feature. This feature helps router A recognize VPN packets and route them appropriately. If router A has this feature, router X and router Y can establish a VPN tunnel as long as the active protocol is ESP. (See Active Protocol on page 411 for more information about active protocols.)

If router A does not have an IPSec pass-thru or if the active protocol is AH, you can solve this problem by enabling NAT traversal. In NAT traversal, router X and router Y add an extra header to the IKE SA and IPSec SA packets. If you configure router A to forward these packets unchanged, router X and router Y can establish a VPN tunnel.

You have to do the following things to set up NAT traversal.

- Enable NAT traversal on the Zyxel Device and remote IPSec router.
- Configure the NAT router to forward packets with the extra header unchanged. (See the field description for detailed information about the extra header.)

The extra header may be UDP port 500 or UDP port 4500, depending on the standard(s) the Zyxel Device and remote IPSec router support.

X-Auth / Extended Authentication

X-Auth / Extended authentication is often used when multiple IPSec routers use the same VPN tunnel to connect to a single IPSec router. For example, this might be used with telecommuters.

In extended authentication, one of the routers (the Zyxel Device or the remote IPSec router) provides a user name and password to the other router, which uses a local user database and/or an external server to verify the user name and password. If the user name or password is wrong, the routers do not establish an IKE SA.

You can set up the Zyxel Device to provide a user name and password to the remote IPSec router, or you can set up the Zyxel Device to check a user name and password that is provided by the remote IPSec router.

If you use extended authentication, it takes four more steps to establish an IKE SA. These steps occur at the end, regardless of the negotiation mode (steps 7-10 in main mode, steps 4-7 in aggressive mode).

Certificates

It is possible for the Zyxel Device and remote IPSec router to authenticate each other with certificates. In this case, you do not have to set up the pre-shared key, local identity, or remote identity because the certificates provide this information instead.

- Instead of using the pre-shared key, the Zyxel Device and remote IPSec router check the signatures on each other's certificates. Unlike pre-shared keys, the signatures do not have to match.
- The local and peer ID type and content come from the certificates.

Note: You must set up the certificates for the Zyxel Device and remote IPSec router first.

IPSec SA Overview

Once the Zyxel Device and remote IPSec router have established the IKE SA, they can securely negotiate an IPSec SA through which to send data between computers on the networks.

Note: The IPSec SA stays connected even if the underlying IKE SA is not available anymore.

This section introduces the key components of an IPSec SA.

Local Network and Remote Network

In an IPSec SA, the local network, the one(s) connected to the Zyxel Device, may be called the local policy. Similarly, the remote network, the one(s) connected to the remote IPSec router, may be called the remote policy.

Active Protocol

The active protocol controls the format of each packet. It also specifies how much of each packet is protected by the encryption and authentication algorithms. IPSec VPN includes two active protocols, AH (Authentication Header, RFC 2402) and ESP (Encapsulating Security Payload, RFC 2406).

Note: The Zyxel Device and remote IPSec router must use the same active protocol.

Usually, you should select ESP. AH does not support encryption, and ESP is more suitable with NAT.

Encapsulation

There are two ways to encapsulate packets. Usually, you should use tunnel mode because it is more secure. Transport mode is only used when the IPSec SA is used for communication between the Zyxel Device and remote IPSec router (for example, for remote management), not between computers on the local and remote networks.

Note: The Zyxel Device and remote IPSec router must use the same encapsulation.

These modes are illustrated below.

Figure 280 VPN: Transport and Tunnel Mode Encapsulation

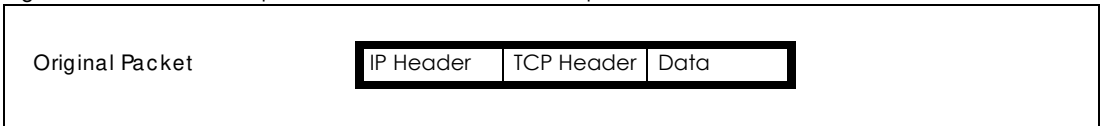


Figure 280 VPN: Transport and Tunnel Mode Encapsulation

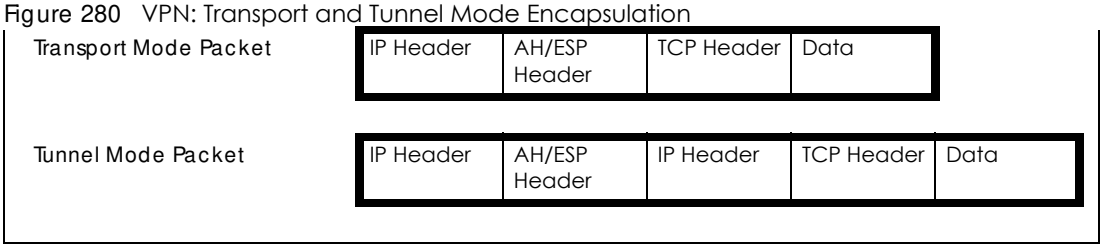


In tunnel mode, the Zyxel Device uses the active protocol to encapsulate the entire IP packet. As a result, there are two IP headers:

- Outside header: The outside IP header contains the IP address of the Zyxel Device or remote IPSec router, whichever is the destination.
- Inside header: The inside IP header contains the IP address of the computer behind the Zyxel Device or remote IPSec router. The header for the active protocol (AH or ESP) appears between the IP headers.

In transport mode, the encapsulation depends on the active protocol. With AH, the Zyxel Device includes part of the original IP header when it encapsulates the packet. With ESP, however, the Zyxel Device does not include the IP header when it encapsulates the packet, so it is not possible to verify the integrity of the source IP address.

IPSec SA Proposal and Perfect Forward Secrecy

An IPSec SA proposal is similar to an IKE SA proposal (see IKE SA Proposal), except that you also have the choice whether or not the Zyxel Device and remote IPSec router perform a new DH key exchange every time an IPSec SA is established. This is called Perfect Forward Secrecy (PFS).

If you enable PFS, the Zyxel Device and remote IPSec router perform a DH key exchange every time an IPSec SA is established, changing the root key from which encryption keys are generated. As a result, if one encryption key is compromised, other encryption keys remain secure.

If you do not enable PFS, the Zyxel Device and remote IPSec router use the same root key that was generated when the IKE SA was established to generate encryption keys.

The DH key exchange is time-consuming and may be unnecessary for data that does not require such security.

PFS is ignored in initial IKEv2 authentication but is used when re-authenticating.

Additional Topics for IPSec SA

This section provides more information about IPSec SA in your Zyxel Device.

Authentication and the Security Parameter Index (SPI)

For authentication, the Zyxel Device and remote IPSec router use the SPI, instead of pre-shared keys, ID type and content. The SPI is an identification number.

Note: The Zyxel Device and remote IPSec router must use the same SPI.

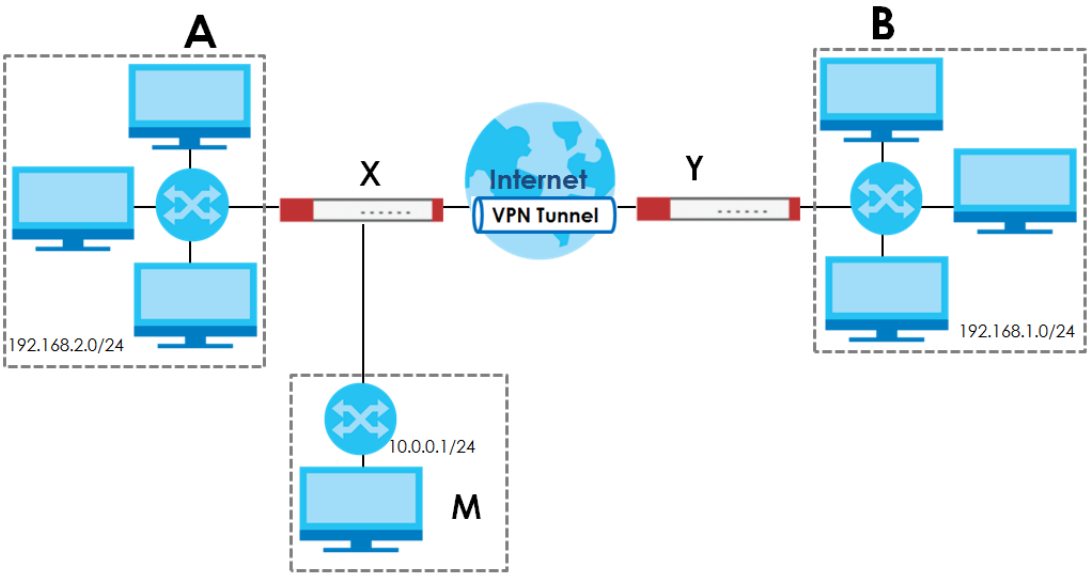
NAT for Inbound and Outbound Traffic

The Zyxel Device can translate the following types of network addresses in IPSec SA.

- Source address in outbound packets - this translation is necessary if you want the Zyxel Device to route packets from computers outside the local network through the IPSec SA.
- Source address in inbound packets - this translation hides the source address of computers in the remote network.
- Destination address in inbound packets - this translation is used if you want to forward packets (for example, mail) from the remote network to a specific computer (like the mail server) in the local network.

Each kind of translation is explained below. The following example is used to help explain each one.

Figure 281 VPN Example: NAT for Inbound and Outbound Traffic



Source Address in Outbound Packets (Outbound Traffic, Source NAT)

This translation lets the Zyxel Device route packets from computers that are not part of the specified local network (local policy) through the IPSec SA. For example, in Figure 281 on page 413, you have to configure this kind of translation if you want computer M to establish a connection with any computer in the remote network (B). If you do not configure it, the remote IPSec router may not route messages for computer M through the IPSec SA because computer M's IP address is not part of its local policy.

To set up this NAT, you have to specify the following information:

- Source - the original source address; most likely, computer M's network.
- Destination - the original destination address; the remote network (B).
- SNAT - the translated source address; the local network (A).

Source Address in Inbound Packets (Inbound Traffic, Source NAT)

You can set up this translation if you want to change the source address of computers in the remote network. To set up this NAT, you have to specify the following information:

- Source - the original source address; the remote network (B).
- Destination - the original destination address; the local network (A).
- SNAT - the translated source address; a different IP address (range of addresses) to hide the original source address.

Destination Address in Inbound Packets (Inbound Traffic, Destination NAT)

You can set up this translation if you want the Zyxel Device to forward some packets from the remote network to a specific computer in the local network. For example, in Figure 281 on page 413, you can configure this kind of translation if you want to forward mail from the remote network to the mail server in the local network (A).

You have to specify one or more rules when you set up this kind of NAT. The Zyxel Device checks these rules similar to the way it checks rules for a security policy. The first part of these rules define the conditions in which the rule apply.

- Original IP - the original destination address; the remote network (B).
- Protocol - the protocol [TCP, UDP, or both] used by the service requesting the connection.
- Original Port - the original destination port or range of destination ports; in Figure 281 on page 413, it might be port 25 for SMTP.

The second part of these rules controls the translation when the condition is satisfied.

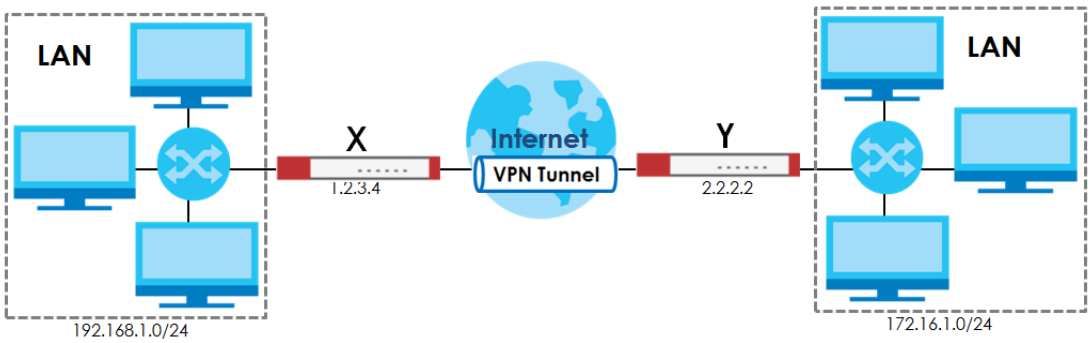
- Mapped IP - the translated destination address; in Figure 281 on page 413, the IP address of the mail server in the local network (A).
- Mapped Port - the translated destination port or range of destination ports.

The original port range and the mapped port range must be the same size.

IPSec VPN Example Scenario

Here is an example site-to-site IPSec VPN scenario.

Figure 282 Site-to-site IPSec VPN Example



CHAPTER 21
SSL VPN

21.1 Overview

Use SSL VPN to allow users to use a web browser for secure remote user login. The remote users do not need a VPN router or VPN client software.

21.1.1 What You Can Do in this Chapter

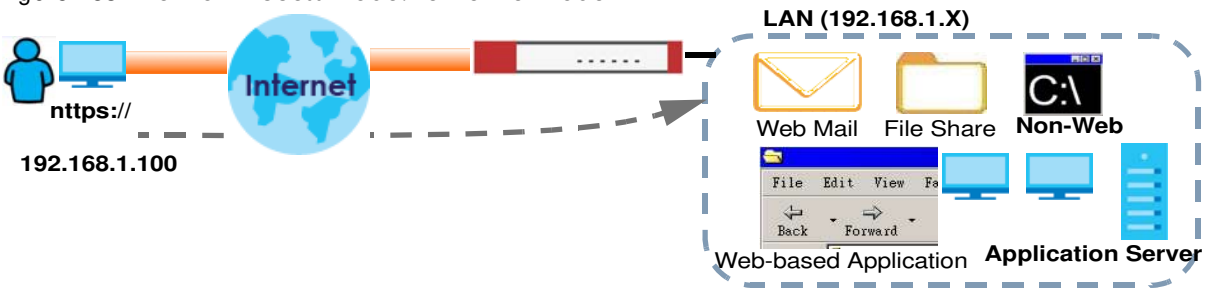
- Use the **VPN > SSL VPN > Access Privilege** screens (see Section 21.2 on page 416) to configure SSL access policies.
- Use the Click **VPN > SSL VPN > Global Setting** screen (see Section 21.3 on page 419) to set the IP address of the Zyxel Device (or a gateway device) on your network for full tunnel mode access, enter access messages or upload a custom logo to be displayed on the remote user screen.

21.1.2 What You Need to Know

Full Tunnel Mode

In full tunnel mode, a virtual connection is created for remote users with private IP addresses in the same subnet as the local network. This allows them to access network resources in the same way as if they were part of the internal network.

Figure 283 Network Access Mode: Full Tunnel Mode



SSL Access Policy

An SSL access policy allows the Zyxel Device to perform the following tasks:

- limit user access to specific applications or file sharing server on the network.
- allow user access to specific networks.
- assign private IP addresses and provide DNS/WINS server information to remote users to access internal networks.

SSL Access Policy Objects

The SSL access policies reference the following objects. If you update this information, in response to changes, the Zyxel Device automatically propagates the changes through the SSL policies that use the object(s). When you delete an SSL policy, the objects are not removed.

Table 162 Objects

OBJECT TYPE	OBJECT SCREEN	DESCRIPTION
User Accounts	User Account/ User Group	Configure a user account or user group to which you want to apply this SSL access policy.
Application	SSL Application	Configure an SSL application object to specify the type of application and the address of the local computer, server, or web site SSL users are to be able to access.
IP Pool	Address	Configure an address object that defines a range of private IP addresses to assign to user computers so they can access the internal network through a VPN connection.
Server Addresses	Address	Configure address objects for the IP addresses of the DNS and WINS servers that the Zyxel Device sends to the VPN connection users.
VPN Network	Address	Configure an address object to specify which network segment users are allowed to access through a VPN connection.

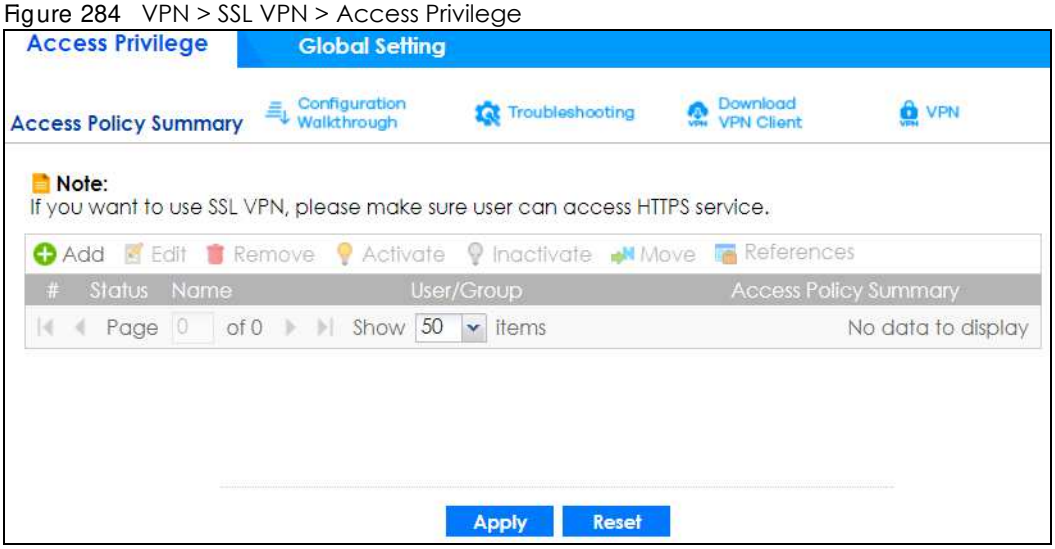
You cannot delete an object that is referenced by an SSL access policy. To delete the object, you must first unassociate the object from the SSL access policy.

21.2 The SSL Access Privilege Screen

Click **VPN** > **SSL VPN** to open the **Access Privilege** screen. This screen lists the configured SSL access policies.

Click on the icons to go to the OneSecurity website where there is guidance on configuration walkthroughs, troubleshooting and other information.

Figure 284 VPN > SSL VPN > Access Privilege



The following table describes the labels in this screen.

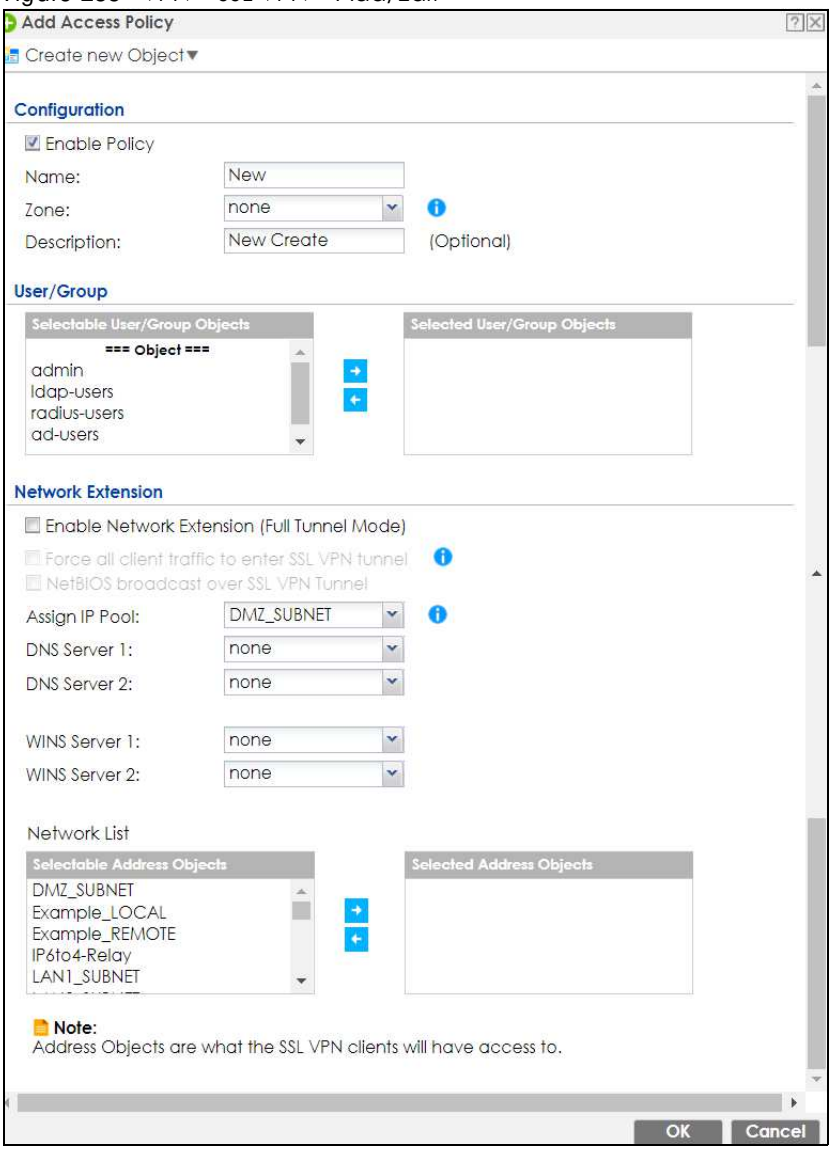
Table 163 VPN > SSL VPN > Access Privilege

LABEL	DESCRIPTION
Access Policy Summary	This screen shows a summary of SSL VPN policies created. Click on the VPN icon to go to the Zyxel VPN Client product page at the Zyxel website.
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Move	To move an entry to a different number in the list, click the **Move** icon. In the field that appears, specify the number to which you want to move the interface.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. Click Refresh to update information on this screen.
#	This field displays the index number of the entry.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Name	This field displays the descriptive name of the SSL access policy for identification purposes.
User/Group	This field displays the user account or user group name(s) associated to an SSL access policy. This field displays up to three names.
Access Policy Summary	This field displays details about the SSL application object this policy uses including its name, type, and address.
Apply	Click **Apply** to save the settings.
Reset	Click **Reset** to discard all changes.

21.2.1 The SSL Access Privilege Policy Add/Edit Screen

To create a new or edit an existing SSL access policy, click the **Add** or **Edit** icon in the **Access Privilege** screen.

Figure 285 VPN > SSL VPN > Add/Edit



The following table describes the labels in this screen.

Table 164 VPN > SSL VPN > Access Privilege > Add/Edit

LABEL	DESCRIPTION
Create new Object	Use to configure any new settings objects that you need to use in this screen.
Configuration	
Enable Policy	Select this option to activate this SSL access policy.
Name	Enter a descriptive name to identify this policy. You can enter up to 31 characters (“a-z”, A-Z”, “0-9”) with no spaces allowed.
Zone	Select the zone to which to add this SSL access policy. You use zones to apply security settings such as security policy and remote management.
Description	Enter additional information about this SSL access policy. You can enter up to 60 characters ("0-9", "a-z", "A-Z", "-" and "_").

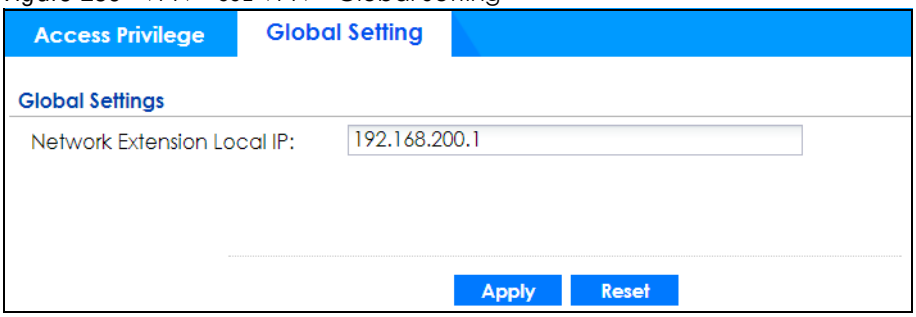
Table 164 VPN > SSL VPN > Access Privilege > Add/Edit (continued)

LABEL	DESCRIPTION
User/Group	The **Selectable User/Group Objects** list displays the name(s) of the user account and/or user group(s) to which you have not applied an SSL access policy yet. To associate a user or user group to this SSL access policy, select a user account or user group and click the right arrow button to add to the **Selected User/Group Objects** list. You can select more than one name. To remove a user or user group, select the name(s) in the **Selected User/Group Objects** list and click the left arrow button. Note: Although you can select admin and limited-admin accounts in this screen, they are reserved for device configuration only. You cannot use them to access the SSL VPN portal.
Network Extension (Optional)	
Enable Network Extension	Select this option to create a VPN tunnel between the authenticated users and the internal network. This allows the users to access the resources on the network as if they were on the same local network. This includes access to resources not supported by SSL application objects. For example this lets users Telnet to the internal network even though the Zyxel Device does not have SSL application objects for Telnet. Clear this option to disable this feature. Users can only access the applications as defined by the VPN tunnel's selected SSL application settings and the remote user computers are not made to be a part of the local network.
Force all client traffic to SSL VPN tunnel	Select this to send all traffic from the SSL VPN clients through the SSL VPN tunnel. This replaces the default gateway of the SSL VPN clients with the SSL VPN gateway.
NetBIOS broadcast over SSL VPN Tunnel	Select this to search for a remote computer and access its applications as if it was in a Local Area Network. The user can find a computer not only by its IP address but also by computer name.
Assign IP Pool	Define a separate pool of IP addresses to assign to the SSL users. Select it here. The SSL VPN IP pool should not overlap with IP addresses on the Zyxel Device's local networks (LAN and DMZ for example), the SSL user's network, or the networks you specify in the SSL VPN **Network List**.
DNS/WINS Server 1..2	Select the name of the DNS or WINS server whose information the Zyxel Device sends to the remote users. This allows them to access devices on the local network using domain names instead of IP addresses.
Network List	To allow user access to local network(s), select a network name in the **Selectable Address Objects** list and click the right arrow button to add to the **Selected Address Objects** list. You can select more than one network. To block access to a network, select the network name in the **Selected Address Objects** list and click the left arrow button.
OK	Click **OK** to save the changes and return to the main **Access Privilege** screen.
Cancel	Click **Cancel** to discard all changes and return to the main **Access Privilege** screen.

21.3 The SSL Global Setting Screen

Click **VPN** > **SSL VPN** and click the **Global Setting** tab to display the following screen. Use this screen to set the IP address of the Zyxel Device (or a gateway device) on your network for full tunnel mode access.

Figure 286 VPN > SSL VPN > Global Setting



The following table describes the labels in this screen.

Table 165 VPN > SSL VPN > Global Setting

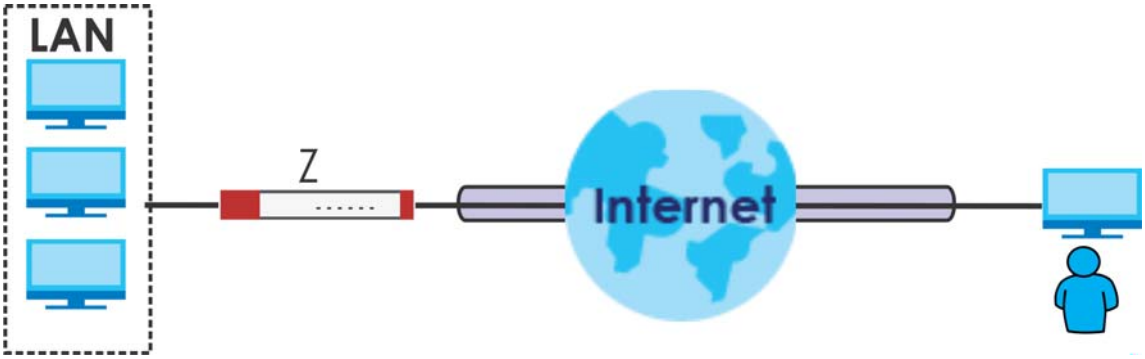
LABEL	DESCRIPTION
Global Setting	
Network Extension Local IP	Specify the IP address of the Zyxel Device (or a gateway device) for full tunnel mode SSL VPN access. Leave this field to the default settings unless it conflicts with another interface.
Apply	Click **Apply** to save the changes and/or start the logo file upload process.
Reset	Click **Reset** to return the screen to its last-saved settings.

CHAPTER 22
L2TP VPN

22.1 Overview

L2TP VPN uses the L2TP and IPSec client software included in remote users' Android, iOS, Windows or Mac OS X operating systems for secure connections to the network behind the Zyxel Device. The remote users do not need their own IPSec gateways or third-party VPN client software.

Figure 287 L2TP VPN Overview



22.1.1 What You Can Do in this Chapter

- Use the **L2TP VPN** screen (see Section 22.2 on page 422) to configure the Zyxel Device's L2TP VPN settings.
- Use the **VPN Setup Wizard** screen in **Quick Setup** (Chapter 4 on page 70) to configure the Zyxel Device's L2TP VPN settings.

22.1.2 What You Need to Know

The Layer 2 Tunneling Protocol (L2TP) works at layer 2 (the data link layer) to tunnel network traffic between two peers over another network (like the Internet). In L2TP VPN, an IPSec VPN tunnel is established first and then an L2TP tunnel is built inside it. See Chapter 20 on page 379 for information on IPSec VPN.

IPSec Configuration Required for L2TP VPN

You must configure an IPSec VPN connection prior to proper L2TP VPN usage (see Chapter 22 on page 421 for details). The IPSec VPN connection must:

- Be enabled.
- Use transport mode.
- Use **Pre-Shared Key** authentication.

- Use a VPN gateway with the **Secure Gateway** set to **0.0.0.0** if you need to allow L2TP VPN clients to connect from more than one IP address.

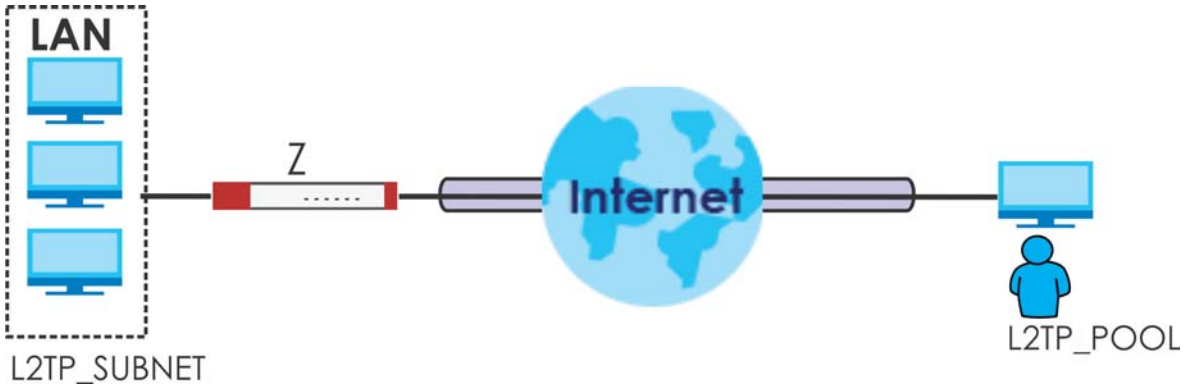
Using the Quick Setup VPN Setup Wizard

The **VPN Setup Wizard** is an easy and convenient way to configure the L2TP VPN settings. Click **Configuration** > **Quick Setup** > **VPN Setup** > **VPN Settings for L2TP VPN Settings** to get started.

Policy Route

The Policy Route for return traffic (from LAN to L2TP clients) is automatically created when Zyxel Device adds a new L2TP connection, allowing users access the resources on a network without additional configuration. However, if some of the traffic from the L2TP clients needs to go to the Internet, you will need to create a policy route to send that traffic from the L2TP tunnels out through a WAN trunk. This task can be easily performed by clicking the Allow L2TP traffic through WAN checkbox at **Quick Setup** > **VPN Setup** > **Allow L2TP traffic through WAN**.

Figure 288 Policy Route for L2TP VPN



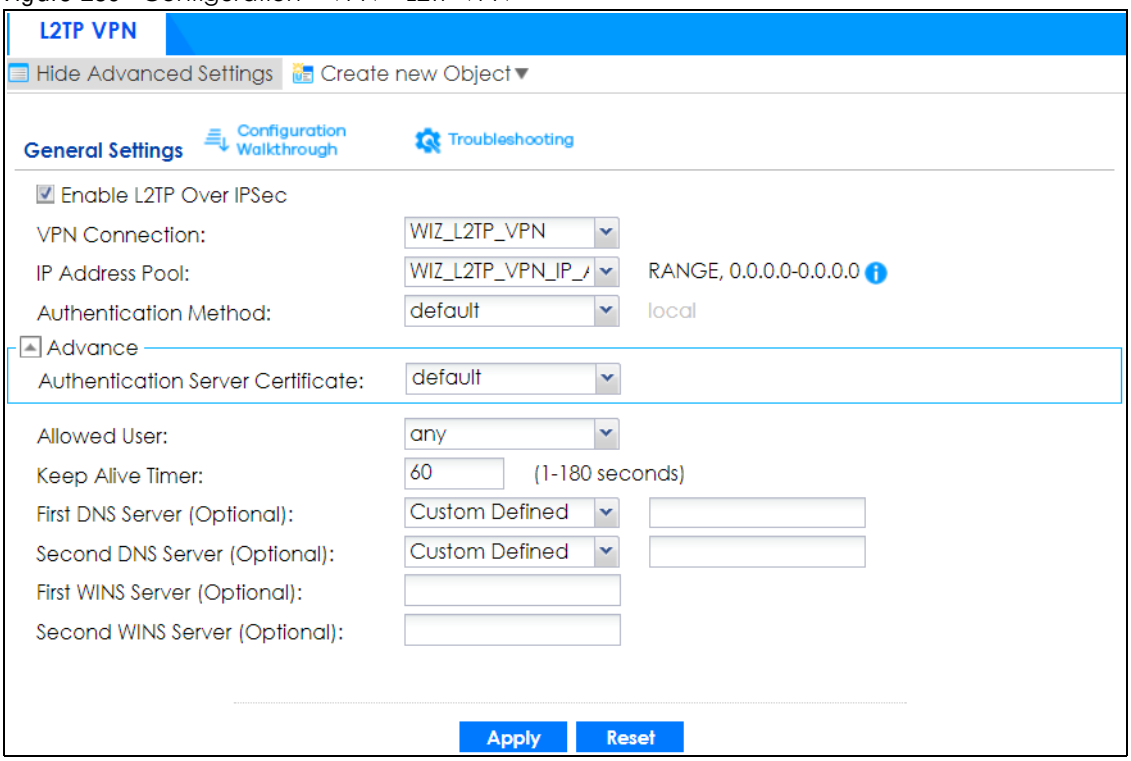
22.2 L2TP VPN Screen

Click **Configuration** > **VPN** > **L2TP VPN** to open the following screen. Use this screen to configure the Zyxel Device's L2TP VPN settings.

Note: Disconnect any existing L2TP VPN sessions before modifying L2TP VPN settings. The remote users must make any needed matching configuration changes and re-establish the sessions using the new settings.

Click on the icons to go to the OneSecurity website where there is guidance on configuration walkthroughs, troubleshooting, and other information.

Figure 289 Configuration > VPN > L2TP VPN



The following table describes the fields in this screen.

Table 166 Configuration > VPN > L2TP VPN

LABEL	DESCRIPTION
Show Advanced Settings / Hide Advanced Settings	Click this button to display a greater or lesser number of configuration fields.
Create new Object	Use to configure any new settings objects that you need to use in this screen.
Enable L2TP Over IPSec	Use this field to turn the Zyxel Device's L2TP VPN function on or off.
VPN Connection	Select the IPSec VPN connection the Zyxel Device uses for L2TP VPN. All of the configured VPN connections display here, but the one you use must meet the requirements listed in IPSec Configuration Required for L2TP VPN. Note: Modifying this VPN connection (or the VPN gateway that it uses) disconnects any existing L2TP VPN sessions.
IP Address Pool	Select the pool of IP addresses that the Zyxel Device uses to assign to the L2TP VPN clients. Use **Create new Object** if you need to configure a new pool of IP addresses. This should not conflict with any WAN, LAN, DMZ or WLAN subnet even if they are not in use.
Authentication Method	Select how the Zyxel Device authenticates a remote user before allowing access to the L2TP VPN tunnel. The authentication method has the Zyxel Device check a user's user name and password against the Zyxel Device's local database, a remote LDAP, RADIUS, a Active Directory server, or more than one of these.
Authentication Server Certificate	Select the certificate to use to identify the Zyxel Device for L2TP VPN connections. You must have certificates already configured in the **My Certificates** screen. The certificate is used with the EAP, PEAP, and MSCHAPv2 authentication protocols.

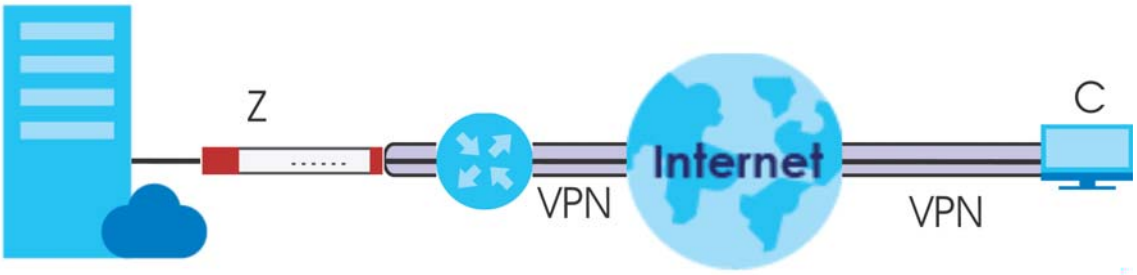
Table 166 Configuration > VPN > L2TP VPN (continued)

LABEL	DESCRIPTION
Allowed User	The remote user must log into the Zyxel Device to use the L2TP VPN tunnel. Select a user or user group that can use the L2TP VPN tunnel. Use **Create new Object** if you need to configure a new user account. Otherwise, select **any** to allow any user with a valid account and password on the Zyxel Device to log in.
Keep Alive Timer	The Zyxel Device sends a Hello message after waiting this long without receiving any traffic from the remote user. The Zyxel Device disconnects the VPN tunnel if the remote user does not respond.
First DNS Server, Second DNS Server	Specify the IP addresses of DNS servers to assign to the remote users. You can specify these IP addresses two ways. **Custom Defined** - enter a static IP address. **From ISP** - use the IP address of a DNS server that another interface received from its DHCP server.
First WINS Server, Second WINS Server	The WINS (Windows Internet Naming Service) server keeps a mapping table of the computer names on your network and the IP addresses that they are currently using. Type the IP addresses of up to two WINS servers to assign to the remote users. You can specify these IP addresses two ways.
Apply	Click **Apply** to save your changes in the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

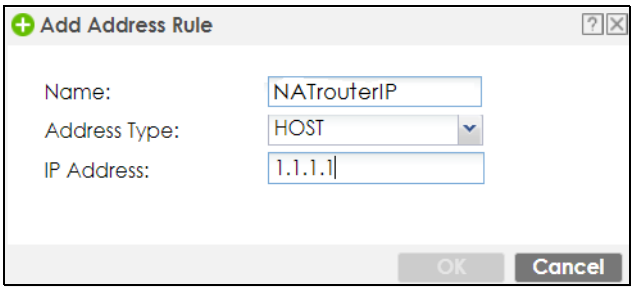
22.2.1 Example: L2TP and Zyxel Device Behind a NAT Router

If the Zyxel Device (Z) is behind a NAT router (N), then do the following for remote clients (C) to access the network behind the Zyxel Device (Z) using L2TP over IPv4.

Figure 290 L2TP and Zyxel Device Behind a NAT Router



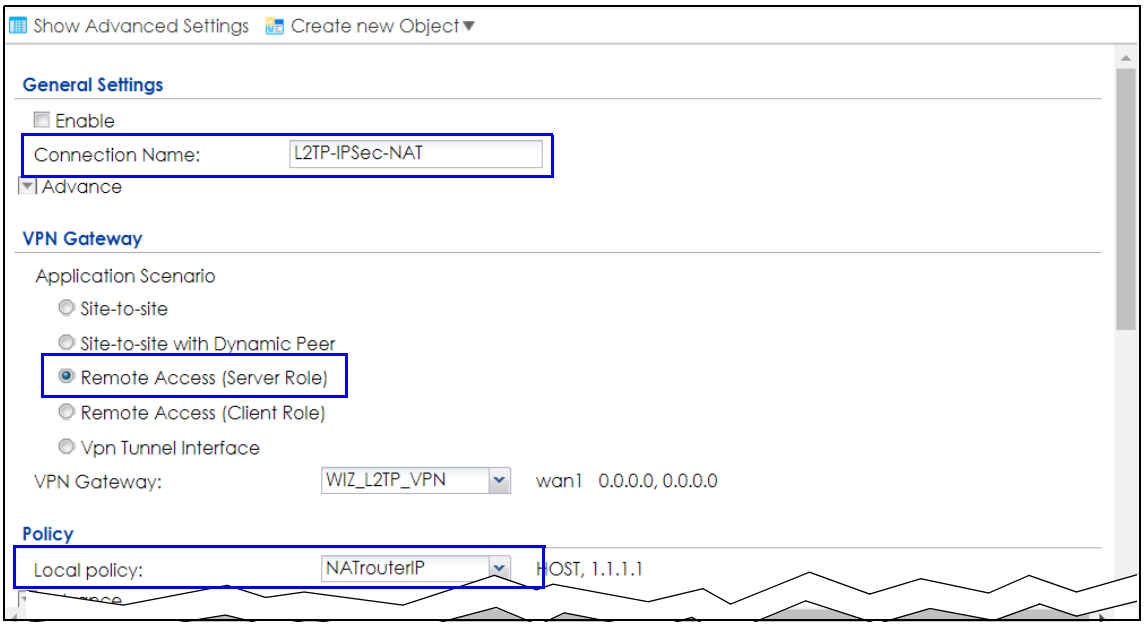
1 Create an address object in **Configuration** > **Object** > **Address**/**GEO IP** > **Address** for the WAN IP address of the NAT router.



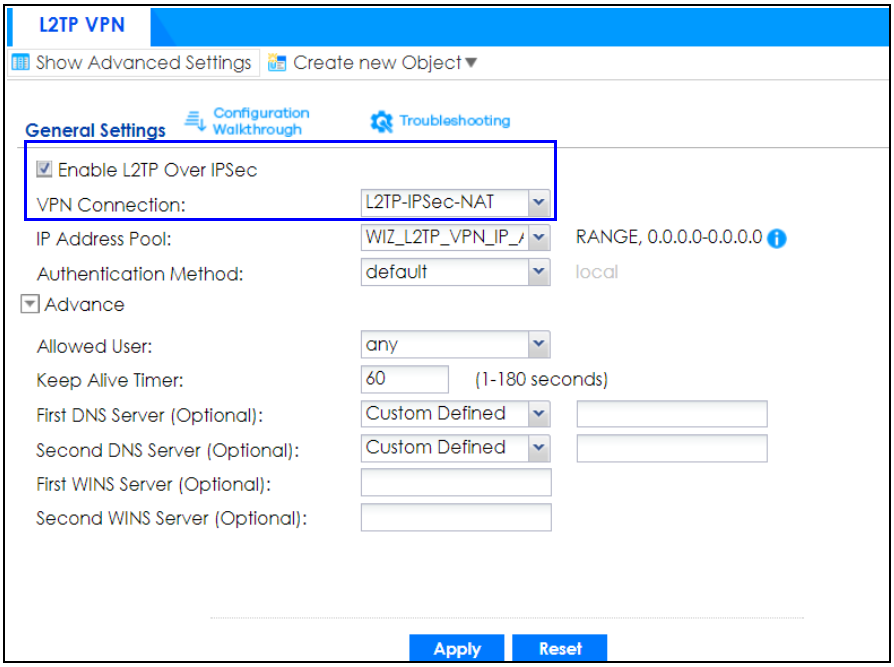
2 Go to **Configuration** > **VPN** > **IPSec VPN** > **VPN Connection** and click **Add** for **IPv4 Configuration** to create a new VPN connection.

3 Select **Remote Access (Server Role)** as the VPN scenario for the remote client.

4 Select the NAT router WAN IP address object as the **Local Policy**.



5 Go to **Configuration** > **VPN** > **L2TP VPN** and select the **VPN Connection** just configured.



CHAPTER 23
BWM (Bandwidth Management)

23.1 Overview

Bandwidth management provides a convenient way to manage the use of various services on the network. It manages general protocols (for example, HTTP and FTP) and applies traffic prioritization to enhance the performance of delay-sensitive applications like voice and video.

23.1.1 What You Can Do in this Chapter

Use the **BWM** screens (see Section 23.2 on page 430) to control bandwidth for services passing through the Zyxel Device, and to identify the conditions that define the bandwidth control.

23.1.2 What You Need to Know

When you allow a service, you can restrict the bandwidth it uses. It controls TCP and UDP traffic. Use policy routes to manage other types of traffic (like ICMP).

Note: Bandwidth management in policy routes has priority over TCP and UDP traffic policies.

If you want to use a service, make sure both the security policy allow the service's packets to go through the Zyxel Device.

Note: The Zyxel Device checks security policies before it checks bandwidth management rules for traffic going through the Zyxel Device.

Bandwidth management examines every TCP and UDP connection passing through the Zyxel Device. Then, you can specify, by port, whether or not the Zyxel Device continues to route the connection.

BWM Type

The Zyxel Device supports three types of bandwidth management: **Shared**, **Per user** and **Per-Source-IP**.

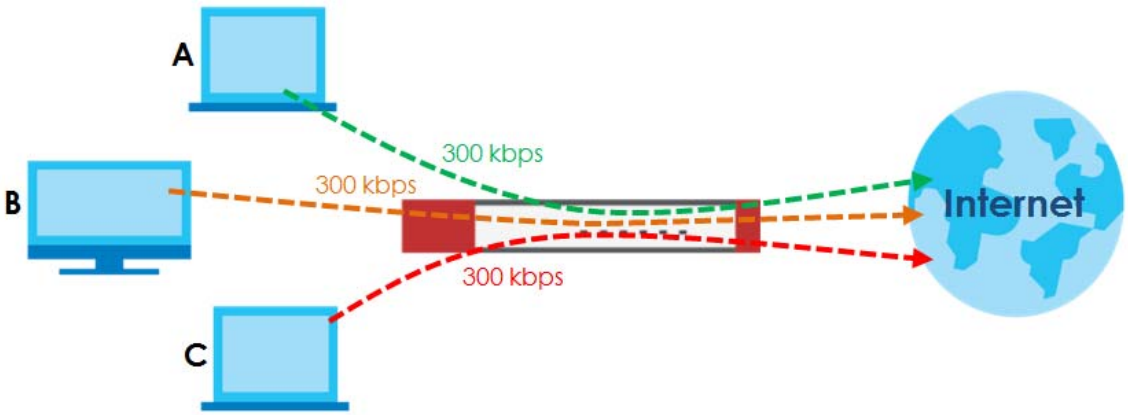
The **Shared** BWM type is selected by default in a bandwidth management rule. All matched traffic shares the bandwidth configured in the rule.

If the BWM type is set to **Per user** in a rule, each user that matches the rule can use up to the configured bandwidth by his/her own.

Select the **Per-Source-IP** type when you want to set the maximum bandwidth for traffic from an individual source IP address.

In the following example, you configure a **Per user** bandwidth management rule for radius-users to limit outgoing traffic to 300 kbs. Then all radius-users (**A**, **B** and **C**) can send 300 kbps of traffic.

Figure 291 Bandwidth Management Per User Type



DiffServ and DSCP Marking

QoS is used to prioritize source-to-destination traffic flows. All packets in the same flow are given the same priority. CoS (class of service) is a way of managing traffic in a network by grouping similar types of traffic together and treating each type as a class. You can use CoS to give different priorities to different packet types.

DiffServ (Differentiated Services) is a class of service (CoS) model that marks packets so that they receive specific per-hop treatment at DiffServ-compliant network devices along the route based on the application types and traffic flow. Packets are marked with DiffServ Code Points (DSCPs) indicating the level of service desired. This allows the intermediary DiffServ-compliant network devices to handle the packets differently depending on the code points without the need to negotiate paths or remember state information for every flow. In addition, applications do not have to request a particular service or give advanced notice of where the traffic is going.

Connection and Packet Directions

Bandwidth management looks at the connection direction, that is, from which interface the connection was initiated and to which interface the connection is going.

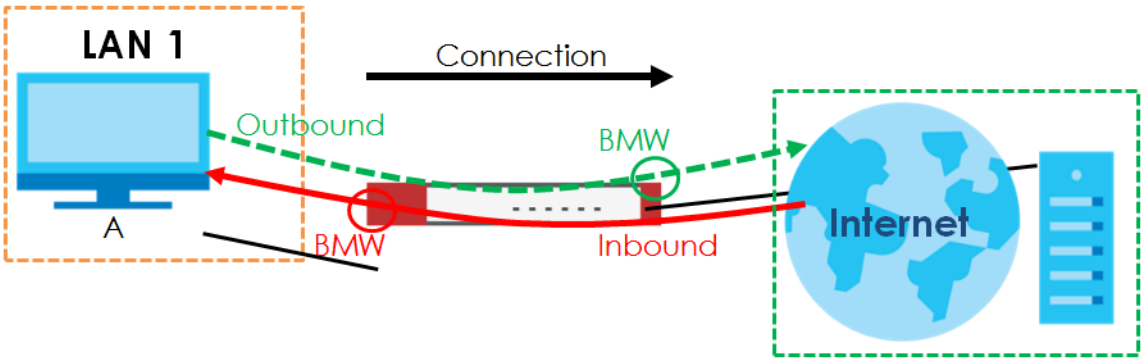
A connection has outbound and inbound packet flows. The Zyxel Device controls the bandwidth of traffic of each flow as it is going out through an interface or VPN tunnel.

- The outbound traffic flows from the connection initiator to the connection responder.
- The inbound traffic flows from the connection responder to the connection initiator.

For example, a LAN1 to WAN connection is initiated from LAN1 and goes to the WAN.

- Outbound traffic goes from a LAN1 device to a WAN device. Bandwidth management is applied before sending the packets out a WAN interface on the Zyxel Device.
- Inbound traffic comes back from the WAN device to the LAN1 device. Bandwidth management is applied before sending the traffic out a LAN1 interface.

Figure 292 LAN1 to WAN Connection and Packet Directions

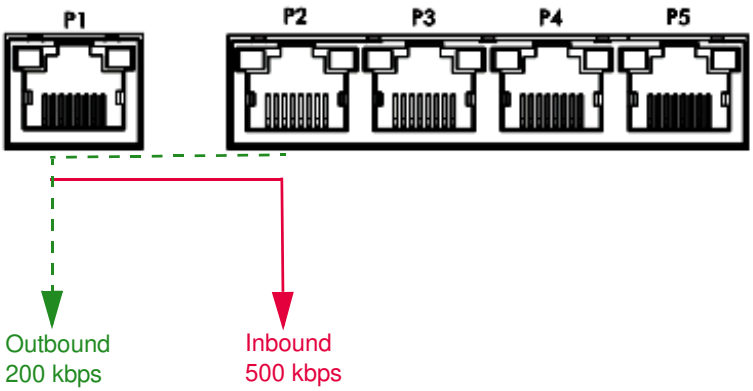


Outbound and Inbound Bandwidth Limits

You can limit an application's outbound or inbound bandwidth. This limit keeps the traffic from using up too much of the out-going interface's bandwidth. This way you can make sure there is bandwidth for other applications. When you apply a bandwidth limit to outbound or inbound traffic, each member of the out-going zone can send up to the limit. Take a LAN1 to WAN policy for example.

- Outbound traffic is limited to 200 kbps. The connection initiator is on the LAN1 so outbound means the traffic traveling from the LAN1 to the WAN. Each of the WAN zone's two interfaces can send the limit of 200 kbps of traffic.
- Inbound traffic is limited to 500 kbs. The connection initiator is on the LAN1 so inbound means the traffic traveling from the WAN to the LAN1.

Figure 293 LAN1 to WAN, Outbound 200 kbps, Inbound 500 kbps



Bandwidth Management Priority

- The Zyxel Device gives bandwidth to higher-priority traffic first, until it reaches its configured bandwidth rate.
- Then lower-priority traffic gets bandwidth.
- The Zyxel Device uses a fairness-based (round-robin) scheduler to divide bandwidth among traffic flows with the same priority.
- The Zyxel Device automatically treats traffic with bandwidth management disabled as priority 7 (the lowest priority).

Maximize Bandwidth Usage

Maximize bandwidth usage allows applications with maximize bandwidth usage enabled to "borrow" any unused bandwidth on the out-going interface.

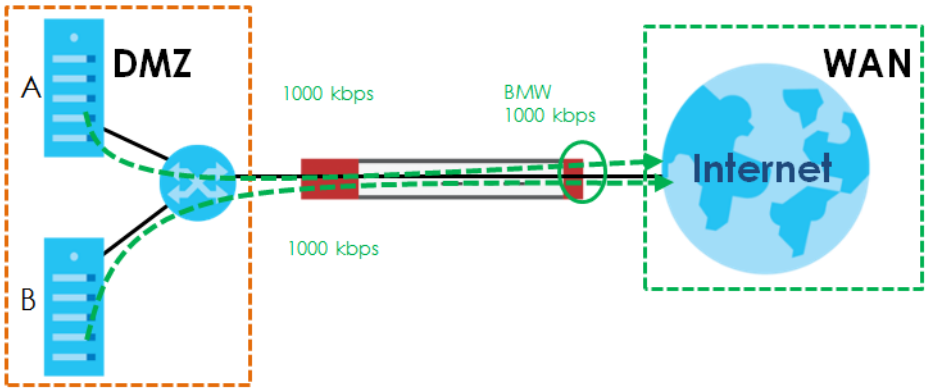
After each application gets its configured bandwidth rate, the Zyxel Device uses the fairness- based scheduler to divide any unused bandwidth on the out-going interface amongst applications that need more bandwidth and have maximize bandwidth usage enabled.

Unused bandwidth is divided equally. Higher priority traffic does not get a larger portion of the unused bandwidth.

Bandwidth Management Behavior

The following sections show how bandwidth management behaves with various settings. For example, you configure DMZ to WAN policies for FTP servers A and B. Each server tries to send 1000 kbps, but the WAN is set to a maximum outgoing speed of 1000 kbps. You configure policy A for server A's traffic and policy B for server B's traffic.

Figure 294 Bandwidth Management Behavior



Configured Rate Effect

In the following table the configured rates total less than the available bandwidth and maximize bandwidth usage is disabled, both servers get their configured rate.

Table 167 Configured Rate Effect

POLICY	CONFIGURED RATE	MAX. B. U.	PRIORITY	ACTUAL RATE
A	300 kbps	No	1	300 kbps
B	200 kbps	No	1	200 kbps

Priority Effect

Here the configured rates total more than the available bandwidth. Because server A has higher priority, it gets up to it's configured rate (800 kbps), leaving only 200 kbps for server B.

Table 168 Priority Effect

POLICY	CONFIGURED RATE	MAX. B. U.	PRIORITY	ACTUAL RATE
A	800 kbps	Yes	1	800 kbps
B	1000 kbps	Yes	2	200 kbps

Maximize Bandwidth Usage Effect

With maximize bandwidth usage enabled, after each server gets its configured rate, the rest of the available bandwidth is divided equally between the two. So server A gets its configured rate of 300 kbps and server B gets its configured rate of 200 kbps. Then the Zyxel Device divides the remaining bandwidth (1000 - 500 = 500) equally between the two (500 / 2 = 250 kbps for each). The priority has no effect on how much of the unused bandwidth each server gets.

So server A gets its configured rate of 300 kbps plus 250 kbps for a total of 550 kbps. Server B gets its configured rate of 200 kbps plus 250 kbps for a total of 450 kbps.

Table 169 Maximize Bandwidth Usage Effect

POLICY	CONFIGURED RATE	MAX. B. U.	PRIORITY	ACTUAL RATE
A	300 kbps	Yes	1	550 kbps
B	200 kbps	Yes	2	450 kbps

Priority and Over Allotment of Bandwidth Effect

Server A has a configured rate that equals the total amount of available bandwidth and a higher priority. You should regard extreme over allotment of traffic with different priorities (as shown here) as a configuration error. Even though the Zyxel Device still attempts to let all traffic get through and not be lost, regardless of its priority, server B gets almost no bandwidth with this configuration.

Table 170 Priority and Over Allotment of Bandwidth Effect

POLICY	CONFIGURED RATE	MAX. B. U.	PRIORITY	ACTUAL RATE
A	1000 kbps	Yes	1	999 kbps
B	1000 kbps	Yes	2	1 kbps

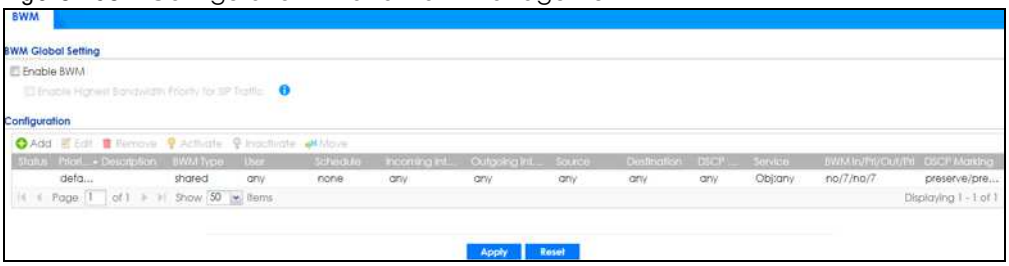
23.2 The Bandwidth Management Configuration

The Bandwidth management screens control the bandwidth allocation for TCP and UDP traffic. You can use source interface, destination interface, destination port, schedule, user, source, destination information, DSCP code and service type as criteria to create a sequence of specific conditions, similar to the sequence of rules used by firewalls, to specify how the Zyxel Device handles the DSCP value and allocate bandwidth for the matching packets.

Click Configuration > BWM to open the following screen. This screen allows you to enable/disable bandwidth management and add, edit, and remove user-defined bandwidth management policies.

The default bandwidth management policy is the one with the priority of "default". It is the last policy the Zyxel Device checks if traffic does not match any other bandwidth management policies you have configured. You cannot remove, activate, deactivate or move the default bandwidth management policy.

Figure 295 Configuration > Bandwidth Management



The following table describes the labels in this screen. See Section 23.2.1 on page 433 for more information as well.

Table 171 Configuration > Bandwidth Management

LABEL	DESCRIPTION
Enable BWM	Select this check box to activate management bandwidth.
Enable Highest Bandwidth Priority for SIP Traffic	Select this to maximize the throughput of SIP traffic to improve SIP-based VoIP call sound quality. This has the Zyxel Device immediately send SIP traffic upon identifying it. When this option is enabled the Zyxel Device ignores any other application patrol rules for SIP traffic (so there is no bandwidth control for SIP traffic) and does not record SIP traffic bandwidth usage statistics.
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Move	To change an entry's position in the numbered list, select it and click **Move** to display a field to type a number for where you want to put that entry and press [ENTER] to move the entry to the number that you typed.
Status	The activate (light bulb) icon is lit when the entry is active and dimmed when the entry is inactive. The status icon is not available for the default bandwidth management policy.
Priority	This field displays a sequential value for each bandwidth management policy and it is not associated with a specific setting. This field displays **default** for the default bandwidth management policy.
Description	This field displays additional information about this policy.
BWM Type	This field displays the below types of BWM: • **Shared**, when the policy is set for all matched traffic • **Per User**, when the policy is set for an individual user or a user group • **Per-Source-IP**, when the policy is set for a source IP
User	This is the type of user account to which the policy applies. If **any** displays, the policy applies to all user accounts.
Schedule	This is the schedule that defines when the policy applies. **none** means the policy always applies.
Incoming Interface	This is the source interface of the traffic to which this policy applies.
Outgoing Interface	This is the destination interface of the traffic to which this policy applies.

Table 171 Configuration > Bandwidth Management

LABEL	DESCRIPTION
Source	This is the source address or address group, including geographic address and FQDN (group) objects, for whom this policy applies. If **any** displays, the policy is effective for every source.
Destination	This is the destination address or address group, including geographic address and FQDN (group) objects, for whom this policy applies. If **any** displays, the policy is effective for every destination.
DSCP Code	These are the DSCP code point values of incoming and outgoing packets to which this policy applies. The lower the number the higher the priority with the exception of 0 which is usually given only best-effort treatment. **any** means all DSCP value or no DSCP marker. **default** means traffic with a DSCP value of 0. This is usually best effort traffic The "af" options stand for Assured Forwarding. The number following the "af" identifies one of four classes and one of three drop preferences.
Service	**App** and the service name displays if you selected **Application Object** for the service type. An **Application Object** is a pre-defined service. **Obj** and the service name displays if you selected **Service Object** for the service type. A **Service Object** is a customized pre-defined service or another service. Mouse over the service object name to view the corresponding IP protocol number.
BWM In/Pri/Out/Pri	This field shows the amount of bandwidth the traffic can use. **In** - This is how much inbound bandwidth, in kilobits per second, this policy allows the matching traffic to use. Inbound refers to the traffic the Zyxel Device sends to a connection's initiator. If **no** displays here, this policy does not apply bandwidth management for the inbound traffic. **Out** - This is how much outgoing bandwidth, in kilobits per second, this policy allows the matching traffic to use. Outbound refers to the traffic the Zyxel Device sends out from a connection's initiator. If **no** displays here, this policy does not apply bandwidth management for the outbound traffic. **Pri** - This is the priority for the incoming (the first **Pri** value) or outgoing (the second **Pri** value) traffic that matches this policy. The smaller the number, the higher the priority. Traffic with a higher priority is given bandwidth before traffic with a lower priority. The Zyxel Device ignores this number if the incoming and outgoing limits are both set to 0. In this case the traffic is automatically treated as being set to the lowest priority (7) regardless of this field's configuration.
DSCP Marking	This is how the Zyxel Device handles the DSCP value of the incoming and outgoing packets that match this policy. **In** - Inbound, the traffic the Zyxel Device sends to a connection's initiator. **Out** - Outbound, the traffic the Zyxel Device sends out from a connection's initiator. If this field displays a DSCP value, the Zyxel Device applies that DSCP value to the route's outgoing packets. **preserve** means the Zyxel Device does not modify the DSCP value of the route's outgoing packets. **default** means the Zyxel Device sets the DSCP value of the route's outgoing packets to 0. The "af" choices stand for Assured Forwarding. The number following the "af" identifies one of four classes and one of three drop preferences.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

23.2.1 The Bandwidth Management Add/Edit Screen

The **Configuration** > **Bandwidth Management Add/Edit** screen allows you to create a new condition or edit an existing one.

802.1P Marking

Use 802.1P to prioritize outgoing traffic from a VLAN interface. The **Priority Code** is a 3-bit field within a 802.1Q VLAN tag that's used to prioritize associated outgoing VLAN traffic. "0" is the lowest priority level and "7" is the highest.

Table 172 Single Tagged 802.1Q Frame Format

			DA	SA	TPID	Priority	VID	Len/Etype	Data	FCS	IEEE 802.1Q customer tagged frame

Table 173 802.1Q Frame

DA	Destination Address	Priority	802.1p Priority
SA	Source Address	Len/Etype	Length and type of Ethernet frame
TPID	Tag Protocol IDentifier	Data	Frame data
VID	VLAN ID	FCS	Frame Check Sequence

The following table is a guide to types of traffic for the priority code.

Table 174 Priority Code and Types of Traffic

PRIORITY	TRAFFIC TYPES
0 (lowest)	Background
1	Best Effort
2	Excellent Effort
3	Critical Applications
4	Video, less than 100 ms latency and jitter
5	Voice, less than 10 ms latency and jitter
6	Internetwork Control
7 (highest)	Network Control

To access this screen, go to the **Configuration** > **Bandwidth Management** screen (see Section 23.2 on page 430), and click either the **Add** icon or an **Edit** icon.

Figure 296 Configuration > Bandwidth Management > Edit (For the Default Policy)

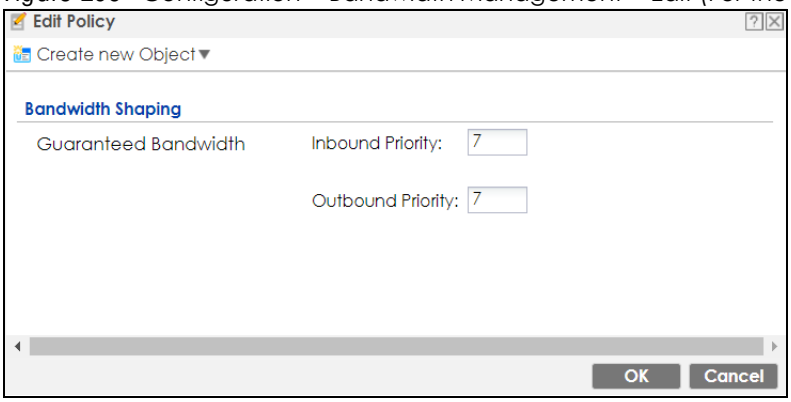


Figure 297 Configuration > Bandwidth Management > Add/Edit

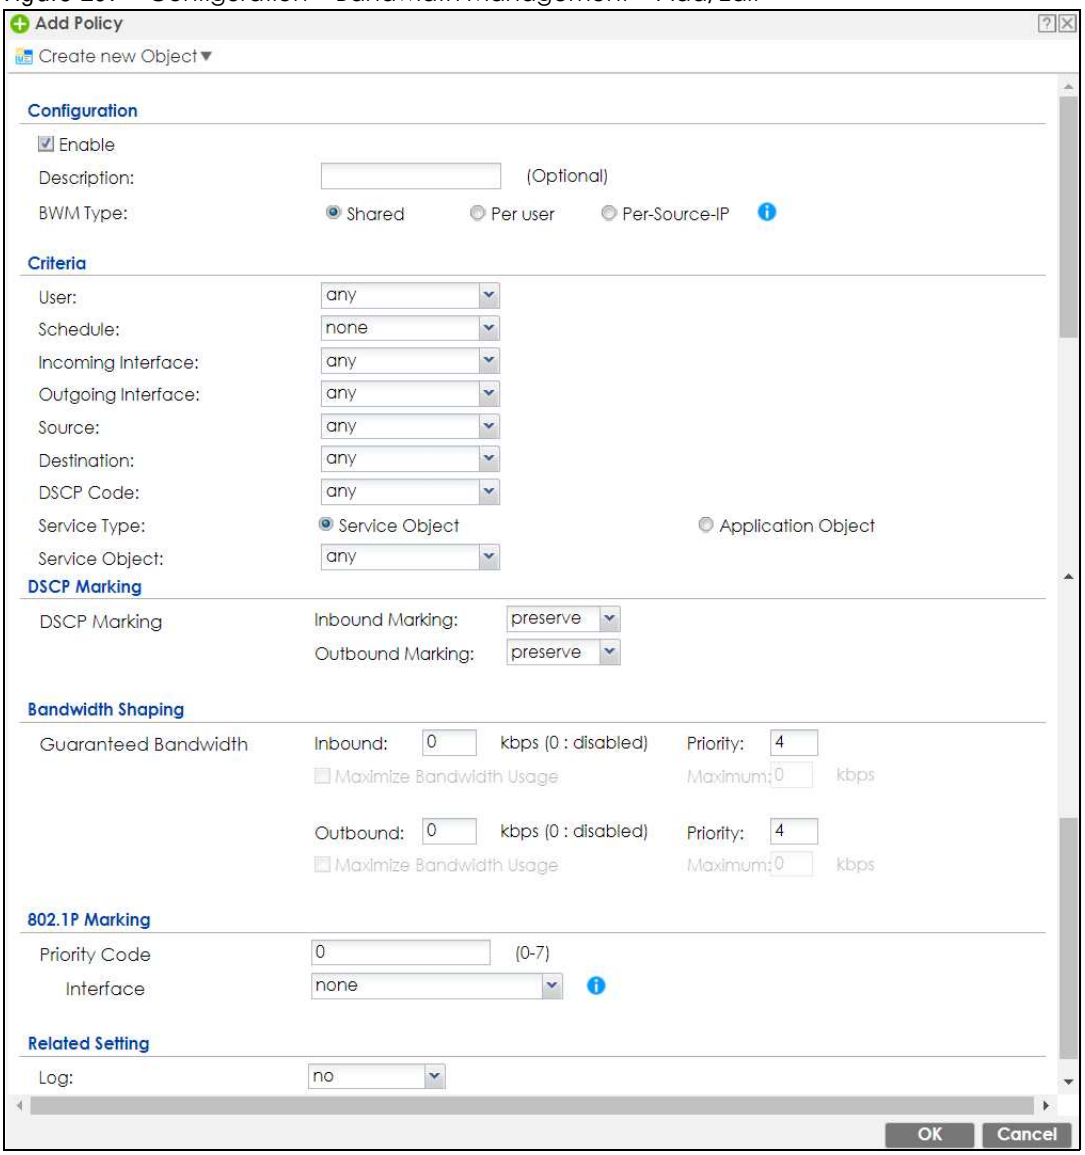


The following table describes the labels in this screen.

Table 175 Configuration > Bandwidth Management > Add/Edit

LABEL	DESCRIPTION
Create new Object	Use to configure any new settings objects that you need to use in this screen.
Configuration	
Enable	Select this check box to turn on this policy.
Description	Enter a description of this policy. It is not used elsewhere. You can use alphanumeric and `()+/:=?!*#@$_%-` characters, and it can be up to 60 characters long.
Criteria	Use this section to configure the conditions of traffic to which this policy applies.
BWM Type	This field displays the below types of BWM rule: • Shared, when the policy is set for all users • Per User, when the policy is set for an individual user or a user group • Per Source IP, when the policy is set for a source IP

Table 175 Configuration > Bandwidth Management > Add/Edit

LABEL	DESCRIPTION
User	Select a user name or user group to which to apply the policy. Use **Create new Object** if you need to configure a new user account. Select **any** to apply the policy for every user.
Schedule	Select a schedule that defines when the policy applies or select **Create Object** to configure a new one. Otherwise, select **none** to make the policy always effective.
Incoming Interface	Select the source interface of the traffic to which this policy applies.
Outgoing Interface	Select the destination interface of the traffic to which this policy applies.
Source	Select a source address or address group, including geographic address and FQDN (group) objects, for whom this policy applies. Use **Create new Object** if you need to configure a new one. Select **any** if the policy is effective for every source.
Destination	Select a destination address or address group, including geographic address and FQDN (group) objects, for whom this policy applies. Use **Create new Object** if you need to configure a new one. Select **any** if the policy is effective for every destination.
DSCP Code	Select a DSCP code point value of incoming packets to which this policy route applies or select **User Defined** to specify another DSCP code point. The lower the number the higher the priority with the exception of 0 which is usually given only best-effort treatment. **any** means all DSCP value or no DSCP marker. **default** means traffic with a DSCP value of 0. This is usually best effort traffic The "**af**" choices stand for Assured Forwarding. The number following the "**af**" identifies one of four classes and one of three drop preferences.
User-Defined DSCP Code	Use this field to specify a custom DSCP code point.
Service Type	Select **Service Object** or **Application Object** if you want a specific service (defined in a service object) or application patrol service to which the policy applies.
Service Object	This field is available if you selected **Service Object** as the service type. Select a service or service group to identify the type of traffic to which this policy applies. **any** means all services.
Application Object	This field is available if you selected **Application Object** as the service type. Select an application patrol service to identify the specific traffic to which this policy applies.
DSCP Marking	Set how the Zyxel Device handles the DSCP value of the incoming and outgoing packets that match this policy. Inbound refers to the traffic the Zyxel Device sends to a connection's initiator. Outbound refers to the traffic the Zyxel Device sends out from a connection's initiator. Select one of the pre-defined DSCP values to apply or select **User Defined** to specify another DSCP value. The "**af**" choices stand for Assured Forwarding. The number following the "**af**" identifies one of four classes and one of three drop preferences. Select **preserve** to have the Zyxel Device keep the packets' original DSCP value. Select **default** to have the Zyxel Device set the DSCP value of the packets to 0.
Bandwidth Shaping	Configure these fields to set the amount of bandwidth the matching traffic can use.

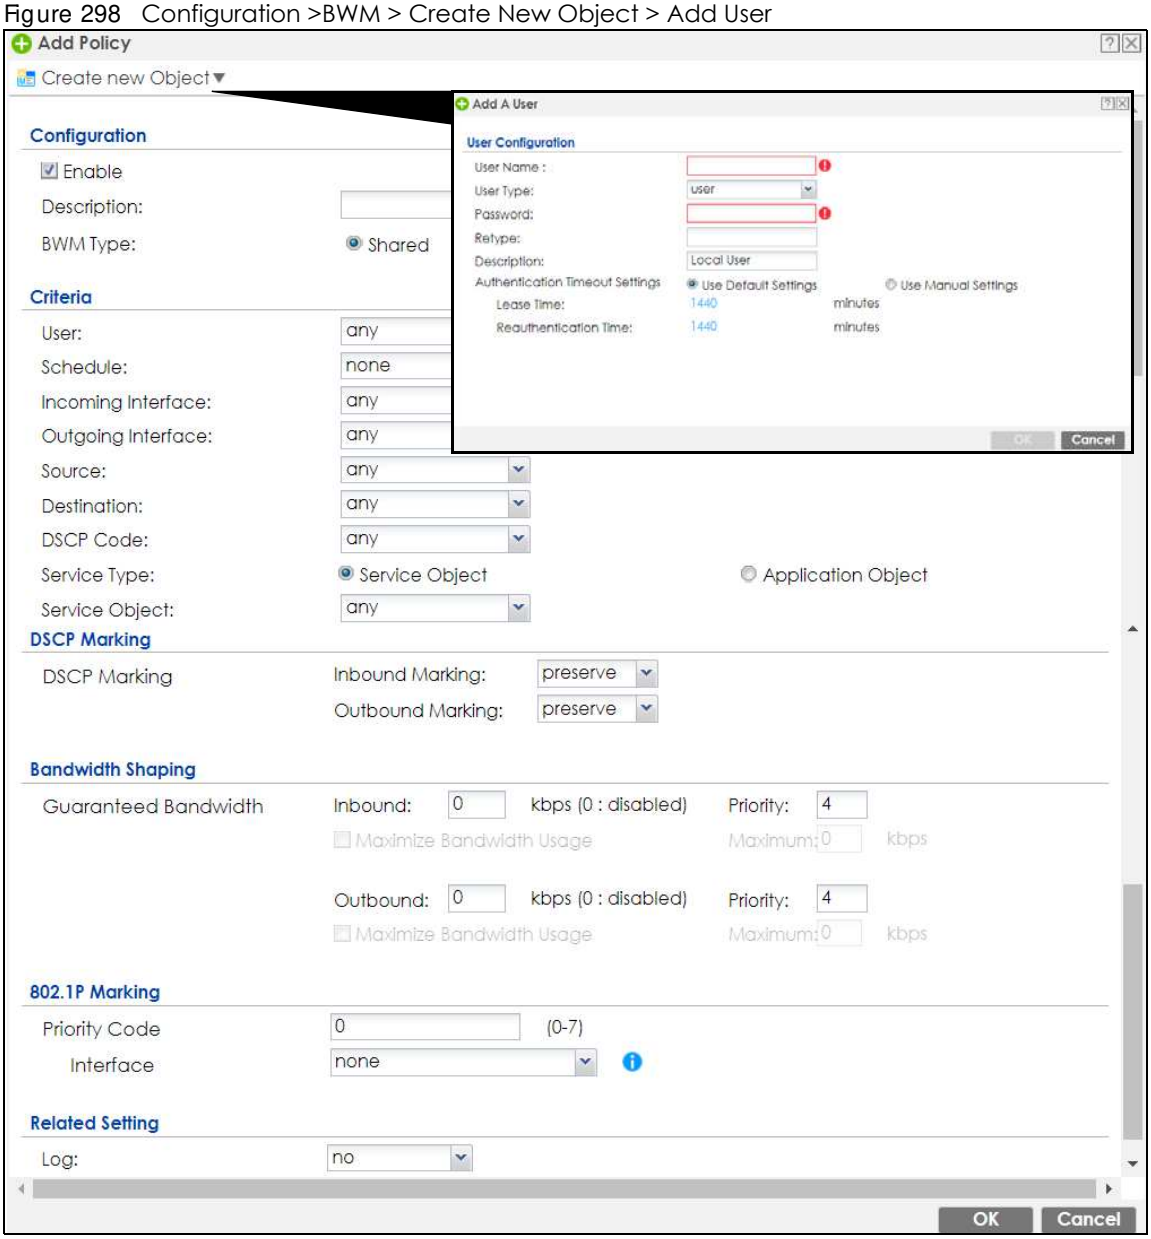
Table 175 Configuration > Bandwidth Management > Add/Edit

LABEL	DESCRIPTION
Inbound kbps	Type how much inbound bandwidth, in kilobits per second, this policy allows the traffic to use. Inbound refers to the traffic the Zyxel Device sends to a connection's initiator. If you enter **0** here, this policy does not apply bandwidth management for the matching traffic that the Zyxel Device sends to the initiator. Traffic with bandwidth management disabled (inbound and outbound are both set to 0) is automatically treated as the lowest priority (7). If the sum of the bandwidths for routes using the same next hop is higher than the actual transmission speed, lower priority traffic may not be sent if higher priority traffic uses all of the actual bandwidth.
Outbound kbps	Type how much outbound bandwidth, in kilobits per second, this policy allows the traffic to use. Outbound refers to the traffic the Zyxel Device sends out from a connection's initiator. If you enter **0** here, this policy does not apply bandwidth management for the matching traffic that the Zyxel Device sends out from the initiator. Traffic with bandwidth management disabled (inbound and outbound are both set to 0) is automatically treated as the lowest priority (7). If the sum of the bandwidths for routes using the same next hop is higher than the actual transmission speed, lower priority traffic may not be sent if higher priority traffic uses all of the actual bandwidth.
Priority	This field displays when the inbound or outbound bandwidth management is not set to 0. Enter a number between 1 and 7 to set the priority for traffic that matches this policy. The smaller the number, the higher the priority. Traffic with a higher priority is given bandwidth before traffic with a lower priority. The Zyxel Device uses a fairness-based (round-robin) scheduler to divide bandwidth between traffic flows with the same priority. The number in this field is ignored if the incoming and outgoing limits are both set to 0. In this case the traffic is automatically treated as being set to the lowest priority (7) regardless of this field's configuration.
Maximize Bandwidth Usage	This field displays when the inbound or outbound bandwidth management is not set to 0 and the **BWM Type** is set to **Shared**. Enable maximize bandwidth usage to let the traffic matching this policy "borrow" all unused bandwidth on the out-going interface. After each application or type of traffic gets its configured bandwidth rate, the Zyxel Device uses the fairness-based scheduler to divide any unused bandwidth on the out-going interface among applications and traffic types that need more bandwidth and have maximize bandwidth usage enabled.
Maximum	If you did not enable **Maximize Bandwidth Usage**, then type the maximum unused bandwidth that traffic matching this policy is allowed to "borrow" on the out-going interface (in Kbps), here.
802.1P Marking	Use 802.1P to prioritize outgoing traffic from a VLAN interface.
Priority Code	This is a 3-bit field within a 802.1Q VLAN tag that's used to prioritize associated outgoing VLAN traffic. "0" is the lowest priority level and "7" is the highest. See Table 174 on page 433. The setting configured here overwrites existing priority settings.
Interface	Choose a VLAN interface to which to apply the priority level for matching frames.
Related Setting	
Log	Select whether to have the Zyxel Device generate a log (**log**), log and alert (**log alert**) or neither (**no**) when any traffic matches this policy.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

23.2.1.1 Adding Objects for the BWM Policy

Objects are parameters to which the Policy rules are built upon. There are three kinds of objects you can add/edit for the BWM policy, they are **User**, **Schedule** and **Address** objects. Click **Configuration** > **BWM** > **Add** > **Create New Object** > **Add User** to see the following screen.

Figure 298 Configuration >BWM > Create New Object > Add User



The following table describes the fields in the above screen.

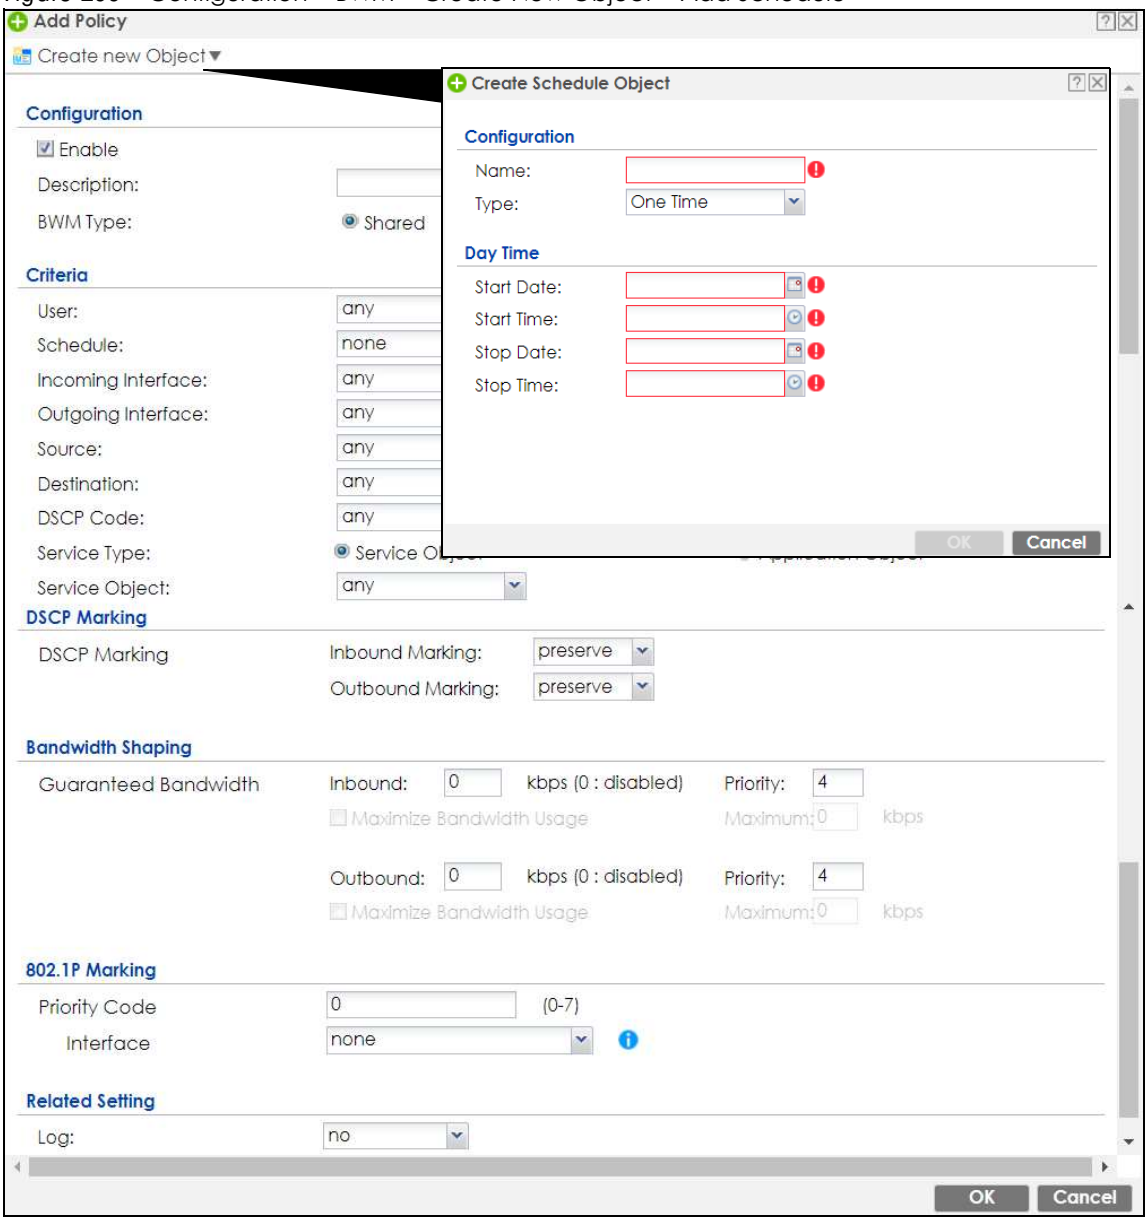
Table 176 Configuration > BWM > Create New Object > Add User

LABEL	DESCRIPTION
User Name	Type a user or user group object name of the rule.
User Type	Select a user type from the drop down menu. The user types are Admin, Limited admin, User, Guest, Ext-user, Ext-group-user.

Table 176 Configuration > BWM > Create New Object > Add User

LABEL	DESCRIPTION
Password	Type a password for the user object. The password can consist of alphanumeric characters, the underscore, and some punctuation marks (+-/*= :; .! @$&%#~ ‘ \ ()), and it can be up to eight characters long.
Retype	Retype the password to confirm.
Description	Enter a description for this user object. It is not used elsewhere. You can use alphanumeric and `()+/:=?!*#@$_%-` characters, and it can be up to 60 characters long.
Authentication Timeout Settings	Choose either **Use Default** setting option, which shows the default Lease Time of 1,440 minutes and Reauthentication Time of 1,440 minutes or you can enter them manually by choosing Use Manual Settings option.
Lease Time	This shows the **Lease Time** setting for the user, by default it is 1,440 minutes.
Reauthentication Time	This shows the **Reauthentication Time** for the user, by default it is 1,440 minutes.
OK	Click OK to save the setting.
Cancel	Click Cancel to abandon this screen.

Figure 299 Configuration > BWM > Create New Object > Add Schedule

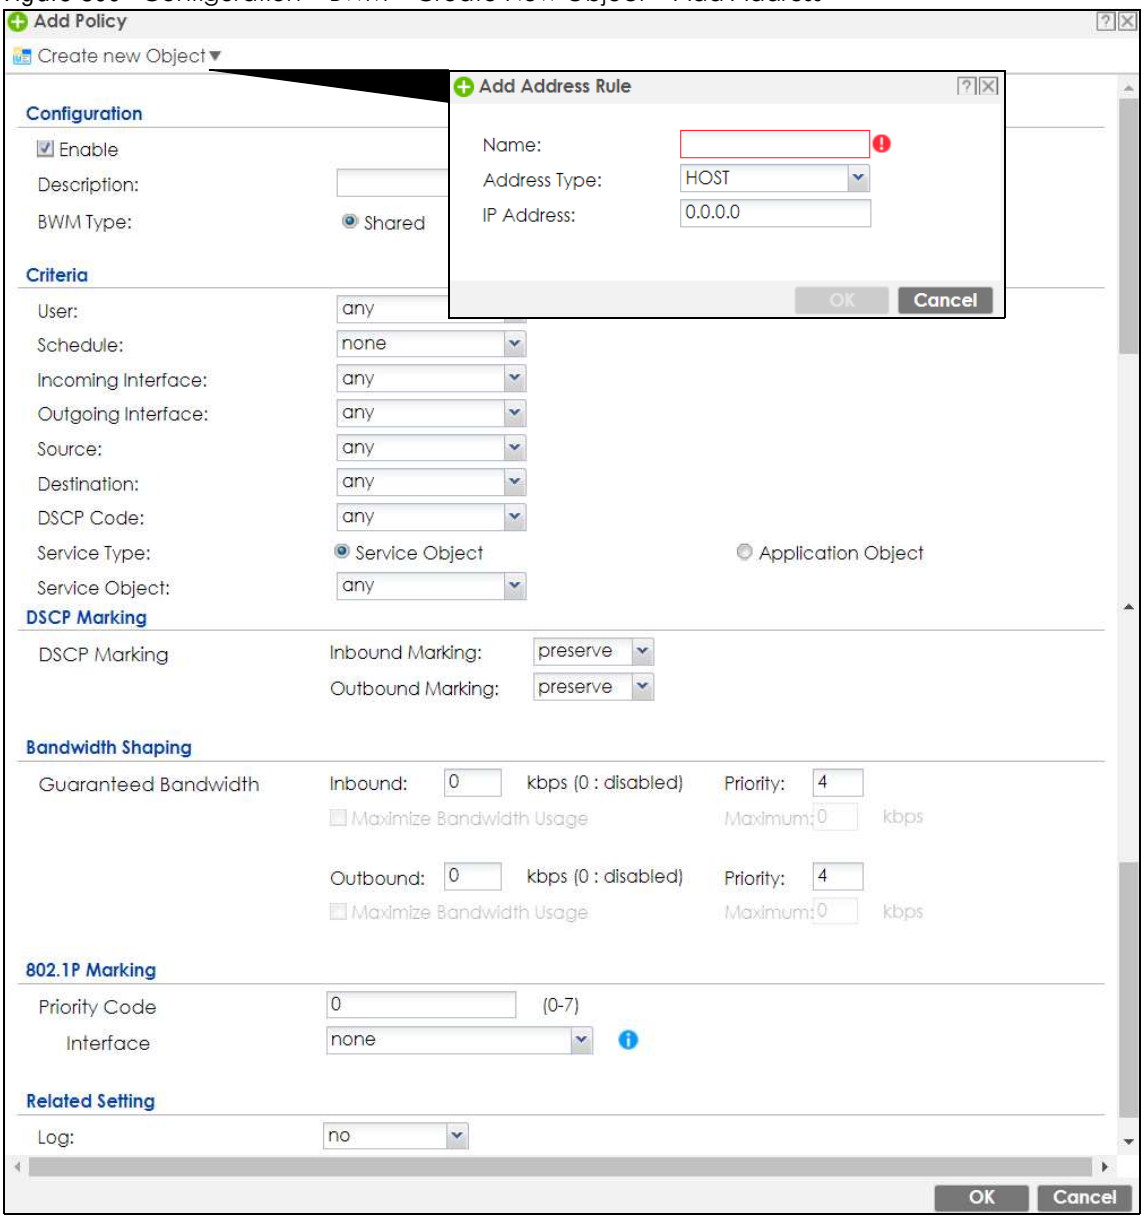


The following table describes the fields in the above screen.

Table 177 Configuration > BWM > Create New Object > Add Schedule

LABEL	DESCRIPTION
Name	Enter a name for the schedule object of the rule.
Type	Select an option from the drop down menu for the schedule object. It will show **One Time** or **Recurring**.
Start Date	Click the icon menu on the right to choose a Start Date for the schedule object.
Start Time	Click the icon menu on the right to choose a Start Time for the schedule object.
Stop Date	Click the icon menu on the right to choose a Stop Date for schedule object.
Stop Time	Click the icon menu on the right to choose a Stop Time for the schedule object.

Figure 300 Configuration > BWM > Create New Object > Add Address



The following table describes the fields in the above screen.

Table 178 Configuration > BWM > Create New Object > Add Address

LABEL	DESCRIPTION
Name	Enter a name for the Address object of the rule.
Address Type	Select an Address Type from the drop down menu on the right. The Address Types are Host, Range, Subnet, Interface IP, Interface Subnet, and Interface Gateway.
IP Address	Enter an IP address for the Address object.
OK	Click OK to save the setting.
Cancel	Click Cancel to abandon the setting.

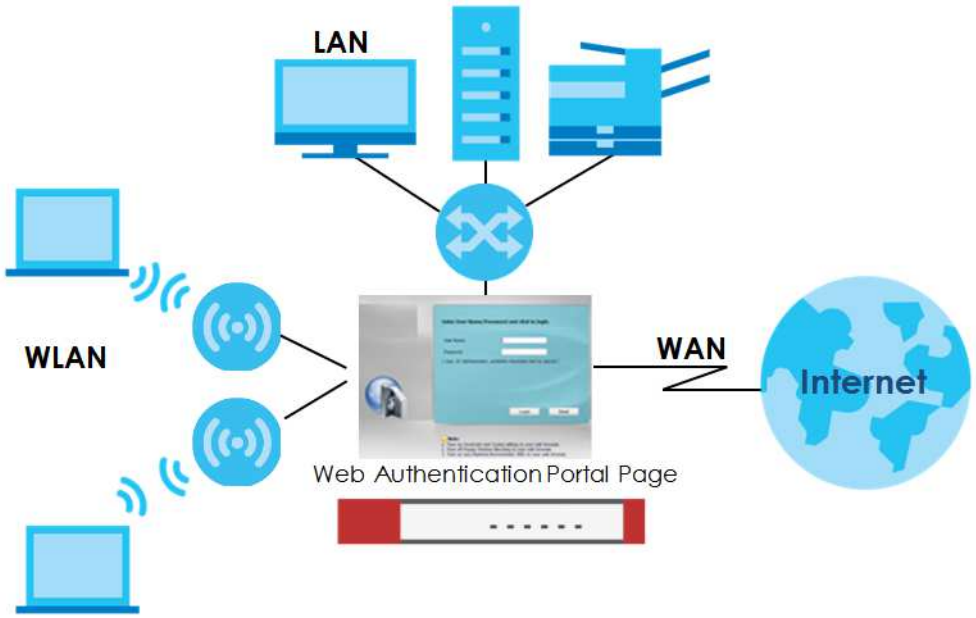
CHAPTER 24
Web Authentication

24.1 Web Auth Overview

Web authentication can intercept network traffic, according to the authentication policies, until the user authenticates his or her connection, usually through a specifically designated login web page. This means all web page requests can initially be redirected to a special web page that requires users to authenticate their sessions. Once authentication is successful, they can then connect to the rest of the network or Internet.

As soon as a user attempt to open a web page, the Zyxel Device reroutes his/her browser to a web portal page that prompts him/her to log in.

Figure 301 Web Authentication Example



The web authentication page only appears once per authentication session. Unless a user session times out or he/she closes the connection, he or she generally will not see it again during the same session.

24.1.1 What You Can Do in this Chapter

- Use the **Configuration > Web Authentication** screens (Section 24.2 on page 442) to create and manage web authentication policies.
- Use the **Configuration > Web Authentication > SSO** screen (Section 24.3 on page 458) to configure how the Zyxel Device communicates with a Single Sign-On agent.

24.1.2 What You Need to Know

Single Sign-On

A SSO (Single Sign On) agent integrates Domain Controller and Zyxel Device authentication mechanisms, so that users just need to log in once (single) to get access to permitted resources.

Forced User Authentication

Instead of making users for which user-aware policies have been configured go to the Zyxel Device **Login** screen manually, you can configure the Zyxel Device to display the **Login** screen automatically whenever it routes HTTP traffic for anyone who has not logged in yet.

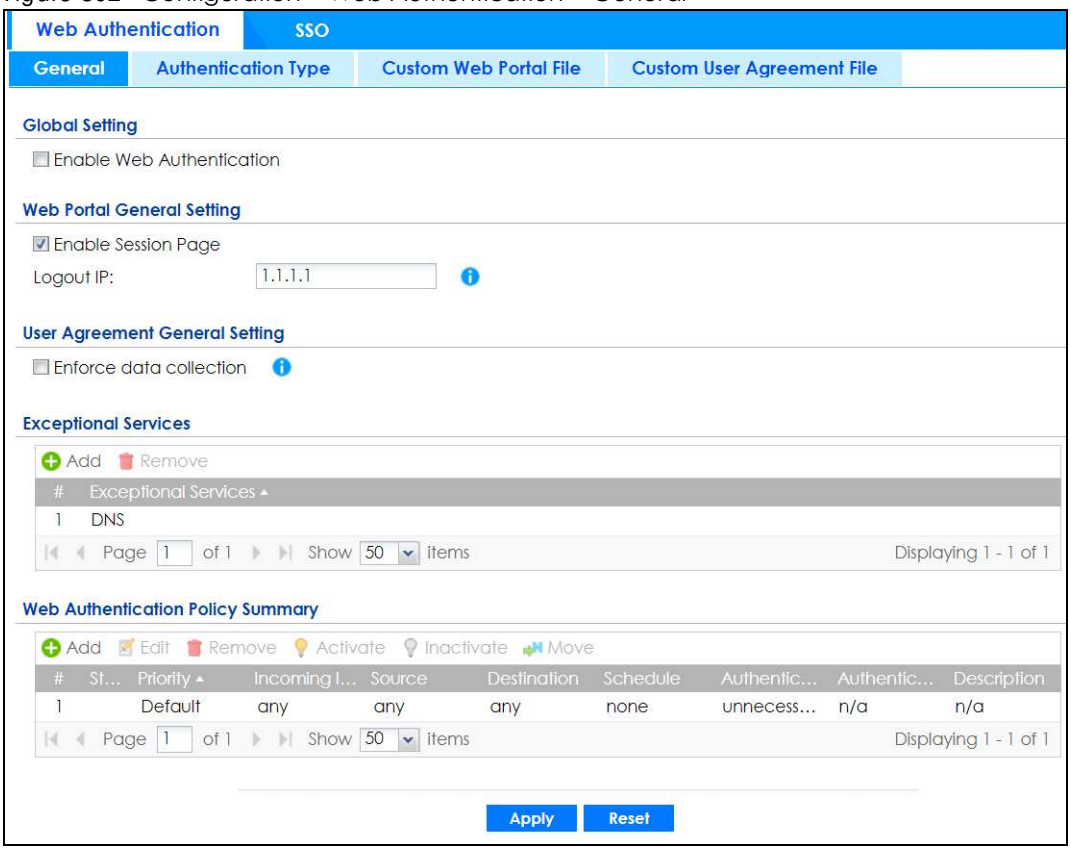
Note: This works with HTTP traffic only. The Zyxel Device does not display the **Login** screen when users attempt to send other kinds of traffic.

The Zyxel Device does not automatically route the request that prompted the login, however, so users have to make this request again.

24.2 Web Authentication General Screen

The **Web Authentication General** screen displays the general web portal settings and web authentication policies you have configured on the Zyxel Device. Use this screen to enable web authentication on the Zyxel Device.

Figure 302 Configuration > Web Authentication > General



The following table gives an overview of the objects you can configure.

Table 179 Configuration > Web Authentication > General

LABEL	DESCRIPTION
Global Setting	
Enable Web Authentication	Select the check box to turn on the web authentication feature. Otherwise, clear the check box to turn it off. Once enabled, all network traffic is blocked until a client authenticates with the Zyxel Device through the specifically designated web portal or user agreement page.
Web Portal General Setting	
Enable Session Page	Select this to display a page showing information on the user session after s/he logs in. It displays remaining time with an option to renew or log out immediately.
Logout IP	Specify an IP address that users can use to terminate their sessions manually by entering the IP address in the address bar of the web browser.
User Agreement General Setting	
Enforce data collection	Select this to require users to fill in their registration information (name, telephone number, address and email address) on the **User Agreement** (PC or mobile) page.

Table 179 Configuration > Web Authentication > General (continued)

LABEL	DESCRIPTION
Exceptional Services	Use this table to list services that users can access without logging in. Click **Add** to change the list's membership. A screen appears. Available services appear on the left. Select any services you want users to be able to access without logging in and click the right arrow button to add them. The member services are on the right. Select any service that you want to remove from the member list, and click the left arrow button to remove them. Keeping DNS as a member allows users' computers to resolve domain names into IP addresses. Figure 303 Configuration > Web Authentication > Add Exceptional Service  In the table, select one or more entries and click **Remove** to delete it or them.
Web Authentication Policy Summary	Use this table to manage the Zyxel Device's list of web authentication policies.
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Move	To move an entry to a different number in the list, click the **Move** icon. In the field that appears, specify the number to which you want to move the interface.
#	This field is a sequential value showing the number of the profile. The profile order is not important.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Priority	This is the position of the authentication policy in the list. The priority is important as the policies are applied in order of priority. **Default** displays for the default authentication policy that the Zyxel Device uses on traffic that does not match any exceptional service or other authentication policy. You can edit the default rule but not delete it.
Incoming Interface	This field displays the interface on which packets for this policy are received.
Source	This displays the source address object, including geographic address and FQDN (group) objects, to which this policy applies.
Destination	This displays the destination address object, including geographic address and FQDN (group) objects, to which this policy applies.
Schedule	This field displays the schedule object that dictates when the policy applies. **none** means the policy is active at all times if enabled.

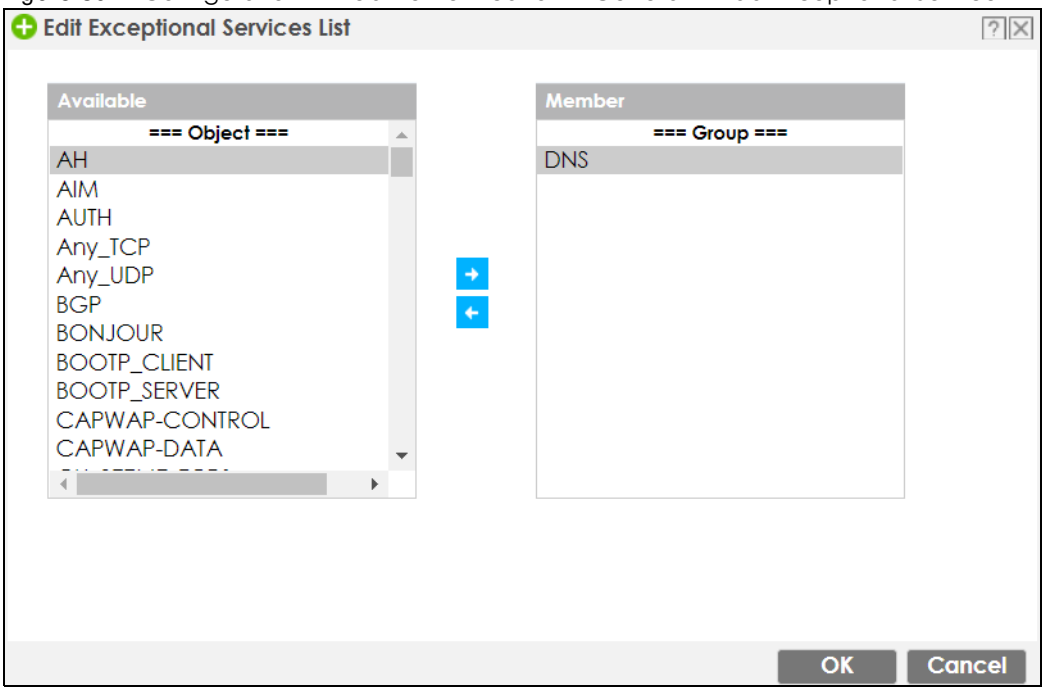
Table 179 Configuration > Web Authentication > General (continued)

LABEL	DESCRIPTION
Authentication	This field displays the authentication requirement for users when their traffic matches this policy. **unnecessary** - Users do not need to be authenticated. **required** - Users need to be authenticated. They must manually go to the login screen or user agreement page. The Zyxel Device will not redirect them to the login screen. **force** - Users need to be authenticated. The Zyxel Device automatically displays the login screen or user agreement page whenever it routes HTTP traffic for users who have not logged in yet.
Authentication Type	This field displays the name of the authentication type profile used in this policy to define how users authenticate their sessions. It shows **n/a** if **Authentication** is set to **unnecessary**.
Description	If the entry has a description configured, it displays here. This is **n/a** for the default policy.
Apply	Click this button to save your changes to the Zyxel Device.
Reset	Click this button to return the screen to its last-saved settings.

Creating Exceptional Services

This screen lists services that users can access without logging in. Click **Add** under **Exceptional Services** in the previous screen to display this screen. You can change the list's membership here. Available services appear on the left. Select any services you want users to be able to access without logging in and click the right arrow button -> to add them. The member services are on the right. Select any service that you want to remove from the member list, and click the left arrow <- button to remove them. Then click **OK** to apply the changes and return to the main **Web Authentication** screen. Alternatively, click **Cancel** to discard the changes and return to the main **Web Authentication** screen.

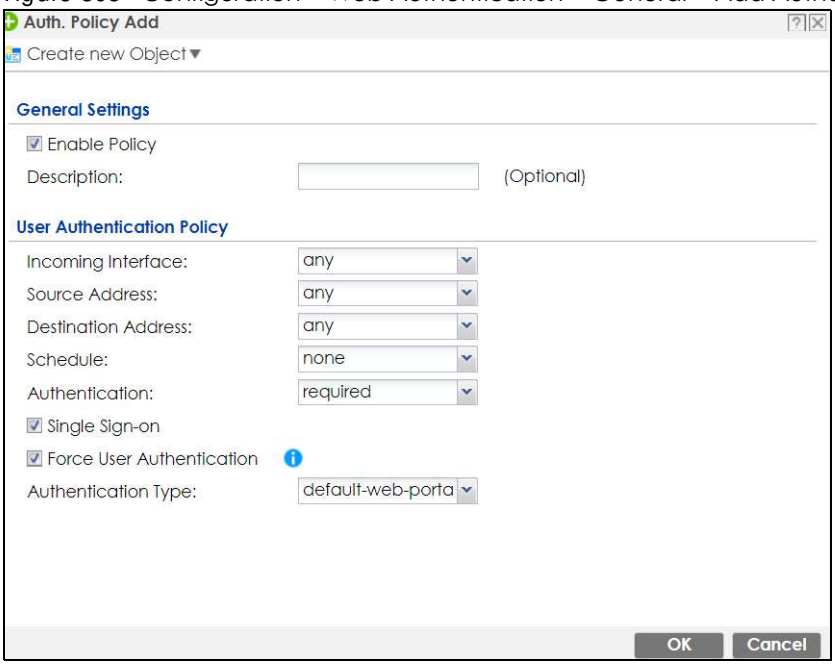
Figure 304 Configuration > Web Authentication > General > Add Exceptional Service



Creating/Editing an Authentication Policy

Open the **Configuration > Web Authentication > General** screen, then click the **Add** icon or select an entry and click the **Edit** icon in the **Web Authentication Policy Summary** section to open the **Auth. Policy Add/Edit** screen. Use this screen to configure an authentication policy.

Figure 305 Configuration > Web Authentication > General > Add Authentication Policy



The following table gives an overview of the objects you can configure.

Table 180 Configuration > Web Authentication > General > Add Authentication Policy

LABEL	DESCRIPTION
Create new Object	Use to configure any new settings objects that you need to use in this screen. Select Address or Schedule.
Enable Policy	Select this check box to activate the authentication policy. This field is available for user-configured policies.
Description	Enter a descriptive name of up to 60 printable ASCII characters for the policy. Spaces are allowed. This field is available for user-configured policies.
User Authentication Policy	Use this section of the screen to determine which traffic requires (or does not require) the senders to be authenticated in order to be routed.
Incoming Interface	Select the interface on which packets for this policy are received.
Source Address	Select a source address or address group, including geographic address and FQDN (group) objects, for whom this policy applies. Select **any** if the policy is effective for every source. This is **any** and not configurable for the default policy.
Destination Address	Select a destination address or address group, including geographic address and FQDN (group) objects, for whom this policy applies. Select **any** if the policy is effective for every destination. This is **any** and not configurable for the default policy.
Schedule	Select a schedule that defines when the policy applies. Otherwise, select **none** and the rule is always effective. This is **none** and not configurable for the default policy.

Table 180 Configuration > Web Authentication > General > Add Authentication Policy (continued)

LABEL	DESCRIPTION
Authentication	Select the authentication requirement for users when their traffic matches this policy. **unnecessary** - Users do not need to be authenticated. **required** - Users need to be authenticated. If **Force User Authentication** is selected, all HTTP traffic from unauthenticated users is redirected to a default or user-defined login page. Otherwise, they must manually go to the login screen. The Zyxel Device will not redirect them to the login screen.
Single Sign-on	This field is available for user-configured policies that require Single Sign-On (SSO). Select this to have the Zyxel Device enable the SSO feature. You can set up this feature in the SSO screen.
Force User Authentication	This field is available for user-configured policies that require authentication. Select this to have the Zyxel Device automatically display the login screen when users who have not logged in yet try to send HTTP traffic.
Authentication Type	Select an authentication method. **default-web-portal**: the default login page built into the Zyxel Device. **default-user-agreement**: the default user agreement page built into the Zyxel Device.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

24.2.1 User-aware Access Control Example

You can configure many policies and security settings for specific users or groups of users. Users can be authenticated locally by the Zyxel Device or by an external (RADIUS) authentication server.

In this example the users are authenticated by an external RADIUS server at 172.16.1.200. First, set up the user accounts and user groups in the Zyxel Device. Then, set up user authentication using the RADIUS server. Finally, set up the policies in the table above.

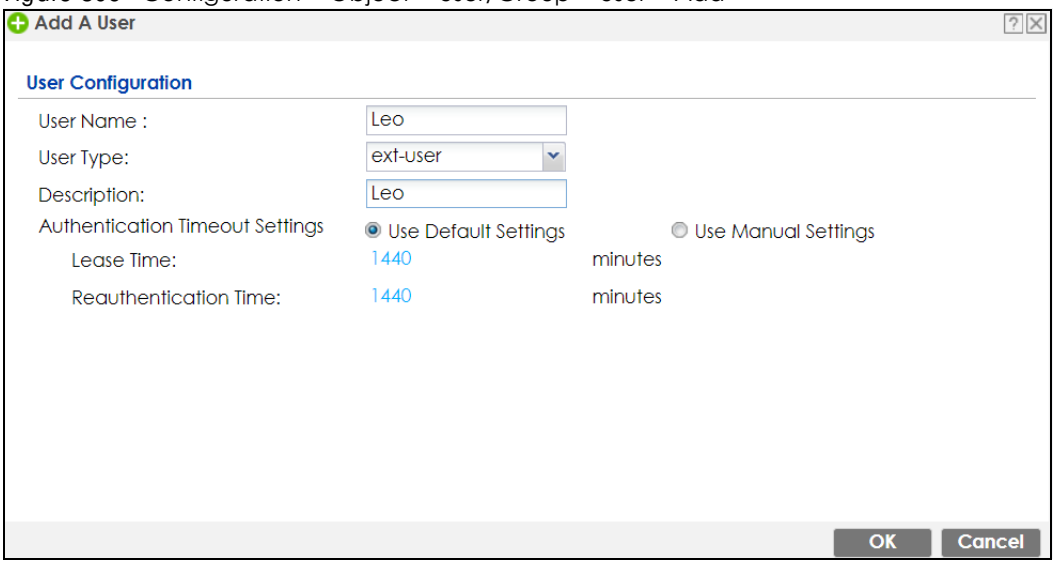
24.2.1.1 Set Up User Accounts

Set up user accounts in the RADIUS server. This example uses the Web Configurator. If you can export user names from the RADIUS server to a text file, then you might configure a script to create the user accounts instead.

1 Click **Configuration** > **Object** > **User/Group** > **User**. Click the **Add** icon.

2 Enter the same user name that is used in the RADIUS server, and set the **User Type** to **ext-user** because this user account is authenticated by an external server. Click **OK**.

Figure 306 Configuration > Object > User/Group > User > Add



3 Repeat this process to set up the remaining user accounts.

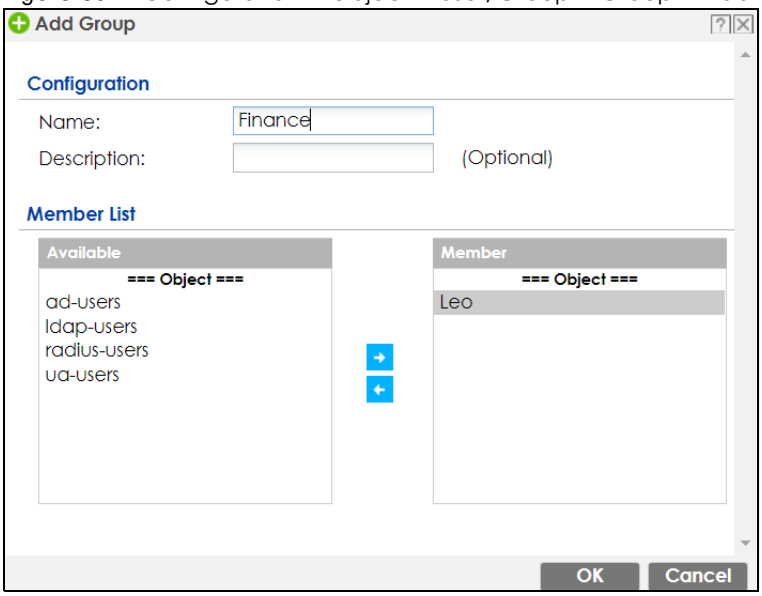
24.2.1.2 Set Up User Groups

Set up the user groups and assign the users to the user groups.

1 Click **Configuration** > **Object** > **User/Group** > **Group**. Click the **Add** icon.

2 Enter the name of the group. In this example, it is "Finance". Then, select **Object/Leo** and click the right arrow to move him to the **Member** list. This example only has one member in this group, so click **OK**. Of course you could add more members later.

Figure 307 Configuration > Object > User/Group > Group > Add



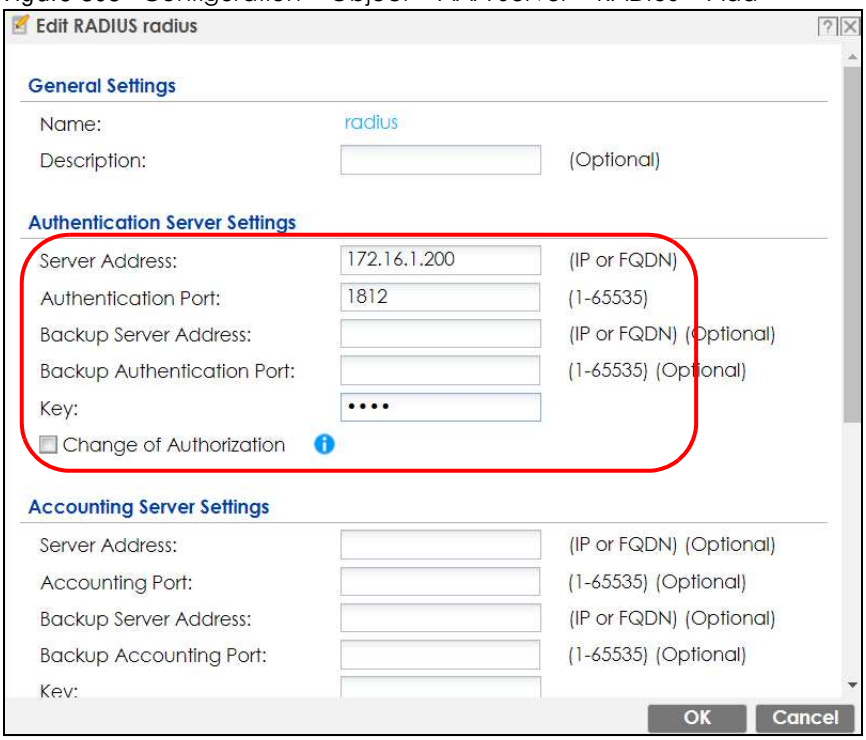
3 Repeat this process to set up the remaining user groups.

24.2.1.3 Set Up User Authentication Using the RADIUS Server

This step sets up user authentication using the RADIUS server. First, configure the settings for the RADIUS server. Then, set up the authentication method, and configure the Zyxel Device to use the authentication method. Finally, force users to log into the Zyxel Device before it routes traffic for them.

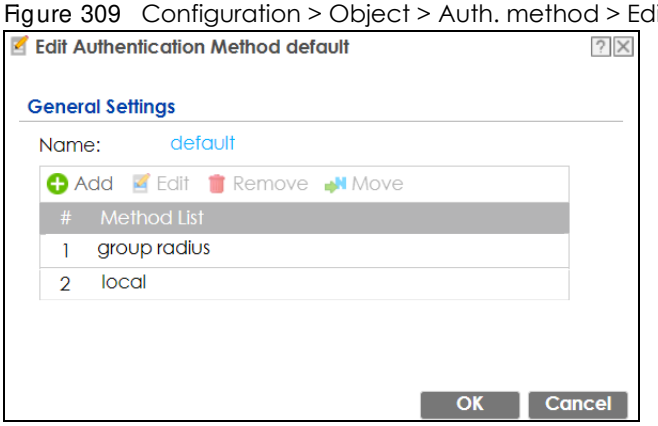
1 Click **Configuration** > **Object** > **AAA Server** > **RADIUS**. Double-click the **radius** entry. Configure the RADIUS server's address, authentication port (1812 if you were not told otherwise), and key. Click **OK**.

Figure 308 Configuration > Object > AAA Server > RADIUS > Add



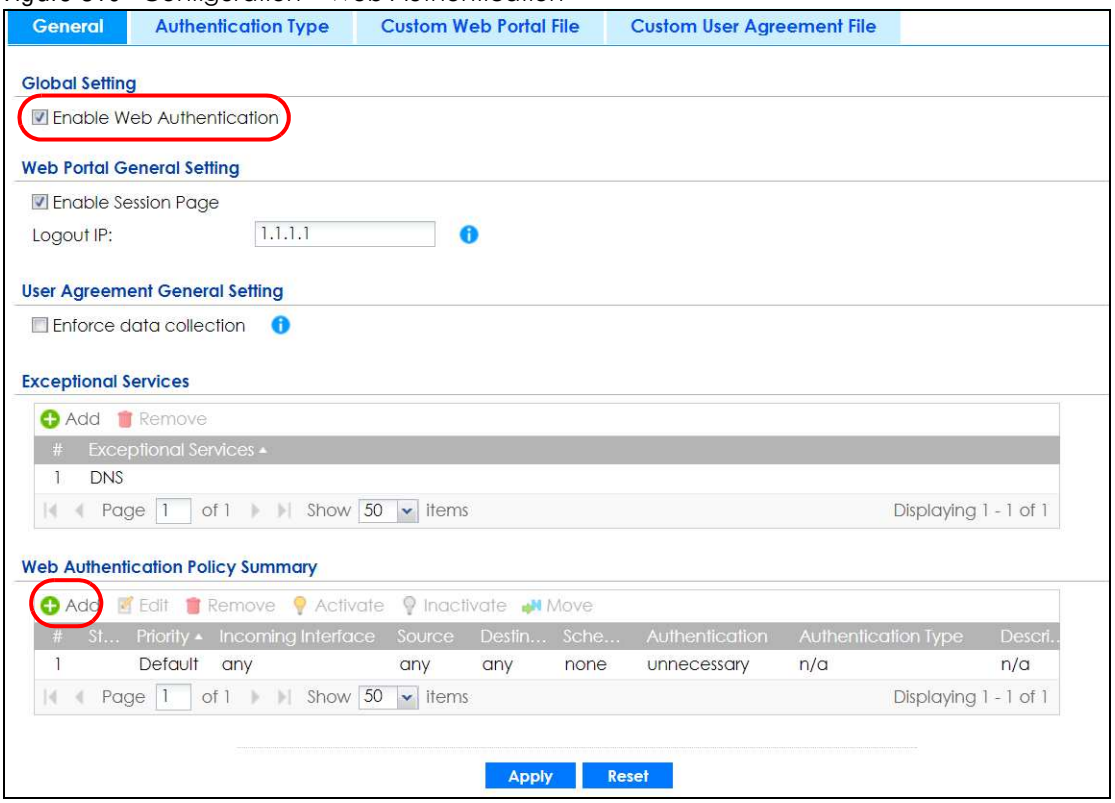
2 Click **Configuration** > **Object** > **Auth. Method**. Double-click the **default** entry. Click the **Add** icon. Select **group radius** because the Zyxel Device should use the specified RADIUS server for authentication. Click **OK**.

Figure 309 Configuration > Object > Auth. method > Edit



3 Click **Configuration** > **Web Authentication**. In the **Web Authentication** > **General** screen, select **Enable Web Authentication** to turn on the web authentication feature and click **Apply**.

Figure 310 Configuration > Web Authentication

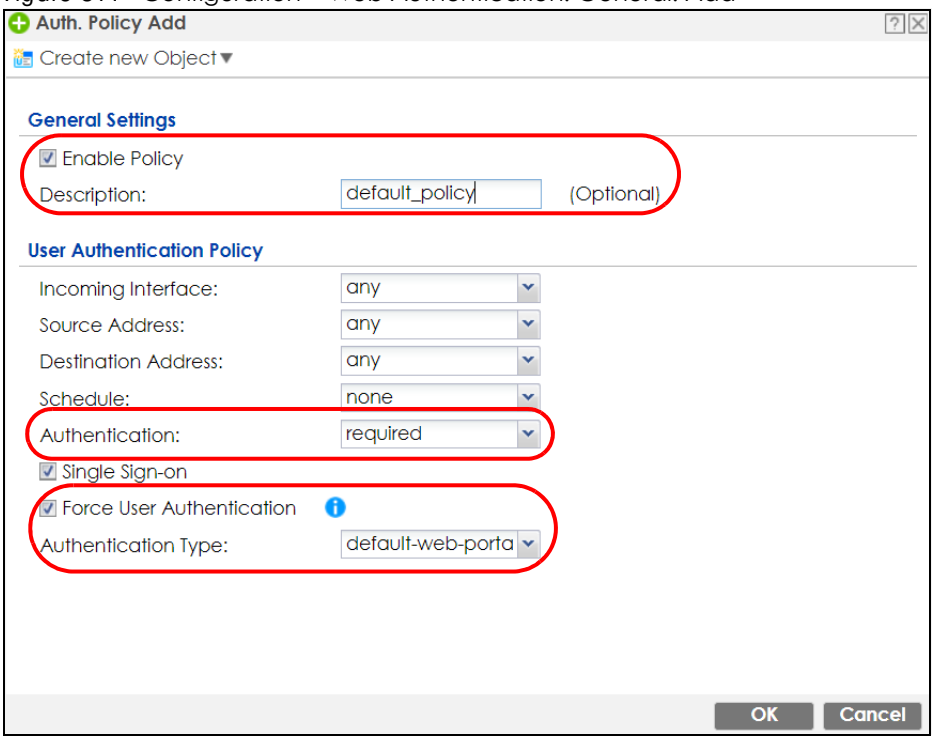


4 In the **Web Authentication Policy Summary** section, click the **Add** icon to set up a default policy that has priority over other policies and forces every user to log into the Zyxel Device before the Zyxel Device routes traffic for them.

5 Select **Enable Policy**. Enter a descriptive name, "default_policy" for example. Set the **Authentication** field to **required**, and make sure **Force User Authentication** is selected. Select an authentication type profile ("default-web-portal" in this example). Keep the rest of the default settings, and click **OK**.

Note: The users must log in at the Web Configurator login screen before they can use HTTP or MSN.

Figure 311 Configuration > Web Authentication: General: Add



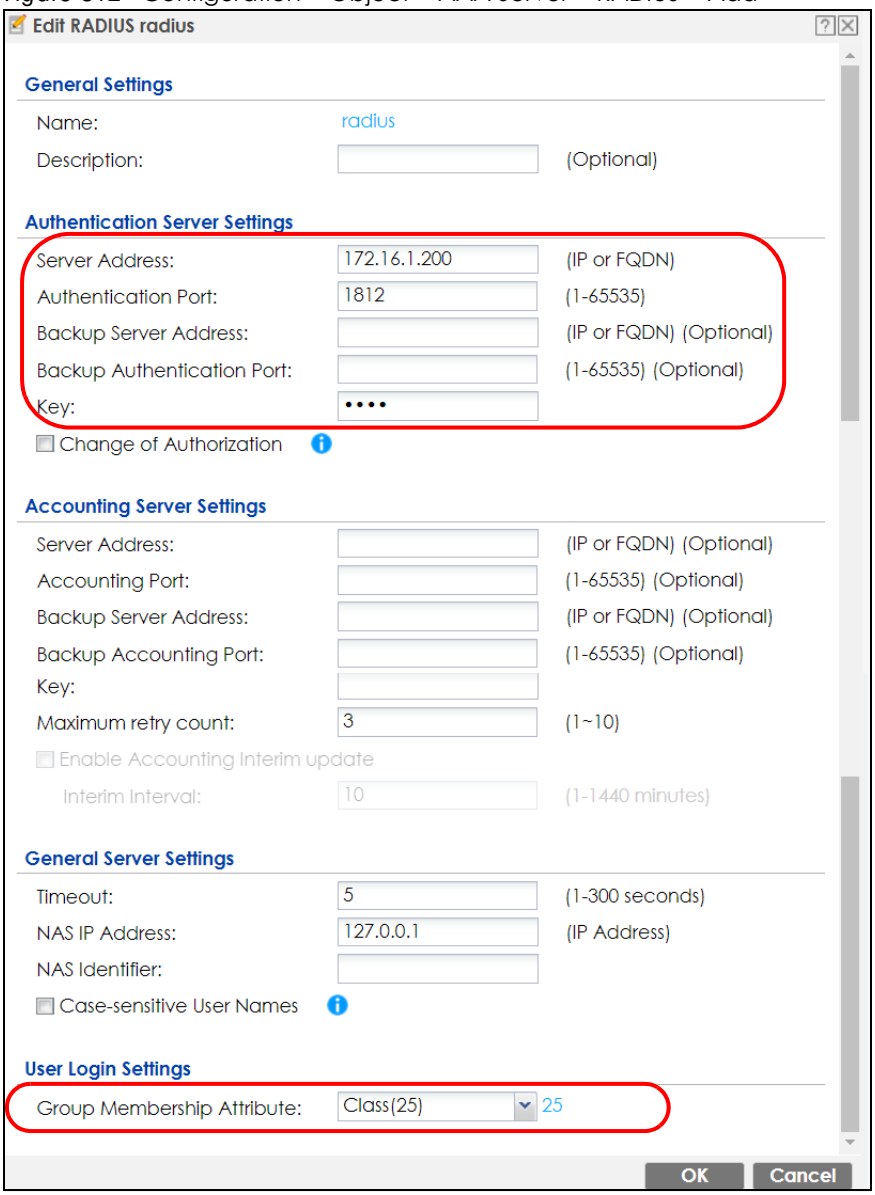
When the users try to browse the web (or use any HTTP application), the login screen appears. They have to log in using the user name and password in the RADIUS server.

24.2.1.4 User Group Authentication Using the RADIUS Server

The previous example showed how to have a RADIUS server authenticate individual user accounts. If the RADIUS server has different user groups distinguished by the value of a specific attribute, you can make a couple of slight changes in the configuration to have the RADIUS server authenticate groups of user accounts defined in the RADIUS server.

1 Click **Configuration** > **Object** > **AAA Server** > **RADIUS**. Double-click the **radius** entry. Besides configuring the RADIUS server's address, authentication port, and key; set the **Group Membership Attribute** field to the attribute that the Zyxel Device is to check to determine to which group a user belongs. This example uses **Class**. This attribute's value is called a group identifier; it determines to which group a user belongs. In this example the values are Finance, Engineer, Sales, and Boss.

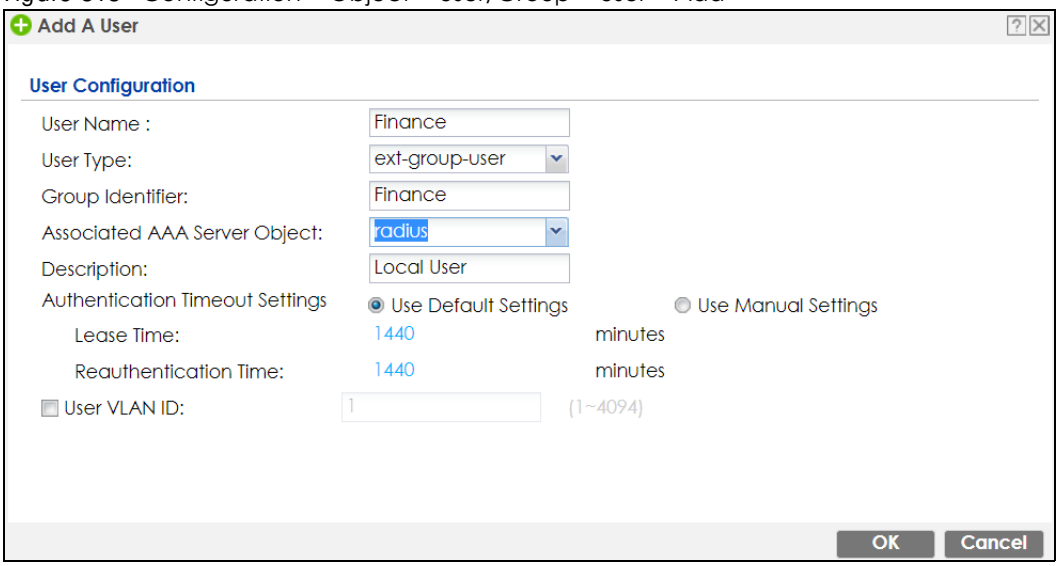
Figure 312 Configuration > Object > AAA Server > RADIUS > Add



2 Now you add ext-group-user objects to identify groups based on the group identifier values. Set up one user account for each group of user accounts in the RADIUS server. Click **Configuration** > **Object** > **User/Group** > **User**. Click the **Add** icon.

Enter a user name and set the **User Type** to **ext-group-user**. In the **Group Identifier** field, enter Finance, Engineer, Sales, or Boss and set the **Associated AAA Server Object** to **radius**.

Figure 313 Configuration > Object > User/Group > User > Add

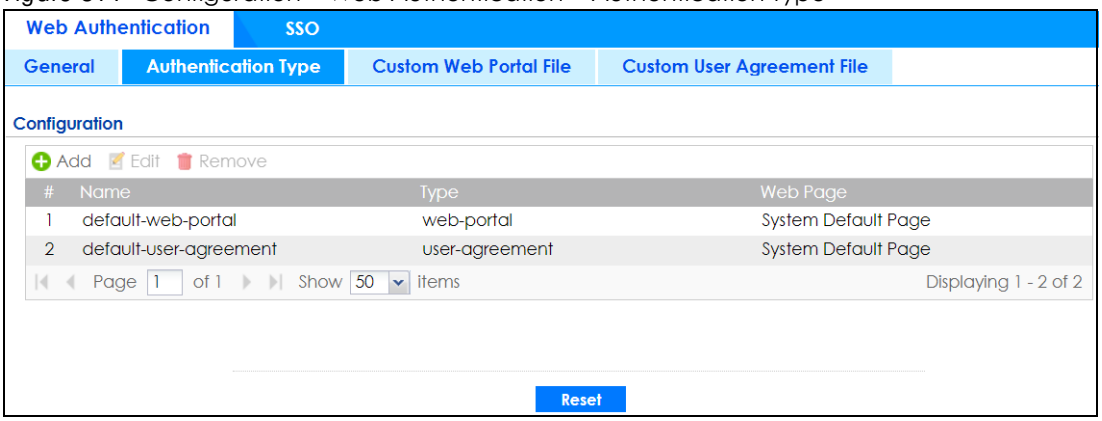


3 Repeat this process to set up the remaining groups of user accounts.

24.2.2 Authentication Type Screen

Use this screen to view, create and manage the authentication type profiles on the Zyxel Device. An authentication type profile decides which type of web authentication pages to be used for user authentication. Go to **Configuration** > **Web Authentication** and then select the **Authentication Type** tab to display the screen.

Figure 314 Configuration > Web Authentication > Authentication Type



The following table describes the labels in this screen.

Table 181 Configuration > Web Authentication > Authentication Type

LABEL	DESCRIPTION
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.

Table 181 Configuration > Web Authentication > Authentication Type (continued)

LABEL	DESCRIPTION
#	This field is a sequential value, and it is not associated with a specific entry.
Name	This field displays the name of the profile. default-web-portal: the default login page built into the Zyxel Device. Note: You can also customize the default login page built into the Zyxel Device in the **System** > **WWW** > **Login Page** screen. default-user-agreement: the default user agreement page built into the Zyxel Device.
Type	This field displays the type of the web authentication page used by this profile.
Web Page	This field displays whether this profile uses the default web authentication page built into the Zyxel Device (**System Default Page**) or custom web authentication pages from an external web server (**External Page**).
Reset	Click **Reset** to return the screen to its last-saved settings.

Add/Edit an Authentication Type Profile

Click the **Add** icon or select an entry in the **Web Authentication** > **Authentication Type** screen and click the **Edit** icon to display the screen. The screen differs depending on what you select in the **Type** field.

Figure 315 Configuration > Web Authentication > Authentication Type: Add/Edit (Web Portal)

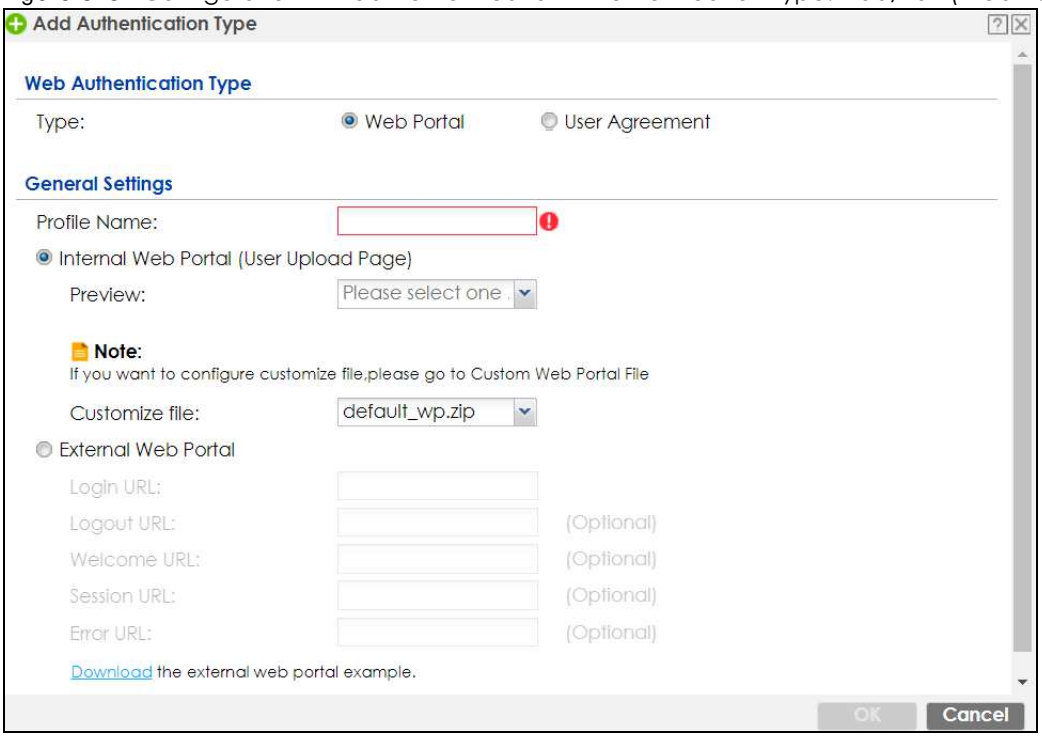


Figure 316 Configuration > Web Authentication > Authentication Type: Add/Edit (User Agreement)

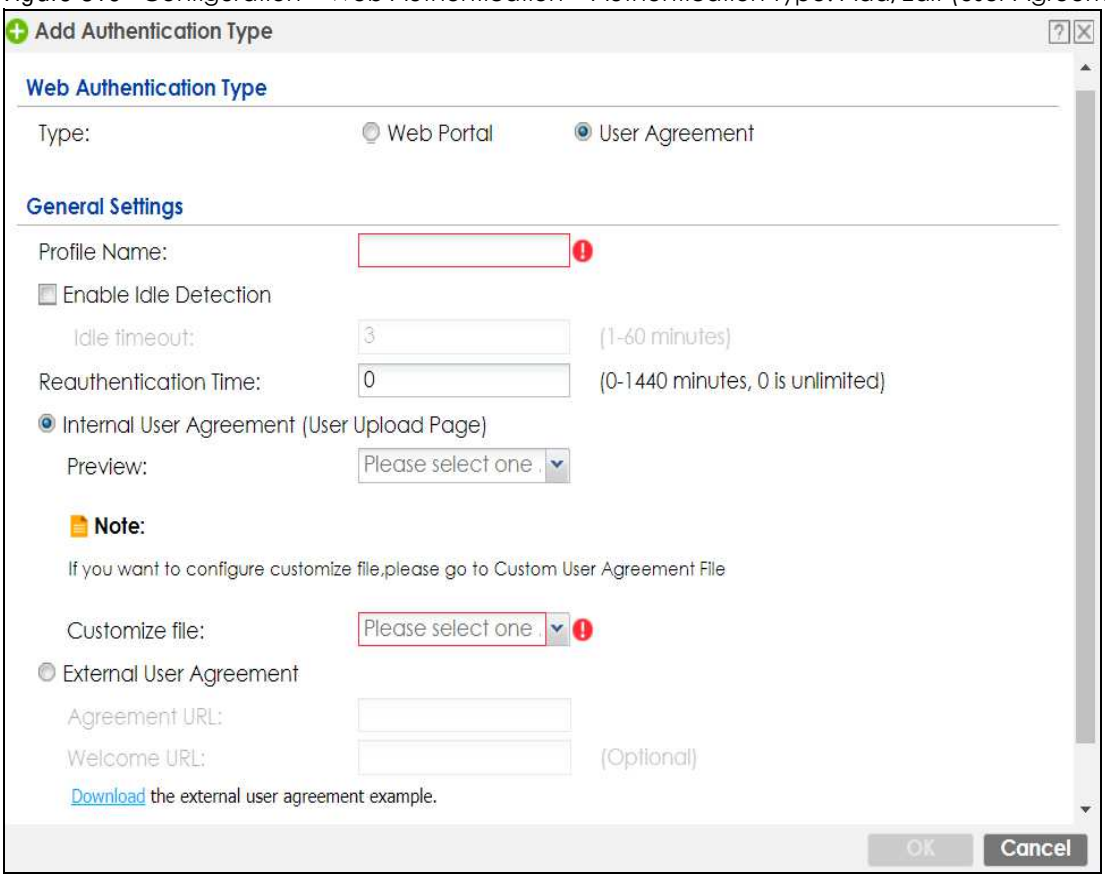

The following table describes the labels in this screen.

Table 182 Configuration > Web Authentication > Authentication Type: Add/Edit

LABEL	DESCRIPTION
Type	Select the type of the web authentication page through which users authenticate their connections. If you select **User Agreement**, by agreeing to the policy of user agreement, users can access the Internet without a guest account.
Profile Name	Enter a name for the profile. You can use up to 31 alphanumeric characters (A-Z, a-z, 0-9) and underscores (_). Spaces are not allowed. The first character must be a letter.
The following fields are available if you set **Type** to **Web Portal**.	
Internal Web Portal	Select this to use the web portal pages uploaded to the Zyxel Device. The login page appears whenever the web portal intercepts network traffic, preventing unauthorized users from gaining access to the network.
Preview	Select to display the page you uploaded to the Zyxel Device in a new frame. Note: You must select a custom file uploaded to the Zyxel Device before you can preview the pages.
Customize file	Select the file name of the web portal file in the Zyxel Device. Note: You can upload zipped custom web portal files to the Zyxel Device using the **Configuration > Web Authentication > Web Portal Customize File** screen.

Table 182 Configuration > Web Authentication > Authentication Type: Add/Edit (continued)

LABEL	DESCRIPTION
External Web Portal	Select this to use a custom login page from an external web portal instead of the one uploaded to the Zyxel Device. You can configure the look and feel of the web portal page.
Login URL	Specify the login page's URL; for example, http://IIS server IP Address/login.html. The Internet Information Server (IIS) is the web server on which the web portal files are installed.
Logout URL	Specify the logout page's URL; for example, http://IIS server IP Address/logout.html. The Internet Information Server (IIS) is the web server on which the web portal files are installed.
Welcome URL	Specify the welcome page's URL; for example, http://IIS server IP Address/welcome.html. Users will be redirected to the welcome page after authentication. This field is optional. The Internet Information Server (IIS) is the web server on which the web portal files are installed.
Session URL	Specify the session page's URL; for example, http://IIS server IP Address/session.html. The Internet Information Server (IIS) is the web server on which the web portal files are installed.
Error URL	Specify the error page's URL; for example, http://IIS server IP Address/error.html. The Internet Information Server (IIS) is the web server on which the web portal files are installed.
Download	Click this to download an example external web portal file for your reference.
The following fields are available if you set **Type** to **User Agreement**.	
Enable Idle Detection	This is applicable for access users. Select this check box if you want the Zyxel Device to monitor how long each access user is logged in and idle (in other words, there is no traffic for this access user). The Zyxel Device automatically logs out the access user once the **Idle timeout** has been reached.
Idle timeout	This is applicable for access users. This field is effective when **Enable Idle Detection** is checked. Type the number of minutes each access user can be logged in and idle before the Zyxel Device automatically logs out the access user.
Reauthentication Time	Enter the number of minutes the user can be logged into the Zyxel Device in one session before having to log in again.
Internal User Agreement	Select this to use the user agreement pages in the Zyxel Device. The user agreement page appears whenever the Zyxel Device intercepts network traffic, preventing unauthorized users from gaining access to the network.
Preview	Select to display the page you uploaded to the Zyxel Device in a new frame. Note: You must select a custom file uploaded to the Zyxel Device before you can preview the pages.
Customize file	Select the file name of the user agreement file in the Zyxel Device. Note: You can upload zipped custom user agreement files to the Zyxel Device using the **Configuration > Web Authentication > User Agreement Customize File** screen.
External User Agreement	Select this to use custom user agreement pages from an external web server instead of the default one built into the Zyxel Device. You can configure the look and feel of the user agreement page.
Agreement URL	Specify the user agreement page's URL; for example, http://IIS server IP Address/logout.html. The Internet Information Server (IIS) is the web server on which the user agreement files are installed.

Table 182 Configuration > Web Authentication > Authentication Type: Add/Edit (continued)

LABEL	DESCRIPTION
Welcome URL	Specify the welcome page's URL; for example, http://IIS server IP Address/welcome.html. The Internet Information Server (IIS) is the web server on which the user agreement files are installed. If you leave this field blank, the Zyxel Device will use the welcome page of internal user agreement file.
Download	Click this to download an example external user agreement file for your reference.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

24.2.3 Custom Web Portal / User Agreement File Screen

Use this screen to upload the zipped custom web portal or user agreement files to the Zyxel Device. You can also download the custom files to your computer.

Click **Configuration** > **Web Authentication** and then select the **Custom Web Portal File** or **Custom User Agreement File** tab to display the screen.

Figure 317 Configuration > Web Authentication > Custom Web Portal File

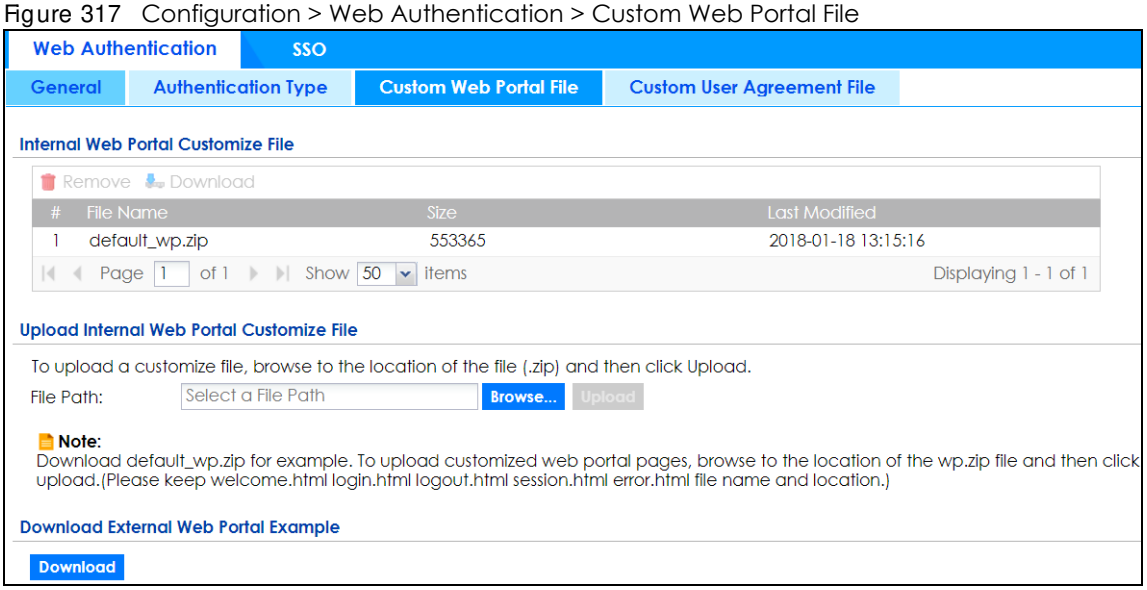

Figure 318 Configuration > Web Authentication > Custom User Agreement File

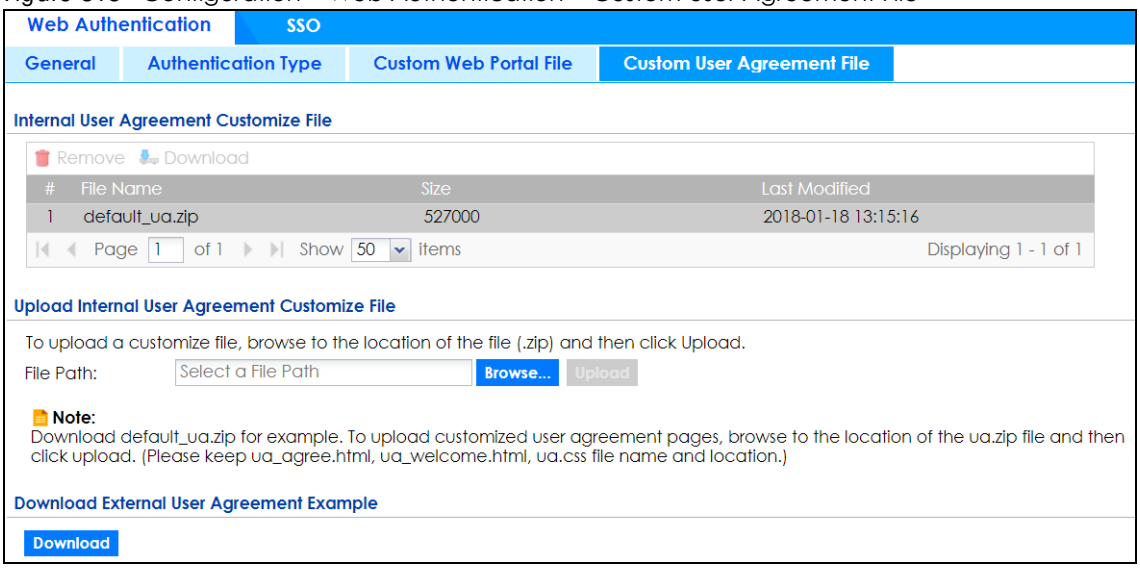


The following table describes the labels in this screen.

Table 183 Configuration > Web Authentication > Custom Web Portal / User Agreement File

LABEL	DESCRIPTION
Remove	Click a file's row to select it and click **Remove** to delete it from the Zyxel Device.
Download	Click a file's row to select it and click **Download** to save the zipped file to your computer.
#	This column displays the index number for each file entry. This field is a sequential value, and it is not associated with a specific entry.
File Name	This column displays the label that identifies a web portal or user agreement file.
Size	This column displays the size (in KB) of a file.
Last Modified	This column displays the date and time that the individual files were last changed or saved.
Browse / Upload	Click **Browse...** to find the zipped file you want to upload, then click the **Upload** button to put it on the Zyxel Device.
Download	Click this to download an example external web portal or user agreement file for your reference.

24.3 SSO Overview

The SSO (Single Sign-On) function integrates Domain Controller and Zyxel Device authentication mechanisms, so that users just need to log in once (single login) to get access to permitted resources.

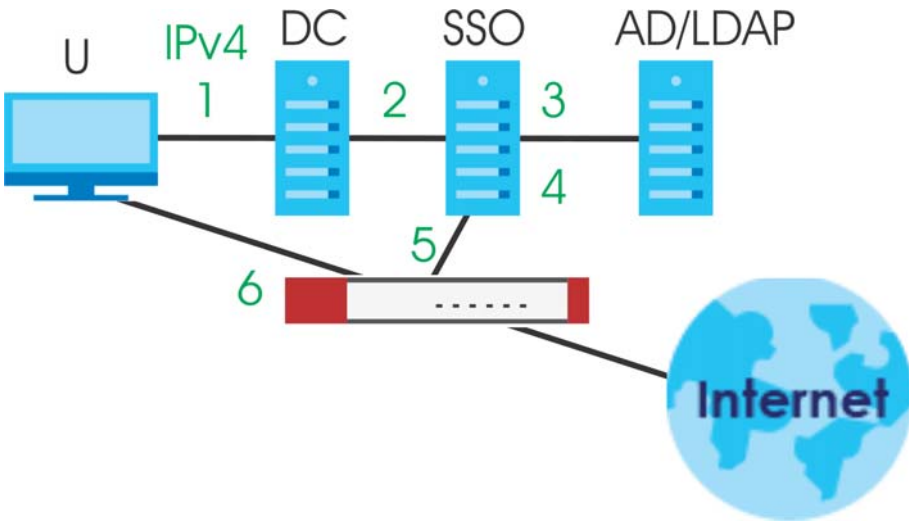
In the following figure, **U** user logs into a Domain Controller (**DC**) which passes the user's login credentials to the SSO agent. The SSO agent checks that these credentials are correct with the AD server, and if the AD server confirms so, the SSO then notifies the Zyxel Device to allow access for the user to the permitted resource (Internet access, for example).

Note: The Zyxel Device, the DC, the SSO agent and the AD server must all be in the same domain and be able to communicate with each other.

SSO does not support IPv6, LDAP or RADIUS; you must use it in an IPv4 network environment with Windows AD (Active Directory) authentication database.

You must enable Web Authentication in the **Configuration > Web Authentication** screen.

Figure 319 SSO Overview



U	User
DC	Domain Controller
SSO	Single Sign-On agent
AD	Active Directory

Install the SSO Agent on one of the following platforms:

- Windows 7 Professional (32-bit and 64-bit)
- Windows Server 2008 Enterprise (32-bit and 64-bit)
- Windows 2008 R2 (64-bit)
- Windows Server 2012 (64-bit)

24.4 SSO - Zyxel Device Configuration

This section shows what you have to do on the Zyxel Device in order to use SSO.

Table 184 Zyxel Device - SSO Agent Field Mapping

ZYXEL DEVICE		SSO	
SCREEN	FIELD	SCREEN	FIELD
Web Authentication > SSO	Listen Port	Agent Configuration Page > Gateway Setting	Gateway Port
Web Authentication > SSO	Primary Agent Port	Agent Configuration Page	Agent Listening Port
Object > User/Group > User > Add	Group Identifier	Agent Configuration Page > Configure LDAP/AD Server	Group Membership
Object > AAA Server > Active Directory > Add	Base DN	Agent Configuration Page > Configure LDAP/AD Server	Base DN
Object > AAA Server > Active Directory > Add	Bind DN	Agent Configuration Page > Configure LDAP/AD Server	Bind DN
Object > User/Group > User > Add	User Name	Agent Configuration Page > Configure LDAP/AD Server	Login Name Attribute
Object > AAA Server > Active Directory > Add	Server Address	Agent Configuration Page > Configure LDAP/AD Server	Server Address
Network > Interface > Ethernet > wan (IPv4)	IP address	Agent Configuration Page > Gateway Setting	Gateway IP

24.4.1 Configuration Overview

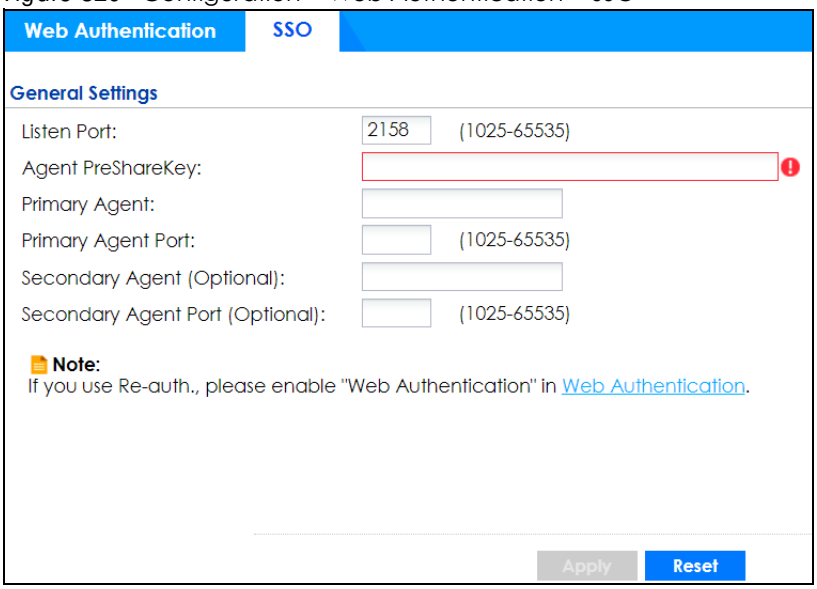
These are the screens you need to configure:

- Configure the Zyxel Device to Communicate with SSO on page 460
- Enable Web Authentication on page 461
- Create a Security Policy on page 463
- Configure User Information on page 464
- Configure an Authentication Method on page 465
- Configure Active Directory on page 466 or Configure Active Directory on page 466

24.4.2 Configure the Zyxel Device to Communicate with SSO

Use **Configuration** > **Web Authentication** > **SSO** to configure how the Zyxel Device communicates with the Single Sign-On (SSO) agent.

Figure 320 Configuration > Web Authentication > SSO



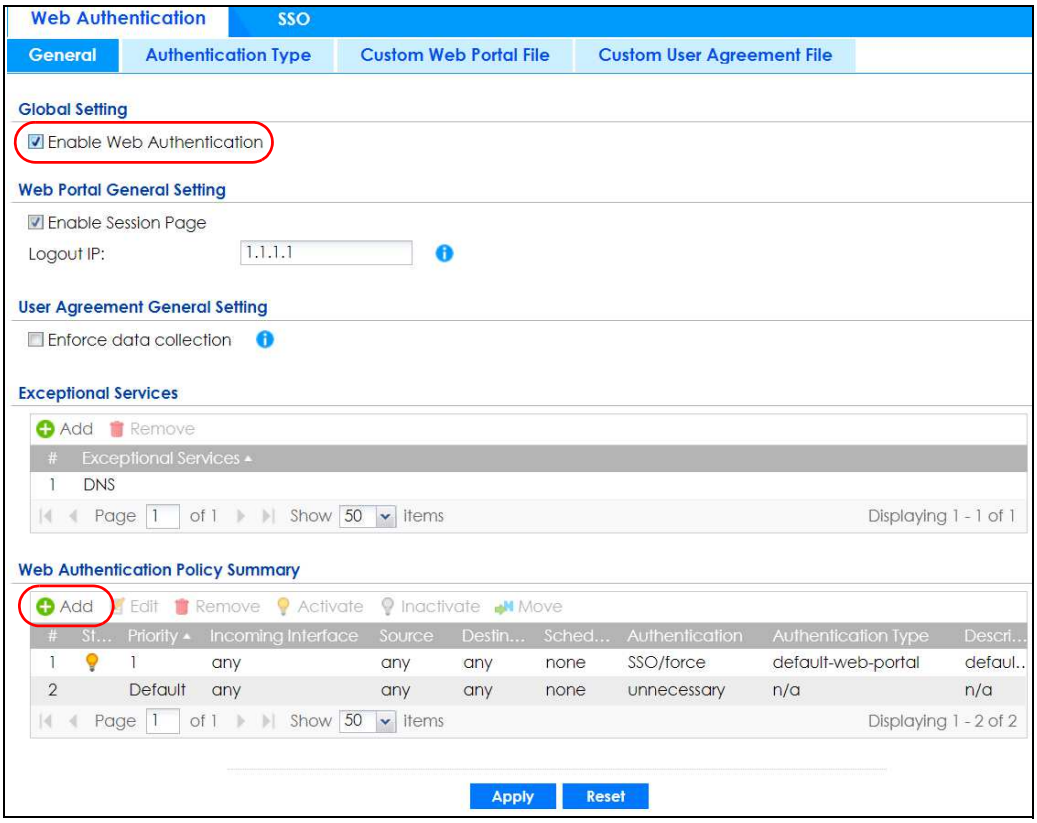
The following table gives an overview of the objects you can configure.

Table 185 Configuration > Web Authentication > SSO

LABEL	DESCRIPTION
Listen Port	The default agent listening port is 2158. If you change it on the Zyxel Device, then change it to the same number in the **Gateway Port** field on the SSO agent too. Type a number ranging from 1025 to 65535.
Agent PreShareKey	Type 8-32 printable ASCII characters or exactly 32 hex characters (0-9; a-f). The Agent PreShareKey is used to encrypt communications between the Zyxel Device and the SSO agent.
Primary Agent	Type the IPv4 address of the SSO agent. The Zyxel Device and the SSO agent must be in the same domain and be able to communicate with each other.
Primary Agent Port	Type the same port number here as in the **Agent Listening Port** field on the SSO agent. Type a number ranging from 1025 to 65535.
Secondary Agent Address (Optional)	Type the IPv4 address of the backup SSO agent if there is one. The Zyxel Device and the backup SSO agent must be in the same domain and be able to communicate with each other.
Secondary Agent Port (Optional)	Type the same port number here as in the **Agent Listening Port** field on the backup SSO agent if there is one. Type a number ranging from 1025 to 65535.
Apply	Click this button to save your changes to the Zyxel Device.
Reset	Click this button to return the screen to its last-saved settings

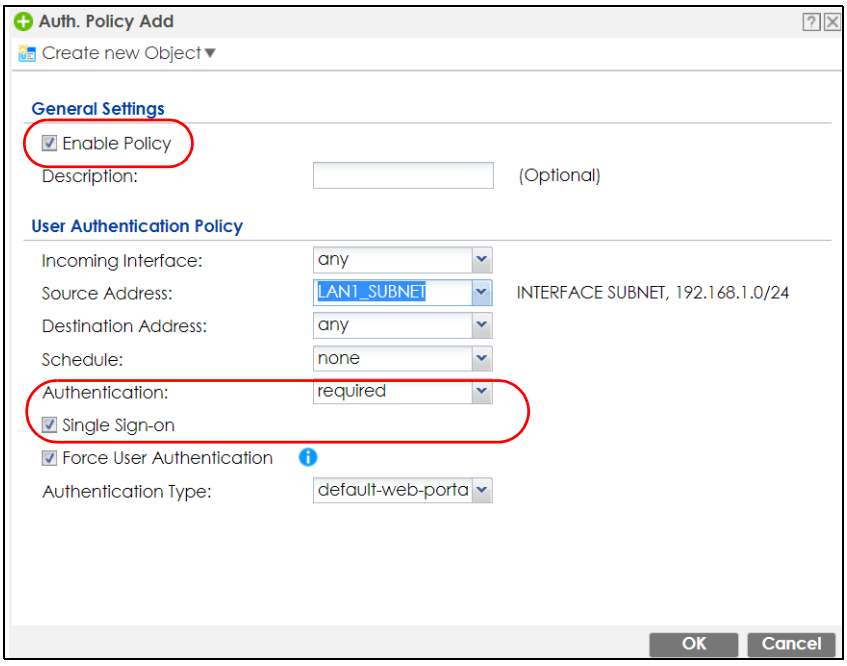
24.4.3 Enable Web Authentication

Enable **Web Authentication** and add a web authentication policy.



Make sure you select **Enable Policy**, **Single Sign-On** and choose **required** in **Authentication**.

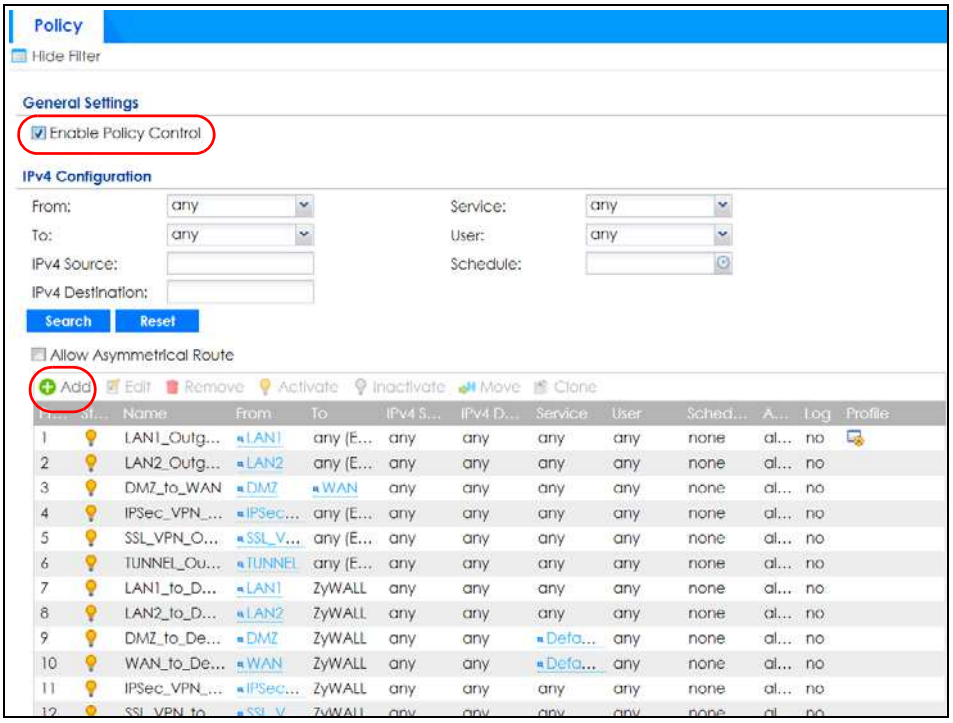
Do NOT select **any** as the **source address** unless you want all incoming connections to be authenticated!



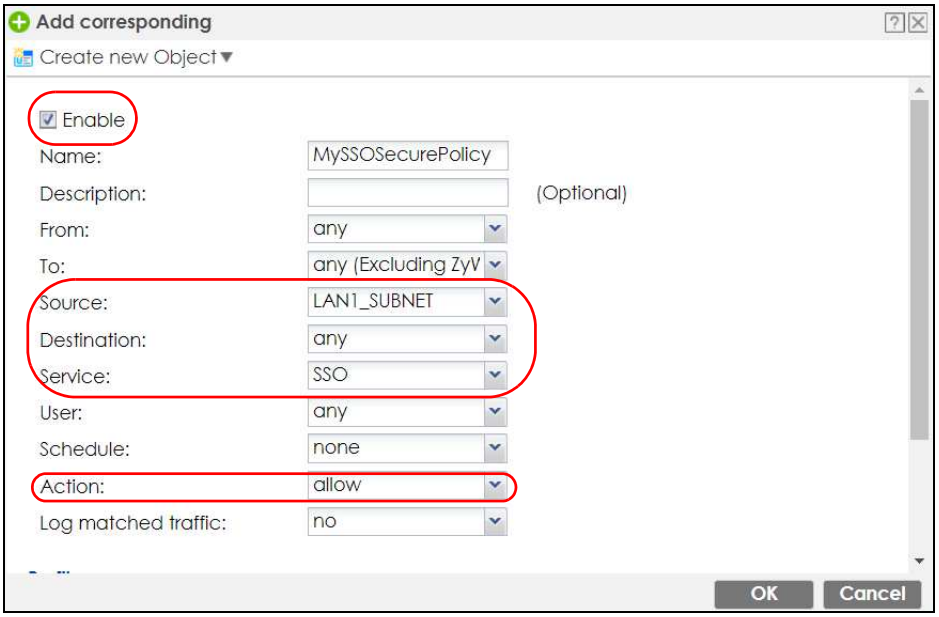
See Table 179 on page 443 and Table 180 on page 446 for more information on configuring these screens.

24.4.4 Create a Security Policy

Configure a Security Policy for SSO traffic source and destination direction in order to prevent the security policy from blocking this traffic. Go to **Configuration** > **Security Policy** > **Policy Control** and add a new policy if a default one does not cover the SSO web authentication traffic direction.

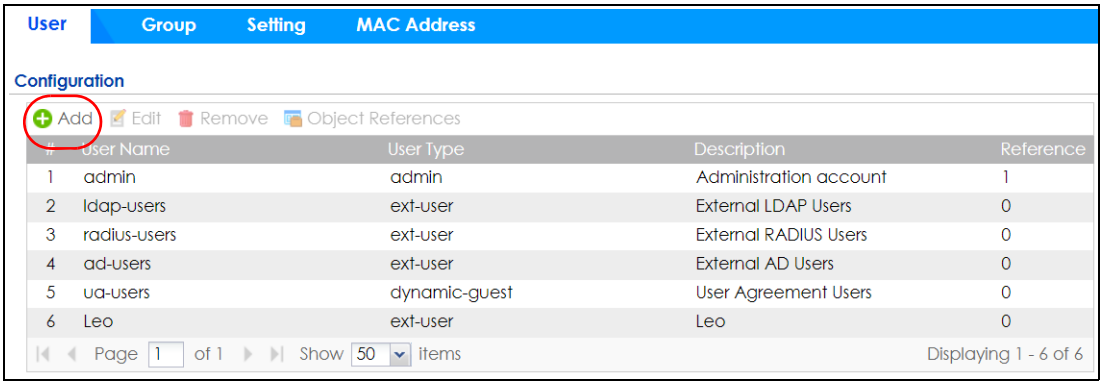


Configure the fields as shown in the following screen. Configure the source and destination addresses according to the SSO web authentication traffic in your network.

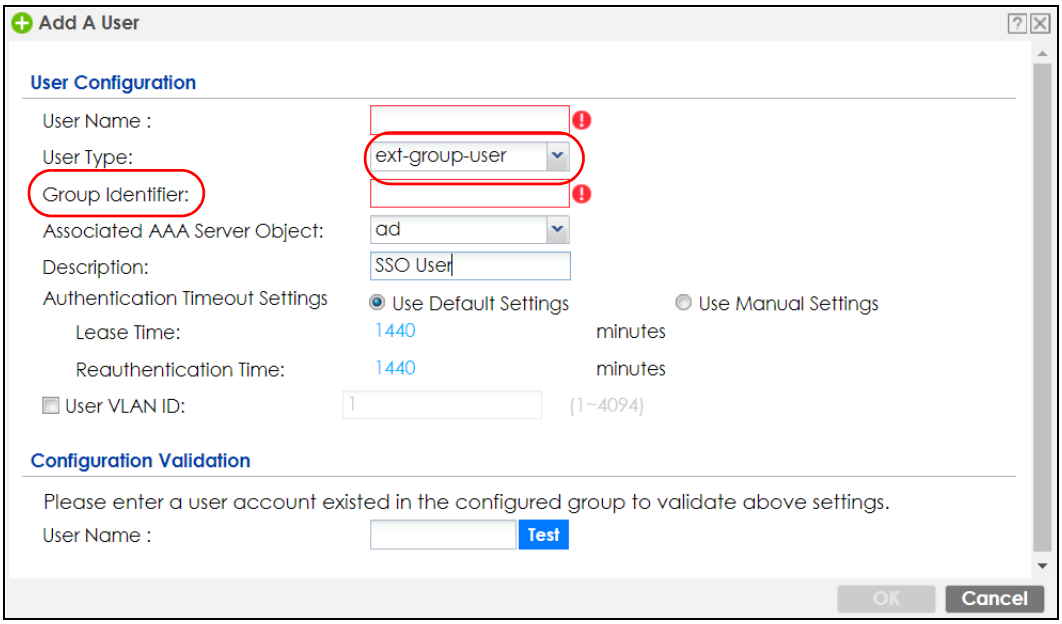


24.4.5 Configure User Information

Configure a **User** account of the **ext-group-user** type.

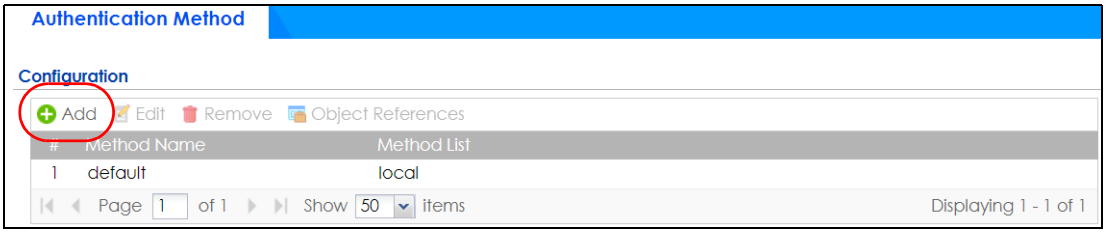


Configure **Group Identifier** to be the same as **Group Membership** on the SSO agent.

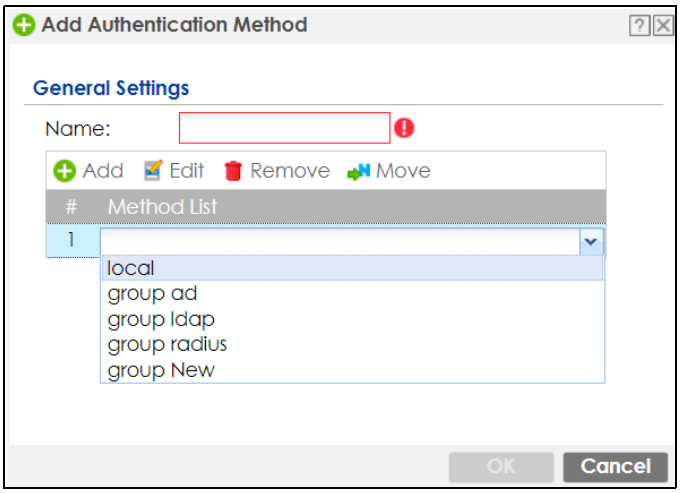


24.4.6 Configure an Authentication Method

Configure Active Directory (AD) for authentication with SSO.

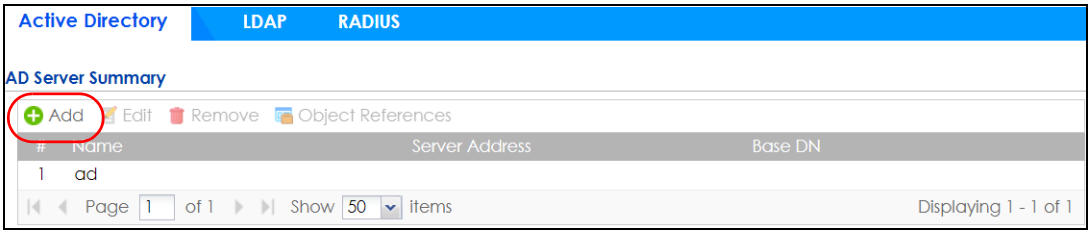


Choose **group ad** as the authentication server for SSO.

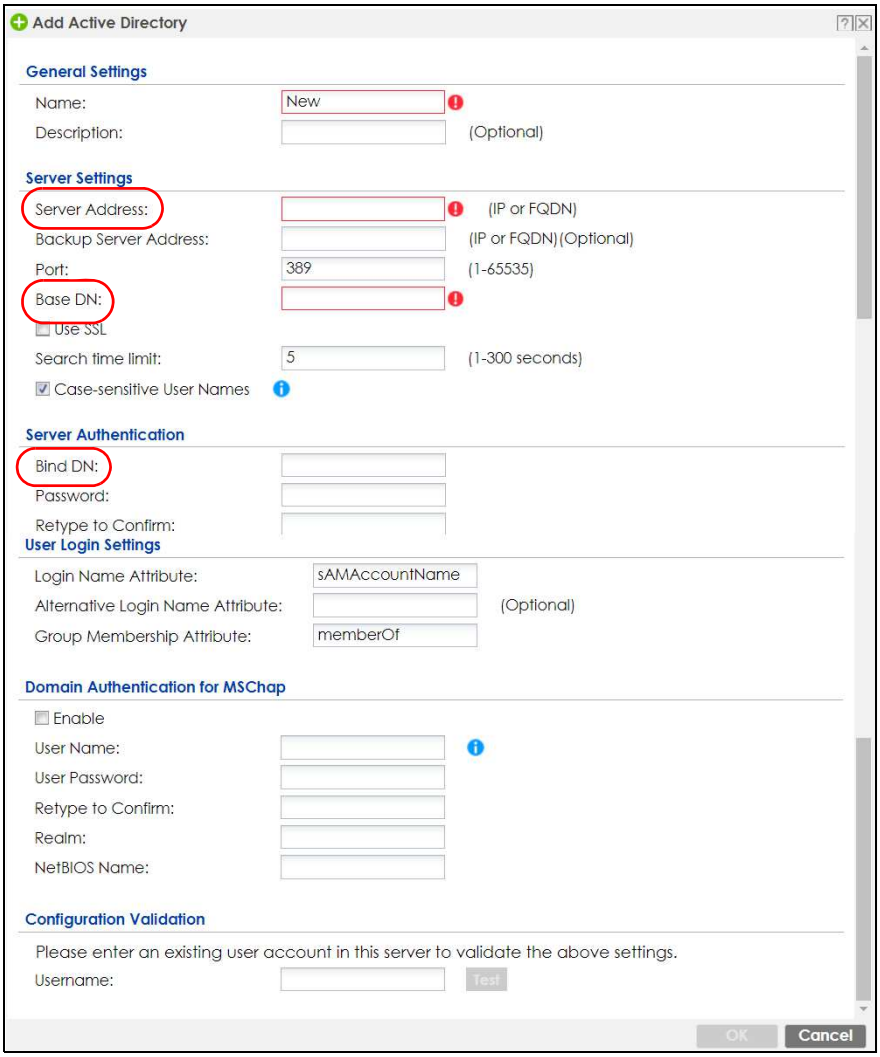


24.4.7 Configure Active Directory

You must configure an Active Directory (AD) server in **AAA Setup** to be the same as AD configured on the SSO agent.



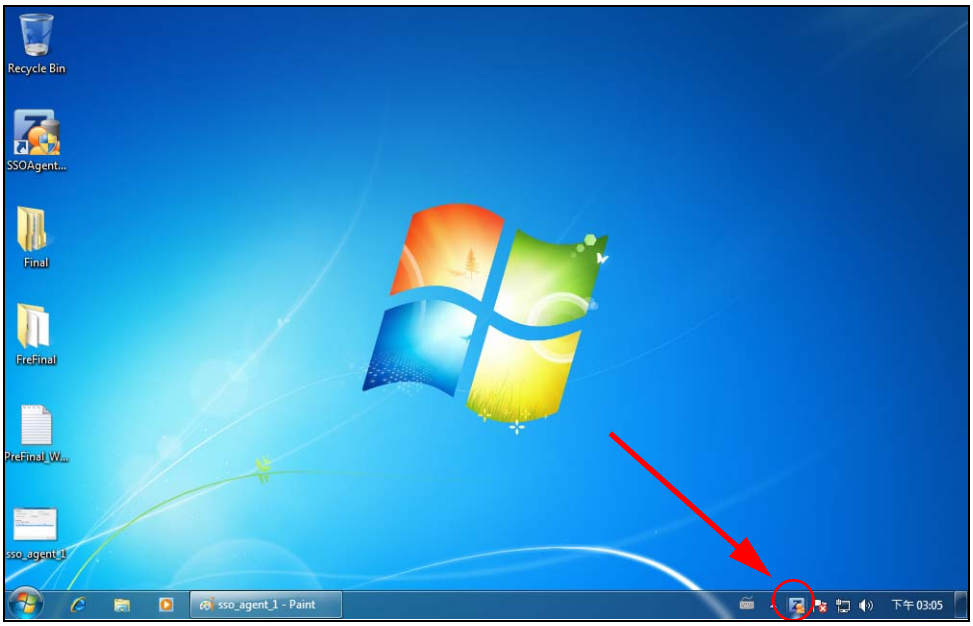
The default AD server port is 389. If you change this, make sure you make the same changes on the SSO. Configure the **Base DN** exactly the same as on the Domain Controller and SSO. **Bind DN** is a user name and password that allows the Zyxel Device to join the domain with administrative privileges. It is a required field.



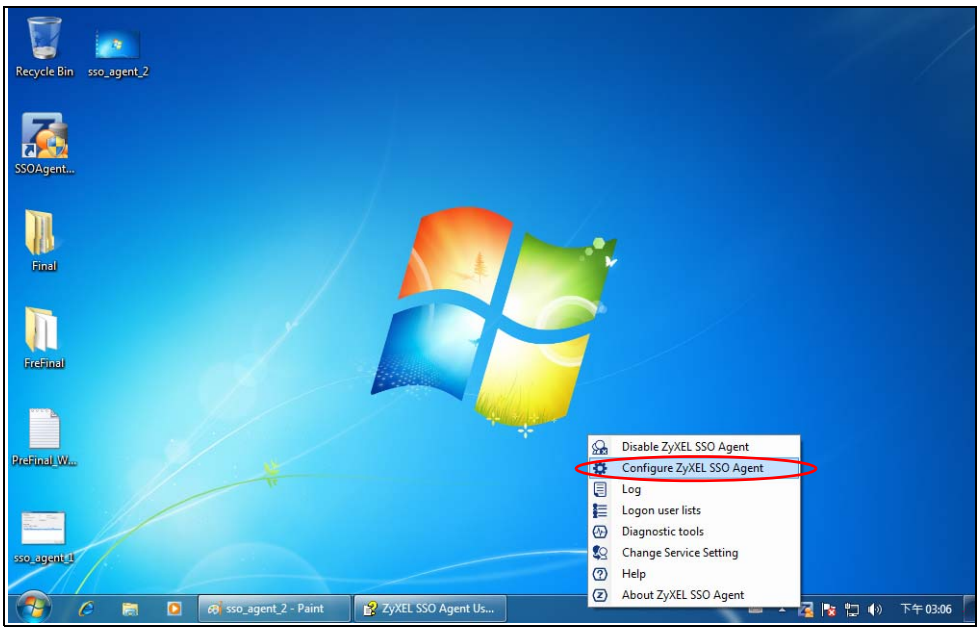
24.5 SSO Agent Configuration

This section shows what you have to do on the SSO agent in order to work with the Zyxel Device.

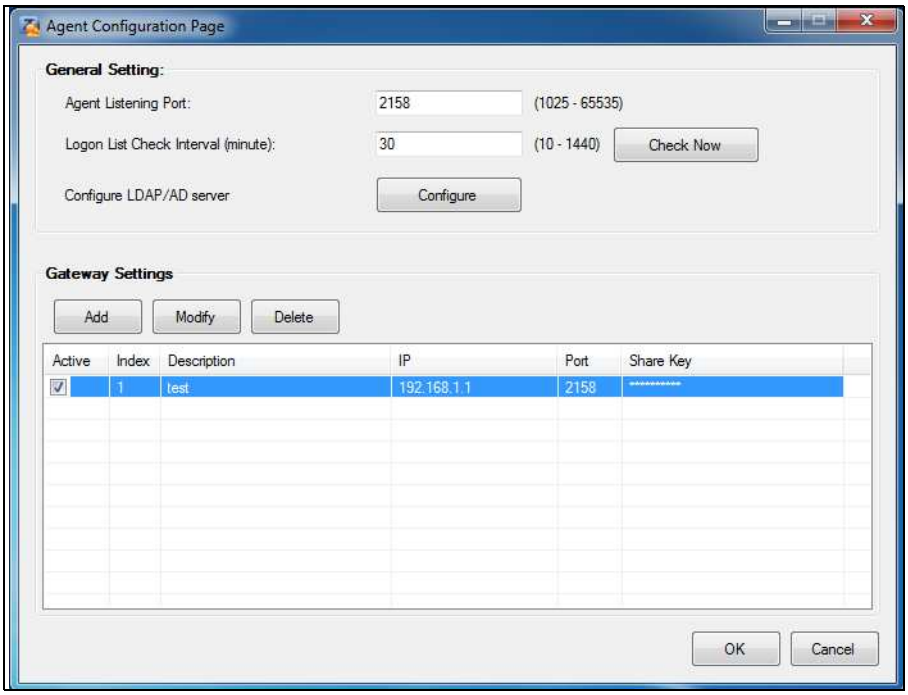
After you install the SSO agent, you will see an icon in the system tray (bottom right of the screen)



Right-click the SSO icon and select **Configure Zyxel SSO Agent**.

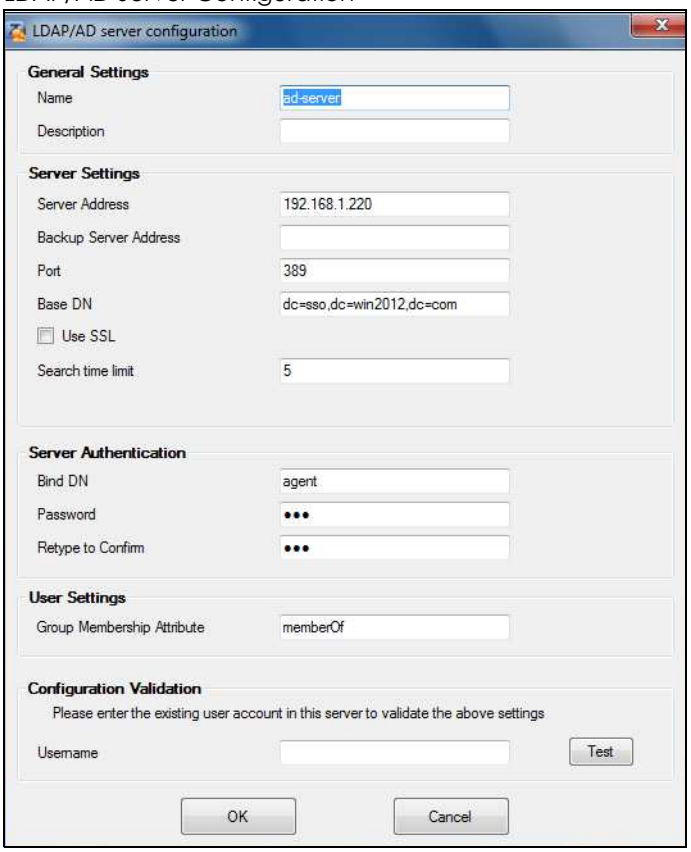


Configure the **Agent Listening Port**, **AD server** exactly as you have done on the Zyxel Device. Add the Zyxel Device IP address as the **Gateway**. Make sure the Zyxel Device and SSO agent are able to communicate with each other.

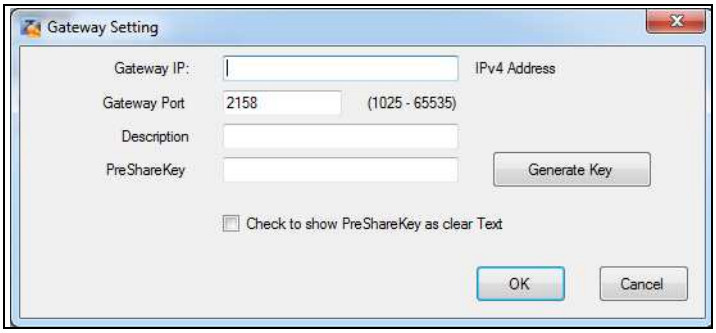


Configure the **Server Address**, **Port**, **Base DN**, **Bind DN**, **Login Name Attribute** and **Group Membership** for the AD server settings exactly as you have done on the Zyxel Device. **Group Membership** is called **Group Identifier** on the Zyxel Device.

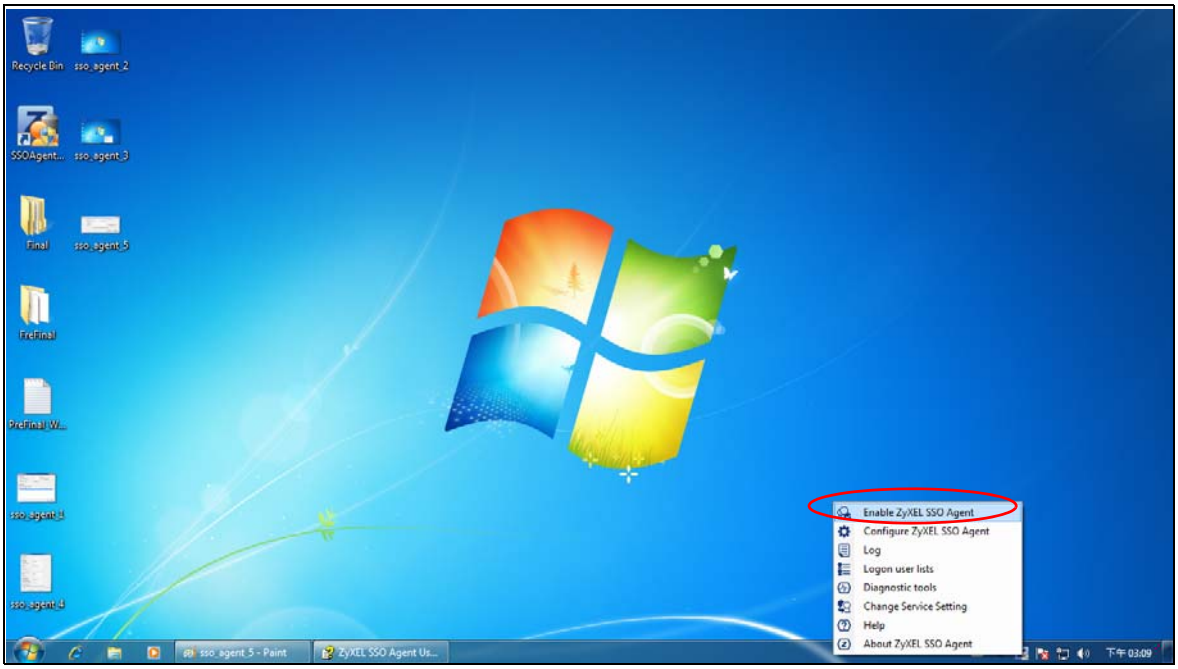
LDAP/AD Server Configuration



Configure the **Gateway IP** address, **Gateway Port** and **PreShareKey** exactly as you have done in the Zyxel Device **Configuration > Web Authentication > SSO** screen. If you want to use **Generate Key** to have the SSO create a random password, select **Check** to show **PreShareKey** as clear Text so as to see the password, then copy and paste it to the Zyxel Device.



After all SSO agent configurations are done, right-click the SSO icon in the system tray and select **Enable Zyxel SSO Agent**.



CHAPTER 25
Security Policy

25.1 Overview

A security policy is a template of security settings that can be applied to specific traffic at specific times. The policy can be applied:

- to a specific direction of travel of packets (from / to)
- to a specific source and destination address objects
- to a specific type of traffic (services)
- to a specific user or group of users
- at a specific schedule

The policy can be configured:

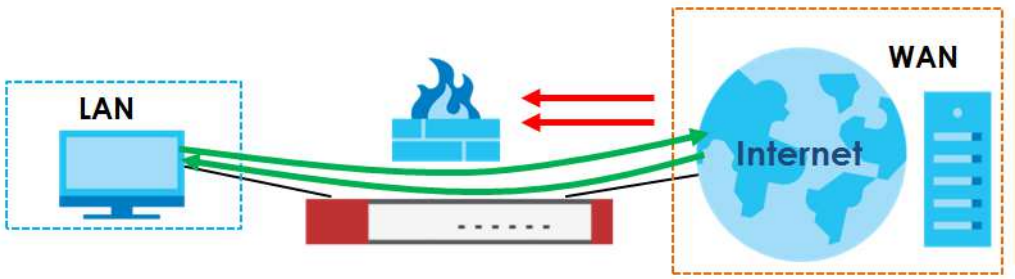
- to allow or deny traffic that matches the criteria above
- send a log or alert for traffic that matches the criteria above
- to apply the actions configured in the profiles (application patrol, content filter, IDP, anti-malware, email security) to traffic that matches the criteria above

Note: Security policies can be applied to both IPv4 and IPv6 traffic.

The security policies can also limit the number of user sessions.

The following example shows the Zyxel Device's default security policies behavior for a specific direction of travel of packets. WAN to LAN traffic and how stateful inspection works. A LAN user can initiate a Telnet session from within the LAN zone and the Zyxel Device allows the response. However, the Zyxel Device blocks incoming Telnet traffic initiated from the WAN zone and destined for the LAN zone.

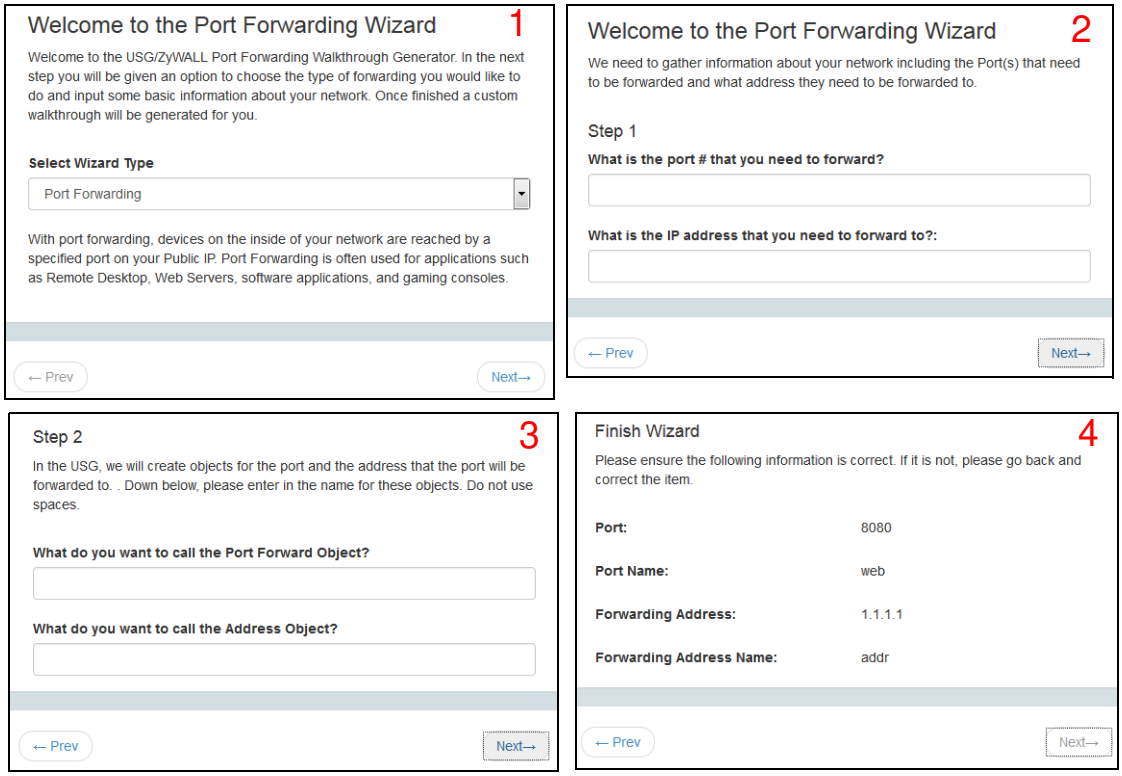
Figure 321 Default Directional Security Policy Example



25.2 One Security

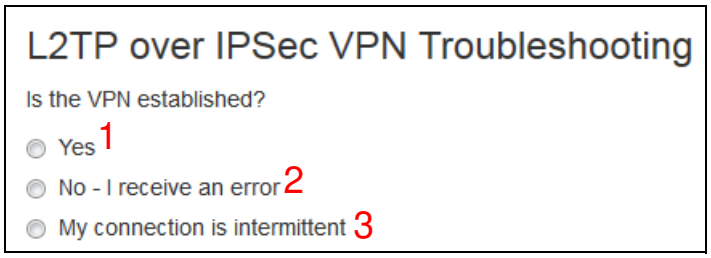
OneSecurity is a website with guidance on configuration walkthroughs, troubleshooting, and other information. This is an example of a port forwarding configuration walkthrough.

Figure 322 Example of a Port Forwarding Configuration Walkthrough.



This is an example of L2TP over IPSec VPN Troubleshooting troubleshooting.

Figure 323 Example of L2TP over IPSec Troubleshooting - 1



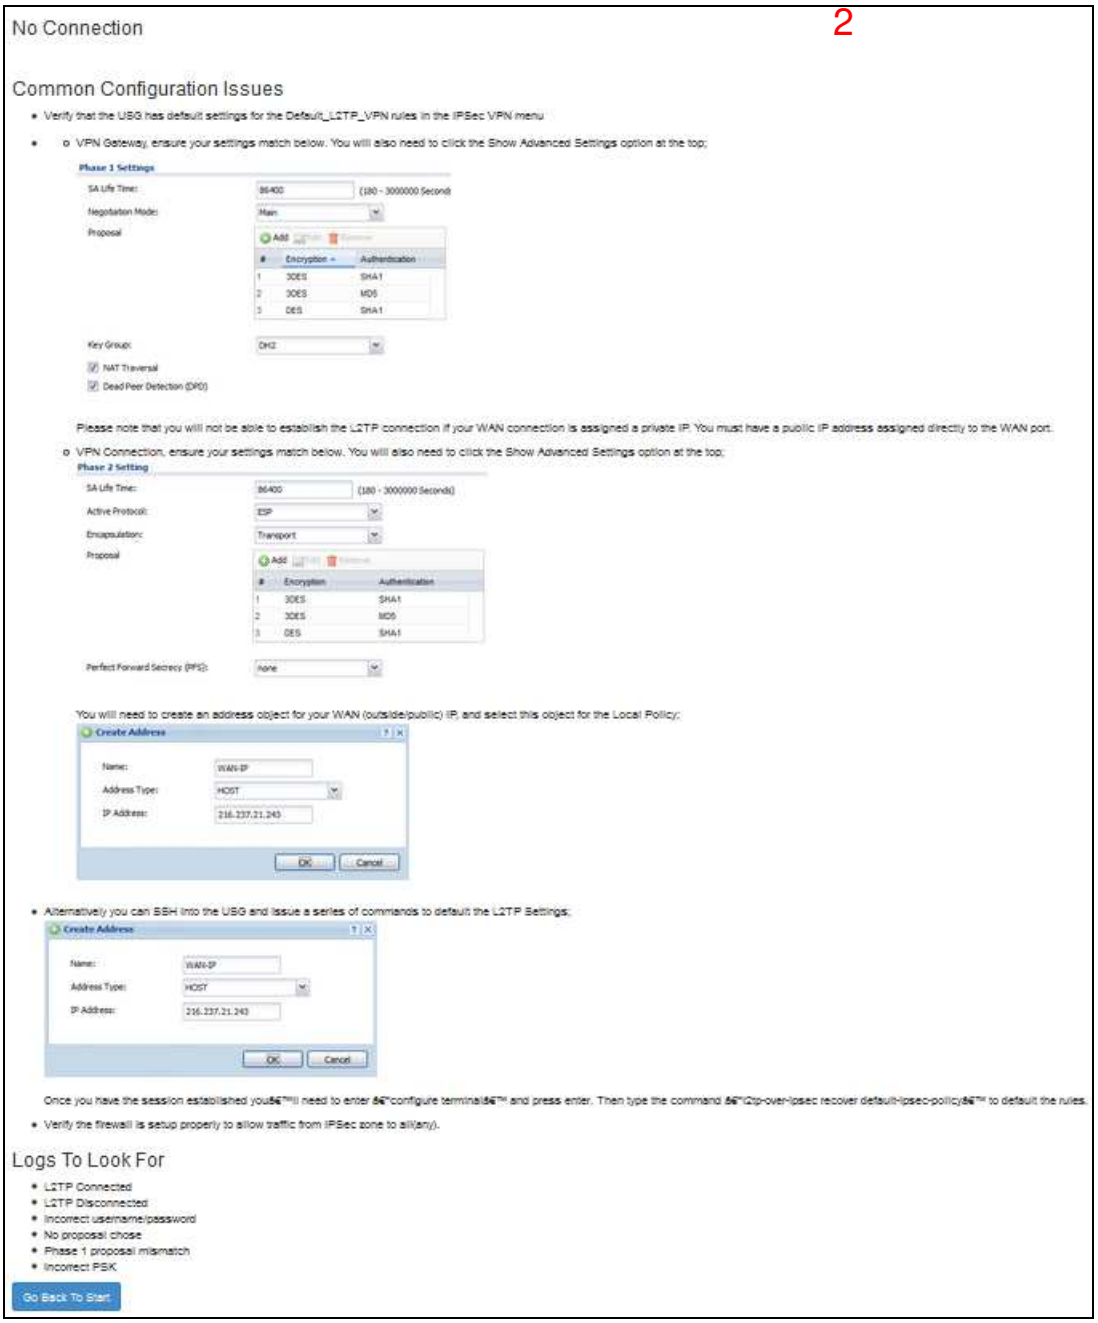


Figure 324 Example of L2TP over IPSec Troubleshooting - 2

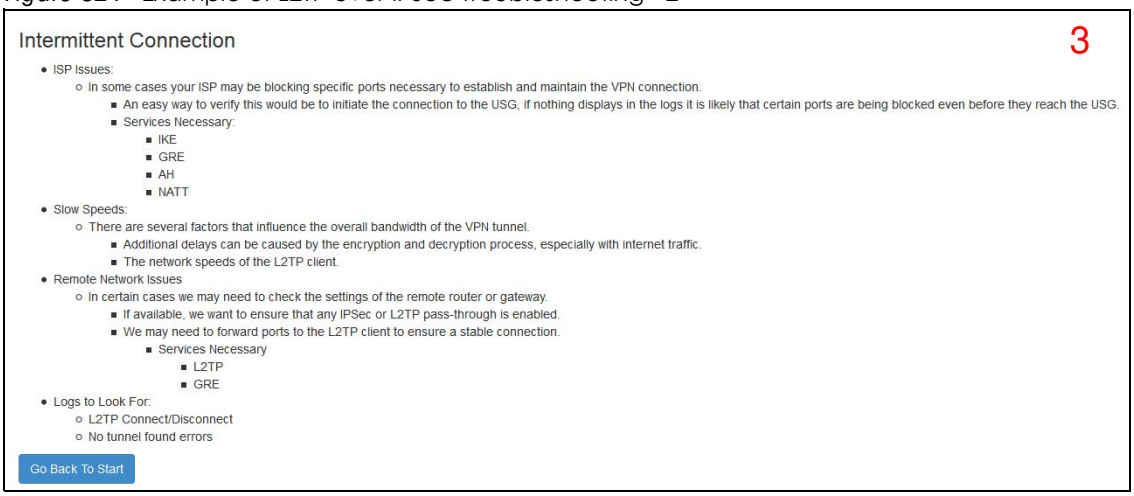


In the Zyxel Device, you will see icons that link to OneSecurity walkthroughs, troubleshooting and so on in certain screens.

For example, at the time of writing, these are the OneSecurity icons you can see.

Table 186 OneSecurity Icons

ONESECURITY ICON	SCREEN
Configuration Walkthrough	Click this icon to go to a series of screens that guide you how to configure the feature. Note that the walkthroughs do not perform the actual configuring, but just show you how to do it. • Device HA > General • Licensing > Registration • Network > NAT • Network > Routing > Policy Route • Security Service > App Patrol • Security Service > Content Filter • Security Service > IDP • Security Service > Anti-Malware • Security Service > Email Security • VPN > IPSec VPN • VPN > SSL VPN • VPN > L2TP VPN
Troubleshooting	Click this icon to go to a series of screens that guide you how to fix problems with the feature. • Device HA > General • Network > NAT • Network > Routing > Policy Route • Security Service > App Patrol • Security Service > Content Filter • Security Service > IDP • Security Service > Anti-Malware • Security Service > Email Security • VPN > IPSec VPN • VPN > SSL VPN • VPN > L2TP VPN

Table 186 OneSecurity Icons (continued)

ONESECURITY ICON	SCREEN
	Click this icon for more information on Application Patrol, which identifies traffic that passes through the Zyxel Device, so you can decide what to do with specific types of traffic. Traffic not recognized by application patrol is ignored. • Security Service > Application Patrol
	Click this icon for more information on Content Filter, which controls access to specific web sites or web content. • Security Service > Content Filter
	Click this icon for more information on IPSec and SSL VPN. Internet Protocol Security (IPSec) VPN connects IPSec routers or remote users using IPSec client software. SSL VPN allows users to use a web browser for secure remote user login without need of a VPN router or VPN client software. • VPN > IPSec VPN • VPN > SSL VPN
	Click this icon to download VPN client software. • VPN > IPSec VPN • VPN > SSL VPN
	Click this icon for more information on the Wireless AP Controller which sets how the Zyxel Device allows APs to connect to the wireless network. • Wireless > AP Management > Mgnt. AP List

25.3 What You Can Do in this Chapter

- Use the **Security Policy Control** screens (Section 25.4 on page 476) to enable or disable policies, asymmetrical routes, and manage and configure policies.
- Use the **Anomaly Detection and Prevention** (ADP) screens (Section 25.5 on page 482) to detect traffic with protocol anomalies and take appropriate action.
- Use the **Session Control** screens (see Section 25.5 on page 482) to limit the number of concurrent NAT/security policies traffic sessions a client can use.

25.3.1 What You Need to Know

Stateful Inspection

The Zyxel Device uses stateful inspection in its security policies. The Zyxel Device restricts access by screening data packets against defined access rules. It also inspects sessions. For example, traffic from one zone is not allowed unless it is initiated by a computer in another zone first.

Zones

A zone is a group of interfaces. Group the Zyxel Device's interfaces into different zones based on your needs. You can configure security policies for data passing between zones or even between interfaces.

Default Directional Security Policy Behavior

Security Policies can be grouped based on the direction of travel of packets to which they apply. Here is the The Zyxel Device has default Security Policy behavior for traffic going through the Zyxel Device in various directions.

Table 187 Directional Security Policy Behavior

FROM ZONE TO ZONE	BEHAVIOR
From any to Device	DHCP traffic from any interface to the Zyxel Device is allowed.
From LAN1 to any (other than the Zyxel Device)	Traffic from the LAN1 to any of the networks connected to the Zyxel Device is allowed.
From LAN2 to any (other than the Zyxel Device)	Traffic from the LAN2 to any of the networks connected to the Zyxel Device is allowed.
From LAN1 to Device	Traffic from the LAN1 to the Zyxel Device itself is allowed.
From LAN2 to Device	Traffic from the LAN2 to the Zyxel Device itself is allowed.
From WAN to Device	The default services listed in To-Device Policies are allowed from the WAN to the Zyxel Device itself. All other WAN to Zyxel Device traffic is dropped.
From any to any	Traffic that does not match any Security policy is dropped. This includes traffic from the WAN to any of the networks behind the Zyxel Device. This also includes traffic to or from interfaces that are not assigned to a zone (extra-zone traffic).

To-Device Policies

Policies with **Device** as the **To Zone** apply to traffic going to the Zyxel Device itself. By default:

- The Security Policy allows only LAN, or WAN computers to access or manage the Zyxel Device.
- The Zyxel Device allows DHCP traffic from any interface to the Zyxel Device.
- The Zyxel Device drops most packets from the WAN zone to the Zyxel Device itself and generates a log except for AH, ESP, GRE, HTTPS, IKE, NATT.

When you configure a Security Policy rule for packets destined for the Zyxel Device itself, make sure it does not conflict with your service control rule. The Zyxel Device checks the security policy before the service control rules for traffic destined for the Zyxel Device.

A **From Any To Device** direction policy applies to traffic from an interface which is not in a zone.

Global Security Policies

Security Policies with **from any** and/or **to any** as the packet direction are called global Security Policies. The global Security Policies are the only Security Policies that apply to an interface that is not included in a zone. The **from any** policies apply to traffic coming from the interface and the **to any** policies apply to traffic going to the interface.

Security Policy Rule Criteria

The Zyxel Device checks the schedule, user name (user's login name on the Zyxel Device), source IP address and object, destination IP address and object, IP protocol type of network traffic (service) and Security Service profile criteria against the Security Policies (in the order you list them). When the traffic matches a policy, the Zyxel Device takes the action specified in the policy.

User Specific Security Policies

You can specify users or user groups in Security Policies. For example, to allow a specific user from any computer to access a zone by logging in to the Zyxel Device, you can set up a policy based on the user name only. If you also apply a schedule to the Security Policy, the user can only access the network at the scheduled time. A user-aware Security Policy is activated whenever the user logs in to the Zyxel Device and will be disabled after the user logs out of the Zyxel Device.

Session Limits

Accessing the Zyxel Device or network resources through the Zyxel Device requires a NAT session and corresponding Security Policy session. Peer to peer applications, such as file sharing applications, may use a large number of NAT sessions. A single client could use all of the available NAT sessions and prevent others from connecting to or through the Zyxel Device. The Zyxel Device lets you limit the number of concurrent NAT/Security Policy sessions a client can use.

25.4 The Security Policy Screen

Asymmetrical Routes

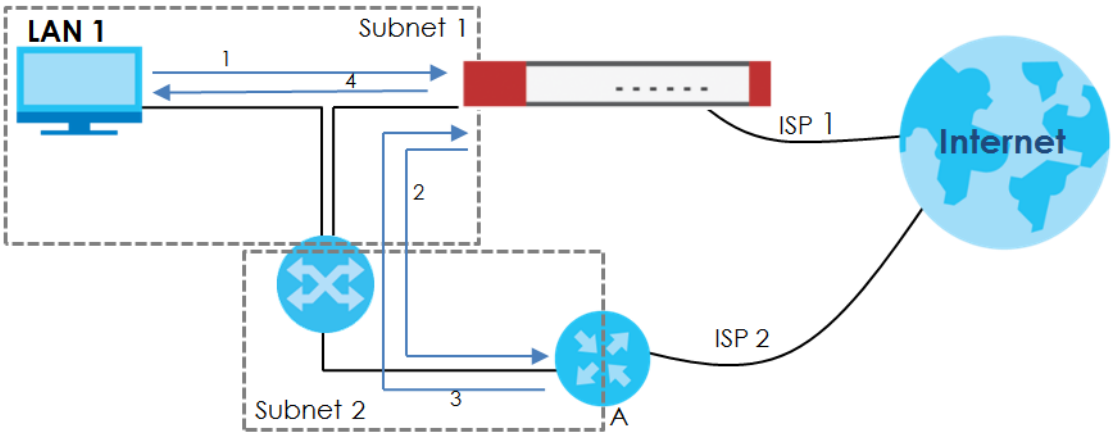
If an alternate gateway on the LAN has an IP address in the same subnet as the Zyxel Device's LAN IP address, return traffic may not go through the Zyxel Device. This is called an asymmetrical or "triangle" route. This causes the Zyxel Device to reset the connection, as the connection has not been acknowledged.

You can have the Zyxel Device permit the use of asymmetrical route topology on the network (not reset the connection). However, allowing asymmetrical routes may let traffic from the WAN go directly to the LAN without passing through the Zyxel Device. A better solution is to use virtual interfaces to put the Zyxel Device and the backup gateway on separate subnets. Virtual interfaces allow you to partition your network into logical sections over the same interface. See the chapter about interfaces for more information.

By putting LAN 1 and the alternate gateway (**A** in the figure) in different subnets, all returning network traffic must pass through the Zyxel Device to the LAN. The following steps and figure describe such a scenario.

1. A computer on the LAN1 initiates a connection by sending a SYN packet to a receiving server on the WAN.
2. The Zyxel Device reroutes the packet to gateway **A**, which is in **Subnet 2**.
3. The reply from the WAN goes to the Zyxel Device.
4. The Zyxel Device then sends it to the computer on the LAN1 in **Subnet 1**.

Figure 325 Using Virtual Interfaces to Avoid Asymmetrical Routes



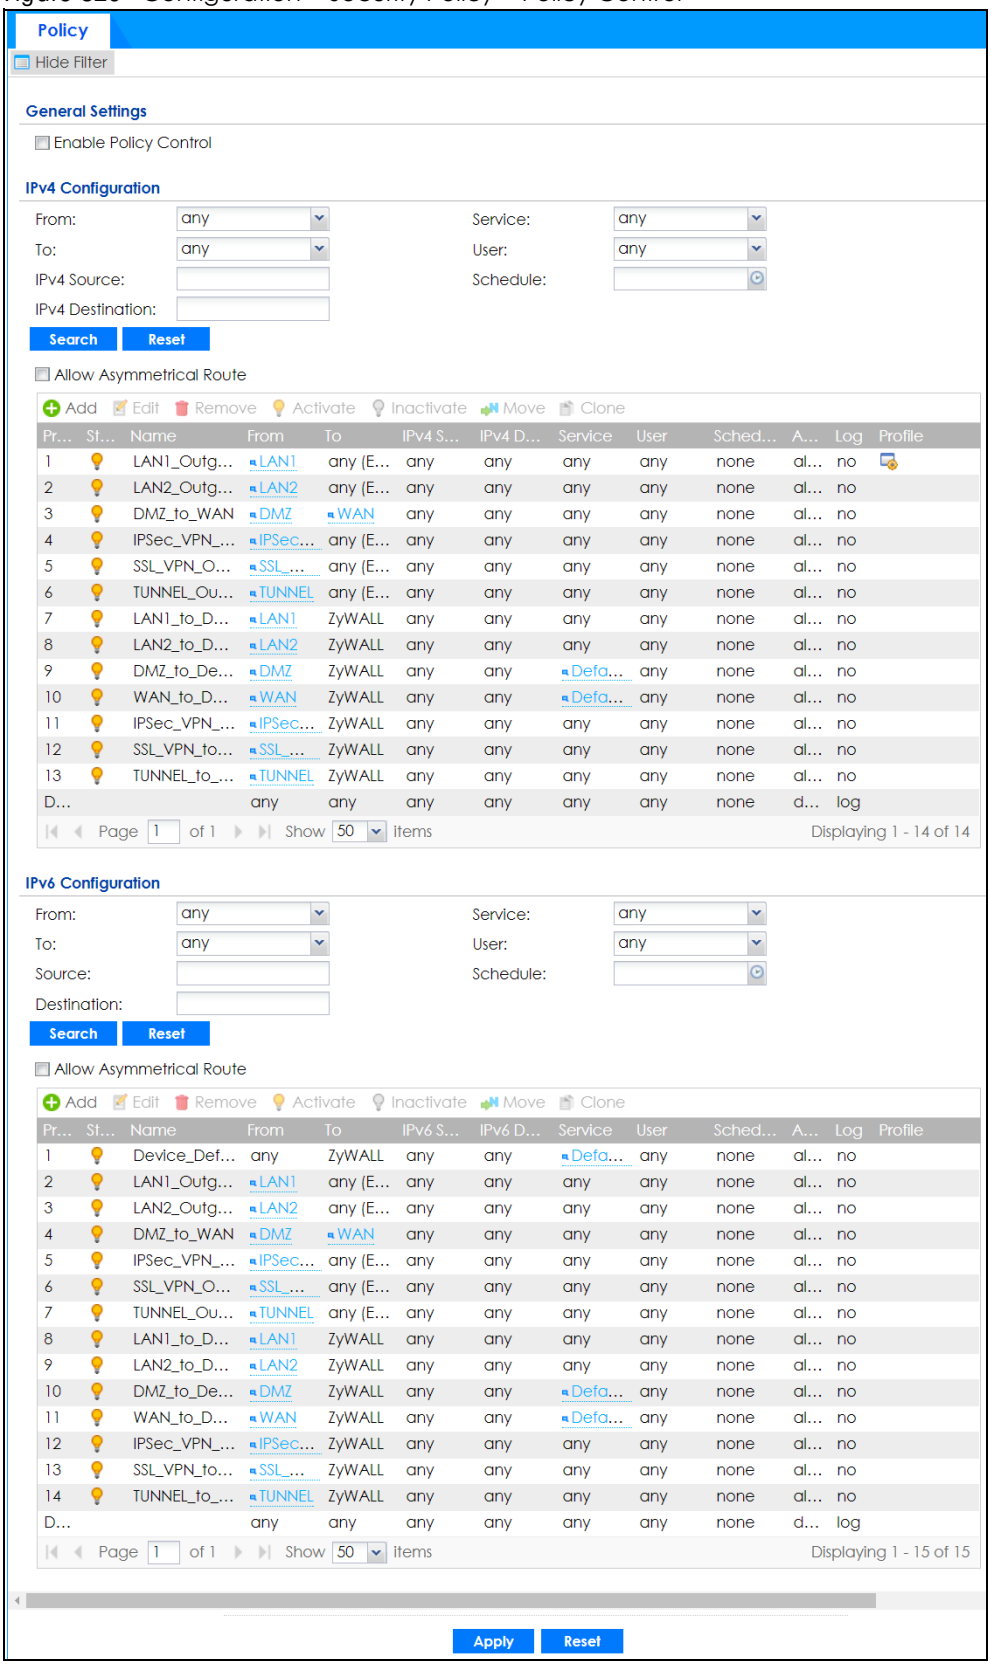
25.4.1 Configuring the Security Policy Control Screen

Click **Configuration** > **Security Policy** > **Policy Control** to open the **Security Policy** screen. Use this screen to enable or disable the Security Policy and asymmetrical routes, set a maximum number of sessions per host, and display the configured Security Policies. Specify from which zone packets come and to which zone packets travel to display only the policies specific to the selected direction. Note the following.

- Besides configuring the Security Policy, you also need to configure NAT rules to allow computers on the WAN to access LAN devices.
- The Zyxel Device applies NAT (Destination NAT) settings before applying the Security Policies. So for example, if you configure a NAT entry that sends WAN traffic to a LAN IP address, when you configure a corresponding Security Policy to allow the traffic, you need to set the LAN IP address as the destination.
- The ordering of your policies is very important as policies are applied in sequence.

The following screen shows the Security Policy summary screen.

Figure 326 Configuration > Security Policy > Policy Control



The following table describes the labels in this screen.

Table 188 Configuration > Security Policy > Policy Control

LABEL	DESCRIPTION
Show Filter/Hide Filter	Click **Show Filter** to display IPv4 and IPv6 (if enabled) security policy search filters.
General Settings	Enable or disable the Security Policy feature on the Zyxel Device.
Enable Policy Control	Select this to activate Security Policy on the Zyxel Device to perform access control.
IPv4 / IPv6 Configuration	Use IPv4 / IPv6 search filters to find specific IPv4 and IPv6 (if enabled) security policies based on direction, application, user, source, destination and/or schedule.
From / To	Select a zone to view all security policies from a particular zone and/or to a particular zone. **any** means all zones.
IPv4 / IPv6 Source	Type an IPv4 or IPv6 IP address to view all security policies based on the IPv4 / IPv6 source address object used. • An IPv4 IP address is written as four integer blocks separated by periods. This is an example IPv4 address: 172.16.6.7. • An 128-bit IPv6 address is written as eight 16-bit hexadecimal blocks separated by colons (:). This is an example IPv6 address: 2001:0db8:1a2b:0015:0000:0000:1a2f:0000.
IPv4 / IPv6 Destination	Type an IPv4 or IPv6 IP address to view all security policies based on the IPv4 / IPv6 destination address object used. • An IPv4 IP address is written as four integer blocks separated by periods. This is an example IPv4 address: 172.16.6.7. • An 128-bit IPv6 address is written as eight 16-bit hexadecimal blocks separated by colons (:). This is an example IPv6 address: 2001:0db8:1a2b:0015:0000:0000:1a2f:0000.
Service	View all security policies based the service object used.
User	View all security policies based on user or user group object used.
Schedule	View all security policies based on the schedule object used.
IPv4/IPv6 Policy Management	Use the following items to manage IPv4 and IPv6 policies.
Allow Asymmetrical Route	If an alternate gateway on the LAN has an IP address in the same subnet as the Zyxel Device's LAN IP address, return traffic may not go through the Zyxel Device. This is called an asymmetrical or "triangle" route. This causes the Zyxel Device to reset the connection, as the connection has not been acknowledged. Select this check box to have the Zyxel Device permit the use of asymmetrical route topology on the network (not reset the connection). Note: Allowing asymmetrical routes may let traffic from the WAN go directly to the LAN without passing through the Zyxel Device. A better solution is to use virtual interfaces to put the Zyxel Device and the backup gateway on separate subnets.
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.

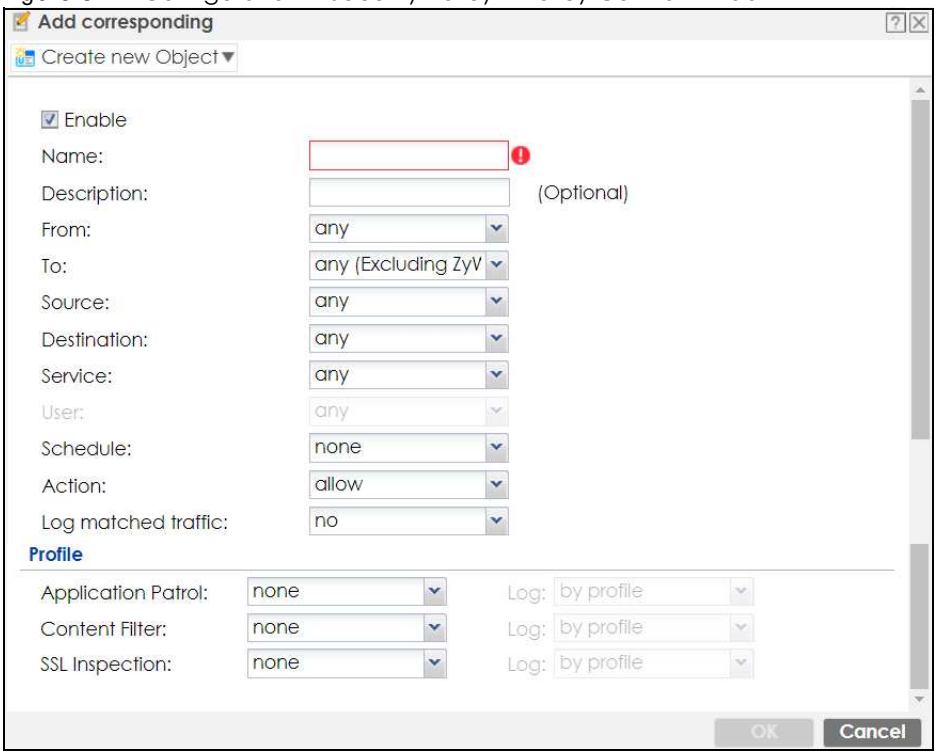
Table 188 Configuration > Security Policy > Policy Control (continued)

LABEL	DESCRIPTION
Move	To change a policy's position in the numbered list, select the policy and click **Move** to display a field to type a number for where you want to put that policy and press [ENTER] to move the policy to the number that you typed. The ordering of your policies is important as they are applied in order of their numbering.
Clone	Use **Clone** to create a new entry by modifying an existing one. • Select an existing entry. • Click **Clone**, type a number where the new entry should go and then press [ENTER]. • A configuration copy of the selected entry pops up. You must at least change the name as duplicate entry names are not allowed.
The following read-only fields summarize the policies you have created that apply to traffic traveling in the selected packet direction.	
Priority	This is the position of your Security Policy in the global policy list (including all through-Zyxel Device and to-Zyxel Device policies). The ordering of your policies is important as policies are applied in sequence. **Default** displays for the default Security Policy behavior that the Zyxel Device performs on traffic that does not match any other Security Policy.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Name	This is the name of the Security policy.
From / To	This is the direction of travel of packets. Select from which zone the packets come and to which zone they go. Security Policies are grouped based on the direction of travel of packets to which they apply. For example, from **LAN** to **LAN** means packets traveling from a computer or subnet on the LAN to either another computer or subnet on the LAN. From **any** displays all the Security Policies for traffic going to the selected **To Zone**. To **any** displays all the Security Policies for traffic coming from the selected **From Zone**. From **any** to **any** displays all of the Security Policies. To **ZyWALL** policies are for traffic that is destined for the Zyxel Device and control which computers can manage the Zyxel Device.
IPv4 / IPv6 Source	This displays the IPv4 / IPv6 source address object, including geographic address and FQDN (group) objects, to which this Security Policy applies.
IPv4 / IPv6 Destination	This displays the IPv4 / IPv6 destination address object, including geographic address and FQDN (group) objects, to which this Security Policy applies.
Service	This displays the service object to which this Security Policy applies.
User	This is the user name or user group name to which this Security Policy applies.
Schedule	This field tells you the schedule object that the policy uses. **none** means the policy is active at all times if enabled.
Action	This field displays whether the Security Policy silently discards packets without notification (**deny**), permits the passage of packets (**allow**) or drops packets with notification (**reject**)
Log	Select whether to have the Zyxel Device generate a log (**log**), log and alert (**log alert**) or not (**no**) when the policy is matched to the criteria listed above.
Profile	This field shows you which Security Service profiles (application patrol, content filter, IDP, anti-malware, email security) apply to this Security policy. Click an applied Security Service profile icon to edit the profile directly.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

25.4.2 The Security Policy Control Add/Edit Screen

In the **Security Policy Control** screen, click the **Edit** or **Add** icon to display the **Security Policy Edit or Add** screen.

Figure 327 Configuration > Security Policy > Policy Control > Add



The following table describes the labels in this screen.

Table 189 Configuration > Security Policy > Policy Control > Add

LABEL	DESCRIPTION
Create new Object	Use to configure any new settings objects that you need to use in this screen.
Enable	Select this check box to activate the Security policy.
Name	Type a name to identify the policy
Description	Enter a descriptive name of up to 60 printable ASCII characters for the Policy. Spaces are allowed.
From To	For through-Zyxel Device policies, select the direction of travel of packets to which the policy applies. **any** means all interfaces. **Device** means packets destined for the Zyxel Device itself.
Source	Select an IPv4 / IPv6 address or address group object, including geographic address and FQDN (group) objects, to apply the policy to traffic coming from it. Select **any** to apply the policy to all traffic coming from IPv4 / IPv6 addresses.
Destination	Select an IPv4 / IPv6 address or address group, including geographic address and FQDN (group) objects, to apply the policy to traffic going to it. Select **any** to apply the policy to all traffic going to IPv4 / IPv6 addresses.
Service	Select a service or service group from the drop-down list box.

Table 189 Configuration > Security Policy > Policy Control > Add (continued)

LABEL	DESCRIPTION
User	This field is not available when you are configuring a to-Zyxel Device policy. Select a user name or user group to which to apply the policy. The Security Policy is activated only when the specified user logs into the system and the policy will be disabled when the user logs out. Otherwise, select **any** and there is no need for user logging. Note: If you specified a source IP address (group) instead of **any** in the field below, the user's IP address should be within the IP address range.
Schedule	Select a schedule that defines when the policy applies. Otherwise, select **none** and the policy is always effective.
Action	Use the drop-down list box to select what the Security Policy is to do with packets that match this policy. Select **deny** to silently discard the packets without sending a TCP reset packet or an ICMP destination-unreachable message to the sender. Select **reject** to discard the packets and send a TCP reset packet or an ICMP destination-unreachable message to the sender. Select **allow** to permit the passage of the packets.
Log matched traffic	Select whether to have the Zyxel Device generate a log (**log**), log and alert (**log alert**) or not (**no**) when the policy is matched to the criteria listed above..
Profile	Use this section to apply anti- x profiles (created in the **Configuration > Security Service** screens) to traffic that matches the criteria above. You must have created a profile first; otherwise **none** displays. Use **Log** to generate a log (**log**), log and alert (**log alert**) or not (**no**) for all traffic that matches criteria in the profile.
Application Patrol	Select an Application Patrol profile from the list box; **none** displays if no profiles have been created in the **Configuration > Security Service > App Patrol** screen.
Content Filter	Select a Content Filter profile from the list box; **none** displays if no profiles have been created in the **Configuration > Security Service > Content Filter** screen.
SSL Inspection	Select an SSL Inspection profile from the list box; **none** displays if no profiles have been created in the **Configuration > Security Service > SSL Inspection** screen.
OK	Click **OK** to save your customized settings and exit this screen.
Cancel	Click **Cancel** to exit this screen without saving.

25.5 Anomaly Detection and Prevention Overview

Anomaly Detection and Prevention (ADP) protects against anomalies based on violations of protocol standards (RFCs – Requests for Comments) and abnormal flows such as port scans. This section introduces ADP, anomaly profiles and applying an ADP profile to a traffic direction.

Traffic Anomalies

Traffic anomaly policies look for abnormal behavior or events such as port scanning, sweeping or network flooding. They operate at OSI layer-2 and layer-3. Traffic anomaly policies may be updated when you upload new firmware.

Protocol Anomalies

Protocol anomalies are packets that do not comply with the relevant RFC (Request For Comments). Protocol anomaly detection includes:

- TCP Decoder
- UDP Decoder
- ICMP Decoder

Protocol anomaly policies may be updated when you upload new firmware.

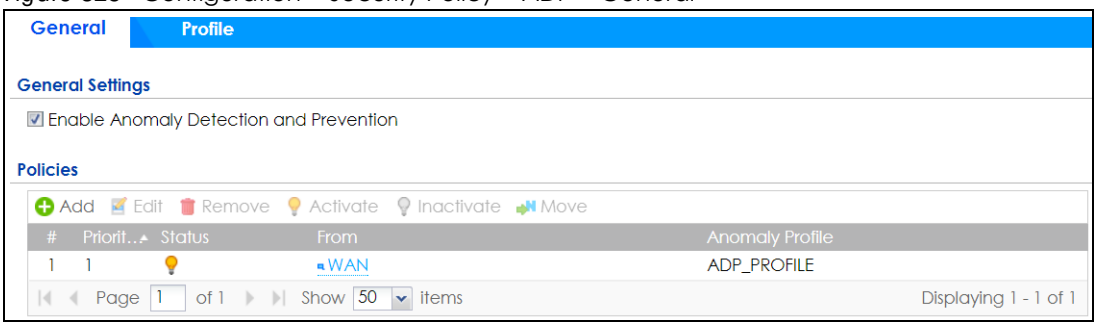
Note: First, create an ADP profile in the In the **Configuration** > **Security Policy** > **ADP** > **Profile** screen.

Then, apply the profile to traffic originating from a specific zone in the **Configuration** > **Security Policy** > **ADP** > **General** screen.

25.5.1 The Anomaly Detection and Prevention General Screen

Click **Configuration** > **Security Policy** > **ADP** > **General** to display the next screen.

Figure 328 Configuration > Security Policy > ADP > General



The following table describes the labels in this screen.

Table 190 Configuration > Security Policy > ADP > General

LABEL	DESCRIPTION
General Settings	
Enable Anomaly Detection and Prevention	Select this to enable traffic anomaly and protocol anomaly detection and prevention.
Add	Select an entry and click **Add** to append a new row beneath the one selected. ADP policies are applied in order (**Priority**) shown in this screen
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Move	To change an entry's position in the numbered list, select it and click **Move** to display a field to type a number for where you want to put that entry and press [ENTER] to move the entry to the number that you typed.
#	This is the entry's index number in the list.

Table 190 Configuration > Security Policy > ADP > General

LABEL	DESCRIPTION
Priority	This is the rank in the list of anomaly profile policies. The list is applied in order of priority.
Status	The activate (light bulb) icon is lit when the entry is active and dimmed when the entry is inactive.
From	This is the direction of travel of packets to which an anomaly profile is bound. Traffic direction is defined by the zone the traffic is coming from. Use the **From** field to specify the zone from which the traffic is coming. Select **ZyWALL** to specify traffic coming from the Zyxel Device itself. **From LAN** means packets traveling from a computer on one LAN subnet to a computer on another subnet via the Zyxel Device's LAN1 zone interfaces. The Zyxel Device does not check packets traveling from a LAN computer to another LAN computer on the same subnet. **From WAN** means packets that come in from the WAN zone and the Zyxel Device routes back out through the WAN zone. Note: Depending on your network topology and traffic load, applying every packet direction to an anomaly profile may affect the Zyxel Device's performance.
Anomaly Profile	An anomaly profile is a set of anomaly policies with configured activation, log and action settings. This field shows which anomaly profile is bound to which traffic direction. Select an ADP profile to apply to the entry's traffic direction. Configure the ADP profiles in the ADP profile screens.

25.5.2 Creating New ADP Profiles

Create new ADP profiles in the **Configuration > Security Policy > ADP > Profile** screens.

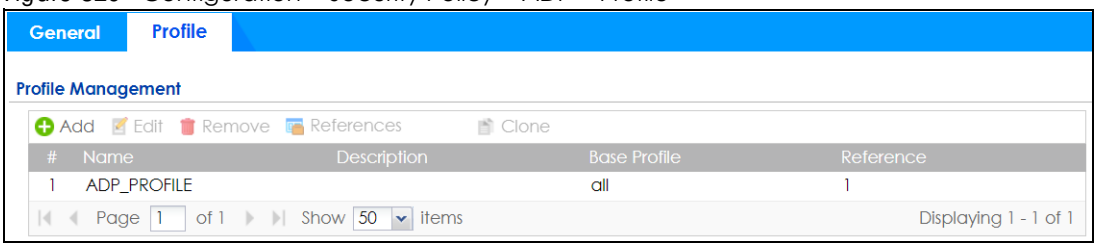
When creating ADP profiles. you may find that certain policies are triggering too many false positives or false negatives. A false positive is when valid traffic is flagged as an attack. A false negative is when invalid traffic is wrongly allowed to pass through the Zyxel Device. As each network is different, false positives and false negatives are common on initial ADP deployment.

To counter this, you could create a 'monitor profile' that creates logs, but all actions are disabled. Observe the logs over time and try to eliminate the causes of the false alarms. When you're satisfied that they have been reduced to an acceptable level, you could then create an 'in-line profile' whereby you configure appropriate actions to be taken when a packet matches a policy.

ADP profiles consist of traffic anomaly profiles and protocol anomaly profiles. To create a new profile, select a base profile and then click **OK** to go to the profile details screen. Type a new profile name, enable or disable individual policies and then edit the default log options and actions.

Click **Configuration > Security Policy > ADP > Profile** to view the following screen.

Figure 329 Configuration > Security Policy > ADP > Profile



The following table describes the labels in this screen.

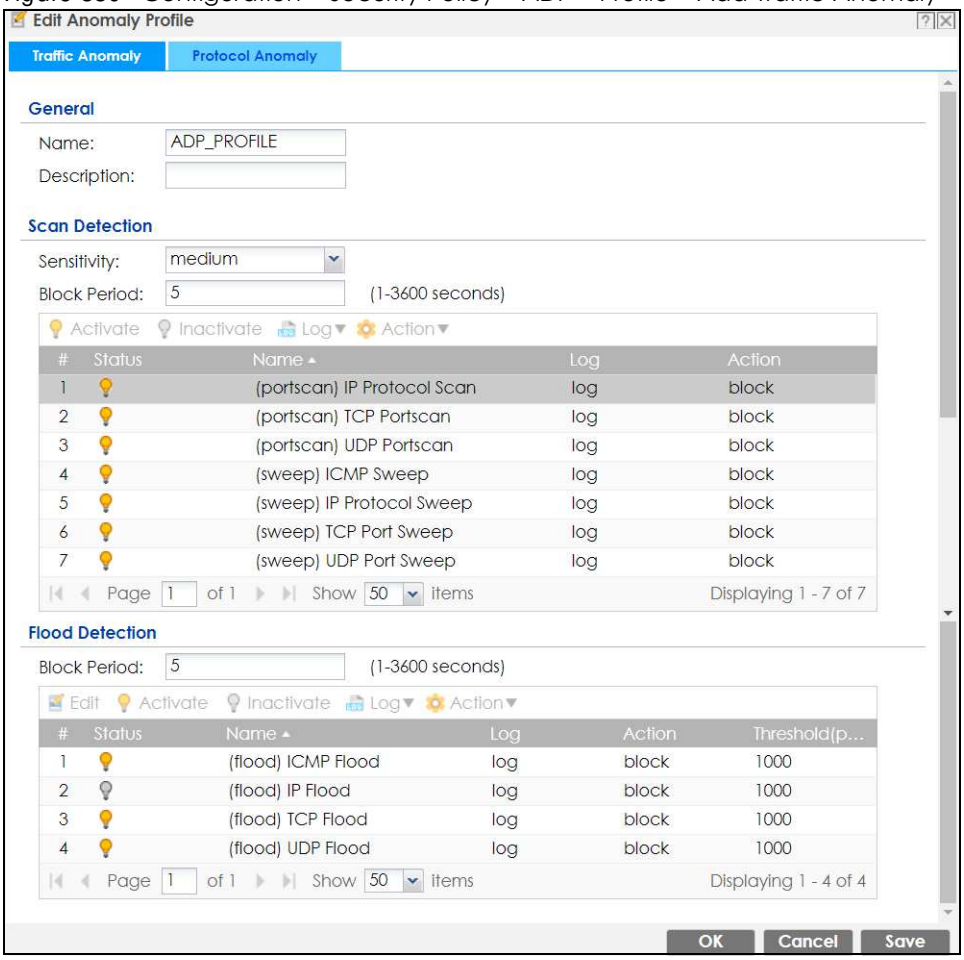
Table 191 Configuration > Security Policy > ADP > Profile

LABEL	DESCRIPTION
Profile Management	Create ADP profiles here and then apply them in the **Configuration** > **Security Policy** > **ADP** > **Profile** screen.
Add	Click **Add** and first choose a **none** or **all Base Profile**. • **none** base profile sets all ADP entries to have **Log** set to **no** and **Action** set to **none** by default. • **all** base profile sets all ADP entries to have **Log** set to **log** and **Action** set to **block** by default.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. Click **Refresh** to update information on this screen.
Clone	Use **Clone** to create a new entry by modifying an existing one. • Select an existing entry. • Click **Clone**. • A configuration copy of the selected entry pops up. You must at least change the name as duplicate entry names are not allowed.
#	This is the entry's index number in the list.
Name	This is the name of the profile you created.
Description	This is the description of the profile you created.
Base Profile	This is the name of the base profile used to create this profile.
Reference	This is the number of object references used to create this profile.

25.5.3 Traffic Anomaly Profiles

Traffic anomaly detection looks for abnormal behavior such as scan or flooding attempts. In the **Configuration** > **Security Policy** > **ADP** > **Profile** screen, click the **Edit** or **Add** icon and choose a base profile. **Traffic Anomaly** is the first tab in the profile.

Figure 330 Configuration > Security Policy > ADP > Profile > Add-Traffic-Anomaly



The following table describes the labels in this screen.

Table 192 Configuration > Security Policy > ADP > Profile > Add-Traffic-Anomaly

LABELS	DESCRIPTION
Name	A name is automatically generated that you can edit. The name must be the same in the Traffic Anomaly and Protocol Anomaly screens for the same ADP profile. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive. These are valid, unique profile names: • MyProfile • mYProfile • Mymy12_3-4 • These are invalid profile names: • 1mYProfile • My Profile • MyProfile? • Whatalongprofilename123456789012
Description	In addition to the name, type additional information to help you identify this ADP profile.

Table 192 Configuration > Security Policy > ADP > Profile > Add-Traffic-Anomaly (continued)

LABELS	DESCRIPTION
Scan/Flood Detection	Scan detection, such as port scanning, tries to find attacks where an attacker scans device(s) to determine what types of network protocols or services a device supports. Flood detection tries to find attacks that saturate a network with useless data, use up all available bandwidth, and so aim to make communications in the network impossible.
Sensitivity	(Scan detection only.) Select a sensitivity level so as to reduce false positives in your network. If you choose low sensitivity, then scan thresholds and sample times are set low, so you will have fewer logs and false positives; however some traffic anomaly attacks may not be detected. If you choose high sensitivity, then scan thresholds and sample times are set high, so most traffic anomaly attacks will be detected; however you will have more logs and false positives.
Block Period	Specify for how many seconds the Zyxel Device blocks all packets from being sent to the victim (destination) of a detected anomaly attack. Flood Detection applies blocking to the destination IP address and Scan Detection applies blocking to the source IP address.
Edit (Flood Detection only)	Select an entry and click this to be able to modify it.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Log	To edit an item's log option, select it and use the **Log** icon. Select whether to have the Zyxel Device generate a log (**log**), log and alert (**log alert**) or neither (**no**) when traffic matches this anomaly policy.
Action	To edit what action the Zyxel Device takes when a packet matches a policy, select the policy and use the **Action** icon. **none**: The Zyxel Device takes no action when a packet matches the policy. **block**: The Zyxel Device silently drops packets that matches the policy. Neither sender nor receiver are notified.
#	This is the entry's index number in the list.
Status	The activate (light bulb) icon is lit when the entry is active and dimmed when the entry is inactive.
Name	This is the name of the anomaly policy. Click the **Name** column heading to sort in ascending or descending order according to the protocol anomaly policy name.
Log	These are the log options. To edit this, select an item and use the **Log** icon.
Action	This is the action the Zyxel Device should take when a packet matches a policy. To edit this, select an item and use the **Action** icon.
Threshold (pkt/sec)	(Flood detection only.) Select a suitable threshold level (the number of packets per second that match the flood detection criteria) for your network. If you choose a low threshold, most traffic anomaly attacks will be detected, but you may have more logs and false positives. If you choose a high threshold, some traffic anomaly attacks may not be detected, but you will have fewer logs and false positives.
OK	Click **OK** to save your settings to the Zyxel Device, complete the profile and return to the profile summary page.
Cancel	Click **Cancel** to return to the profile summary page without saving any changes.
Save	Click **Save** to save the configuration to the Zyxel Device but remain in the same page. You may then go to the another profile screen (tab) in order to complete the profile. Click **OK** in the final profile screen to complete the profile.

25.5.4 Protocol Anomaly Profiles

Protocol anomalies are packets that do not comply with the relevant RFC (Request For Comments). Protocol anomaly detection includes:

- TCP Decoder
- UDP Decoder
- ICMP Decoder
- IP Decoder

Teardrop

When an IP packet is larger than the Maximum Transmission Unit (MTU) configured in the Zyxel Device, it is fragmented using the TCP or ICMP protocol.

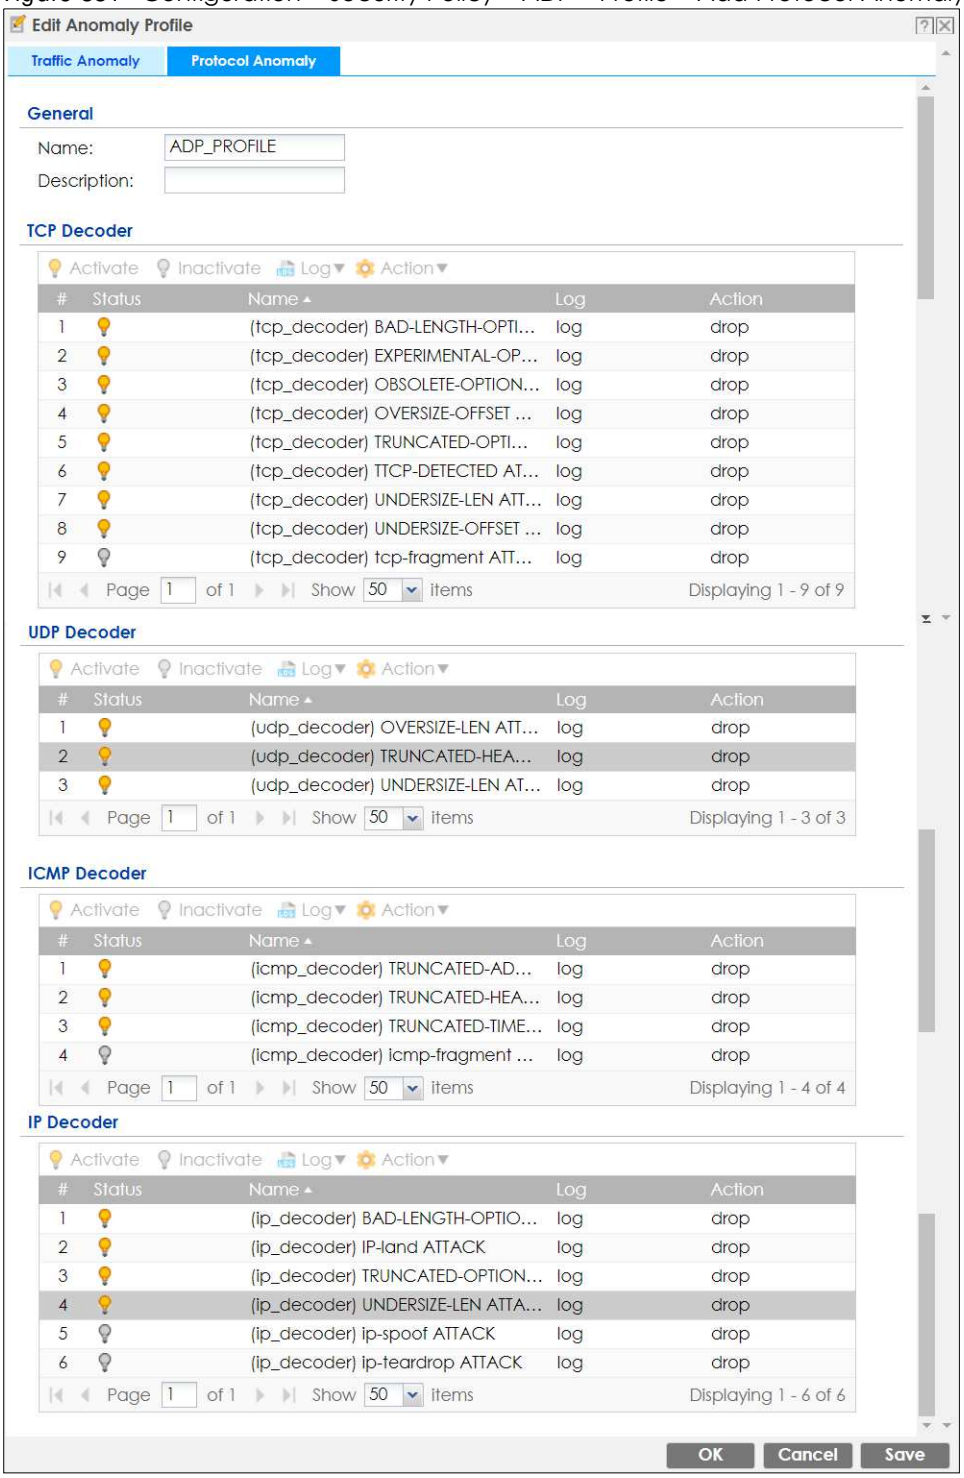
A Teardrop attack falsifies the offset which defines the size of the fragment and the original packet. A series of IP fragments with overlapping offset fields can cause some systems to crash, hang, or reboot when fragment reassembling is attempted at the destination.

IP Spoofing

IP Spoofing is used to gain unauthorized access to network devices by modifying packet headers so that it appears that the packets originate from a host within a trusted network.

- In an IP Spoof from the WAN, the source address appears to be in the same subnet as a Zyxel Device LAN interface.
- In an IP Spoof from a LAN interface, the source address appears to be in a different subnet from that Zyxel Device LAN interface.

Figure 331 Configuration > Security Policy > ADP > Profile > Add-Protocol-Anomaly



The following table describes the labels in this screen.

Table 193 Configuration > Security Policy > ADP > Profile > Add-Protocol-Anomaly

LABEL	DESCRIPTION
Name	A name is automatically generated that you can edit. The name must be the same in the Traffic Anomaly and Protocol Anomaly screens for the same ADP profile. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive. These are valid, unique profile names: • MyProfile • mYProfile • Mymy12_3-4 • These are invalid profile names: • 1mYProfile • My Profile • MyProfile? • Whatalongprofilename123456789012
Description	In addition to the name, type additional information to help you identify this ADP profile.
TCP Decoder/UDP Decoder/ICMP Decoder/IP Decoder	Perform the following actions for each type of encoder.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Log	To edit an item's log option, select it and use the **Log** icon. Select whether to have the Zyxel Device generate a log (**log**), log and alert (**log alert**) or neither (**no**) when traffic matches this anomaly policy.
Action	To edit what action the Zyxel Device takes when a packet matches a policy, select the policy and use the **Action** icon. **original setting**: Select this action to return each rule in a service group to its previously saved configuration. **none**: Select this action to have the Zyxel Device take no action when a packet matches a policy. **drop**: Select this action to have the Zyxel Device silently drop a packet that matches a policy. Neither sender nor receiver are notified. **reject-sender**: Select this action to have the Zyxel Device send a reset to the sender when a packet matches the policy. If it is a TCP attack packet, the Zyxel Device will send a packet with a 'RST' flag. If it is an ICMP or UDP attack packet, the Zyxel Device will send an ICMP unreachable packet. **reject-receiver**: Select this action to have the Zyxel Device send a reset to the receiver when a packet matches the policy. If it is a TCP attack packet, the Zyxel Device will send a packet with an a 'RST' flag. If it is an ICMP or UDP attack packet, the Zyxel Device will do nothing. **reject-both**: Select this action to have the Zyxel Device send a reset to both the sender and receiver when a packet matches the policy. If it is a TCP attack packet, the Zyxel Device will send a packet with a 'RST' flag to the receiver and sender. If it is an ICMP or UDP attack packet, the Zyxel Device will send an ICMP unreachable packet.
#	This is the entry's index number in the list.
Status	The activate (light bulb) icon is lit when the entry is active and dimmed when the entry is inactive.
Name	This is the name of the anomaly policy. Click the **Name** column heading to sort in ascending or descending order according to the protocol anomaly policy name.

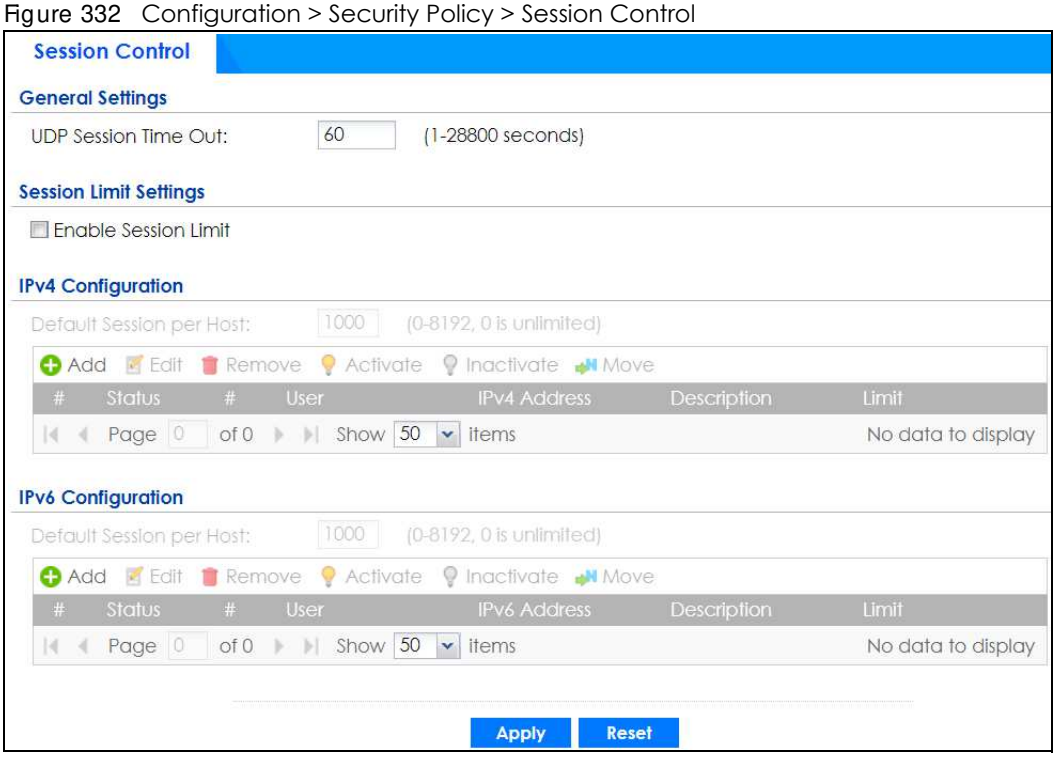
Table 193 Configuration > Security Policy > ADP > Profile > Add-Protocol-Anomaly

LABEL	DESCRIPTION
Log	These are the log options. To edit this, select an item and use the **Log** icon.
Action	This is the action the Zyxel Device should take when a packet matches a policy. To edit this, select an item and use the **Action** icon.
OK	Click **OK** to save your settings to the Zyxel Device, complete the profile and return to the profile summary page.
Cancel	Click **Cancel** to return to the profile summary page without saving any changes.
Save	Click **Save** to save the configuration to the Zyxel Device but remain in the same page. You may then go to the another profile screen (tab) in order to complete the profile. Click **OK** in the final profile screen to complete the profile.

25.6 The Session Control Screen

Click **Configuration** > **Security Policy** > **Session Control** to display the **Security Policy Session Control** screen. Use this screen to limit the number of concurrent NAT/Security Policy sessions a client can use. You can apply a default limit for all users and individual limits for specific users, addresses, or both. The individual limit takes priority if you apply both.

Figure 332 Configuration > Security Policy > Session Control



The following table describes the labels in this screen.

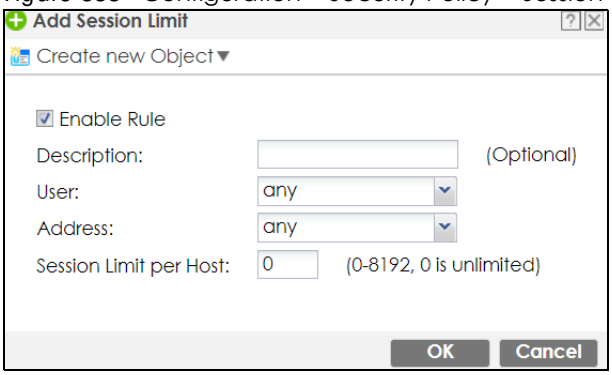
Table 194 Configuration > Security Policy > Session Control

LABEL	DESCRIPTION
General Settings	
UDP Session Time Out	Set how many seconds the Zyxel Device will allow a UDP session to remain idle (without UDP traffic) before closing it.
Session Limit Settings	
Enable Session limit	Select this check box to control the number of concurrent sessions hosts can have.
IPv4 / IPv6 Configuration	This table lists the rules for limiting the number of concurrent sessions hosts can have.
Default Session per Host	This field is configurable only when you enable session limit. Use this field to set a common limit to the number of concurrent NAT/Security Policy sessions each client computer can have. If only a few clients use peer to peer applications, you can raise this number to improve their performance. With heavy peer to peer application use, lower this number to ensure no single client uses too many of the available NAT sessions. Create rules below to apply other limits for specific users or addresses.
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Move	To change a rule's position in the numbered list, select the rule and click **Move** to display a field to type a number for where you want to put that rule and press [ENTER] to move the rule to the number that you typed. The ordering of your rules is important as they are applied in order of their numbering.
#	This field is a sequential value showing the number of the profile. The profile order is not important.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
#	This is the index number of a session limit rule. It is not associated with a specific rule.
User	This is the user name or user group name to which this session limit rule applies.
IPv4 / IPv6 Address	This is the IPv4 / IPv6 address object, including geographic address (group) objects to which this session limit rule applies.
Description	This is the information configured to help you identify the rule.
Limit	This is how many concurrent sessions this user or address is allowed to have.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

25.6.1 The Session Control Add/Edit Screen

Click **Configuration** > **Security Policy** > **Session Control** and the **Add** or **Edit** icon to display the **Add or Edit** screen. Use this screen to configure rules that define a session limit for specific users or addresses.

Figure 333 Configuration > Security Policy > Session Control > Edit



The following table describes the labels in this screen.

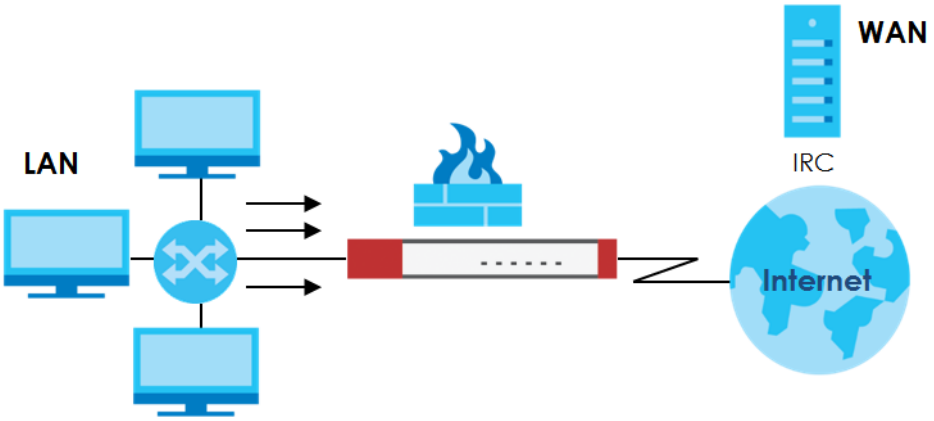
Table 195 Configuration > Security Policy > Session Control > Add / Edit

LABEL	DESCRIPTION
Create new Object	Use to configure new settings for User or Address objects that you need to use in this screen.Click on the down arrow to see the menu.
Enable Rule	Select this check box to turn on this session limit rule.
Description	Enter information to help you identify this rule. Use up to 60 printable ASCII characters. Spaces are allowed.
User	Select a user name or user group to which to apply the rule. The rule is activated only when the specified user logs into the system and the rule will be disabled when the user logs out. Otherwise, select **any** and there is no need for user logging. Note: If you specified an IP address (or address group) instead of **any** in the field below, the user's IP address should be within the IP address range.
Address	Select the IPv4 source address or address group, including geographic address (group) object, to which this rule applies. Select **any** to apply the rule to all IPv4 source addresses.
IPv6 Address	Select the IPv6 source address or address group, including geographic address (group) object, to which this rule applies. Select **any** to apply the rule to all IPv6 source addresses.
Session Limit per Host	Use this field to set a limit to the number of concurrent NAT/Security Policy sessions this rule's users or addresses can have. For this rule's users and addresses, this setting overrides the **Default Session per Host** setting in the general **Security Policy Session Control** screen.
OK	Click **OK** to save your customized settings and exit this screen.
Cancel	Click **Cancel** to exit this screen without saving.

25.7 Security Policy Example Applications

Suppose you decide to block LAN users from using IRC (Internet Relay Chat) through the Internet. To do this, you would configure a LAN to WAN Security Policy that blocks IRC traffic from any source IP address from going to any destination address. You do not need to specify a schedule since you need the Security Policy to always be in effect. The following figure shows the results of this policy.

Figure 334 Blocking All LAN to WAN IRC Traffic Example



Your Security Policy would have the following settings.

Table 196 Blocking All LAN to WAN IRC Traffic Example

#	USER	SOURCE	DESTINATION	SCHEDULE	SERVICE	ACTION
1	Any	Any	Any	Any	IRC	Deny
2	Any	Any	Any	Any	Any	Allow

- The first row blocks LAN access to the IRC service on the WAN.
- The second row is the Security Policy's default policy that allows all LAN1 to WAN traffic.

The Zyxel Device applies the security policies in order. So for this example, when the Zyxel Device receives traffic from the LAN, it checks it against the first policy. If the traffic matches (if it is IRC traffic) the security policy takes the action in the policy (drop) and stops checking the subsequent security policies. Any traffic that does not match the first security policy will match the second security policy and the Zyxel Device forwards it.

Now suppose you need to let the CEO use IRC. You configure a LAN1 to WAN security policy that allows IRC traffic from the IP address of the CEO's computer. You can also configure a LAN to WAN policy that allows IRC traffic from any computer through which the CEO logs into the Zyxel Device with his/her user name. In order to make sure that the CEO's computer always uses the same IP address, make sure it either:

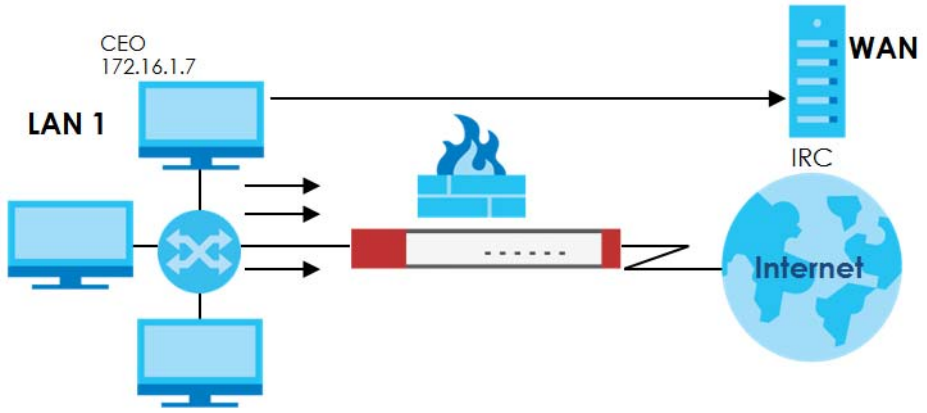
- Has a static IP address,

  or

- You configure a static DHCP entry for it so the Zyxel Device always assigns it the same IP address.

Now you configure a LAN1 to WAN security policy that allows IRC traffic from the IP address of the CEO's computer (172.16.1.7 for example) to go to any destination address. You do not need to specify a schedule since you want the security policy to always be in effect. The following figure shows the results of your two custom policies.

Figure 335 Limited LAN to WAN IRC Traffic Example



Your security policy would have the following configuration.

Table 197 Limited LAN1 to WAN IRC Traffic Example 1

#	USER	SOURCE	DESTINATION	SCHEDULE	SERVICE	ACTION
1	Any	172.16.1.7	Any	Any	IRC	Allow
2	Any	Any	Any	Any	IRC	Deny
3	Any	Any	Any	Any	Any	Allow

- The first row allows the LAN1 computer at IP address 172.16.1.7 to access the IRC service on the WAN.
- The second row blocks LAN1 access to the IRC service on the WAN.
- The third row is the default policy of allowing all traffic from the LAN1 to go to the WAN.

Alternatively, you configure a LAN1 to WAN policy with the CEO's user name (say CEO) to allow IRC traffic from any source IP address to go to any destination address.

Your Security Policy would have the following settings.

Table 198 Limited LAN1 to WAN IRC Traffic Example 2

#	USER	SOURCE	DESTINATION	SCHEDULE	SERVICE	ACTION
1	CEO	Any	Any	Any	IRC	Allow
2	Any	Any	Any	Any	IRC	Deny
3	Any	Any	Any	Any	Any	Allow

- The first row allows any LAN1 computer to access the IRC service on the WAN by logging into the Zyxel Device with the CEO's user name.
- The second row blocks LAN1 access to the IRC service on the WAN.
- The third row is the default policy of allowing allows all traffic from the LAN1 to go to the WAN.

The policy for the CEO must come before the policy that blocks all LAN1 to WAN IRC traffic. If the policy that blocks all LAN1 to WAN IRC traffic came first, the CEO's IRC traffic would match that policy and the Zyxel Device would drop it and not check any other security policies.

CHAPTER 26
Application Patrol

26.1 Overview

Application patrol provides a convenient way to manage the use of various applications on the network. It manages general protocols (for example, HTTP and FTP) and instant messenger (IM), peer-to-peer (P2P), Voice over IP (VoIP), and streaming (RSTP) applications. You can even control the use of a particular application's individual features (like text messaging, voice, video conferencing, and file transfers).

26.1.1 What You Can Do in this Chapter

- Use the **App Patrol** summary screen (see Section 26.2 on page 497) to manage the application patrol profiles. You can also view license registration and signature information.
- Use the **App Patrol Add/Edit** screens (see Section 26.2.2 on page 501 & Section 26.2.3 on page 503) to set actions for application categories and for specific applications within the category.

26.1.2 What You Need to Know

If you want to use a service, make sure both the Security Policy and application patrol allow the service's packets to go through the Zyxel Device.

Note: The Zyxel Device checks secure policies before it checks application patrol rules for traffic going through the Zyxel Device.

Application patrol examines every TCP and UDP connection passing through the Zyxel Device and identifies what application is using the connection. Then, you can specify whether or not the Zyxel Device continues to route the connection. Traffic not recognized by the application patrol signatures is ignored.

Application Profiles & Policies

An application patrol profile is a group of categories of application patrol signatures. For each profile, you can specify the default action the Zyxel Device takes once a packet matches a signature (forward, drop, or reject a service's connections and/or create a log alert).

Use policies to link profiles to traffic flows based on criteria such as source zone, destination zone, source address, destination address, schedule, user.

Classification of Applications

There are two ways the Zyxel Device can identify the application. The first is called auto. The Zyxel Device looks at the IP payload (OSI level-7 inspection) and attempts to match it with known patterns for specific applications. Usually, this occurs at the beginning of a connection, when the payload is more consistent across connections, and the Zyxel Device examines several packets to make sure the match

is correct. Before confirmation, packets are forwarded by App Patrol with no action taken. The number of packets inspected before confirmation varies by signature.

Note: The Zyxel Device allows the first eight packets to go through the security policy, regardless of the application patrol policy for the application. The Zyxel Device examines these first eight packets to identify the application.

The second approach is called service ports. The Zyxel Device uses only OSI level-4 information, such as ports, to identify what application is using the connection. This approach is available in case the Zyxel Device identifies a lot of "false positives" for a particular application.

Custom Ports for SIP and the SIP ALG

Configuring application patrol to use custom port numbers for SIP traffic also configures the SIP ALG to use the same port numbers for SIP traffic. Likewise, configuring the SIP ALG to use custom port numbers for SIP traffic also configures application patrol to use the same port numbers for SIP traffic.

26.2 Application Patrol Profile

Use the application patrol screens to customize action and log settings for a group of application patrol signatures. You then link a profile to a policy. Use this screen to create an application patrol profile, and view signature information. It also lists the registration status and details about the signature set the Zyxel Device is using.

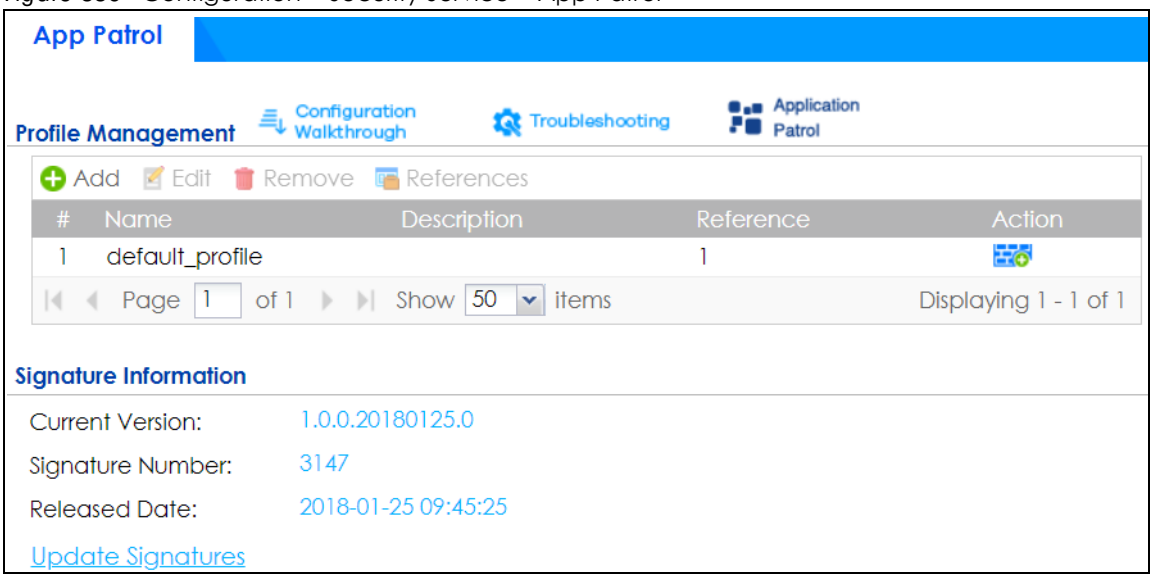
Note: You must register for the AppPatrol signature service (at least the trial) before you can use it.

A profile is an application object(s) or application group(s) that has customized action and log settings.

Click **Configuration > Security Service > App Patrol** to open the following screen.

Click on the icons to go to the OneSecurity website where there is guidance on configuration walkthroughs, troubleshooting and other information.

Figure 336 Configuration > Security Service > App Patrol



The following table describes the labels in this screen.

Table 199 Configuration > Security Service > App Patrol

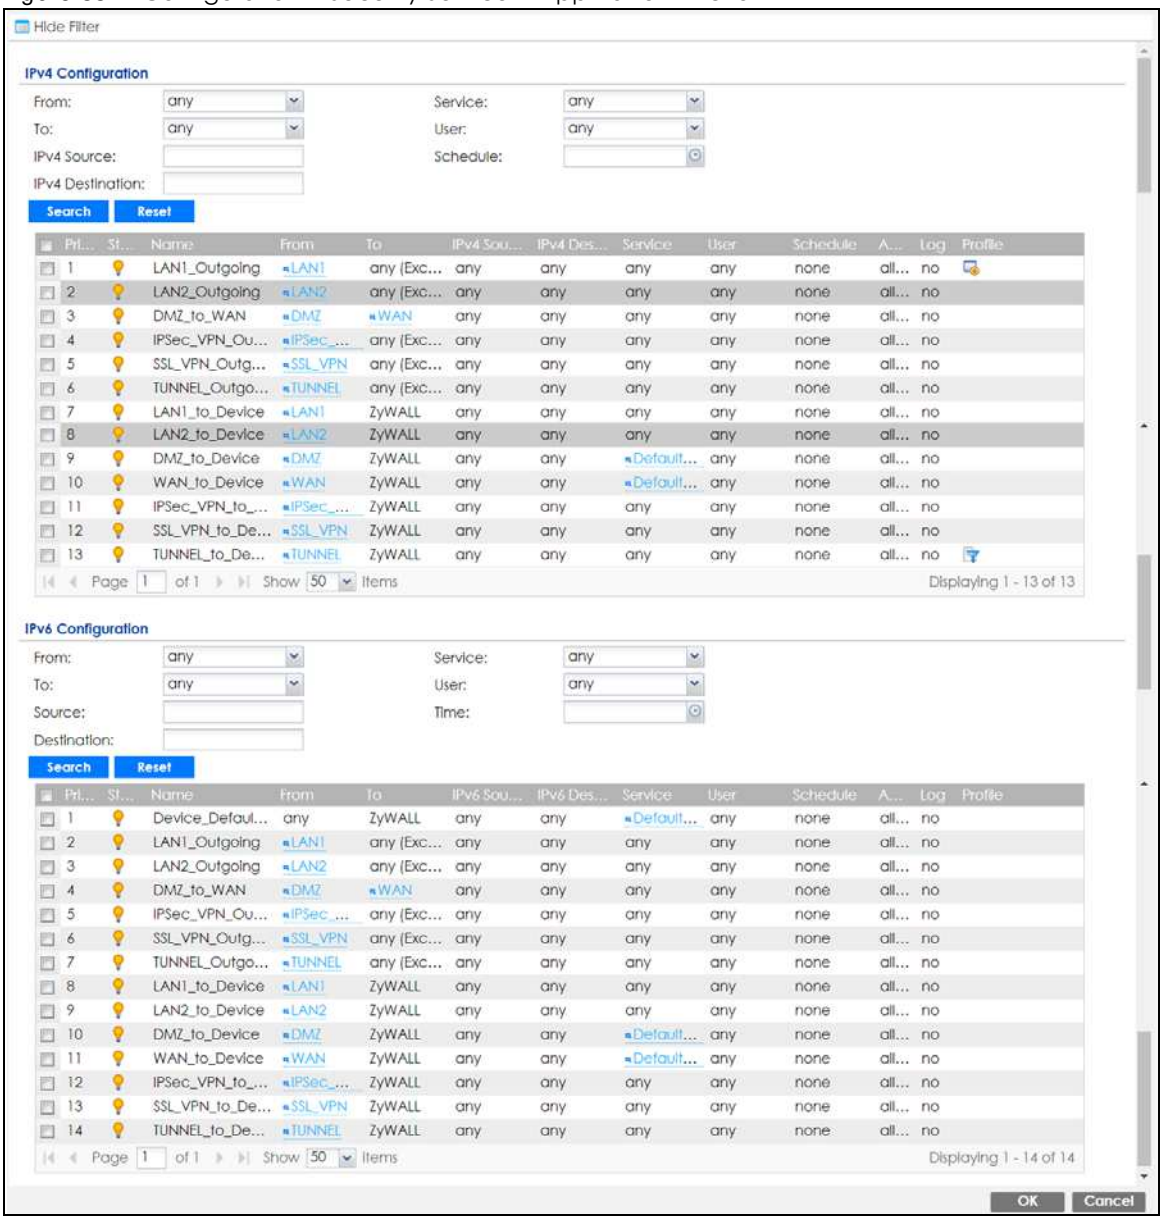
LABEL	DESCRIPTION
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	Select an entry and click **Remove** to delete the selected entry.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. Click Refresh to update information on this screen.
#	This field is a sequential value showing the number of the profile. The profile order is not important.
Name	This displays the name of the profile created.
Description	This displays the description of the App Patrol Profile.
Scan Option	This field displays the scan options from the App Patrol profile.
Reference	This displays the number of times an object reference is used in a profile.
Action	Click this icon to apply the entry to a security policy. Go to the **Configuration** > **Security Policy** > **Policy Control** screen to check the result.
Signature Information	The following fields display information on the current signature set that the Zyxel Device is using.
Current Version	This field displays the App Patrol signature set version number. This number gets larger as the set is enhanced.
Signature Number	This field displays the number of IDP signatures in this set. This number usually gets larger as the set is enhanced. Older signatures and rules may be removed if they are no longer applicable or have been supplanted by newer ones.
Released Date	This field displays the date and time the set was released.
Update Signatures	Click this link to go to the screen you can use to download signatures from the update server.

26.2.1 Apply to a Security Policy

Click the icon in the **Action** field of an existing application patrol file to apply the profile to a security policy.

Go to the **Configuration** > **Security Policy** > **Policy Control** screen to check the result.

Figure 337 Configuration > Security Service > App Patrol > Action



The following table describes the labels in this screen.

Table 200 Configuration > Security Service > App Patrol > Action

LABEL	DESCRIPTION
Show Filter/Hide Filter	Click **Show Filter** to display IPv4 and IPv6 (if enabled) security policy search filters.
IPv4 / IPv6 Configuration	Use IPv4 / IPv6 search filters to find specific IPv4 and IPv6 (if enabled) security policies based on direction, application, user, source, destination and/or schedule.
From / To	Select a zone to view all security policies from a particular zone and/or to a particular zone. **any** means all zones.
IPv4 / IPv6 Source	Type an IPv4 or IPv6 IP address to view all security policies based on the IPv4 / IPv6 source address object used. • An IPv4 IP address is written as four integer blocks separated by periods. This is an example IPv4 address: 172.16.6.7. • An 128-bit IPv6 address is written as eight 16-bit hexadecimal blocks separated by colons (:). This is an example IPv6 address: 2001:0db8:1a2b:0015:0000:0000:1a2f:0000.
IPv4 / IPv6 Destination	Type an IPv4 or IPv6 IP address to view all security policies based on the IPv4 / IPv6 destination address object used. • An IPv4 IP address is written as four integer blocks separated by periods. This is an example IPv4 address: 172.16.6.7. • An 128-bit IPv6 address is written as eight 16-bit hexadecimal blocks separated by colons (:). This is an example IPv6 address: 2001:0db8:1a2b:0015:0000:0000:1a2f:0000.
Service	View all security policies based the service object used.
User	View all security policies based on user or user group object used.
Schedule	View all security policies based on the schedule object used.
Priority	This is the position of your Security Policy in the global policy list (including all through-Zyxel Device and to-Zyxel Device policies). The ordering of your policies is important as policies are applied in sequence. **Default** displays for the default Security Policy behavior that the Zyxel Device performs on traffic that does not match any other Security Policy.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Name	This is the name of the Security policy.
From / To	This is the direction of travel of packets. Select from which zone the packets come and to which zone they go. Security Policies are grouped based on the direction of travel of packets to which they apply. For example, from **LAN** to **LAN** means packets traveling from a computer or subnet on the LAN to either another computer or subnet on the LAN. From **any** displays all the Security Policies for traffic going to the selected **To Zone**. To **any** displays all the Security Policies for traffic coming from the selected **From Zone**. From **any** to **any** displays all of the Security Policies. To **ZyWALL** policies are for traffic that is destined for the Zyxel Device and control which computers can manage the Zyxel Device.
IPv4 / IPv6 Source	This displays the IPv4 / IPv6 source address object, including geographic address and FQDN (group) objects, to which this Security Policy applies.
IPv4 / IPv6 Destination	This displays the IPv4 / IPv6 destination address object, including geographic address and FQDN (group) objects, to which this Security Policy applies.
Service	This displays the service object to which this Security Policy applies.
User	This is the user name or user group name to which this Security Policy applies.
Schedule	This field tells you the schedule object that the policy uses. **none** means the policy is active at all times if enabled.

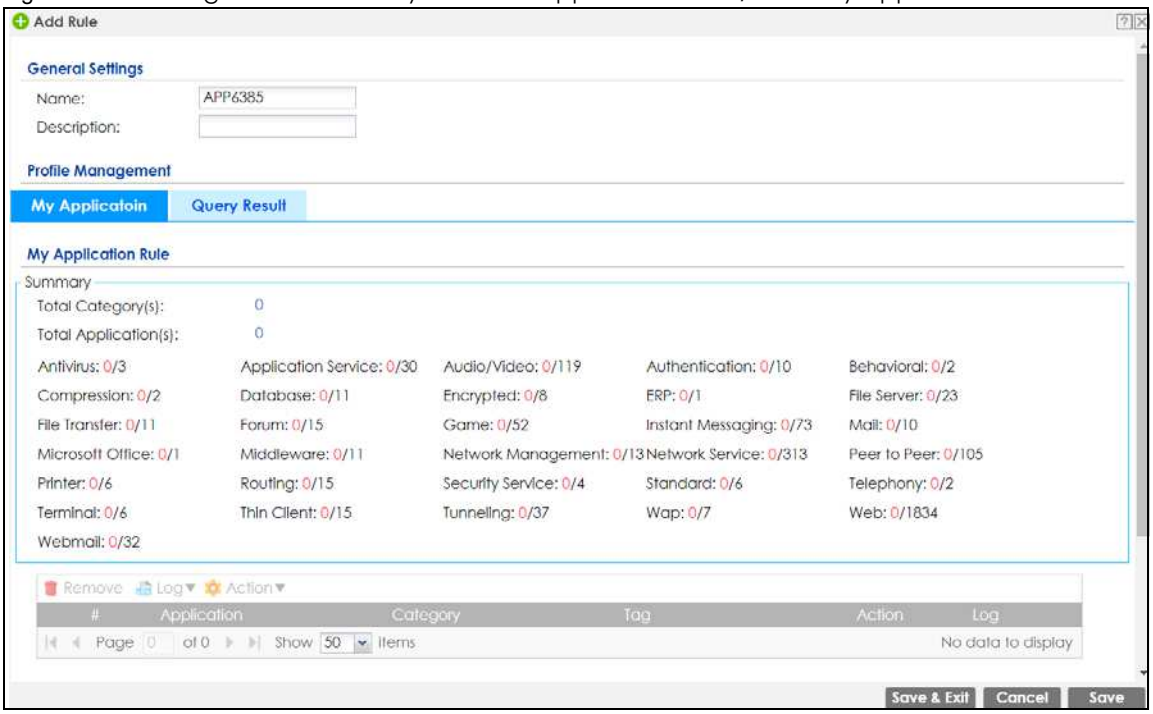
Table 200 Configuration > Security Service > App Patrol > Action

LABEL	DESCRIPTION
Action	This field displays whether the Security Policy silently discards packets without notification (**deny**), permits the passage of packets (**allow**) or drops packets with notification (**reject**)
Log	Select whether to have the Zyxel Device generate a log (**log**), log and alert (**log alert**) or not (**no**) when the policy is matched to the criteria listed above.
Profile	This field shows you which Security Service profiles (application patrol, content filter, IDP, anti-malware, email security) apply to this Security policy. Click an applied Security Service profile icon to edit the profile directly.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

26.2.2 The Application Patrol Profile Add/Edit Screen - My Application

Use this screen to configure profile settings. Click **Configuration** > **Security Service** > **App Patrol** > **Add/Edit**, then click **My Application** to open the following screen.

Figure 338 Configuration > Security Service > App Patrol > Add/Edit > My Application



The following table describes the labels in this screen.

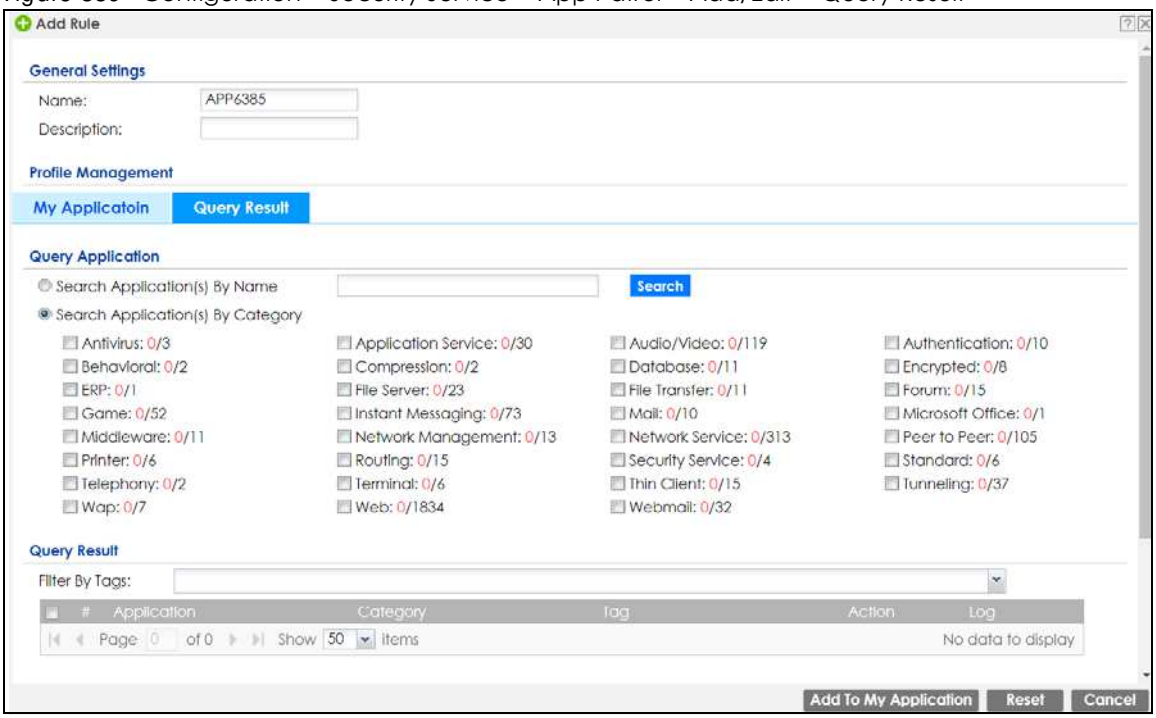
Table 201 Configuration > Security Service > App Patrol > Add/Edit > My Application

LABEL	DESCRIPTION
General Settings	
Name	Type the name of the profile. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive. These are valid, unique profile names: • MyProfile • mYProfile • Mymy12_3-4 These are invalid profile names: • 1mYProfile • My Profile • MyProfile? • Whatalongprofilename123456789012
Description	Type a description for the profile rule to help identify the purpose of rule. You may use 1-31 alphanumeric characters, underscores (_), or dashes (-), but the first character cannot be a number. This value is case-sensitive. This field is optional.
Total Category(s)	This field displays the total number of the selected category(ies) in the **Query Result** screen.
Total Application(s)	This field displays the total number of the selected applications in the **Query Result** screen.
Remove	Select an entry and click **Remove** to delete the selected entry.
Log	Select whether to have the Zyxel Device generate a log (**log**), log and alert (**log alert**) or neither (**no**) by default when traffic matches a signature in this category.
Action	Select the default action for all signatures in this category. **forward** - the Zyxel Device routes packets that matches these signatures. **drop** - the Zyxel Device silently drops packets that matches these signatures without notification. **reject** - the Zyxel Device drops packets that matches these signatures and sends notification.
#	This field is a sequential value showing the number of the profile. The profile order is not important.
Application	This field displays the application name of the policy.
Category	This field displays the category type of the application.
Tag	This field displays the tag information of the application.
Action	Select the default action for all signatures in this category. **forward** - the Zyxel Device routes packets that matches these signatures. **drop** - the Zyxel Device silently drops packets that matches these signatures without notification. **reject** - the Zyxel Device drops packets that matches these signatures and sends notification.
Log	Select whether to have the Zyxel Device generate a log (**log**), log and alert (**log alert**) or neither (**no**) by default when traffic matches a signature in this category.
Save & Exit	A profile consists of separate category editing screens. If you want to configure just one category for a profile, click **OK** to save your settings to the Zyxel Device, complete the profile and return to the profile summary page.
Cancel	Click **Cancel** to return to the profile summary page without saving any changes.
Save	If you want to configure more than one category for a profile, click **Save** to save your settings to the Zyxel Device without leaving this page.

26.2.3 The Application Patrol Profile Add/Edit Screen - Query Result

Click **Configuration** > **Security Service** > **App Patrol** > **Add**, then click **Query Result** to search for certain applications within a specific category, and the selected applications will be added to **My Application** screen. You can also click an existing profile, click **Edit** (or double-click it), then click **Query Result** to open the following screen.

Figure 339 Configuration > Security Service > App Patrol > Add/Edit > Query Result



The following table describes the labels in this screen.

Table 202 Configuration > Security Service > App Patrol > Add/Edit > Query Result

LABEL	DESCRIPTION
General Settings	
Name	Type the name of the profile. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive. These are valid, unique profile names: • MyProfile • mYProfile • Mymy12_3-4 These are invalid profile names: • 1mYProfile • My Profile • MyProfile? • Whatalongprofilename123456789012
Description	Type a description for the profile rule to help identify the purpose of rule. You may use 1-31 alphanumeric characters, underscores (_), or dashes (-), but the first character cannot be a number. This value is case-sensitive. This field is optional.
Search Application(s) By Name	Enter a name to search for relevant applications.

Table 202 Configuration > Security Service > App Patrol > Add/Edit (continued)> Query Result

LABEL	DESCRIPTION
Search Application(s) By Category	Select a category(ies) below to search for relevant applications.
Filter by Tags	Add or delete a tag(s) to display or not display an application(s).
#	This field is a sequential value showing the number of the profile. The profile order is not important.
Application	This field displays the application name of the policy.
Category	This field displays the category type of the application.
Tag	This field displays the tag information of the policy.
Action	Select the default action for all signatures in this category. **forward** - the Zyxel Device routes packets that matches these signatures. **drop** - the Zyxel Device silently drops packets that matches these signatures without notification. **reject** - the Zyxel Device drops packets that matches these signatures and sends notification.
Log	Select whether to have the Zyxel Device generate a log (**log**), log and alert (**log alert**) or neither (**no**) by default when traffic matches a signature in this category.
Add to My Application	Select an application(s) to show in the **My Application** profile screen.
Reset	Click this button to reset the fields to default settings.
Cancel	Click **Cancel** to return to the profile summary page without saving any changes.

CHAPTER 27
Content Filter

27.1 Overview

Use the content filtering feature to control access to specific web sites or web content.

27.1.1 What You Can Do in this Chapter

- Use the **Filter Profile** screens (Section 27.2 on page 507) to set up content filtering profiles.
- Use the **Trusted Web Sites** screens (Section 27.3 on page 520) to create a common list of good (allowed) web site addresses.
- Use the **Forbidden Web Sites** screens (Section 27.4 on page 521) to create a common list of bad (blocked) web site addresses.

27.1.2 What You Need to Know

Content Filtering

Content filtering allows you to block certain web features, such as cookies, and/or block access to specific web sites. It can also block access to specific categories of web site content. You can create different content filter policies for different addresses, schedules, users or groups and content filter profiles. For example, you can configure one policy that blocks John Doe's access to arts and entertainment web pages during the workday and another policy that lets him access them after work.

Content Filtering Policies

A content filtering policy allows you to do the following.

- Use schedule objects to define when to apply a content filter profile.
- Use address and/or user/group objects to define to whose web access to apply the content filter profile.
- Apply a content filter profile that you have custom-tailored.

Content Filtering Profiles

A content filtering profile conveniently stores your custom settings for the following features.

- Category-based Blocking

  The Zyxel Device can block access to particular categories of web site content, such as pornography or racial intolerance.

- Restrict Web Features

  The Zyxel Device can disable web proxies and block web features such as ActiveX controls, Java applets and cookies.

- Customize Web Site Access

  You can specify URLs to which the Zyxel Device blocks access. You can alternatively block access to all URLs except ones that you specify. You can also have the Zyxel Device block access to URLs that contain particular keywords.

Content Filtering Configuration Guidelines

When the Zyxel Device receives an HTTP request, the content filter searches for a policy that matches the source address and time (schedule). The content filter checks the policies in order (based on the policy numbers). When a matching policy is found, the content filter allows or blocks the request depending on the settings of the filtering profile specified by the policy. Some requests may not match any policy. The Zyxel Device allows the request if the default policy is not set to block. The Zyxel Device blocks the request if the default policy is set to block.

External Web Filtering Service

When you register for and enable the external web filtering service, your Zyxel Device accesses an external database that has millions of web sites categorized based on content. You can have the Zyxel Device block, block and/or log access to web sites based on these categories.

HTTPS Domain Filter

HTTPS Domain Filter works with the Content Filter category feature to identify HTTPS traffic and take appropriate action. SSL Inspection identifies HTTPS traffic for all Security Service traffic and has higher priority than HTTPS Domain Filter. HTTPS Domain Filter only identifies keywords in the domain name of an URL and matches it to a category. For example, if the keyword is 'picture' and the URL is http://www.google.com/picture/index.htm, then HTTPS Domain Filter cannot identify 'picture' because that keyword in not in the domain name 'www.google.com'. However, SSL Inspection can identify 'picture' in the URL http://www.google.com/picture/index.htm.

Keyword Blocking URL Checking

The Zyxel Device checks the URL's domain name (or IP address) and file path separately when performing keyword blocking.

The URL's domain name or IP address is the characters that come before the first slash in the URL. For example, with the URL www.zyxel.com.tw/news/pressroom.php, the domain name is www.zyxel.com.tw.

The file path is the characters that come after the first slash in the URL. For example, with the URL www.zyxel.com.tw/news/pressroom.php, the file path is news/pressroom.php.

Since the Zyxel Device checks the URL's domain name (or IP address) and file path separately, it will not find items that go across the two. For example, with the URL www.zyxel.com.tw/news/pressroom.php, the Zyxel Device would find "tw" in the domain name (www.zyxel.com.tw). It would also find "news" in the file path (news/pressroom.php) but it would not find "tw/news".

Finding Out More

- See Section 27.5 on page 522 for content filtering background/technical information.

27.1.3 Before You Begin

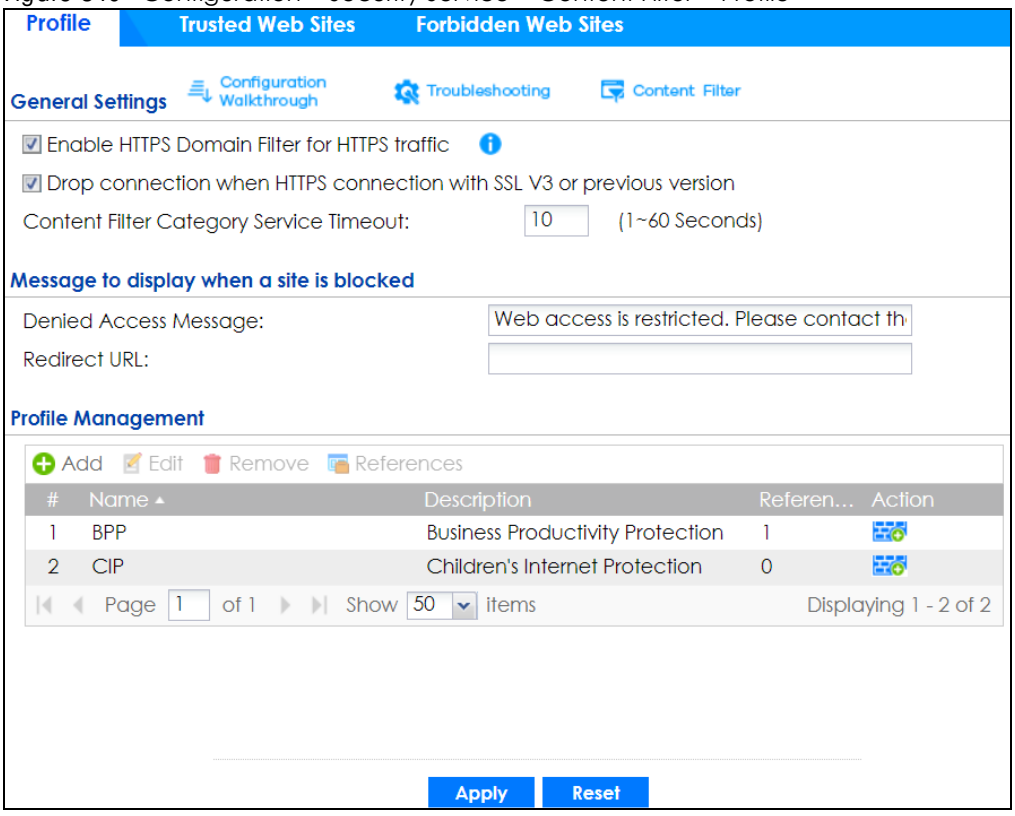
- You must configure an address object, a schedule object and a filtering profile before you can set up a content security policy.
- You must have Content Filtering license in order to use the function.subscribe to use the external database content filtering (see the **Licensing** > **Registration** screens).

27.2 Content Filter Profile Screen

Click **Configuration** > **Security Service**> **Content Filter** > **Profile** to open the **Content Filter Profile** screen. Use this screen to enable content filtering, view and order your list of content filter policies, create a denial of access message or specify a redirect URL and check your external web filtering service registration status.

Click on the icons to go to the OneSecurity website where there is guidance on configuration walkthroughs, troubleshooting and other information.

Figure 340 Configuration > Security Service > Content Filter > Profile



The following table describes the labels in this screen.

Table 203 Configuration > Security Service > Content Filter > Profile

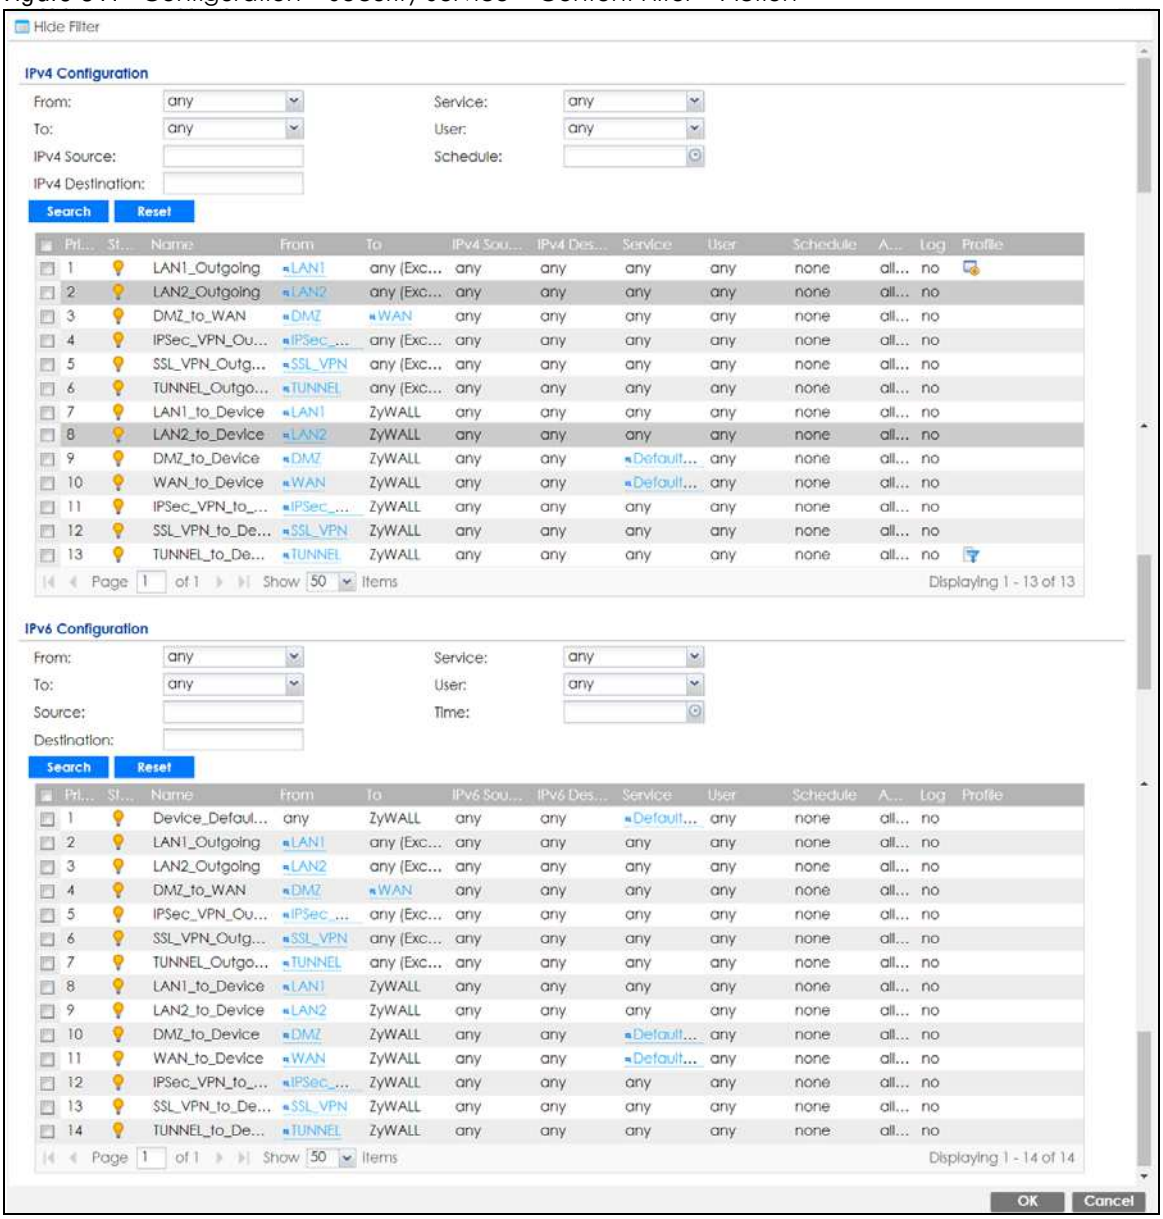
LABEL	DESCRIPTION
General Settings	
Enable HTTPS Domain Filter for HTTPS traffic	Select this check box to have the Zyxel Device block HTTPS web pages using the CommTouch category service. In an HTTPS connection, the Zyxel Device can extract the Server Name Indication (SNI) from a client request, check if it matches a category in the CommTouch content filter and then take appropriate action. The keyword match is for the domain name only.
Drop connection when HTTPS connection with SSL V3 or previous version	Select this check box to have the Zyxel Device block HTTPS web pages using SSL V3 or a previous version.
Content Filter Category Service Timeout	Specify the allowable time period in seconds for accessing the external web filtering service's server.
Denied Access Message	Enter a message to be displayed when content filter blocks access to a web page. Use up to 127 characters (0-9a-zA-Z;/?:@&=+$\.-_!~*'()%,"). For example, "Access to this web page is not allowed. Please contact the network administrator". It is also possible to leave this field blank if you have a URL specified in the **Redirect URL** field. In this case if the content filter blocks access to a web page, the Zyxel Device just opens the web page you specified without showing a denied access message.
Redirect URL	Enter the URL of the web page to which you want to send users when their web access is blocked by content filter. The web page you specify here opens in a new frame below the denied access message. Use "http://" or "https://" followed by up to 262 characters (0-9a-zA-Z;/?:@&=+$\.-_!~*'()%). For example, http://192.168.1.17/blocked access.
Profile Management	
Add	Click Add to create a new content filter rule.
Edit	Click Edit to make changes to a content filter rule.
Remove	Click Remove the delete a content filter rule.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. Click Refresh to update information on this screen.
#	This column lists the index numbers of the content filter profile.
Name	This column lists the names of the content filter profile rule.
Description	This column lists the description of the content filter profile rule.
Reference	This displays the number of times an Object Reference is used in a rule.
Action	Click this icon to apply the content filter profile with a security policy. Go to the **Configuration** > **Security Policy** > **Policy Control** screen to check the result.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

27.2.1 Apply to a Security Policy

Click the icon in the **Action** field to apply the entry to a security policy.

Go to the **Configuration** > **Security Policy** > **Policy Control** screen to check the result.

Figure 341 Configuration > Security Service > Content Filter > Action



The following table describes the labels in this screen.

Table 204 Configuration > Security Service > Content Filter > Action

LABEL	DESCRIPTION
Show Filter/Hide Filter	Click **Show Filter** to display IPv4 and IPv6 (if enabled) security policy search filters.
IPv4 / IPv6 Configuration	Use IPv4 / IPv6 search filters to find specific IPv4 and IPv6 (if enabled) security policies based on direction, application, user, source, destination and/or schedule.
From / To	Select a zone to view all security policies from a particular zone and/or to a particular zone. **any** means all zones.

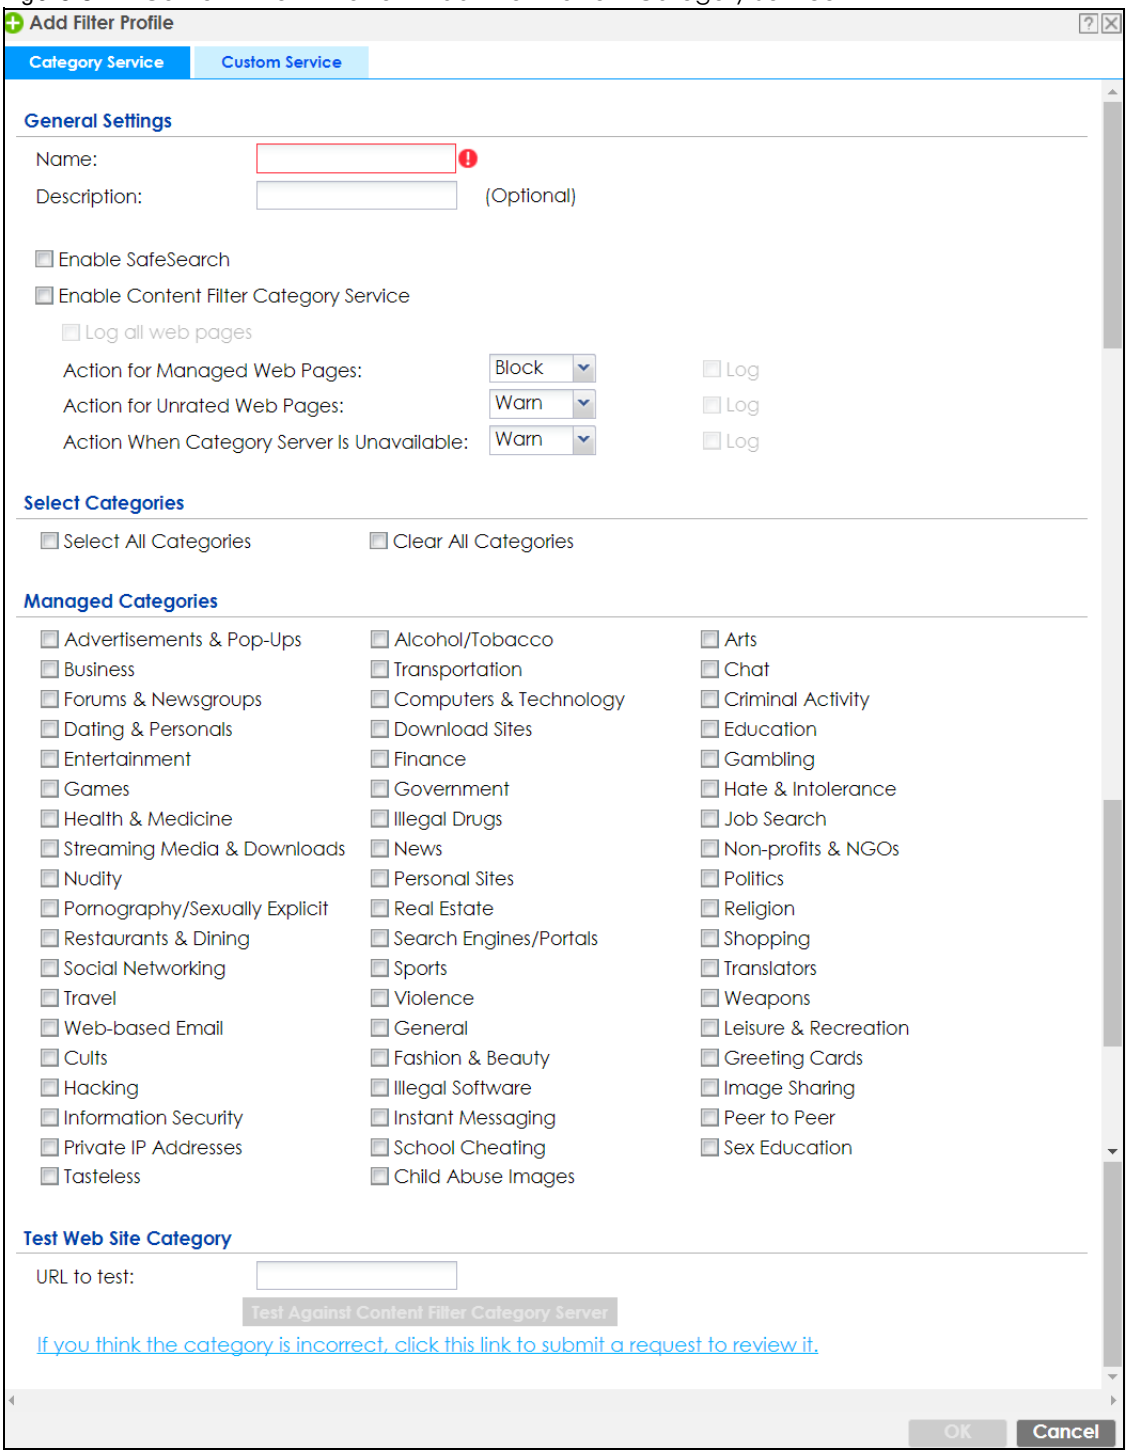
Table 204 Configuration > Security Service > Content Filter > Action

LABEL	DESCRIPTION
IPv4 / IPv6 Source	Type an IPv4 or IPv6 IP address to view all security policies based on the IPv4 / IPv6 source address object used. • An IPv4 IP address is written as four integer blocks separated by periods. This is an example IPv4 address: 172.16.6.7. • An 128-bit IPv6 address is written as eight 16-bit hexadecimal blocks separated by colons (:). This is an example IPv6 address: 2001:0db8:1a2b:0015:0000:0000:1a2f:0000.
IPv4 / IPv6 Destination	Type an IPv4 or IPv6 IP address to view all security policies based on the IPv4 / IPv6 destination address object used. • An IPv4 IP address is written as four integer blocks separated by periods. This is an example IPv4 address: 172.16.6.7. • An 128-bit IPv6 address is written as eight 16-bit hexadecimal blocks separated by colons (:). This is an example IPv6 address: 2001:0db8:1a2b:0015:0000:0000:1a2f:0000.
Service	View all security policies based the service object used.
User	View all security policies based on user or user group object used.
Schedule	View all security policies based on the schedule object used.
Priority	This is the position of your Security Policy in the global policy list (including all through-Zyxel Device and to-Zyxel Device policies). The ordering of your policies is important as policies are applied in sequence. **Default** displays for the default Security Policy behavior that the Zyxel Device performs on traffic that does not match any other Security Policy.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Name	This is the name of the Security policy.
From / To	This is the direction of travel of packets. Select from which zone the packets come and to which zone they go. Security Policies are grouped based on the direction of travel of packets to which they apply. For example, from **LAN** to **LAN** means packets traveling from a computer or subnet on the LAN to either another computer or subnet on the LAN. From **any** displays all the Security Policies for traffic going to the selected **To Zone**. To **any** displays all the Security Policies for traffic coming from the selected **From Zone**. From **any** to **any** displays all of the Security Policies. To **ZyWALL** policies are for traffic that is destined for the Zyxel Device and control which computers can manage the Zyxel Device.
IPv4 / IPv6 Source	This displays the IPv4 / IPv6 source address object, including geographic address and FQDN (group) objects, to which this Security Policy applies.
IPv4 / IPv6 Destination	This displays the IPv4 / IPv6 destination address object, including geographic address and FQDN (group) objects, to which this Security Policy applies.
Service	This displays the service object to which this Security Policy applies.
User	This is the user name or user group name to which this Security Policy applies.
Schedule	This field tells you the schedule object that the policy uses. **none** means the policy is active at all times if enabled.
Action	This field displays whether the Security Policy silently discards packets without notification (**deny**), permits the passage of packets (**allow**) or drops packets with notification (**reject**)
Log	Select whether to have the Zyxel Device generate a log (**log**), log and alert (**log alert**) or not (**no**) when the policy is matched to the criteria listed above.
Profile	This field shows you which Security Service profiles (application patrol, content filter, IDP, anti-malware, email security) apply to this Security policy. Click an applied Security Service profile icon to edit the profile directly.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving.

27.2.2 Content Filter Add Profile Category Service

Click **Configuration** > **Security Service** > **Content Filter** > **Profile** > **Add** or **Edit** to open the **Add Filter Profile** screen.

Figure 342 Content Filter > Profile > Add Filter Profile > Category Service



The following table describes the labels in this screen.

Table 205 Configuration > Security Service > Content Filter > Profile > Add > Category Service

LABEL	DESCRIPTION
Name	Enter a descriptive name for this content filtering profile name. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Description	Enter a description for the content filtering profile rule to help identify the purpose of rule. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive. This field is optional.
Enable SafeSearch	SafeSearch is a search engine that can automatically filter sexually explicit videos and images from the search result without overloading the Zyxel Device. It does this by adding a parameter in the search URL: *https://www.google.com.tw/?gws_rd=ssl#q=porn&safe=active*. Supported search engines at the time of writing are: Yahoo, Google, MSN Live Bing, Yandex
Enable Content Filter Category Service	Enable external database content filtering to have the Zyxel Device check an external database to find to which category a requested web page belongs. The Zyxel Device then blocks or forwards access to the web page depending on the configuration of the rest of this page.
Log all web pages	Select this to record attempts to access web pages when: • They match the other categories that you select below. • They are not categorized. • The external content filtering database is unavailable.
Action for Managed Web Pages	Select **Pass** to allow users to access web pages that match the other categories that you select below. Select **Block** to prevent users from accessing web pages that match the other categories that you select below. When external database content filtering blocks access to a web page, it displays the denied access message that you configured in the **Content Filter General** screen along with the category of the blocked web page. Select **Log** to record attempts to access web pages that match the other categories that you select below.
Action for Unrated Web Pages	Select **Pass** to allow users to access web pages that the external web filtering service has not categorized. Select **Block** to prevent users from accessing web pages that the external web filtering service has not categorized. When the external database content filtering blocks access to a web page, it displays the denied access message that you configured in the **Content Filter General** screen along with the category of the blocked web page. Select **Warn** to display a warning message before allowing users to access web pages that the external web filtering service has not categorized. Select **Log** to record attempts to access web pages that are not categorized.

Table 205 Configuration > Security Service > Content Filter > Profile > Add > Category Service

LABEL	DESCRIPTION
Action When Category Server Is Unavailable	Select **Pass** to allow users to access any requested web page if the external content filtering database is unavailable. Select **Block** to block access to any requested web page if the external content filtering database is unavailable. Select **Warn** to display a warning message before allowing users to access any requested web page if the external content filtering database is unavailable. The following are possible causes for the external content filtering server not being available: • There is no response from the external content filtering server within the time period specified in the **Content Filter Server Unavailable Timeout** field. • The Zyxel Device is not able to resolve the domain name of the external content filtering database. • There is an error response from the external content filtering database. This can be caused by an expired content filtering registration (External content filtering's license key is invalid"). Select **Log** to record attempts to access web pages that occur when the external content filtering database is unavailable.
Select Categories	
Select All Categories	Select this check box to restrict access to all site categories listed below.
Clear All Categories	Select this check box to clear the selected categories below.
Managed Categories	These are categories of web pages based on their content. Select categories in this section to control access to specific types of Internet content. You must have the Category Service content filtering license to filter these categories. See the next table for category details.
Test Web Site Category	
URL to test	You can check which category a web page belongs to. Enter a web site URL in the text box. When the content filter is active, you should see the web page's category. The query fails if the content filter is not active. Content Filtering can query a category by full URL string (for example, http://www.google.com/picture/index.htm), but HTTPS Domain Filter can only query a category by domain name ('www.google.com'), so the category may be different in the query result. **URL to test** displays both results in the test.
If you think the category is incorrect	Click this link to see the category recorded in the Zyxel Device's content filtering database for the web page you specified (if the database has an entry for it).
Test Against Content Filter Category Server	Click this button to see the category recorded in the external content filter server's database for the web page you specified.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

The following table describes the managed categories.

Table 206 Managed Category Descriptions

CATEGORY	DESCRIPTION
Advertisements & Pop-Ups	Sites that provide advertising graphics or other ad content files such as banners and pop-ups. For example, pagead2.googlesyndication.com, ad.yieldmanager.com.
Alcohol & Tobacco	Sites that promote or sell alcohol- or tobacco-related products or services. For example, www.drinks.com.tw, www.p9.com.tw, beer.ttl.com.tw.

Table 206 Managed Category Descriptions (continued)

Arts	Sites with artistic content or relating to artistic institutions such as theaters, museums, galleries, dance companies, photography, and digital graphic resources. For example, www.npm.gov.tw, www.nmh.gov.tw.
Business	Sites that provide business related information such as corporate Web sites. Information, services, or products that help businesses of all sizes to do their day-to-day commercial activities. For example, www.kinkos.com, www.proctorgamble.com, www.bbb.org.
Transportation	Sites that provide information about motor vehicles such as cars, motorcycles, boats, trucks, RVs and the like. Includes manufacturer sites, dealerships, review sites, pricing,, online purchase sites, enthusiasts clubs, etc. For example, www.toyota.com.tw, www.ford.com.tw, www.sym.com.tw.
Chat	Sites that enable web-based exchange of real time messages through chat services or chat rooms. For example, me.sohu.com, blufiles.storage.live.com.
Forums & Newsgroups	Sites for sharing information in the form of newsgroups, forums, bulletin boards. For example, ck101.com, my.xuite.net, ptt.cc.
Computers & Technology	Sites that contain information about computers, software, hardware, IT, peripheral and computer services, such as product reviews, discussions, and IT news. For example, www.informationsecurity.com.tw, blog.ithome.com.tw.
Criminal Activity	Sites that offer advice on how to commit illegal or criminal activities, or to avoid detection. These can include how to commit murder, build bombs, pick locks, etc. Also includes sites with information about illegal manipulation of electronic devices, hacking, fraud and illegal distribution of software. For example, www.hackbase.com, jia.hackbase.com, ad.adver.com.tw.
Dating & Personals	Sites that promote networking for interpersonal relationships such as dating and marriage. Includes sites for match-making, online dating, spousal introduction. For example, www.i-part.com.tw, www.imatchi.com.
Download Sites	Sites that contain downloadable software, whether shareware, freeware, or for a charge. Includes peer-to-peer sites. For example, www.hotdl.com, toget.pchome.com.tw, www.azroo.com.
Education	Sites sponsored by educational institutions and schools of all types including distance education. Includes general educational and reference materials such as dictionaries, encyclopedias, online courses, teaching aids and discussion guides. For example, www.tfam.museum, www.lksf.org, www.1980.org.tw.
Entertainment	Sites related to television, movies, music and video (including video on demand), such as program guides, celebrity sites, and entertainment news. For example, www.ctitv.com.tw, www.hboasia.com, www.startv.com.tw.
Finance	Sites related to banking, finance, payment or investment, including banks, brokerages, online stock trading, stock quotes, fund management, insurance companies, credit unions, credit card companies, and so on. For example, www.concords.com.tw, www.polaris.com.tw, www.bochk.com.
Gambling	Sites that offer or are related to online gambling, lottery, casinos and betting agencies involving chance. For example, www.taiwanlottery.com.tw, www.i-win.com.tw, www.hkjc.com.
Games	Sites relating to computer or other games, information about game producers, or how to obtain cheat codes. Game-related publication sites. For example, www.gamer.com.tw, www.wowtaiwan.com.tw, tw.lineage.gamania.com.
Government	Sites run by governmental organizations, departments, or agencies, including police departments, fire departments, customs bureaus, emergency services, civil defense, counter-terrorism organizations, military and hospitals. For example, www.ey.gov.tw, www.whitehouse.gov, www.npa.gov.tw.
Hate & Intolerance	Sites that promote a supremacist political agenda, encouraging oppression of people or groups of people based on their race, religion, gender, age, disability, sexual orientation or nationality. For example, www.racist-jokes.com, aryan-nations.org, whitepower.com.

Table 206 Managed Category Descriptions (continued)

Health & Medicine	Sites containing information pertaining to health, healthcare services, fitness and well-being, including information about medical equipment, hospitals, drugstores, nursing, medicine, procedures, prescription medications, etc. For example, www.lksf.org, www.ohayo.com.tw.
Illegal Drugs	Sites with information on the purchase, manufacture, and use of illegal or recreational drugs and their paraphernalia, and misuse of prescription drugs and other compounds For example, www.cannabis.net, www.amphetamines.com.
Job Search	Sites containing job listings, career information, assistance with job searches (such as resume writing, interviewing tips, etc.), employment agencies or head hunters. For example, www.104.com.tw, www.1111.com.tw, www.yes123.com.tw.
Streaming Media & Downloads	Sites that deliver streaming content, such as Internet radio, Internet TV or MP3 and live or archived media download sites. Includes fan sites, or official sites run by musicians, bands, or record labels. For example, www.youtube.com, pfp.sina.com.cn, my.xunlei.com.
News	Sites covering news and current events such as newspapers, newswire services, personalized news services, broadcasting sites, and magazines. For example, www.tvbs.com.tw?Awww.ebc.net.tw?Awww.iset.com.tw.
Non-profits & NGOs	Sites devoted to clubs, communities, unions, and non-profit organizations. Many of these groups exist for educational or charitable purposes. For example, www.tzuchi.org.tw, web.redcross.org.tw, www.lksf.org.
Nudity	Sites that contain full or partial nudity that are not necessarily overtly sexual in intent. Includes sites that advertise or sell lingerie, intimate apparel, or swim wear. For example, www.easyshop.com.tw, www.faster-swim.com.tw, image.baidu.com.
Personal Sites	Sites about or hosted by personal individuals, including those hosted on commercial sites. For example, blog.yam.com, www.wretch.cc, blog.xuite.net.
Politics	Sites that promote political parties or political advocacy, or provide information about political parties, interest groups, elections, legislation or lobbying. Also includes sites that offer legal information and advice. For example, www.kmt.org.tw, www.dpp.org.tw, cpc.people.com.cn.
Pornography/Sexually Explicit	Sites that contain explicit sexual content. Includes adult products such as sex toys, CD-ROMs, and videos, adult services such as videoconferencing, escort services, and strip clubs, erotic stories and textual descriptions of sexual acts. For example, www.dvd888.com, www.18center.com, blog.sina.com.tw.
Real Estate	Sites relating to commercial or residential real estate services, including renting, purchasing, selling or financing homes, offices, etc. For example, www.sinyi.com.tw, www.yungching.com.tw, house.focus.cn.
Religion	Sites that deal with faith, human spirituality or religious beliefs, including sites of churches, synagogues, mosques and other houses of worship. For example, www.fgs.org.tw, www.twtaoism.net, www.fhl.net.
Restaurants & Dining	Sites that list, review, promote or advertise food, dining or catering services. Includes sites for recipes, cooking instruction and tips, food products, and wine advisors. For example, www.jogoya.com.tw, www.dintaifung.com.tw, www2.pizzahut.com.tw.
Search Engines & Portals	Sites enabling the searching of the Web, newsgroups, images, directories, and other online content. Includes portal and directory sites such as white/yellow pages. For example, tw.yahoo.com, www.pchome.com.tw, www.google.com.tw.
Shopping	Sites for online shopping, catalogs, online ordering, auctions, classified ads. Excludes shopping for products and services exclusively covered by another category such as health & medicine. For example, shopping.pchome.com.tw, buy.yahoo.com.tw, www.tkec.com.tw.
Social Networking	Sites that enable social networking for online communities of various topics, for friendship, dating, or professional reasons. For example, www.facebook.com, www.flickr.com, www.groups.google.com.

Table 206 Managed Category Descriptions (continued)

Sports	Sites relating to sports teams, fan clubs, scores and sports news. Relates to all sports, whether professional or recreational. For example, www.yankees.com, www.nba.com, mlb.mlb.com.
Translators	Sites that translate Web pages or phrases from one language to another. These sites may be used to attempt to bypass a filtering system. For example, translate.google.com.tw, www.smartlinkcorp.com, translation.paralink.com.
Travel	Sites that provide travel and tourism information or online booking of travel services such as airlines, accommodations, car rentals. Includes regional or city information sites. For example, www.startravel.com.tw, taipei.grand.hyatt.com.tw, www.car-plus.com.tw.
Violence	Sites that contain images or text depicting or advocating physical assault against humans, animals, or institutions. Sites of a particularly gruesome nature such as shocking depictions of blood or wounds, or cruel animal treatment. For example, crimescene.com, deathnet.com, michiganmilitia.com.
Weapons	Sites that depict, sell, review or describe guns and weapons, including for sport. For example, www.ak-47.net, warfare.ru.
Web-based Email	Sites that enable users to send and receive email through a web-accessible email account. For example, mail.163.com, mail.google.com, mail.yahoo.com.tw.
General	Sites that do not clearly fall into other categories, for example, blank Web pages. For example, bs.serving-sys.com, simg.sinajs.cn, i0.itc.cn.
Leisure & Recreation	Sites relating to recreational activities and hobbies including zoos, public recreation centers, pools, amusement parks, and hobbies such as gardening, literature, arts & crafts, home improvement, home d?cor, family, etc. For example, tpbg.tfri.gov.tw, tw.fashion.yahoo.com, www.relaxtimes.com.tw.
Cults	Sites relating to non-traditional religious practice typically known as "cults," that is, considered to be false, unorthodox, extremist, or coercive, with members often living under the direction of a charismatic leader. For example, www.churchofsatan.com, www.ccya.org.tw.
Fashion & Beauty	Sites concerning fashion, jewelry, glamour, beauty, modeling, cosmetics or related products or services. Includes product reviews, comparisons, and general consumer information. For example, women.sohu.com, baodian.women.sohu.com.
Greeting cards	Sites that allow people to send and receive greeting cards and postcards. For example, www.e-card.com.tw, card.ivy.net.tw.
Hacking	Sites that promote or give advice about how to gain unauthorized access to proprietary computer systems, for the purpose of stealing information, perpetrating fraud, creating viruses, or committing other illegal activity related to theft of digital information. For example, www.hackbase.com, www.chinahacker.com.
Illegal Software	Sites that illegally distribute software or copyrighted materials such as movies or music, software cracks, illicit serial numbers, illegal license key generators. For example, www.zhaokey.com.cn, www.tiansha.net.
Image Sharing	Sites that host digital photographs and images, online photo albums and digital photo exchanges. For example, photo.pchome.com.tw, photo.xuite.net, photobucket.com.
Information Security	Sites that provide legitimate information about data protection, including newly discovered vulnerabilities and how to block them. For example, www.informationsecurity.com.tw, www.itis.tw.
Instant Messaging	Sites that enable logging in to instant messaging services such as ICQ, AOL Instant Messenger, IRC, MSN, Jabber, Yahoo Messenger, and the like. For example, www.meebo.com, www.aim.com, www. ebuddy.com.
Peer-to-Peer	Sites that enable direct exchange of files between users without dependence on a central server. For example, www.eyny.com.

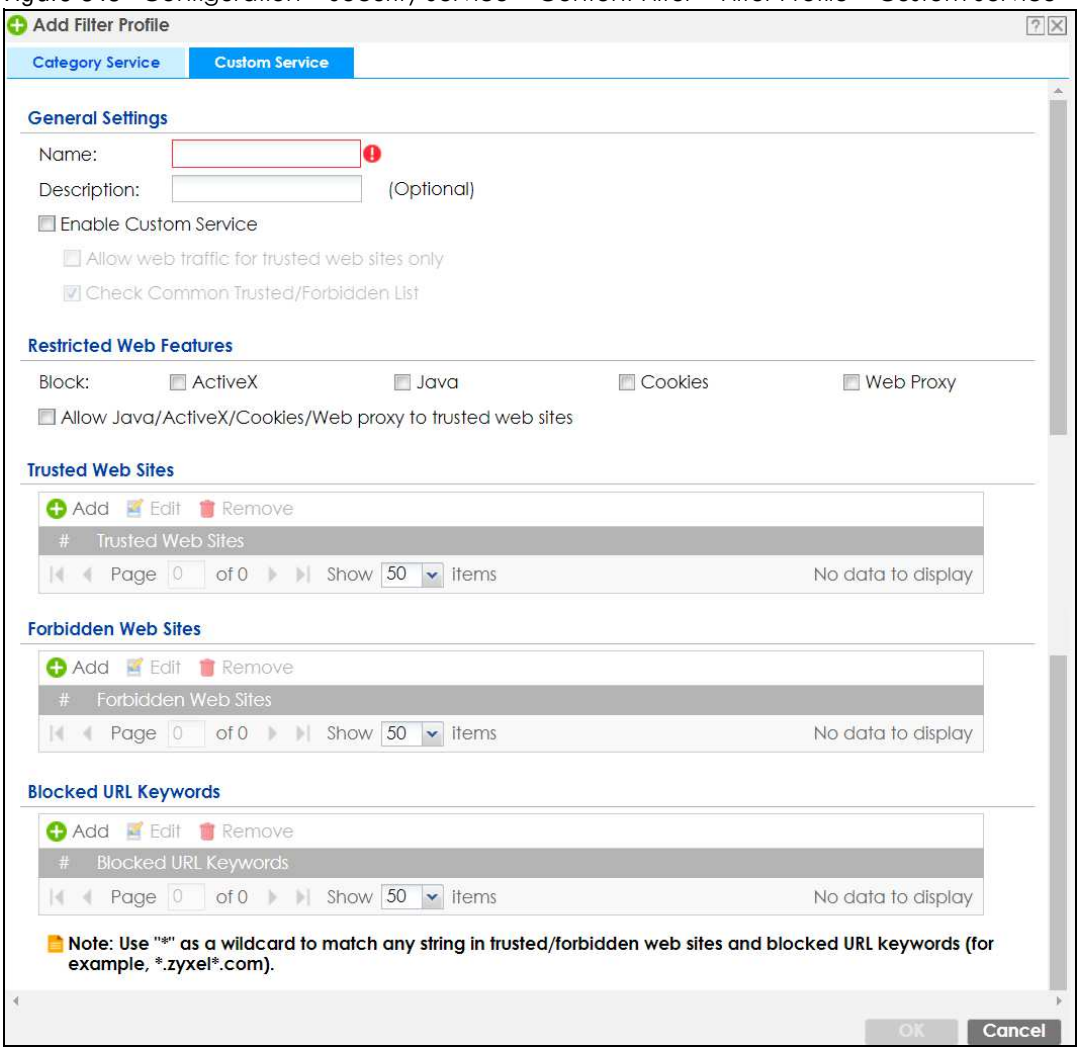
Table 206 Managed Category Descriptions (continued)

Private IP Addresses	Sites that are private IP addresses as defined in RFC 1918, that is, hosts that do not require access to hosts in other enterprises (or require just limited access) and whose IP address may be ambiguous between enterprises but are well defined within a certain enterprise. For example, 172.21.20.123, 192.168.35.62.
School Cheating	Sites that promote unethical practices such as cheating or plagiarism by providing test answers, written essays, research papers, or term papers. For example, www.zydk788.com, www.huafengksw.com.
Sex Education	Sites relating to sex education, including subjects such as respect for partner, abortion, gay and lesbian lifestyle, contraceptives, sexually transmitted diseases, and pregnancy. For example, apps.rockyou.com, www.howmama.com.tw, www.mombaby.com.tw.
Tasteless	Sites with offensive or tasteless content such as bathroom humor or profanity. For example, comedycentral.com, dilbert.com.
Child Abuse Images	Sites that portray or discuss children in sexual or other abusive acts. For example, a.uuzhijia.info.
Unknown	Unknown For example, www.669.com.tw, www.appleballoon.com.tw, www.uimco.com.tw.

27.2.3 Content Filter Add Filter Profile Custom Service

Click **Configuration** > **Security Service** > **Content Filter** > **Filter Profile** > **Add or Edit** > **Custom Service** to open the **Custom Service** screen. You can create a list of good (allowed) web site addresses and a list of bad (blocked) web site addresses. You can also block web sites based on whether the web site's address contains a keyword. Use this screen to add or remove specific sites or keywords from the filter list.

Figure 343 Configuration > Security Service > Content Filter > Filter Profile > Custom Service



The following table describes the labels in this screen.

Table 207 Configuration > Security Service > Content Filter > Profile > Custom Service

LABEL	DESCRIPTION
Name	Enter a descriptive name for this content filtering profile name. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Description	Enter a description for the content filtering profile rule to help identify the purpose of rule. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive. This field is optional.
Enable Custom Service	Select this check box to allow trusted web sites and block forbidden web sites. Content filter list customization may be enabled and disabled without re-entering these site names.
Allow Web traffic for trusted web sites only	When this box is selected, the Zyxel Device blocks Web access to sites that are not on the **Trusted Web Sites** list. If they are chosen carefully, this is the most effective way to block objectionable material.

Table 207 Configuration > Security Service > Content Filter > Profile > Custom Service (continued)

LABEL	DESCRIPTION
Check Common Trusted/ Forbidden List	Select this check box to check the common trusted and forbidden web sites lists. See Section 27.3 on page 520 and Section 27.4 on page 521 for information on configuring these lists.
Restricted Web Features	Select the check box(es) to restrict a feature. Select the check box(es) to restrict a feature. • When you download a page containing ActiveX or Java, that part of the web page will be blocked with an X. • When you download a page coming from a Web Proxy, the whole web page will be blocked. • When you download a page containing cookies, the cookies will be removed, but the page will not be blocked.
Block ActiveX	ActiveX is a tool for building dynamic and active web pages and distributed object applications. When you visit an ActiveX web site, ActiveX controls are downloaded to your browser, where they remain in case you visit the site again.
Java	Java is a programming language and development environment for building downloadable Web components or Internet and intranet business applications of all kinds.
Cookies	Cookies are files stored on a computer's hard drive. Some web servers use them to track usage and provide service based on ID.
Web Proxy	A server that acts as an intermediary between a user and the Internet to provide security, administrative control, and caching service. When a proxy server is located on the WAN it is possible for LAN users to circumvent content filtering by pointing to this proxy server.
Allow Java/ActiveX/Cookies/ Web proxy to trusted web sites	When this box is selected, the Zyxel Device will permit Java, ActiveX and Cookies from sites on the **Trusted Web Sites** list to the LAN. In certain cases, it may be desirable to allow Java, ActiveX or Cookies from sites that are known and trusted.
Trusted Web Sites	These are sites that you want to allow access to, regardless of their content rating, can be allowed by adding them to this list.
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
#	This displays the index number of the trusted web sites.
Trusted Web Site	This column displays the trusted web sites already added. Enter host names such as www.good-site.com into this text field. Do not enter the complete URL of the site – that is, do not include "http://". All subdomains are allowed. For example, entering "*zyxel.com" also allows "www.zyxel.com", "partner.zyxel.com", "press.zyxel.com", and so on. You can also enter just a top level domain. For example, enter "*.com" to allow all .com domains. Use up to 127 characters (0-9a-z-). The casing does not matter. "*" can be used as a wildcard to match any string. The entry must contain at least one "." or it will be invalid.
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
#	This displays the index number of the forbidden web sites.

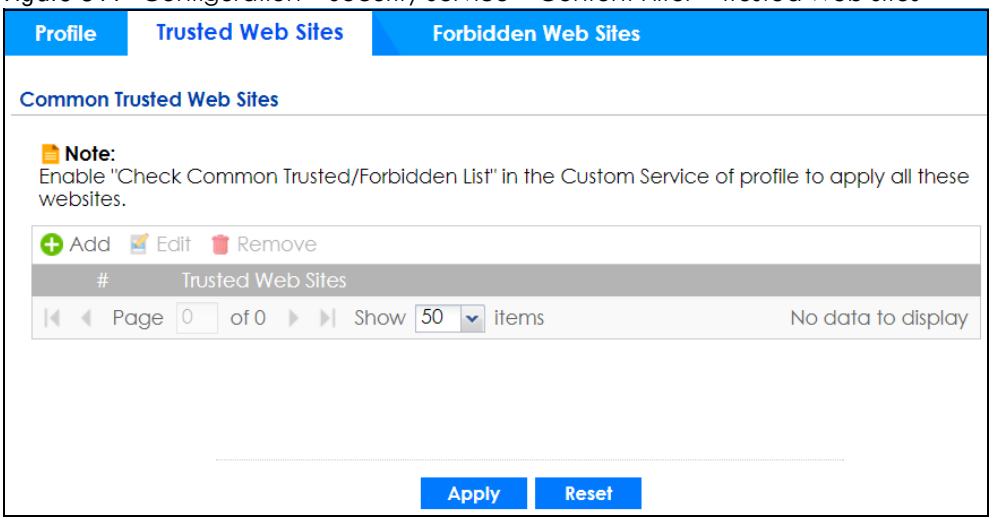
Table 207 Configuration > Security Service > Content Filter > Profile > Custom Service (continued)

LABEL	DESCRIPTION
Forbidden Web Sites	This list displays the forbidden web sites already added. Enter host names such as www.bad-site.com into this text field. Do not enter the complete URL of the site – that is, do not include "http://". All subdomains are also blocked. For example, entering "*bad-site.com" also blocks "www.bad-site.com", "partner.bad-site.com", "press.bad-site.com", and do on. You can also enter just a top level domain. For example, enter "*.com" to block all .com domains. Use up to 127 characters (0-9a-z-). The casing does not matter. "*" can be used as a wildcard to match any string. The entry must contain at least one "." or it will be invalid.
Blocked URL Keywords	This section allows you to block Web sites with URLs that contain certain keywords in the domain name or IP address.
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
#	This displays the index number of the blocked URL keywords.
Blocked URL Keywords	This list displays the keywords already added. Enter a keyword or a numerical IP address to block. You can also enter a numerical IP address. Use up to 127 case-insensitive characters (0-9a-zA-Z;/?:@&=+$\.-_!~*()%). "*" can be used as a wildcard to match any string. Use "|*" to indicate a single wildcard character. For example enter *Bad_Site* to block access to any web page that includes the exact phrase Bad_Site. This does not block access to web pages that only include part of the phrase (such as Bad for example).
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

27.3 Content Filter Trusted Web Sites Screen

Click **Configuration** > **Security Service** > **Content Filter** > **Trusted Web Sites** to open the **Trusted Web Sites** screen. You can create a common list of good (allowed) web site addresses. When you configure **Filter Profiles**, you can select the option to check the **Common Trusted Web Sites** list. Use this screen to add or remove specific sites from the filter list.

Figure 344 Configuration > Security Service > Content Filter > Trusted Web Sites



The following table describes the labels in this screen.

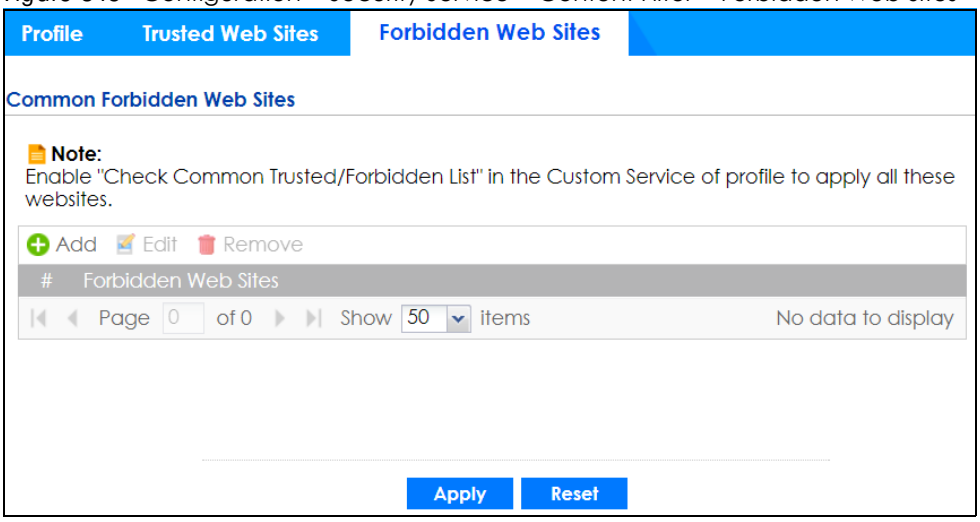
Table 208 Configuration > Security Service > Content Filter > Trusted Web Sites

LABEL	DESCRIPTION
Common Trusted Web Sites	These are sites that you want to allow access to, regardless of their content rating, can be allowed by adding them to this list.
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
#	This displays the index number of the trusted web sites.
Trusted Web Site	This column displays the trusted web sites already added. Enter host names such as www.good-site.com into this text field. Do not enter the complete URL of the site – that is, do not include "http://". All subdomains are allowed. For example, entering "zyxel.com" also allows "www.zyxel.com", "partner.zyxel.com", "press.zyxel.com", and so on. You can also enter just a top level domain. For example, enter .com to allow all .com domains. Use up to 127 characters (0-9a-z-). The casing does not matter.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

27.4 Content Filter Forbidden Web Sites Screen

Click **Configuration** > **Security Service** > **Content Filter** > **Forbidden Web Sites** to open the **Forbidden Web Sites** screen. You can create a common list of bad (blocked) web site addresses. When you configure **Filter Profiles**, you can select the option to check the **Common Forbidden Web Sites** list. Use this screen to add or remove specific sites from the filter list.

Figure 345 Configuration > Security Service > Content Filter > Forbidden Web Sites



The following table describes the labels in this screen.

Table 209 Configuration > Security Service > Content Filter > Forbidden Web Sites

LABEL	DESCRIPTION
Forbidden Web Site List	Sites that you want to block access to, regardless of their content rating, can be allowed by adding them to this list.
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
#	This displays the index number of the forbidden web sites.
Forbidden Web Sites	This list displays the forbidden web sites already added. Enter host names such as www.bad-site.com into this text field. Do not enter the complete URL of the site – that is, do not include "http://". All subdomains are also blocked. For example, entering "bad-site.com" also blocks "www.bad-site.com", "partner.bad-site.com", "press.bad-site.com", and do on. You can also enter just a top level domain. For example, enter .com to block all .com domains. Use up to 127 characters (0-9a-z-). The casing does not matter.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Cancel	Click **Reset** to return the screen to its last-saved settings.

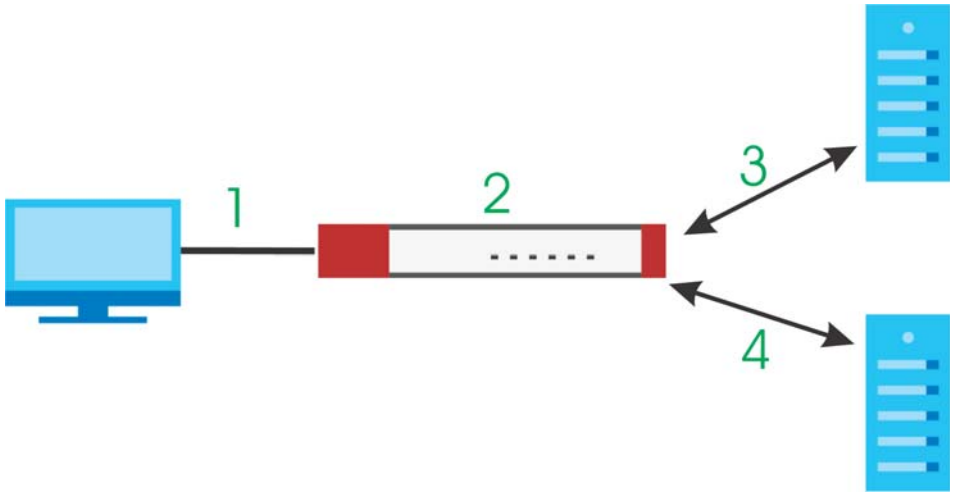
27.5 Content Filter Technical Reference

This section provides content filtering background information.

External Content Filter Server Lookup Procedure

The content filter lookup process is described below.

Figure 346 Content Filter Lookup Procedure



1 A computer behind the Zyxel Device tries to access a web site.

2 The Zyxel Device looks up the web site in its cache. If an attempt to access the web site was made in the past, a record of that web site's category will be in the Zyxel Device's cache. The Zyxel Device blocks, blocks and logs or just logs the request based on your configuration.

3 Use the **Content Filter Cache** screen to configure how long a web site address remains in the cache as well as view those web site addresses. All of the web site address records are also cleared from the local cache when the Zyxel Device restarts.

4 If the Zyxel Device has no record of the web site, it queries the external content filter database and simultaneously sends the request to the web server.

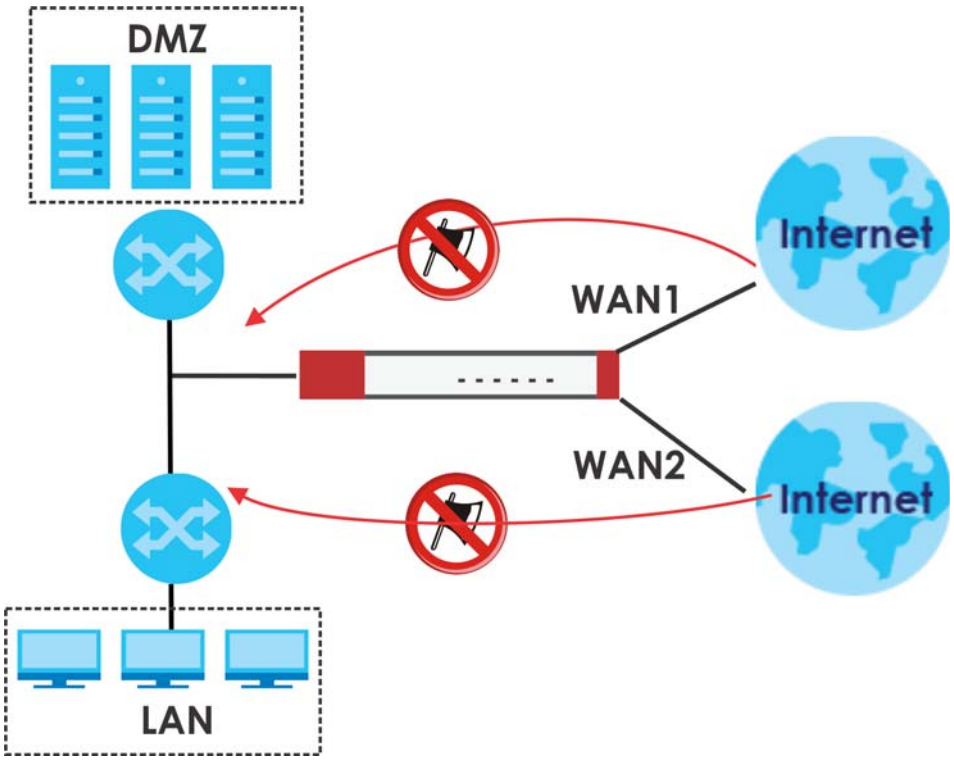
5 The external content filter server sends the category information back to the Zyxel Device, which then blocks and/or logs access to the web site based on the settings in the content filter profile. The web site's address and category are then stored in the Zyxel Device's content filter cache.

CHAPTER 28
Anti-Malware

28.1 Overview

Use the Zyxel Device's anti-malware feature to protect your connected network from malware (malicious software) infection, such as computer virus, worms or spyware. The Zyxel Device checks traffic going in both directions for signature matches. In the following figure the Zyxel Device checks traffic coming from the WAN zone (which includes two interfaces) to the LAN zone.

Figure 347 Zyxel Device Anti-Malware Example



28.1.1 What You Can Do in this Chapter

- Use the **Anti-Malware** screen (Section 28.2 on page 526) to turn anti-malware on or off, and check the anti-malware signature status. In addition, you can set up anti-malware black (blocked) and white (allowed) lists of malware patterns.
- Use the **Signature** screen (Section 28.3 on page 530) to search for particular signatures and get more information about them.

28.1.2 What You Need to Know

Anti-Malware Signatures

The Zyxel Device downloads two signature sets after it is registered and the anti-malware service is activated at myZyxel. In addition to the anti-malware signature, the Zyxel Device also uses the Cloud Threat Database signature, which comes from the sandboxing inspection results and helps the Zyxel Device block possible malicious or suspicious files.

After the anti-malware license expires, you need to purchase an iCard for the signature you want to use and extend it in the **Registration > Service** screen.

Virus and Worm

A computer virus is a small program designed to corrupt and/or alter the operation of other legitimate programs. A worm is a self-replicating virus that resides in active memory and duplicates itself. The effect of a virus attack varies from doing so little damage that you are unaware your computer is infected to wiping out the entire contents of a hard drive to rendering your computer inoperable.

Zyxel Device Anti-Malware Scanner

The Zyxel Device has a built-in signature database. As a network-based anti-malware scanner, the Zyxel Device helps stop threats at the network edge before they reach the local host computers.

You can set the Zyxel Device to examine files received through the following protocols:

- FTP (File Transfer Protocol)
- HTTP (Hyper Text Transfer Protocol)
- SMTP (Simple Mail Transfer Protocol)
- POP3 (Post Office Protocol version 3)

How the Zyxel Device Anti-Malware Scanner Works

The following describes the malware scanning process on the Zyxel Device.

1. The Zyxel Device first identifies SMTP, POP3, HTTP and FTP packets through standard ports.
2. If the packets are not session connection setup packets (such as SYN, ACK and FIN), the Zyxel Device records the sequence of the packets.
3. The scanning engine checks the contents of the packets for malware.
4. If a malware pattern is matched, the Zyxel Device removes the infected portion of the file along with the rest of the file. The uninfected portion of the file before a malware pattern was matched still goes through.

Note: If a malware pattern is matched, the Zyxel Device removes the infected portion of the file along with the rest of the file. The uninfected portion of the file before a malware pattern was matched still goes through. Since the Zyxel Device erases the infected portion of the file before sending it, you may not be able to open the file.

Notes About the Zyxel Device Anti-Malware

The following lists important notes about the anti-malware scanner:

1. The Zyxel Device anti-malware scanner can detect polymorphic malware.
2. When malware is detected, an alert message is displayed in Microsoft Windows computers.
3. Changes to the Zyxel Device's anti-malware settings affect new sessions (not the sessions that already existed before you applied the changed settings).
4. The Zyxel Device does not scan the following file/traffic types:
   - Simultaneous downloads of a file using multiple connections. For example, when you use FlashGet to download sections of a file simultaneously.
   - Encrypted traffic. This could be password-protected files or VPN traffic where the Zyxel Device is not the endpoint (pass-through VPN traffic).
   - Traffic through custom (non-standard) ports. The only exception is FTP traffic. The Zyxel Device scans whatever port number is specified for FTP in the ALG screen.
   - ZIP file(s) within a ZIP file.
   - Traffic a server or client compressed or encoded using a method the Zyxel Device does not support.

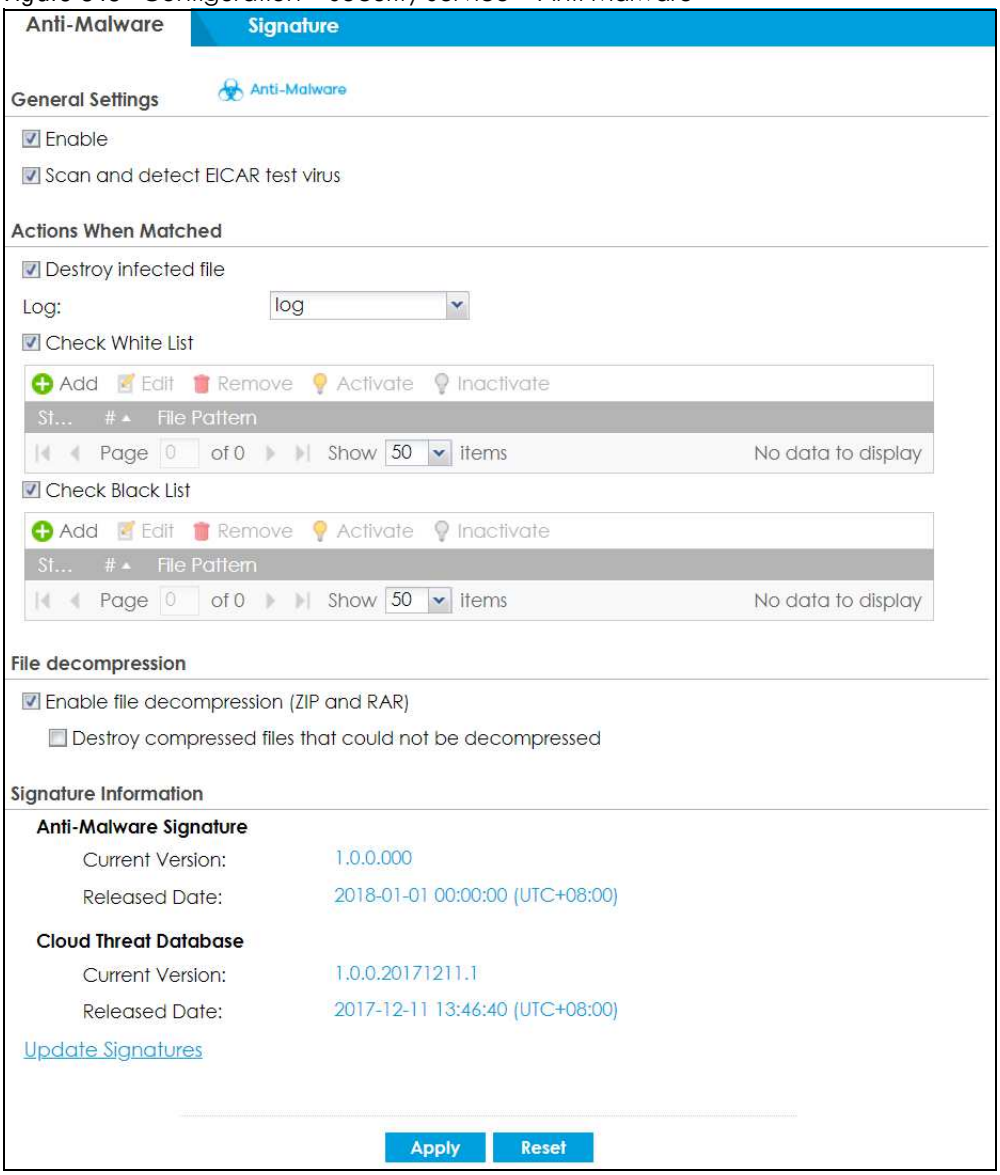
Finding Out More

- See Section 28.4 on page 531 for anti-malware background information.

28.2 Anti-Malware Screen

Click **Configuration** > **Security Service** > **Anti-Malware** to display the configuration screen as shown next.

Figure 348 Configuration > Security Service > Anti-Malware



The following table describes the labels in this screen.

Table 210 Configuration > Security Service > Anti-Malware

LABEL	DESCRIPTION
General Setting	
Enable	Select this checkbox to activate the anti-malware feature to protect your connected network from infection and the installation of malicious software.
Scan and detect EICAR test virus	Select this option to have the Zyxel Device check for the EICAR test file and treat it in the same way as a real malware file. The EICAR test file is a standardized test file for signature based anti-malware scanners. When the scanner detects the EICAR file, it responds in the same way as if it found a real malware. Besides straightforward detection, the EICAR file can also be compressed to test whether the anti-malware software can detect it in a compressed file. The test string consists of the following human-readable ASCII characters. X5O!P%@AP[4\PZX54(P^)7CC)7}$EICAR-STANDARD-ANTIVIRUS-TEST-FILE!$H+H*

Table 210 Configuration > Security Service > Anti-Malware (continued)

LABEL	DESCRIPTION
Destroy infected file	When you select this check box, if a malware pattern is matched, the Zyxel Device overwrites the infected portion of the file (and the rest of the file) with zeros. The uninfected portion of the file before a malware pattern was matched goes through unmodified.
Log	These are the log options: • **no**: Do not create a log when a packet matches a signature(s). • **log**: Create a log on the Zyxel Device when a packet matches a signature(s). • **log alert**: An alert is an emailed log for more serious events that may need more immediate attention. Select this option to have the Zyxel Device send an alert when a packet matches a signature(s).
Check White List	Select this check box to have the Zyxel Device not perform the anti-malware check on files with names that match the white list patterns.
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Status	The activate (light bulb) icon is lit when the entry is active and dimmed when the entry is inactive.
#	This is the entry's index number in the list.
File Pattern	This is the file name pattern. If a file's name matches this pattern, the Zyxel Device does not check the file for malware.
Check Black List	Select this check box to log and delete files with names that match the black list patterns.
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Status	The activate (light bulb) icon is lit when the entry is active and dimmed when the entry is inactive.
#	This is the entry's index number in the list.
File Pattern	This is the file name pattern. If a file's name that matches this pattern, the Zyxel Device logs and then destroys the file.
File decompression	
Enable file decompression (ZIP and RAR)	Select this check box to have the Zyxel Device scan a ZIP file (the file does not have to have a "zip" or "rar" file extension). The Zyxel Device first decompresses the ZIP file and then scans the contents for malware. Note: The Zyxel Device decompresses a ZIP file once. The Zyxel Device does NOT decompress any ZIP file(s) within a ZIP file.

Table 210 Configuration > Security Service > Anti-Malware (continued)

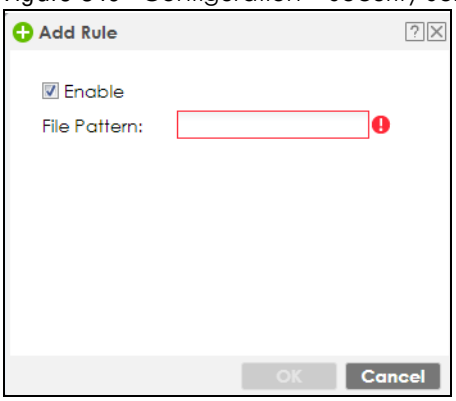
LABEL	DESCRIPTION
Destroy compressed files that could not be decompressed	When you select this check box, the Zyxel Device deletes ZIP files that use password encryption. Select this check box to have the Zyxel Device delete any ZIP files that it is not able to unzip. The Zyxel Device cannot unzip password protected ZIP files or a ZIP file within another ZIP file. There are also limits to the number of ZIP files that the Zyxel Device can concurrently unzip. Note: The Zyxel Device's firmware package cannot go through the Zyxel Device with this check box enabled. The Zyxel Device classifies the firmware package as not being able to be decompressed and deletes it. Clear this check box when you download a firmware package from the Zyxel website. It's OK to upload a firmware package to the Zyxel Device with the check box selected.
Signature Information	The following fields display information on the current signature set that the Zyxel Device is using.
Current Version	This field displays the signature set version number currently used by the Zyxel Device. This number gets larger as the set is enhanced.
Released Date	This field displays the date and time the set was released.
Update Signatures	Click this link to go to the screen you can use to download signatures from the update server.
Apply	Click **Apply** to save your changes.
Reset	Click **Reset** to return the screen to its last-saved settings.

28.2.1 Anti-Malware Black List or White List Add/Edit

From the **Configuration** > **Security Service** > **Anti-Malware** > **Black/White List** screen, click the **Add** icon or an **Edit** icon to display the following screen.

- For a black list entry, enter a file pattern that should cause the Zyxel Device to log and then destroy a file.
- For a white list entry, enter a file pattern that should cause the Zyxel Device to allow a file.

Figure 349 Configuration > Security Service > Anti-Malware > Black/White List > Add



The following table describes the labels in this screen.

Table 211 Configuration > Security Service > Anti-Malware > Black/White List > Add

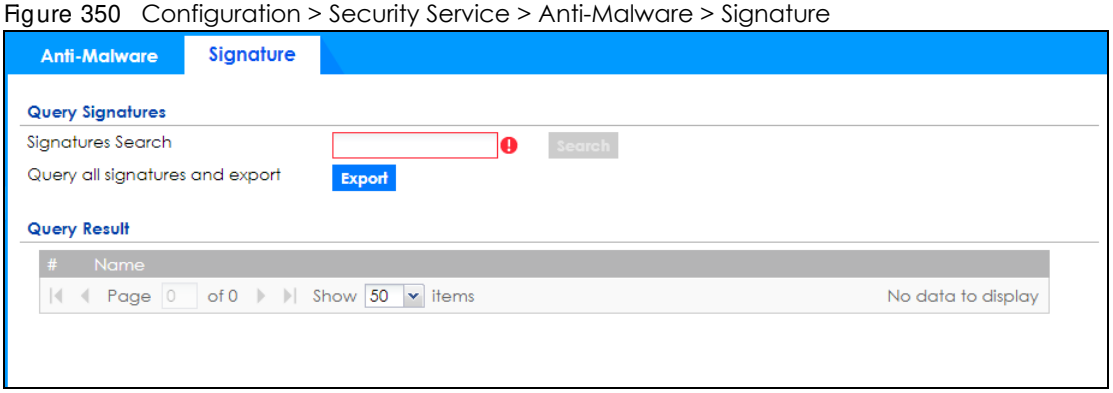
LABEL	DESCRIPTION
Enable	If this is a black list entry, select this option to have the Zyxel Device apply this entry when using the black list. If this is a white list entry, select this option to have the Zyxel Device apply this entry when using the white list.
File Pattern	For a black list entry, specify a pattern to identify the names of files that the Zyxel Device should log and then destroy. For a white list entry, specify a pattern to identify the names of files that the Zyxel Device should not scan for malware. • Use up to 80 characters. Alphanumeric characters, underscores (_), dashes (-), question marks (?) and asterisks (*) are allowed. • A question mark (?) lets a single character in the file name vary. For example, use "a?.zip" (without the quotation marks) to specify aa.zip, ab.zip and so on. • Wildcards (*) let multiple files match the pattern. For example, use "*a.zip" (without the quotation marks) to specify any file that ends with "a.zip". A file named "testa.zip would match. There could be any number (of any type) of characters in front of the "a.zip" at the end and the file name would still match. A file named "test.zipa" for example would not match. • A * in the middle of a pattern has the Zyxel Device check the beginning and end of the file name and ignore the middle. For example, with "abc*.zip", any file starting with "abc" and ending in ".zip" matches, no matter how many characters are in between. • The whole file name has to match if you do not use a question mark or asterisk. • If you do not use a wildcard, the Zyxel Device checks up to the first 80 characters of a file name.
OK	Click **OK** to save your changes.
Cancel	Click **Cancel** to exit this screen without saving your changes.

28.3 Anti-Malware Signature Searching

Click **Configuration** > **Security Service** > **Anti-Malware** > **Signature** to display this screen. Use this screen to locate signatures and display details about them.

If Internet Explorer opens a warning screen about a script making Internet Explorer run slowly and the computer maybe becoming unresponsive, just click **No** to continue. Click a column's heading cell to sort the table entries by that column's criteria. Click the heading cell again to reverse the sort order.

Figure 350 Configuration > Security Service > Anti-Malware > Signature



The following table describes the labels in this screen.

Table 212 Configuration > Security Service > Anti-Malware > Signature

LABEL	DESCRIPTION
Signatures Search	Enter the name, part of the name or keyword of the signature(s) you want to find and click **Search**. This search is not case-sensitive and accepts numerical strings.
Query all signatures and export	Click **Export** to have the Zyxel Device save all of the anti-malware signatures to your computer in a .txt file.
Query Result	
#	This is the entry's index number in the list.
Name	This is the name of the anti-malware signature. Click the **Name** column heading to sort your search results in ascending or descending order according to the signature name. Click a signature's name to see details about the malware.

28.4 Anti-Malware Technical Reference

Types of Malware

The following table describes some of the common malware.

Table 213 Common Malware Types

TYPE	DESCRIPTION
File Infector	This is a small program that embeds itself in a legitimate program. A file infector is able to copy and attach itself to other programs that are executed on an infected computer.
Boot Sector Virus	This type of virus infects the area of a hard drive that a computer reads and executes during startup. The virus causes computer crashes and to some extend renders the infected computer inoperable.
Macro Virus	Macro viruses or Macros are small programs that are created to perform repetitive actions. Macros run automatically when a file to which they are attached is opened. Macros spread more rapidly than other types of viruses as data files are often shared on a network.
Email Virus	Email viruses are malicious programs that spread through email.
Polymorphic Virus	A polymorphic virus (also known as a mutation virus) tries to evade detection by changing a portion of its code structure after each execution or self replication. This makes it harder for an anti-malware scanner to detect or intercept it. A polymorphic virus can also belong to any of the virus types discussed above.

Malware Infection and Prevention

The following describes a simple life cycle of malware.

1. A computer gets a copy of malware from a source such as the Internet, email, file sharing or any removable storage media. The malware is harmless until the execution of an infected program.
2. The malware spreads to other files and programs on the computer.
3. The infected files are unintentionally sent to another computer thus starting the spread of the malware.

4 Once the malware is spread through the network, the number of infected networked computers can grow exponentially.

Types of Anti-Malware Scanner

The section describes two types of anti-malware scanner: host-based and network-based.

A host-based anti-malware (HAM) scanner is often software installed on computers and/or servers in the network. It inspects files for malware patterns as they are moved in and out of the hard drive. However, host-based anti-malware scanners cannot eliminate all malware for a number of reasons:

- HAM scanners are slow in stopping malware threats through real-time traffic (such as from the Internet).
- HAM scanners may reduce computing performance as they also share the resources (such as CPU time) on the computer for file inspection.
- You have to update the malware signatures and/or perform malware scans on all computers in the network regularly.

A network-based anti-malware (NAM) scanner is often deployed as a dedicated security device (such as your Zyxel Device) on the network edge. NAM scanners inspect real-time data traffic (such as email messages or web) that tends to bypass HAM scanners. The following lists some of the benefits of NAM scanners.

- NAM scanners stops malware threats at the network edge before they enter or exit a network.
- NAM scanners reduce computing loading on computers as the read-time data traffic inspection is done on a dedicated security device.

CHAPTER 29
Botnet Filter

29.1 Overview

A botnet is a network consisting of computers that are infected with malware and remotely controlled. The infected computers will contact and wait for instructions from a command and control (C&C) server(s). An attacker can control the botnet by setting up a C&C server and sending commands to the infected computers. Alternatively, a peer-to-peer network approach is used. The infected computer scans and communicates with the peer devices in the same botnet to share commands or malware sent by the C&C server.

The Zyxel Device's botnet filtering service allows you to detect and block connection attempts to or from the C&C server or known botnet IP addresses.

When you register for and enable the botnet filtering service, your Zyxel Device downloads signature files that contain known botnet domain names and IP addresses. The Zyxel Device will also access an external database that has millions of web sites categorized based on content. You can have the Zyxel Device allow, block, block and/or log access to web sites or hosts based on these signatures and categories.

29.1.1 What You Can Do in this Chapter

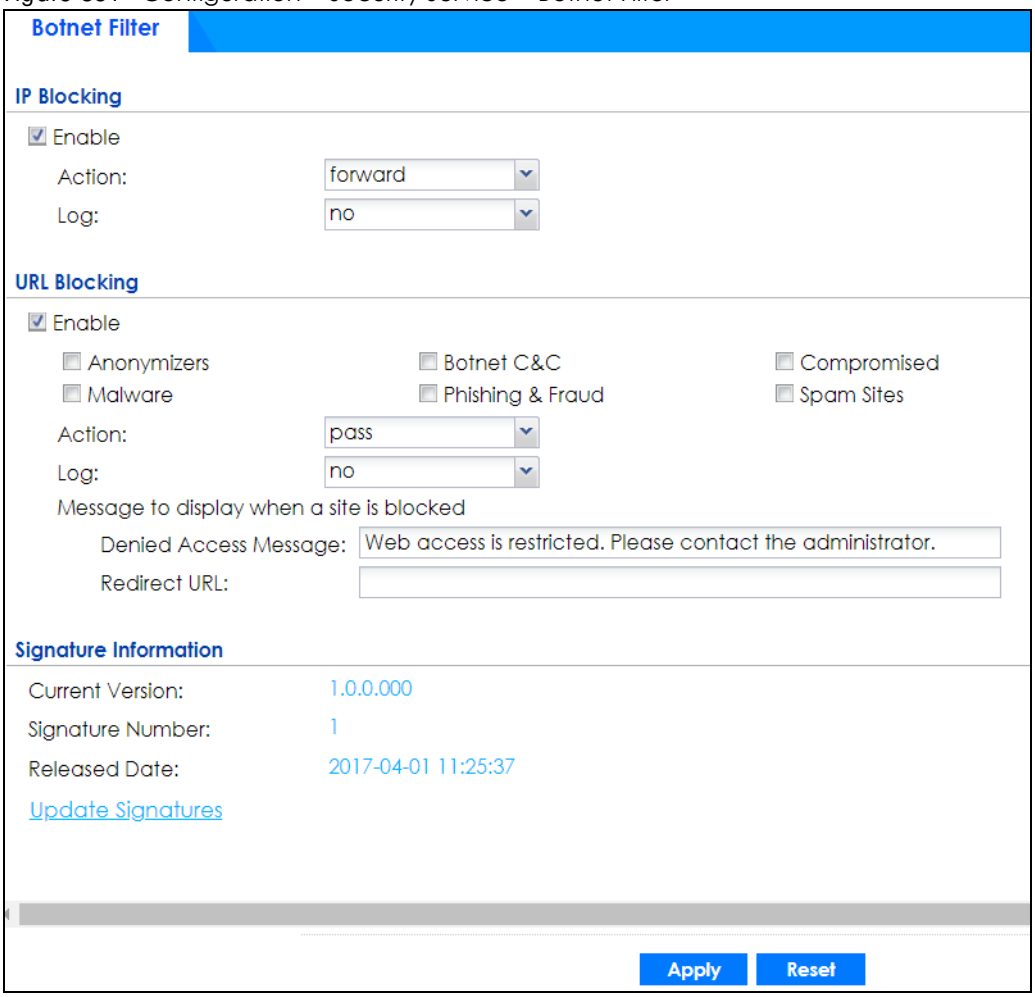
Use the **Botnet Filter** screen (Section 29.2 on page 533) to enable botnet filtering and specify what action the Zyxel Device takes when any suspicious activity is detected.

29.2 Botnet Filter Screen

Click **Configuration** > **Security Service** > **Botnet Filter** to display the configuration screen as shown next.

Use this screen to enable botnet filtering and specify the action the Zyxel Device takes when it detects a suspicious activity or a connection attempt to or from a botnet C&C server.

Figure 351 Configuration > Security Service > Botnet Filter



The following table describes the labels in this screen.

Table 214 Configuration > Security Service > Botnet Filter

LABEL	DESCRIPTION
IP Blocking	
Enable	Select this option to turn on IP blocking on the Zyxel Device. Otherwise, deselect it.
Action	Set what action the Zyxel Device takes when a packet contains a botnet IP address. **forward**: Select this action to have the Zyxel Device allow the packet to go through. **reject-sender**: Select this action to have the Zyxel Device deny the packets and send a TCP RST to the sender when a packet contains a botnet IP address. **reject-receiver**: Select this action to have the Zyxel Device deny the packets and send a TCP RST to the receiver when a packet contains a botnet IP address. **reject-both**: Select this action to have the Zyxel Device deny the packets and send a TCP RST to both the sender and receiver when a packet contains a botnet IP address.

Table 214 Configuration > Security Service > Botnet Filter (continued)

LABEL	DESCRIPTION
Log	These are the log options: **no**: Do not create a log when the packet contains a botnet IP address. **log**: Create a log on the Zyxel Device when the packet contains a botnet IP address. **log alert**: An alert is an emailed log for more serious events that may need more immediate attention. Select this option to have the Zyxel Device send an alert when the packet contains a botnet IP address.
URL Blocking	
Enable	Select this option to turn on URL blocking on the Zyxel Device and select the categories of web pages that are known to pose a security threat to users or their computers. Otherwise, deselect it.
Anonymizers	Sites and proxies that act as an intermediary for surfing to other Web sites in an anonymous fashion, whether to circumvent Web filtering or for other reasons. For example, blog.go2.tw, anonymizer.com, www.qu365.com.
Botnets	Sites that use bots (zombies) including command-and-control (C&C) servers.
Compromised	Sites that have been compromised by someone other than the site owner in order to install malicious programs without the user's knowledge. Includes sites that may be vulnerable to a particular high-risk attack. For example, www.wokoo.net, movie.sx.zj.cn.
Malware	Sites that install unwanted software on a user's computer with the intent to enable third-party monitoring or make system changes without the user's consent. For example, www.tqlkg.com, aladel.net.
Network Errors	Sites that do not resolve to any IP address. A site may not be able to resolve to an IP address if, for example, the site is no longer available, the site is temporarily offline, network access to the site is down, the DNS server address record is wrong, the DNS server has another problem, the site has maintenance/repair work going on, or the site has been hacked.
Parked Domains	Sites that are inactive, typically reserved for later use. They most often do not contain their own content, may simply say "under construction," "purchase this domain," or display advertisements. For example, www.moemoon.com, artlin.net, img.sedoparking.com.
Phishing & Fraud	Sites that are used for deceptive or fraudulent purposes (e.g. phishing), such as stealing financial or other user account information. These sites are most often designed to appear as legitimate sites in order to mislead users into entering their credentials. For example, optimizedby.rmxads.com, 218.1.71.226/.../e3b.
Spam Sites	Sites that have been promoted through spam techniques. For example, img.tongji.linezing.com, banner.chinesegamer.net.
Action	Set what action the Zyxel Device takes when it detects a connection attempt to or from the web pages of the specified categories. **block**: Select this action to have the Zyxel Device block access to the web pages that match the categories that you select above. **warn**: Select this action to have the Zyxel Device display a warning message to the access requesters for the web pages before allowing users to access web pages that match the categories that you select above. **pass**: Select this action to have the Zyxel Device allow access to the web pages that match the categories that you select above.
Log	These are the log options: **no**: Do not create a log when it detects a connection attempt to or from the web pages of the specified categories. **log**: Create a log on the Zyxel Device when it detects a connection attempt to or from the web pages of the specified categories.

Table 214 Configuration > Security Service > Botnet Filter (continued)

LABEL	DESCRIPTION
Message to display when a site is blocked	
Denied Access Message	Enter a message to be displayed when the botnet filter blocks access to a web page. Use up to 127 characters (0-9a-zA-Z;/?:@&=+$\.-_!~*'()%,"). For example, "Access to this web page is not allowed. Please contact the network administrator". It is also possible to leave this field blank if you have a URL specified in the **Redirect URL** field. In this case if the botnet filter blocks access to a web page, the Zyxel Device just opens the web page you specified without showing a denied access message.
Redirect URL	Enter the URL of the web page to which you want to send users when their web access is blocked by the botnet filter. The web page you specify here opens in a new frame below the denied access message. Use "http://" or "https://" followed by up to 262 characters (0-9a-zA-Z;/?:@&=+$\.-_!~*'()%). For example, http://192.168.1.17/blocked access.
Signature Information	The Zyxel Device comes with signatures for the botnet filter. These signatures are continually updated as new malware evolves. New signatures can be downloaded to the Zyxel Device periodically if you have subscribed for the botnet filter signatures service. You need to create an account at myZyxel, register your Zyxel Device and then subscribe for botnet filter service in order to be able to download new signatures from myZyxel (see the **Registration** screens). The following fields display information on the current signature set that the Zyxel Device is using.
Current Version	This field displays the signature set version number currently used by the Zyxel Device. This number gets larger as new signatures are added.
Signature Number	This field displays the number of signatures in this set.
Released Date	This field displays the date and time the set was released.
Update Signatures	Click this to go to the **Configuration > Licensing > Signature Update** screen to check for new signatures at myZyxel. You can schedule or immediately download signatures.
Apply	Click **Apply** to save your changes.
Reset	Click **Reset** to return the screen to its last-saved settings.

CHAPTER 30
IDP

30.1 Overview

This chapter introduces packet inspection IDP (Intrusion, Detection and Prevention), custom signatures, and updating signatures. An IDP system can detect malicious or suspicious packets and respond instantaneously. IDP on the Zyxel Device protects against network-based intrusions.

30.1.1 What You Can Do in this Chapter

- Use the **Security Service** > **IDP** screen (Section 30.2 on page 537) to view registration and signature information.
- Use the **Security Service** > **IDP** > **Custom Signature** > **Add** screens (Section 30.3 on page 543) to create a new custom signature, edit an existing signature, delete existing signatures or save signatures to your computer.

30.1.2 What You Need To Know

Packet Inspection Signatures

A signature identifies a malicious or suspicious packet and specifies an action to be taken. You can change the action in the profile screens. Packet inspection signatures examine OSI (Open System Interconnection) layer-4 to layer-7 packet contents for malicious data. Generally, packet inspection signatures are created for known attacks while anomaly detection looks for abnormal behavior.

Applying Your IDP Configuration

Changes to the Zyxel Device's IDP settings affect new sessions (not the sessions that already existed before you applied the changed settings).

30.1.3 Before You Begin

- Register for a trial IDP subscription in the **Registration** screen. This gives you access to free signature updates. This is important as new signatures are created as new attacks evolve. When the trial subscription expires, purchase and enter a license key using the same screens to continue the subscription.

30.2 The IDP Screen

An IDP profile is a set of packet inspection signatures.

Packet inspection signatures examine packet content for malicious data. Packet inspection applies to OSI (Open System Interconnection) layer-4 to layer-7 contents. You need to subscribe for IDP service in order to be able to download new signatures.

In general, packet inspection signatures are created for known attacks while anomaly detection looks for abnormal behavior.

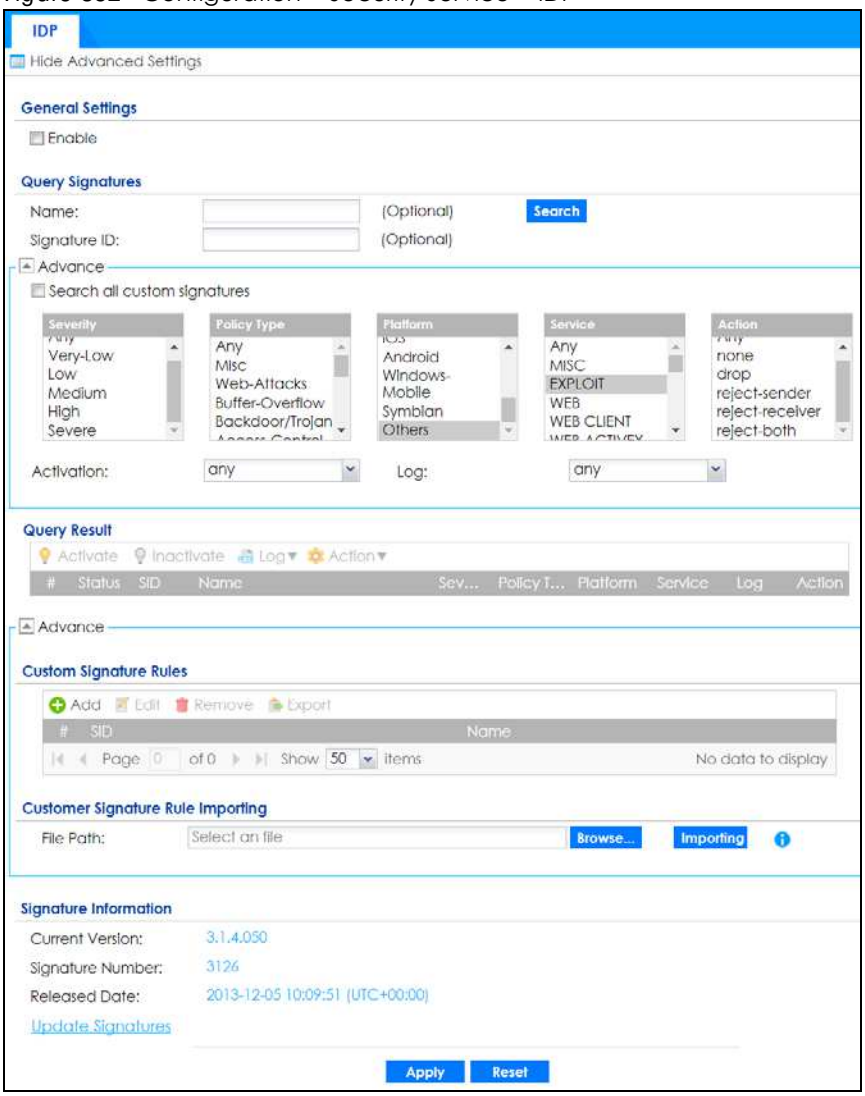
Click **Configuration** > **Security Service** > **IDP** to open this screen. Use this screen to view registration and signature information.

Note: You must register in order to use packet inspection signatures. See the **Registration** screens.

If you try to enable IDP when the IDP service has not yet been registered, a warning screen displays and IDP is not enabled.

Click on the icons to go to the OneSecurity website where there is guidance on configuration walkthroughs, troubleshooting and other information.

Figure 352 Configuration > Security Service > IDP



The following table describes the fields in this screen.

Table 215 Configuration > Security Service > IDP

LABEL	DESCRIPTION
General Settings	
Enable	Select this check box to activate the IDP feature which detects and prevents malicious or suspicious packets and responds instantaneously.
Query Signatures	
Name	Type the name or part of the name of the signature(s) you want to find.
Signature ID	Type the ID or part of the ID of the signature(s) you want to find.
Search all custom signatures	Select this check box to include signatures you created or imported in the **Custom Signatures** screen in the search. You can search for specific signatures by name or ID. If the name and ID fields are left blank, then all signatures are searched according to the criteria you select.
Severity	Search for signatures by severity level(s). Hold down the [Ctrl] key if you want to make multiple selections. These are the severities as defined in the Zyxel Device. The number in brackets is the number you use if using commands. **Severe** (5): These denote attacks that try to run arbitrary code or gain system privileges. **High** (4): These denote known serious vulnerabilities or attacks that are probably not false alarms. **Medium** (3): These denote medium threats, access control attacks or attacks that could be false alarms. **Low** (2): These denote mild threats or attacks that could be false alarms. **Very-Low** (1): These denote possible attacks caused by traffic such as Ping, trace route, ICMP queries etc.
Classification Type	Search for signatures by attack type(s) (see Table 216 on page 540). Attack types are known as policy types in the group view screen. Hold down the [Ctrl] key if you want to make multiple selections.
Platform	Search for signatures created to prevent intrusions targeting specific operating system(s). Hold down the [Ctrl] key if you want to make multiple selections.
Service	Search for signatures by IDP service group(s). See Table 216 on page 540 for group details. Hold down the [Ctrl] key if you want to make multiple selections.
Action	Search for signatures by the response the Zyxel Device takes when a packet matches a signature.Hold down the [Ctrl] key if you want to make multiple selections.
Activation	Search for activated and/or inactivated signatures here.
Log	Search for signatures by log option here.
Query Result	The results are displayed in a table showing the **SID**, **Name**, **Severity**, **Classification Type**, **Platform**, **Service**, **Log**, and **Action** criteria as selected in the search. Click the **SID** column header to sort search results by signature ID.
Custom Signature Rules	Use this part of the screen to create, edit, delete or export (save to your computer) custom signatures.
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
Export	To save an entry or entries as a file on your computer, select them and click **Export**. Click **Save** in the file download dialog box and then select a location and name for the file. Custom signatures must end with the 'rules' file name extension, for example, MySig.rules.

Table 215 Configuration > Security Service > IDP (continued)

LABEL	DESCRIPTION
#	This is the entry's index number in the list.
SID	SID is the signature ID that uniquely identifies a signature. Click the SID header to sort signatures in ascending or descending order. It is automatically created when you click the **Add** icon to create a new signature. You can edit the ID, but it cannot already exist and it must be in the 9000000 to 9999999 range.
Name	This is the name of your custom signature. Duplicate names can exist, but it is advisable to use unique signature names that give some hint as to intent of the signature and the type of attack it is supposed to prevent.
Customer Signature Rule Importing	Use this part of the screen to import custom signatures (previously saved to your computer) to the Zyxel Device. Note: The name of the complete custom signature file on the Zyxel Device is 'custom.rules'. If you import a file named 'custom.rules', then all custom signatures on the Zyxel Device are overwritten with the new file. If this is not your intention, make sure that the files you import are not named 'custom.rules'.
File Path	Type the file path and name of the custom signature file you want to import in the text box (or click **Browse** to find it on your computer) and then click **Import**ing to transfer the file to the Zyxel Device. New signatures then display in the Zyxel Device **IDP** > **Custom Signatures** screen.
Signature Information	The following fields display information on the current signature set that the Zyxel Device is using.
Current Version	This field displays the IDP signature set version number. This number gets larger as the set is enhanced.
Signature Number	This field displays the number of IDP signatures in this set. This number usually gets larger as the set is enhanced. Older signatures and rules may be removed if they are no longer applicable or have been supplanted by newer ones.
Released Date	This field displays the date and time the set was released.
Update Signatures	Click this link to go to the screen you can use to download signatures from the update server.

Policy Types

This table describes **Policy Types** as categorized in the Zyxel Device.

Table 216 Policy Types

POLICY TYPE	DESCRIPTION
Access Control	Access control refers to procedures and controls that limit or detect access. Access control attacks try to bypass validation checks in order to access network resources such as servers, directories, and files.
Any	Any attack includes all other kinds of attacks that are not specified in the policy such as password, spoof, hijack, phishing, and close-in.
Backdoor/Trojan Horse	A backdoor (also called a trapdoor) is hidden software or a hardware mechanism that can be triggered to gain access to a program, online service or an entire computer system. A Trojan horse is a harmful program that is hidden inside apparently harmless programs or data. Although a virus, a worm and a Trojan are different types of attacks, they can be blended into one attack. For example, W32/Blaster and W32/Sasser are blended attacks that feature a combination of a worm and a Trojan.

Table 216 Policy Types (continued)

POLICY TYPE	DESCRIPTION
BotNet	A Botnet is a number of Internet computers that have been set up to forward transmissions including spam or viruses to other computers on the Internet though their owners are unaware of it. It is also a collection of Internet-connected programs communicating with other similar programs in order to perform tasks and participate in distributed Denial-Of-Service attacks.
Buffer Overflow	A buffer overflow occurs when a program or process tries to store more data in a buffer (temporary data storage area) than it was intended to hold. The excess information can overflow into adjacent buffers, corrupting or overwriting the valid data held in them. Intruders could run codes in the overflow buffer region to obtain control of the system, install a backdoor or use the victim to launch attacks on other devices.
DoS/DDoS	The goal of Denial of Service (DoS) attacks is not to steal information, but to disable a device or network on the Internet. A Distributed Denial of Service (DDoS) attack is one in which multiple compromised systems attack a single target, thereby causing denial of service for users of the targeted system.
Instant Messenger	IM (Instant Messenger) refers to chat applications. Chat is real-time, text-based communication between two or more users via networks-connected computers. After you enter a chat (or chat room), any room member can type a message that will appear on the monitors of all the other participants.
Mail	A Mail or email bombing attack involves sending several thousand identical messages to an electronic mailbox in order to overflow it, making it unusable.
Misc	Miscellaneous attacks takes advantage of vulnerable computer networks and web servers by forcing cache servers or web browsers into disclosing user-specific information that might be sensitive and confidential. The most common type of Misc. attacks are HTTP Response Smuggling, HTTP Response Splitting and JSON Hijacking.
P2P	Peer-to-peer (P2P) is where computing devices link directly to each other and can directly initiate communication with each other; they do not need an intermediary. A device can be both the client and the server. In the Zyxel Device, P2P refers to peer-to-peer applications such as e-Mule, e-Donkey, BitTorrent, iMesh, etc.
Scan	A scan describes the action of searching a network for an exposed service. An attack may then occur once a vulnerability has been found. Scans occur on several network levels. A network scan occurs at layer-3. For example, an attacker looks for network devices such as a router or server running in an IP network. A scan on a protocol is commonly referred to as a layer-4 scan. For example, once an attacker has found a live end system, he looks for open ports. A scan on a service is commonly referred to a layer-7 scan. For example, once an attacker has found an open port, say port 80 on a server, he determines that it is a HTTP service run by some web server application. He then uses a web vulnerability scanner (for example, Nikto) to look for documented vulnerabilities.
SPAM	Spam is unsolicited "junk" email sent to large numbers of people to promote products or services.
Stream Media	A Stream Media attack occurs when a malicious network node downloads an overwhelming amount of media stream data that could potentially exhaust the entire system. This method allows users to send small requests messages that result in the streaming of large media objects, providing an opportunity for malicious users to exhaust resources in the system with little effort expended on their part.
Tunnel	A Tunneling attack involves sending IPv6 traffic over IPv4, slipping viruses, worms and spyware through the network using secret tunnels. This method infiltrates standard security measures through IPv6 tunnels, passing through IPv4 undetected. An external signal then triggers the malware to spring to life and wreak havoc from inside the network.

Table 216 Policy Types (continued)

POLICY TYPE	DESCRIPTION
Virus/Worm	A computer virus is a small program designed to corrupt and/or alter the operation of other legitimate programs. A worm is a program that is designed to copy itself from one computer to another on a network. A worm's uncontrolled replication consumes system resources, thus slowing or stopping other tasks.
Web Attack	Web attacks refer to attacks on web servers such as IIS (Internet Information Services).

IDP Service Groups

An IDP service group is a set of related packet inspection signatures.

Table 217 IDP Service Groups

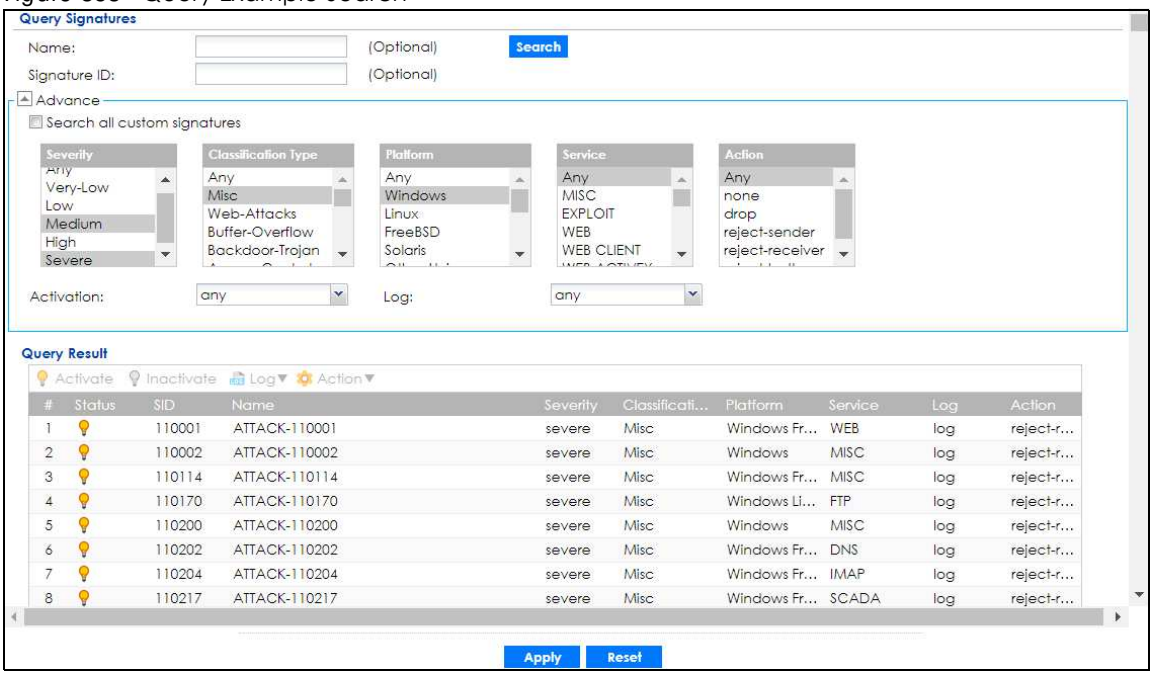
WEB_PHP	WEB_MISC	WEB_IIS	WEB_FRONTPAGE
WEB_CGI	WEB_ATTACKS	TFTP	TELNET
SQL	SNMP	SMTP	RSERVICES
RPC	POP3	POP2	P2P
ORACLE	NNTP	NETBIOS	MYSQL
MISC_EXPLOIT	MISC_DDOS	MISC_BACKDOOR	MISC
IMAP	IM	ICMP	FTP
FINGER	DNS	n/a	

30.2.1 Query Example

This example shows a search with these criteria:

- Severity: Severe
- Classification Type: Misc
- Platform: Windows
- Service: Any
- Actions: Any

Figure 353 Query Example Search



30.3 IDP Custom Signatures

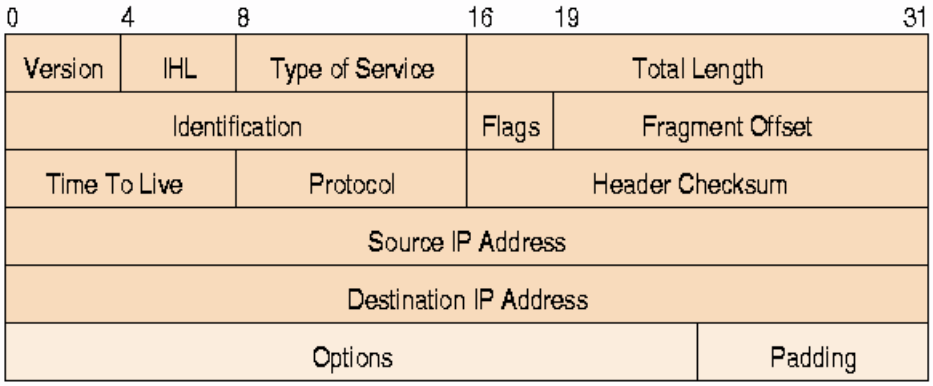
Create custom signatures for new attacks or attacks peculiar to your network. Custom signatures can also be saved to/from your computer so as to share with others.

You need some knowledge of packet headers and attack types to create your own custom signatures.

IP Packet Header

These are the fields in an Internet Protocol (IP) version 4 packet header.

Figure 354 IP v4 Packet Headers



The header fields are discussed in the following table.

Table 218 IP v4 Packet Headers

HEADER	DESCRIPTION
Version	The value 4 indicates IP version 4.
IHL	IP Header Length is the number of 32 bit words forming the total length of the header (usually five).
Type of Service	The Type of Service, (also known as Differentiated Services Code Point (DSCP)) is usually set to 0, but may indicate particular quality of service needs from the network.
Total Length	This is the size of the datagram in bytes. It is the combined length of the header and the data.
Identification	This is a 16-bit number, which together with the source address, uniquely identifies this packet. It is used during reassembly of fragmented datagrams.
Flags	Flags are used to control whether routers are allowed to fragment a packet and to indicate the parts of a packet to the receiver.
Fragment Offset	This is a byte count from the start of the original sent packet.
Time To Live	This is a counter that decrements every time it passes through a router. When it reaches zero, the datagram is discarded. It is used to prevent accidental routing loops.
Protocol	The protocol indicates the type of transport packet being carried, for example, 1 = ICMP; 2= IGMP; 6 = TCP; 17= UDP.
Header Checksum	This is used to detect processing errors introduced into the packet inside a router or bridge where the packet is not protected by a link layer cyclic redundancy check. Packets with an invalid checksum are discarded by all nodes in an IP network.
Source IP Address	This is the IP address of the original sender of the packet.
Destination IP Address	This is the IP address of the final destination of the packet.
Options	IP options is a variable-length list of IP options for a datagram that define IP **Security Option**, **IP Stream Identifier**, (security and handling restrictions for the military), **Record Route** (have each router record its IP address), **Loose Source Routing** (specifies a list of IP addresses that must be traversed by the datagram), **Strict Source Routing** (specifies a list of IP addresses that must ONLY be traversed by the datagram), **Timestamp** (have each router record its IP address and time), **End of IP List** and **No IP Options**.
Padding	Padding is used as a filler to ensure that the IP packet is a multiple of 32 bits.

Select **Configuration** > **Security Service**. The **Custom Signature Rules** section shows a summary of all custom signatures created. Click the **SID** or **Name** heading to sort. Click the **Add** icon to create a new signature or click the **Edit** icon to edit an existing signature. You can also delete custom signatures here or save them to your computer.

Note: The Zyxel Device checks all signatures and continues searching even after a match is found. If two or more rules have conflicting actions for the same packet, then the Zyxel Device applies the more restrictive action (**reject-both**, **reject-receiver** or **reject-sender**, **drop**, **none** in this order). If a packet matches a rule for **reject-receiver** and it also matches a rule for **reject-sender**, then the Zyxel Device will **reject-both**.

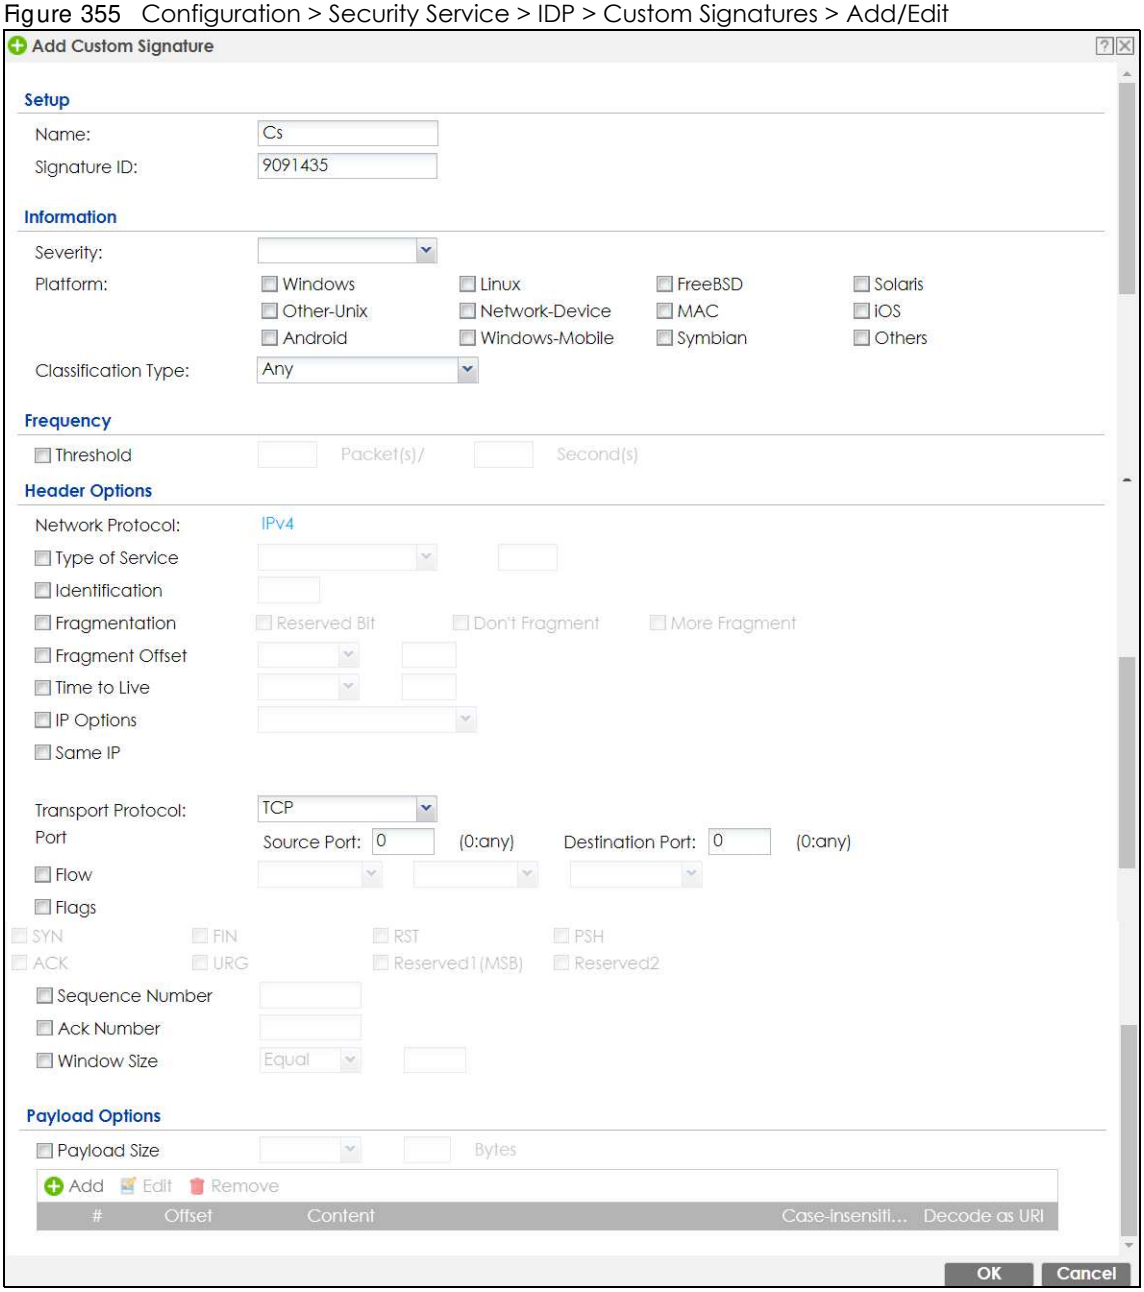
30.3.1 Add / Edit Custom Signatures

Click the **Add** icon to create a new signature or click the **Edit** icon to edit an existing signature in the screen as shown in Figure 352 on page 538.

A packet must match all items you configure in this screen before it matches the signature. The more specific your signature (including packet contents), then the fewer false positives the signature will trigger.

Try to write signatures that target a vulnerability, for example a certain type of traffic on certain operating systems, instead of a specific exploit.

Figure 355 Configuration > Security Service > IDP > Custom Signatures > Add/Edit



The following table describes the fields in this screen.

Table 219 Configuration > Security Service > IDP > Custom Signatures > Add/Edit

LABEL	DESCRIPTION
Name	Type the name of your custom signature. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive. Duplicate names can exist but it is advisable to use unique signature names that give some hint as to intent of the signature and the type of attack it is supposed to prevent. Refer to (but do not copy) the packet inspection signature names for hints on creating a naming convention.
Signature ID	A signature ID is automatically created when you click the **Add** icon to create a new signature. You can edit the ID to create a new one (in the 9000000 to 9999999 range), but you cannot use one that already exists. You may want to do that if you want to order custom signatures by SID.
Information	Use the following fields to set general information about the signature as denoted below.
Severity	The severity level denotes how serious the intrusion is. Categorize the seriousness of the intrusion here.
Platform	Some intrusions target specific operating systems only. Select the operating systems that the intrusion targets, that is, the operating systems you want to protect from this intrusion. SGI refers to Silicon Graphics Incorporated, who manufactures multi-user Unix workstations that run the IRIX operating system (SGI's version of UNIX). A router is an example of a network device.
Classification Type	Categorize the attack type here. See Table 216 on page 540 as a reference.
Frequency	Recurring packets of the same type may indicate an attack. Use the following field to indicate how many packets per how many seconds constitute an intrusion
Threshold	Select **Threshold** and then type how many packets (that meet the criteria in this signature) per how many seconds constitute an intrusion.
Header Options	
Network Protocol	Configure signatures for IP version 4.
Type Of Service	Type of service in an IP header is used to specify levels of speed and/or reliability. Some intrusions use an invalid **Type Of Service** number. Select the check box, then select **Equal** or **Not-Equal** and then type in a number.
Identification	The identification field in a datagram uniquely identifies the datagram. If a datagram is fragmented, it contains a value that identifies the datagram to which the fragment belongs. Some intrusions use an invalid **Identification** number. Select the check box and then type in the invalid number that the intrusion uses.
Fragmentation	A fragmentation flag identifies whether the IP datagram should be fragmented, not fragmented or is a reserved bit. Some intrusions can be identified by this flag. Select the check box and then select the flag that the intrusion uses.
Fragment Offset	When an IP datagram is fragmented, it is reassembled at the final destination. The fragmentation offset identifies where the fragment belongs in a set of fragments. Some intrusions use an invalid **Fragment Offset** number. Select the check box, select **Equal**, **Smaller** or **Greater** and then type in a number
Time to Live	Time to Live is a counter that decrements every time it passes through a router. When it reaches zero, the datagram is discarded. Usually it's used to set an upper limit on the number of routers a datagram can pass through. Some intrusions can be identified by the number in this field. Select the check box, select **Equal**, **Smaller** or **Greater** and then type in a number.

Table 219 Configuration > Security Service > IDP > Custom Signatures > Add/Edit (continued)

LABEL	DESCRIPTION
IP Options	IP options is a variable-length list of IP options for a datagram that define IP **Security Option**, **IP Stream Identifier**, (security and handling restrictions for the military), **Record Route** (have each router record its IP address), **Loose Source Routing** (specifies a list of IP addresses that must be traversed by the datagram), **Strict Source Routing** (specifies a list of IP addresses that must ONLY be traversed by the datagram), **Timestamp** (have each router record its IP address and time), **End of IP List** and **No IP Options**. **IP Options** can help identify some intrusions. Select the check box, then select an item from the list box that the intrusion uses
Same IP	Select the check box for the signature to check for packets that have the same source and destination IP addresses.
Transport Protocol	The following fields vary depending on whether you choose **TCP**, **UDP** or **ICMP**.
Transport Protocol: TCP	
Port	Select the check box and then enter the source and destination TCP port numbers that will trigger this signature.
Flow	If selected, the signature only applies to certain directions of the traffic flow and only to clients or servers. Select **Flow** and then select the identifying options. **Established**: The signature only checks for established TCP connections **Stateless**: The signature is triggered regardless of the state of the stream processor (this is useful for packets that are designed to cause devices to crash) **To Client**: The signature only checks for server responses from A to B. **To Server**: The signature only checks for client requests from B to A. **From Client**: The signature only checks for client requests from B to A. **From Servers**: The signature only checks for server responses from A to B. **No Stream**: The signature does not check rebuilt stream packets. **Only Stream**: The signature only checks rebuilt stream packets.
Flags	Select what TCP flag bits the signature should check.
Sequence Number	Use this field to check for a specific TCP sequence number.
Ack Number	Use this field to check for a specific TCP acknowledgment number.
Window Size	Use this field to check for a specific TCP window size.
Transport Protocol: UDP	
Port	Select the check box and then enter the source and destination UDP port numbers that will trigger this signature.
Transport Protocol: ICMP	
Type	Use this field to check for a specific ICMP type value.
Code	Use this field to check for a specific ICMP code value.
ID	Use this field to check for a specific ICMP ID value. This is useful for covert channel programs that use static ICMP fields when they communicate.
Sequence Number	Use this field to check for a specific ICMP sequence number. This is useful for covert channel programs that use static ICMP fields when they communicate.
Payload Options	The longer a payload option is, the more exact the match, the faster the signature processing. Therefore, if possible, it is recommended to have at least one payload option in your signature.

Table 219 Configuration > Security Service > IDP > Custom Signatures > Add/Edit (continued)

LABEL	DESCRIPTION
Payload Size	This field may be used to check for abnormally sized packets or for detecting buffer overflows. Select the check box, then select **Equal**, **Smaller** or **Greater** and then type the payload size. Stream rebuilt packets are not checked regardless of the size of the payload.
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
#	This is the entry's index number in the list.
Offset	This field specifies where to start searching for a pattern within a packet. For example, an offset of 5 would start looking for the specified pattern after the first five bytes of the payload.
Content	Type the content that the signature should search for in the packet payload. Hexadecimal code entered between pipes is converted to ASCII. For example, you could represent the ampersand as either & or |26| (26 is the hexadecimal code for the ampersand).
Case-insensitive	Select **Yes** if content casing does NOT matter.
Decode as URI	A Uniform Resource Identifier (URI) is a string of characters for identifying an abstract or physical resource (RFC 2396). A resource can be anything that has identity, for example, an electronic document, an image, a service ("today's weather report for Taiwan"), a collection of other resources. An identifier is an object that can act as a reference to something that has identity. Example URIs are: ftp://ftp.is.co.za/rfc/rfc1808.txt; ftp scheme for File Transfer Protocol services http://www.math.uio.no/faq/compression-faq/part1.html; http scheme for Hypertext Transfer Protocol services mailto:mduerst@ifi.unizh.ch; mailto scheme for electronic mail addresses telnet://melvyl.ucop.edu/; telnet scheme for interactive services via the TELNET Protocol Select **Yes** for the signature to search for normalized URI fields. This means that if you are writing signatures that includes normalized content, such as %2 for directory traversals, these signatures will not be triggered because the content is normalized out of the URI buffer. For example, the URI: /scripts/..%c0%af../winnt/system32/cmd.exe?/c+ver will get normalized into: /winnt/system32/cmd.exe?/c+ver
OK	Click this button to save your changes to the Zyxel Device and return to the summary screen.
Cancel	Click this button to return to the summary screen without saving any changes.

30.3.2 Custom Signature Example

Before creating a custom signature, you must first clearly understand the vulnerability.

30.3.2.1 Understand the Vulnerability

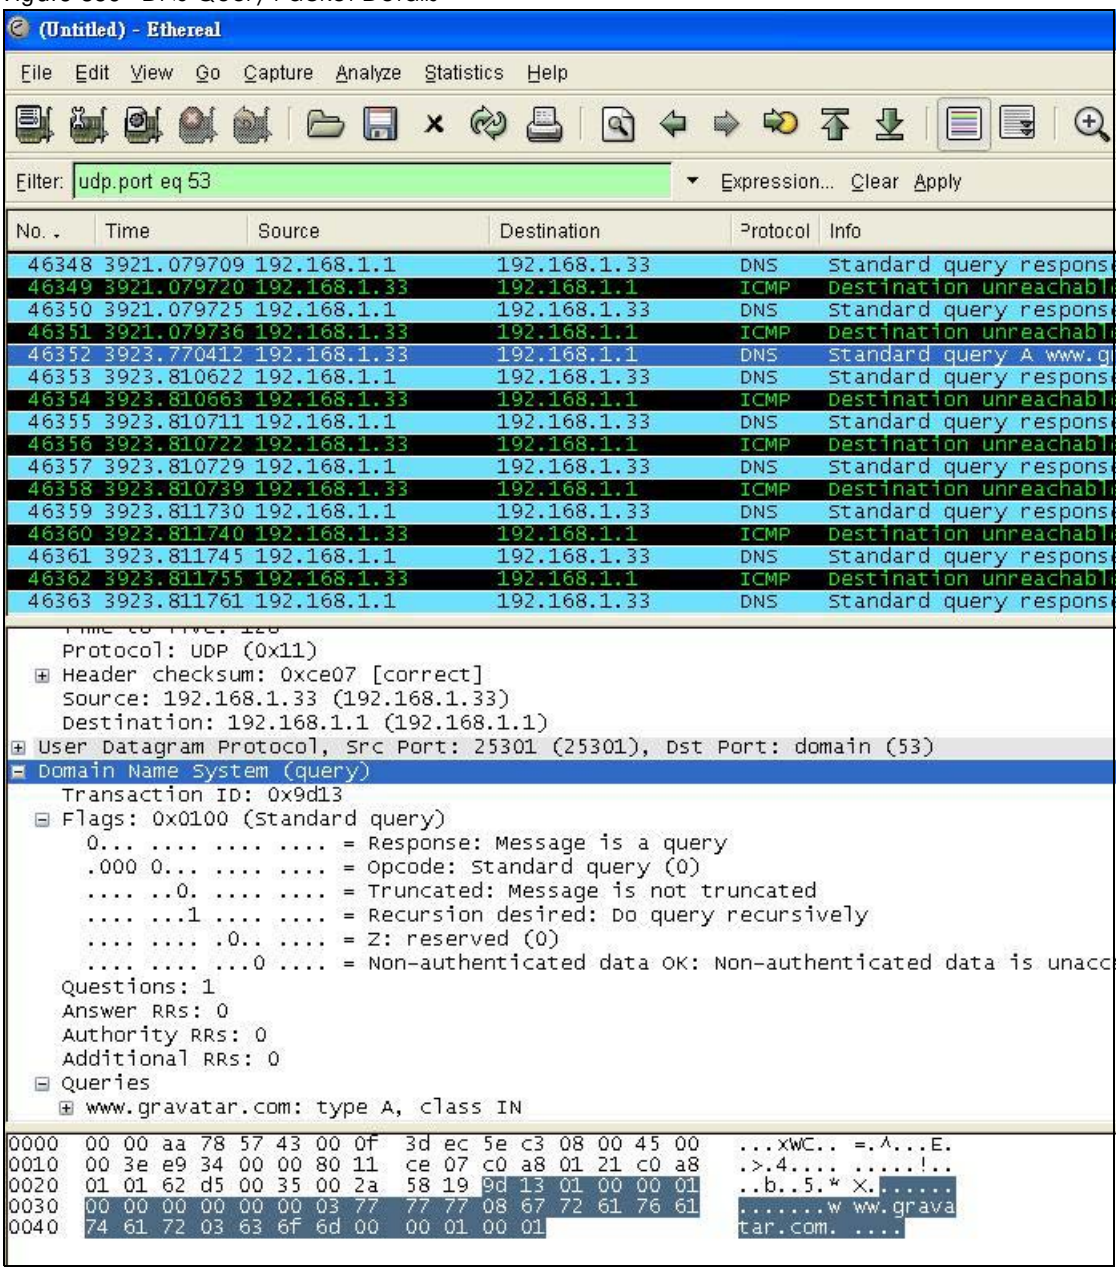
Check the Zyxel Device logs when the attack occurs. Use web sites such as Google or Security Focus to get as much information about the attack as you can. The more specific your signature, the less chance it will cause false positives.

As an example, say you want to check if your router is being overloaded with DNS queries so you create a signature to detect DNS query traffic.

30.3.2.2 Analyze Packets

Use the packet capture screen and a packet analyzer (also known as a network or protocol analyzer) such as Wireshark or Ethereal to investigate some more.

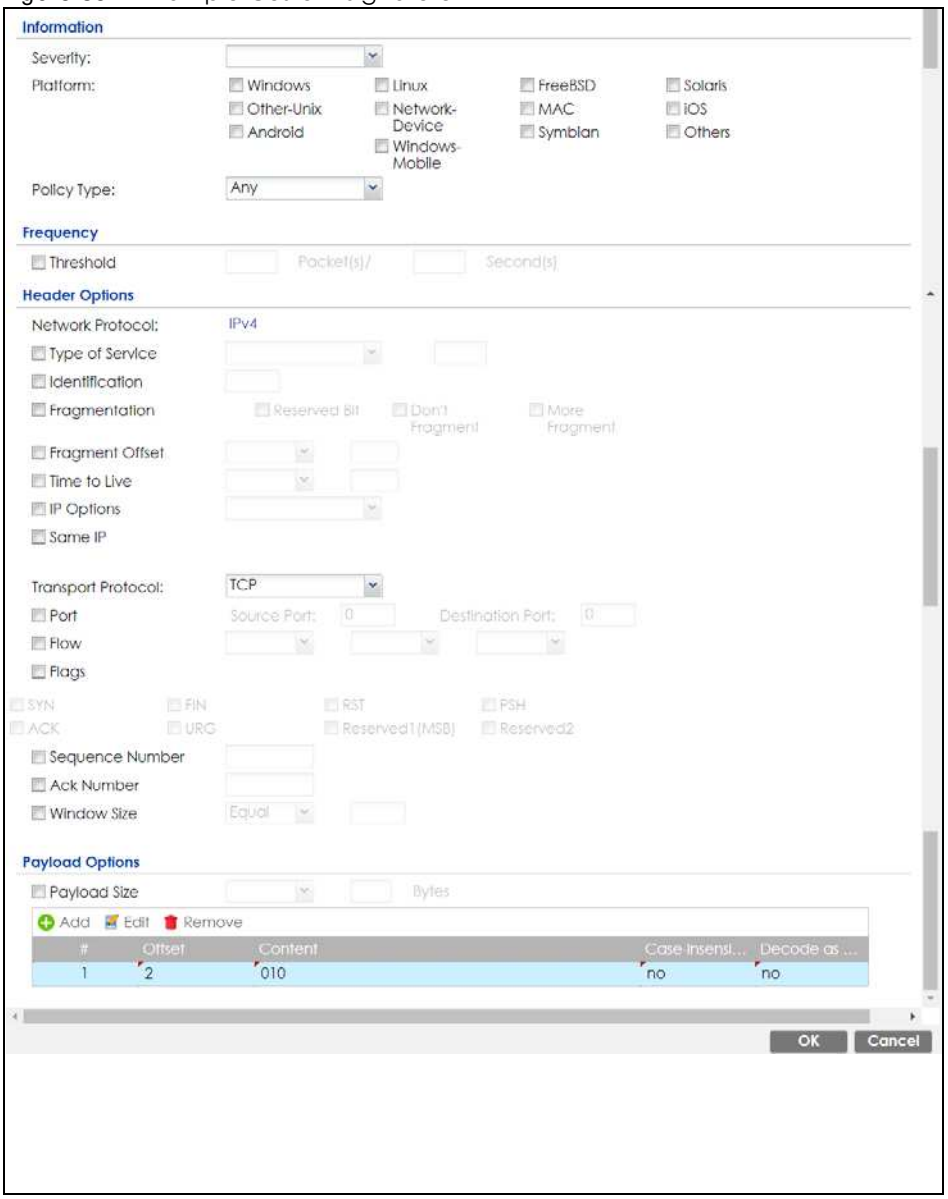
Figure 356 DNS Query Packet Details



From the details about DNS query you see that the protocol is UDP and the port is 53. The type of DNS packet is standard query and the Flag is 0x0100 with an offset of 2. Therefore enter |010| as the first pattern.

The final custom signature should look like as shown in the following figure.

Figure 357 Example Custom Signature



30.3.3 Applying Custom Signatures

After you create your custom signature, it becomes available in an IDP profile (**Configuration** > **Security Service** > **IDP** > **Profile** > **Edit**) screen. Custom signatures have an SID from 9000000 to 9999999.

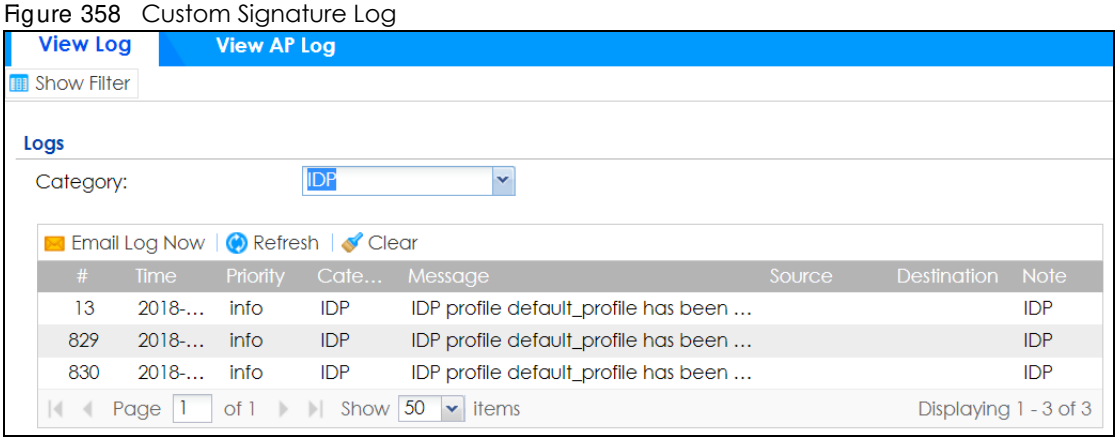
Search for, then activate the signature, configure what action to take when a packet matches it and if it should generate a log or alert in a profile. Then bind the profile to a zone.

30.3.4 Verifying Custom Signatures

Configure the signature to create a log when traffic matches the signature. (You may also want to configure an alert if it is for a serious attack and needs immediate attention.) After you apply the signature to a zone, you can see if it works by checking the logs (**Monitor** > **Log**).

The **Priority** column shows **warn** for signatures that are configured to generate a log only. It shows **critical** for signatures that are configured to generate a log and alert. All IDP signatures come under the **IDP** category. The **Note** column displays **ACCESS FORWARD** when no action is configured for the signature. It displays **ACCESS DENIED** if you configure the signature action to drop the packet. The destination port is the service port (53 for DNS in this case) that the attack tries to exploit.

Figure 358 Custom Signature Log



30.4 IDP Technical Reference

This section contains some background information on IDP.

Host Intrusions

The goal of host-based intrusions is to infiltrate files on an individual computer or server in with the goal of accessing confidential information or destroying information on a computer.

You must install a host IDP directly on the system being protected. It works closely with the operating system, monitoring and intercepting system calls to the kernel or APIs in order to prevent attacks as well as log them.

Disadvantages of host IDPs are that you have to install them on each device (that you want to protect) in your network and due to the necessarily tight integration with the host operating system, future operating system upgrades could cause problems.

Network Intrusions

Network-based intrusions have the goal of bringing down a network or networks by attacking computer(s), switch(es), router(s) or modem(s). If a LAN switch is compromised for example, then the whole LAN is compromised. Host-based intrusions may be used to cause network-based intrusions when the goal of the host virus is to propagate attacks on the network, or attack computer/server operating

system vulnerabilities with the goal of bringing down the computer/server. Typical "network-based intrusions" are SQL slammer, Blaster, Nimda MyDoom etc.

Snort Signatures

You may want to refer to open source Snort signatures when creating custom Zyxel Device ones. Most Snort rules are written in a single line. Snort rules are divided into two logical sections, the rule header and the rule options as shown in the following example:

```
alert tcp any any -> 192.168.1.0/24 111 (content:"|00 01 a5|"; msg:"mountd access";)
```

The text up to the first parenthesis is the rule header and the section enclosed in parenthesis contains the rule options. The words before the colons in the rule options section are the option keywords.

The rule header contains the rule's:

- Action
- Protocol
- Source and destination IP addresses and netmasks
- Source and destination ports information.

The rule option section contains alert messages and information on which parts of the packet should be inspected to determine if the rule action should be taken.

These are some equivalent Snort terms in the Zyxel Device.

Table 220 Zyxel Device - Snort Equivalent Terms

ZYXEL DEVICE TERM	SNORT EQUIVALENT TERM
Type Of Service	tos
Identification	id
Fragmentation	fragbits
Fragmentation Offset	fragoffset
Time to Live	ttl
IP Options	ipopts
Same IP	sameip
Transport Protocol	
Transport Protocol: TCP	
Port	(In Snort rule header)
Flow	flow
Flags	flags
Sequence Number	seq
Ack Number	ack
Window Size	window
Transport Protocol: UDP	(In Snort rule header)
Port	(In Snort rule header)
Transport Protocol: ICMP	
Type	itype
Code	icode

Table 220 Zyxel Device - Snort Equivalent Terms (continued)

ZYXEL DEVICE TERM	SNORT EQUIVALENT TERM
ID	icmp_id
Sequence Number	icmp_seq
Payload Options	(Snort rule options)
Payload Size	dsize
Offset (relative to start of payload)	offset
Relative to end of last match	distance
Content	content
Case-insensitive	nocase
Decode as URI	uricontent

Note: Not all Snort functionality is supported in the Zyxel Device.

CHAPTER 31
Sandboxing

31.1 Overview

The Zyxel Device sandboxing is a security mechanism, which provides a safe environment to separate running programs from your network and host devices. Unknown or untrusted programs/codes are executed within an isolated virtual machine (VM) to monitor and analyze the zero-day malware and advanced persistent threats (APTs) that may evade the Zyxel Device protection, such as anti-malware. When a file with malicious or suspicious codes is detected, the Zyxel Device can take specific actions on the threats.

31.1.1 What You Can Do in this Chapter

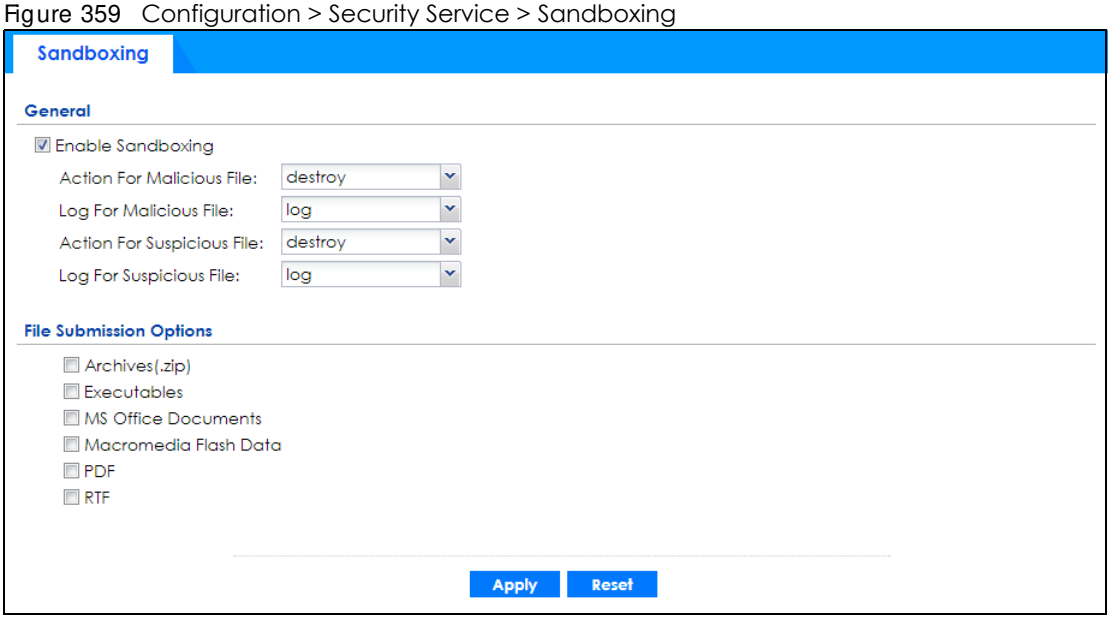
Use the **Sandboxing** screen (Section 31.2 on page 554) to turn sandboxing on or off, and specify the actions the Zyxel Device takes when malicious or suspicious files are detected.

31.2 Sandboxing Screen

Click **Configuration** > **Security Service** > **Sandboxing** to display the configuration screen as shown next.

Use this screen to enable sandboxing, and specify the actions the Zyxel Device takes when malicious or suspicious files are detected.

Figure 359 Configuration > Security Service > Sandboxing



The following table describes the labels in this screen.

Table 221 Configuration > Security Service > Sandboxing

LABEL	DESCRIPTION
Enable Sandboxing	Select this option to turn on sandboxing on the Zyxel Device. Otherwise, deselect it.
Action For Malicious File	Specify whether the Zyxel Device deletes (**destroy**) or forwards (**allow**) malicious files.
Log For Malicious File	These are the log options for malicious files: **no**: Do not create a log when a malicious file is detected. **log**: Create a log on the Zyxel Device when a malicious file is detected. **log alert**: An alert is an emailed log for more serious events that may need more immediate attention. Select this option to have the Zyxel Device send an alert when a malicious file is detected.
Action For Suspicious File	Specify whether the Zyxel Device deletes (**destroy**) or forwards (**allow**) suspicious files.
Log For Suspicious File	These are the log options for suspicious files: **no**: Do not create a log when a suspicious file is detected. **log**: Create a log on the Zyxel Device when a suspicious file is detected. **log alert**: An alert is an emailed log for more serious events that may need more immediate attention. Select this option to have the Zyxel Device send an alert when a suspicious file is detected.
File Submission Options	Specify the type of files to be sent for sandboxing inspection.
Apply	Click **Apply** to save your changes.
Reset	Click **Reset** to return the screen to its last-saved settings.

CHAPTER 32
Email Security

32.1 Overview

The email security feature can mark or discard spam (unsolicited commercial or junk email). Use the white list to identify legitimate email. Use the black list to identify spam email. The Zyxel Device can also check email against a DNS black list (DNSBL) of IP addresses of servers that are suspected of being used by spammers.

32.1.1 What You Can Do in this Chapter

- Use the **Email Security** screens (Section 32.3 on page 558) to turn email security on or off and manage email security policies. Also, you can enable and configure the mail scan functions and have the Zyxel Device check email against DNS Black Lists.
- Use the **Black/White List** screens (Section 32.4 on page 561) to set up a black list to identify spam and a white list to identify legitimate email.

32.1.2 What You Need to Know

White List

Configure white list entries to identify legitimate email. The white list entries have the Zyxel Device classify any email that is from a specified sender or uses a specified header field and header value as being legitimate (see Email Headers for more on mail headers). The email security feature checks an email against the white list entries before doing any other email security checking. If the email matches a white list entry, the Zyxel Device classifies the email as legitimate and does not perform any more email security checking on that individual email. A properly configured white list helps keep important email from being incorrectly classified as spam. The white list can also increases the Zyxel Device's email security speed and efficiency by not having the Zyxel Device perform the full email security checking process on legitimate email.

Black List

Configure black list entries to identify spam. The black list entries have the Zyxel Device classify any email that is from or forwarded by a specified IP address or uses a specified header field and header value as being spam. If an email does not match any of the white list entries, the Zyxel Device checks it against the black list entries. The Zyxel Device classifies an email that matches a black list entry as spam and immediately takes the configured action for dealing with spam. If an email matches a blacklist entry, the Zyxel Device does not perform any more email security checking on that individual email. A properly configured black list helps catch spam email and increases the Zyxel Device's email security speed and efficiency.

SMTP and POP3

Simple Mail Transfer Protocol (SMTP) is the Internet's message transport standard. It controls the sending of email messages between servers. Email clients (also called email applications) then use mail server protocols such as POP (Post Office Protocol) or IMAP (Internet Message Access Protocol) to retrieve email. Email clients also generally use SMTP to send messages to a mail server. The older POP2 requires SMTP for sending messages while the newer POP3 can be used with or without it. This is why many email applications require you to specify both the SMTP server and the POP or IMAP server (even though they may actually be the same server).

The Zyxel Device's email security feature checks SMTP (TCP port 25) and POP3 (TCP port 110) emails by default. You can also specify custom SMTP and POP3 ports for the Zyxel Device to check.

Email Headers

Every email has a header and a body. The header is structured into fields and includes the addresses of the recipient and sender, the subject, and other information about the email and its journey. The body is the actual message text and any attachments. You can have the Zyxel Device check for specific header fields with specific values.

Email programs usually only show you the To:, From:, Subject:, and Date: header fields but there are others such as Received: and Content-Type:. To see all of an email's header, you can select an email in your email program and look at its properties or details. For example, in Microsoft's Outlook Express, select a mail and click **File** > **Properties** > **Details**. This displays the email's header. Click **Message Source** to see the source for the entire mail including both the header and the body.

Email Header Buffer Size

The Zyxel Device has a 5 K buffer for an individual email header. If an email's header is longer than 5 K, the Zyxel Device only checks up to the first 5 K.

DNSBL

A DNS Black List (DNSBL) is a server that hosts a list of IP addresses known or suspected of having sent or forwarded spam. A DNSBL is also known as a DNS spam blocking list. The Zyxel Device can check the routing addresses of email against DNSBLs and classify an email as spam if it was sent or forwarded by a computer with an IP address in the DNSBL.

Finding Out More

See Section 32.5 on page 563 for more background information on email security.

32.2 Before You Begin

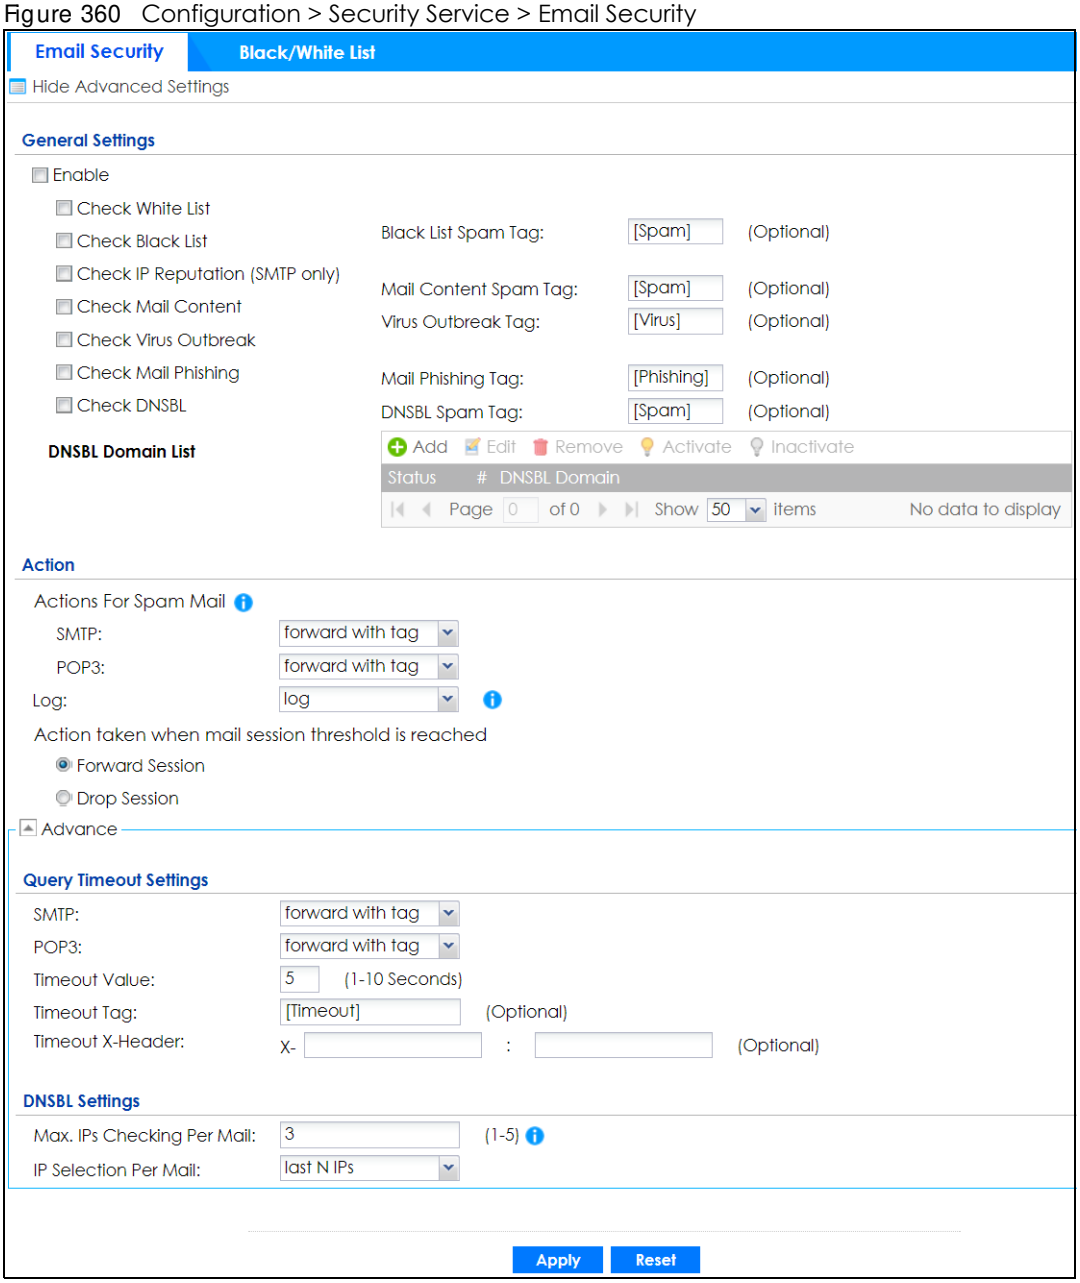
- Before using the email security features (IP Reputation, Mail Content Analysis and Virus Outbreak Detection) you must activate your email security Service license.
- Configure your zones before you configure email security.

32.3 The Email Security Screen

Click **Configuration** > **Security Service** > **Email Security** to open the **Email Security** screen. Use this screen to turn the email security feature on or off and manage email security policies. You can also select the action the Zyxel Device takes when the mail sessions threshold is reached.

Click on the icons to go to the OneSecurity website where there is guidance on configuration walkthroughs, troubleshooting and other information.

Figure 360 Configuration > Security Service > Email Security



The following table describes the labels in this screen.

Table 222 Configuration > Security Service > Email Security

LABEL	DESCRIPTION
General Settings	
Enable	Select this check box to activate the settings in this section.
Check White List	Select this check box to check email against the white list. The Zyxel Device classifies email that matches a white list entry as legitimate (not spam).
Check Black List	Select this check box to check email against the black list. The Zyxel Device classifies email that matches a black list entry as spam.
Black List Spam Tag	Enter a message or label (up to 15 ASCII characters) to add to the mail subject of emails that match the Zyxel Device's spam black list.
Check IP Reputation (SMTP Only)	Select this to use IP reputation to identify Spam or Unwanted Bulk Email by the sender's IP address.
Check Mail Content	Select this to identify spam email by content, such as malicious content.
Mail Content Spam Tag	Enter a message or label (up to 15 ASCII characters) to add to the beginning of the mail subject of emails that are determined to spam based on the mail content analysis. This tag is only added if the email security policy is configured to forward spam mail with a spam tag.
Check Virus Outbreak	Select this to scan emails for attached viruses.
Virus Outbreak Tag	Enter a message or label (up to 15 ASCII characters) to add to the beginning of the mail subject of emails that are determined to have an attached viruses. This tag is only added if the email security policy is configured to forward spam mail with a spam tag.
Check Mail Phishing	Phishing is an act of tricking you into providing login or personal information with malicious emails or website links. Select this to identify emails sent from suspicious websites known for phishing.
Mail Phishing Tag	Enter a message or label (up to 15 ASCII characters) to add to the beginning of the mail subject of emails that have suspicious websites links. This tag is only added if the email security action is configured to forward spam mail with a spam tag.
Check DNSBL	Select this check box to check email against the Zyxel Device's configured DNSBL domains. The Zyxel Device classifies email that matches a DNS black list as spam.
DNSBL Spam Tag	Enter a message or label (up to 15 ASCII characters) to add to the beginning of the mail subject of emails that have a sender or relay IP address in the header that matches a black list maintained by one of the DNSBL domains listed in the Zyxel Device. This tag is only added if the email security policy is configured to forward spam mail with a spam tag.
DNSBL Domain List	
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Status	The activate (light bulb) icon is lit when the entry is active and dimmed when the entry is inactive.
#	This is the entry's index number in the list.

Table 222 Configuration > Security Service > Email Security

LABEL	DESCRIPTION
DNSBL Domain	This is the name of a domain that maintains DNSBL servers. Enter the domain that is maintaining a DNSBL.
Actions for Spam Mail	Use this section to set how the Zyxel Device is to handle spam mail.
SMTP	Select how the Zyxel Device is to handle spam SMTP mail. Select **drop** to discard spam SMTP mail. Select **forward** to allow spam SMTP mail to go through. Select **forward with tag** to add a spam tag to an SMTP spam mail's mail subject and send it on to the destination.
POP3	Select how the Zyxel Device is to handle spam POP3 mail. Select **forward** to allow spam POP3 mail to go through. Select **forward with tag** to add a spam tag to an POP3 spam mail's mail subject and send it on to the destination.
Log	Select whether to have the ZyXEL device generate a log (**log**), log and alert (**log alert**) or neither (**no**) by default when traffic matches a signature in this category.
Action taken when mail sessions threshold is reached	An email session is when an email client and email server (or two email servers) connect through the Zyxel Device. Select how to handle concurrent email sessions that exceed the maximum number of concurrent email sessions that the email security feature can handle. See the chapter of product specifications for the threshold. Select **Forward Session** to have the Zyxel Device allow the excess email sessions without any spam filtering. Select **Drop Session** to have the Zyxel Device drop mail connections to stop the excess email sessions. The email client or server will have to re-attempt to send or receive email later when the number of email sessions is under the threshold.
Query Timeout Settings	
SMTP	Select how the Zyxel Device is to handle SMTP mail query timeout. Select **drop** to discard SMTP mail. Select **forward** to allow SMTP mail to go through. Select **forward with tag** to add a tag to an SMTP query timeout mail's mail subject and send it on to the destination.
POP3	Select how the Zyxel Device is to handle POP3 mail query timeout. Select **forward** to allow POP3 mail to go through. Select **forward with tag** to add a tag to an POP3 query timeout mail's mail subject and send it on to the destination.
Timeout Value	Set how long the Zyxel Device waits for a reply from the mail scan server. If there is no reply before this time period expires, the Zyxel Device takes the action defined in the relevant **Actions when Query Timeout** field.
Timeout Tag	Enter a message or label (up to 15 ASCII characters) to add to the mail subject of emails that the Zyxel Device forwards if queries to the mail scan servers time out.
Timeout X-Header	Specify the name and value for the X-Header to be added when queries to the mail scan servers time out.
Max. IPs Checking Per Mail	Set the maximum number of sender and relay server IP addresses in the mail header to check against the DNSBL domain servers.

Table 222 Configuration > Security Service > Email Security

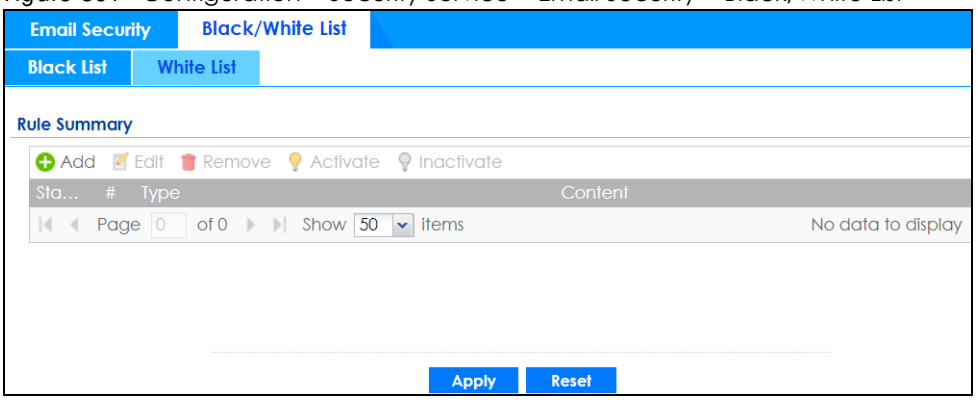
LABEL	DESCRIPTION
IP Selection Per Mail	Select **first N IPs** to have the Zyxel Device start checking from the first IP address in the mail header. This is the IP of the sender or the first server that forwarded the mail. Select **last N IPs** to have the Zyxel Device start checking from the last IP address in the mail header. This is the IP of the last server that forwarded the mail.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

32.4 The Black List / White List Screen

Click **Configuration** > **Security Service** > **Email Security** > **Black /White List** to display the **Black List / White List** screen.

Configure the black list to identify spam email. You can create black list entries based on the sender's or relay server's IP address or email address. You can also create entries that check for particular email header fields with specific values or specific subject text. Click a column's heading cell to sort the table entries by that column's criteria. Click the heading cell again to reverse the sort order.

Figure 361 Configuration > Security Service > Email Security > Black/White List



The following table describes the labels in this screen.

Table 223 Configuration > Security Service > Email Security > Black/White List

LABEL	DESCRIPTION
Rule Summary	
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
Status	The activate (light bulb) icon is lit when the entry is active and dimmed when the entry is inactive.
#	This is the entry's index number in the list.
Type	This field displays whether the entry is based on the email's subject, source or relay IP address, source email address, or header.

Table 223 Configuration > Security Service > Email Security > Black/White List (continued)

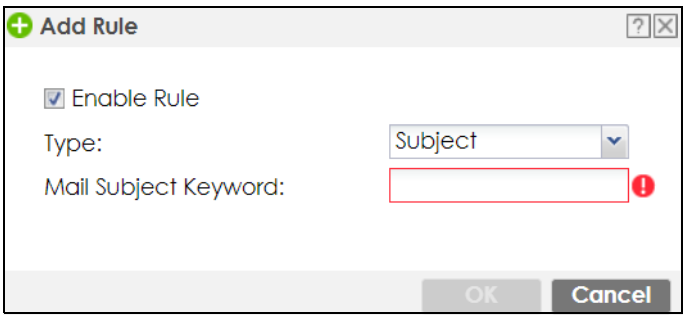
LABEL	DESCRIPTION
Content	This field displays the subject content, source or relay IP address, source email address, or header value for which the entry checks.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

32.4.1 The Black or White List Add/Edit Screen

In the **Black List** or **White List** screen, click the **Add** icon or an **Edit** icon to display the following screen.

Use this screen to configure an email security black list entry to identify spam email. You can create entries based on specific subject text, or the sender's or relay's IP address or email address. You can also create entries that check for particular header fields and values.

Figure 362 Configuration > Security Service > Email Security > Black/White List > Black List (or White List) > Add



The following table describes the labels in this screen.

Table 224 Configuration > Security Service > Email Security > Black/White List > Black/White List > Add

LABEL	DESCRIPTION
Enable Rule	Select this to have the Zyxel Device use this entry as part of the black or white list. To actually use the entry, you must also turn on the use of the list in the corresponding list screen, enable the email security feature in the email security general screen, and configure an email security policy to use the list.
Type	Use this field to base the entry on the email's subject, source or relay IP address, source email address, or header. Select **Subject** to have the Zyxel Device check email for specific content in the subject line. Select **IP Address** to have the Zyxel Device check email for a specific source or relay IP address. Select **IPv6 Address** to have the Zyxel Device check email for a specific source or relay IPv6 address. Select **E-Mail Address** to have the Zyxel Device check email for a specific source email address or domain name. Select **Mail Header** to have the Zyxel Device check email for specific header fields and values. Configure black list header entries to check for email from bulk mail programs or with content commonly used in spam. Configure white list header entries to allow certain header values that identify the email as being from a trusted source.

Table 224 Configuration > Security Service > Email Security > Black/White List > Black/White List > Add

LABEL	DESCRIPTION
Mail Subject Keyword	This field displays when you select the **Subject** type. Enter up to 63 ASCII characters of text to check for in email headers. Spaces are not allowed, although you could substitute a question mark (?). See Section 32.4.2 on page 563 for more details.
Sender or Mail Relay IP Address	This field displays when you select the **IP Address** type. Enter an IP address in dotted decimal notation.
Sender or Mail Relay IPv6 Address	This field displays when you select the **IPv6 Address** type. Enter an IPv6 address with prefix.
Netmask	This field displays when you select the **IP** type. Enter the subnet mask here, if applicable.
Sender E-Mail Address	This field displays when you select the **E-Mail** type. Enter a keyword (up to 63 ASCII characters). See Section 32.4.2 on page 563 for more details.
Mail Header Field Name	This field displays when you select the **Mail Header** type. Type the name part of an email header (the part that comes before the colon). Use up to 63 ASCII characters. For example, if you want the entry to check the "Received:" header for a specific mail server's domain, enter "Received" here.
Field Value Keyword	This field displays when you select the **Mail Header** type. Type the value part of an email header (the part that comes after the colon). Use up to 63 ASCII characters. For example, if you want the entry to check the "Received:" header for a specific mail server's domain, enter the mail server's domain here. See Section 32.4.2 on page 563 for more details.
OK	Click **OK** to save your changes.
Cancel	Click **Cancel** to exit this screen without saving your changes.

32.4.2 Regular Expressions in Black or White List Entries

The following applies for a black or white list entry based on an email subject, email address, or email header value.

- Use a question mark (?) to let a single character vary. For example, use "a?c" (without the quotation marks) to specify abc, acc and so on.
- You can also use a wildcard (*). For example, if you configure *def.com, any email address that ends in def.com matches. So "mail.def.com" matches.
- The wildcard can be anywhere in the text string and you can use more than one wildcard. You cannot use two wildcards side by side, there must be other characters between them.
- The Zyxel Device checks the first header with the name you specified in the entry. So if the email has more than one "Received" header, the Zyxel Device checks the first one.

32.5 Email Security Technical Reference

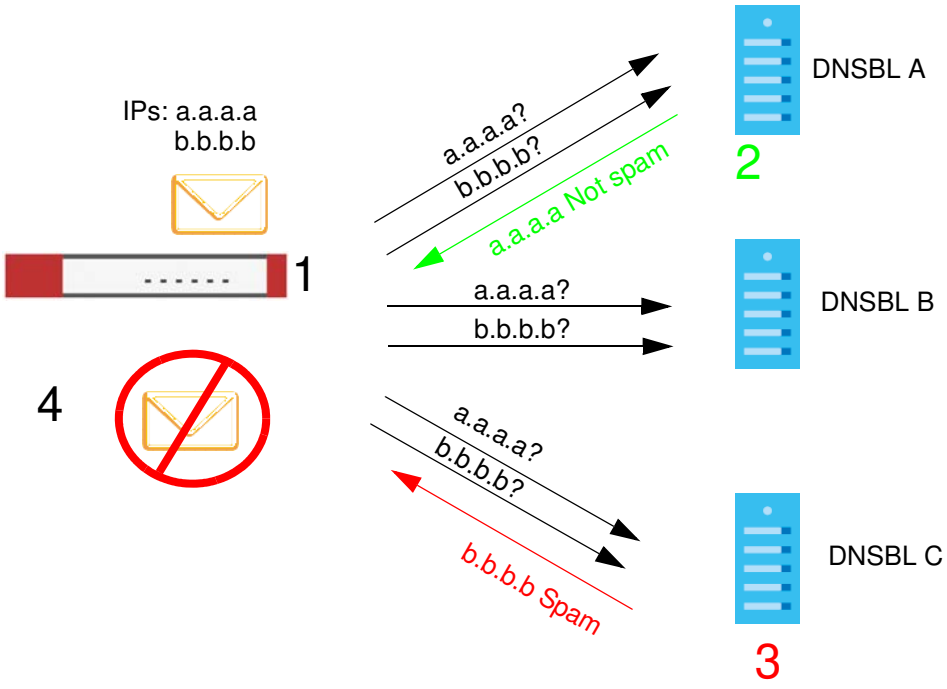
Here is more detailed email security information.

DNSBL

- The Zyxel Device checks only public sender and relay IP addresses, it does not check private IP addresses.
- The Zyxel Device sends a separate query (DNS lookup) for each sender or relay IP address in the email's header to each of the Zyxel Device's DNSBL domains at the same time.
- The DNSBL servers send replies as to whether or not each IP address matches an entry in their list. Each IP address has a separate reply.
- As long as the replies are indicating the IP addresses do not match entries on the DNSBL lists, the Zyxel Device waits until it receives at least one reply for each IP address.
- If the Zyxel Device receives a DNSBL reply that one of the IP addresses is in the DNSBL list, the Zyxel Device immediately classifies the email as spam and takes the email security policy's configured action for spam. The Zyxel Device does not wait for any more DNSBL replies.
- If the Zyxel Device receives at least one non-spam reply for each of an email's routing IP addresses, the Zyxel Device immediately classifies the email as legitimate and forwards it.
- Any further DNSBL replies that come after the Zyxel Device classifies an email as spam or legitimate have no effect.
- The Zyxel Device records DNSBL responses for IP addresses in a cache for up to 72 hours. The Zyxel Device checks an email's sender and relay IP addresses against the cache first and only sends DNSBL queries for IP addresses that are not in the cache.

Here is an example of an email classified as spam based on DNSBL replies.

Figure 363 DNSBL Spam Detection Example



1 The Zyxel Device receives an email that was sent from IP address a.a.a.a and relayed by an email server at IP address b.b.b.b. The Zyxel Device sends a separate query to each of its DNSBL domains for IP address a.a.a.a. The Zyxel Device sends another separate query to each of its DNSBL domains for IP address b.b.b.b.

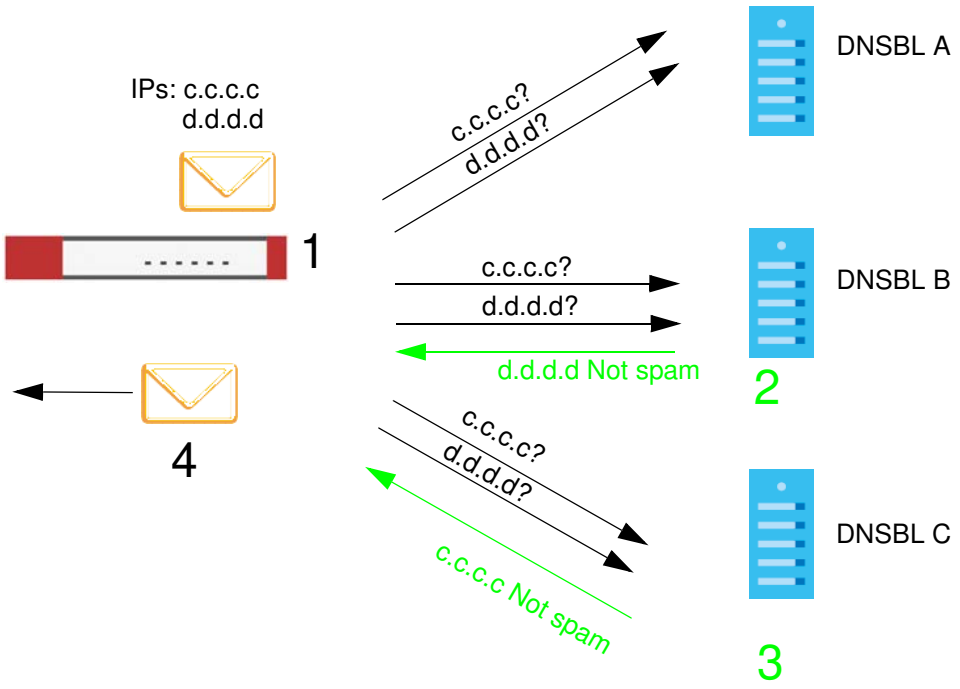
2 DNSBL A replies that IP address a.a.a.a does not match any entries in its list (not spam).

3 DNSBL C replies that IP address b.b.b.b matches an entry in its list.

4 The Zyxel Device immediately classifies the email as spam and takes the action for spam that you defined in the email security policy. In this example it was an SMTP mail and the defined action was to drop the mail. The Zyxel Device does not wait for any more DNSBL replies.

Here is an example of an email classified as legitimate based on DNSBL replies.

Figure 364 DNSBL Legitimate Email Detection Example



1 The Zyxel Device receives an email that was sent from IP address c.c.c.c and relayed by an email server at IP address d.d.d.d. The Zyxel Device sends a separate query to each of its DNSBL domains for IP address c.c.c.c. The Zyxel Device sends another separate query to each of its DNSBL domains for IP address d.d.d.d.

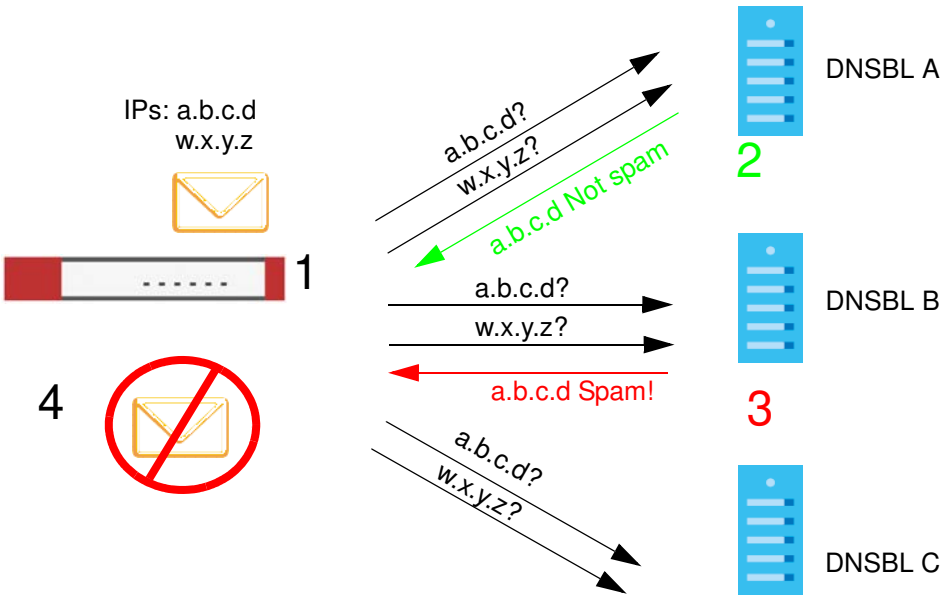
2 DNSBL B replies that IP address d.d.d.d does not match any entries in its list (not spam).

3 DNSBL C replies that IP address c.c.c.c does not match any entries in its list (not spam).

4 Now that the Zyxel Device has received at least one non-spam reply for each of the email's routing IP addresses, the Zyxel Device immediately classifies the email as legitimate and forwards it. The Zyxel Device does not wait for any more DNSBL replies.

If the Zyxel Device receives conflicting DNSBL replies for an email routing IP address, the Zyxel Device classifies the email as spam. Here is an example.

Figure 365 Conflicting DNSBL Replies Example



1 The Zyxel Device receives an email that was sent from IP address a.b.c.d and relayed by an email server at IP address w.x.y.z. The Zyxel Device sends a separate query to each of its DNSBL domains for IP address a.b.c.d. The Zyxel Device sends another separate query to each of its DNSBL domains for IP address w.x.y.z.

2 DNSBL A replies that IP address a.b.c.d does not match any entries in its list (not spam).

3 While waiting for a DNSBL reply about IP address w.x.y.z, the Zyxel Device receives a reply from DNSBL B saying IP address a.b.c.d is in its list.

4 The Zyxel Device immediately classifies the email as spam and takes the action for spam that you defined in the email security policy. In this example it was an SMTP mail and the defined action was to drop the mail. The Zyxel Device does not wait for any more DNSBL replies.

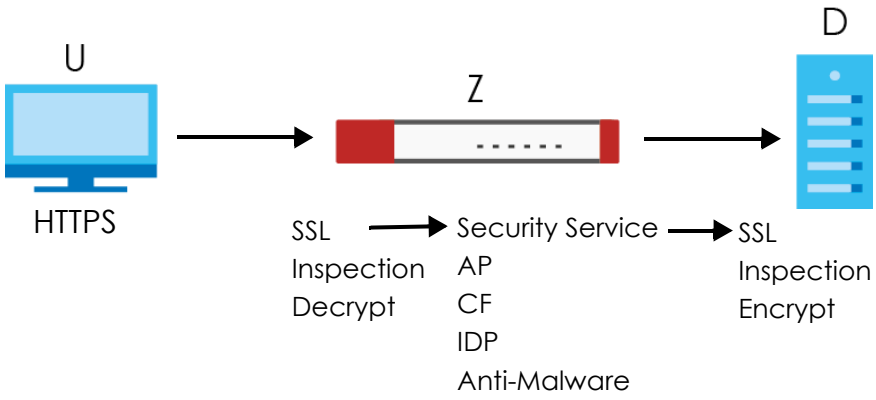
CHAPTER 33
SSL Inspection

33.1 Overview

Secure Socket Layer (SSL) traffic, such as https://www.google.com/HTTPS, FTPs, POP3s, SMTPs, etc. is encrypted, and cannot be inspected using Security Service profiles such as App Patrol, Content Filter, Intrusion, Detection and Prevention (IDP), or Anti-Malware. The Zyxel Device uses SSL Inspection to decrypt SSL traffic, sends it to the Security Service engines for inspection, then encrypts traffic that passes inspection and forwards it to the destination server, such as Google.

An example process is shown in the following figure. User **U** sends a HTTPS request (SSL) to destination server **D**, via the Zyxel Device, **Z**. The traffic matches an SSL Inspection profile in a security policy, so the Zyxel Device decrypts the traffic using SSL Inspection. The decrypted traffic is then inspected by the Security Service profiles in the same security profile that matched the SSL Inspection profile. If all is OK, then the Zyxel Device re-encrypts the traffic using SSL Inspection and forwards it to the destination server **D**. SSL traffic could be in the opposite direction for other examples.

Figure 366 SSL Inspection Overview



Note: Email security cannot be applied to traffic decrypted by SSL Inspection.

33.1.1 What You Can Do in this Chapter

- Use the **Security Service** > **SSL Inspection** > **Profile** screen (Section 33.2 on page 568) to view SSL Inspection profiles. Click the **Add** or **Edit** icon in this screen to configure the CA certificate, action and log in an SSL Inspection profile.
- Use the **Security Service** > **SSL Inspection** > **Exclude List** screens (Section 33.3 on page 573) to create a whitelist of destination servers to which traffic is passed through uninspected.

33.1.2 What You Need To Know

- Supported Cipher Suite
  - DES (Data Encryption Standard)

  - 3DES
  - AES (Advanced Encryption Standard)
- SSLv3/TLS1.0 (Transport Layer Security) Support
  - SSLv3/TLS1.0 is currently supported with option to pass or block SSLv2 traffic
- Traffic using TLS1.1 (Transport Layer Security) or TLS1.2 is downgraded to TLS1.0 for SSL Inspection
- No Compression Support Now
- No Client Authentication Request Support Now
- Finding Out More
  - See **Configuration** > **Object** > **Certificate** > **My Certificates** for information on creating certificates on the Zyxel Device.
  - See **Monitor** > **Security Statistics** > **SSL Inspection** to get usage data and easily add a destination server to the whitelist of exclusion servers.
  - See **Configuration** > **Security Policy** > **Policy Control** > **Policy** to bind an SSL Inspection profile to a traffic flow(s).

33.1.3 Before You Begin

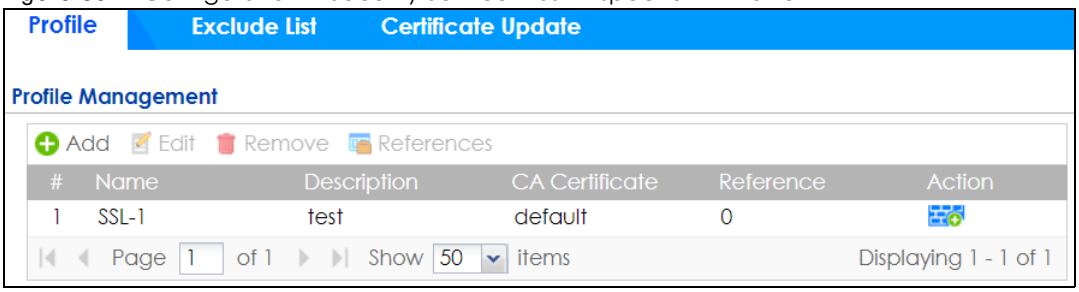
- If you don't want to use the default Zyxel Device certificate, then create a new certificate in **Object** > **Certificate** > **My Certificates**.
- Decide what destination servers to which traffic is sent directly without inspection. This may be a matter of privacy and legality regarding inspecting an individual's encrypted session, such as financial websites. This may vary by locale.

33.2 The SSL Inspection Profile Screen

An SSL Inspection profile is a template with pre-configured certificate, action and log.

Click **Configuration** > **Security Service** > **SSL Inspection** > **Profile** to open this screen.

Figure 367 Configuration > Security Service > SSL Inspection > Profile



The following table describes the fields in this screen.

Table 225 Configuration > Security Service > SSL Inspection > Profile

LABEL	DESCRIPTION
Profile Management	
Add	Click **Add** to create a new profile.
Edit	Select an entry and click this to be able to modify it.

Table 225 Configuration > Security Service > SSL Inspection > Profile (continued)

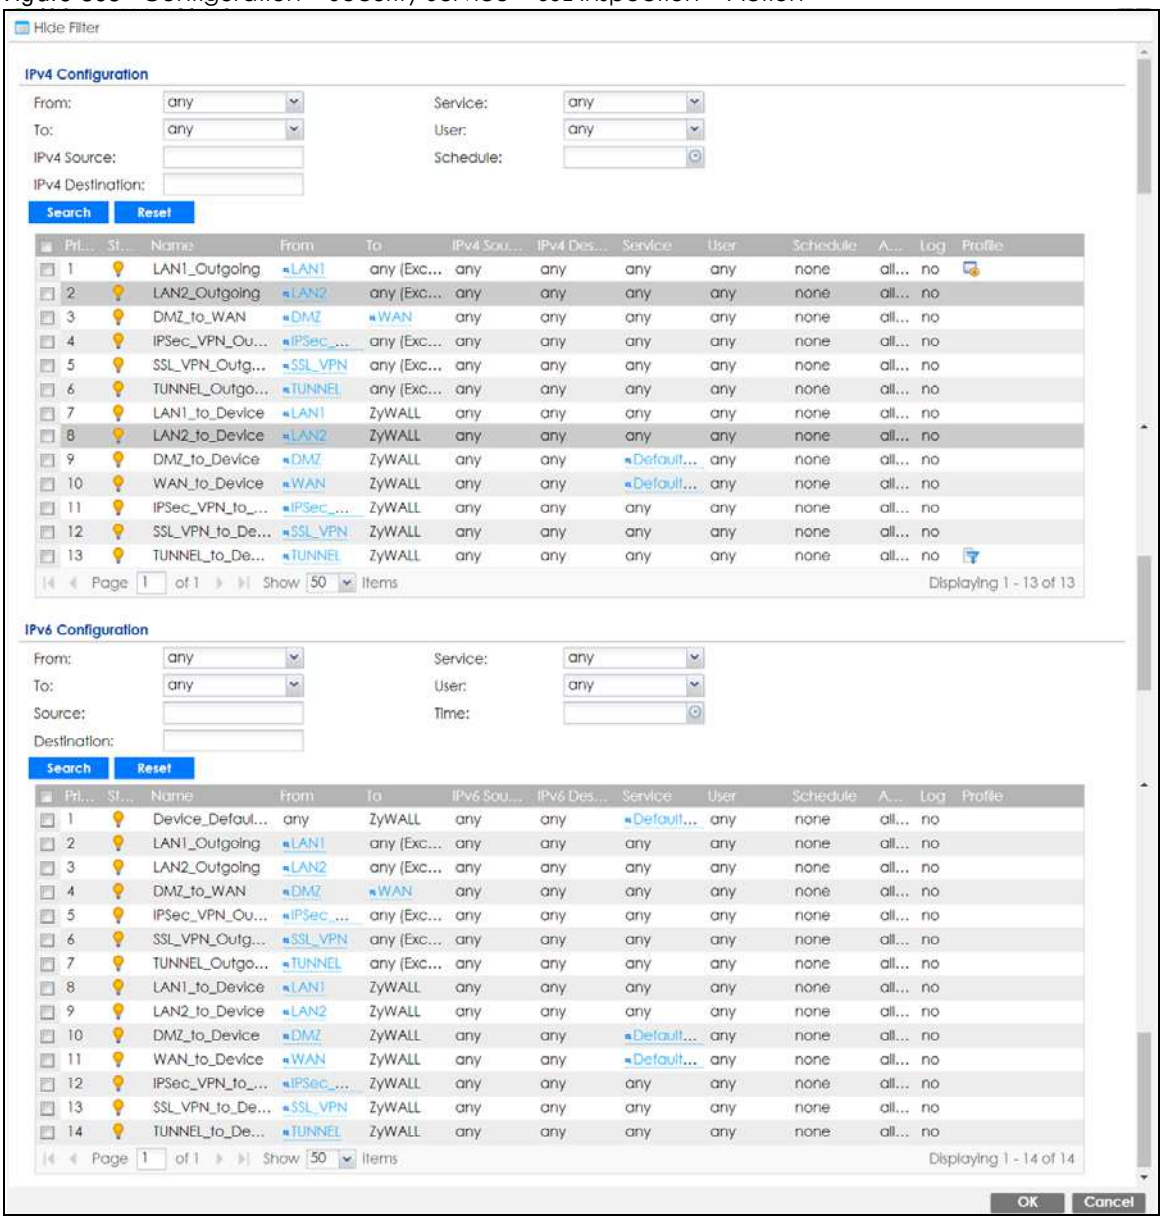
LABEL	DESCRIPTION
Remove	Select an entry and click this to delete it.
References	Select an entry and click **References** to open a screen that shows which settings use the entry. Click Refresh to update information on this screen.
#	This is the entry's index number in the list.
Name	This displays the name of the profile.
Description	This displays the description of the profile.
CA Certificate	This displays the CA certificate being used in this profile.
Reference	This displays the number of times an object reference is used in a profile.
Action	Click this icon to apply the entry to a security policy. Go to the **Configuration > Security Policy > Policy Control** screen to check the result.

33.2.1 Apply to a Security Policy

Click the icon in the **Action** field to apply the entry to a security policy.

Go to the **Configuration > Security Policy > Policy Control** screen to check the result.

Figure 368 Configuration > Security Service > SSL Inspection > Action



The following table describes the labels in this screen.

Table 226 Configuration > Security Service > SSL Inspection > Action

LABEL	DESCRIPTION
Show Filter/Hide Filter	Click **Show Filter** to display IPv4 and IPv6 (if enabled) security policy search filters.
IPv4 / IPv6 Configuration	Use IPv4 / IPv6 search filters to find specific IPv4 and IPv6 (if enabled) security policies based on direction, application, user, source, destination and/or schedule.
From / To	Select a zone to view all security policies from a particular zone and/or to a particular zone. **any** means all zones.

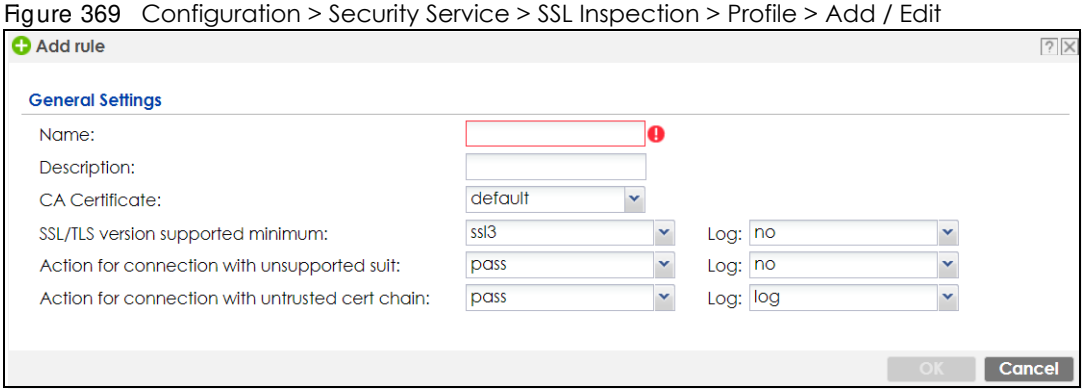
Table 226 Configuration > Security Service > SSL Inspection > Action

LABEL	DESCRIPTION
IPv4 / IPv6 Source	Type an IPv4 or IPv6 IP address to view all security policies based on the IPv4 / IPv6 source address object used. • An IPv4 IP address is written as four integer blocks separated by periods. This is an example IPv4 address: 172.16.6.7. • An 128-bit IPv6 address is written as eight 16-bit hexadecimal blocks separated by colons (:). This is an example IPv6 address: 2001:0db8:1a2b:0015:0000:0000:1a2f:0000.
IPv4 / IPv6 Destination	Type an IPv4 or IPv6 IP address to view all security policies based on the IPv4 / IPv6 destination address object used. • An IPv4 IP address is written as four integer blocks separated by periods. This is an example IPv4 address: 172.16.6.7. • An 128-bit IPv6 address is written as eight 16-bit hexadecimal blocks separated by colons (:). This is an example IPv6 address: 2001:0db8:1a2b:0015:0000:0000:1a2f:0000.
Service	View all security policies based the service object used.
User	View all security policies based on user or user group object used.
Schedule	View all security policies based on the schedule object used.
Priority	This is the position of your Security Policy in the global policy list (including all through-Zyxel Device and to-Zyxel Device policies). The ordering of your policies is important as policies are applied in sequence. Default displays for the default Security Policy behavior that the Zyxel Device performs on traffic that does not match any other Security Policy.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Name	This is the name of the Security policy.
From / To	This is the direction of travel of packets. Select from which zone the packets come and to which zone they go. Security Policies are grouped based on the direction of travel of packets to which they apply. For example, from LAN to LAN means packets traveling from a computer or subnet on the LAN to either another computer or subnet on the LAN. From any displays all the Security Policies for traffic going to the selected To Zone. To any displays all the Security Policies for traffic coming from the selected From Zone. From any to any displays all of the Security Policies. To ZyWALL policies are for traffic that is destined for the Zyxel Device and control which computers can manage the Zyxel Device.
IPv4 / IPv6 Source	This displays the IPv4 / IPv6 source address object, including geographic address and FQDN (group) objects, to which this Security Policy applies.
IPv4 / IPv6 Destination	This displays the IPv4 / IPv6 destination address object, including geographic address and FQDN (group) objects, to which this Security Policy applies.
Service	This displays the service object to which this Security Policy applies.
User	This is the user name or user group name to which this Security Policy applies.
Schedule	This field tells you the schedule object that the policy uses. none means the policy is active at all times if enabled.
Action	This field displays whether the Security Policy silently discards packets without notification (deny), permits the passage of packets (allow) or drops packets with notification (reject)
Log	Select whether to have the Zyxel Device generate a log (log), log and alert (log alert) or not (no) when the policy is matched to the criteria listed above.
Profile	This field shows you which Security Service profiles (application patrol, content filter, IDP, anti-malware, email security) apply to this Security policy. Click an applied Security Service profile icon to edit the profile directly.
OK	Click OK to save your changes back to the Zyxel Device.
Cancel	Click Cancel to exit this screen without saving.

33.2.2 Add / Edit SSL Inspection Profiles

Click **Configuration** > **Security Service** > **SSL Inspection** > **Profile** > **Add** to create a new profile or select an existing profile and click **Edit** to change its settings.

Figure 369 Configuration > Security Service > SSL Inspection > Profile > Add / Edit



The following table describes the fields in this screen.

Table 227 Configuration > Security Service > SSL Inspection > Profile > Add / Edit

LABEL	DESCRIPTION
Name	This is the name of the profile. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive. These are valid, unique profile names: • MyProfile • mYProfile • Mymy12_3-4 These are invalid profile names: • 1mYProfile • My Profile • MyProfile? • Whatalongprofilename123456789012
Description	Enter additional information about this SSL Inspection entry. You can enter up to 60 characters ("0-9", "a-z", "A-Z", "-" and "_").
CA Certificate	This contains the default certificate and the certificates created in **Object** > **Certificate** > **My Certificates**. Choose the certificate for this profile.
SSL/TLS version supported minimum	SSL Inspection supports SSLv3, TLS1.0, TLS1.1, and TLS1.2 to use Secure Sockets Layer (SSL) or Transport Layer Security (TLS) if you want encrypted traffic.
Log	These are the log options for unsupported traffic that matches traffic bound to this policy: • **no**: Select this option to have the Zyxel Device create no log for unsupported traffic that matches traffic bound to this policy. • **log**: Select this option to have the Zyxel Device create a log for unsupported traffic that matches traffic bound to this policy • **log alert**: An alert is an emailed log for more serious events that may need more immediate attention. They also appear in red in the **Monitor** > **Log** screen. Select this option to have the Zyxel Device send an alert for unsupported traffic that matches traffic bound to this policy.

Table 227 Configuration > Security Service > SSL Inspection > Profile > Add / Edit (continued)

LABEL	DESCRIPTION
Action for Connection with unsupported suit	SSL Inspection supports these cipher suites: • DES • 3DES • AES Select to **pass** or **block** unsupported traffic (such as other cipher suites, compressed traffic, client authentication requests, and so on) that matches traffic bound to this policy here.
Log	These are the log options for unsupported traffic that matches traffic bound to this policy: • **no**: Select this option to have the Zyxel Device create no log for unsupported traffic that matches traffic bound to this policy. • **log**: Select this option to have the Zyxel Device create a log for unsupported traffic that matches traffic bound to this policy • **log alert**: An alert is an emailed log for more serious events that may need more immediate attention. They also appear in red in the **Monitor > Log** screen. Select this option to have the Zyxel Device send an alert for unsupported traffic that matches traffic bound to this policy.
Action for connection with untrusted cert chain	A certificate chain is a certification process that involves the following certificates between the SSL/TLS server and a client. A certificate chain will fail if one of the following certificates is not correct. • A certificate owned by a user • The certificate signed by a certification authority • A root certificate Select to **pass**, **inspect**, or **block** an untrusted certification chain.
Log	These are the log options for unsupported traffic that matches traffic bound to this policy: • **no**: Select this option to have the Zyxel Device create no log for unsupported traffic that matches traffic bound to this policy. • **log**: Select this option to have the Zyxel Device create a log for unsupported traffic that matches traffic bound to this policy • **log alert**: An alert is an emailed log for more serious events that may need more immediate attention. They also appear in red in the **Monitor > Log** screen. Select this option to have the Zyxel Device send an alert for unsupported traffic that matches traffic bound to this policy.
OK	Click **OK** to save your settings to the Zyxel Device, and return to the profile summary page.
Cancel	Click **Cancel** to return to the profile summary page without saving any changes.

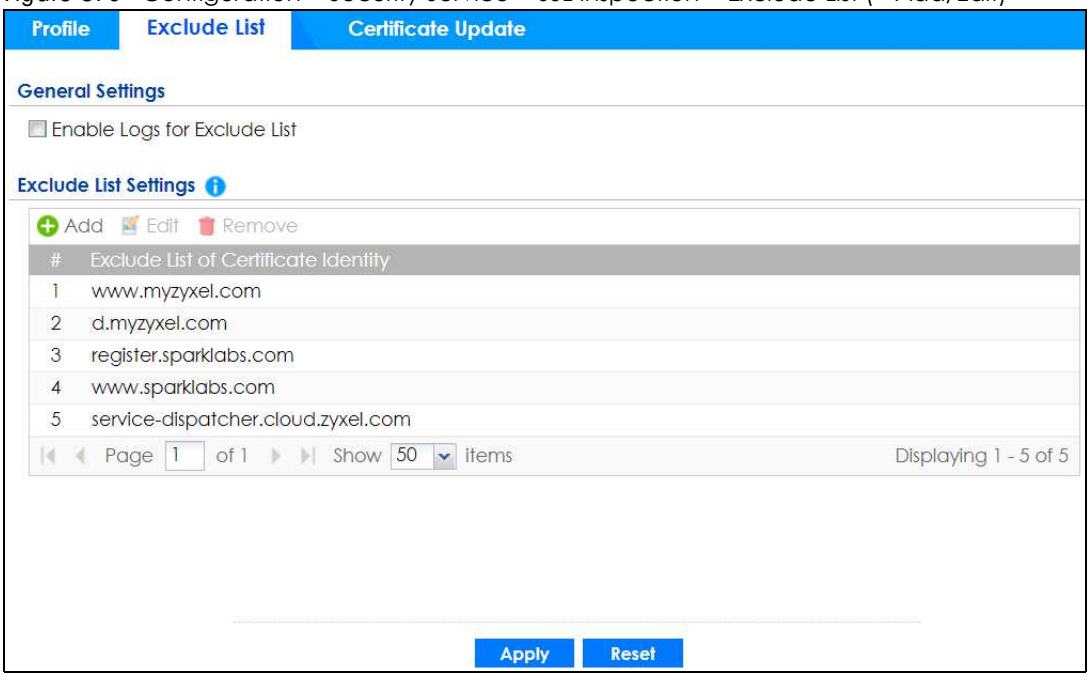
33.3 Exclude List Screen

There may be privacy and legality issues regarding inspecting a user's encrypted session. The legal issues may vary by locale, so it's important to check with your legal department to make sure that it's OK to intercept SSL traffic from your Zyxel Device users.

To ensure individual privacy and meet legal requirements, you can configure an exclusion list to exclude matching sessions to destination servers. This traffic is not intercepted and is passed through uninspected.

Click **Configuration > Security Service > SSL Inspection > Exclude List** to display the following screen. Use **Add** to put a new item in the list or **Edit** to change an existing one or **Remove** to delete an existing entry.

Figure 370 Configuration > Security Service > SSL Inspection > Exclude List (> Add/Edit)



The following table describes the fields in this screen.

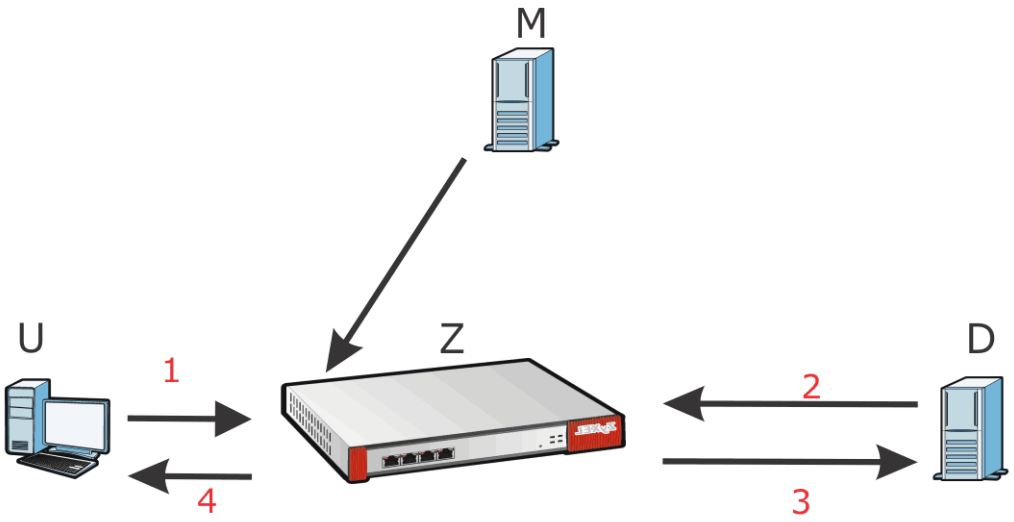
Table 228 Configuration > Security Service > SSL Inspection > Exclude List

LABEL	DESCRIPTION
General Settings	
Enable Logs for Exclude List	Click this to create a log for traffic that bypasses SSL Inspection.
Exclude List Settings	Use this part of the screen to create, edit, or delete items in the SSL Inspection exclusion list.
Add	Click this to create a new entry.
Edit	Select an entry and click this to be able to modify it.
Remove	Select an entry and click this to delete it.
#	This is the entry's index number in the list.
Exclude List of Certificate Identity	SSL traffic to a server to be excluded from SSL Inspection is identified by its certificate. Identify the certificate in one of the following ways: • The Common Name (CN) of the certificate. The common name of the certificate can be created in the **Object > Certificate > My Certificates** screen. • Type an IPv4 or IPv6 address. For example, type 192.168.1.35, or 2001:7300:3500::1 • Type an IPv4/IPv6 in CIDR notation. For example, type 192.168.1.1/24, or 2001:7300:3500::1/64 • Type an IPv4/IPv6 address range. For example, type 192.168.1.1-192.168.1.35, or 2001:7300:3500::1-2001:7300:3500::35 • Type an email address. For example, type abc@zyxel.com.tw • Type a DNS name or a common name (wildcard char: '*', escape char: '\'). Use up to 127 case-insensitive characters (0-9a-zA-Z`~!@#$%^&*()-_=+[]{}\ | ;:',.<>/?). '*' can be used as a wildcard to match any string. Use '*' to indicate a single wildcard character. Alternatively, to automatically add an entry for existing SSL traffic to a destination server, go to **Monitor > Security Statistics > SSL Inspection > Certificate Cache List**, select an item and then click **Add to Exclude List**. The item will then appear here.
Apply	Click **Apply** to save your settings to the Zyxel Device.
Reset	Click **Reset** to return to the profile summary page without saving any changes.

33.4 Certificate Update Screen

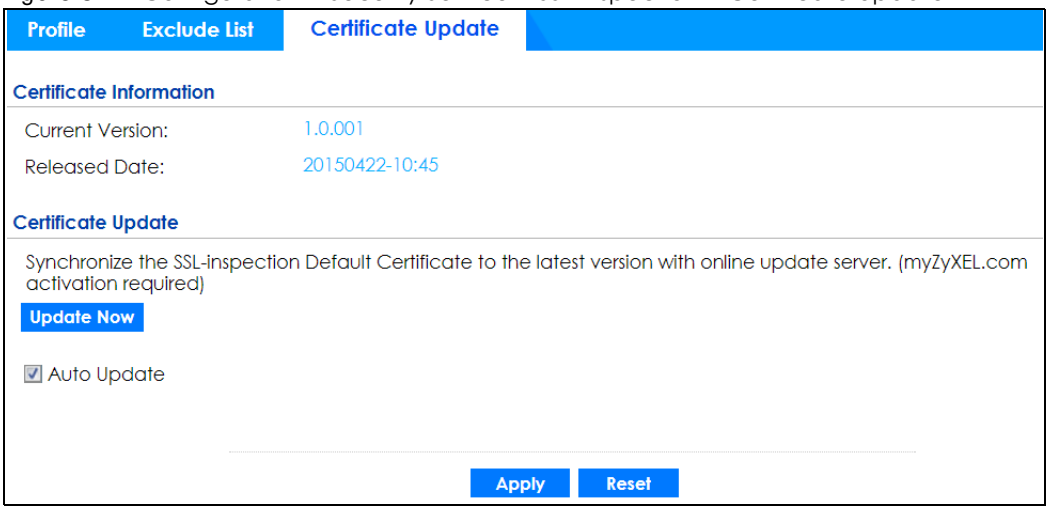
Use this screen to update the latest certificates of servers using SSL connections to the Zyxel Device network. User U sends an SSL request to destination server D (1), via the Zyxel Device, Z. D replies (2); Z intercepts the response from D and checks if the certificate has been previously signed. Z then replies to D (3) and also to U (4). D's latest certificate is stored at myZyxel (M) along with other server certificates and can be downloaded to the Zyxel Device.

Figure 371 SSL Inspection Certificate Update Overview



Click Configuration > Security Service > SSL Inspection > Certificate Update to display the following screen.

Figure 372 Configuration > Security Service > SSL Inspection > Certificate Update



The following table describes the fields in this screen.

Table 229 Configuration > Security Service > SSL Inspection > Certificate Update

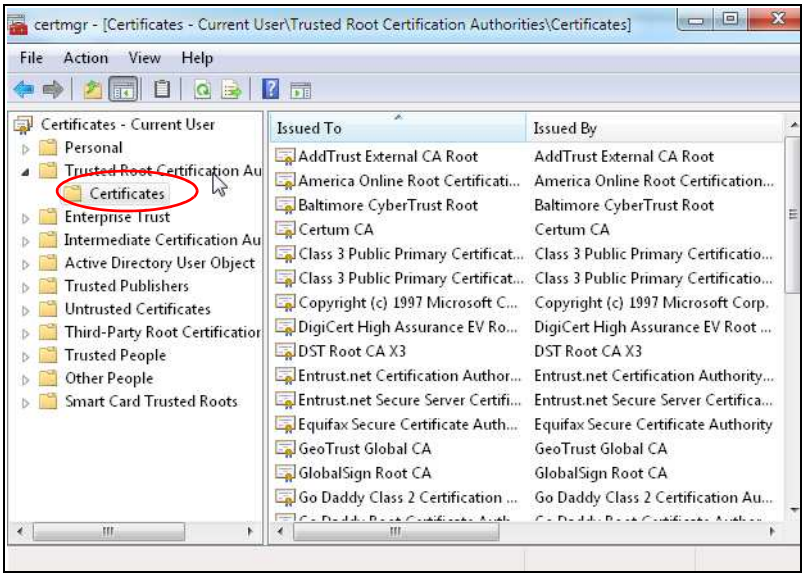
LABEL	DESCRIPTION
Certificate Information	
Current Version	This displays the current certificate set version.
Released Date	This field displays the date and time the current certificate set was released.
Certificate Update	You should have Internet access and have activated SSL Inspection on the Zyxel Device at myZyxel.
Update Now	Click this button to download the latest certificate set from the myZyxel and update it on the Zyxel Device.
Auto Update	Select this to automatically have the Zyxel Device update the certificate set when a new one becomes available on myZyxel.
Apply	Click **Apply** to save your settings to the Zyxel Device.
Reset	Click **Reset** to return to the profile summary page without saving any changes.

33.5 Install a CA Certificate in a Browser

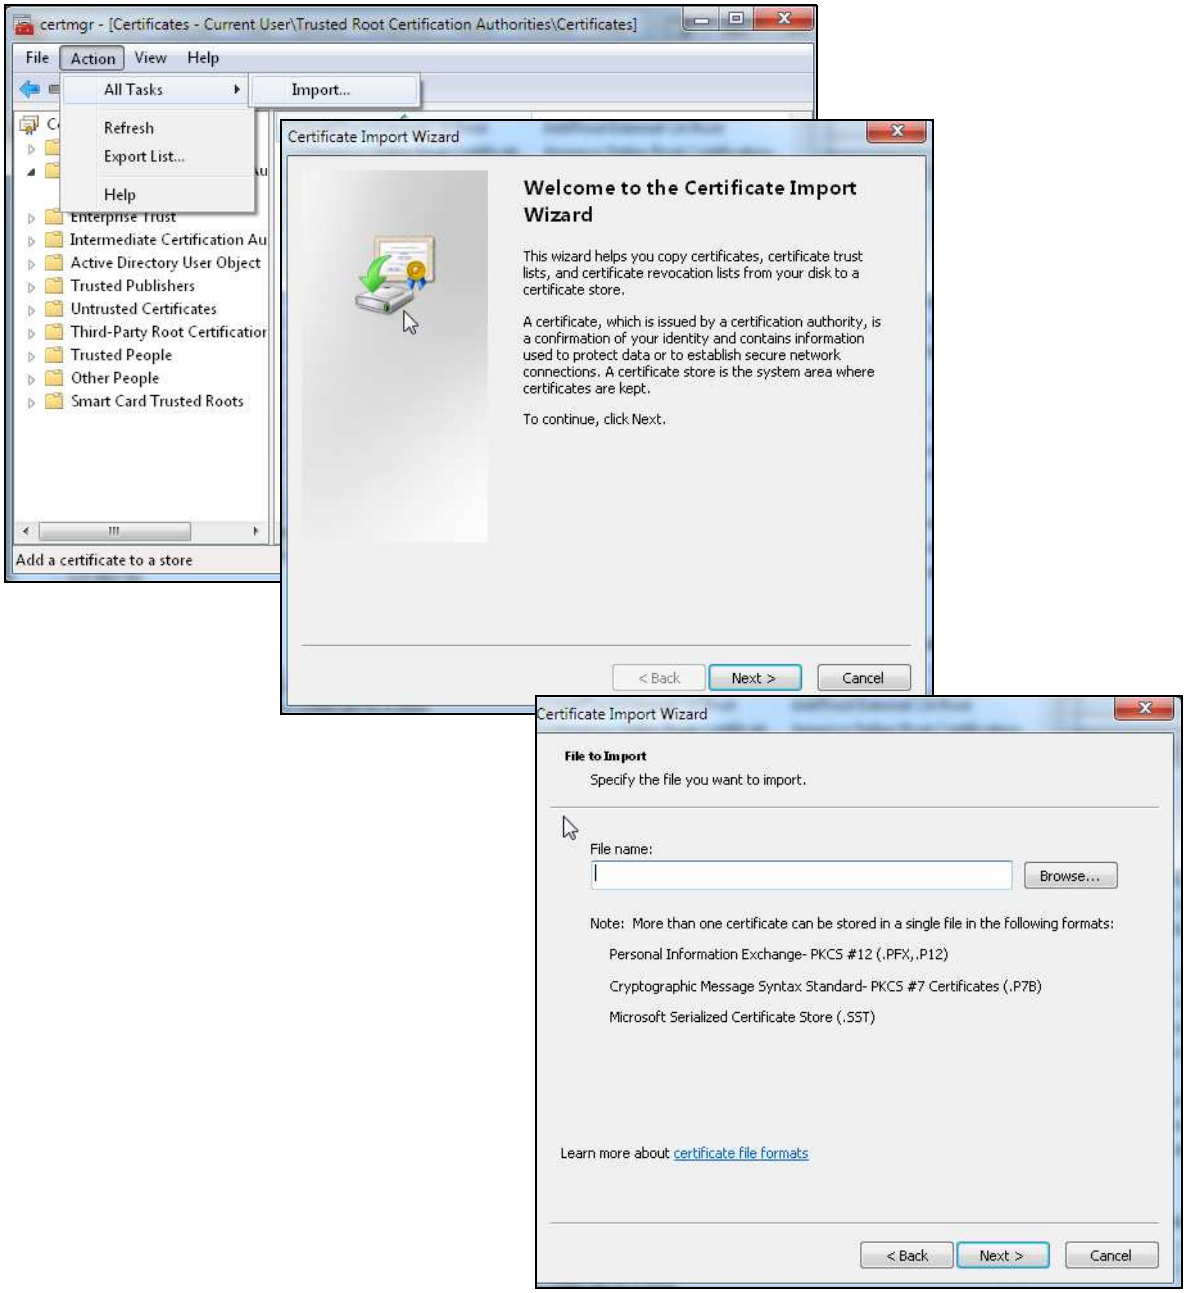
Certificates used in SSL Inspection profiles should be installed in user web browsers. Do the following steps to install a certificate in a computer with a Windows operating system (PC). First, save the certificate to your computer.

1 Run the certificate manager using certmgr.msc.

2 Go to **Trusted Root Certification Authorities** > **Certificates**.



3 From the main menu, select **Action** > **All Tasks** > **Import** and run the **Certificate Import Wizard** to install the certificate on the PC.



33.5.0.1 Firefox Browser

If you're using a Firefox browser, in addition to the above you need to do the following to import a certificate into the browser.

Click **Tools** > **Options** > **Advanced** > **Encryption** > **View Certificates**, click **Import** and enter the filename of the certificate you want to import. See the browser's help for further information.

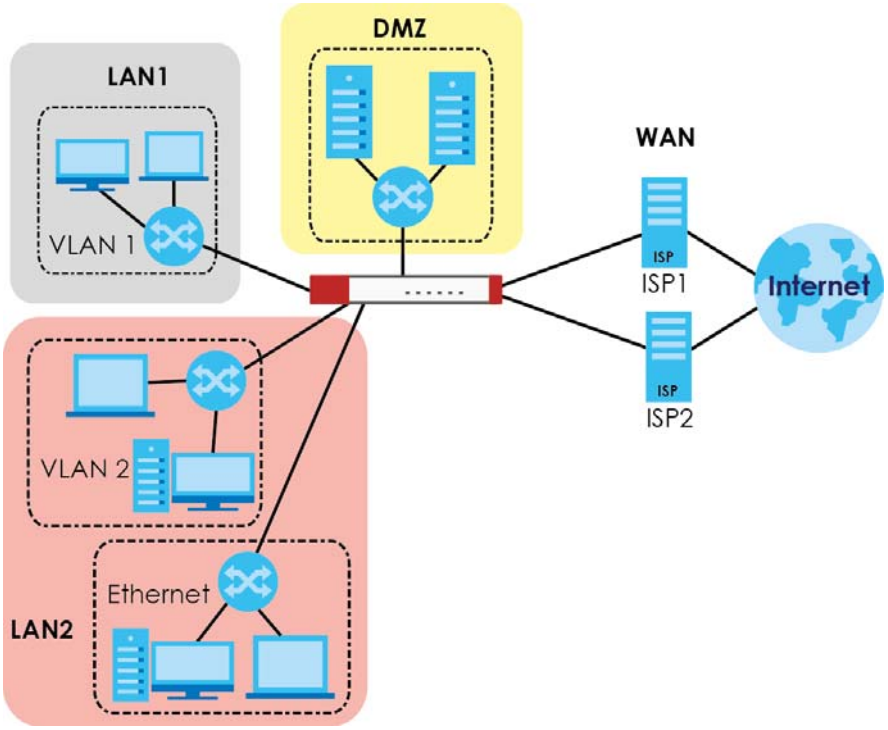
CHAPTER 34
Object

34.1 Zones Overview

Set up zones to configure network security and network policies in the Zyxel Device. A zone is a group of interfaces and/or VPN tunnels. The Zyxel Device uses zones instead of interfaces in many security and policy settings, such as Secure Policies rules, Security Service, and remote management.

Zones cannot overlap. Each Ethernet interface, VLAN interface, bridge interface, PPPoE/PPTP interface and VPN tunnel can be assigned to at most one zone. Virtual interfaces are automatically assigned to the same zone as the interface on which they run.

Figure 373 Example: Zones



Use the **Zone** screens (see Section 34.8.2 on page 633) to manage the Zyxel Device's zones.

34.1.1 What You Need to Know

Zones effectively divide traffic into three types--intra-zone traffic, inter-zone traffic, and extra-zone traffic.

Intra-zone Traffic

- Intra-zone traffic is traffic between interfaces or VPN tunnels in the same zone. For example, in Figure 373 on page 579, traffic between VLAN 2 and the Ethernet is intra-zone traffic.

Inter-zone Traffic

Inter-zone traffic is traffic between interfaces or VPN tunnels in different zones. For example, in Figure 373 on page 579, traffic between VLAN 1 and the Internet is inter-zone traffic. This is the normal case when zone-based security and policy settings apply.

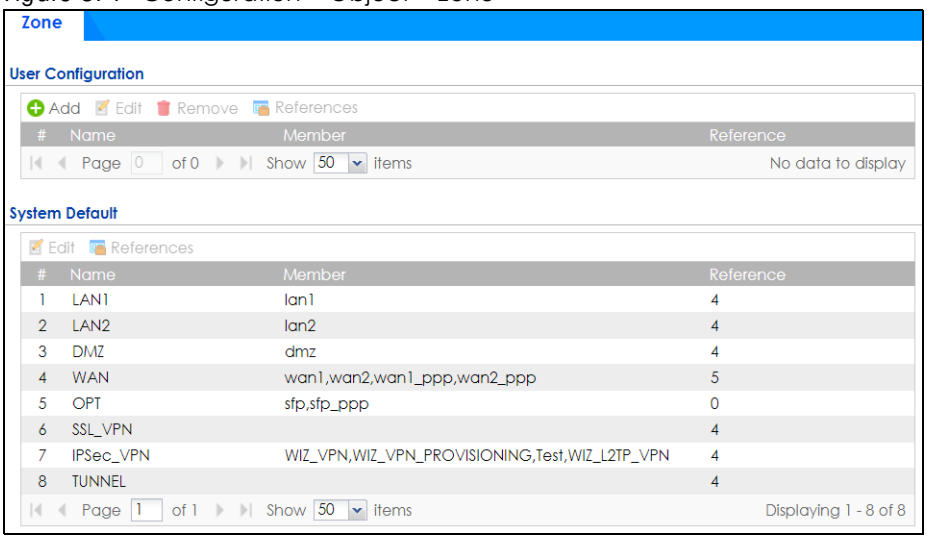
Extra-zone Traffic

- Extra-zone traffic is traffic to or from any interface or VPN tunnel that is not assigned to a zone. For example, in Figure 373 on page 579, traffic to or from computer **C** is extra-zone traffic.
- Some zone-based security and policy settings may apply to extra-zone traffic, especially if you can set the zone attribute in them to **Any** or **All**. See the specific feature for more information.

34.1.2 The Zone Screen

The **Zone** screen provides a summary of all zones. In addition, this screen allows you to add, edit, and remove zones. To access this screen, click **Configuration** > **Object** > **Zone**.

Figure 374 Configuration > Object > Zone



The following table describes the labels in this screen.

Table 230 Configuration > Object > Zone

LABEL	DESCRIPTION
User Configuration / System Default	The Zyxel Device comes with pre-configured **System Default** zones that you cannot delete. You can create your own **User Configuration** zones
Add	Click this to create a new, user-configured zone.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove a user-configured trunk, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.

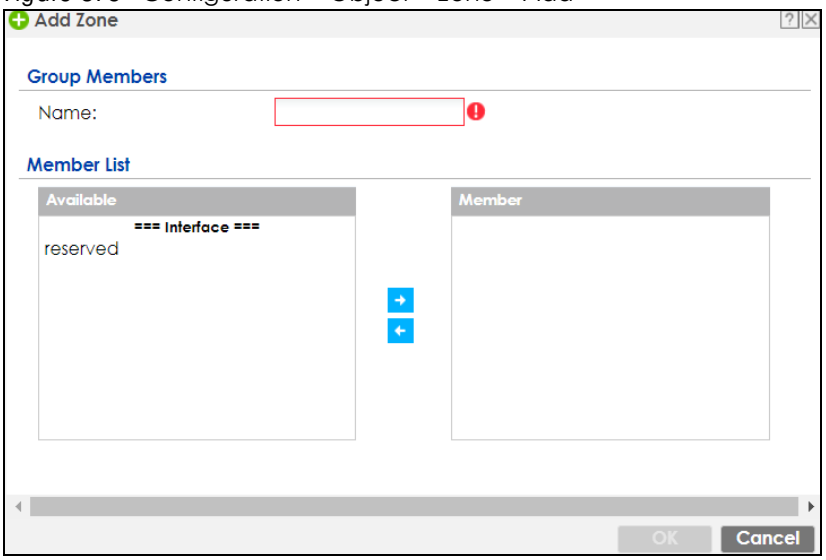
Table 230 Configuration > Object > Zone (continued)

LABEL	DESCRIPTION
References	Select an entry and click **References** to open a screen that shows which settings use the entry. Click Refresh to update information in this screen.
#	This field is a sequential value, and it is not associated with any interface.
Name	This field displays the name of the zone.
Member	This field displays the names of the interfaces that belong to each zone.
Reference	This field displays the number of times an Object Reference is used in a policy.

34.1.2.1 Zone Edit

The **Zone Edit** screen allows you to add or edit a zone. To access this screen, go to the **Zone** screen (see Section 34.8.2 on page 633), and click the **Add** icon or an **Edit** icon.

Figure 375 Configuration > Object > Zone > Add



The following table describes the labels in this screen.

Table 231 Configuration > Object > Zone > Add/Edit

LABEL	DESCRIPTION
Name	For a system default zone, the name is read only. For a user-configured zone, type the name used to refer to the zone. You may use 1-31 alphanumeric characters, underscores (_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Member List	**Available** lists the interfaces and VPN tunnels that do not belong to any zone. Select the interfaces and VPN tunnels that you want to add to the zone you are editing, and click the right arrow button to add them. **Member** lists the interfaces and VPN tunnels that belong to the zone. Select any interfaces that you want to remove from the zone, and click the left arrow button to remove them.
OK	Click **OK** to save your customized settings and exit this screen.
Cancel	Click **Cancel** to exit this screen without saving.

34.2 User/Group Overview

This section describes how to set up user accounts, user groups, and user settings for the Zyxel Device. You can also set up rules that control when users have to log in to the Zyxel Device before the Zyxel Device routes traffic for them.

- The **User** screen (see Section 34.13.1 on page 671) provides a summary of all user accounts.
- The **Group** screen (see Section 34.2.3 on page 587) provides a summary of all user groups. In addition, this screen allows you to add, edit, and remove user groups. User groups may consist of access users and other user groups. You cannot put admin users in user groups.
- The **Setting** screen (see Section 34.2.4 on page 589) controls default settings, login settings, lockout settings, and other user settings for the Zyxel Device. You can also use this screen to specify when users must log in to the Zyxel Device before it routes traffic for them.
- The **MAC Address** screen (see Section 34.2.5 on page 594) allows you to configure the MAC addresses or OUI (Organizationally Unique Identifier) of wireless clients for MAC authentication using the local user database. The OUI is the first three octets in a MAC address and uniquely identifies the manufacturer of a network device.

34.2.1 What You Need To Know

User Account

A user account defines the privileges of a user logged into the Zyxel Device. User accounts are used in security policies and application patrol, in addition to controlling access to configuration and services in the Zyxel Device.

User Types

These are the types of user accounts the Zyxel Device uses.

Table 232 Types of User Accounts

TYPE	ABILITIES	LOGIN METHOD(S)
Admin Users		
admin	Change Zyxel Device configuration (web, CLI)	WWW, TELNET, SSH, FTP, Console
limited-admin	Look at Zyxel Device configuration (web, CLI) Perform basic diagnostics (CLI)	WWW, TELNET, SSH, Console
Access Users		
user	Access network services Browse user-mode commands (CLI)	WWW, TELNET, SSH
guest	Access network services	WWW
ext-user	External user account	WWW
ext-group-user	External group user account	WWW
guest-manager	Create dynamic guest accounts	WWW
dynamic-guest	Access network services	Hotspot Portal

Note: The default **admin** account is always authenticated locally, regardless of the authentication method setting. (See Chapter 34 on page 647 for more information about authentication methods.)

Ext-User Accounts

Set up an **ext-user** account if the user is authenticated by an external server and you want to set up specific policies for this user in the Zyxel Device. If you do not want to set up policies for this user, you do not have to set up an **ext-user** account.

All **ext-user** users should be authenticated by an external server, such as AD, LDAP or RADIUS. If the Zyxel Device tries to use the local database to authenticate an **ext-user**, the authentication attempt always fails. (This is related to AAA servers and authentication methods, which are discussed in those chapters in this guide.)

Note: If the Zyxel Device tries to authenticate an **ext-user** using the local database, the attempt always fails.

Once an **ext-user** user has been authenticated, the Zyxel Device tries to get the user type (see Table 232 on page 582) from the external server. If the external server does not have the information, the Zyxel Device sets the user type for this session to **User**.

For the rest of the user attributes, such as reauthentication time, the Zyxel Device checks the following places, in order.

1. User account in the remote server.
2. User account (Ext-User) in the Zyxel Device.
3. Default user account for AD users (**ad-users**), LDAP users (**ldap-users**) or RADIUS users (**radius-users**) in the Zyxel Device.

See Setting up User Attributes in an External Server for a list of attributes and how to set up the attributes in an external server.

Ext-Group-User Accounts

Ext-Group-User accounts work are similar to ext-user accounts but allow you to group users by the value of the group membership attribute configured for the AD or LDAP server. See Section 34.9.5.1 on page 641 for more on the group membership attribute.

Dynamic-Guest Accounts

Dynamic guest accounts are guest accounts, but are created dynamically and stored in the Zyxel Device's local user database. A dynamic guest account has a dynamically-created user name and password. A dynamic guest account user can access the Zyxel Device's services only within a given period of time and will become invalid after the expiration date/time.

There are three types of dynamic guest accounts depending on how they are created or authenticated: **billing-users**, **ua-users** and **trial-users**.

billing-users are guest account created with the guest manager account or an external printer and paid by cash or created and paid via the on-line payment service. **ua-users** are users that log in from the user agreement page. **trial-users** are free guest accounts that are created with the Free Time function.

User Groups

User groups may consist of user accounts or other user groups. Use user groups when you want to create the same rule for several user accounts, instead of creating separate rules for each one.

Note: You cannot put access users and admin users in the same user group.

Note: You cannot put the default **admin** account into any user group.

The sequence of members in a user group is not important.

User Awareness

By default, users do not have to log into the Zyxel Device to use the network services it provides. The Zyxel Device automatically routes packets for everyone. If you want to restrict network services that certain users can use via the Zyxel Device, you can require them to log in to the Zyxel Device first. The Zyxel Device is then 'aware' of the user who is logged in and you can create 'user-aware policies' that define what services they can use. See Section 34.2.6 on page 596 for a user-aware login example.

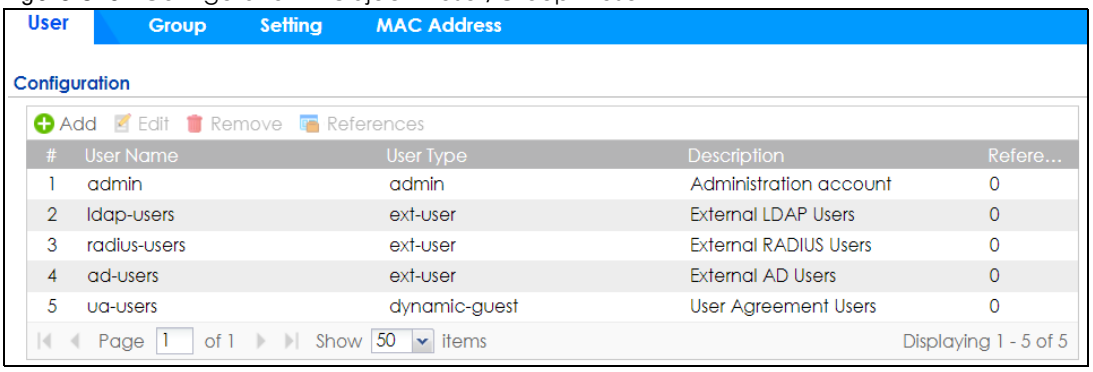
Finding Out More

- See Section 34.2.6 on page 596 for some information on users who use an external authentication server in order to log in.
- The Zyxel Device supports TTLS using PAP so you can use the Zyxel Device's local user database to authenticate users with WPA or WPA2 instead of needing an external RADIUS server.

34.2.2 User/Group User Summary Screen

The **User** screen provides a summary of all user accounts. To access this screen, login to the Web Configurator, and click **Configuration** > **Object** > **User/Group**.

Figure 376 Configuration > Object > User/Group > User



The following table describes the labels in this screen.

Table 233 Configuration > Object > User/Group > User

LABEL	DESCRIPTION
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.

Table 233 Configuration > Object > User/Group > User (continued)

LABEL	DESCRIPTION
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with a specific user.
User Name	This field displays the user name of each user.
User Type	This field displays the types of user accounts the Zyxel Device uses: • **admin** - this user can look at and change the configuration of the Zyxel Device • **limited-admin** - this user can look at the configuration of the Zyxel Device but not to change it • **dynamic-guest** - this user has access to the Zyxel Device's services but cannot look at the configuration. • **user** - this user has access to the Zyxel Device's services and can also browse user-mode commands (CLI). • **guest** - this user has access to the Zyxel Device's services but cannot look at the configuration • **ext-user** - this user account is maintained in a remote server, such as RADIUS or LDAP. See Ext-User Accounts on page 583 for more information about this type. • **ext-group-user** - this user account is maintained in a remote server, such as RADIUS or LDAP. See Ext-Group-User Accounts on page 583 for more information about this type. • **guest-manager** - this user can log in via the web configurator login screen and create dynamic guest accounts using the **Account Generator** screen that pops up.
Description	This field displays the description for each user.
Reference	This displays the number of times an object reference is used in a profile.

34.2.2.1 User Add/Edit Screen

The **User Add/Edit** screen allows you to create a new user account or edit an existing one.

34.2.2.2 Rules for User Names

Enter a user name from 1 to 31 characters.

The user name can only contain the following characters:

- Alphanumeric A-z 0-9 (there is no unicode support)
- _ [underscores]
- - [dashes]

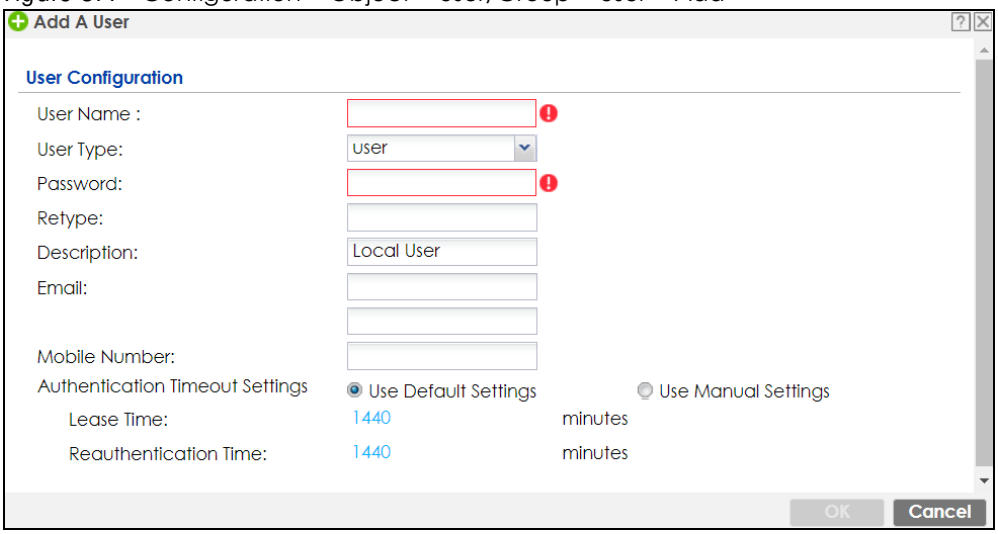
The first character must be alphabetical (A-Z a-z), an underscore (_), or a dash (-). Other limitations on user names are:

- User names are case-sensitive. If you enter a user 'bob' but use 'BOB' when connecting via CIFS or FTP, it will use the account settings used for 'BOB' not 'bob'.
- User names have to be different than user group names.
- Here are the reserved user names:

• adm	• admin	• any	• bin	• daemon
• debug	• devicehaecived	• ftp	• games	• halt
• ldap-users	• lp	• mail	• news	• nobody
• operator	• radius-users	• root	• shutdown	• sshd
• sync	• uucp	• zyxel		

To access this screen, go to the **User** screen (see Section 34.13.1 on page 671), and click either the **Add** icon or an **Edit** icon.

Figure 377 Configuration > Object > User/Group > User > Add



The following table describes the labels in this screen.

Table 234 Configuration > Object > User/Group > User > Add

LABEL	DESCRIPTION
User Name	Type the user name for this user account. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive. User names have to be different than user group names, and some words are reserved. See Section 34.2.2.2 on page 585.
User Type	This field displays the types of user accounts the Zyxel Device uses: • **admin** - this user can look at and change the configuration of the Zyxel Device • **limited-admin** - this user can look at the configuration of the Zyxel Device but not to change it • **user** - this user has access to the Zyxel Device's services and can also browse user-mode commands (CLI). • **guest** - this user has access to the Zyxel Device's services but cannot look at the configuration. • **ext-user** - this user account is maintained in a remote server, such as RADIUS or LDAP. See Ext-User Accounts on page 583 for more information about this type. • **ext-group-user** - this user account is maintained in a remote server, such as RADIUS or LDAP. See Ext-Group-User Accounts on page 583 for more information about this type.
Password	This field is not available if you select the **ext-user** or **ext-group-user** type. Enter a password of from 1 to 64 characters for this user account. If you selected **Enable Password Complexity** in **Configuration > Object > User/Group > Setting**, it must consist of at least 8 characters and at most 64. At least 1 character must be a number, at least 1 a lower case letter, at least 1 an upper case letter and at least 1 a special character from the keyboard, such as !@#$%^&*()_+.
Retype	This field is not available if you select the **ext-user** or **ext-group-user** type.
Group Identifier	This field is available for a **ext-group-user** type user account. Specify the value of the AD or LDAP server's **Group Membership Attribute** that identifies the group to which this user belongs.
Associated AAA Server Object	This field is available for a **ext-group-user** type user account. Select the AAA server to use to authenticate this account's users.

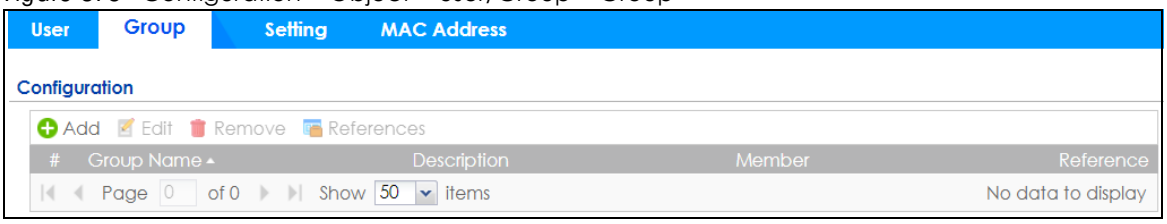
Table 234 Configuration > Object > User/Group > User > Add (continued)

LABEL	DESCRIPTION
Description	Enter the description of each user, if any. You can use up to 60 printable ASCII characters. Default descriptions are provided.
Email	Type one or more valid email addresses for this user so that email messages can be sent to this user if required. A valid email address must contain the @ character. For example, this is a valid email address: abc@example.com.
Mobile Number	Type a valid mobile telephone number for this user so that SMS messages can be sent to this user if required. A valid mobile telephone number can be up to 20 characters in length, including the numbers 1~9 and the following characters in the square brackets [+*#()-].
Authentication Timeout Settings	If you want the system to use default settings, select **Use Default Settings**. If you want to set authentication timeout to a value other than the default settings, select **Use Manual Settings** then fill your preferred values in the fields that follow.
Lease Time	If you select **Use Default Settings** in the **Authentication Timeout Settings** field, the default lease time is shown. If you select **Use Manual Settings**, you need to enter the number of minutes this user has to renew the current session before the user is logged out. You can specify 1 to 1440 minutes. You can enter 0 to make the number of minutes unlimited. Admin users renew the session every time the main screen refreshes in the Web Configurator. Access users can renew the session by clicking the **Renew** button on their screen. If you allow access users to renew time automatically (see Section 34.2.4 on page 589), the users can select this check box on their screen as well. In this case, the session is automatically renewed before the lease time expires.
Reauthentication Time	If you select **Use Default Settings** in the **Authentication Timeout Settings** field, the default lease time is shown. If you select **Use Manual Settings**, you need to type the number of minutes this user can be logged into the Zyxel Device in one session before the user has to log in again. You can specify 1 to 1440 minutes. You can enter 0 to make the number of minutes unlimited. Unlike **Lease Time**, the user has no opportunity to renew the session without logging out.
User VLAN ID	This field is available for a **ext-group-user** type user account. Select this option to enable dynamic VLAN assignment on the Zyxel Device. When a user is authenticated successfully, all data traffic from this user is tagged with the VLAN ID number you specify here. This allows you to assign a user of the **ext-group-user** type to a specific VLAN based on the user credentials instead of using an AAA server.
Configuration Validation	Use a user account from the group specified above to test if the configuration is correct. Enter the account's user name in the **User Name** field and click **Test**.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

34.2.3 User/Group Group Summary Screen

User groups consist of access users and other user groups. You cannot put admin users in user groups. The **Group** screen provides a summary of all user groups. In addition, this screen allows you to add, edit, and remove user groups. To access this screen, login to the Web Configurator, and click **Configuration** > **Object** > **User/Group** > **Group**.

Figure 378 Configuration > Object > User/Group > Group



The following table describes the labels in this screen. See Section 34.2.3.1 on page 588 for more information as well.

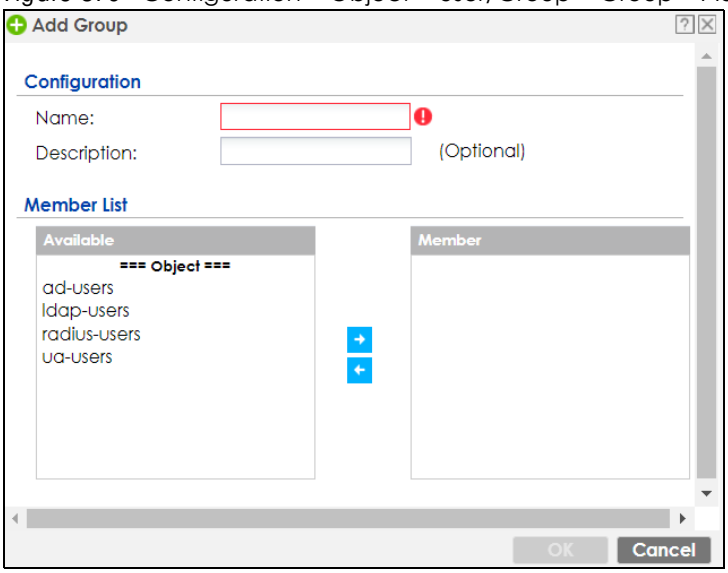
Table 235 Configuration > Object > User/Group > Group

LABEL	DESCRIPTION
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so. Removing a group does not remove the user accounts in the group.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with a specific user group.
Group Name	This field displays the name of each user group.
Description	This field displays the description for each user group.
Member	This field lists the members in the user group. Each member is separated by a comma.
Reference	This displays the number of times an object reference is used in a profile.

34.2.3.1 Group Add/Edit Screen

The **Group Add/Edit** screen allows you to create a new user group or edit an existing one. To access this screen, go to the **Group** screen (see Section 34.2.3 on page 587), and click either the **Add** icon or an **Edit** icon.

Figure 379 Configuration > Object > User/Group > Group > Add



The following table describes the labels in this screen.

Table 236 Configuration > Object > User/Group > Group > Add

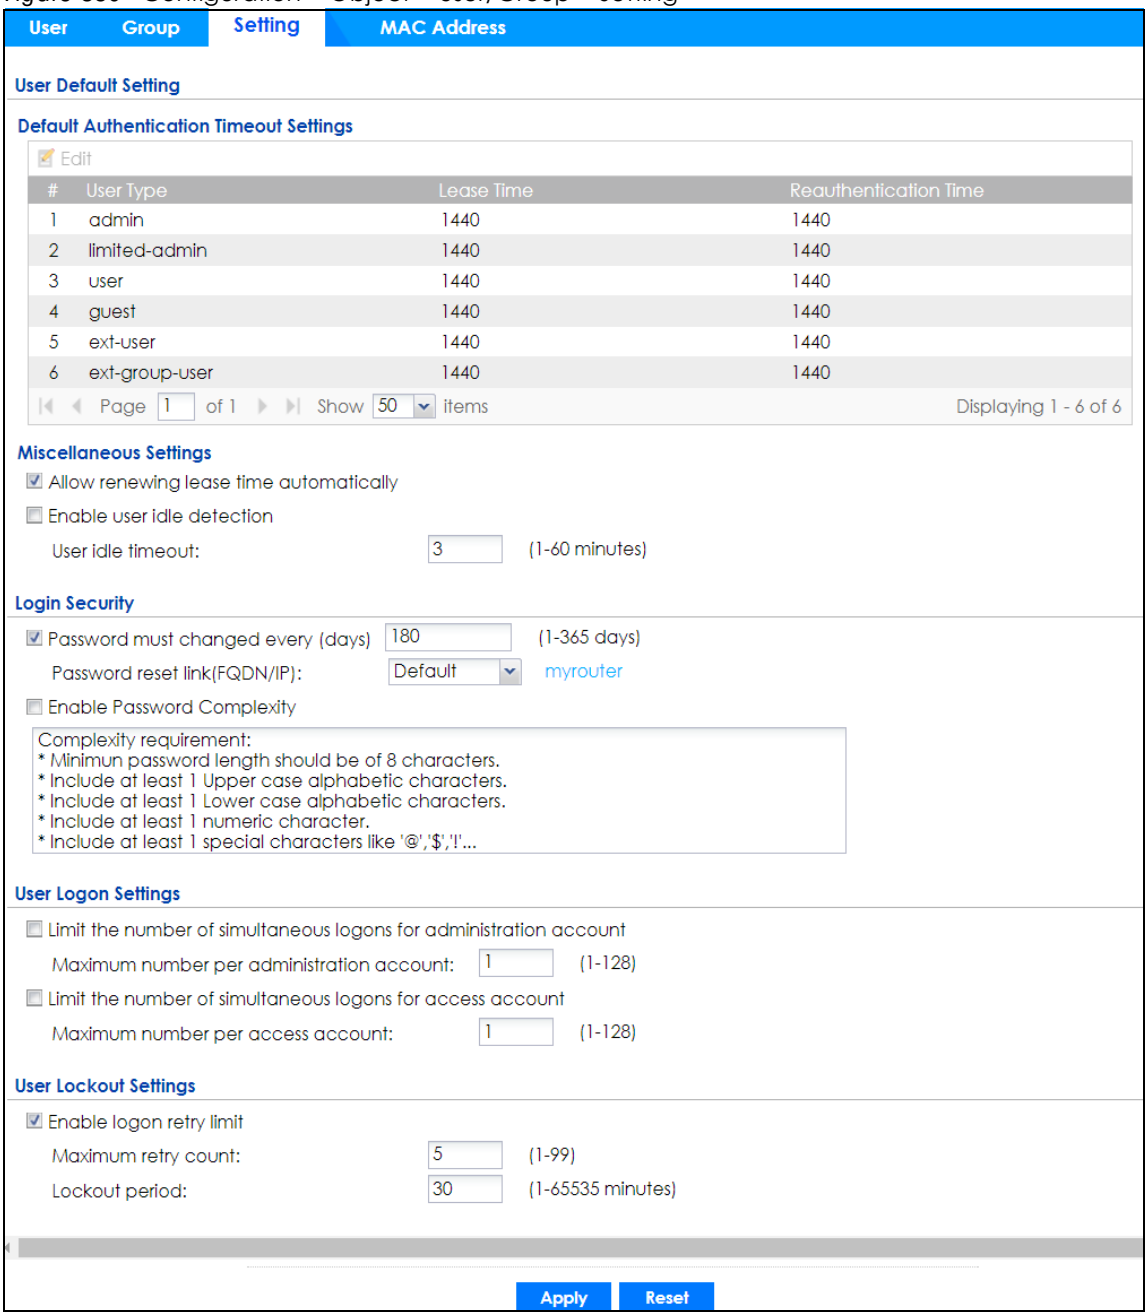
LABEL	DESCRIPTION
Name	Type the name for this user group. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive. User group names have to be different than user names.
Description	Enter the description of the user group, if any. You can use up to 60 characters, punctuation marks, and spaces.
Member List	The **Member** list displays the names of the users and user groups that have been added to the user group. The order of members is not important. Select users and groups from the **Available** list that you want to be members of this group and move them to the **Member** list. You can double-click a single entry to move it or use the [Shift] or [Ctrl] key to select multiple entries and use the arrow button to move them. Move any members you do not want included to the **Available** list.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

34.2.4 User/Group Setting Screen

The **Setting** screen controls default settings, login settings, lockout settings, and other user settings for the Zyxel Device. You can also use this screen to specify when users must log in to the Zyxel Device before it routes traffic for them.

To access this screen, login to the Web Configurator, and click **Configuration** > **Object** > **User/Group** > **Setting**.

Figure 380 Configuration > Object > User/Group > Setting



The following table describes the labels in this screen.

Table 237 Configuration > Object > User/Group > Setting

LABEL	DESCRIPTION
User Authentication Timeout Settings	
Default Authentication Timeout Settings	These authentication timeout settings are used by default when you create a new user account. They also control the settings for any existing user accounts that are set to use the default settings. You can still manually configure any user account's authentication timeout settings.
Edit	Double-click an entry or select it and click Edit to open a screen where you can modify the entry's settings.

Table 237 Configuration > Object > User/Group > Setting (continued)

LABEL	DESCRIPTION
#	This field is a sequential value, and it is not associated with a specific entry.
User Type	These are the kinds of user account the Zyxel Device supports. • **admin** - this user can look at and change the configuration of the Zyxel Device • **limited-admin** - this user can look at the configuration of the Zyxel Device but not to change it • **user** - this user has access to the Zyxel Device's services but cannot look at the configuration • **guest** - this user has access to the Zyxel Device's services but cannot look at the configuration • **ext-user** - this user account is maintained in a remote server, such as RADIUS or LDAP. See Ext-User Accounts on page 583 for more information about this type. • **ext-group-user** - this user account is maintained in a remote server, such as RADIUS or LDAP. See Ext-Group-User Accounts on page 583 for more information about this type.
Lease Time	This is the default lease time in minutes for each type of user account. It defines the number of minutes the user has to renew the current session before the user is logged out. Admin users renew the session every time the main screen refreshes in the Web Configurator. Access users can renew the session by clicking the **Renew** button on their screen. If you allow access users to renew time automatically (see Section 34.2.4 on page 589), the users can select this check box on their screen as well. In this case, the session is automatically renewed before the lease time expires.
Reauthentication Time	This is the default reauthentication time in minutes for each type of user account. It defines the number of minutes the user can be logged into the Zyxel Device in one session before having to log in again. Unlike **Lease Time**, the user has no opportunity to renew the session without logging out.
Miscellaneous Settings	
Allow renewing lease time automatically	Select this check box if access users can renew lease time automatically, as well as manually, simply by selecting the **Updating lease time automatically** check box on their screen.
Enable user idle detection	This is applicable for access users. Select this check box if you want the Zyxel Device to monitor how long each access user is logged in and idle (in other words, there is no traffic for this access user). The Zyxel Device automatically logs out the access user once the **User idle timeout** has been reached.
User idle timeout	This is applicable for access users. This field is effective when **Enable user idle detection** is checked. Type the number of minutes each access user can be logged in and idle before the Zyxel Device automatically logs out the access user.
Login Security	
Password must changed every (days):	Enter how often users must change their password when they log into the Zyxel Device. You can choose from once a day to once a year.
Password reset link (FQDN/IP):	Associate the password expiration to a specific Zyxel Device. **Default** is this Zyxel Device (myrouter) or select **Custom** and enter the IP address or Fully Qualified Domain Name (FQDN).
Enable Password Complexity	Select this to enforce the following conditions in a user password. Requiring a strong password is good for security. The conditions are that the password must consist of at least 8 characters and at most 64. At least 1 character must be a number, at least 1 a lower case letter, at least 1 an upper case letter and at least 1 a special character from the keyboard, such as !@#$%^&*()_+.

Table 237 Configuration > Object > User/Group > Setting (continued)

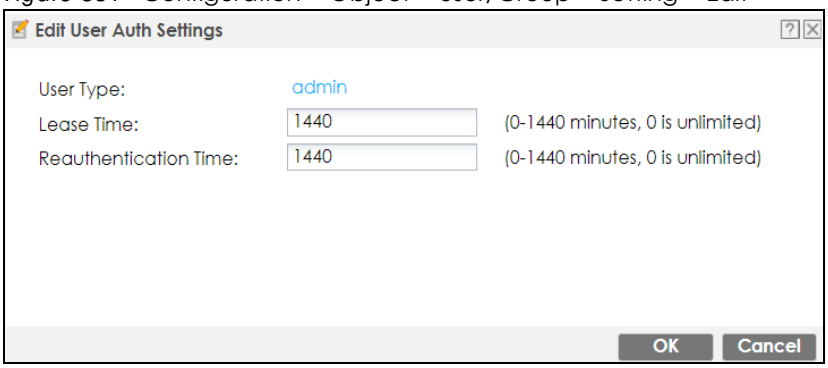
LABEL	DESCRIPTION
User Logon Settings	
Limit the number of simultaneous logons for administration account	Select this check box if you want to set a limit on the number of simultaneous logins by admin users. If you do not select this, admin users can login as many times as they want at the same time using the same or different IP addresses.
Maximum number per administration account	This field is effective when **Limit ... for administration account** is checked. Type the maximum number of simultaneous logins by each admin user.
Limit the number of simultaneous logons for access account	Select this check box if you want to set a limit on the number of simultaneous logins by non-admin users. If you do not select this, access users can login as many times as they want as long as they use different IP addresses.
Maximum number per access account	This field is effective when **Limit ... for access account** is checked. Type the maximum number of simultaneous logins by each access user.
User Lockout Settings	
Enable logon retry limit	Select this check box to set a limit on the number of times each user can login unsuccessfully (for example, wrong password) before the IP address is locked out for a specified amount of time.
Maximum retry count	This field is effective when **Enable logon retry limit** is checked. Type the maximum number of times each user can login unsuccessfully before the IP address is locked out for the specified **lockout period**. The number must be between 1 and 99.
Lockout period	This field is effective when **Enable logon retry limit** is checked. Type the number of minutes the user must wait to try to login again, if **logon retry limit** is enabled and the **maximum retry count** is reached. This number must be between 1 and 65,535 (about 45.5 days).
Apply	Click **Apply** to save the changes.
Reset	Click **Reset** to return the screen to its last-saved settings.

34.2.4.1 Default User Authentication Timeout Settings Edit Screens

The **Default Authentication Timeout Settings Edit** screen allows you to set the default authentication timeout settings for the selected type of user account. These default authentication timeout settings also control the settings for any existing user accounts that are set to use the default settings. You can still manually configure any user account's authentication timeout settings.

To access this screen, go to the **Configuration > Object > User/ Group > Setting** screen (see Section 34.2.4 on page 589), and click one of the **Default Authentication Timeout Settings** section's **Edit** icons.

Figure 381 Configuration > Object > User/Group > Setting > Edit



The following table describes the labels in this screen.

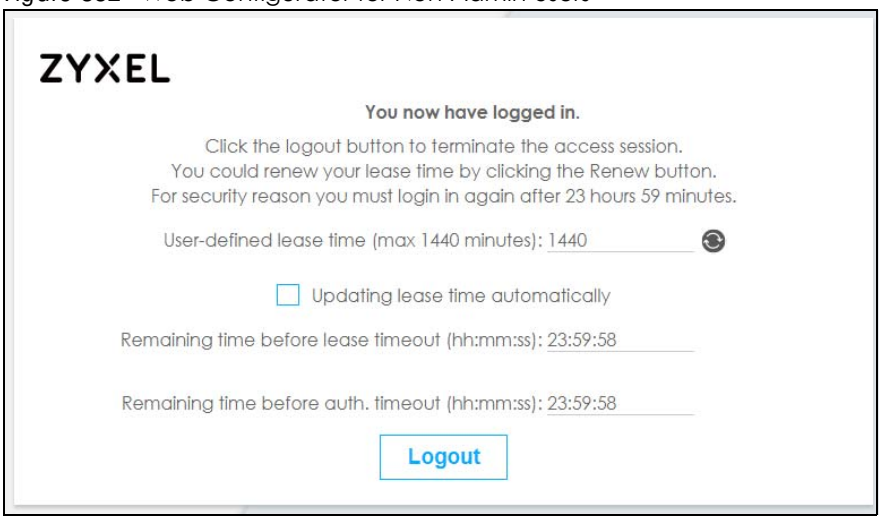
Table 238 Configuration > Object > User/Group > Setting > Edit

LABEL	DESCRIPTION
User Type	This read-only field identifies the type of user account for which you are configuring the default settings. • admin - this user can look at and change the configuration of the Zyxel Device • limited-admin - this user can look at the configuration of the Zyxel Device but not to change it. • dynamic-guest - this user has access to the Zyxel Device's services but cannot look at the configuration. • user - this user has access to the Zyxel Device's services but cannot look at the configuration. • guest - this user has access to the Zyxel Device's services but cannot look at the configuration. • ext-user - this user account is maintained in a remote server, such as RADIUS or LDAP. See Ext-User Accounts on page 583 for more information about this type. • ext-group-user - this user account is maintained in a remote server, such as RADIUS or LDAP. See Ext-Group-User Accounts on page 583 for more information about this type. • guest-manager - this user can log in via the web configurator login screen and create dynamic guest accounts using the Account Generator screen that pops up.
Lease Time	Enter the number of minutes this type of user account has to renew the current session before the user is logged out. You can specify 1 to 1440 minutes. You can enter 0 to make the number of minutes unlimited. Admin users renew the session every time the main screen refreshes in the Web Configurator. Access users can renew the session by clicking the Renew button on their screen. If you allow access users to renew time automatically (see Section 34.2.4 on page 589), the users can select this check box on their screen as well. In this case, the session is automatically renewed before the lease time expires.
Reauthentication Time	Type the number of minutes this type of user account can be logged into the Zyxel Device in one session before the user has to log in again. You can specify 1 to 1440 minutes. You can enter 0 to make the number of minutes unlimited. Unlike Lease Time, the user has no opportunity to renew the session without logging out.
OK	Click OK to save your changes back to the Zyxel Device.
Cancel	Click Cancel to exit this screen without saving your changes.

34.2.4.2 User Aware Login Example

Access users cannot use the Web Configurator to browse the configuration of the Zyxel Device. Instead, after access users log into the Zyxel Device, the following screen appears.

Figure 382 Web Configurator for Non-Admin Users



The following table describes the labels in this screen.

Table 239 Web Configurator for Non-Admin Users

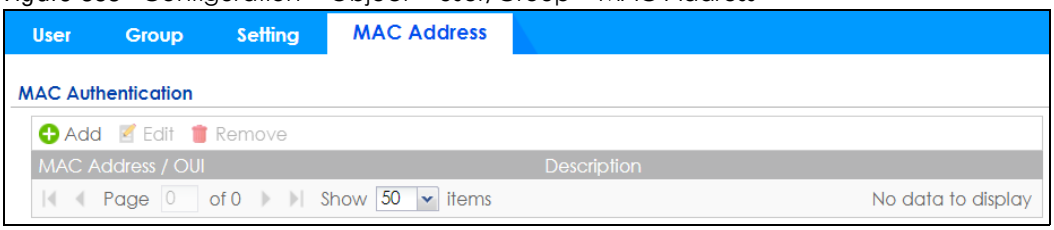
LABEL	DESCRIPTION
User-defined lease time (max ... minutes)	Access users can specify a lease time shorter than or equal to the one that you specified. The default value is the lease time that you specified.
Renew	Access users can click this button to reset the lease time, the amount of time remaining before the Zyxel Device automatically logs them out. The Zyxel Device sets this amount of time according to the: • **User-defined lease time** field in this screen • **Lease time** field in the **User Add/Edit** screen (see Section 34.2.5.1 on page 595) • **Lease time** field in the **Setting** screen (see Section 34.2.4 on page 589).
Updating lease time automatically	This box appears if you checked the **Allow renewing lease time automatically** box in the **Setting** screen. (See Section 34.2.4 on page 589.) Access users can select this check box to reset the lease time automatically 30 seconds before it expires. Otherwise, access users have to click the **Renew** button to reset the lease time.
Remaining time before lease timeout	This field displays the amount of lease time that remains, though the user might be able to reset it.
Remaining time before auth. timeout	This field displays the amount of time that remains before the Zyxel Device automatically logs the access user out, regardless of the lease time.

34.2.5 User/Group MAC Address Summary Screen

This screen shows the MAC addresses of wireless clients, which can be authenticated by their MAC addresses using the local user database. Click **Configuration** > **Object** > **User/Group** > **MAC Address** to open this screen.

Note: You need to configure an SSID security profile's MAC authentication settings to have the AP use the Zyxel Device's local database to authenticate wireless clients by their MAC addresses.

Figure 383 Configuration > Object > User/Group > MAC Address



The following table describes the labels in this screen.

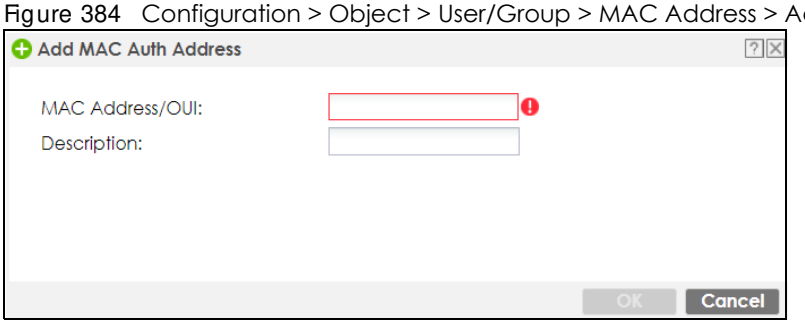
Table 240 Configuration > Object > User/Group > MAC Address

LABEL	DESCRIPTION
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
MAC Address/ OUI	This field displays the MAC address or OUI (Organizationally Unique Identifier of computer hardware manufacturers) of wireless clients using MAC authentication with the Zyxel Device local user database.
Description	This field displays a description of the device identified by the MAC address or OUI.

34.2.5.1 MAC Address Add/Edit Screen

This screen allows you to create a new allowed device or edit an existing one. To access this screen, go to the **MAC Address** screen (see Section 34.2.5 on page 594), and click either the **Add** icon or an **Edit** icon.

Figure 384 Configuration > Object > User/Group > MAC Address > Add



The following table describes the labels in this screen.

Table 241 Configuration > Object > User/Group > MAC Address > Add

LABEL	DESCRIPTION
MAC Address/ OUI	Type the MAC address (six hexadecimal number pairs separated by colons or hyphens) or OUI (three hexadecimal number pairs separated by colons or hyphens) to identify specific wireless clients for MAC authentication using the Zyxel Device local user database. The OUI is the first three octets in a MAC address and uniquely identifies the manufacturer of a network device.
Description	Enter an optional description of the wireless device(s) identified by the MAC or OUI. You can use up to 60 characters, punctuation marks, and spaces.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

34.2.6 User / Group Technical Reference

This section provides some information on users who use an external authentication server in order to log in.

Setting up User Attributes in an External Server

To set up user attributes, such as reauthentication time, in LDAP or RADIUS servers, use the following keywords in the user configuration file.

Table 242 LDAP/RADIUS: Keywords for User Attributes

KEYWORD	CORRESPONDING ATTRIBUTE IN WEB CONFIGURATOR
type	**User Type**. Possible Values: admin, limited-admin, dynamic-guest, user, guest.
leaseTime	**Lease Time**. Possible Values: 1-1440 (minutes).
reauthTime	**Reauthentication Time**. Possible Values: 1-1440 (minutes).

The following examples show you how you might set up user attributes in LDAP and RADIUS servers.

Figure 385 LDAP Example: Keywords for User Attributes

```
type: admin
leaseTime: 99
reauthTime: 199
```

Figure 386 RADIUS Example: Keywords for User Attributes

```
type=user;leaseTime=222;reauthTime=222
```

Creating a Large Number of Ext-User Accounts

If you plan to create a large number of **Ext-User** accounts, you might use CLI commands, instead of the Web Configurator, to create the accounts. Extract the user names from the LDAP or RADIUS server, and create a shell script that creates the user accounts.

34.3 AP Profile Overview

This section shows you how to configure preset profiles for the Access Points (APs) connected to your Zyxel Device's wireless network.

- The **Radio** screen (Section 34.3.1 on page 597) creates radio configurations that can be used by the APs.
- The **SSID** screen (Section 34.3.2 on page 603) configures three different types of profiles for your networked APs.

34.3.0.1 What You Need To Know

The following terms and concepts may help as you read this section.

Wireless Profiles

At the heart of all wireless AP configurations on the Zyxel Device are profiles. A profile represents a group of saved settings that you can use across any number of connected APs. You can set up the following wireless profile types:

- **Radio** - This profile type defines the properties of an AP's radio transmitter. You can have a maximum of 32 radio profiles on the Zyxel Device.
- **SSID** - This profile type defines the properties of a single wireless network signal broadcast by an AP. Each radio on a single AP can broadcast up to 8 SSIDs. You can have a maximum of 32 SSID profiles on the Zyxel Device.
- **Security** - This profile type defines the security settings used by a single SSID. It controls the encryption method required for a wireless client to associate itself with the SSID. You can have a maximum of 32 security profiles on the Zyxel Device.
- **MAC Filtering** - This profile provides an additional layer of security for an SSID, allowing you to block access or allow access to that SSID based on wireless client MAC addresses. If a client's MAC address is on the list, then it is either allowed or denied, depending on how you set up the MAC Filter profile. You can have a maximum of 32 MAC filtering profiles on the Zyxel Device.

SSID

The SSID (Service Set IDentifier) is the name that identifies the Service Set with which a wireless station is associated. Wireless stations associating to the access point (AP) must have the same SSID. In other words, it is the name of the wireless network that clients use to connect to it.

WEP

WEP (Wired Equivalent Privacy) encryption scrambles all data packets transmitted between the AP and the wireless stations associated with it in order to keep network communications private. Both the wireless stations and the access points must use the same WEP key for data encryption and decryption.

WPA and WPA2

Wi-Fi Protected Access (WPA) is a subset of the IEEE 802.11i standard. WPA2 (IEEE 802.11i) is a wireless security standard that defines stronger encryption, authentication and key management than WPA. Key differences between WPA(2) and WEP are improved data encryption and user authentication.

IEEE 802.1x

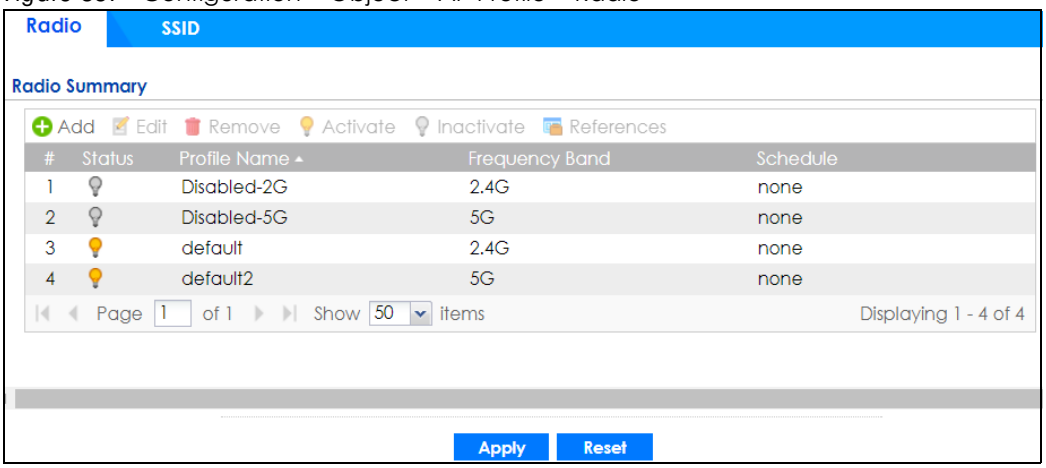
The IEEE 802.1x standard outlines enhanced security methods for both the authentication of wireless stations and encryption key management. Authentication is done using an external RADIUS server.

34.3.1 Radio Screen

This screen allows you to create radio profiles for the APs on your network. A radio profile is a list of settings that a supported managed AP (NWA5121-N for example) can use to configure either one of its two radio transmitters. To access this screen click **Configuration** > **Object** > **AP Profile**.

Note: You can have a maximum of 32 radio profiles on the Zyxel Device.

Figure 387 Configuration > Object > AP Profile > Radio



The following table describes the labels in this screen.

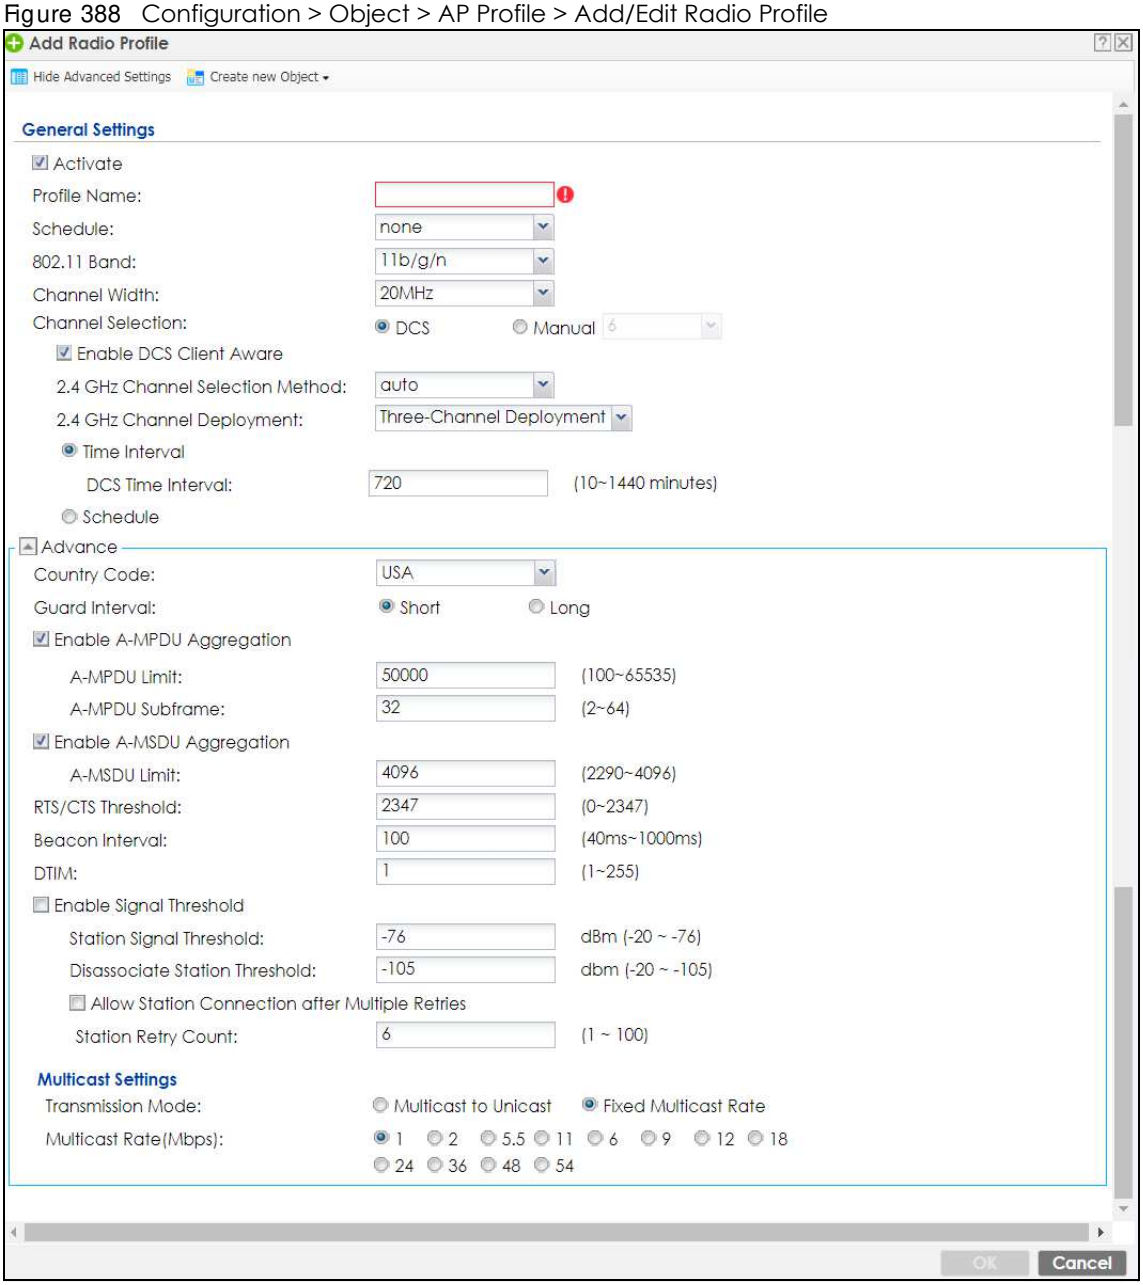
Table 243 Configuration > Object > AP Profile > Radio

LABEL	DESCRIPTION
Add	Click this to add a new radio profile.
Edit	Click this to edit the selected radio profile.
Remove	Click this to remove the selected radio profile.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
References	Click this to view which other objects are linked to the selected radio profile.
#	This field is a sequential value, and it is not associated with a specific profile.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Profile Name	This field indicates the name assigned to the radio profile.
Frequency Band	This field indicates the frequency band which this radio profile is configured to use.
Schedule	This field displays the schedule object which defines when this radio profile can be used.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

34.3.1.1 Add/Edit Radio Profile

This screen allows you to create a new radio profile or edit an existing one. To access this screen, click the **Add** button or select a radio profile from the list and click the **Edit** button.

Figure 388 Configuration > Object > AP Profile > Add/Edit Radio Profile



The following table describes the labels in this screen.

Table 244 Configuration > Object > AP Profile > Add/Edit Radio Profile

LABEL	DESCRIPTION
Hide / Show Advanced Settings	Click this to hide or show the **Advanced Settings** in this window.
Create New Object	Use this to configure any new settings objects that you need to use in this screen.

Table 244 Configuration > Object > AP Profile > Add/Edit Radio Profile (continued)

LABEL	DESCRIPTION
General Settings	
Activate	Select this option to make this profile active.
Profile Name	Enter up to 31 alphanumeric characters to be used as this profile's name. Spaces and underscores are allowed.
Schedule	This field displays the schedule object which defines when this radio profile can be used.
802.11 Band	Select how to let wireless clients connect to the AP. • 11b/g: allows either IEEE 802.11b or IEEE 802.11g compliant WLAN devices to associate with the AP. The AP adjusts the transmission rate automatically according to the wireless standard supported by the wireless devices. • 11b/g/n: allows IEEE802.11b, IEEE802.11g and IEEE802.11n compliant WLAN devices to associate with the AP. The transmission rate of your AP might be reduced. • 11a: allows only IEEE 802.11a compliant WLAN devices to associate with the AP. • 11a/n: allows both IEEE802.11n and IEEE802.11a compliant WLAN devices to associate with the AP. The transmission rate of your AP might be reduced. • 11ac: allows only IEEE802.11ac compliant WLAN devices to associate with the AP.
Channel Width	Select the wireless channel bandwidth you want the AP to use. A standard 20 MHz channel offers transfer speeds of up to 144Mbps (2.4GHz) or 217Mbps (5GHZ) whereas a 40MHz channel uses two standard channels and offers speeds of up to 300Mbps (2.4GHz) or 450Mbps (5GHZ). An IEEE 802.11ac-specific 80MHz channel offers speeds of up to 1.3Gbps. 40 MHz (channel bonding or dual channel) bonds two adjacent radio channels to increase throughput. A 80 MHz channel consists of two adjacent 40 MHz channels. The wireless clients must also support 40 MHz or 80 MHz. It is often better to use the 20 MHz setting in a location where the environment hinders the wireless signal. Because not all devices support 40 MHz and/or 80 MHz channels, select 20/40MHz or 20/40/80MHz to allow the AP to adjust the channel bandwidth automatically. Select 20MHz if you want to lessen radio interference with other wireless devices in your neighborhood or the wireless clients do not support channel bonding.
Channel Selection	Select the wireless channel which this radio profile should use. It is recommended that you choose the channel least in use by other APs in the region where this profile will be implemented. This will reduce the amount of interference between wireless clients and the AP to which this profile is assigned. Select DCS to have the AP automatically select the radio channel upon which it broadcasts by scanning the area around it and determining what channels are currently being used by other devices. Note: If you change the country code later, Channel Selection is set to Manual automatically. Select Manual and specify the channels the AP uses.
Enable DCS Client Aware	This field is available when you set Channel Selection to DCS. Select this to have the AP wait until all connected clients have disconnected before switching channels. If you disable this then the AP switches channels immediately regardless of any client connections. In this instance, clients that are connected to the AP when it switches channels are dropped.

Table 244 Configuration > Object > AP Profile > Add/Edit Radio Profile (continued)

LABEL	DESCRIPTION
2.4 GHz Channel Selection Method	This field is available when you set **Channel Selection** to **DCS**. Select **auto** to have the AP search for available channels automatically in the 2.4 GHz band. The available channels vary depending on what you select in the **2.4 GHz Channel Deployment** field. Select **manual** and specify the channels the AP uses in the 2.4 GHz band.
Channel ID	This field is available only when you set **Channel Selection** to **DCS** and set **2.4 GHz Channel Selection Method** to **manual**. Select the check boxes of the channels that you want the AP to use.
Time Interval	Select this option to have the AP survey the other APs within its broadcast radius at the end of the specified time interval.
DCS Time Interval	This field is available when you set **Channel Selection** to **DCS**. Enter a number of minutes. This regulates how often the AP surveys the other APs within its broadcast radius. If the channel on which it is currently broadcasting suddenly comes into use by another AP, the AP will then dynamically select the next available clean channel or a channel with lower interference.
Schedule	Select this option to have the AP survey the other APs within its broadcast radius at a specific time on selected days of the week.
Start Time	Specify the time of the day (in 24-hour format) to have the AP use DCS to automatically scan and find a less-used channel.
Week Days	Select each day of the week to have the AP use DCS to automatically scan and find a less-used channel.
2.4 GHz Channel Deployment	This field is available only when you set **Channel Selection** to **DCS** and set **2.4 GHz Channel Selection Method** to **auto**. Select **Three-Channel Deployment** to limit channel switching to channels 1,6, and 11, the three channels that are sufficiently attenuated to have almost no impact on one another. In other words, this allows you to minimize channel interference by limiting channel-hopping to these three "safe" channels. Select **Four-Channel Deployment** to limit channel switching to four channels. Depending on the country domain, if the only allowable channels are 1-11 then the Zyxel Device uses channels 1, 4, 7, 11 in this configuration; otherwise, the Zyxel Device uses channels 1, 5, 9, 13 in this configuration. Four channel deployment expands your pool of possible channels while keeping the channel interference to a minimum.
Enable 5 GHz DFS Aware	This field is available only when you select **11a**, **11a/n** or **11ac** in the **802.11 Band** field. Select this if your APs are operating in an area known to have RADAR devices. This allows the device to downgrade its frequency to below 5 GHz in the event a RADAR signal is detected, thus preventing it from interfering with that signal. Enabling this forces the AP to select a non-DFS channel.
5 GHz Channel Selection Method	This shows **auto** and allows the AP to search for available channels automatically in the 5 GHz band.
Advanced Settings	
Country Code	Select the country code of APs that are connected to the Zyxel Device to be the same as where the Zyxel Device is located/installed. The available channels vary depending on the country you selected. Be sure to select the correct/same country for both radios on an AP and all connected APs, in order to prevent roaming failure and interference to other systems.

Table 244 Configuration > Object > AP Profile > Add/Edit Radio Profile (continued)

LABEL	DESCRIPTION
Guard Interval	This field is available only when the channel width is 20/40MHz or 20/40/80MHz. Set the guard interval for this radio profile to either Short or Long. The guard interval is the gap introduced between data transmission from users in order to reduce interference. Reducing the interval increases data transfer rates but also increases interference. Increasing the interval reduces data transfer rates but also reduces interference.
Enable A-MPDU Aggregation	Select this to enable A-MPDU aggregation. Message Protocol Data Unit (MPDU) aggregation collects Ethernet frames along with their 802.11n headers and wraps them in a 802.11n MAC header. This method is useful for increasing bandwidth throughput in environments that are prone to high error rates.
A-MPDU Limit	Enter the maximum frame size to be aggregated.
A-MPDU Subframe	Enter the maximum number of frames to be aggregated each time.
Enable A-MSDU Aggregation	Select this to enable A-MSDU aggregation. Mac Service Data Unit (MSDU) aggregation collects Ethernet frames without any of their 802.11n headers and wraps the header-less payload in a single 802.11n MAC header. This method is useful for increasing bandwidth throughput. It is also more efficient than A-MPDU except in environments that are prone to high error rates.
A-MSDU Limit	Enter the maximum frame size to be aggregated.
RTS/CTS Threshold	Use RTS/CTS to reduce data collisions on the wireless network if you have wireless clients that are associated with the same AP but out of range of one another. When enabled, a wireless client sends an RTS (Request To Send) and then waits for a CTS (Clear To Send) before it transmits. This stops wireless clients from transmitting packets at the same time (and causing data collisions). A wireless client sends an RTS for all packets larger than the number (of bytes) that you enter here. Set the RTS/CTS equal to or higher than the fragmentation threshold to turn RTS/CTS off.
Beacon Interval	When a wirelessly networked device sends a beacon, it includes with it a beacon interval. This specifies the time period before the device sends the beacon again. The interval tells receiving devices on the network how long they can wait in low-power mode before waking up to handle the beacon. A high value helps save current consumption of the access point.
DTIM	Delivery Traffic Indication Message (DTIM) is the time period after which broadcast and multicast packets are transmitted to mobile clients in the Active Power Management mode. A high DTIM value can cause clients to lose connectivity with the network. This value can be set from 1 to 255.
Enable Signal Threshold	Select the check box to use the signal threshold to ensure wireless clients receive good throughput. This allows only wireless clients with a strong signal to connect to the AP. Clear the check box to not require wireless clients to have a minimum signal strength to connect to the AP.
Station Signal Threshold	Set a minimum client signal strength. A wireless client is allowed to connect to the AP only when its signal strength is stronger than the specified threshold. -20 dBm is the strongest signal you can require and -76 is the weakest.
Disassociate Station Threshold	Set a minimum kick-off signal strength. When a wireless client's signal strength is lower than the specified threshold, the Zyxel Device disconnects the wireless client from the AP. -20 dBm is the strongest signal you can require and -90 is the weakest.
Allow Station Connection after Multiple Retries	Select this option to allow a wireless client to try to associate with the AP again after it is disconnected due to weak signal strength.

Table 244 Configuration > Object > AP Profile > Add/Edit Radio Profile (continued)

LABEL	DESCRIPTION
Station Retry Count	Set the maximum number of times a wireless client can attempt to re-connect to the AP
Multicast Settings	Use this section to set a transmission mode and maximum rate for multicast traffic.
Transmission Mode	Set how the AP handles multicast traffic. Select **Multicast to Unicast** to broadcast wireless multicast traffic to all of the wireless clients as unicast traffic. Unicast traffic dynamically changes the data rate based on the application's bandwidth requirements. The retransmit mechanism of unicast traffic provides more reliable transmission of the multicast traffic, although it also produces duplicate packets. Select **Fixed Multicast Rate** to send wireless multicast traffic at a single data rate. You must know the multicast application's bandwidth requirements and set it in the following field.
Multicast Rate (Mbps)	If you set the multicast transmission mode to fixed multicast rate, set the data rate for multicast traffic here. For example, to deploy 4 Mbps video, select a fixed multicast rate higher than 4 Mbps.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

34.3.2 SSID Screen

The SSID screens allow you to configure three different types of profiles for your networked APs: an SSID list, which can assign specific SSID configurations to your APs; a security list, which can assign specific encryption methods to the APs when allowing wireless clients to connect to them; and a MAC filter list, which can limit connections to an AP based on wireless clients MAC addresses.

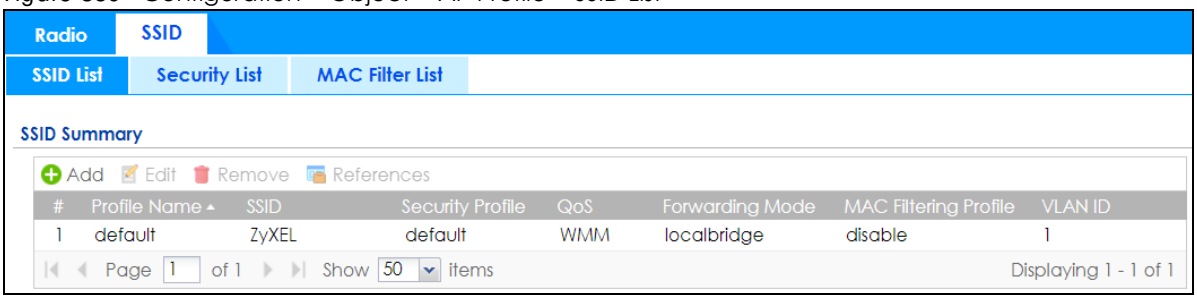
34.3.2.1 SSID List

This screen allows you to create and manage SSID configurations that can be used by the APs. An SSID, or Service Set IDentifier, is basically the name of the wireless network to which a wireless client can connect. The SSID appears as readable text to any device capable of scanning for wireless frequencies (such as the WiFi adapter in a laptop), and is displayed as the wireless network name when a person makes a connection to it.

To access this screen click **Configuration** > **Object** > **AP Profile** > **SSID**.

Note: You can have a maximum of 32 SSID profiles on the Zyxel Device.

Figure 389 Configuration > Object > AP Profile > SSID List



The following table describes the labels in this screen.

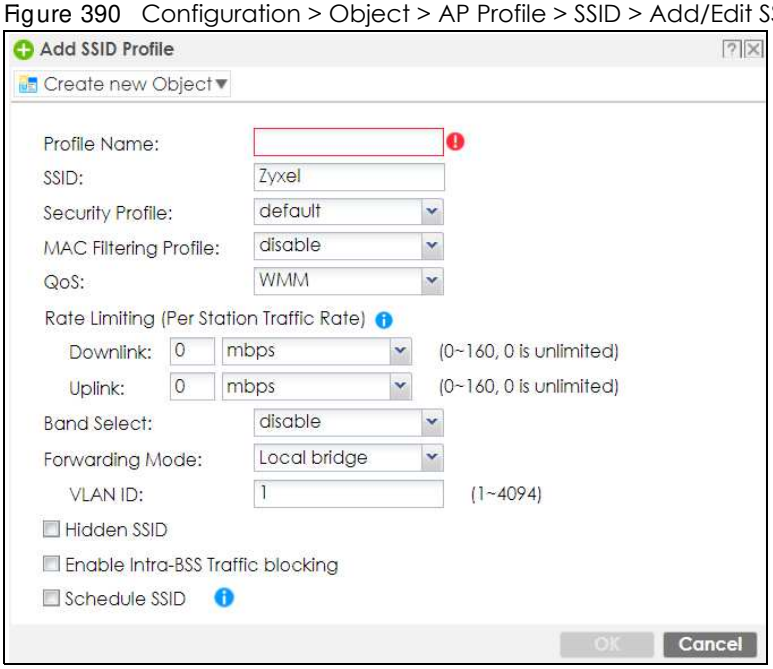
Table 245 Configuration > Object > AP Profile > SSID List

LABEL	DESCRIPTION
Add	Click this to add a new SSID profile.
Edit	Click this to edit the selected SSID profile.
Remove	Click this to remove the selected SSID profile.
References	Click this to view which other objects are linked to the selected SSID profile (for example, radio profile).
#	This field is a sequential value, and it is not associated with a specific profile.
Profile Name	This field indicates the name assigned to the SSID profile.
SSID	This field indicates the SSID name as it appears to wireless clients.
Security Profile	This field indicates which (if any) security profile is associated with the SSID profile.
QoS	This field indicates the QoS type associated with the SSID profile.
MAC Filtering Profile	This field indicates which (if any) MAC Filter Profile is associated with the SSID profile.
VLAN ID	This field indicates the VLAN ID associated with the SSID profile.

34.3.2.2 Add/Edit SSID Profile

This screen allows you to create a new SSID profile or edit an existing one. To access this screen, click the **Add** button or select an SSID profile from the list and click the **Edit** button.

Figure 390 Configuration > Object > AP Profile > SSID > Add/Edit SSID Profile



The following table describes the labels in this screen.

Table 246 Configuration > Object > AP Profile > SSID > Add/Edit SSID Profile

LABEL	DESCRIPTION
Create new Object	Select an object type from the list to create a new one associated with this SSID profile.
Profile Name	Enter up to 31 alphanumeric characters for the profile name. This name is only visible in the Web Configurator and is only for management purposes. Spaces and underscores are allowed.
SSID	Enter the SSID name for this profile. This is the name visible on the network to wireless clients. Enter up to 32 characters, spaces and underscores are allowed.
Security Profile	Select a security profile from this list to associate with this SSID. If none exist, you can use the **Create new Object** menu to create one. Note: It is highly recommended that you create security profiles for all of your SSIDs to enhance your network security.
MAC Filtering Profile	Select a MAC filtering profile from the list to associate with this SSID. If none exist, you can use the **Create new Object** menu to create one. MAC filtering allows you to limit the wireless clients connecting to your network through a particular SSID by wireless client MAC addresses. Any clients that have MAC addresses not in the MAC filtering profile of allowed addresses are denied connections. The **disable** setting means no MAC filtering is used.
QoS	Select a Quality of Service (QoS) access category to associate with this SSID. Access categories minimize the delay of data packets across a wireless network. Certain categories, such as video or voice, are given a higher priority due to the time sensitive nature of their data packets. QoS access categories are as follows: **disable**: Turns off QoS for this SSID. All data packets are treated equally and not tagged with access categories. **WMM**: Enables automatic tagging of data packets. The Zyxel Device assigns access categories to the SSID by examining data as it passes through it and making a best guess effort. If something looks like video traffic, for instance, it is tagged as such. **WMM_VOICE**: All wireless traffic to the SSID is tagged as voice data. This is recommended if an SSID is used for activities like placing and receiving VoIP phone calls. **WMM_VIDEO**: All wireless traffic to the SSID is tagged as video data. This is recommended for activities like video conferencing. **WMM_BEST_EFFORT**: All wireless traffic to the SSID is tagged as "best effort," meaning the data travels the best route it can without displacing higher priority traffic. This is good for activities that do not require the best bandwidth throughput, such as surfing the Internet. **WMM_BACKGROUND**: All wireless traffic to the SSID is tagged as low priority or "background traffic", meaning all other access categories take precedence over this one. If traffic from an SSID does not have strict throughput requirements, then this access category is recommended. For example, an SSID that only has network printers connected to it.
Rate Limiting (Per Station Traffic Rate)	Define the maximum incoming and outgoing transmission data rate per wireless station
Downlink:	Define the maximum incoming transmission data rate (either in Mbps or Kbps) on a per-station basis.
Uplink:	Define the maximum outgoing transmission data rate (either in Mbps or Kbps) on a per-station basis.

Table 246 Configuration > Object > AP Profile > SSID > Add/Edit SSID Profile (continued)

LABEL	DESCRIPTION
Band Select:	To improve network performance and avoid interference in the 2.4 GHz frequency band, you can enable this feature to use the 5 GHz band first. You should set 2.4GHz and 5 GHz radio profiles to use the same SSID and security settings. Select **standard** to have the AP try to connect the wireless clients to the same SSID using the 5 GHZ band. Connections to an SSID using the 2.4GHz band are still allowed. Otherwise, select **disable** to turn off this feature.
Stop Threshold	This field is not available when you disable **Band Select**. Select this option and set the threshold number of the connected wireless clients at which the Zyxel Device disables the band select feature.
Balance Ratio	This field is not available when you disable **Band Select**. Select this option and set a ratio of the wireless clients using the 5 GHz band to the wireless clients using the 2.4 GHz band.
Forwarding Mode	Select a forwarding mode (**Tunnel** or **Local bridge**) for traffic from this SSID.
VLAN ID	If you selected **Local Bridge** forwarding mode, enter the VLAN ID that will be used to tag all traffic originating from this SSID if the VLAN is different from the native VLAN. All the wireless station's traffic goes through the associated AP's gateway.
VLAN Interface	If you selected the **Tunnel** forwarding mode, select a VLAN interface. All the wireless station's traffic is forwarded to the Zyxel Device first.
Hidden SSID	Select this if you want to "hide" your SSID from wireless clients. This tells any wireless clients in the vicinity of the AP using this SSID profile not to display its SSID name as a potential connection. Not all wireless clients respect this flag and display it anyway. When an SSID is "hidden" and a wireless client cannot see it, the only way you can connect to the SSID is by manually entering the SSID name in your wireless connection setup screen(s) (these vary by client, client connectivity software, and operating system).
Enable Intra-BSS Traffic Blocking	Select this option to prevent crossover traffic from within the same SSID.
Schedule SSID	Select this option and set whether the SSID is enabled or disabled on each day of the week. You also need to select the hour and minute (in 24-hour format) to specify the time period of each day during which the SSID is enabled/enabled.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

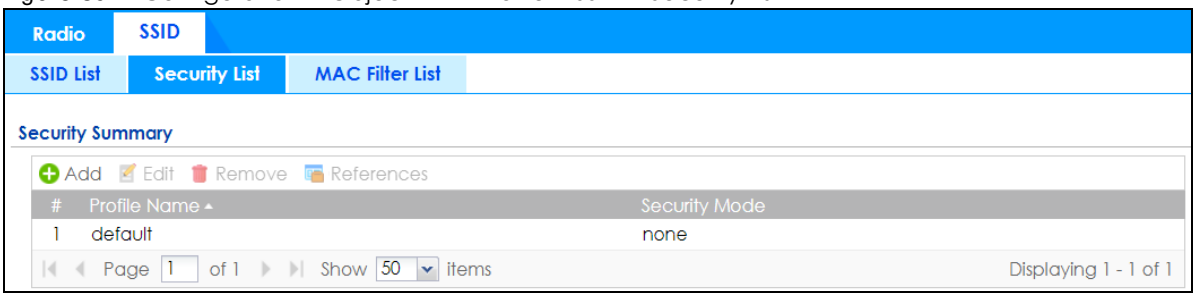
34.3.2.3 Security List

This screen allows you to manage wireless security configurations that can be used by your SSIDs. Wireless security is implemented strictly between the AP broadcasting the SSID and the stations that are connected to it.

To access this screen click **Configuration > Object > AP Profile > SSID > Security List**.

Note: You can have a maximum of 32 security profiles on the Zyxel Device.

Figure 391 Configuration > Object > AP Profile > SSID > Security List



The following table describes the labels in this screen.

Table 247 Configuration > Object > AP Profile > SSID > Security List

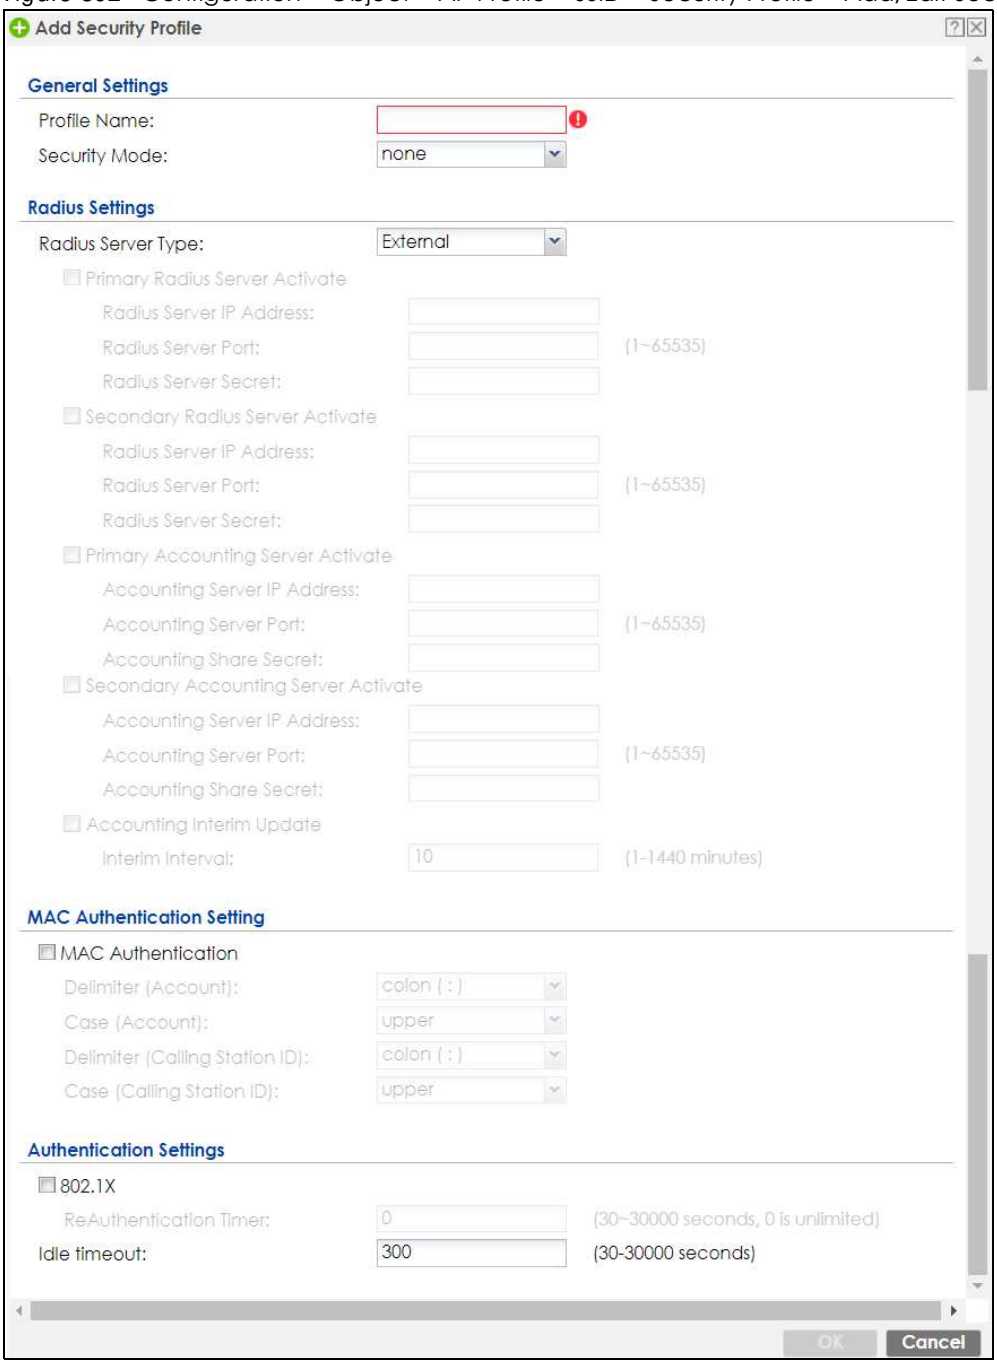
LABEL	DESCRIPTION
Add	Click this to add a new security profile.
Edit	Click this to edit the selected security profile.
Remove	Click this to remove the selected security profile.
References	Click this to view which other objects are linked to the selected security profile (for example, SSID profile).
#	This field is a sequential value, and it is not associated with a specific profile.
Profile Name	This field indicates the name assigned to the security profile.
Security Mode	This field indicates this profile's security mode (if any).

34.3.2.4 Add/Edit Security Profile

This screen allows you to create a new security profile or edit an existing one. To access this screen, click the **Add** button or select a security profile from the list and click the **Edit** button.

Note: This screen's options change based on the **Security Mode** selected. Only the default screen is displayed here.

Figure 392 Configuration > Object > AP Profile > SSID > Security Profile > Add/Edit Security Profile



The following table describes the labels in this screen.

Table 248 Configuration > Object > AP Profile > SSID > Security Profile > Add/Edit Security Profile

LABEL	DESCRIPTION
Profile Name	Enter up to 31 alphanumeric characters for the profile name. This name is only visible in the Web Configurator and is only for management purposes. Spaces and underscores are allowed.
Security Mode	Select a security mode from the list: none, wep, wpa2, or wpa2-mix.
Fast Roaming Settings	IEEE 802.11r fast roaming, which is also known as Fast BSS Transition (FT), allows wireless clients to quickly move from one AP to another in a WiFi network that uses WPA2 with 802.1x authentication. Information from the original association is passed to the target AP when the client roams. The client doesn't need to perform the whole 802.1x authentication process. Messages exchanged between the target AP and client are reduced and performed using one of the two methods: • Over-the-DS: The wireless client communicates with the target AP via the current AP. The communication is sent to the target AP through the wired Ethernet connection. • Over-the-Air: The wireless client communicates directly with the target AP.
802.11r	Select this to turn on IEEE 802.11r fast roaming on the AP (Zyxel Device). This is good for wireless clients that transport a lot of real-time interactive traffic, such as voice and video. Wireless clients should also support WPA2 and fast roaming to associate with the AP (Zyxel Device) and roam seamlessly.
Radius Server Type	Select Internal to use the Zyxel Device's internal authentication database, or External to use an external RADIUS server for authentication.
Primary / Secondary Radius Server Activate	Select this to have the Zyxel Device use the specified RADIUS server.
Radius Server IP Address	Enter the IP address of the RADIUS server to be used for authentication.
Radius Server Port	Enter the port number of the RADIUS server to be used for authentication.
Radius Server Secret	Enter the shared secret password of the RADIUS server to be used for authentication.
Primary / Secondary Accounting Server Activate	Select the check box to enable user accounting through an external authentication server.
Accounting Server IP Address	Enter the IP address of the external accounting server in dotted decimal notation.
Accounting Server Port	Enter the port number of the external accounting server.
Accounting Share Secret	Enter a password (up to 128 alphanumeric characters) as the key to be shared between the external accounting server and the AP. The key must be the same on the external accounting server and your AP. The key is not sent over the network.
Accounting Interim Update	This field is available only when you enable user accounting through an external accounting server. Select this to have the AP send accounting update messages to the accounting server at the interval you specify.
Interim Interval	Specify the time interval for how often the AP is to send an interim update message with current client statistics to the accounting server.
MAC Authentication	Select this to use an external server or the Zyxel Device's local database to authenticate wireless clients by their MAC addresses. Users cannot get an IP address if the MAC authentication fails. An external server can use the wireless client's account (username/password) or Calling Station ID for MAC authentication. Configure the ones the external server uses.
Delimiter (Account)	Select the separator the external server uses for the two-character pairs within account MAC addresses.

Table 248 Configuration > Object > AP Profile > SSID > Security Profile > Add/Edit Security Profile

LABEL	DESCRIPTION
Case (Account)	Select the case (upper or lower) the external server requires for letters in the account MAC addresses.
Delimiter (Calling Station ID)	RADIUS servers can require the MAC address in the Calling Station ID RADIUS attribute. Select the separator the external server uses for the pairs in calling station MAC addresses.
Case (Calling Station ID)	Select the case (upper or lower) the external server requires for letters in the calling station MAC addresses.
802.1X	Select this to enable 802.1x secure authentication.
Auth. Method	This field is available only when you set the RADIUS server type to Internal. Select an authentication method if you have created any in the Configuration > Object > Auth. Method screen.
Reauthentication Timer	Enter the interval (in seconds) between authentication requests. Enter a 0 for unlimited requests.
The following fields are available if you set Security Mode to wep.	
Idle Timeout	Enter the idle interval (in seconds) that a client can be idle before authentication is discontinued.
Authentication Type	Select a WEP authentication method. Choices are Open or Share key.
Key Length	Select the bit-length of the encryption key to be used in WEP connections. If you select WEP-64: • Enter 10 hexadecimal digits in the range of "A-F", "a-f" and "0-9" (for example, 0x11AA22BB33) for each Key used. or • Enter 5 ASCII characters (case sensitive) ranging from "a-z", "A-Z" and "0-9" (for example, MyKey) for each Key used. If you select WEP-128: • Enter 26 hexadecimal digits in the range of "A-F", "a-f" and "0-9" (for example, 0x00112233445566778899AABBCC) for each Key used. or • Enter 13 ASCII characters (case sensitive) ranging from "a-z", "A-Z" and "0-9" (for example, MyKey12345678) for each Key used.
Key 1~4	Based on your Key Length selection, enter the appropriate length hexadecimal or ASCII key.
The following fields are available if you set Security Mode to wpa, wpa2 or wpa2-mix.	
PSK	Select this option to use a Pre-Shared Key with WPA encryption.
Pre-Shared Key	Enter a pre-shared key of between 8 and 63 case-sensitive ASCII characters (including spaces and symbols) or 64 hexadecimal characters.
Cipher Type	Select an encryption cipher type from the list. • auto - This automatically chooses the best available cipher based on the cipher in use by the wireless client that is attempting to make a connection. • tkip - This is the Temporal Key Integrity Protocol encryption method added later to the WEP encryption protocol to further secure. Not all wireless clients may support this. • aes - This is the Advanced Encryption Standard encryption method. It is a more recent development over TKIP and considerably more robust. Not all wireless clients may support this.
Idle Timeout	Enter the idle interval (in seconds) that a client can be idle before authentication is discontinued.
Group Key Update Timer	Enter the interval (in seconds) at which the AP updates the group WPA encryption key.

Table 248 Configuration > Object > AP Profile > SSID > Security Profile > Add/Edit Security Profile

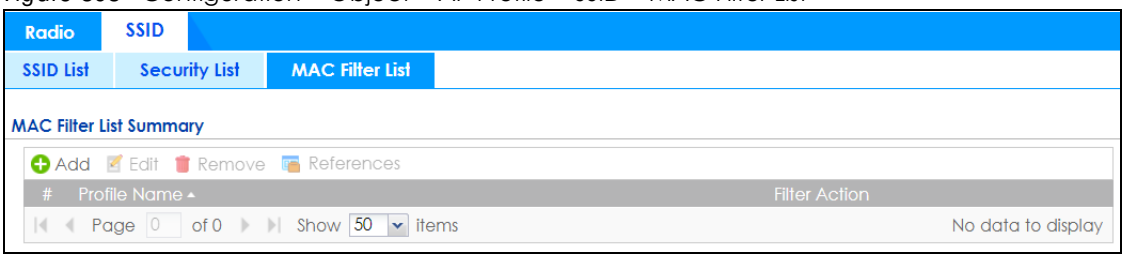
LABEL	DESCRIPTION
Management Frame Protection	This field is available only when you select **wpa2** or **wpa2-mix** in the **Security Mode** field and set **Cipher Type** to **aes**. Data frames in 802.11 WLANs can be encrypted and authenticated with WEP, WPA or WPA2. But 802.11 management frames, such as beacon/probe response, association request, association response, de-authentication and disassociation are always unauthenticated and unencrypted. IEEE 802.11w Protected Management Frames allows APs to use the existing security mechanisms (encryption and authentication methods defined in IEEE 802.11i WPA/WPA2) to protect management frames. This helps prevent wireless DoS attacks. Select the check box to enable management frame protection (MFP) to add security to 802.11 management frames. Select **Optional** if you do not require the wireless clients to support MFP. Management frames will be encrypted if the clients support MFP. Select **Required** and wireless clients must support MFP in order to join the AP's wireless network.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

34.3.2.5 MAC Filter List

This screen allows you to create and manage security configurations that can be used by your SSIDs. To access this screen click **Configuration** > **Object** > **AP Profile** > **SSID** > **MAC Filter List**.

Note: You can have a maximum of 32 MAC filtering profiles on the Zyxel Device.

Figure 393 Configuration > Object > AP Profile > SSID > MAC Filter List



The following table describes the labels in this screen.

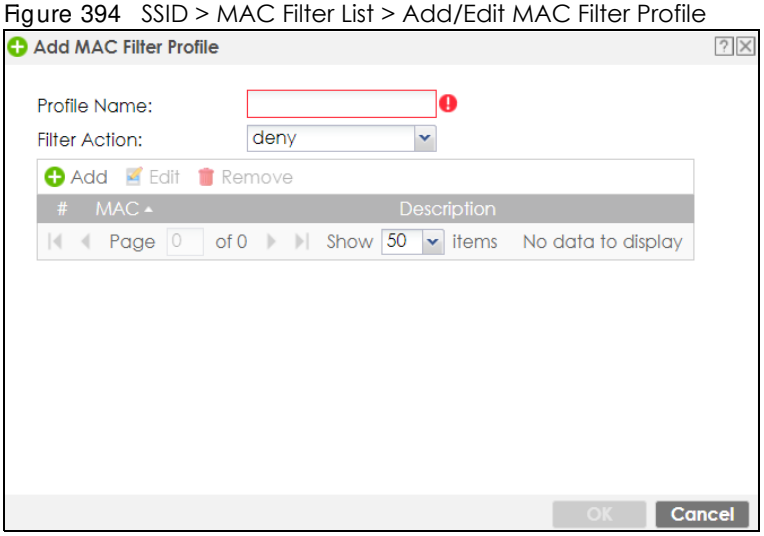
Table 249 Configuration > Object > AP Profile > SSID > MAC Filter List

LABEL	DESCRIPTION
Add	Click this to add a new MAC filtering profile.
Edit	Click this to edit the selected MAC filtering profile.
Remove	Click this to remove the selected MAC filtering profile.
References	Click this to view which other objects are linked to the selected MAC filtering profile (for example, SSID profile).
#	This field is a sequential value, and it is not associated with a specific profile.
Profile Name	This field indicates the name assigned to the MAC filtering profile.
Filter Action	This field indicates this profile's filter action (if any).

34.3.2.6 Add/Edit MAC Filter Profile

This screen allows you to create a new MAC filtering profile or edit an existing one. To access this screen, click the **Add** button or select a MAC filter profile from the list and click the **Edit** button.

Figure 394 SSID > MAC Filter List > Add/Edit MAC Filter Profile



The following table describes the labels in this screen.

Table 250 SSID > MAC Filter List > Add/Edit MAC Filter Profile

LABEL	DESCRIPTION
Profile Name	Enter up to 31 alphanumeric characters for the profile name. This name is only visible in the Web Configurator and is only for management purposes. Spaces and underscores are allowed.
Filter Action	Select **allow** to permit the wireless client with the MAC addresses in this profile to connect to the network through the associated SSID; select **deny** to block the wireless clients with the specified MAC addresses.
Add	Click this to add a MAC address to the profile's list.
Edit	Click this to edit the selected MAC address in the profile's list.
Remove	Click this to remove the selected MAC address from the profile's list.
#	This field is a sequential value, and it is not associated with a specific profile.
MAC	This field specifies a MAC address associated with this profile.
Description	This field displays a description for the MAC address associated with this profile. You can click the description to make it editable. Enter up to 60 characters, spaces and underscores allowed.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

34.4 MON Profile

34.4.1 Overview

This screen allows you to set up monitor mode configurations that allow your connected APs to scan for other wireless devices in the vicinity. Once detected, you can use the **MON Mode** screen (Section 8.4 on page 197) to classify them as either rogue or friendly and then manage them accordingly.

The MON Profile screen (Section 34.4.2 on page 613) creates preset monitor mode configurations that can be used by the APs.

34.4.1.1 What You Need To Know

The following terms and concepts may help as you read this chapter.

Active Scan

An active scan is performed when an 802.11-compatible wireless monitoring device is explicitly triggered to scan a specified channel or number of channels for other wireless devices broadcasting on the 802.11 frequencies by sending probe request frames.

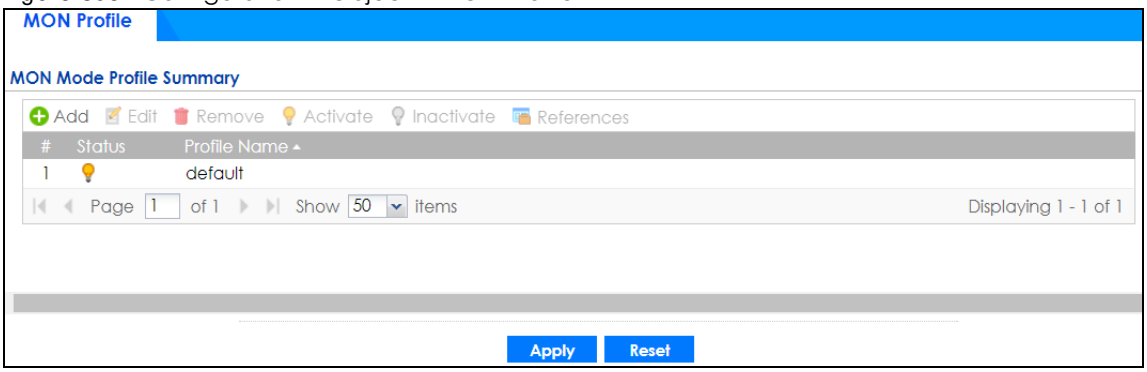
Passive Scan

A passive scan is performed when an 802.11-compatible monitoring device is set to periodically listen to a specified channel or number of channels for other wireless devices broadcasting on the 802.11 frequencies.

34.4.2 Configuring MON Profile

This screen allows you to create monitor mode configurations that can be used by the APs. To access this screen, login to the Web Configurator, and click Configuration > Object > MON Profile.

Figure 395 Configuration > Object > MON Profile



The following table describes the labels in this screen.

Table 251 Configuration > Object > MON Profile

LABEL	DESCRIPTION
Add	Click this to add a new monitor mode profile.
Edit	Click this to edit the selected monitor mode profile.
Remove	Click this to remove the selected monitor mode profile.
Activate	To turn on an entry, select it and click Activate.
Inactivate	To turn off an entry, select it and click Inactivate.
References	Click this to view which other objects are linked to the selected monitor mode profile (for example, an AP management profile).
#	This field is a sequential value, and it is not associated with a specific user.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.

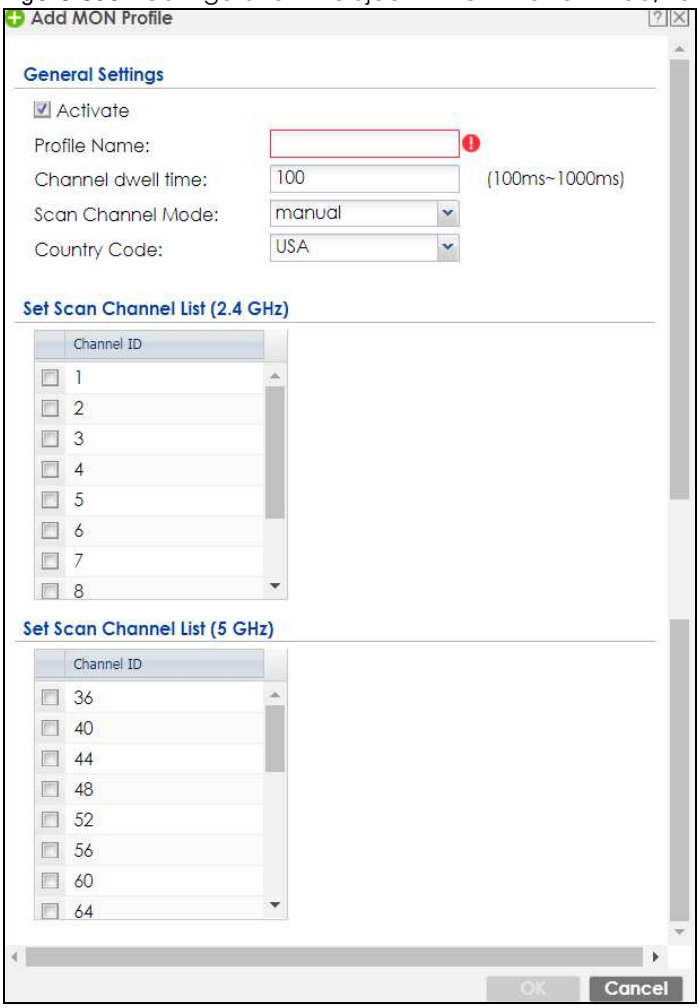
Table 251 Configuration > Object > MON Profile (continued)

LABEL	DESCRIPTION
Profile Name	This field indicates the name assigned to the monitor profile.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

34.4.3 Add/Edit MON Profile

This screen allows you to create a new monitor mode profile or edit an existing one. To access this screen, click the **Add** button or select and existing monitor mode profile and click the **Edit** button.

Figure 396 Configuration > Object > MON Profile > Add/Edit MON Profile



The following table describes the labels in this screen.

Table 252 Configuration > Object > MON Profile > Add/Edit MON Profile

LABEL	DESCRIPTION
Activate	Select this to activate this monitor mode profile.
Profile Name	This field indicates the name assigned to the monitor mode profile.

Table 252 Configuration > Object > MON Profile > Add/Edit MON Profile (continued)

LABEL	DESCRIPTION
Channel dwell time	Enter the interval (in milliseconds) before the AP switches to another channel for monitoring.
Scan Channel Mode	Select **auto** to have the AP switch to the next sequential channel once the **Channel dwell time** expires. Select **manual** to set specific channels through which to cycle sequentially when the **Channel dwell time** expires. Selecting this options makes the **Scan Channel List** options available.
Country Code	Select the country code of APs that are connected to the Zyxel Device to be the same as where the Zyxel Device is located/installed. The available channels vary depending on the country you selected. Be sure to select the correct/same country for both radios on an AP and all connected APs, in order to prevent roaming failure and interference to other systems. After changing the country code, the AP channel setting will be reset if your manually selected channel(s) are not valid in the new country code setting.
Set Scan Channel List (2.4 GHz)	Move a channel from the **Available channels** column to the **Channels selected** column to have the APs using this profile scan that channel when **Scan Channel Mode** is set to manual. These channels are limited to the 2 GHz range (802.11 b/g/n).
Set Scan Channel List (5 GHz)	Move a channel from the **Available channels** column to the **Channels selected** column to have the APs using this profile scan that channel when **Scan Channel Mode** is set to manual. These channels are limited to the 5 GHz range (802.11 a/n).
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

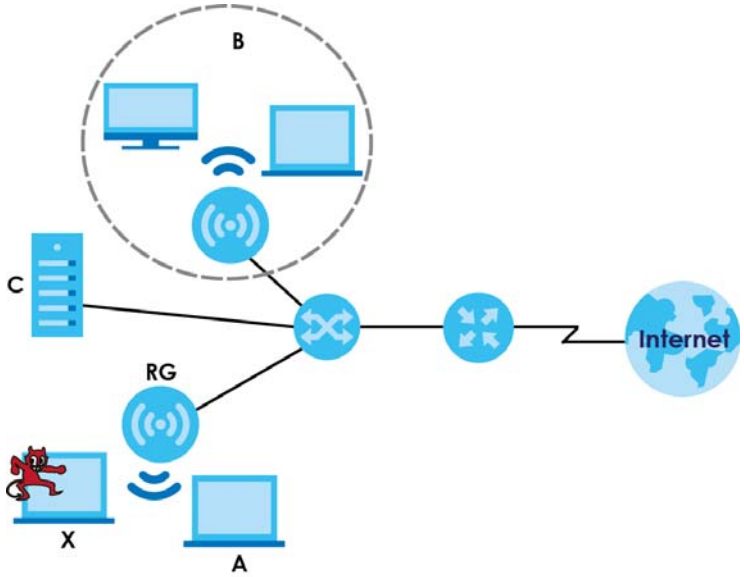
34.4.4 Technical Reference

The following section contains additional technical information about the features described in this chapter.

Rogue APs

Rogue APs are wireless access points operating in a network's coverage area that are not under the control of the network's administrators, and can open up holes in a network's security. Attackers can take advantage of a rogue AP's weaker (or non-existent) security to gain access to the network, or set up their own rogue APs in order to capture information from wireless clients. If a scan reveals a rogue AP, you can use commercially-available software to physically locate it.

Figure 397 Rogue AP Example



In the example above, a corporate network's security is compromised by a rogue AP (RG) set up by an employee at his workstation in order to allow him to connect his notebook computer wirelessly (A). The company's legitimate wireless network (the dashed ellipse B) is well-secured, but the rogue AP uses inferior security that is easily broken by an attacker (X) running readily available encryption-cracking software. In this example, the attacker now has access to the company network, including sensitive data stored on the file server (C).

Friendly APs

If you have more than one AP in your wireless network, you should also configure a list of "friendly" APs. Friendly APs are other wireless access points that are detected in your network, as well as any others that you know are not a threat (those from recognized networks, for example). It is recommended that you export (save) your list of friendly APs often, especially if you have a network with a large number of access points.

34.5 ZyMesh Overview

This section shows you how to configure ZyMesh profiles for the Zyxel Device to apply to the managed APs.

ZyMesh is a Zyxel proprietary protocol that creates wireless mesh links between managed APs to expand the wireless network. Managed APs can provide services or forward traffic between the Zyxel Device and wireless clients. ZyMesh also allows the Zyxel Device to use CAPWAP to automatically update the configuration settings on the managed APs (in repeater mode) through wireless connections. The managed APs (in repeater mode) are provisioned hop by hop.

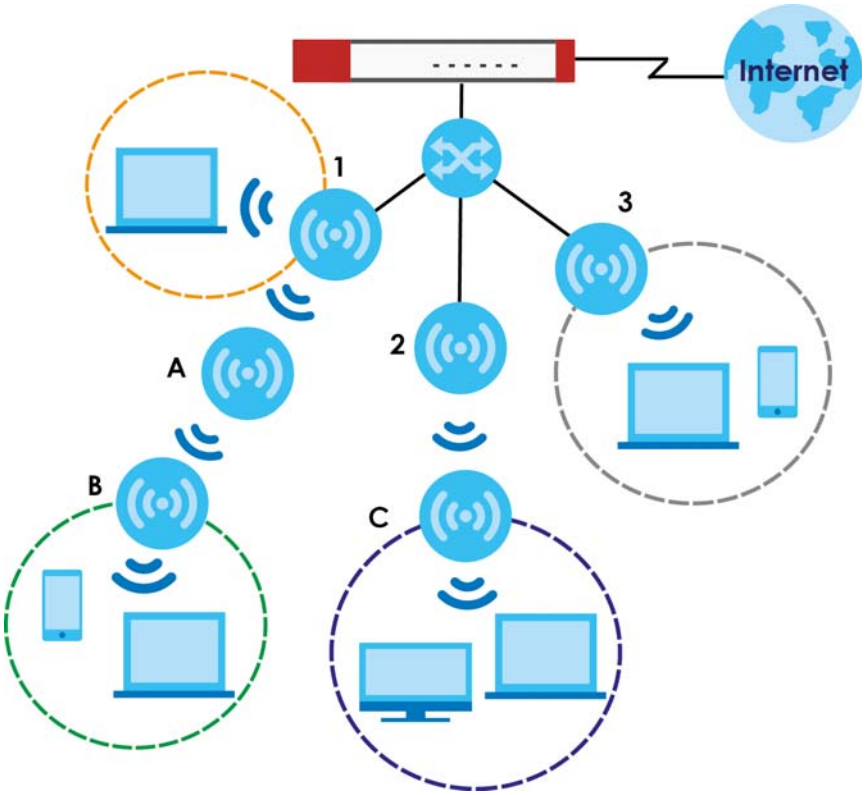
The managed APs in a ZyMesh must use the same SSID, channel number and pre-shared key. A manged AP can be either a root AP or repeater in a ZyMesh.

Note: All managed APs should be connected to the Zyxel Device directly to get the configuration file before being deployed to build a ZyMesh. Ensure you restart the managed AP after you change its operating mode using the **Configuration** > **Wireless** > **AP Management** screen (see Section 8.3 on page 185).

- Root AP: a managed AP that can transmit and receive data from the Zyxel Device via a wired Ethernet connection.
- Repeater: a managed AP that transmits and/or receives data from the Zyxel Device via a wireless connection through a root AP.

Note: When managed APs are deployed to form a ZyMesh for the first time, the root AP must be connected to an AP controller (the Zyxel Device).

In the following example, managed APs **1** and **2** act as a root AP and managed APs **A**, **B** and **C** are repeaters.



The maximum number of hops (the repeaters between a wireless client and the root AP) you can have in a ZyMesh varies according to how many wireless clients a managed AP can support.

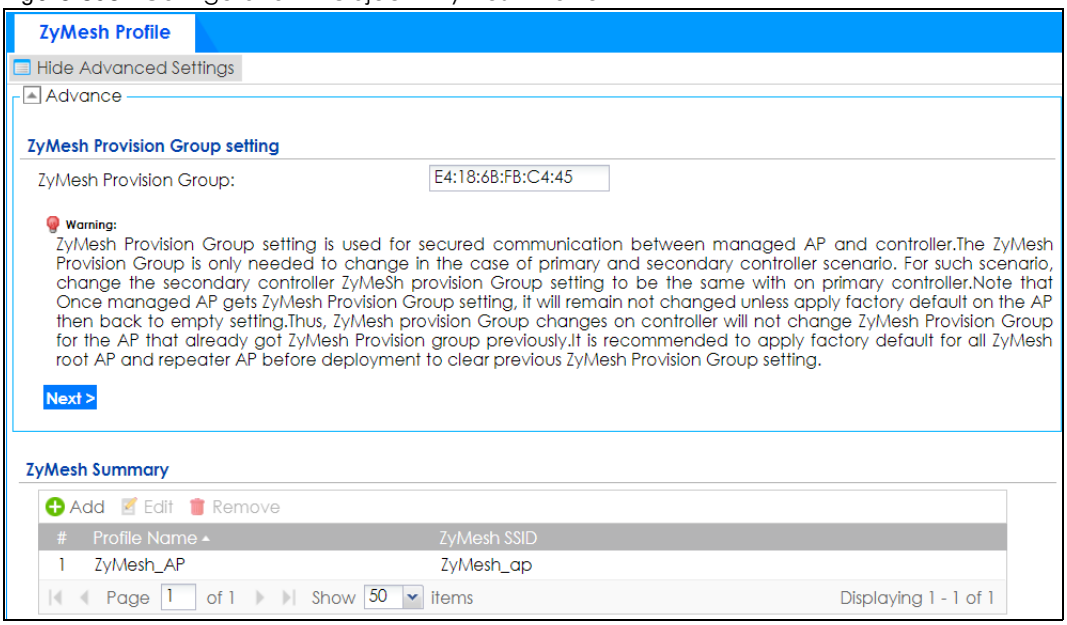
Note: A ZyMesh link with more hops has lower throughput.

Note: When the wireless connection between the root AP and the repeater is up, in order to prevent bridge loops, the repeater would not be able to transmit data through its Ethernet port(s). The repeater then could only receive power from a PoE device if you use PoE to provide power to the managed AP via an 8-ping Ethernet cable.

34.5.1 ZyMesh Profile

This screen allows you to manage and create ZyMesh profiles that can be used by the APs. To access this screen, click **Configuration > Object > ZyMesh Profile**.

Figure 398 Configuration > Object > ZyMesh Profile



The following table describes the labels in this screen.

Table 253 Configuration > Object > ZyMesh Profile

LABEL	DESCRIPTION
Hide / Show Advanced Settings	Click this to display a greater or lesser number of configuration fields.
ZyMesh Provision Group	By default, this shows the MAC address used by the Zyxel Device's first Ethernet port. Say you have two AP controllers (Zyxel Devices) in your network and the primary AP controller is not reachable. You may want to deploy the second/backup AP controller in your network to replace the primary AP controller. In this case, it is recommended that you enter the primary AP controller's **ZyMesh Provision Group** MAC address in the second AP controller's **ZyMesh Provision Group** field. If you didn't change the second AP controller's MAC address, managed APs in an existing ZyMesh can still access the networks through the second AP controller and communicate with each other. But new managed APs will not be able to communicate with the managed APs in the existing ZyMesh, which is set up with the primary AP controller's MAC address. To allow all managed APs to communicate in the same ZyMesh, you can just set the second AP controller to use the primary AP controller's MAC address. Otherwise, reset all managed APs to the factory defaults and set up a new ZyMesh with the second AP controller's MAC address.
Next	Click this button and follow the on-screen instructions to update the AP controller's MAC address.
Add	Click this to add a new profile.
Edit	Click this to edit the selected profile.
Remove	Click this to remove the selected profile.
#	This field is a sequential value, and it is not associated with a specific profile.

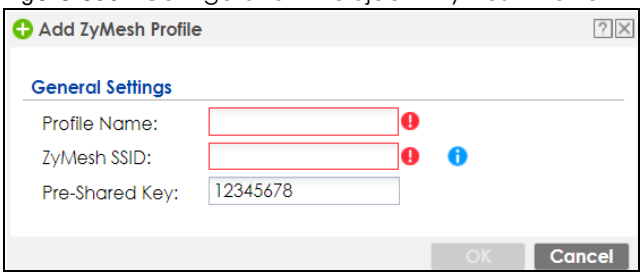
Table 253 Configuration > Object > ZyMesh Profile (continued)

LABEL	DESCRIPTION
Profile Name	This field indicates the name assigned to the profile.
ZyMesh SSID	This field shows the SSID specified in this ZyMesh profile.

34.5.2 Add/Edit ZyMesh Profile

This screen allows you to create a new ZyMesh profile or edit an existing one. To access this screen, click the **Add** button or select and existing profile and click the **Edit** button.

Figure 399 Configuration > Object > ZyMesh Profile > Add/Edit ZyMesh Profile



The following table describes the labels in this screen.

Table 254 Configuration > Object > ZyMesh Profile > Add/Edit ZyMesh Profile

LABEL	DESCRIPTION
Profile Name	Enter up to 31 alphanumeric characters for the profile name.
ZyMesh SSID	Enter the SSID with which you want the managed AP to connect to a root AP or repeater to build a ZyMesh link. Note: The ZyMesh SSID is hidden in the outgoing beacon frame so a wireless device cannot obtain the SSID through scanning using a site survey tool.
Pre-Shared Key	Enter a pre-shared key of between 8 and 63 case-sensitive ASCII characters (including spaces and symbols) or 64 hexadecimal characters. The key is used to encrypt the wireless traffic between the APs.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

34.6 Address/Geo IP Overview

Address objects can represent a single IP address or a range of IP addresses. Address groups are composed of address objects and other address groups.

- The **Address** screen (Section 34.6.2 on page 620) provides a summary of all addresses in the Zyxel Device. Use the **Address Add/Edit** screen to create a new address or edit an existing one.
- Use the **Address Group** summary screen (Section 34.6.3 on page 624) and the **Address Group Add/Edit** screen, to maintain address groups in the Zyxel Device.
- Use the **Geo IP** screen (Section 34.6.4 on page 626) to update the database of country-to-IP address mappings and to manually configure country-to-IP address mappings.

34.6.1 What You Need To Know

Address objects and address groups are used in dynamic routes, security policies, application patrol, content filtering, and VPN connection policies. For example, addresses are used to specify where content restrictions apply in content filtering. Please see the respective sections for more information about how address objects and address groups are used in each one.

Address groups are composed of address objects and address groups. The sequence of members in the address group is not important.

34.6.2 Address Summary Screen

The address screens are used to create, maintain, and remove addresses. There are the types of address objects:

- **HOST** - the object uses an **IP Address** to define a host address
- **RANGE** - the object uses a range address defined by a **Starting IP Address** and an **Ending IP Address**
- **SUBNET** - the object uses a network address defined by a **Network** IP address and **Netmask** subnet mask
- **INTERFACE IP** - the object uses the IP address of one of the Zyxel Device's interfaces
- **INTERFACE SUBNET** - the object uses the subnet mask of one of the Zyxel Device's interfaces
- **INTERFACE GATEWAY** - the object uses the gateway IP address of one of the Zyxel Device's interfaces
- **GEOGRAPHY** - the object uses the IP addresses of a country to represent a country

FQDN - the object uses a FQDN (Fully Qualified Domain Name). An FQDN consists of a host and domain name. For example, www.zyxel.com is a fully qualified domain name, where "www" is the host, "zyxel" is the second-level domain, and "com" is the top level domain. mail.myZyxel.com.tw is also an FQDN, where "mail" is the host, "myZyxel" is the third-level domain, "com" is the second-level domain, and "tw" is the top level domain.

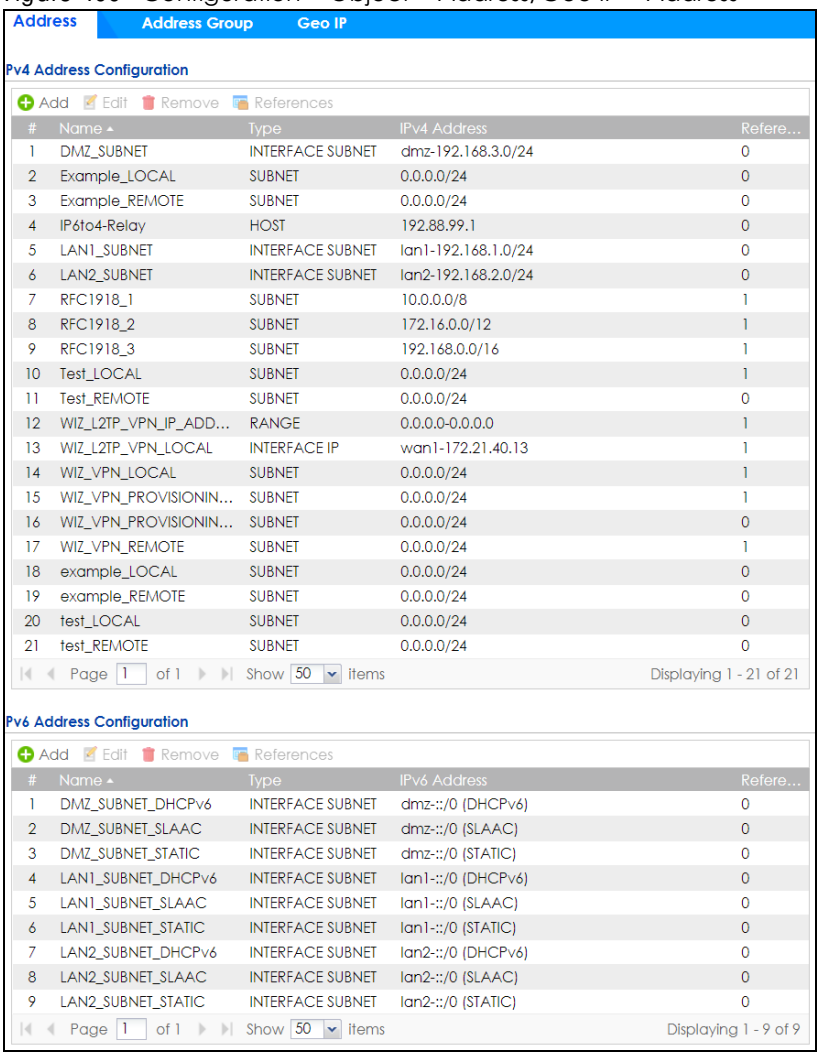
Table 255 FQDN Example

HTTP://	WWW.	ZYXEL.	COM
	host name	second-level domain name	top-level domain name
	FQDN		
Uniform Resource Locator (URL)			

In an address FQDN object, you can also use one wildcard. For example, *.zyxel.com. An FQDN is resolved to its IP address using the DNS server configured on the Zyxel Device.

The **Address** screen provides a summary of all addresses in the Zyxel Device. To access this screen, click **Configuration** > **Object** > **Address** > **Address**. Click a column's heading cell to sort the table entries by that column's criteria. Click the heading cell again to reverse the sort order.

Figure 400 Configuration > Object > Address/Geo IP > Address



The following table describes the labels in this screen. See Section 34.6.2.1 on page 622 for more information as well.

Table 256 Configuration > Object > Address/Geo IP > Address

LABEL	DESCRIPTION
IPv4 Address Configuration	
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with a specific address.
Name	This field displays the configured name of each address object.
Type	This field displays the type of each address object. "**INTERFACE**" means the object uses the settings of one of the Zyxel Device's interfaces.
IPv4 Address	This field displays the IPv4 addresses represented by each address object. If the object's settings are based on one of the Zyxel Device's interfaces, the name of the interface displays first followed by the object's current address settings.

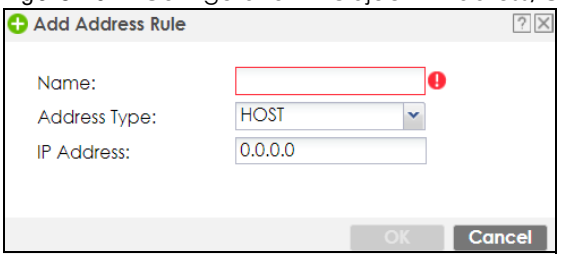
Table 256 Configuration > Object > Address/Geo IP > Address (continued)

LABEL	DESCRIPTION
Reference	This displays the number of times an object reference is used in a profile.
IPv6 Address Configuration	
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with a specific address.
Name	This field displays the configured name of each address object.
Type	This field displays the type of each address object. "INTERFACE" means the object uses the settings of one of the Zyxel Device's interfaces.
IPv6 Address	This field displays the IPv6 addresses represented by each address object. If the object's settings are based on one of the Zyxel Device's interfaces, the name of the interface displays first followed by the object's current address settings.
Reference	This displays the number of times an object reference is used in a profile.

34.6.2.1 IPv4 Address Add/Edit Screen

The **Configuration > Object > Address/GeoIP > Address > Add/Edit (IPv4)** screen allows you to create a new address or edit an existing one. To access this screen, go to the **Address** screen (see Section 34.6.2 on page 620), and click either the **Add** icon or an **Edit** icon in the **IPv4 Address Configuration** section.

Figure 401 Configuration > Object > Address/GeoIP > Address > Add/Edit (IPv4) t



The following table describes the labels in this screen.

Table 257 Configuration > Object > Address/GeoIP > Address > Add/Edit (IPv4)

LABEL	DESCRIPTION
Name	Type the name used to refer to the address. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Address Type	Select the type of address you want to create. Note: The Zyxel Device automatically updates address objects that are based on an interface's IP address, subnet, or gateway if the interface's IP address settings change. For example, if you change 1's IP address, the Zyxel Device automatically updates the corresponding interface-based, LAN subnet address object.
IP Address	This field is only available if the **Address Type** is **HOST**. This field cannot be blank. Enter the IP address that this address object represents.
Starting IP Address	This field is only available if the **Address Type** is **RANGE**. This field cannot be blank. Enter the beginning of the range of IP addresses that this address object represents.

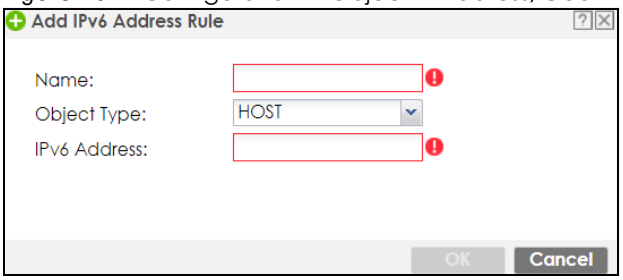
Table 257 Configuration > Object > Address/GeoIP > Address > Add/Edit (IPv4)

LABEL	DESCRIPTION
Ending IP Address	This field is only available if the **Address Type** is **RANGE**. This field cannot be blank. Enter the end of the range of IP address that this address object represents.
Network	This field is only available if the **Address Type** is **SUBNET**, in which case this field cannot be blank. Enter the IP address of the network that this address object represents.
Netmask	This field is only available if the **Address Type** is **SUBNET**, in which case this field cannot be blank. Enter the subnet mask of the network that this address object represents. Use dotted decimal format.
Interface	If you selected **INTERFACE IP**, **INTERFACE SUBNET**, or **INTERFACE GATEWAY** as the **Address Type**, use this field to select the interface of the network that this address object represents.
Country	If you selected **Geography** as the **Address Type**, use this field to select a country.
FQDN	If you selected **FQDN** as the **Address Type**, use this field to enter a fully qualified domain name.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

34.6.2.2 IPv6 Address Add/Edit Screen

The **Configuration > Object > Address/GeoIP > Address > Add/Edit (IPv6)** screen allows you to create a new address or edit an existing one. To access this screen, go to the **Address** screen (see Section 34.6.2 on page 620), and click either the **Add** icon or an **Edit** icon in the **IPv6 Address Configuration** section.

Figure 402 Configuration > Object > Address/GeoIP > Address > Add/Edit (IPv6)



The following table describes the labels in this screen.

Table 258 Configuration > Object > Address/GeoIP > Address > Add/Edit (IPv6)

LABEL	DESCRIPTION
Name	Type the name used to refer to the address. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Object Type	Select the type of address you want to create. Note: The Zyxel Device automatically updates address objects that are based on an interface's IP address, subnet, or gateway if the interface's IP address settings change. For example, if you change 1's IP address, the Zyxel Device automatically updates the corresponding interface-based, LAN subnet address object.
IPv6 Address	This field is only available if the **Address Type** is **HOST**. This field cannot be blank. Enter the IP address that this address object represents.
IPv6 Starting Address	This field is only available if the **Address Type** is **RANGE**. This field cannot be blank. Enter the beginning of the range of IP addresses that this address object represents.
IPv6 Ending Address	This field is only available if the **Address Type** is **RANGE**. This field cannot be blank. Enter the end of the range of IP address that this address object represents.

Table 258 Configuration > Object > Address/GeoIP > Address > Add/Edit (IPv6)

LABEL	DESCRIPTION
IPv6 Address Prefix	This field is only available if the **Address Type** is **SUBNET**. This field cannot be blank. Enter the IPv6 address prefix that the Zyxel Device uses for the LAN IPv6 address.
Interface	If you selected **INTERFACE IP**, **INTERFACE SUBNET**, or **INTERFACE GATEWAY** as the **Address Type**, use this field to select the interface of the network that this address object represents.
IPv6 Address Type	Select whether the IPv6 address is a link-local IP address (**LINK LOCAL**), static IP address (**STATIC**), an IPv6 StateLess Address Auto Configuration IP address (**SLAAC**), or is obtained from a DHCPv6 server (**DHCPv6**).
Country	If you selected **Geography** as the **Address Type**, use this field to select a country.
FQDN	If you selected **FQDN** as the **Address Type**, use this field to enter a fully qualified domain name.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

34.6.3 Address Group Summary Screen

The **Address Group** screen provides a summary of all address groups. To access this screen, click **Configuration** > **Object** > **Address/ Geo IP** > **Address Group**. Click a column's heading cell to sort the table entries by that column's criteria. Click the heading cell again to reverse the sort order.

Figure 403 Configuration > Object > Address/Geo IP > Address Group

The following table describes the labels in this screen. See Section 34.6.3.1 on page 625 for more information as well.

Table 259 Configuration > Object > Address/Geo IP > Address Group

LABEL	DESCRIPTION
IPv4 Address Group Configuration	
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with a specific address group.
Name	This field displays the name of each address group.
Description	This field displays the description of each address group, if any.
Reference	This displays the number of times an object reference is used in a profile.
IPv6 Address Group Configuration	

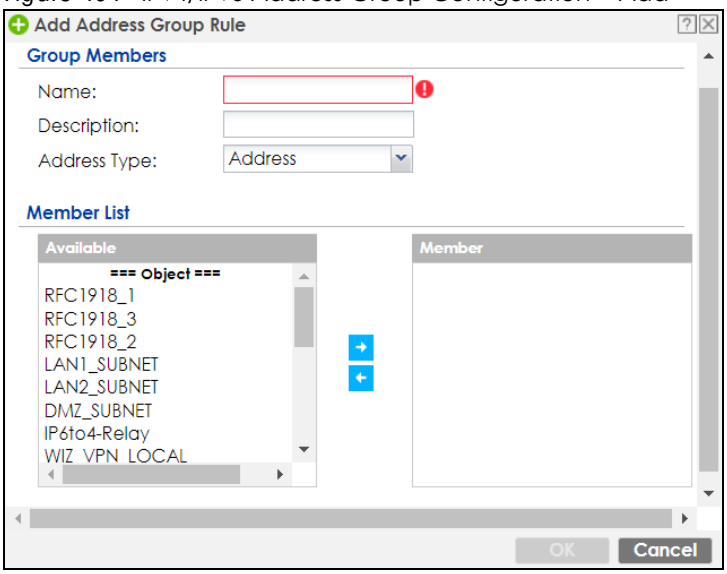
Table 259 Configuration > Object > Address/Geo IP > Address Group (continued)

LABEL	DESCRIPTION
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with a specific address group.
Name	This field displays the name of each address group.
Description	This field displays the description of each address group, if any.
Reference	This displays the number of times an object reference is used in a profile.

34.6.3.1 Address Group Add/Edit Screen

The **Address Group Add/Edit** screen allows you to create a new address group or edit an existing one. To access this screen, go to the **Address Group** screen (see Section 34.6.3 on page 624), and click either the **Add** icon or an **Edit** icon in the **IPv4 Address Group Configuration** or **IPv6 Address Group Configuration** section.

Figure 404 IPv4/IPv6 Address Group Configuration > Add



The following table describes the labels in this screen.

Table 260 IPv4/IPv6 Address Group Configuration > Add

LABEL	DESCRIPTION
Name	Enter a name for the address group. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Description	This field displays the description of each address group, if any. You can use up to 60 characters, punctuation marks, and spaces.

Table 260 IPv4/IPv6 Address Group Configuration > Add (continued)

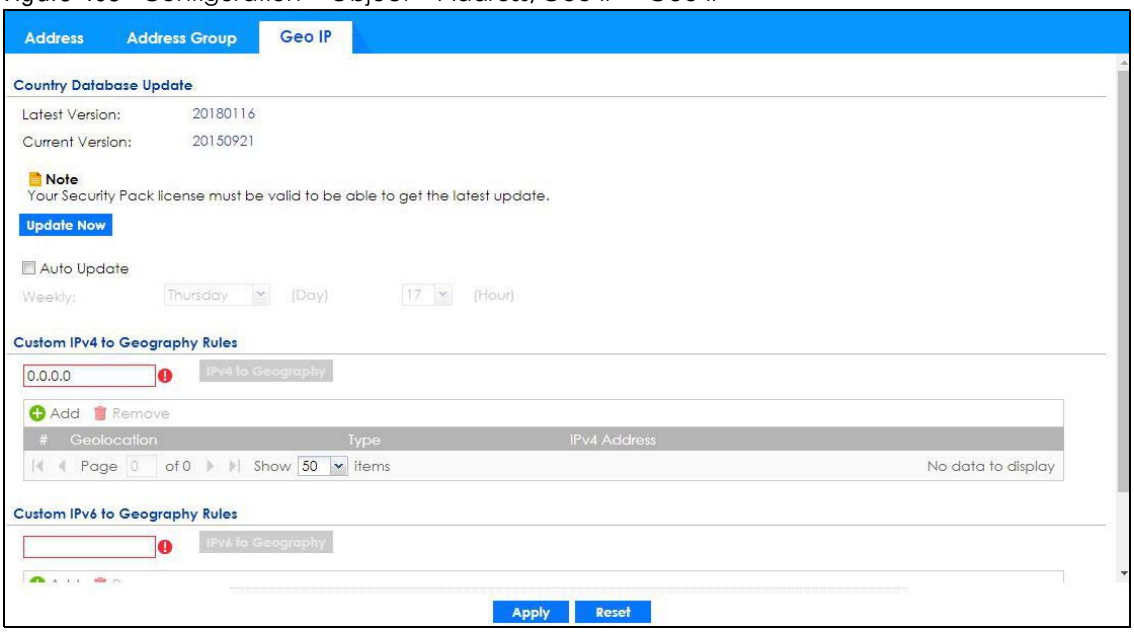
LABEL	DESCRIPTION
Address Type	Select the type of address you want to create. Note: The Zyxel Device automatically updates address objects that are based on an interface's IP address, subnet, or gateway if the interface's IP address settings change. For example, if you change 1's IP address, the Zyxel Device automatically updates the corresponding interface-based, LAN subnet address object.
Member List	The **Member** list displays the names of the address and address group objects that have been added to the address group. The order of members is not important. Select items from the **Available** list that you want to be members and move them to the **Member** list. You can double-click a single entry to move it or use the [Shift] or [Ctrl] key to select multiple entries and use the arrow button to move them. Move any members you do not want included to the **Available** list. Note: You cannot mix FQDN objects with other objects in an FQDN group.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

34.6.4 Geo IP Summary Screen

Use this screen to update the database of country-to-IP address mappings and manually configure custom country-to-IP address mappings in geographic address objects. You can then use geographic address objects in security policies to forward or deny traffic to whole countries or regions.

Click a column's heading cell to sort the table entries by that column's criteria. Click the heading cell again to reverse the sort order.

Figure 405 Configuration > Object > Address/Geo IP > Geo IP



The following table describes the labels in this screen.

Table 261 Configuration > Object > Address/Geo IP > Geo IP

LABEL	DESCRIPTION
Country Database Update	
Latest Version	This is the latest country-to-IP address database version on myZyxel. You need to have a registered Content Filter Service license. Current Version	This is the country-to-IP address database version currently on the Zyxel Device.
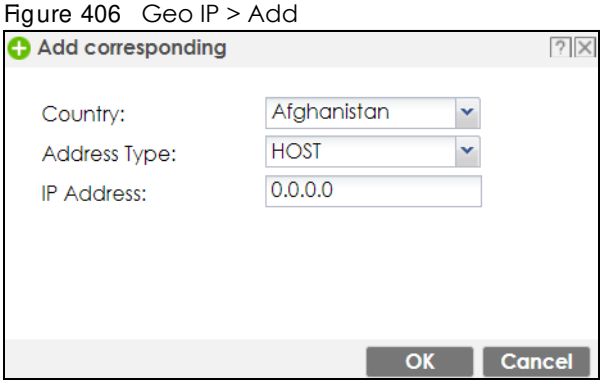
Update Now	Click this to check for the latest country-to-IP address database version on myZyxel. The latest version is downloaded to the Zyxel Device and replaces the current version if it is newer. There are logs to show the update status. You need to have a registered Content Filter Service license.
Auto Update	If you want the Zyxel Device to check weekly for the latest country-to-IP address database version on myZyxel, select the checkbox, choose a day and time each week and then click **Apply**. The default day and time displayed is the Zyxel Device current day and time.
Custom IPv4/IPv6 to Geography Rules	
IPv4/IPv6 to Geography	Enter an IP address, then click this button to query which country this IP address belongs to.
Add	Click this to create a new entry.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
#	This field is a sequential value, and it is not associated with a specific entry.
Geolocation	This field displays the name of the country or region that is associated with this IP address.
Type	This field displays whether this address object is **HOST**, **RANGE** or **SUBNET**.
IPv4/IPv6 Address	This field displays the IPv4/IPv6 addresses represented by the type of address object.

34.6.4.1 Add Custom IPv4/IPv6 Address to Geography Screen

This screen allows you to create a new geography-to-IP address mapping. To access this screen, go to the **Geo IP** screen (see Section 34.6.4 on page 626), and click the **Add** icon in the **Custom IPv4 to Geography Rules** or **Custom IPv6 to Geography Rules** section.

Figure 406 Geo IP > Add



The following table describes the labels in this screen.

Table 262 Geo IP > Add

LABEL	DESCRIPTION
Country	Select the country or region that maps to this IP address.
Address Type	Select the type of address you want to create. Choices are: HOST, RANGE, SUBNET.
IP Address	This field is only available if the Address Type is HOST. This field cannot be blank. Enter the IP address that this address object represents.
IP Starting Address	This field is only available if the Address Type is RANGE. This field cannot be blank. Enter the beginning of the range of IP addresses that this address object represents.
IP Ending Address	This field is only available if the Address Type is RANGE. This field cannot be blank. Enter the end of the range of IP address that this address object represents.
Network / Netmask	These fields are only available if the IPv4 Address Type is SUBNET. They cannot be blank. Enter the network IP and subnet mask that defines the IPv4 subnet.
IPv6 Address Prefix	This field is only available if the IPv6 Address Type is SUBNET. This field cannot be blank. Enter the IPv6 address prefix that the Zyxel Device uses for the LAN IPv6 address.
OK	Click OK to save your changes back to the Zyxel Device.
Cancel	Click Cancel to exit this screen without saving your changes.

34.7 Service Overview

Use service objects to define TCP applications, UDP applications, and ICMP messages. You can also create service groups to refer to multiple service objects in other features.

- Use the Service screens (Section 34.7.2 on page 629) to view and configure the Zyxel Device's list of services and their definitions.
- Use the Service Group screens (Section 34.7.2 on page 629) to view and configure the Zyxel Device's list of service groups.

34.7.1 What You Need to Know

IP Protocols

IP protocols are based on the eight-bit protocol field in the IP header. This field represents the next-level protocol that is sent in this packet. This section discusses three of the most common IP protocols.

Computers use Transmission Control Protocol (TCP, IP protocol 6) and User Datagram Protocol (UDP, IP protocol 17) to exchange data with each other. TCP guarantees reliable delivery but is slower and more complex. Some uses are FTP, HTTP, SMTP, and TELNET. UDP is simpler and faster but is less reliable. Some uses are DHCP, DNS, RIP, and SNMP.

TCP creates connections between computers to exchange data. Once the connection is established, the computers exchange data. If data arrives out of sequence or is missing, TCP puts it in sequence or waits for the data to be re-transmitted. Then, the connection is terminated.

In contrast, computers use UDP to send short messages to each other. There is no guarantee that the messages arrive in sequence or that the messages arrive at all.

Both TCP and UDP use ports to identify the source and destination. Each port is a 16-bit number. Some port numbers have been standardized and are used by low-level system processes; many others have no particular meaning.

Unlike TCP and UDP, Internet Control Message Protocol (ICMP, IP protocol 1) is mainly used to send error messages or to investigate problems. For example, ICMP is used to send the response if a computer cannot be reached. Another use is ping. ICMP does not guarantee delivery, but networks often treat ICMP messages differently, sometimes looking at the message itself to decide where to send it.

Service Objects and Service Groups

Use service objects to define IP protocols.

- TCP applications
- UDP applications
- ICMP messages
- user-defined services (for other types of IP protocols)

These objects are used in policy routes, security policies, and IDP profiles.

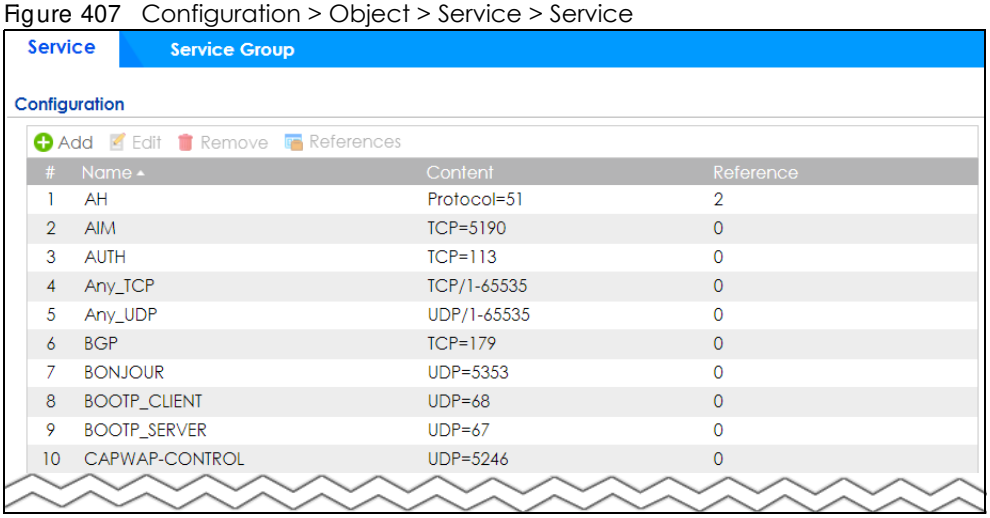
Use service groups when you want to create the same rule for several services, instead of creating separate rules for each service. Service groups may consist of services and other service groups. The sequence of members in the service group is not important.

34.7.2 The Service Summary Screen

The **Service** summary screen provides a summary of all services and their definitions. In addition, this screen allows you to add, edit, and remove services.

To access this screen, log in to the Web Configurator, and click **Configuration** > **Object** > **Service** > **Service**. Click a column's heading cell to sort the table entries by that column's criteria. Click the heading cell again to reverse the sort order.

Figure 407 Configuration > Object > Service > Service



The following table describes the labels in this screen.

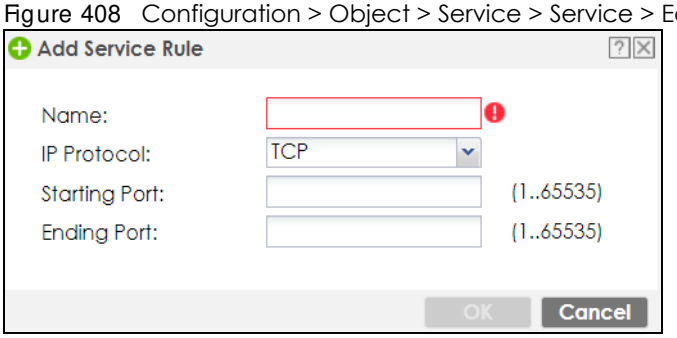
Table 263 Configuration > Object > Service > Service

LABEL	DESCRIPTION
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with a specific service.
Name	This field displays the name of each service.
Content	This field displays a description of each service.
Reference	This displays the number of times an object reference is used in a profile.

34.7.2.1 The Service Add/Edit Screen

The **Service Add/Edit** screen allows you to create a new service or edit an existing one. To access this screen, go to the **Service** screen (see Section 34.7.2 on page 629), and click either the **Add** icon or an **Edit** icon.

Figure 408 Configuration > Object > Service > Service > Edit



The following table describes the labels in this screen.

Table 264 Configuration > Object > Service > Service > Edit

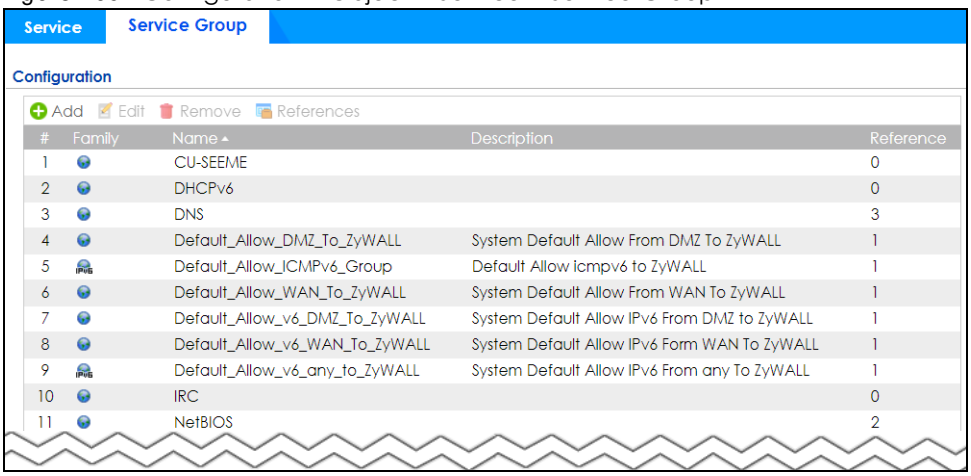
LABEL	DESCRIPTION
Name	Type the name used to refer to the service. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
IP Protocol	Select the protocol the service uses. Choices are: **TCP**, **UDP**, **ICMP**, **ICMPv6**, and **User Defined**.
Starting Port Ending Port	This field appears if the **IP Protocol** is **TCP** or **UDP**. Specify the port number(s) used by this service. If you fill in one of these fields, the service uses that port. If you fill in both fields, the service uses the range of ports.
ICMP Type	This field appears if the **IP Protocol** is **ICMP** or **ICMPv6**. Select the ICMP message used by this service. This field displays the message text, not the message number.
IP Protocol Number	This field appears if the **IP Protocol** is **User Defined**. Enter the number of the next-level protocol (IP protocol). Allowed values are 1 - 255.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

34.7.3 The Service Group Summary Screen

The **Service Group** summary screen provides a summary of all service groups. In addition, this screen allows you to add, edit, and remove service groups.

To access this screen, log in to the Web Configurator, and click **Configuration** > **Object** > **Service** > **Service Group**.

Figure 409 Configuration > Object > Service > Service Group



The following table describes the labels in this screen. See Section 34.7.3.1 on page 632 for more information as well.

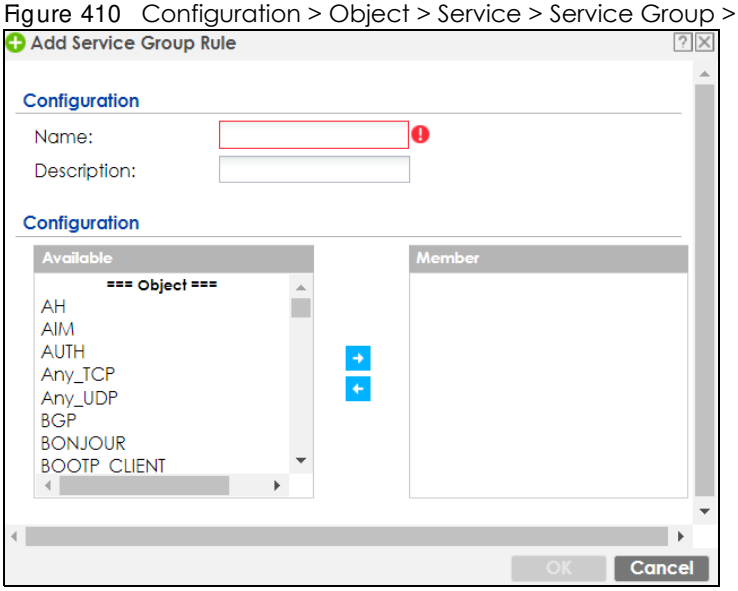
Table 265 Configuration > Object > Service > Service Group

LABEL	DESCRIPTION
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with a specific service group.
Family	This field displays the Server Group supported type, which is according to your configurations in the **Service Group Add/Edit** screen. There are 3 types of families: • : Supports IPv4 only • : Supports IPv6 only • : Supports both IPv4 and IPv6
Name	This field displays the name of each service group. By default, the Zyxel Device uses services starting with "Default_Allow_" in the security policies to allow certain services to connect to the Zyxel Device.
Description	This field displays the description of each service group, if any.
Reference	This displays the number of times an object reference is used in a profile.

34.7.3.1 The Service Group Add/Edit Screen

The **Service Group Add/Edit** screen allows you to create a new service group or edit an existing one. To access this screen, go to the **Service Group** screen (see Section 34.7.3 on page 631), and click either the **Add** icon or an **Edit** icon.

Figure 410 Configuration > Object > Service > Service Group > Edit



The following table describes the labels in this screen.

Table 266 Configuration > Object > Service > Service Group > Edit

LABEL	DESCRIPTION
Name	Enter the name of the service group. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Description	Enter a description of the service group, if any. You can use up to 60 printable ASCII characters.
Configuration	The **Member** list displays the names of the service and service group objects that have been added to the service group. The order of members is not important. Select items from the **Available** list that you want to be members and move them to the **Member** list. You can double-click a single entry to move it or use the [Shift] or [Ctrl] key to select multiple entries and use the arrow button to move them. Move any members you do not want included to the **Available** list.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

34.8 Schedule Overview

Use schedules to set up one-time and recurring schedules for policy routes, security policies, application patrol, and content filtering. The Zyxel Device supports one-time and recurring schedules. One-time schedules are effective only once, while recurring schedules usually repeat. Both types of schedules are based on the current date and time in the Zyxel Device.

Note: Schedules are based on the Zyxel Device's current date and time.

- Use the **Schedule** summary screen (Section 34.8.2 on page 633) to see a list of all schedules in the Zyxel Device.
- Use the **One-Time Schedule Add/Edit** screen (Section 34.8.2.1 on page 634) to create or edit a one-time schedule.
- Use the **Recurring Schedule Add/Edit** screen (Section 34.8.2.2 on page 635) to create or edit a recurring schedule.
- Use the Schedule Group screen (Section 34.8.3 on page 636) to merge individual schedule objects as one object.

34.8.1 What You Need to Know

One-time Schedules

One-time schedules begin on a specific start date and time and end on a specific stop date and time. One-time schedules are useful for long holidays and vacation periods.

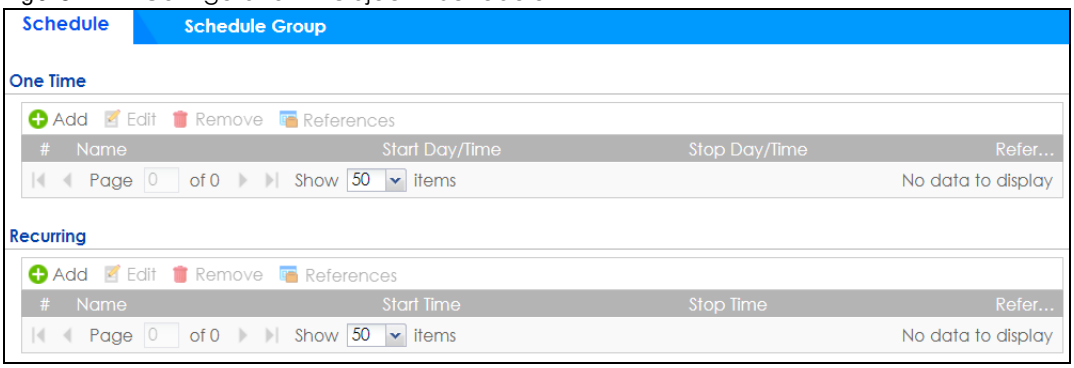
Recurring Schedules

Recurring schedules begin at a specific start time and end at a specific stop time on selected days of the week (Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, and Saturday). Recurring schedules always begin and end in the same day. Recurring schedules are useful for defining the workday and off-work hours.

34.8.2 The Schedule Screen

The **Schedule** screen provides a summary of all schedules in the Zyxel Device. To access this screen, click **Configuration** > **Object** > **Schedule**.

Figure 411 Configuration > Object > Schedule



The following table describes the labels in this screen. See Section 34.8.2.1 on page 634 and Section 34.8.2.2 on page 635 for more information as well.

Table 267 Configuration > Object > Schedule

LABEL	DESCRIPTION
One Time	
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.

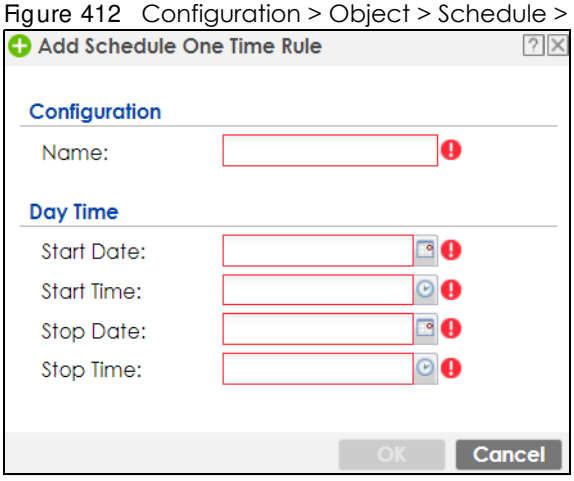
Table 267 Configuration > Object > Schedule (continued)

LABEL	DESCRIPTION
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with a specific schedule.
Name	This field displays the name of the schedule, which is used to refer to the schedule.
Start Day / Time	This field displays the date and time at which the schedule begins.
Stop Day / Time	This field displays the date and time at which the schedule ends.
Reference	This displays the number of times an object reference is used in a profile.
Recurring	
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with a specific schedule.
Name	This field displays the name of the schedule, which is used to refer to the schedule.
Start Time	This field displays the time at which the schedule begins.
Stop Time	This field displays the time at which the schedule ends.
Reference	This displays the number of times an object reference is used in a profile.

34.8.2.1 The One-Time Schedule Add/Edit Screen

The **One-Time Schedule Add/Edit** screen allows you to define a one-time schedule or edit an existing one. To access this screen, go to the **Schedule** screen (see Section 34.8.2 on page 633), and click either the **Add** icon or an **Edit** icon in the **One Time** section.

Figure 412 Configuration > Object > Schedule > Edit (One Time)



The following table describes the labels in this screen.

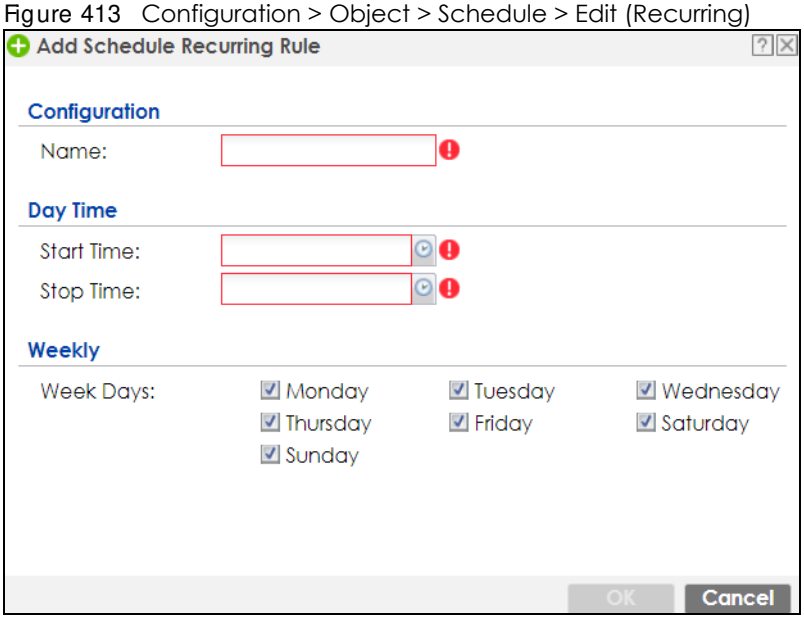
Table 268 Configuration > Object > Schedule > Edit (One Time)

LABEL	DESCRIPTION
Configuration	
Name	Type the name used to refer to the one-time schedule. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Day Time	
StartDate	Specify the year, month, and day when the schedule begins. • Year - 1900 - 2999 • Month - 1 - 12 • Day - 1 - 31 (it is not possible to specify illegal dates, such as February 31.)
StartTime	Specify the hour and minute when the schedule begins. • Hour - 0 - 23 • Minute - 0 - 59
StopDate	Specify the year, month, and day when the schedule ends. • Year - 1900 - 2999 • Month - 1 - 12 • Day - 1 - 31 (it is not possible to specify illegal dates, such as February 31.)
StopTime	Specify the hour and minute when the schedule ends. • Hour - 0 - 23 • Minute - 0 - 59
OK	Click OK to save your changes back to the Zyxel Device.
Cancel	Click Cancel to exit this screen without saving your changes.

34.8.2.2 The Recurring Schedule Add/Edit Screen

The Recurring Schedule Add/Edit screen allows you to define a recurring schedule or edit an existing one. To access this screen, go to the Schedule screen (see Section 34.8.2 on page 633), and click either the Add icon or an Edit icon in the Recurring section.

Figure 413 Configuration > Object > Schedule > Edit (Recurring)



The **Year**, **Month**, and **Day** columns are not used in recurring schedules and are disabled in this screen. The following table describes the remaining labels in this screen.

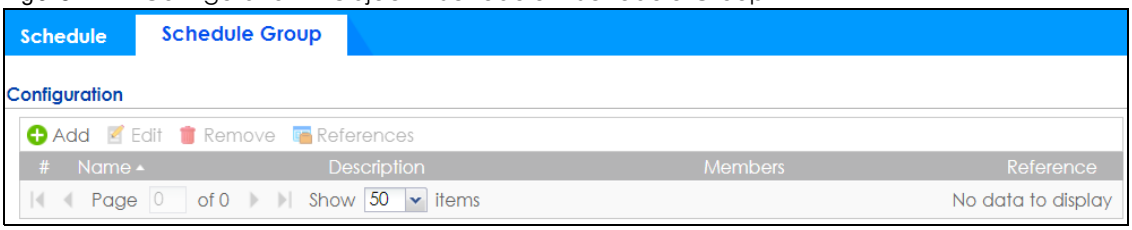
Table 269 Configuration > Object > Schedule > Edit (Recurring)

LABEL	DESCRIPTION
Configuration	
Name	Type the name used to refer to the recurring schedule. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Date Time	
StartTime	Specify the hour and minute when the schedule begins each day. • **Hour** - 0 - 23 • **Minute** - 0 - 59
StopTime	Specify the hour and minute when the schedule ends each day. • **Hour** - 0 - 23 • **Minute** - 0 - 59
Weekly	
Week Days	Select each day of the week the recurring schedule is effective.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

34.8.3 The Schedule Group Screen

The **Schedule Group** screen provides a summary of all groups of schedules in the Zyxel Device. To access this screen, click **Configuration** > **Object** > **Schedule** >**Group**.

Figure 414 Configuration > Object > Schedule > Schedule Group



The following table describes the fields in the above screen.

Table 270 Configuration > Object > Schedule > Schedule Group

LABEL	DESCRIPTION
Configuration	
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with a specific schedule.

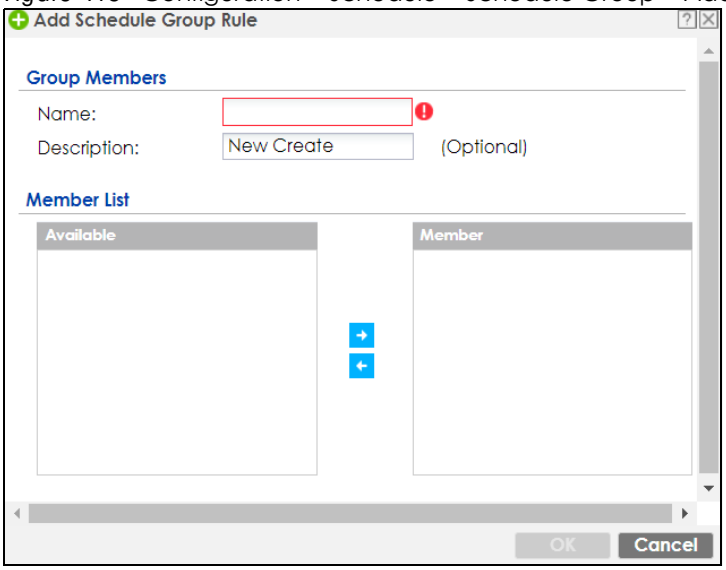
Table 270 Configuration > Object > Schedule > Schedule Group

LABEL	DESCRIPTION
Name	This field displays the name of the schedule group, which is used to refer to the schedule.
Description	This field displays the description of the schedule group.
Members	This field lists the members in the schedule group. Each member is separated by a comma.
Reference	This displays the number of times an object reference is used in a profile.

34.8.3.1 The Schedule Group Add/Edit Screen

The **Schedule Group Add/Edit** screen allows you to define a schedule group or edit an existing one. To access this screen, go to the **Schedule** screen (see), and click either the **Add** icon or an **Edit** icon in the **Schedule Group** section.

Figure 415 Configuration > Schedule > Schedule Group > Add



The following table describes the fields in the above screen.

Table 271 Configuration > Schedule > Schedule Group > Add

LABEL	DESCRIPTION
Group Members	
Name	Type the name used to refer to the recurring schedule. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Description	Enter a description of the service group, if any. You can use up to 60 printable ASCII characters.
Member List	The **Member** list displays the names of the service and service group objects that have been added to the service group. The order of members is not important. Select items from the **Available** list that you want to be members and move them to the **Member** list. You can double-click a single entry to move it or use the [Shift] or [Ctrl] key to select multiple entries and use the arrow button to move them. Move any members you do not want included to the **Available** list.

Table 271 Configuration > Schedule > Schedule Group > Add

LABEL	DESCRIPTION
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

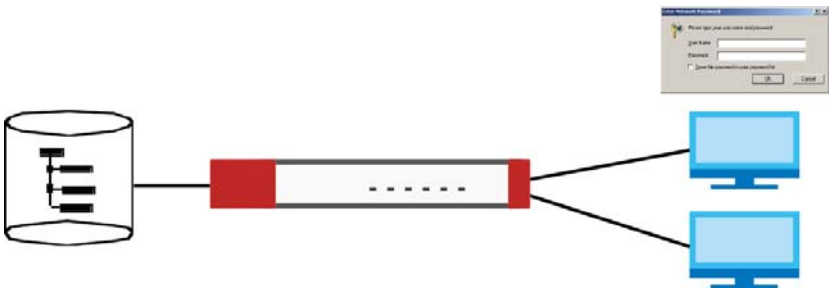
34.9 AAA Server Overview

You can use a AAA (Authentication, Authorization, Accounting) server to provide access control to your network. The AAA server can be a Active Directory, LDAP, or RADIUS server. Use the **AAA Server** screens to create and manage objects that contain settings for using AAA servers. You use AAA server objects in configuring ext-group-user user objects and authentication method objects (see Chapter 34 on page 647).

34.9.1 Directory Service (AD/LDAP)

LDAP/AD allows a client (the Zyxel Device) to connect to a server to retrieve information from a directory. A network example is shown next.

Figure 416 Example: Directory Service Client and Server



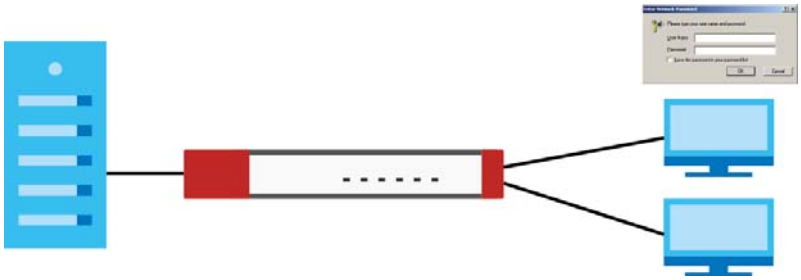
The following describes the user authentication procedure via an LDAP/AD server.

1. A user logs in with a user name and password pair.
2. The Zyxel Device tries to bind (or log in) to the LDAP/AD server.
3. When the binding process is successful, the Zyxel Device checks the user information in the directory against the user name and password pair.
4. If it matches, the user is allowed access. Otherwise, access is blocked.

34.9.2 RADIUS Server

RADIUS (Remote Authentication Dial-In User Service) authentication is a popular protocol used to authenticate users by means of an external server instead of (or in addition to) an internal device user database that is limited to the memory capacity of the device. In essence, RADIUS authentication allows you to validate a large number of users from a central location.

Figure 417 RADIUS Server Network Example



34.9.3 ASAS

ASAS (Authenex Strong Authentication System) is a RADIUS server that works with the One-Time Password (OTP) feature. Purchase a Zyxel Device OTP package in order to use this feature. The package contains server software and physical OTP tokens (PIN generators). Do the following to use OTP. See the documentation included on the ASAS' CD for details.

1. Install the ASAS server software on a computer.
2. Create user accounts on the Zyxel Device and in the ASAS server.
3. Import each token's database file (located on the included CD) into the server.
4. Assign users to OTP tokens (on the ASAS server).
5. Configure the ASAS as a RADIUS server in the Zyxel Device's **Configuration** > **Object** > **AAA Server** screens.
6. Give the OTP tokens to (local or remote) users.
   - Use the **Configuration** > **Object** > **AAA Server** > **Active Directory** (or **LDAP**) screens (Section 34.9.5 on page 641) to configure Active Directory or LDAP server objects.
   - Use the **Configuration** > **Object** > **AAA Server** > **RADIUS** screen (Section 34.9.2 on page 638) to configure the default external RADIUS server to use for user authentication.

34.9.4 What You Need To Know

AAA Servers Supported by the Zyxel Device

The following lists the types of authentication server the Zyxel Device supports.

- Local user database

  The Zyxel Device uses the built-in local user database to authenticate administrative users logging into the Zyxel Device's Web Configurator or network access users logging into the network through the Zyxel Device. You can also use the local user database to authenticate VPN users.

- Directory Service (LDAP/AD)

  LDAP (Lightweight Directory Access Protocol)/AD (Active Directory) is a directory service that is both a directory and a protocol for controlling access to a network. The directory consists of a database specialized for fast information retrieval and filtering activities. You create and store user profile and login information on the external server.

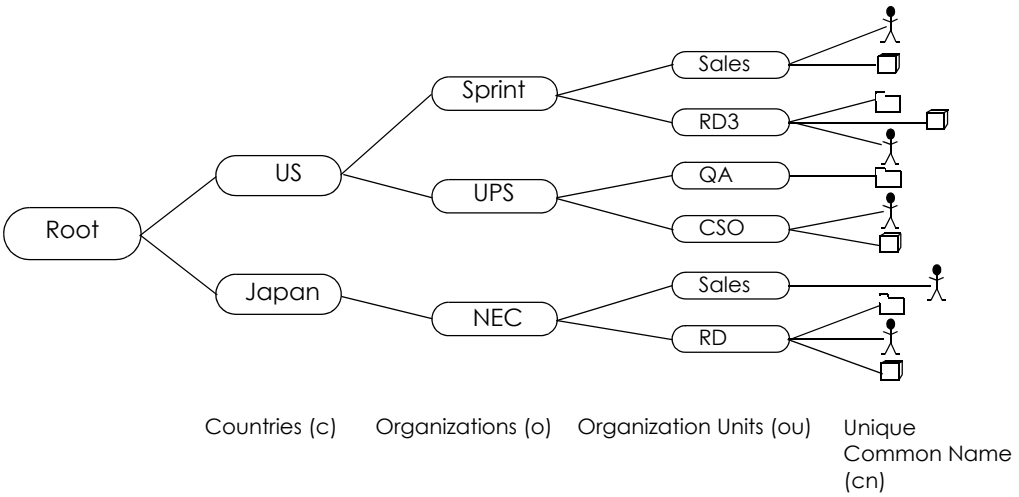
- RADIUS

  RADIUS (Remote Authentication Dial-In User Service) authentication is a popular protocol used to authenticate users by means of an external or built-in RADIUS server. RADIUS authentication allows you to validate a large number of users from a central location.

Directory Structure

The directory entries are arranged in a hierarchical order much like a tree structure. Normally, the directory structure reflects the geographical or organizational boundaries. The following figure shows a basic directory structure branching from countries to organizations to organizational units to individuals.

Figure 418 Basic Directory Structure



Distinguished Name (DN)

A DN uniquely identifies an entry in a directory. A DN consists of attribute-value pairs separated by commas. The leftmost attribute is the Relative Distinguished Name (RDN). This provides a unique name for entries that have the same "parent DN" ("`cn=domain1.com`, `ou=Sales`, `o=MyCompany`" in the following examples).

```
cn=domain1.com, ou = Sales, o=MyCompany, c=US
cn=domain1.com, ou = Sales, o=MyCompany, c=JP
```

Base DN

A base DN specifies a directory. A base DN usually contains information such as the name of an organization, a domain name and/or country. For example, `o=MyCompany`, `c=UK` where `o` means organization and `c` means country.

Bind DN

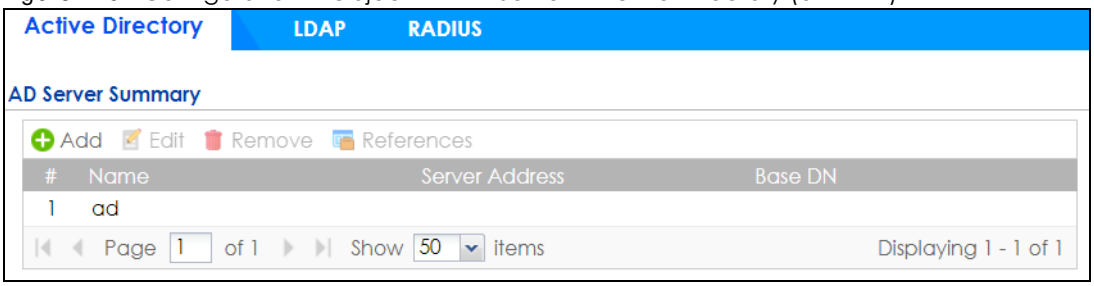
A bind DN is used to authenticate with an LDAP/AD server. For example a bind DN of `cn=zywallAdmin` allows the Zyxel Device to log into the LDAP/AD server using the user name of `zywallAdmin`. The bind DN is used in conjunction with a bind password. When a bind DN is not specified, the Zyxel Device will try to log in as an anonymous user. If the bind password is incorrect, the login will fail.

34.9.5 Active Directory or LDAP Server Summary

Use the **Active Directory** or **LDAP** screen to manage the list of AD or LDAP servers the Zyxel Device can use in authenticating users.

Click **Configuration** > **Object** > **AAA Server** > **Active Directory** (or **LDAP**) to display the **Active Directory** (or **LDAP**) screen.

Figure 419 Configuration > Object > AAA Server > Active Directory (or LDAP)



The following table describes the labels in this screen.

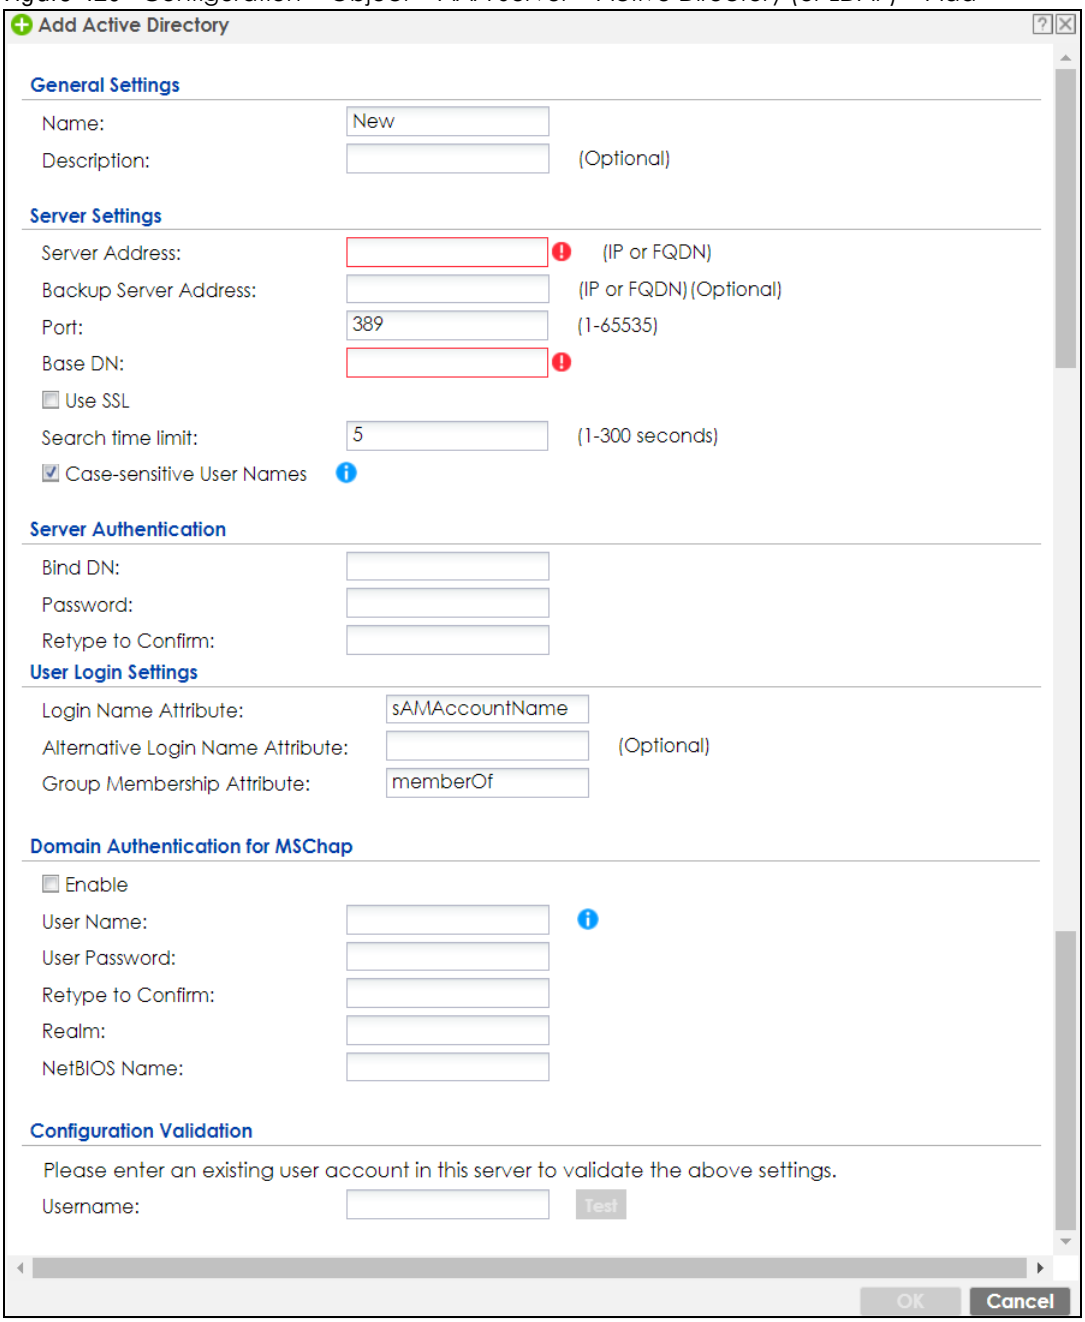
Table 272 Configuration > Object > AAA Server > Active Directory (or LDAP)

LABEL	DESCRIPTION
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with a specific AD or LDAP server.
Name	This field displays the name of the Active Directory.
Server Address	This is the address of the AD or LDAP server.
Base DN	This specifies a directory. For example, `o=Zyxel, c=US`.

34.9.5.1 Adding an Active Directory or LDAP Server

Click **Object** > **AAA Server** > **Active Directory** (or **LDAP**) to display the **Active Directory** (or **LDAP**) screen. Click the **Add** icon or an **Edit** icon to display the following screen. Use this screen to create a new AD or LDAP entry or edit an existing one.

Figure 420 Configuration > Object > AAA Server > Active Directory (or LDAP) > Add



The following table describes the labels in this screen.

Table 273 Configuration > Object > AAA Server > Active Directory (or LDAP) > Add

LABEL	DESCRIPTION
Name	Enter a descriptive name (up to 63 alphanumerical characters) for identification purposes.
Description	Enter the description of each server, if any. You can use up to 60 printable ASCII characters.
Server Address	Enter the address of the AD or LDAP server.
Backup Server Address	If the AD or LDAP server has a backup server, enter its address here.

Table 273 Configuration > Object > AAA Server > Active Directory (or LDAP) > Add (continued)

LABEL	DESCRIPTION
Port	Specify the port number on the AD or LDAP server to which the Zyxel Device sends authentication requests. Enter a number between 1 and 65535. This port number should be the same on all AD or LDAP server(s) in this group.
Base DN	Specify the directory (up to 127 alphanumerical characters). For example, `o=Zyxel, c=US`. This is only for **LDAP**.
Use SSL	Select **Use SSL** to establish a secure connection to the AD or LDAP server(s).
Search time limit	Specify the timeout period (between 1 and 300 seconds) before the Zyxel Device disconnects from the AD or LDAP server. In this case, user authentication fails. Search timeout occurs when either the user information is not in the AD or LDAP server(s) or the AD or LDAP server(s) is down.
Case-sensitive User Names	Select this if the server checks the case of the usernames.
Bind DN	Specify the bind DN for logging into the AD or LDAP server. Enter up to 127 alphanumerical characters. For example, `cn=zywallAdmin` specifies `zywallAdmin` as the user name.
Password	If required, enter the password (up to 15 alphanumerical characters) for the Zyxel Device to bind (or log in) to the AD or LDAP server.
Retype to Confirm	Retype your new password for confirmation.
Login Name Attribute	Enter the type of identifier the users are to use to log in. For example "name" or "email address".
Alternative Login Name Attribute	If there is a second type of identifier that the users can use to log in, enter it here. For example "name" or "email address".
Group Membership Attribute	An AD or LDAP server defines attributes for its accounts. Enter the name of the attribute that the Zyxel Device is to check to determine to which group a user belongs. The value for this attribute is called a group identifier; it determines to which group a user belongs. You can add **ext-group-user** user objects to identify groups based on these group identifier values. For example you could have an attribute named "memberOf" with values like "sales", "RD", and "management". Then you could also create a **ext-group-user** user object for each group. One with "sales" as the group identifier, another for "RD" and a third for "management".
Domain Authentication for MSChap	Select the **Enable** checkbox to enable domain authentication for MSChap. This is only for **Active Directory**.
User Name	Enter the user name for the user who has rights to add a machine to the domain. This is only for **Active Directory**.
User Password	Enter the password for the associated user name. This is only for **Active Directory**.
Retype to Confirm	Retype your new password for confirmation. This is only for **Active Directory**.
Realm	Enter the realm FQDN. This is only for **Active Directory**.
NetBIOS Name	Type the NetBIOS name. This field is optional. NetBIOS packets are TCP or UDP packets that enable a computer to connect to and communicate with a LAN which allows local computers to find computers on the remote network and vice versa.

Table 273 Configuration > Object > AAA Server > Active Directory (or LDAP) > Add (continued)

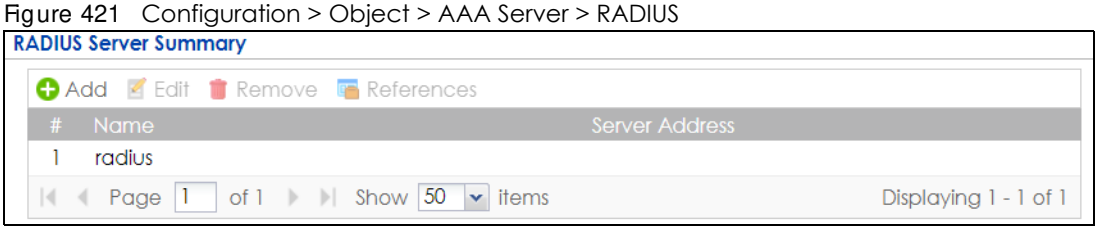
LABEL	DESCRIPTION
Configuration Validation	Use a user account from the server specified above to test if the configuration is correct. Enter the account's user name in the **Username** field and click **Test**.
OK	Click **OK** to save the changes.
Cancel	Click **Cancel** to discard the changes.

34.9.6 RADIUS Server Summary

Use the **RADIUS** screen to manage the list of RADIUS servers the Zyxel Device can use in authenticating users.

Click **Configuration** > **Object** > **AAA Server** > **RADIUS** to display the **RADIUS** screen.

Figure 421 Configuration > Object > AAA Server > RADIUS



The following table describes the labels in this screen.

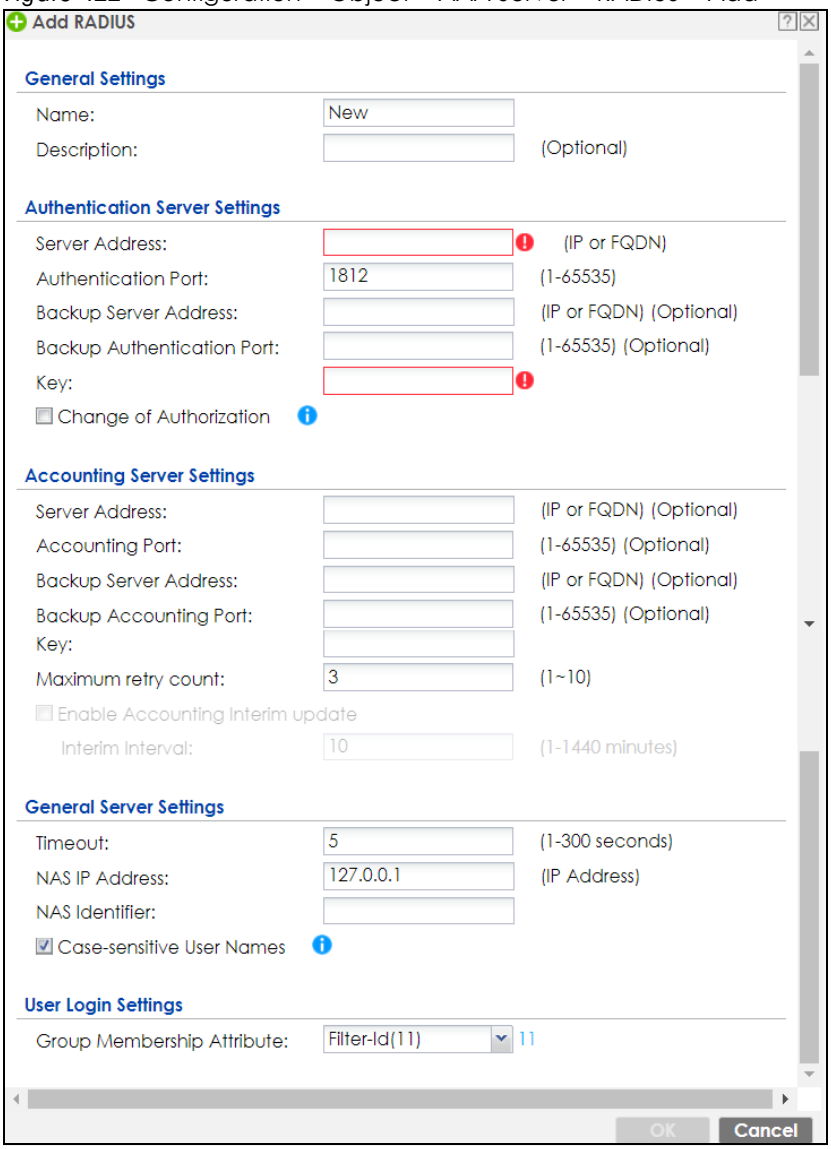
Table 274 Configuration > Object > AAA Server > RADIUS

LABEL	DESCRIPTION
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field displays the index number.
Name	This is the name of the RADIUS server entry.
Server Address	This is the address of the AD or LDAP server.

34.9.6.1 Adding a RADIUS Server

Click **Configuration** > **Object** > **AAA Server** > **RADIUS** to display the **RADIUS** screen. Click the **Add** icon or an **Edit** icon to display the following screen. Use this screen to create a new AD or LDAP entry or edit an existing one.

Figure 422 Configuration > Object > AAA Server > RADIUS > Add



The following table describes the labels in this screen.

Table 275 Configuration > Object > AAA Server > RADIUS > Add

LABEL	DESCRIPTION
Name	Enter a descriptive name (up to 63 alphanumerical characters) for identification purposes.
Description	Enter the description of each server, if any. You can use up to 60 printable ASCII characters.
Server Address	Enter the address of the RADIUS server.
Authentication Port	Specify the port number on the RADIUS server to which the Zyxel Device sends authentication requests. Enter a number between 1 and 65535.
Backup Server Address	If the RADIUS server has a backup server, enter its address here.
Backup Authentication Port	Specify the port number on the RADIUS server to which the Zyxel Device sends authentication requests. Enter a number between 1 and 65535.

Table 275 Configuration > Object > AAA Server > RADIUS > Add (continued)

LABEL	DESCRIPTION
Key	Enter a password (up to 15 alphanumeric characters) as the key to be shared between the external authentication server and the Zyxel Device. The key is not sent over the network. This key must be the same on the external authentication server and the Zyxel Device.
Change of Authorization	The external RADIUS server can change its authentication policy and send CoA (Change of Authorization) or RADIUS Disconnect messages in order to terminate the subscriber's service. Select this option to allow the Zyxel Device to disconnect wireless clients based on the information (such as client's user name and MAC address) specified in CoA or RADIUS Disconnect messages sent by the RADIUS server.
Server Address	Enter the IP address or Fully-Qualified Domain Name (FQDN) of the RADIUS accounting server.
Accounting Port	Specify the port number on the RADIUS server to which the Zyxel Device sends accounting information. Enter a number between 1 and 65535.
Backup Server Address	If the RADIUS server has a backup accounting server, enter its address here.
Backup Accounting Port	Specify the port number on the RADIUS server to which the Zyxel Device sends accounting information. Enter a number between 1 and 65535.
Key	Enter a password (up to 15 alphanumeric characters) as the key to be shared between the external authentication server and the Zyxel Device. The key is not sent over the network. This key must be the same on the external authentication server and the Zyxel Device.
Maximum Retry Count	At times the Zyxel Device may not be able to use the primary RADIUS accounting server. Specify the number of times the Zyxel Device should reattempt to use the primary RADIUS server before attempting to use the secondary RADIUS server. This also sets how many times the Zyxel Device will attempt to use the secondary RADIUS server. For example, you set this field to 3. If the Zyxel Device does not get a response from the primary RADIUS server, it tries again up to three times. If there is no response, the Zyxel Device tries the secondary RADIUS server up to three times. If there is also no response from the secondary RADIUS server, the Zyxel Device stops attempting to authenticate the subscriber. The subscriber will see a message that says the RADIUS server was not found.
Enable Accounting Interim Update	This field is configurable only after you configure a RADIUS accounting server address. Select this to have the Zyxel Device send subscriber status updates to the RADIUS server at the interval you specify.
Interim Interval	Specify the time interval for how often the Zyxel Device is to send a subscriber status update to the RADIUS server.
Timeout	Specify the timeout period (between 1 and 300 seconds) before the Zyxel Device disconnects from the RADIUS server. In this case, user authentication fails. Search timeout occurs when either the user information is not in the RADIUS server or the RADIUS server is down.
NAS IP Address	Type the IP address of the NAS (Network Access Server).
NAS Identifier	If the RADIUS server requires the Zyxel Device to provide the Network Access Server identifier attribute with a specific value, enter it here.
Case-sensitive User Names	Select this if you want configure your username as case-sensitive.

Table 275 Configuration > Object > AAA Server > RADIUS > Add (continued)

LABEL	DESCRIPTION
Group Membership Attribute	A RADIUS server defines attributes for its accounts. Select the name and number of the attribute that the Zyxel Device is to check to determine to which group a user belongs. If it does not display, select user-defined and specify the attribute's number. This attribute's value is called a group identifier; it determines to which group a user belongs. You can add **ext-group-user** user objects to identify groups based on these group identifier values. For example you could have an attribute named "memberOf" with values like "sales", "RD", and "management". Then you could also create a **ext-group-user** user object for each group. One with "sales" as the group identifier, another for "RD" and a third for "management".
OK	Click **OK** to save the changes.
Cancel	Click **Cancel** to discard the changes.

34.10 Auth. Method Overview

Authentication method objects set how the Zyxel Device authenticates wireless, HTTP/HTTPS clients, and peer IPSec routers (extended authentication) clients. Configure authentication method objects to have the Zyxel Device use the local user database, and/or the authentication servers and authentication server groups specified by AAA server objects. By default, user accounts created and stored on the Zyxel Device are authenticated locally.

- Use the **Configuration > Object > Auth. Method** screens (Section 34.10.3 on page 648) to create and manage authentication method objects.
- Use the **Configuration > Object > Auth. Method > Two-Factor Authentication** screen (Section 34.10.4 on page 650) to configure double-layer security to access a secured network behind the Zyxel Device via a VPN tunnel.

34.10.1 Before You Begin

Configure AAA server objects before you configure authentication method objects.

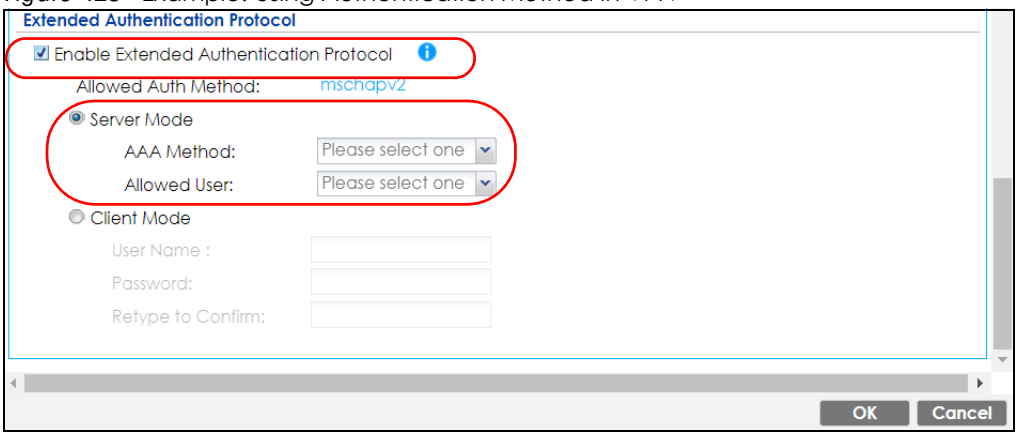
34.10.2 Example: Selecting a VPN Authentication Method

After you set up an authentication method object in the **Auth. Method** screens, you can use it in the **VPN Gateway** screen to authenticate VPN users for establishing a VPN connection. Refer to the chapter on VPN for more information.

Follow the steps below to specify the authentication method for a VPN connection.

1. Access the **Configuration > VPN > IPSec VPN > VPN Gateway > Edit** screen.
2. Click **Show Advance Setting** and select **Enable Extended Authentication**.
3. Select **Server Mode** and select an authentication method object from the drop-down list box.
4. Click **OK** to save the settings.

Figure 423 Example: Using Authentication Method in VPN

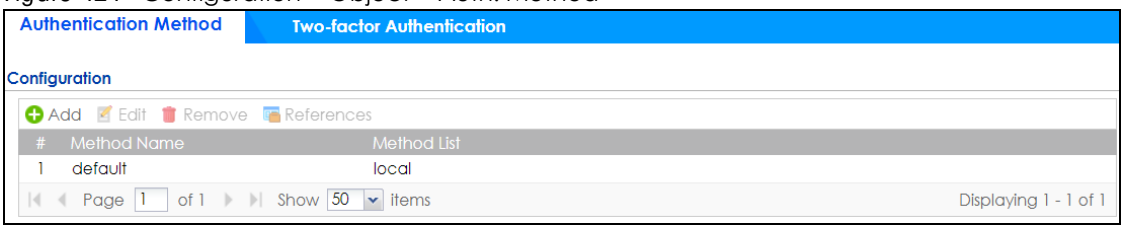


34.10.3 Authentication Method Objects

Click **Configuration** > **Object** > **Auth. Method** to display the screen as shown.

Note: You can create up to 16 authentication method objects.

Figure 424 Configuration > Object > Auth. Method



The following table describes the labels in this screen.

Table 276 Configuration > Object > Auth. Method

LABEL	DESCRIPTION
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field displays the index number.
Method Name	This field displays a descriptive name for identification purposes.
Method List	This field displays the authentication method(s) for this entry.

34.10.3.1 Creating an Authentication Method Object

Follow the steps below to create an authentication method object.

1 Click **Configuration** > **Object** > **Auth. Method**.

2 Click **Add**.

3 Specify a descriptive name for identification purposes in the **Name** field. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive. For example, "My_Device".

4 Click **Add** to insert an authentication method in the table.

5 Select a server object from the **Method List** drop-down list box.

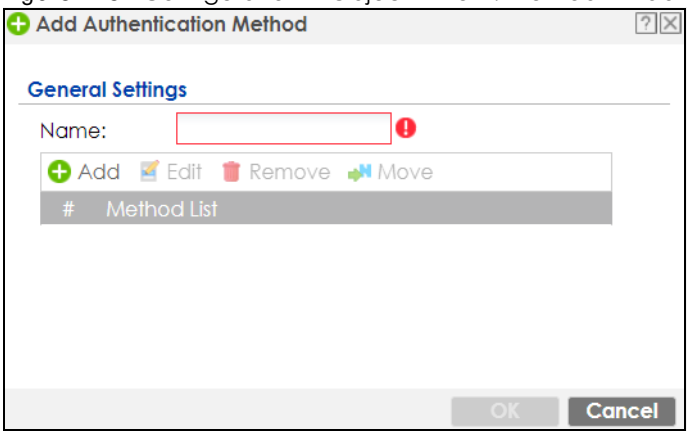
6 You can add up to four server objects to the table. The ordering of the **Method List** column is important. The Zyxel Device authenticates the users using the databases (in the local user database or the external authentication server) in the order they appear in this screen.

If two accounts with the same username exist on two authentication servers you specify, the Zyxel Device does not continue the search on the second authentication server when you enter the username and password that doesn't match the one on the first authentication server.

Note: You can NOT select two server objects of the same type.

7 Click **OK** to save the settings or click **Cancel** to discard all changes and return to the previous screen.

Figure 425 Configuration > Object > Auth. Method > Add



The following table describes the labels in this screen.

Table 277 Configuration > Object > Auth. Method > Add

LABEL	DESCRIPTION
Name	Specify a descriptive name for identification purposes. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive. For example, "My_Device".
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
Move	To change a method's position in the numbered list, select the method and click **Move** to display a field to type a number for where you want to put it and press [ENTER] to move the rule to the number that you typed. The ordering of your methods is important as Zyxel Device authenticates the users using the authentication methods in the order they appear in this screen.
#	This field displays the index number.

Table 277 Configuration > Object > Auth. Method > Add (continued)

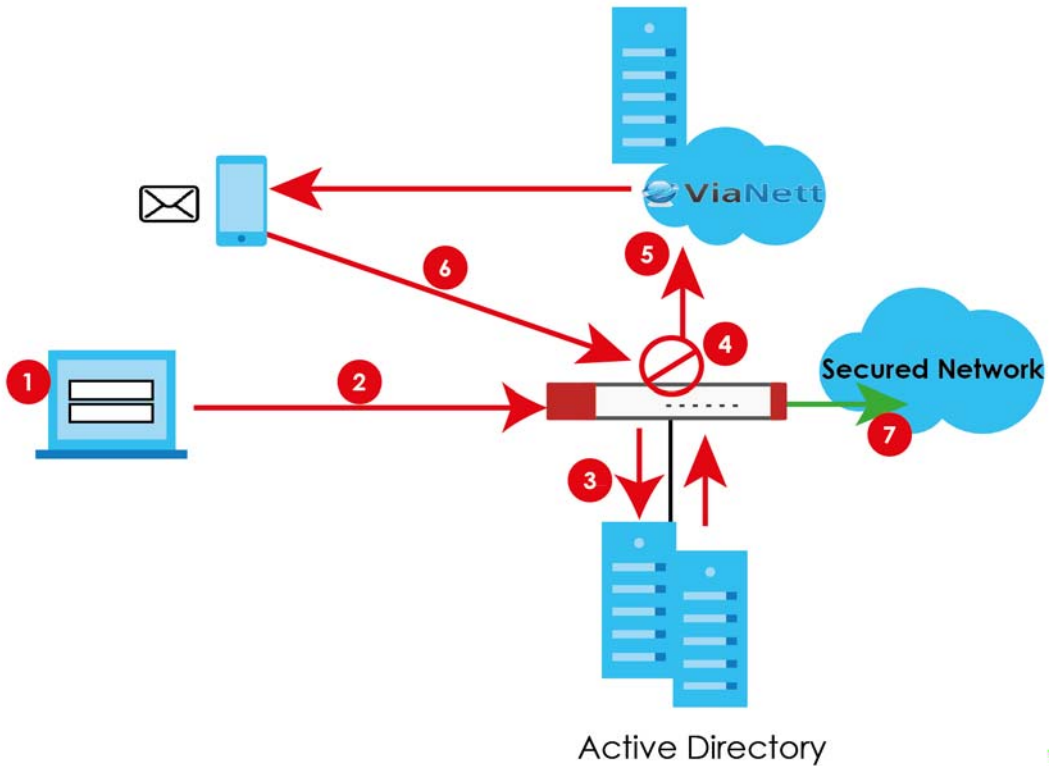
LABEL	DESCRIPTION
Method List	Select a server object from the drop-down list box. You can create a server object in the **AAA Server** screen. The Zyxel Device authenticates the users using the databases (in the local user database or the external authentication server) in the order they appear in this screen. If two accounts with the same username exist on two authentication servers you specify, the Zyxel Device does not continue the search on the second authentication server when you enter the username and password that doesn't match the one on the first authentication server.
OK	Click **OK** to save the changes.
Cancel	Click **Cancel** to discard the changes.

34.10.4 Two-Factor Authentication

Use two-factor authentication to have double-layer security to access a secured network behind the Zyxel Device via a VPN tunnel. The first layer is the VPN client user name / password and the second layer is an authorized SMS (via mobile phone number) or email address.

Overview

Figure 426 Two-Factor Authentication



1 A user runs a VPN client and logs in with the user name and password for this VPN tunnel.

2 The VPN tunnel is created from the VPN client device to the Zyxel Device.

3 The Zyxel Device requests the user's user-name, password and mobile phone number or email address from the Active Directory, RADIUS server or local Zyxel Device database in order to authenticate this user's use of the VPN tunnel (factor 1). If they are not found, then the Zyxel Device terminates the VPN tunnel.

4 If all correct credentials are found, then the Zyxel Device will request the Cloud SMS system to send an authorization SMS or email to the client requesting VPN access (factor 2).

5 The client should access the authorization link sent via SMS or email by the Cloud SMS system within a specified deadline (**Valid Time**).

6 If the authorization is correct and received on time, then the client can have VPN access to the secured network. If the authorization deadline has expired, then the client will have to run the VPN client again. If authorization credentials are incorrect or if the SMS/email was not received, then the client must check with the network administrator.

Pre-configuration

Before configuration, you must:

- Set up the user's user-name, password and email address or mobile number in the Active Directory, RADIUS server or local Zyxel Device database
- Configure the VPN tunnel for this user on the Zyxel Device
- Have an account with ViaNett to be able to send SMS/email authorization requests
- Enable **HTTP** and/or **HTTPS** in **System** > **WWW** > **Service Control**
- Configure **SMS** in **System** > **Notification** > **SMS**.
- Add **HTTP** and/or **HTTPS** in the **Object** > **Service** > **Service Group** > **Default_Allow_WAN_To_ZyWALL** service group.

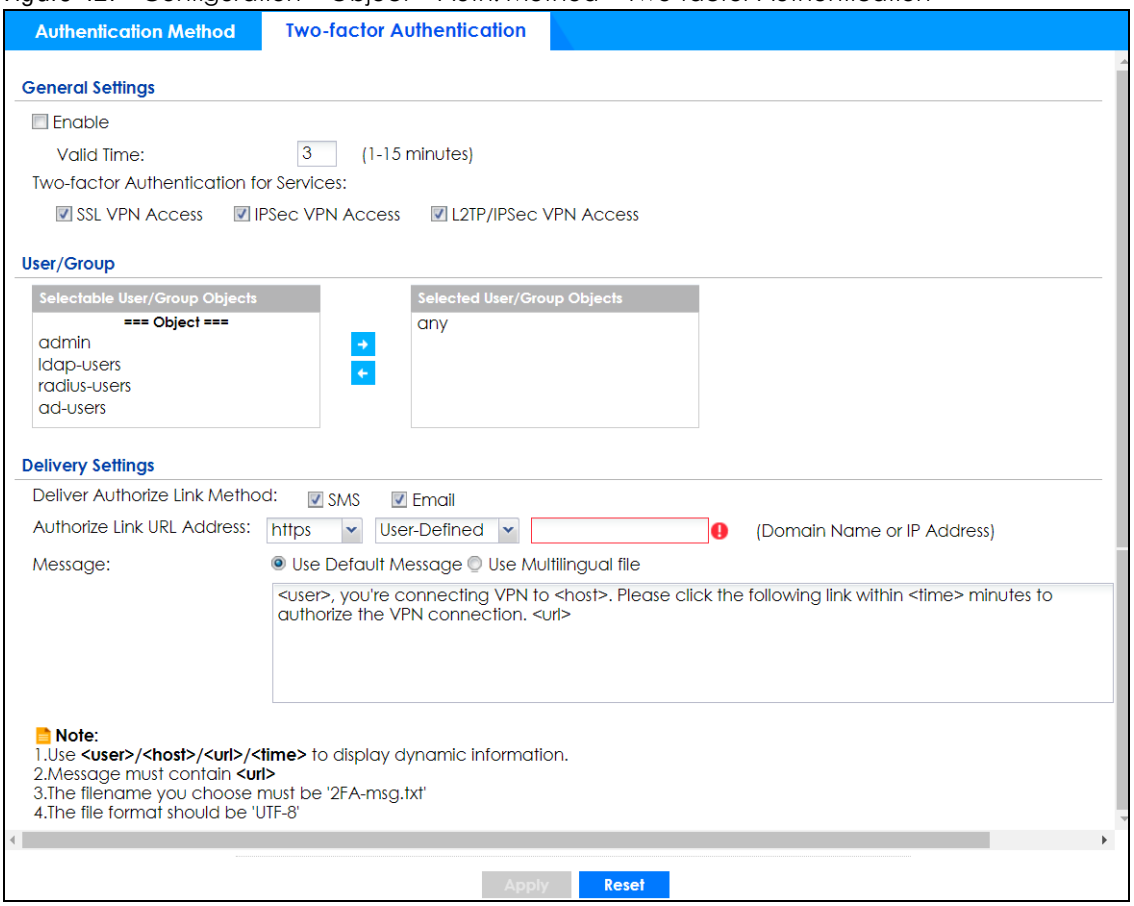
Two-Factor authentication may fail if one of the above is not configured or:

- The user did not receive the authorization SMS or email. Check if the mobile telephone number or email address of the user in the Active Directory, RADIUS Server or local Zyxel Device database is configured correctly
- ViaNett Authentication failed and no SMS was sent. Check that SMS is enabled and credentials are correct in **System** > **Notification** > **SMS**.
- Mail server authentication failed. Check if the **System** > **Notification** > **Mail Server** settings are correct.
- The authorization timed out. Extend the Valid Time in **Configuration** > **Object** > **Auth. Method** > **Two-factor Authentication**.

Configuration

Go to **Configuration** > **Object** > **Auth. Method** > **Two-factor Authentication** and configure the following screen as shown.

Figure 427 Configuration > Object > Auth. Method > Two-factor Authentication



The following table describes the labels in this screen.

Table 278 Configuration > Object > Auth. Method > Two-factor Authentication

LABEL	DESCRIPTION
General Settings	
Enable	Select the check box to require double-layer security to access a secured network behind the Zyxel Device via a VPN tunnel.
Valid Time	Enter the maximum time (in minutes) that the user must click or tap the authorization link in the SMS or email in order to get authorization for the VPN connection.
Two-factor Authentication for Services:	Select which kinds of VPN tunnels require Two-Factor Authentication. You should have configured the VPN tunnel first. • SSL VPN Access • IPSec VPN Access • L2TP/IPSec VPN Access
User/Group	This list displays the names of the users and user groups that can be selected for two-factor authentication. The order of members is not important. Select users and groups from the **Selectable User/Group Objects** list that require two-factor authentication for VPN access to a secured network behind the Zyxel Device and move them to the **Selected User/Group Objects** list. You can double-click a single entry to move it or use the [Shift] or [Ctrl] key to select multiple entries and use the arrow button to move them. Similarly, move user/groups that do not you do not require two-factor authentication back to the **Selectable User/Group Objects** list.
Delivery Settings	Use this section to configure how to send an SMS or email for authorization.

Table 278 Configuration > Object > Auth. Method > Two-factor Authentication (continued)

LABEL	DESCRIPTION
Deliver Authorize Link Method:	Select one or both methods: • SMS: **Object > User/Group > User** must contain a valid mobile telephone number. A valid mobile telephone number can be up to 20 characters in length, including the numbers 1~9 and the following characters in the square brackets [+*#()-]. • Email: **Object > User/Group > User** must contain a valid email address. A valid email address must contain the @ character. For example, this is a valid email address: abc@example.com
Authorize Link URL Address:	Configure the link that the user will receive in the SMS or email. The user must be able to access the link. • **http/https**: you must enable **HTTP** or **HTTPS** in **System > WWW > Service Control** • **From Interface/User-Defined**: select the Zyxel Device WAN interface (**wan1/2**) or select **User-Defined** and then enter an IP address.
Message	You can either create a default message in the text box or upload a message file (**Use Multilingual file**) from your computer. The message file must be named '2FA-msg.txt' and be in UTF-8 format. To create the file, click **Download the default 2FA-msg.txt example** and edit the file for your needs. (If you make a mistake, use **Restore Customized File to Default** to restore your customized file to the default.) Use **Select a File Path** to locate the final file on your computer and then click **Upload** to transfer it to the Zyxel Device. The message in either the text box or the file must contain the <url> variable within angle brackets, while the <user>, <host>, and <time> variables are optional.
Apply	Click **Apply** to save the changes.
Reset	Click **Reset** to return the screen to its last-saved settings.

34.11 Certificate Overview

The Zyxel Device can use certificates (also called digital IDs) to authenticate users. Certificates are based on public-private key pairs. A certificate contains the certificate owner's identity and public key. Certificates provide a way to exchange public keys for use in authentication.

- Use the **My Certificates** screens (see Section 34.11.3 on page 656 to Section 34.11.3.3 on page 662) to generate and export self-signed certificates or certification requests and import the CA-signed certificates.
- Use the **Trusted Certificates** screens (see Section 34.11.4 on page 663 to Section 34.11.4.2 on page 667) to save CA certificates and trusted remote host certificates to the Zyxel Device. The Zyxel Device trusts any valid certificate that you have imported as a trusted certificate. It also trusts any valid certificate signed by any of the certificates that you have imported as a trusted certificate.

34.11.1 What You Need to Know

When using public-key cryptology for authentication, each host has two keys. One key is public and can be made openly available. The other key is private and must be kept secure.

These keys work like a handwritten signature (in fact, certificates are often referred to as "digital signatures"). Only you can write your signature exactly as it should look. When people know what your signature looks like, they can verify whether something was signed by you, or by someone else. In the same way, your private key "writes" your digital signature and your public key allows people to verify whether data was signed by you, or by someone else. This process works as follows.

1. Tim wants to send a message to Jenny. He needs her to be sure that it comes from him, and that the message content has not been altered by anyone else along the way. Tim generates a public key pair (one public key and one private key).
2. Tim keeps the private key and makes the public key openly available. This means that anyone who receives a message seeming to come from Tim can read it and verify whether it is really from him or not.
3. Tim uses his private key to sign the message and sends it to Jenny.
4. Jenny receives the message and uses Tim's public key to verify it. Jenny knows that the message is from Tim, and that although other people may have been able to read the message, no-one can have altered it (because they cannot re-sign the message with Tim's private key).
5. Additionally, Jenny uses her own private key to sign a message and Tim uses Jenny's public key to verify the message.

The Zyxel Device uses certificates based on public-key cryptology to authenticate users attempting to establish a connection, not to encrypt the data that you send after establishing a connection. The method used to secure the data that you send through an established connection depends on the type of connection. For example, a VPN tunnel might use the triple DES encryption algorithm.

The certification authority uses its private key to sign certificates. Anyone can then use the certification authority's public key to verify the certificates.

A certification path is the hierarchy of certification authority certificates that validate a certificate. The Zyxel Device does not trust a certificate if any certificate on its path has expired or been revoked.

Certification authorities maintain directory servers with databases of valid and revoked certificates. A directory of certificates that have been revoked before the scheduled expiration is called a CRL (Certificate Revocation List). The Zyxel Device can check a peer's certificate against a directory server's list of revoked certificates. The framework of servers, software, procedures and policies that handles keys is called PKI (public-key infrastructure).

Advantages of Certificates

Certificates offer the following benefits.

- The Zyxel Device only has to store the certificates of the certification authorities that you decide to trust, no matter how many devices you need to authenticate.
- Key distribution is simple and very secure since you can freely distribute public keys and you never need to transmit private keys.

Self-signed Certificates

You can have the Zyxel Device act as a certification authority and sign its own certificates.

Factory Default Certificate

The Zyxel Device generates its own unique self-signed certificate when you first turn it on. This certificate is referred to in the GUI as the factory default certificate.

Certificate File Formats

Any certificate that you want to import has to be in one of these file formats:

- Binary X.509: This is an ITU-T recommendation that defines the formats for X.509 certificates.
- PEM (Base-64) encoded X.509: This Privacy Enhanced Mail format uses lowercase letters, uppercase letters and numerals to convert a binary X.509 certificate into a printable form.
- Binary PKCS#7: This is a standard that defines the general syntax for data (including digital signatures) that may be encrypted. A PKCS #7 file is used to transfer a public key certificate. The private key is not included. The Zyxel Device currently allows the importation of a PKS#7 file that contains a single certificate.
- PEM (Base-64) encoded PKCS#7: This Privacy Enhanced Mail (PEM) format uses lowercase letters, uppercase letters and numerals to convert a binary PKCS#7 certificate into a printable form.
- Binary PKCS#12: This is a format for transferring public key and private key certificates. The private key in a PKCS #12 file is within a password-encrypted envelope. The file's password is not connected to your certificate's public or private passwords. Exporting a PKCS #12 file creates this and you must provide it to decrypt the contents when you import the file into the Zyxel Device.

Note: Be careful not to convert a binary file to text during the transfer process. It is easy for this to occur since many programs use text files by default.

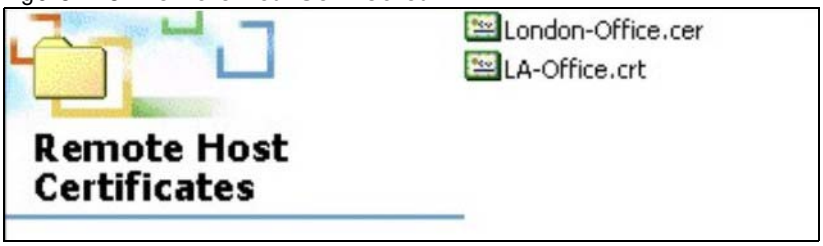
34.11.2 Verifying a Certificate

Before you import a trusted certificate into the Zyxel Device, you should verify that you have the correct certificate. You can do this using the certificate's fingerprint. A certificate's fingerprint is a message digest calculated using the MD5 or SHA1 algorithm. The following procedure describes how to check a certificate's fingerprint to verify that you have the actual certificate.

1 Browse to where you have the certificate saved on your computer.

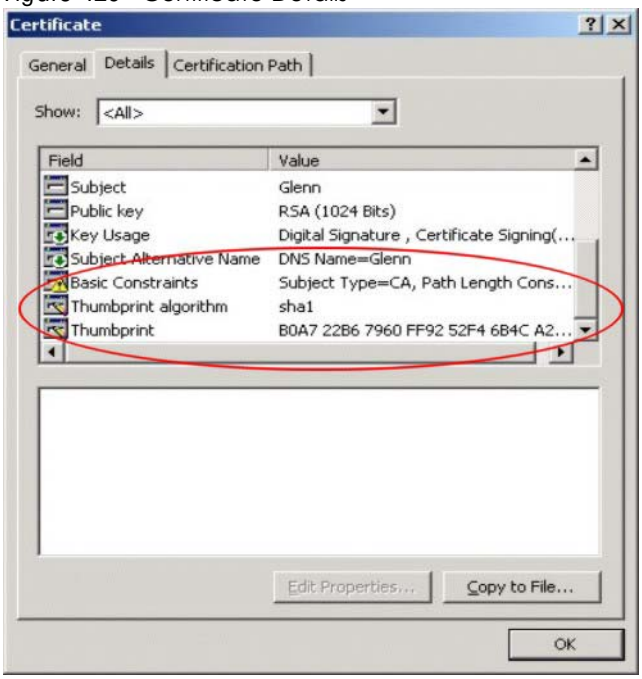
2 Make sure that the certificate has a ".cer" or ".crt" file name extension.

Figure 428 Remote Host Certificates



3 Double-click the certificate's icon to open the **Certificate** window. Click the **Details** tab and scroll down to the **Thumbprint Algorithm** and **Thumbprint** fields.

Figure 429 Certificate Details

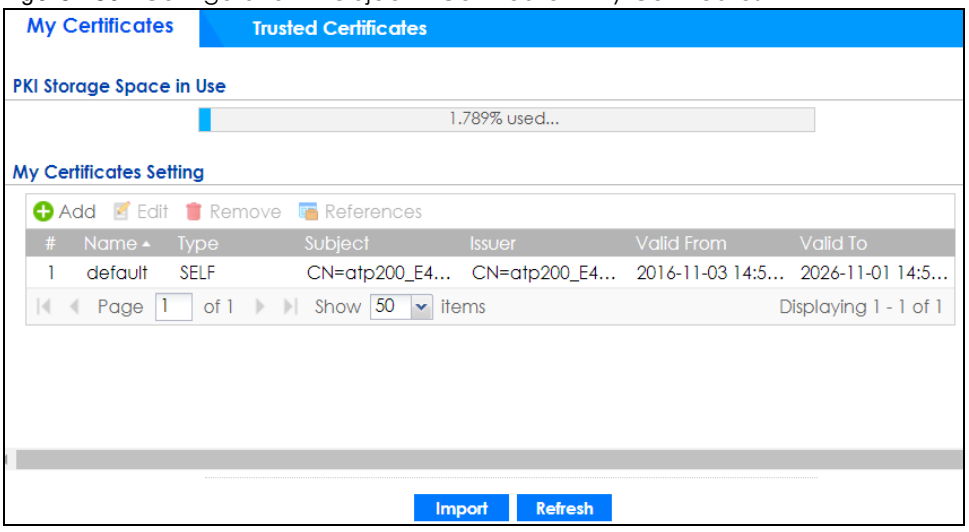


4 Use a secure method to verify that the certificate owner has the same information in the **Thumbprint Algorithm** and **Thumbprint** fields. The secure method may very based on your situation. Possible examples would be over the telephone or through an HTTPS connection.

34.11.3 The My Certificates Screen

Click **Configuration** > **Object** > **Certificate** > **My Certificates** to open the **My Certificates** screen. This is the Zyxel Device's summary list of certificates and certification requests.

Figure 430 Configuration > Object > Certificate > My Certificates



The following table describes the labels in this screen.

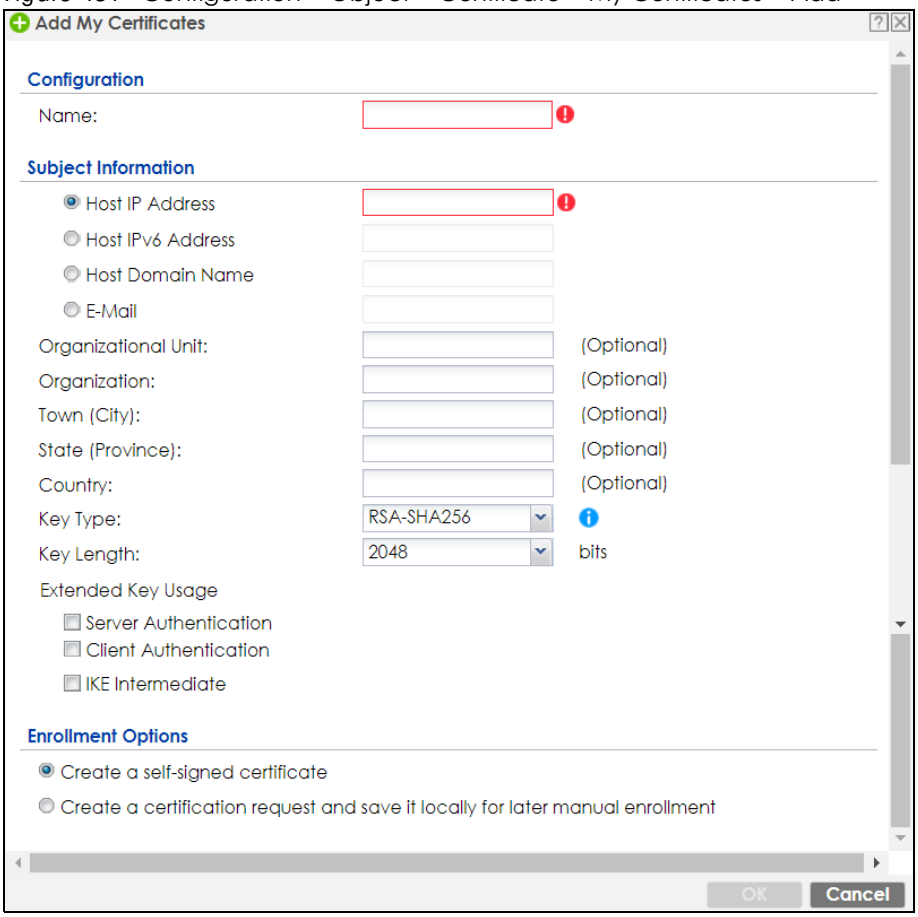
Table 279 Configuration > Object > Certificate > My Certificates

LABEL	DESCRIPTION
PKI Storage Space in Use	This bar displays the percentage of the Zyxel Device's PKI storage space that is currently in use. When the storage space is almost full, you should consider deleting expired or unnecessary certificates before adding more certificates.
Add	Click this to go to the screen where you can have the Zyxel Device generate a certificate or a certification request.
Edit	Double-click an entry or select it and click **Edit** to open a screen with an in-depth list of information about the certificate.
Remove	The Zyxel Device keeps all of your certificates unless you specifically delete them. Uploading a new firmware or default configuration file does not delete your certificates. To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so. Subsequent certificates move up by one when you take this action.
References	You cannot delete certificates that any of the Zyxel Device's features are configured to use. Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field displays the certificate index number. The certificates are listed in alphabetical order.
Name	This field displays the name used to identify this certificate. It is recommended that you give each certificate a unique name.
Type	This field displays what kind of certificate this is. **REQ** represents a certification request and is not yet a valid certificate. Send a certification request to a certification authority, which then issues a certificate. Use the **My Certificate Import** screen to import the certificate and replace the request. **SELF** represents a self-signed certificate. **CERT** represents a certificate issued by a certification authority.
Subject	This field displays identifying information about the certificate's owner, such as CN (Common Name), OU (Organizational Unit or department), O (Organization or company) and C (Country). It is recommended that each certificate have unique subject information.
Issuer	This field displays identifying information about the certificate's issuing certification authority, such as a common name, organizational unit or department, organization or company and country. With self-signed certificates, this is the same information as in the **Subject** field.
Valid From	This field displays the date that the certificate becomes applicable.
Valid To	This field displays the date that the certificate expires. The text displays in red and includes an Expired! message if the certificate has expired.
Import	Click **Import** to open a screen where you can save a certificate to the Zyxel Device.
Refresh	Click **Refresh** to display the current validity status of the certificates.

34.11.3.1 The My Certificates Add Screen

Click **Configuration** > **Object** > **Certificate** > **My Certificates** and then the **Add** icon to open the **My Certificates Add** screen. Use this screen to have the Zyxel Device create a self-signed certificate, enroll a certificate with a certification authority or generate a certification request.

Figure 431 Configuration > Object > Certificate > My Certificates > Add



The following table describes the labels in this screen.

Table 280 Configuration > Object > Certificate > My Certificates > Add

LABEL	DESCRIPTION
Name	Type a name to identify this certificate. You can use up to 31 alphanumeric and ;'~!@#$%^&()_+[]{}',.=- characters.
Subject Information	Use these fields to record information that identifies the owner of the certificate. You do not have to fill in every field, although you must specify a **Host IP Address**, **Host IPv6 Address**, **Host Domain Name**, or **E-Mail**. The certification authority may add fields (such as a serial number) to the subject information when it issues a certificate. It is recommended that each certificate have unique subject information. Select a radio button to identify the certificate's owner by IP address, domain name or email address. Type the IP address (in dotted decimal notation), domain name or email address in the field provided. The domain name or email address is for identification purposes only and can be any string. A domain name can be up to 255 characters. You can use alphanumeric characters, the hyphen and periods. An email address can be up to 63 characters. You can use alphanumeric characters, the hyphen, the @ symbol, periods and the underscore.
Organizational Unit	Identify the organizational unit or department to which the certificate owner belongs. You can use up to 31 characters. You can use alphanumeric characters, the hyphen and the underscore.

Table 280 Configuration > Object > Certificate > My Certificates > Add (continued)

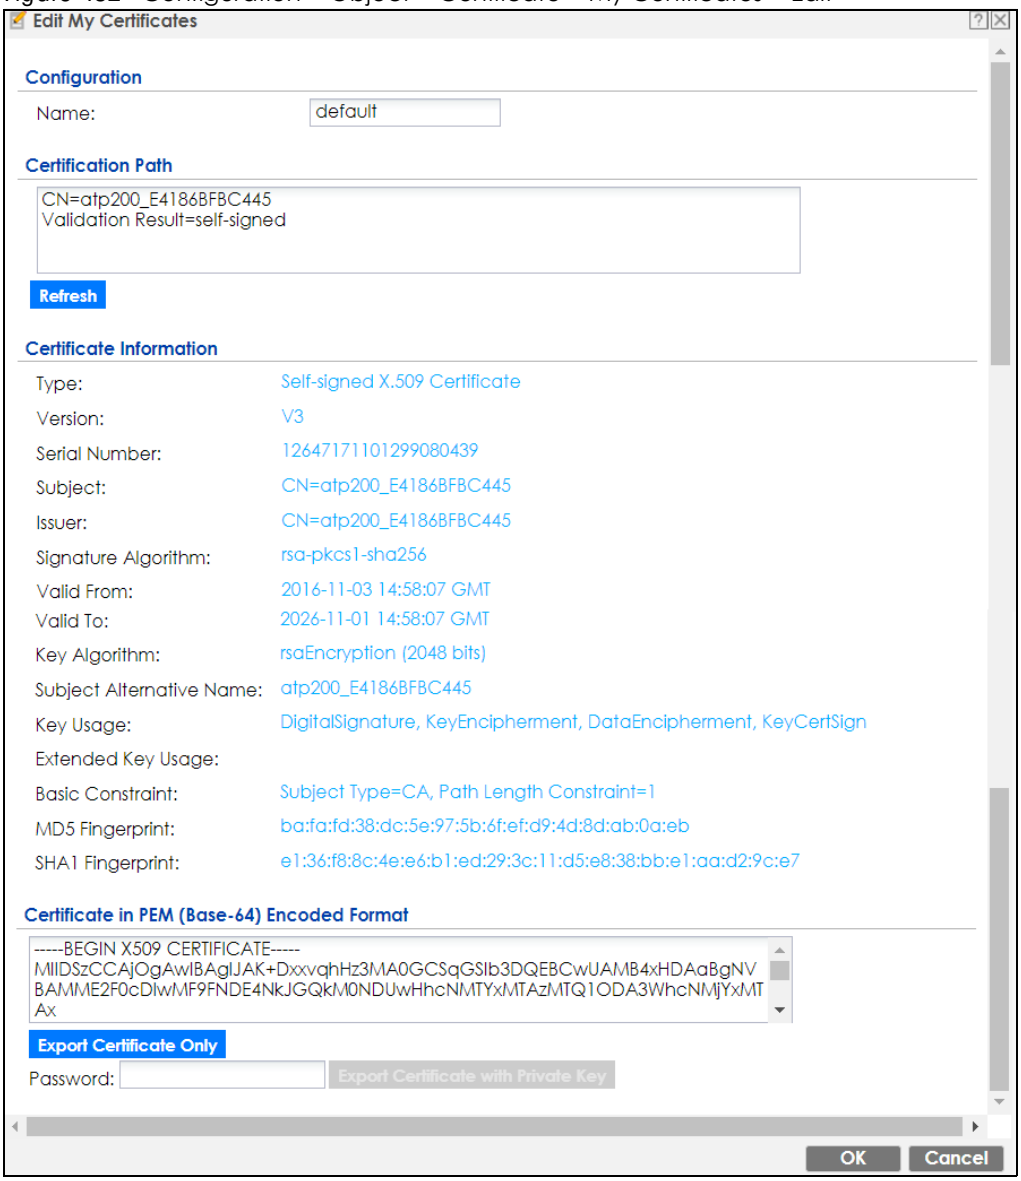
LABEL	DESCRIPTION
Organization	Identify the company or group to which the certificate owner belongs. You can use up to 31 characters. You can use alphanumeric characters, the hyphen and the underscore.
Town (City)	Identify the town or city where the certificate owner is located. You can use up to 31 characters. You can use alphanumeric characters, the hyphen and the underscore.
State, (Province)	Identify the state or province where the certificate owner is located. You can use up to 31 characters. You can use alphanumeric characters, the hyphen and the underscore.
Country	Identify the nation where the certificate owner is located. You can use up to 31 characters. You can use alphanumeric characters, the hyphen and the underscore.
Key Type	Select **RSA** to use the Rivest, Shamir and Adleman public-key algorithm. Select **DSA** to use the Digital Signature Algorithm public-key algorithm.
Key Length	Select a number from the drop-down list box to determine how many bits the key should use (512 to 2048). The longer the key, the more secure it is. A longer key also uses more PKI storage space.
Extended Key Usage	
Server Authentication	Select this to have Zyxel Device generate and store a request for server authentication certificate.
Client Authentication	Select this to have Zyxel Device generate and store a request for client authentication certificate.
IKE Intermediate	Select this to have Zyxel Device generate and store a request for IKE Intermediate authentication certificate.
Create a self-signed certificate	Select this to have the Zyxel Device generate the certificate and act as the Certification Authority (CA) itself. This way you do not need to apply to a certification authority for certificates.
Create a certification request and save it locally for later manual enrollment	Select this to have the Zyxel Device generate and store a request for a certificate. Use the **My Certificate Details** screen to view the certification request and copy it to send to the certification authority. Copy the certification request from the **My Certificate Details** screen (see Section 34.11.3.2 on page 659) and then send it to the certification authority.
OK	Click **OK** to begin certificate or certification request generation.
Cancel	Click **Cancel** to quit and return to the **My Certificates** screen.

If you configured the **My Certificate Create** screen to have the Zyxel Device enroll a certificate and the certificate enrollment is not successful, you see a screen with a **Return** button that takes you back to the **My Certificate Create** screen. Click **Return** and check your information in the **My Certificate Create** screen. Make sure that the certification authority information is correct and that your Internet connection is working properly if you want the Zyxel Device to enroll a certificate online.

34.11.3.2 The My Certificates Edit Screen

Click **Configuration** > **Object** > **Certificate** > **My Certificates** and then the **Edit** icon to open the **My Certificate Edit** screen. You can use this screen to view in-depth certificate information and change the certificate's name.

Figure 432 Configuration > Object > Certificate > My Certificates > Edit



The following table describes the labels in this screen.

Table 281 Configuration > Object > Certificate > My Certificates > Edit

LABEL	DESCRIPTION
Name	This field displays the identifying name of this certificate. You can use up to 31 alphanumeric and ;'~!@#$%^&()_+[]{}',.=- characters.
Certification Path	This field displays for a certificate, not a certification request. Click the **Refresh** button to have this read-only text box display the hierarchy of certification authorities that validate the certificate (and the certificate itself). If the issuing certification authority is one that you have imported as a trusted certification authority, it may be the only certification authority in the list (along with the certificate itself). If the certificate is a self-signed certificate, the certificate itself is the only one in the list. The Zyxel Device does not trust the certificate and displays "Not trusted" in this field if any certificate on the path has expired or been revoked.
Refresh	Click **Refresh** to display the certification path.

Table 281 Configuration > Object > Certificate > My Certificates > Edit (continued)

LABEL	DESCRIPTION
Certificate Information	These read-only fields display detailed information about the certificate.
Type	This field displays general information about the certificate. CA-signed means that a Certification Authority signed the certificate. Self-signed means that the certificate's owner signed the certificate (not a certification authority). "X.509" means that this certificate was created and signed according to the ITU-T X.509 recommendation that defines the formats for public-key certificates.
Version	This field displays the X.509 version number.
Serial Number	This field displays the certificate's identification number given by the certification authority or generated by the Zyxel Device.
Subject	This field displays information that identifies the owner of the certificate, such as Common Name (CN), Organizational Unit (OU), Organization (O), State (ST), and Country (C).
Issuer	This field displays identifying information about the certificate's issuing certification authority, such as Common Name, Organizational Unit, Organization and Country. With self-signed certificates, this is the same as the Subject Name field. "none" displays for a certification request.
Signature Algorithm	This field displays the type of algorithm that was used to sign the certificate. The Zyxel Device uses rsa-pkcs1-sha1 (RSA public-private key encryption algorithm and the SHA1 hash algorithm). Some certification authorities may use rsa-pkcs1-md5 (RSA public-private key encryption algorithm and the MD5 hash algorithm).
Valid From	This field displays the date that the certificate becomes applicable. "none" displays for a certification request.
Valid To	This field displays the date that the certificate expires. The text displays in red and includes an Expired! message if the certificate has expired. "none" displays for a certification request.
Key Algorithm	This field displays the type of algorithm that was used to generate the certificate's key pair (the Zyxel Device uses RSA encryption) and the length of the key set in bits (1024 bits for example).
Subject Alternative Name	This field displays the certificate owner's IP address (IP), domain name (DNS) or email address (EMAIL).
Key Usage	This field displays for what functions the certificate's key can be used. For example, "DigitalSignature" means that the key can be used to sign certificates and "KeyEncipherment" means that the key can be used to encrypt text.
Extended Key Usage	This field displays how the Zyxel Device generates and stores a request for server authentication, client authentication, or IKE Intermediate authentication certificate.
Basic Constraint	This field displays general information about the certificate. For example, Subject Type=CA means that this is a certification authority's certificate and "Path Length Constraint=1" means that there can only be one certification authority in the certificate's path. This field does not display for a certification request.
MD5 Fingerprint	This is the certificate's message digest that the Zyxel Device calculated using the MD5 algorithm.
SHA1 Fingerprint	This is the certificate's message digest that the Zyxel Device calculated using the SHA1 algorithm.

Table 281 Configuration > Object > Certificate > My Certificates > Edit (continued)

LABEL	DESCRIPTION
Certificate in PEM (Base-64) Encoded Format	This read-only text box displays the certificate or certification request in Privacy Enhanced Mail (PEM) format. PEM uses lowercase letters, uppercase letters and numerals to convert a binary certificate into a printable form. You can copy and paste a certification request into a certification authority's web page, an email that you send to the certification authority or a text editor and save the file on a management computer for later manual enrollment. You can copy and paste a certificate into an email to send to friends or colleagues or you can copy and paste a certificate into a text editor and save the file on a management computer for later distribution (via floppy disk for example).
Export Certificate Only	Use this button to save a copy of the certificate without its private key. Click this button and then **Save** in the **File Download** screen. The **Save As** screen opens, browse to the location that you want to use and click **Save**.
Password	If you want to export the certificate with its private key, create a password and type it here. Make sure you keep this password in a safe place. You will need to use it if you import the certificate to another device.
Export Certificate with Private Key	Use this button to save a copy of the certificate with its private key. Type the certificate's password and click this button. Click **Save** in the **File Download** screen. The **Save As** screen opens, browse to the location that you want to use and click **Save**.
OK	Click **OK** to save your changes back to the Zyxel Device. You can only change the name.
Cancel	Click **Cancel** to quit and return to the **My Certificates** screen.

34.11.3.3 The My Certificates Import Screen

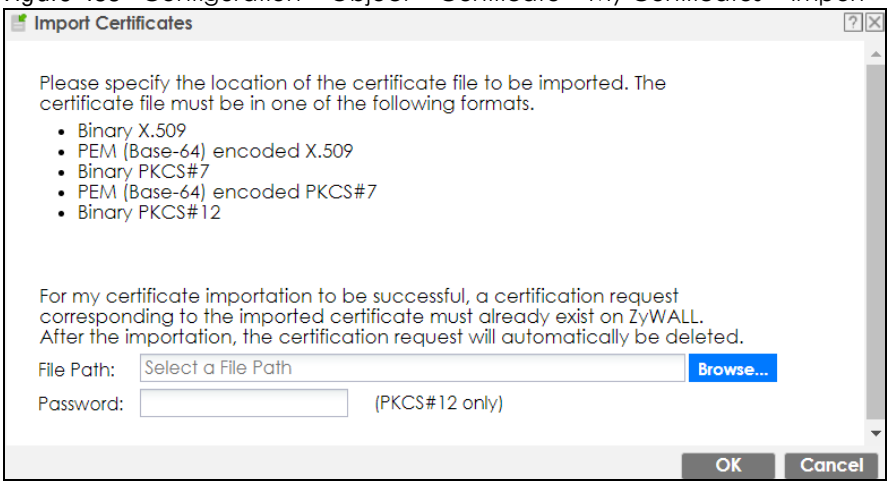
Click **Configuration** > **Object** > **Certificate** > **My Certificates** > **Import** to open the **My Certificate Import** screen. Follow the instructions in this screen to save an existing certificate to the Zyxel Device.

Note: You can import a certificate that matches a corresponding certification request that was generated by the Zyxel Device. You can also import a certificate in PKCS#12 format, including the certificate's public and private keys.

The certificate you import replaces the corresponding request in the **My Certificates** screen.

You must remove any spaces from the certificate's filename before you can import it.

Figure 433 Configuration > Object > Certificate > My Certificates > Import



The following table describes the labels in this screen.

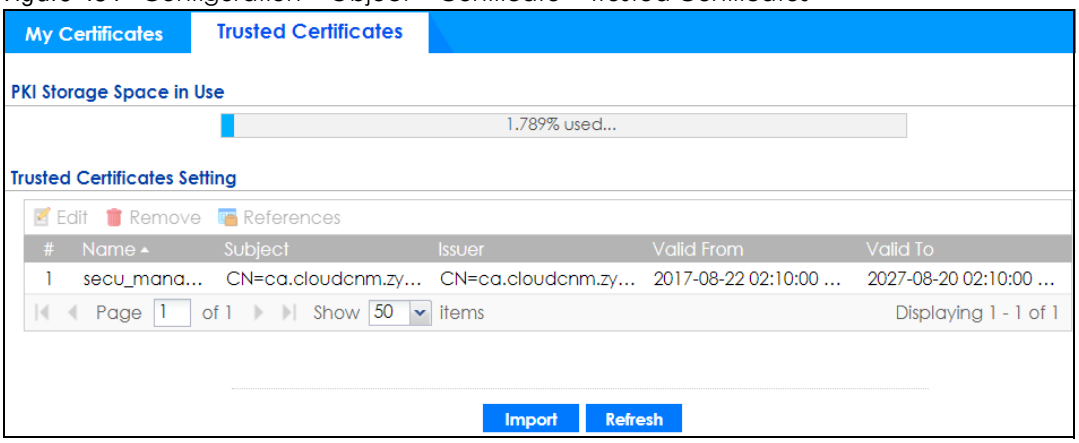
Table 282 Configuration > Object > Certificate > My Certificates > Import

LABEL	DESCRIPTION
File Path	Type in the location of the file you want to upload in this field or click **Browse** to find it. You cannot import a certificate with the same name as a certificate that is already in the Zyxel Device.
Browse	Click **Browse** to find the certificate file you want to upload.
Password	This field only applies when you import a binary PKCS#12 format file. Type the file's password that was created when the PKCS #12 file was exported.
OK	Click **OK** to save the certificate on the Zyxel Device.
Cancel	Click **Cancel** to quit and return to the **My Certificates** screen.

34.11.4 The Trusted Certificates Screen

Click **Configuration** > **Object** > **Certificate** > **Trusted Certificates** to open the **Trusted Certificates** screen. This screen displays a summary list of certificates that you have set the Zyxel Device to accept as trusted. The Zyxel Device also accepts any valid certificate signed by a certificate on this list as being trustworthy; thus you do not need to import any certificate that is signed by one of these certificates.

Figure 434 Configuration > Object > Certificate > Trusted Certificates



The following table describes the labels in this screen.

Table 283 Configuration > Object > Certificate > Trusted Certificates

LABEL	DESCRIPTION
PKI Storage Space in Use	This bar displays the percentage of the Zyxel Device's PKI storage space that is currently in use. When the storage space is almost full, you should consider deleting expired or unnecessary certificates before adding more certificates.
Edit	Double-click an entry or select it and click **Edit** to open a screen with an in-depth list of information about the certificate.
Remove	The Zyxel Device keeps all of your certificates unless you specifically delete them. Uploading a new firmware or default configuration file does not delete your certificates. To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so. Subsequent certificates move up by one when you take this action.
References	You cannot delete certificates that any of the Zyxel Device's features are configured to use. Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field displays the certificate index number. The certificates are listed in alphabetical order.

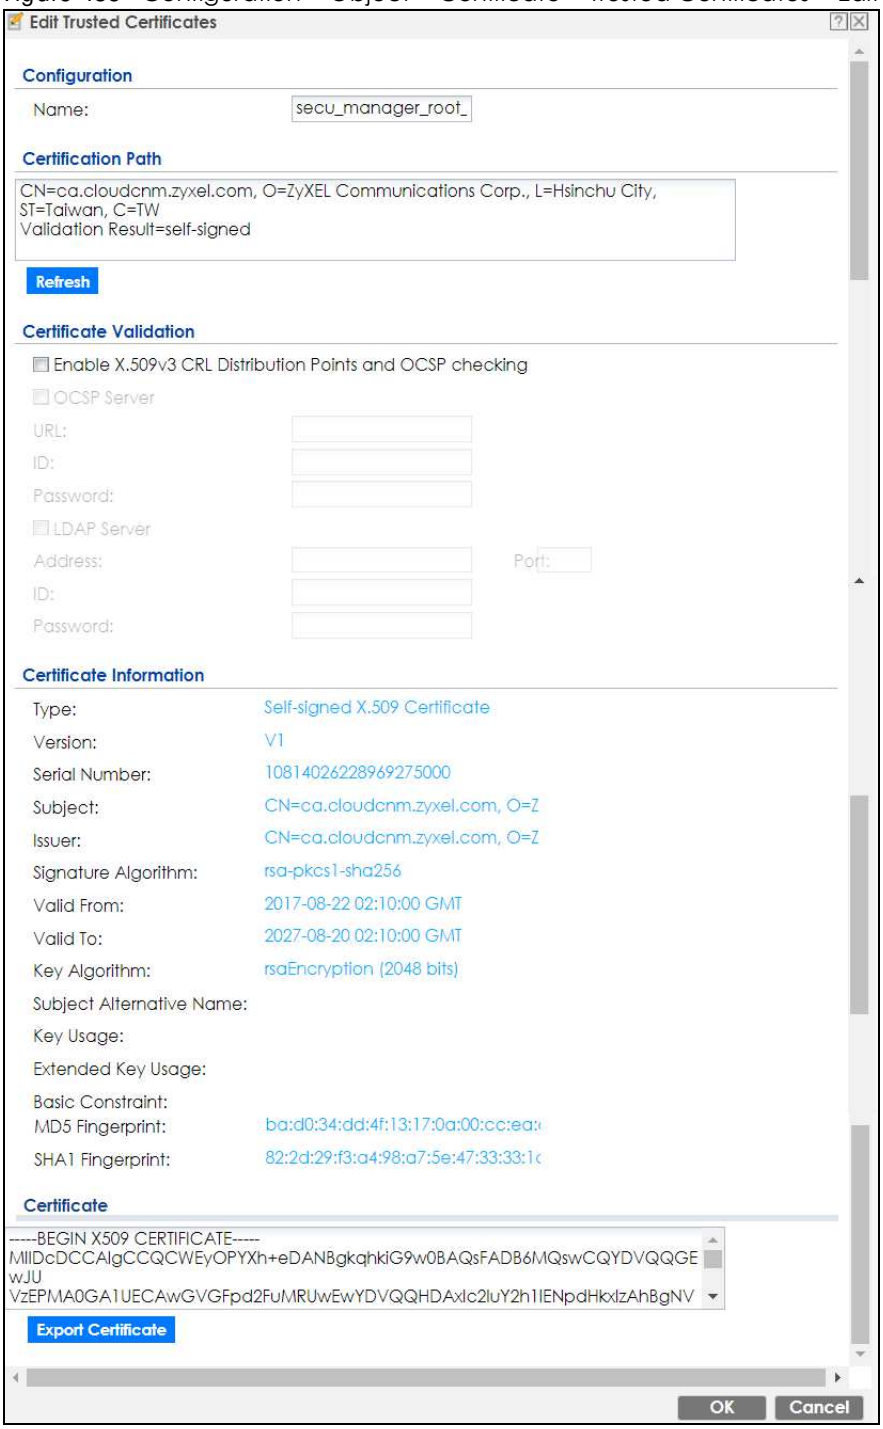
Table 283 Configuration > Object > Certificate > Trusted Certificates (continued)

LABEL	DESCRIPTION
Name	This field displays the name used to identify this certificate.
Subject	This field displays identifying information about the certificate's owner, such as CN (Common Name), OU (Organizational Unit or department), O (Organization or company) and C (Country). It is recommended that each certificate have unique subject information.
Issuer	This field displays identifying information about the certificate's issuing certification authority, such as a common name, organizational unit or department, organization or company and country. With self-signed certificates, this is the same information as in the **Subject** field.
Valid From	This field displays the date that the certificate becomes applicable.
Valid To	This field displays the date that the certificate expires. The text displays in red and includes an Expired! message if the certificate has expired.
Import	Click **Import** to open a screen where you can save the certificate of a certification authority that you trust, from your computer to the Zyxel Device.
Refresh	Click this button to display the current validity status of the certificates.

34.11.4.1 The Trusted Certificates Edit Screen

Click **Configuration** > **Object** > **Certificate** > **Trusted Certificates** and then a certificate's **Edit** icon to open the **Trusted Certificates Edit** screen. Use this screen to view in-depth information about the certificate, change the certificate's name and set whether or not you want the Zyxel Device to check a certification authority's list of revoked certificates before trusting a certificate issued by the certification authority.

Figure 435 Configuration > Object > Certificate > Trusted Certificates > Edit



The following table describes the labels in this screen.

Table 284 Configuration > Object > Certificate > Trusted Certificates > Edit

LABEL	DESCRIPTION
Name	This field displays the identifying name of this certificate. You can change the name. You can use up to 31 alphanumeric and ;'~!@#$%^&()_+[]{}',.=- characters.
Certification Path	Click the **Refresh** button to have this read-only text box display the end entity's certificate and a list of certification authority certificates that shows the hierarchy of certification authorities that validate the end entity's certificate. If the issuing certification authority is one that you have imported as a trusted certificate, it may be the only certification authority in the list (along with the end entity's own certificate). The Zyxel Device does not trust the end entity's certificate and displays "Not trusted" in this field if any certificate on the path has expired or been revoked.
Refresh	Click **Refresh** to display the certification path.
Enable X.509v3 CRL Distribution Points and OCSP checking	Select this check box to turn on/off certificate revocation. When it is turned on, the Zyxel Device validates a certificate by getting Certificate Revocation List (CRL) through HTTP or LDAP (can be configured after selecting the **LDAP Server** check box) and online responder (can be configured after selecting the **OCSP Server** check box).
OCSP Server	Select this check box if the directory server uses OCSP (Online Certificate Status Protocol).
URL	Type the protocol, IP address and path name of the OCSP server.
ID	The Zyxel Device may need to authenticate itself in order to assess the OCSP server. Type the login name (up to 31 ASCII characters) from the entity maintaining the server (usually a certification authority).
Password	Type the password (up to 31 ASCII characters) from the entity maintaining the OCSP server (usually a certification authority).
LDAP Server	Select this check box if the directory server uses LDAP (Lightweight Directory Access Protocol). LDAP is a protocol over TCP that specifies how clients access directories of certificates and lists of revoked certificates.
Address	Type the IP address (in dotted decimal notation) of the directory server.
Port	Use this field to specify the LDAP server port number. You must use the same server port number that the directory server uses. 389 is the default server port number for LDAP.
ID	The Zyxel Device may need to authenticate itself in order to assess the CRL directory server. Type the login name (up to 31 ASCII characters) from the entity maintaining the server (usually a certification authority).
Password	Type the password (up to 31 ASCII characters) from the entity maintaining the CRL directory server (usually a certification authority).
Certificate Information	These read-only fields display detailed information about the certificate.
Type	This field displays general information about the certificate. CA-signed means that a Certification Authority signed the certificate. Self-signed means that the certificate's owner signed the certificate (not a certification authority). X.509 means that this certificate was created and signed according to the ITU-T X.509 recommendation that defines the formats for public-key certificates.
Version	This field displays the X.509 version number.
Serial Number	This field displays the certificate's identification number given by the certification authority.
Subject	This field displays information that identifies the owner of the certificate, such as Common Name (CN), Organizational Unit (OU), Organization (O) and Country (C).
Issuer	This field displays identifying information about the certificate's issuing certification authority, such as Common Name, Organizational Unit, Organization and Country. With self-signed certificates, this is the same information as in the **Subject Name** field.

Table 284 Configuration > Object > Certificate > Trusted Certificates > Edit (continued)

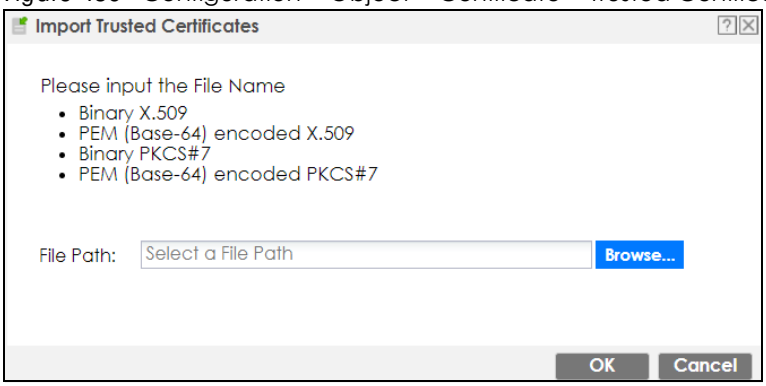
LABEL	DESCRIPTION
Signature Algorithm	This field displays the type of algorithm that was used to sign the certificate. Some certification authorities use rsa-pkcs1-sha1 (RSA public-private key encryption algorithm and the SHA1 hash algorithm). Other certification authorities may use rsa-pkcs1-md5 (RSA public-private key encryption algorithm and the MD5 hash algorithm).
Valid From	This field displays the date that the certificate becomes applicable. The text displays in red and includes a Not Yet Valid! message if the certificate has not yet become applicable.
Valid To	This field displays the date that the certificate expires. The text displays in red and includes an Expiring! or Expired! message if the certificate is about to expire or has already expired.
Key Algorithm	This field displays the type of algorithm that was used to generate the certificate's key pair (the Zyxel Device uses RSA encryption) and the length of the key set in bits (1024 bits for example).
Subject Alternative Name	This field displays the certificate's owner's IP address (IP), domain name (DNS) or email address (EMAIL).
Key Usage	This field displays for what functions the certificate's key can be used. For example, "DigitalSignature" means that the key can be used to sign certificates and "KeyEncipherment" means that the key can be used to encrypt text.
Extended Key Usage	This field displays the method that the Zyxel Device generates and stores a request for server authentication, client authentication, or IKE Intermediate authentication certificate.
Basic Constraint	This field displays general information about the certificate. For example, Subject Type=CA means that this is a certification authority's certificate and "Path Length Constraint=1" means that there can only be one certification authority in the certificate's path.
MD5 Fingerprint	This is the certificate's message digest that the Zyxel Device calculated using the MD5 algorithm. You can use this value to verify with the certification authority (over the phone for example) that this is actually their certificate.
SHA1 Fingerprint	This is the certificate's message digest that the Zyxel Device calculated using the SHA1 algorithm. You can use this value to verify with the certification authority (over the phone for example) that this is actually their certificate.
Certificate	This read-only text box displays the certificate or certification request in Privacy Enhanced Mail (PEM) format. PEM uses lowercase letters, uppercase letters and numerals to convert a binary certificate into a printable form. You can copy and paste the certificate into an email to send to friends or colleagues or you can copy and paste the certificate into a text editor and save the file on a management computer for later distribution (via floppy disk for example).
Export Certificate	Click this button and then **Save** in the **File Download** screen. The **Save As** screen opens, browse to the location that you want to use and click **Save**.
OK	Click **OK** to save your changes back to the Zyxel Device. You can only change the name.
Cancel	Click **Cancel** to quit and return to the **Trusted Certificates** screen.

34.11.4.2 The Trusted Certificates Import Screen

Click **Configuration** > **Object** > **Certificate** > **Trusted Certificates** > **Import** to open the **Trusted Certificates Import** screen. Follow the instructions in this screen to save a trusted certificate to the Zyxel Device.

Note: You must remove any spaces from the certificate's filename before you can import the certificate.

Figure 436 Configuration > Object > Certificate > Trusted Certificates > Import



The following table describes the labels in this screen.

Table 285 Configuration > Object > Certificate > Trusted Certificates > Import

LABEL	DESCRIPTION
File Path	Type in the location of the file you want to upload in this field or click **Browse** to find it. You cannot import a certificate with the same name as a certificate that is already in the Zyxel Device.
Browse	Click **Browse** to find the certificate file you want to upload.
OK	Click **OK** to save the certificate on the Zyxel Device.
Cancel	Click **Cancel** to quit and return to the previous screen.

34.11.5 Certificates Technical Reference

OCSP

OCSP (Online Certificate Status Protocol) allows an application or device to check whether a certificate is valid. With OCSP the Zyxel Device checks the status of individual certificates instead of downloading a Certificate Revocation List (CRL). OCSP has two main advantages over a CRL. The first is real-time status information. The second is a reduction in network traffic since the Zyxel Device only gets information on the certificates that it needs to verify, not a huge list. When the Zyxel Device requests certificate status information, the OCSP server returns a "expired", "current" or "unknown" response.

34.12 ISP Account Overview

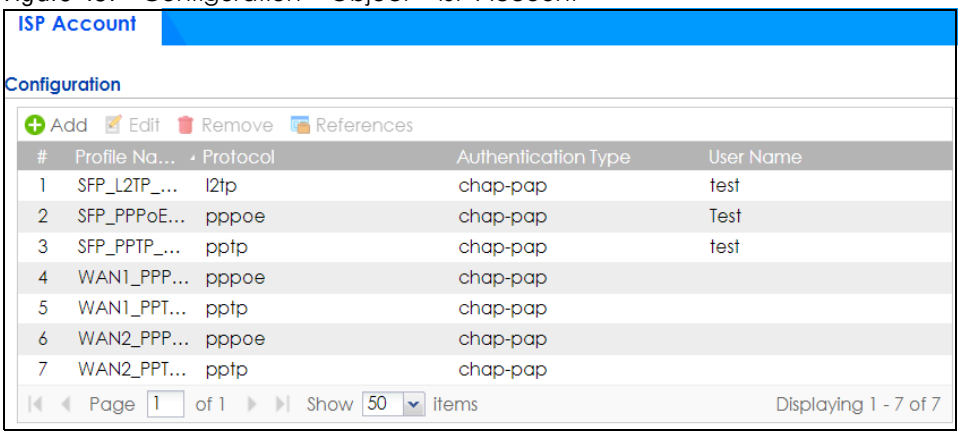
Use ISP accounts to manage Internet Service Provider (ISP) account information for PPPoE/PPTP/L2TP interfaces. An ISP account is a profile of settings for Internet access using PPPoE, PPTP or L2TP.

Use the **Object** > **ISP Account** screens (Section 34.12.1 on page 668) to create and manage ISP accounts in the Zyxel Device.

34.12.1 ISP Account Summary

This screen provides a summary of ISP accounts in the Zyxel Device. To access this screen, click **Configuration** > **Object** > **ISP Account**.

Figure 437 Configuration > Object > ISP Account



The following table describes the labels in this screen. See the ISP Account Add/Edit section below for more information as well.

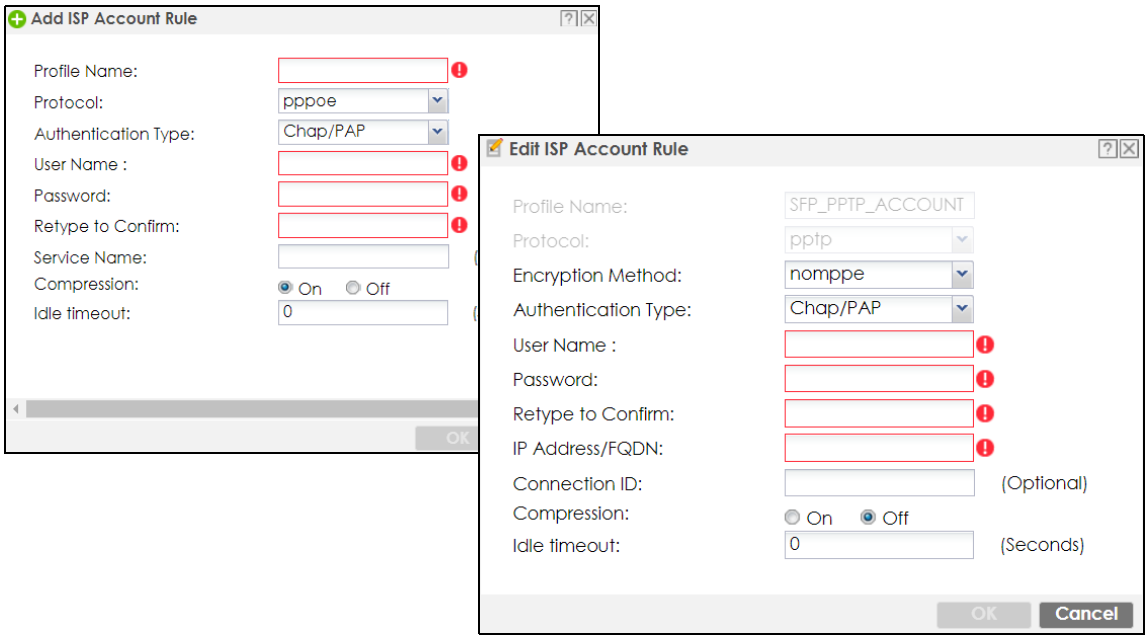
Table 286 Configuration > Object > ISP Account

LABEL	DESCRIPTION
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with a specific entry.
Profile Name	This field displays the profile name of the ISP account. This name is used to identify the ISP account.
Protocol	This field displays the protocol used by the ISP account.
Authentication Type	This field displays the authentication type used by the ISP account.
User Name	This field displays the user name of the ISP account.

34.12.1.1 ISP Account Add/Edit

The **ISP Account Add/Edit** screen lets you add information about new accounts and edit information about existing accounts. To open this window, open the **ISP Account** screen. (See Section 34.12.1 on page 668.) Then, click on an **Add** icon or **Edit** icon to open the **ISP Account Edit** screen below.

Figure 438 Configuration > Object > ISP Account > Edit



The following table describes the labels in this screen.

Table 287 Configuration > Object > ISP Account > Edit

LABEL	DESCRIPTION
Profile Name	This field is read-only if you are editing an existing account. Type in the profile name of the ISP account. The profile name is used to refer to the ISP account. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Protocol	This field is read-only if you are editing an existing account. Select the protocol used by the ISP account. Your ISP will provide you with a related username, password and IP (server) information. Options are: **pppoe** - This ISP account uses the PPPoE protocol. **pptp** - This ISP account uses the PPTP protocol. **l2tp** - This ISP account uses the L2TP protocol.
Authentication Type	Use the drop-down list box to select an authentication protocol for outgoing calls. Options are: **CHAP/PAP** - Your Zyxel Device accepts either CHAP or PAP when requested by this remote node. **Chap** - Your Zyxel Device accepts CHAP only. **PAP** - Your Zyxel Device accepts PAP only. **MSCHAP** - Your Zyxel Device accepts MSCHAP only. **MSCHAP-V2** - Your Zyxel Device accepts MSCHAP-V2 only.
Encryption Method	This field is available if this ISP account uses the **PPTP** protocol. Use the drop-down list box to select the type of Microsoft Point-to-Point Encryption (MPPE). Options are: **nomppe** - This ISP account does not use MPPE. **mppe-40** - This ISP account uses 40-bit MPPE. **mppe-128** - This ISP account uses 128-bit MMPE.
User Name	Type the user name given to you by your ISP.

Table 287 Configuration > Object > ISP Account > Edit (continued)

LABEL	DESCRIPTION
Password	Type the password associated with the user name above. The password can only consist of alphanumeric characters (A-Z, a-z, 0-9). This field can be blank.
Retype to Confirm	Type your password again to make sure that you have entered is correctly.
IP Address/FQDN	Enter the IP address or Fully-Qualified Domain Name (FQDN) of the PPTP or L2TP server.
Connection ID	This field is available if this ISP account uses the **PPTP** protocol. Type your identification name for the PPTP server. This field can be blank.
Service Name	If this ISP account uses the PPPoE protocol, type the PPPoE service name to access. PPPoE uses the specified service name to identify and reach the PPPoE server. This field can be blank. If this ISP account uses the PPTP protocol, this field is not displayed.
Compression	Select **On** button to turn on stac compression, and select **Off** to turn off stac compression. Stac compression is a data compression technique capable of compressing data by a factor of about four.
Idle Timeout	This value specifies the number of seconds that must elapse without outbound traffic before the Zyxel Device automatically disconnects from the PPPoE/PPTP server. This value must be an integer between 0 and 360. If this value is zero, this timeout is disabled.
OK	Click **OK** to save your changes back to the Zyxel Device. If there are no errors, the program returns to the **ISP Account** screen. If there are errors, a message box explains the error, and the program stays in the **ISP Account Edit** screen.
Cancel	Click **Cancel** to return to the **ISP Account** screen without creating the profile (if it is new) or saving any changes to the profile (if it already exists).

34.13 DHCPv6 Overview

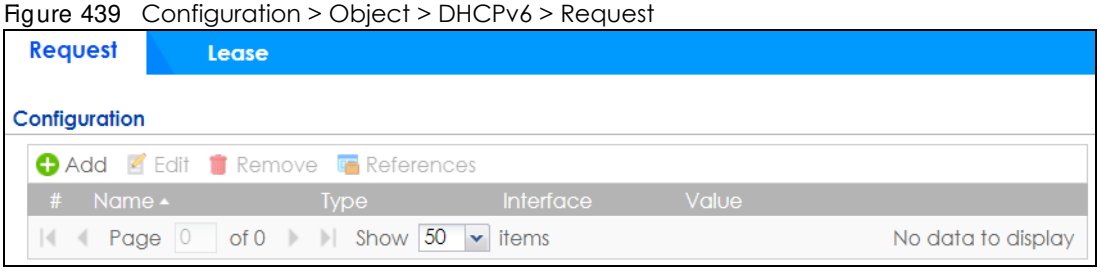
This section describes how to configure DHCPv6 request type and lease type objects.

- The **Request** screen (see Section 34.13.1 on page 671) allows you to configure DHCPv6 request type objects.
- The **Lease** screen (see Section 34.2.3 on page 587) allows you to configure DHCPv6 lease type objects.

34.13.1 The DHCPv6 Request Screen

The **Request** screen allows you to add, edit, and remove DHCPv6 request type objects. To access this screen, login to the Web Configurator, and click **Configuration** > **Object** > **DHCPv6** > **Request**.

Figure 439 Configuration > Object > DHCPv6 > Request



The following table describes the labels in this screen.

Table 288 Configuration > Object > DHCPv6 > Request

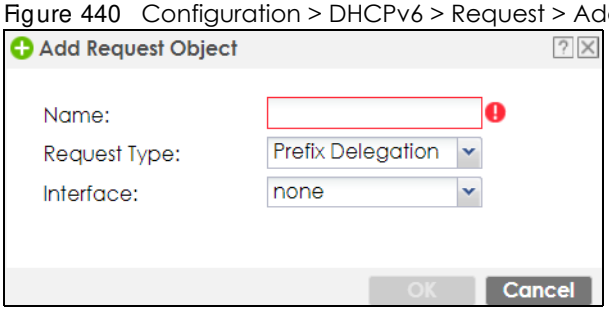
LABEL	DESCRIPTION
Configuration	
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with a specific object.
Name	This field displays the name of each request object.
Type	This field displays the request type of each request object.
Interface	This field displays the interface used for each request object.
Value	This field displays the value for each request object.

34.13.1.1 DHCPv6 Request Add/Edit Screen

The **Request Add/Edit** screen allows you to create a new request object or edit an existing one.

To access this screen, go to the **Request** screen (see Section 34.13.1 on page 671), and click either the **Add** icon or an **Edit** icon.

Figure 440 Configuration > DHCPv6 > Request > Add



The following table describes the labels in this screen.

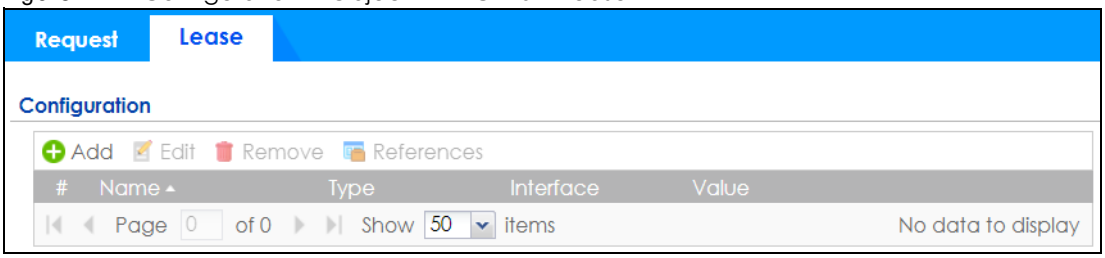
Table 289 Configuration > DHCPv6 > Request > Add

LABEL	DESCRIPTION
Name	Type the name for this request object. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Request Type	Select the request type for this request object. You can choose from **Prefix Delegation**, **DNS Server**, **NTP Server**, or **SIP Server**.
Interface	Select the interface for this request object.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

34.13.2 The DHCPv6 Lease Screen

The **Lease** screen allows you to add, edit, and remove DHCPv6 lease type objects. To access this screen, login to the Web Configurator, and click **Configuration** > **Object** > **DHCPv6** > **Lease**.

Figure 441 Configuration > Object > DHCPv6 > Lease



The following table describes the labels in this screen.

Table 290 Configuration > Object > DHCPv6 > Lease

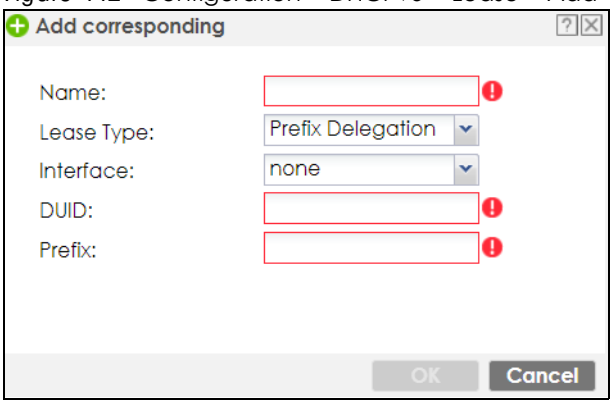
LABEL	DESCRIPTION
Configuration	
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so.
References	Select an entry and click **References** to open a screen that shows which settings use the entry.
#	This field is a sequential value, and it is not associated with a specific object.
Name	This field displays the name of each lease object.
Type	This field displays the request type of each lease object.
Interface	This field displays the interface used for each lease object.
Value	This field displays the value for each lease object.

34.13.2.1 DHCPv6 Lease Add/Edit Screen

The **Lease Add/Edit** screen allows you to create a new lease object or edit an existing one.

To access this screen, go to the **Lease** screen (see Section 34.13.2 on page 673), and click either the **Add** icon or an **Edit** icon.

Figure 442 Configuration > DHCPv6 > Lease > Add



The following table describes the labels in this screen.

Table 291 Configuration > DHCPv6 > Lease > Add/Edit

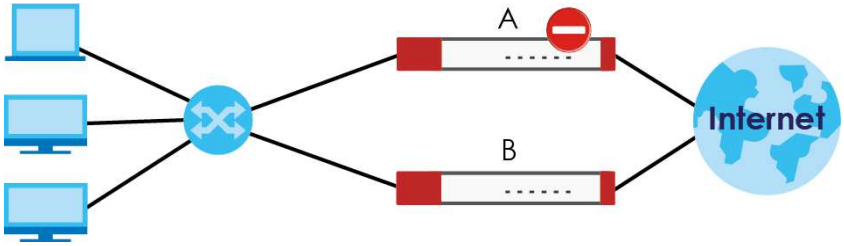
LABEL	DESCRIPTION
Name	Type the name for this lease object. You may use 1-31 alphanumeric characters, underscores(_), or dashes (-), but the first character cannot be a number. This value is case-sensitive.
Lease Type	Select the lease type for this lease object. You can choose from **Prefix Delegation**, **DNS Server**, **Address**, **Address Pool**, **NTP Server**, or **SIP Server**.
Interface	Select the interface for this lease object.
DUID	If you select **Prefix Delegation** or **Address** in the **Lease Type field**, enter the DUID of the interface.
Address	If you select **Address** in the **Lease Type** field, enter the IP address of the DHCPv6 server.
Prefix	If you select **Prefix Delegation** or **Address** in the **Lease Type field**, enter the IPv6 prefix of the interface.
DNS Server	If you select **DNS Server** in the **Lease Type field**, select a request object or **User Defined** in the **DNS Server** field and enter the IP address of the DNS server in the **User Defined Address** field below.
Starting IP Address	If you select **Address Pool** in the **Lease Type field**, enter the first of the contiguous addresses in the IP address pool.
End IP Address	If you select **Address Pool** in the **Lease Type field**, enter the last of the contiguous addresses in the IP address pool.
NTP Server	If you select **NTP Server** in the **Lease Type field**, select a request object or **User Defined** in the **NTP Server** field and enter the IP address of the NTP server in the **User Defined Address** field below.
SIP Server	If you select **SIP Server** in the **Lease Type field**, select a request object or **User Defined** in the **SIP** field and enter the IP address of the SIP server in the **User Defined Address** field below.
User Defined Address	If you select **DNS Server**, **NTP Server**, or **SIP Server** as your lease type, you must enter the IP address of the server your selected.
OK	Click **OK** to save your changes back to the Zyxel Device.
Cancel	Click **Cancel** to exit this screen without saving your changes.

CHAPTER 35
Device HA

35.1 Device HA Overview

Device HA lets a backup (or passive) Zyxel Device (B) automatically take over if the master (or active) Zyxel Device (A) fails.

Figure 443 Device HA Backup Taking Over for the Master



35.1.1 What You Can Do in These Screens

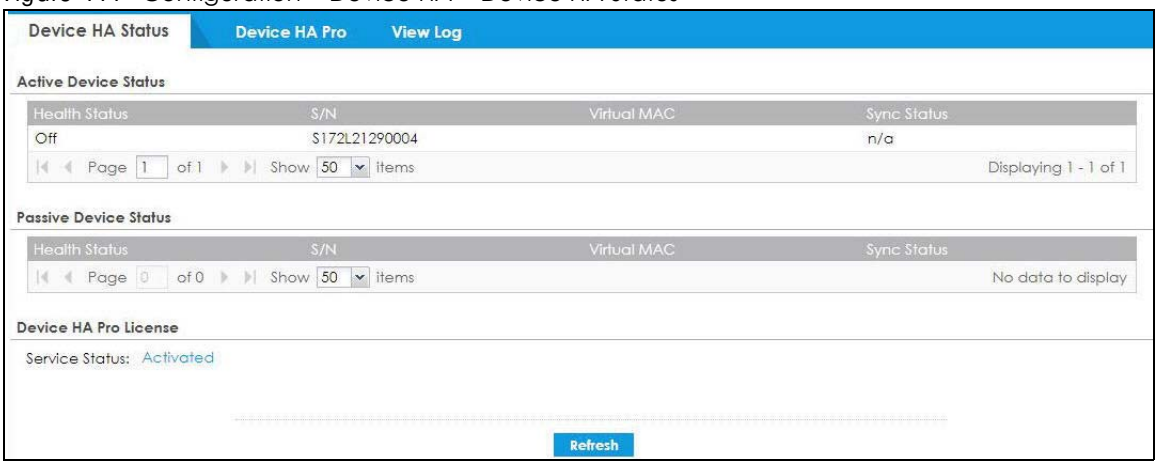
- Use the **Device HA Status** screen (Section 35.2 on page 675) to see the license status for Device HA Pro, and see the status of the active and passive devices.
- Use the **Device HA Pro** screen (Section 35.3 on page 677) to configure Device HA Pro global settings, monitored interfaces and synchronization settings.
- Use the **View Log** screen (Section 35.4 on page 680) to see logs of the active and passive devices.

35.2 Device HA Status

Use this screen to view Device HA Pro license status and details on the active and passive Zyxel Devices.

Go to **Configuration** > **Device HA** > **Device HA Status** to view the following screen.

Figure 444 Configuration > Device HA > Device HA Status



The following table describes the labels in this screen.

Table 292 Configuration > Device HA > Device HA Status

LABEL	DESCRIPTION
Active Device Status	This section displays information on the active Zyxel Device with an activated Device HA Pro license.
Health Status	This displays **Off** or **On** depending on whether Device HA Pro is disabled or enabled on the active Zyxel Device.
S/N	This displays the serial number of the active Zyxel Device.
Virtual MAC	This displays the hardware MAC address of the active Zyxel Device with an activated Device HA Pro license.
Synch Status	This displays the synchronization progress, **No Progress / Fail / Abort / Success / In Progress**, between the active Zyxel Device with an activated Device HA Pro license and the passive Zyxel Device.
Passive Device Status	This section displays information on the passive Zyxel Device with an activated Device HA Pro license.
Health Status	This displays **Off** or **On** depending on whether Device HA Pro is disabled or enabled on the passive Zyxel Device.
S/N	This displays the serial number of the passive Zyxel Device.
Virtual MAC	This displays the hardware MAC address of the passive Zyxel Device.
Synch Status	This displays the synchronization progress, **No Progress / Fail / Abort / Success / In Progress**, between the passive Zyxel Device with an activated Device HA Pro license and the active Zyxel Device.
Device HA Pro License	These are the steps to activate a Device HA Pro license on your active and passive Zyxel Devices. 1. See your Device HA Pro iCard. The card contains two keys. 2. Register your active and passive Zyxel Devices at myZyxel. 3. Activate the license by entering one key on the active Zyxel Device and the other key on the passive Zyxel Device. It doesn't matter which Zyxel Device is actually active or passive as this is dynamic in Device HA Pro.

Table 292 Configuration > Device HA > Device HA Status (continued)

LABEL	DESCRIPTION
Service Status	This field displays whether a service license is enabled at myZyxel (**Activated**) or not (**Not Activated**) or expired (**Expired**). It displays the remaining Grace Period if your license has **Expired**. It displays **Not Licensed** if there isn't a license to be activated for this service. If you need a license or a trial license has expired, click **Buy** to buy a new one. If a **Standard** license has expired, click **Renew** to extend the license. Then, click **Activate** to connect with the myZyxel server to activate the new license.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

35.3 Device HA Pro

You need a license to use Device HA Pro. Device HA Pro is easier to deploy than Device HA, is more reliable (no risk of overloading), and faster (Device HA causes a connection break of 10~30 seconds while Device HA Pro just has 1~2 seconds). In addition to configuration file backup in Device HA, device time, TCP sessions (IPv4/IPv6), IPSec VPN sessions, login/logout information, DHCP table, IP/MAC binding table and license status can also be backed up using Device HA Pro.

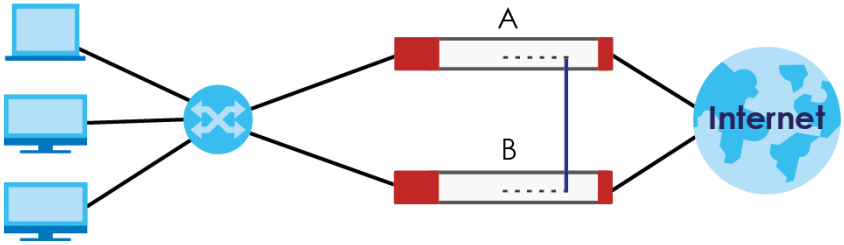
Active and Passive Devices

Device HA Pro uses a dedicated heartbeat link between an active device ('master') and a passive device ('backup') for status syncing and backup to the passive device. On the passive device, all ports are disabled except for the port with the heartbeat link.

In the following example, Zyxel Device **A** is the active device that is connected to passive device Zyxel Device **B** via a dedicated link that is used for heartbeat control, configuration synchronization and troubleshooting. All links on Zyxel Device **B** are down except for the dedicated heartbeat link.

Note: The dedicated heartbeat link port must be the highest-numbered port on each Zyxel Device for Device HA Pro to work.

Figure 445 Device HA Pro



Failover from the active Zyxel Device to the passive Zyxel Device is activated when:

- A monitored interface is down
- A monitored service (daemon) is down
- The heartbeat link exceeds the failure tolerance.

After failover, the initial active Zyxel Device becomes the passive Zyxel Device after it recovers.

35.3.1 Deploying Device HA Pro

1. Register either the active or passive Zyxel Device with a Device HA Pro license at myZyxel. Check that it's properly licensed in **Licensing** > **Registration** > **Service** in the active Zyxel Device.
2. Make sure the passive Zyxel Device is offline, then enable Device HA in **Device HA** > **General** in the passive Zyxel Device.
3. Must make sure the FTP port in **System** > **FTP** (default 21) is the same on both Zyxel Devices. FTP is used for transferring files in the event of failover from active to passive Zyxel Device.
4. Connect the passive Zyxel Device to the active Zyxel Device using the highest-numbered ports on both Zyxel Devices. This is the heartbeat interface. Make sure that this interface is not already configured for other features such as LAG, VLAN, Bridge.

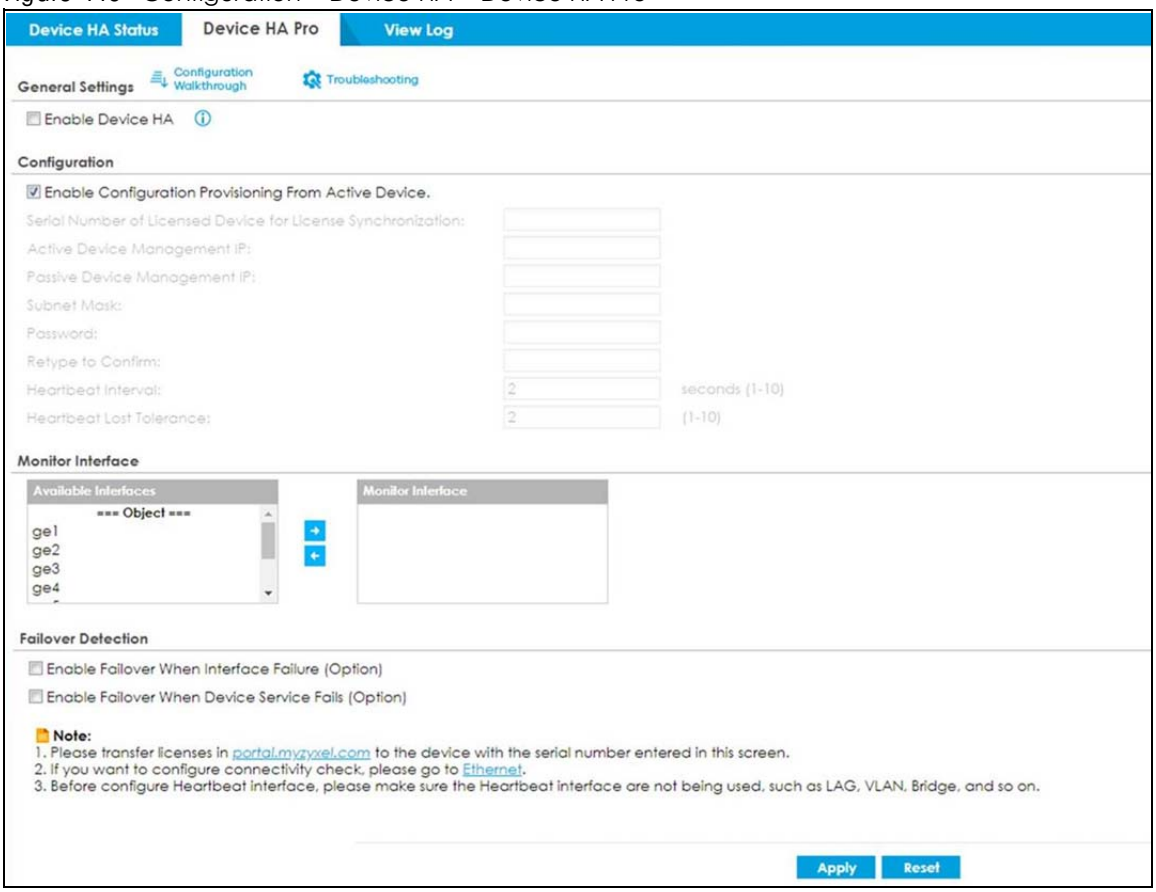
   Note: If both Zyxel Devices are turned on at the same time with Device HA enabled, then they may send the heartbeat at the same time. In this case, the Zyxel Device with the bigger MAC address becomes the passive Zyxel Device.

5. When using Device HA Pro to synchronize firmware, the location of the running firmware must be the same in both active and passive Zyxel Devices. For example, if the running firmware is in partition 1 in the active Zyxel Device (standby firmware in partition 2), then the running firmware must also be in partition 1 in the passive Zyxel Device (standby firmware in partition 2).

35.3.2 Configuring Device HA Pro

Go to **Configuration** > **Device HA** > **Device HA Pro** and configure the following screen.

Figure 446 Configuration > Device HA > Device HA Pro



The following table describes the labels in this screen.

Table 293 Configuration > Device HA > Device HA Pro

LABEL	DESCRIPTION
Enable Device HA	Select this to turn the Zyxel Device's Device HA Pro feature on.
Enable Configuration Provisioning From Active Device.	Select this to have a passive Zyxel Device copy the active Zyxel Device's configuration, signatures (anti-virus, IDP/application patrol, and system protect), and certificates. Note: Only Zyxel Devices of the same model and firmware version can synchronize.
Serial Number of Licensed Device for License Synchronization	Type the serial number of the Zyxel Device (active or passive) with the Device HA Pro subscribed license.
Active Device Management IP	Type the IPv4 address of the highest-numbered port on the active Zyxel Device (the heartbeat dedicated link port).
Passive Device Management IP	Type the IPv4 address of the highest-numbered port on the passive Zyxel Device (the heartbeat dedicated link port). Note: The active and passive Zyxel Device Management IP addresses must be in the same subnet.
Subnet Mask	Type the subnet mask for the management IP addresses.

Table 293 Configuration > Device HA > Device HA Pro (continued)

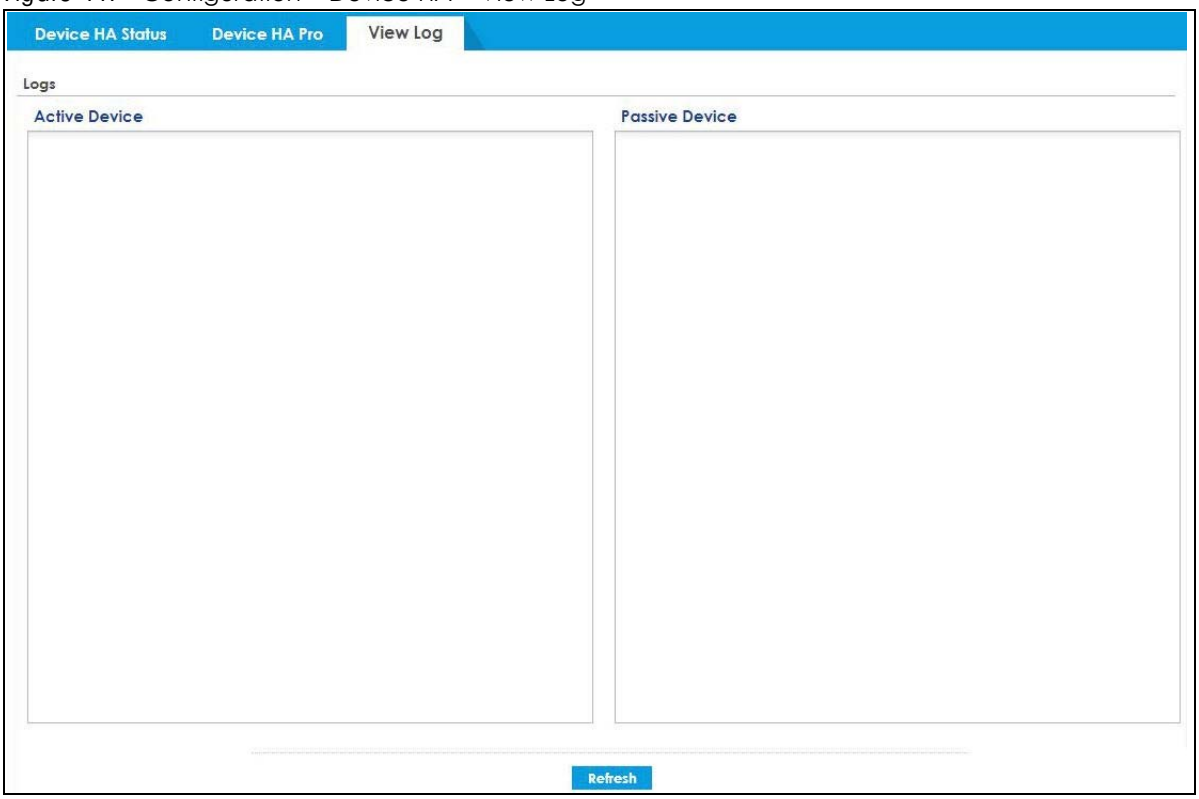
LABEL	DESCRIPTION
Password	Type a synchronization password of between 1 and 32 single-byte printable characters. You will be prompted for the password before synchronization takes place.
Retype to Confirm	Type the exact same synchronization password as typed above.
Heartbeat Interval	Type the number of seconds (1-10) allowed for absence of a heartbeat signal before a failure of the active Zyxel Device is recorded.
Heartbeat Lost Tolerance	Type the number of heartbeat failures allowed before failover is activated on the passive Zyxel Device.
Monitor Interface	Select an interface in **Available Interfaces** and click the right-arrow button to move it to **Monitor Interface** to become a Device HA pro monitored interface. To remove a Device HA pro monitored interface, select it in **Monitor Interface** and click the left-arrow button to move it to **Available Interfaces**.
Failover Detection	
Enable Failover When Interface Failure (Option)	Select this to have the passive Zyxel Device take over when a monitored interface fails.
Enable Failover When Device Service Fails (Option)	Select this to have the passive Zyxel Device take over when a monitored service daemon on the active Zyxel Device fails.
Apply	Click **Apply** to save your Device HA Pro configurations back to the Zyxel Device but keep the Zyxel Device using Device HA (general).
Reset	Click **Reset** to return the screen to its last-saved settings.

35.4 View Log

Use this screen to see Device HA Pro logs on the active and passive Zyxel Devices.

Go to **Configuration** > **Device HA** > **View Log** to display the following screen.

Figure 447 Configuration > Device HA > View Log



The following table describes the labels in this screen.

Table 294 Configuration > Device HA > View Log

LABEL	DESCRIPTION
Logs	
Active Device	This displays Device HA Pro logs on the active Zyxel Device.
Passive Device	This displays Device HA Pro logs on the passive Zyxel Device.
Refresh	Click **Refresh** to update information in this screen.

CHAPTER 36
Cloud CNM

36.1 Cloud CNM Overview

You need licenses to use Cloud CNM SecuManager and Cloud CNM SecuReporter. You need the SecuManager license to get a **CNM ID** with which you can access the SecuManager server. It is independent from the Zyxel Devices. The SecuReporter license must be activated on each Zyxel Device.

36.1.1 What You Can Do in this Chapter

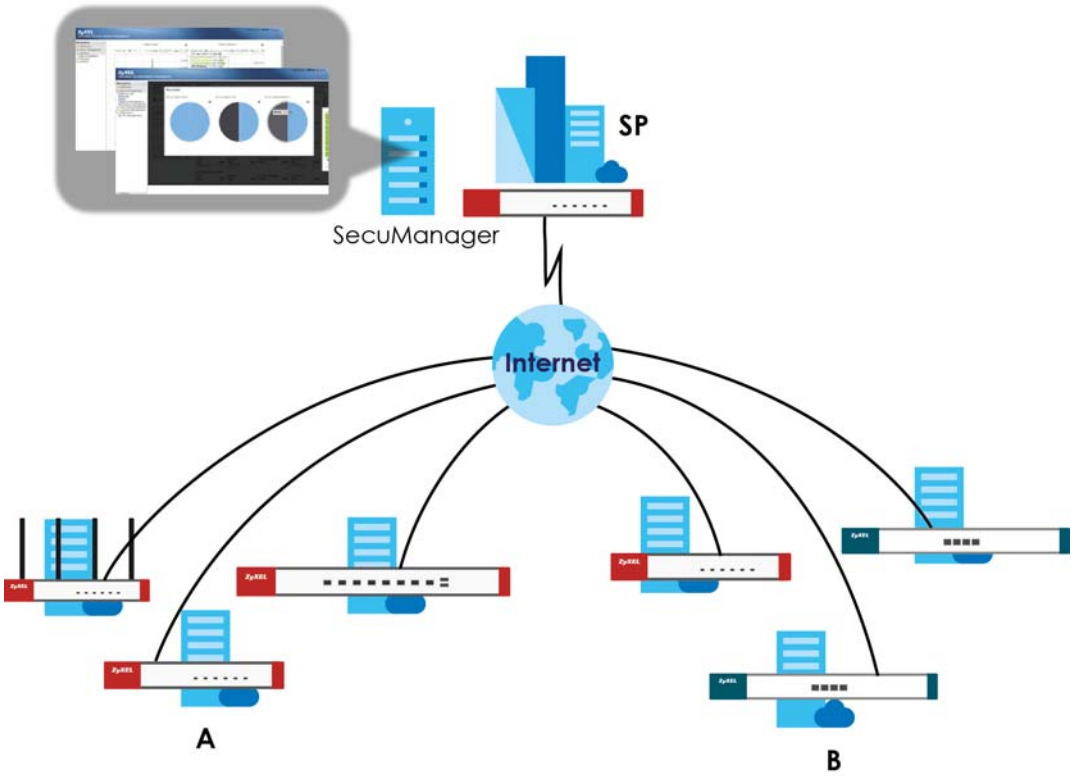
- Use the **Cloud CNM > SecuManager** screen (Section 36.2 on page 682) to enable and configure management of the Zyxel Device by a Central Network Management system.
- Use the **Cloud CNM > SecuReporter** screen (Section 36.3 on page 685) to enable SecuReporter logging on your Zyxel Device, see license status, type, expiration date and access a link to the SecuReporter web portal. The SecuReporter web portal collects and analyzes logs from your Zyxel Device in order to identify anomalies, alert on potential internal / external threats, and report on network usage.

36.2 Cloud CNM SecuManager

Cloud CNM SecuManager is a Virtual Machine-based (VM) management system that uses the TR-069 protocol to encapsulate commands to ZyWALL/USG devices for management and monitoring; these devices must have firmware that supports the TR-069 protocol.

In the following figure, SP is the management service provider, while A and B are sites with devices being managed by SP.

Figure 448 Cloud CNM SecuManager Example Network Topology



Cloud CNM SecuManager features include:

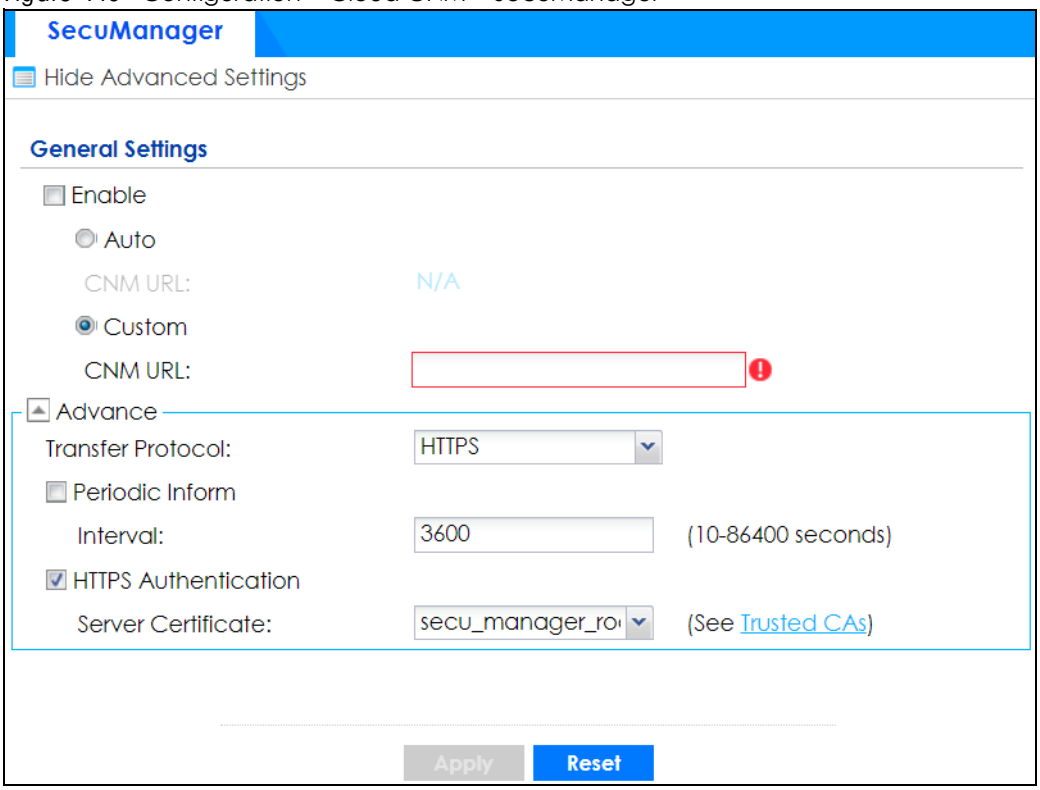
- Batch import of managed devices at one time using one CSV file
- See an overview of all managed devices and system information in one place
- Monitor and manage devices
- Install firmware to multiple devices of the same model at one time
- Backup and restore device configuration
- View the location of managed devices on a map
- Receive notification for events and alarms, such as when a device goes down
- Graphically monitor individual devices and see related statistics
- Directly access a device for remote configuration
- Create four types of administrators with different privileges
- Perform Site-to-Site, Hub & Spoke, Fully-meshed and Remote Access VPN provisioning.

To allow Cloud CNM SecuManager management of your Zyxel Device:

- You must have a Cloud CNM SecuManager license with CNM ID number or a Cloud CNM SecuManager server URL.
- The Zyxel Device must be able to communicate with the Cloud CNM SecuManager server.

You must configure **Configuration** > **Cloud CNM** > **SecuManager** to allow the Zyxel Device to find the Cloud CNM SecuManager server.

Figure 449 Configuration > Cloud CNM > SecuManager



The following table describes the labels in this screen.

Table 295 Configuration > Cloud CNM > SecuManager

LABEL	DESCRIPTION
Show Advanced Settings / Hide Advanced Settings	Click this button to display a greater or lesser number of configuration fields.
Enable	Select this to allow management of the Zyxel Device by Cloud CNM SecuManager.
Auto	Select this if your Cloud CNM SecuManager server can access myZyxel to automatically get the VM server URL from myZyxel. You also need **CNM ID** from the Cloud CNM SecuManager license.
CNM URL	myZyxel associates the **CNM ID** with the **CNM URL** which identifies the server on which Cloud CNM SecuManager is installed. Therefore you don't need to enter the CNM URL when you select **Auto**.
Custom	Select this if your Cloud CNM SecuManager server cannot access myZyxel.
CNM URL	Select this if your VM server or Zyxel Device are in a private network, or if the VM server is behind a NAT router. You then need to manually enter the VM server URL into the Zyxel Device. Enter the IPv4 IP address of the Cloud CNM SecuManager server followed by the port number (default 7547 for HTTPS or 7549 for HTPP) followed by the **CNM ID** from the license in **CNM URL**. For example, if you installed Cloud CNM SecuManager on a server with IP address 1.1.1.1 and **CNM ID** V6ABQNTPYGD, then type `1.1.1.1:7547/V6ABQNTPYG` or `1.1.1.1:7549/V6ABQNTPYG` as the **CNM URL**.
Transfer Protocol	Choose the CNM URL protocol: **HTTP** or **HTTPS**. If you enter 1.1.1.1:7547 as the **CNM URL**, you must choose **HTTPS** as the **Transfer Protocol**, and then the whole CNM URL is https://1.1.1.1:7547. If you enter 1.1.1.1:7549 as the **CNM URL**, you must choose **HTTP** as the **Transfer Protocol**, and then the whole CNM URL is http://1.1.1.1:7549.
Periodic Inform	Enable this to have the Zyxel Device inform the Cloud CNM SecuManager server of its presence at regular intervals.

Table 295 Configuration > Cloud CNM > SecuManager (continued)

LABEL	DESCRIPTION
Interval	Type how often the Zyxel Device should inform Cloud CNM SecuManager server of its presence.
HTTPS Authentication	Select the check box if you have a HTTPs server certificate.
Server Certificate	Select a certificate the HTTPS server (the Zyxel Device) uses to authenticate itself to the HTTPS client.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

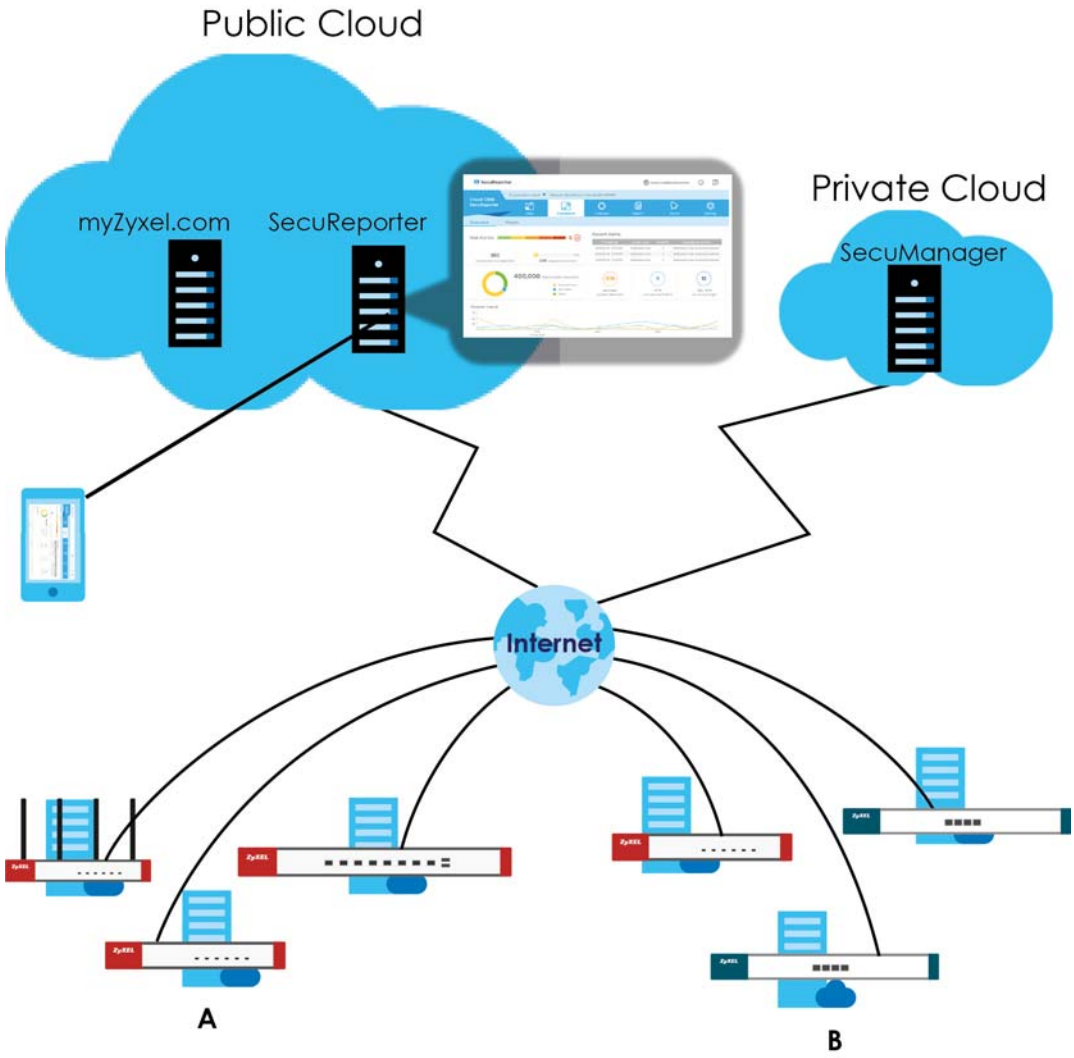
Note: See the Cloud CNM SecuManager User's Guide for more information on Cloud CNM SecuManager.

36.3 Cloud CNM SecuReporter

Cloud CNM SecuReporter is a security analytics portal that collects and analyzes logs from SecuReporter-licensed Zyxel Devices in order to identify anomalies, alert on potential internal / external threats, and report on network usage. You need to buy a license for SecuReporter for your Zyxel Device and register it at myZyxel. You must be a registered user at myZyxel.

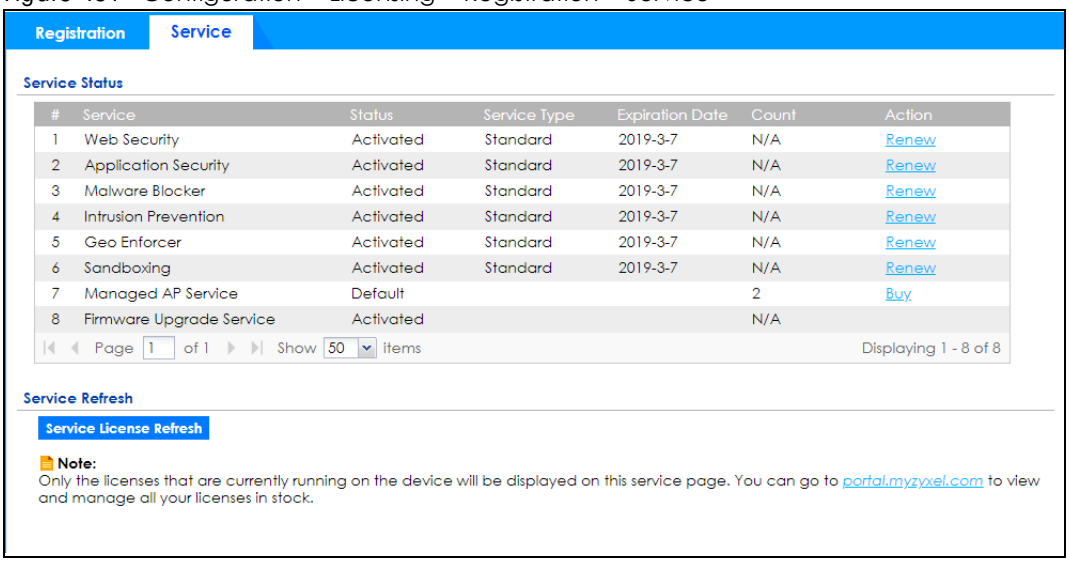
You can access the portal from a web browser and also get notifications sent to an app on your mobile phone.

Figure 450 Cloud CNM SecuReporter Application Scenario



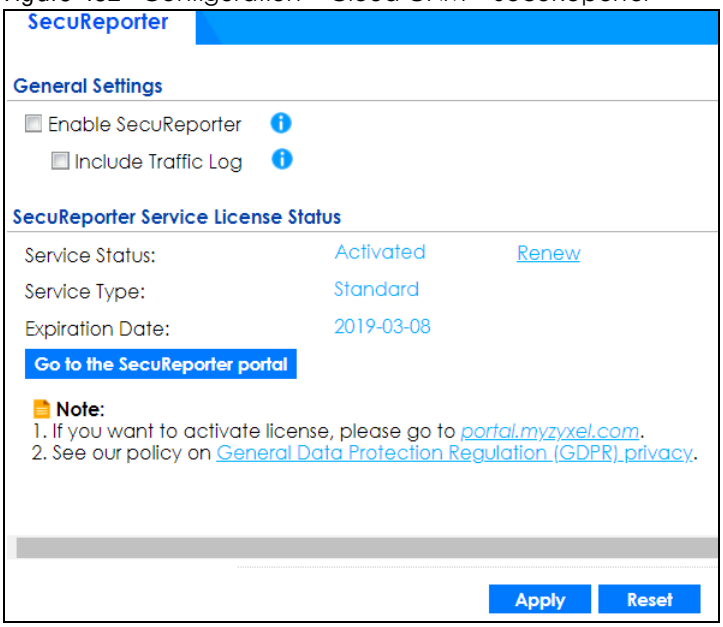
Your SecuReporter license displays in **Configuration** > **Licensing** > **Registration** > **Service** after you purchase a license and register it at myZyxel. The Zyxel Device must be able to communicate with the myZyxel server.

Figure 451 Configuration > Licensing > Registration > Service



Click **Configuration** > **Cloud CNM** > **SecuReporter** to enable SecuReporter logging on your Zyxel Device, see license status, type, expiration date and access a link to the SecuReporter web portal.

Figure 452 Configuration > Cloud CNM > SecuReporter



The following table describes the labels in this screen.

Table 296 Configuration > Cloud CNM > SecuReporter

LABEL	DESCRIPTION
Enable SecuReporter	Security-related logs are sent to the SecuReporter portal. Click the General Data Protection Regulation (GDPR) privacy link below to see the Zyxel privacy policy. This must be selected to have SecuReporter collect and analyze logs from this Zyxel Device. • It's selected by default if you have activated a SecuReporter **Standard** license, • You need to select this if you have a SecuReporter **Trial** license. • This field is not available if you do not have a SecuReporter license.
Include Traffic Log	Select this for traffic logs to be also sent to the SecuReporter portal for application usage analysis via this Zyxel Device. This may cause an increase in traffic to SecuReporter from this Zyxel Device. Clear the field if it impacts Zyxel Device performance.
SecuReporter Service License Status	
Service Status	This field displays whether a service license is enabled at myZyxel (**Activated**) or not (**Not Activated**) or expired (**Expired**). It displays the remaining Grace Period if your license has **Expired**. It displays **Not Licensed** if there isn't a license to be activated for this service.
Service Type	This field displays whether you applied for a trial application (**Trial**) or registered this service with your iCard's PIN number (**Standard**). This field is blank when the service is not activated.
Expiration Date	This field displays the date your service expires.
Launch Portal	Click this to go to the SecuReporter security analytics portal.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

CHAPTER 37
System

37.1 Overview

Use the system screens to configure general Zyxel Device settings.

37.1.1 What You Can Do in this Chapter

- Use the **System** > **Host Name** screen (see Section 37.2 on page 690) to configure a unique name for the Zyxel Device in your network.
- Use the **System** > **USB Storage** screen (see Section 37.3 on page 690) to configure the settings for the connected USB devices.
- Use the **System** > **Date/Time** screen (see Section 37.4 on page 691) to configure the date and time for the Zyxel Device.
- Use the **System** > **Console Speed** screen (see Section 37.5 on page 695) to configure the console port speed when you connect to the Zyxel Device via the console port using a terminal emulation program.
- Use the **System** > **DNS** screen (see Section 37.6 on page 696) to configure the DNS (Domain Name System) server used for mapping a domain name to its corresponding IP address and vice versa.
- Use the **System** > **WWW** screens (see Section 37.7 on page 706) to configure settings for HTTP or HTTPS access to the Zyxel Device and how the login and access user screens look.
- Use the **System** > **SSH** screen (see Section 37.8 on page 723) to configure SSH (Secure SHell) used to securely access the Zyxel Device's command line interface. You can specify which zones allow SSH access and from which IP address the access can come.
- Use the **System** > **TELNET** screen (see Section 37.9 on page 728) to configure Telnet to access the Zyxel Device's command line interface. Specify which zones allow Telnet access and from which IP address the access can come.
- Use the **System** > **FTP** screen (see Section 37.10 on page 730) to specify from which zones FTP can be used to access the Zyxel Device. You can also specify from which IP addresses the access can come. You can upload and download the Zyxel Device's firmware and configuration files using FTP.
- Your Zyxel Device can act as an SNMP agent, which allows a manager station to manage and monitor the Zyxel Device through the network. Use the **System** > **SNMP** screen (see Section 37.11 on page 732) to configure SNMP settings, including from which zones SNMP can be used to access the Zyxel Device. You can also specify from which IP addresses the access can come.
- Use the **Auth. Server** screen (Section 37.12 on page 738) to configure the Zyxel Device to operate as a RADIUS server.
- Use the **Notification** > **Mail Server** screen (Section 37.13 on page 740) to configure the Zyxel Device to operate as a RADIUS server.
- Use the **Notification** > **SMS** screen (Section 37.14 on page 742) to turn on the SMS service on the Zyxel Device in order to send dynamic guest account information in text messages and authorization for VPN tunnel access to a secured network.
- Use the **System** > **Language** screen (see Section 37.15 on page 743) to set a language for the Zyxel Device's Web Configurator screens.

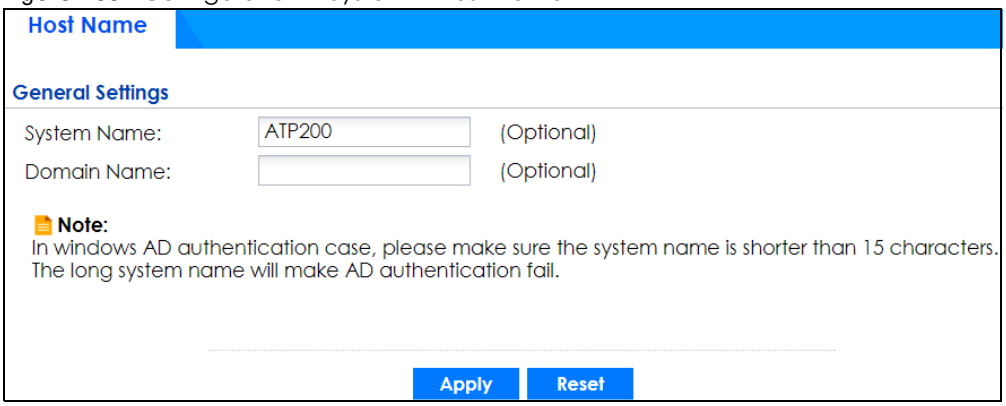
- Use the System > IPv6 screen (see Section 37.16 on page 743) to enable or disable IPv6 support on the Zyxel Device.
- Use the System > ZON screen (see Section 37.17 on page 744) to enable or disable the Zyxel One Network (ZON) utility that uses Zyxel Discovery Protocol (ZDP) for discovering and configuring ZDP-aware Zyxel devices in the same network as the computer on which ZON is installed.

Note: See each section for related background information and term definitions.

37.2 Host Name

A host name is the unique name by which a device is known on a network. Click Configuration > System > Host Name to open the Host Name screen.

Figure 453 Configuration > System > Host Name



The following table describes the labels in this screen.

Table 297 Configuration > System > Host Name

LABEL	DESCRIPTION
System Name	Enter a descriptive name to identify your Zyxel Device device. This name can be up to 64 alphanumeric characters long. Spaces are not allowed, but dashes (-) underscores (_) and periods (.) are accepted.
Domain Name	Enter the domain name (if you know it) here. This name is propagated to DHCP clients connected to interfaces with the DHCP server enabled. This name can be up to 254 alphanumeric characters long. Spaces are not allowed, but dashes "-" are accepted.
Apply	Click Apply to save your changes back to the Zyxel Device.
Reset	Click Reset to return the screen to its last-saved settings.

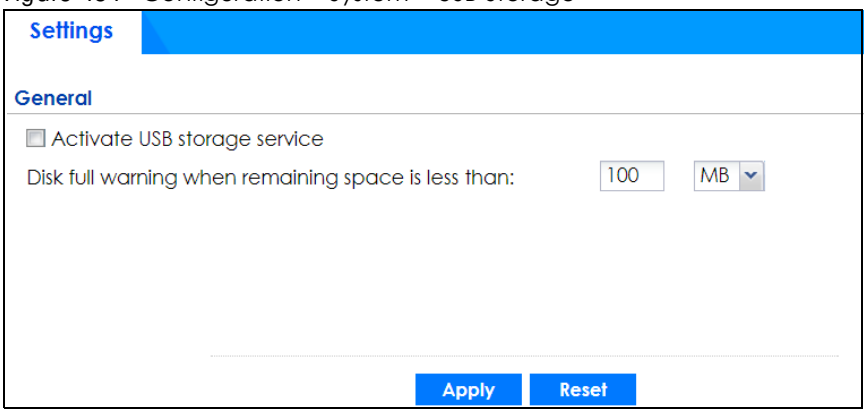
37.3 USB Storage

The Zyxel Device can use a connected USB device to store the system log and other diagnostic information. Use this screen to turn on this feature and set a disk full warning limit.

Note: Only connect one USB device. It must allow writing (it cannot be read-only) and use the FAT16, FAT32, EXT2, or EXT3 file system.

Click **Configuration** > **System** > **USB Storage** to open the screen as shown next.

Figure 454 Configuration > System > USB Storage



The following table describes the labels in this screen.

Table 298 Configuration > System > USB Storage

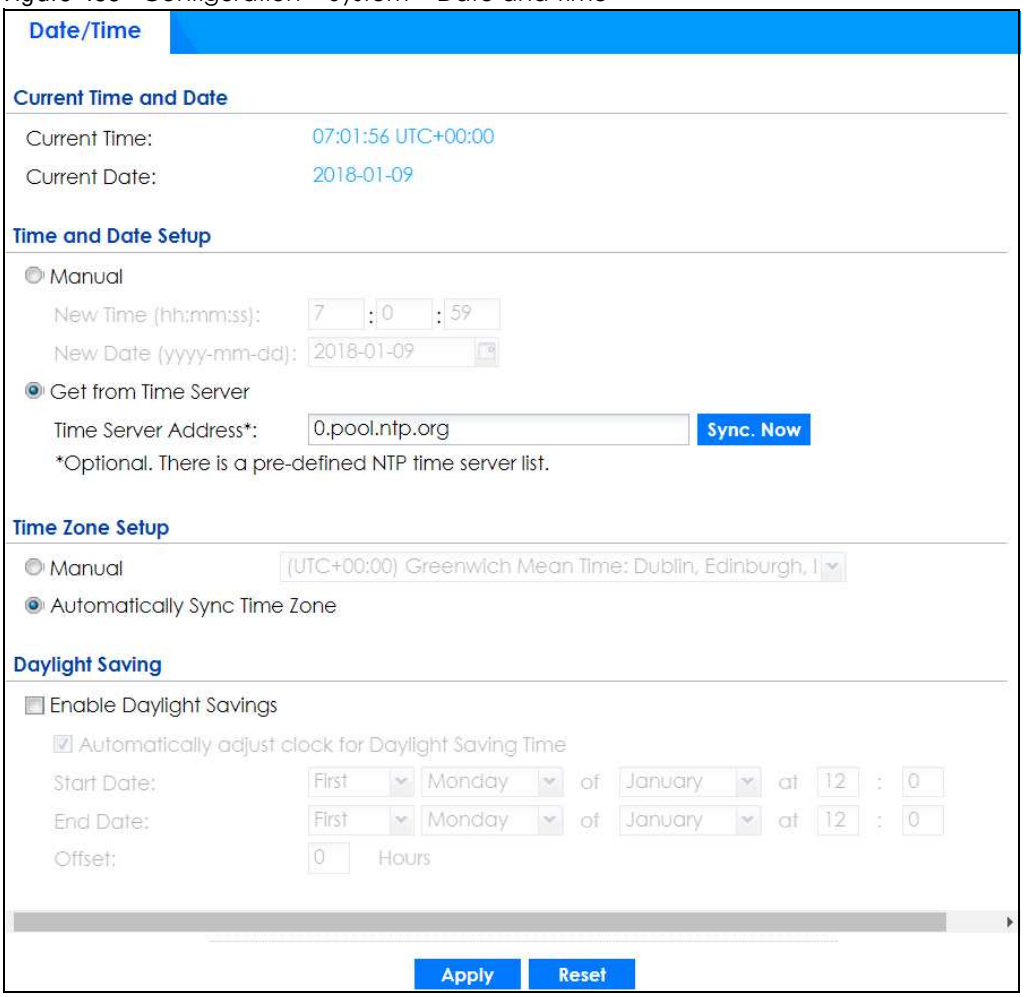
LABEL	DESCRIPTION
Activate USB storage service	Select this if you want to use the connected USB device(s).
Disk full warning when remaining space is less than	Set a number and select a unit (**MB** or **%**) to have the Zyxel Device send a warning message when the remaining USB storage space is less than the value you set here.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

37.4 Date and Time

For effective scheduling and logging, the Zyxel Device system time must be accurate. The Zyxel Device's Real Time Chip (RTC) keeps track of the time and date. There is also a software mechanism to set the time manually or get the current time and date from an external server.

To change your Zyxel Device's time based on your local time zone and date, click **Configuration** > **System** > **Date/Time**. The screen displays as shown. You can manually set the Zyxel Device's time and date or have the Zyxel Device get the date and time from a time server.

Figure 455 Configuration > System > Date and Time



The following table describes the labels in this screen.

Table 299 Configuration > System > Date and Time

LABEL	DESCRIPTION
Current Time and Date	
Current Time	This field displays the present time of your Zyxel Device.
Current Date	This field displays the present date of your Zyxel Device.
Time and Date Setup	
Manual	Select this radio button to enter the time and date manually. If you configure a new time and date, time zone and daylight saving at the same time, the time zone and daylight saving will affect the new time and date you entered. When you enter the time settings manually, the Zyxel Device uses the new setting once you click **Apply**.
New Time (hh-mm-ss)	This field displays the last updated time from the time server or the last time configured manually. When you set **Time and Date Setup** to **Manual**, enter the new time in this field and then click **Apply**.

Table 299 Configuration > System > Date and Time (continued)

LABEL	DESCRIPTION
New Date (yyyy-mm-dd)	This field displays the last updated date from the time server or the last date configured manually. When you set **Time and Date Setup** to **Manual**, enter the new date in this field and then click **Apply**.
Get from Time Server	Select this radio button to have the Zyxel Device get the time and date from the time server you specify below. The Zyxel Device requests time and date settings from the time server under the following circumstances. • When the Zyxel Device starts up. • When you click **Apply** or **Synchronize Now** in this screen. • 24-hour intervals after starting up.
Time Server Address	Enter the IP address or URL of your time server. Check with your ISP/network administrator if you are unsure of this information.
Sync. Now	Click this button to have the Zyxel Device get the time and date from a time server (see the **Time Server Address** field). This also saves your changes (except the daylight saving settings).
Time Zone Setup	
Time Zone	Choose the time zone of your location. This will set the time difference between your time zone and Greenwich Mean Time (GMT).
Automatically Sync Time Zone	Select this for the Zyxel Device to automatically get its time zone.
Daylight Saving	
Enable Daylight Savings	Daylight savings is a period from late spring to early fall when many countries set their clocks ahead of normal local time by one hour to give more daytime light in the evening. Select this option if you use Daylight Saving Time.
Automatically adjust clock for Daylight Saving Time	Select this for the Zyxel Device to automatically adjust the time if daylight savings is implemented in its time zone.
Start Date	Configure the day and time when Daylight Saving Time starts if you selected **Enable Daylight Saving**. The **at** field uses the 24 hour format. Here are a couple of examples: Daylight Saving Time starts in most parts of the United States on the second Sunday of March. Each time zone in the United States starts using Daylight Saving Time at 2 A.M. local time. So in the United States you would select **Second**, **Sunday**, **March** and type 2 in the **at** field. Daylight Saving Time starts in the European Union on the last Sunday of March. All of the time zones in the European Union start using Daylight Saving Time at the same moment (1 A.M. GMT or UTC). So in the European Union you would select **Last**, **Sunday**, **March**. The time you type in the **at** field depends on your time zone. In Germany for instance, you would type 2 because Germany's time zone is one hour ahead of GMT or UTC (GMT+1).
End Date	Configure the day and time when Daylight Saving Time ends if you selected **Enable Daylight Saving**. The **at** field uses the 24 hour format. Here are a couple of examples: Daylight Saving Time ends in the United States on the first Sunday of November. Each time zone in the United States stops using Daylight Saving Time at 2 A.M. local time. So in the United States you would select **First**, **Sunday**, **November** and type 2 in the **at** field. Daylight Saving Time ends in the European Union on the last Sunday of October. All of the time zones in the European Union stop using Daylight Saving Time at the same moment (1 A.M. GMT or UTC). So in the European Union you would select **Last**, **Sunday**, **October**. The time you type in the **at** field depends on your time zone. In Germany for instance, you would type 2 because Germany's time zone is one hour ahead of GMT or UTC (GMT+1).

Table 299 Configuration > System > Date and Time (continued)

LABEL	DESCRIPTION
Offset	Specify how much the clock changes when daylight saving begins and ends. Enter a number from 1 to 5.5 (by 0.5 increments). For example, if you set this field to 3.5, a log occurred at 6 P.M. in local official time will appear as if it had occurred at 10:30 P.M.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

37.4.1 Pre-defined NTP Time Servers List

When you turn on the Zyxel Device for the first time, the date and time start at 2003-01-01 00:00:00. The Zyxel Device then attempts to synchronize with one of the following pre-defined list of Network Time Protocol (NTP) time servers.

The Zyxel Device continues to use the following pre-defined list of NTP time servers if you do not specify a time server or it cannot synchronize with the time server you specified.

Table 300 Default Time Servers

0.pool.ntp.org
1.pool.ntp.org
2.pool.ntp.org

When the Zyxel Device uses the pre-defined list of NTP time servers, it randomly selects one server and tries to synchronize with it. If the synchronization fails, then the Zyxel Device goes through the rest of the list in order from the first one tried until either it is successful or all the pre-defined NTP time servers have been tried.

37.4.2 Time Server Synchronization

Click the **Synchronize Now** button to get the time and date from the time server you specified in the **Time Server Address** field.

When the **Loading** screen appears, you may have to wait up to one minute.

Figure 456 Synchronization in Process

The **Current Time** and **Current Date** fields will display the appropriate settings if the synchronization is successful.

If the synchronization was not successful, a log displays in the **View Log** screen. Try re-configuring the **Date/Time** screen.

To manually set the Zyxel Device date and time.

1 Click **System** > **Date/Time**.

2 Select **Manual** under **Time and Date Setup**.

3 Enter the Zyxel Device's time in the **New Time** field.

4 Enter the Zyxel Device's date in the **New Date** field.

5 Under **Time Zone Setup**, select your **Time Zone** from the list.

6 As an option you can select the **Enable Daylight Saving** check box to adjust the Zyxel Device clock for daylight savings.

7 Click **Apply**.

To get the Zyxel Device date and time from a time server

1 Click **System** > **Date/Time**.

2 Select **Get from Time Server** under **Time and Date Setup**.

3 Under **Time Zone Setup**, select your **Time Zone** from the list.

4 As an option you can select the **Enable Daylight Saving** check box to adjust the Zyxel Device clock for daylight savings.

5 Under **Time and Date Setup**, enter a **Time Server Address** (Table 300 on page 694).

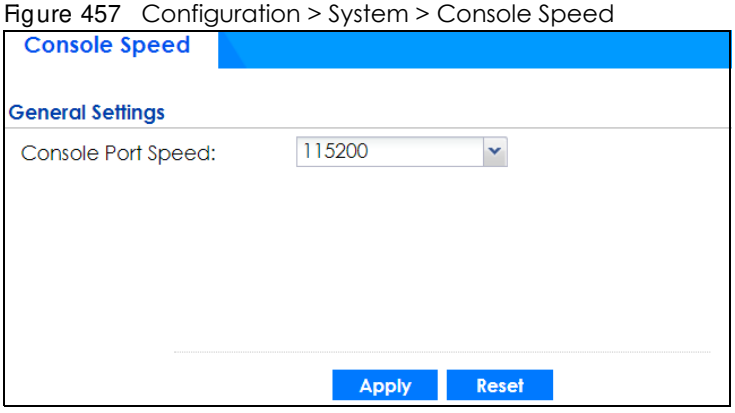
6 Click **Apply**.

37.5 Console Port Speed

This section shows you how to set the console port speed when you connect to the Zyxel Device via the console port using a terminal emulation program.

Click **Configuration** > **System** > **Console Speed** to open the **Console Speed** screen.

Figure 457 Configuration > System > Console Speed



The following table describes the labels in this screen.

Table 301 Configuration > System > Console Speed

LABEL	DESCRIPTION
Console Port Speed	Use the drop-down list box to change the speed of the console port. Your Zyxel Device supports 9600, 19200, 38400, 57600, and 115200 bps (default) for the console port. The **Console Port Speed** applies to a console port connection using terminal emulation software and NOT the **Console** in the Zyxel Device Web Configurator **Status** screen.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

37.6 DNS Overview

DNS (Domain Name System) is for mapping a domain name to its corresponding IP address and vice versa. The DNS server is extremely important because without it, you must know the IP address of a machine before you can access it.

37.6.1 DNS Server Address Assignment

The Zyxel Device can get the DNS server addresses in the following ways.

- The ISP tells you the DNS server addresses, usually in the form of an information sheet, when you sign up. If your ISP gives you DNS server addresses, manually enter them in the DNS server fields.
- If your ISP dynamically assigns the DNS server IP addresses (along with the Zyxel Device's WAN IP address), set the DNS server fields to get the DNS server address from the ISP.
- You can manually enter the IP addresses of other DNS servers.

37.6.2 Configuring the DNS Screen

Click **Configuration** > **System** > **DNS** to change your Zyxel Device's DNS settings. Use the **DNS** screen to configure the Zyxel Device to use a DNS server to resolve domain names for Zyxel Device system features like VPN, DDNS and the time server. You can also configure the Zyxel Device to accept or discard DNS queries. Use the **Network** > **Interface** screens to configure the DNS server information that the Zyxel Device sends to the specified DHCP client devices.

A name query begins at a client computer and is passed to a resolver, a DNS client service, for resolution. The Zyxel Device can be a DNS client service. The Zyxel Device can resolve a DNS query locally using cached Resource Records (RR) obtained from a previous query (and kept for a period of time). If the Zyxel Device does not have the requested information, it can forward the request to DNS servers. This is known as recursion.

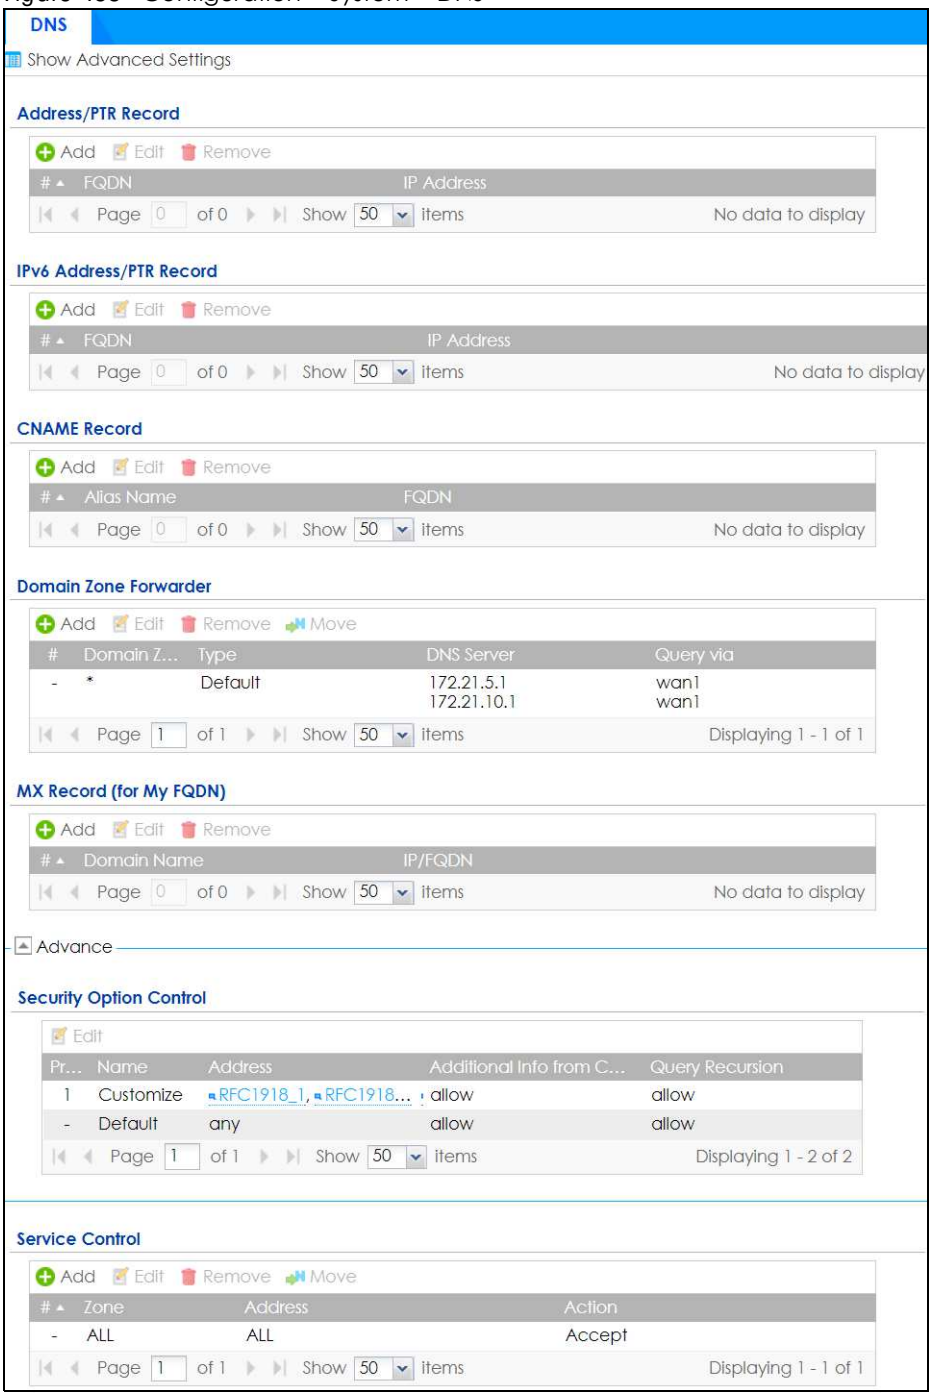
The Zyxel Device can ask a DNS server to use recursion to resolve its DNS client requests. If recursion on the Zyxel Device or a DNS server is disabled, they cannot forward DNS requests for resolution.

A Domain Name Server (DNS) amplification attack is a kind of Distributed Denial of Service (DDoS) attack that uses publicly accessible open DNS servers to flood a victim with DNS response traffic. An open DNS server is a DNS server which is willing to resolve recursive DNS queries from anyone on the Internet.

In a DNS amplification attack, an attacker sends a DNS name lookup request to an open DNS server with the source address spoofed as the victim's address. When the DNS server sends the DNS record response, it is sent to the victim. Attackers can request as much information as possible to maximize the amplification effect.

Configure the **Security Option Control** section in the **Configuration > System > DNS** screen (click **Show Advanced Settings** to display it) if you suspect the Zyxel Device is being used (either by hackers or by a corrupted open DNS server) in a DNS amplification attack.

Figure 458 Configuration > System > DNS



The following table describes the labels in this screen.

Table 302 Configuration > System > DNS

LABEL	DESCRIPTION
Address/PTR Record	This record specifies the mapping of a Fully-Qualified Domain Name (FQDN) to an IP address. An FQDN consists of a host and domain name. For example, www.zyxel.com.tw is a fully qualified domain name, where "www" is the host, "zyxel" is the third-level domain, "com" is the second-level domain, and "tw" is the top level domain.
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so. Note that subsequent entries move up by one when you take this action.
#	This is the index number of the address/PTR record.
FQDN	This is a host's fully qualified domain name.
IP Address	This is the IP address of a host.
CNAME Record	This record specifies an alias for a FQDN. Use this record to bind all subdomains with the same IP address as the FQDN without having to update each one individually, which increases chance for errors. See CNAME Record (Section 37.6.6 on page 701) for more details.
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click Edit to be able to modify the entry's settings.
Remove	To remove an entry, select it and click Remove. The Zyxel Device confirms you want to remove it before doing so. Note that subsequent entries move up by one when you take this action.
#	This is the index number of the domain zone forwarder record. The ordering of your rules is important as rules are applied in sequence. A hyphen (-) displays for the default domain zone forwarder record. The default record is not configurable. The Zyxel Device uses this default record if the domain zone that needs to be resolved does not match any of the other domain zone forwarder records.
Alias Name	Enter an Alias name. Use "*." as prefix for a wildcard domain name. For example, *.example.com.
FQDN	Enter the Fully Qualified Domain Name (FQDN).
Domain Zone Forwarder	This specifies a DNS server's IP address. The Zyxel Device can query the DNS server to resolve domain zones for features like VPN, DDNS and the time server. When the Zyxel Device needs to resolve a domain zone, it checks it against the domain zone forwarder entries in the order that they appear in this list.
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so. Note that subsequent entries move up by one when you take this action.
Move	To change an entry's position in the numbered list, select the method and click **Move** to display a field to type a number for where you want to put it and press [ENTER] to move the rule to the number that you typed.
#	This is the index number of the domain zone forwarder record. The ordering of your rules is important as rules are applied in sequence. A hyphen (-) displays for the default domain zone forwarder record. The default record is not configurable. The Zyxel Device uses this default record if the domain zone that needs to be resolved does not match any of the other domain zone forwarder records.

Table 302 Configuration > System > DNS (continued)

LABEL	DESCRIPTION
Domain Zone	A domain zone is a fully qualified domain name without the host. For example, zyxel.com.tw is the domain zone for the www.zyxel.com.tw fully qualified domain name. A "*" means all domain zones.
Type	This displays whether the DNS server IP address is assigned by the ISP dynamically through a specified interface or configured manually (User-Defined).
DNS Server	This is the IP address of a DNS server. This field displays N/A if you have the Zyxel Device get a DNS server IP address from the ISP dynamically but the specified interface is not active.
Query Via	This is the interface through which the Zyxel Device sends DNS queries to the entry's DNS server. If the Zyxel Device connects through a VPN tunnel, tunnel displays.
MX Record (for My FQDN)	A MX (Mail eXchange) record identifies a mail server that handles the mail for a particular domain.
Add	Click this to create a new entry.
Edit	Double-click an entry or select it and click Edit to be able to modify the entry's settings.
Remove	To remove an entry, select it and click Remove. The Zyxel Device confirms you want to remove it before doing so. Note that subsequent entries move up by one when you take this action.
#	This is the index number of the MX record.
Domain Name	This is the domain name where the mail is destined for.
IP/FQDN	This is the IP address or Fully-Qualified Domain Name (FQDN) of a mail server that handles the mail for the domain specified in the field above.
Security Option Control	Click Show Advanced Settings to display this part of the screen. There are two control policies: Default and Customize.
Edit	Click either control policy and then click this button to change allow or deny actions for Query Recursion and Additional Info from Cache.
Priority	The Customize control policy is checked first and if an address object match is not found, the Default control policy is checked.
Name	You may change the name of the Customize control policy.
Address	These are the object addresses used in the control policy. RFC1918 refers to private IP address ranges. It can be modified in Object > Address.
Additional Info from Cache	This displays if the Zyxel Device is allowed or denied to cache Resource Records (RR) obtained from previous DNS queries.
Query Recursion	This displays if the Zyxel Device is allowed or denied to forward DNS client requests to DNS servers for resolution.
Service Control	This specifies from which computers and zones you can send DNS queries to the Zyxel Device.
Add	Click this to create a new entry. Select an entry and click Add to create a new entry after the selected entry.
Edit	Double-click an entry or select it and click Edit to be able to modify the entry's settings.
Remove	To remove an entry, select it and click Remove. The Zyxel Device confirms you want to remove it before doing so. Note that subsequent entries move up by one when you take this action.
Move	To change an entry's position in the numbered list, select the method and click Move to display a field to type a number for where you want to put it and press [ENTER] to move the rule to the number that you typed.

Table 302 Configuration > System > DNS (continued)

LABEL	DESCRIPTION
#	This the index number of the service control rule. The ordering of your rules is important as rules are applied in sequence. The entry with a hyphen (-) instead of a number is the Zyxel Device's (non-configurable) default policy. The Zyxel Device applies this to traffic that does not match any other configured rule. It is not an editable rule. To apply other behavior, configure a rule that traffic will match so the Zyxel Device will not have to use the default policy.
Zone	This is the zone on the Zyxel Device the user is allowed or denied to access.
Address	This is the object name of the IP address(es) with which the computer is allowed or denied to send DNS queries.
Action	This displays whether the Zyxel Device accepts DNS queries from the computer with the IP address specified above through the specified zone (**Accept**) or discards them (**Deny**).

37.6.3 (IPv6) Address Record

An address record contains the mapping of a Fully-Qualified Domain Name (FQDN) to an IP address.

The Zyxel Device allows you to configure address records about the Zyxel Device itself or another device. This way you can keep a record of DNS names and addresses that people on your network may use frequently. If the Zyxel Device receives a DNS query for an FQDN for which the Zyxel Device has an address record, the Zyxel Device can send the IP address in a DNS response without having to query a DNS name server.

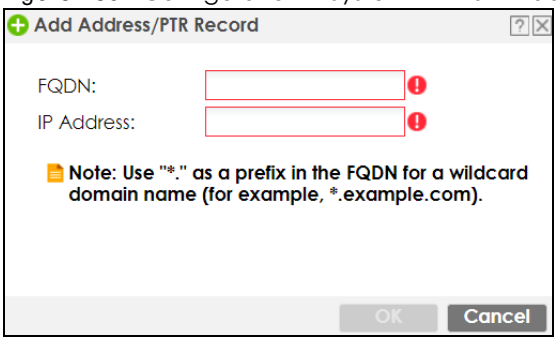
37.6.4 PTR Record

A PTR (pointer) record is also called a reverse record or a reverse lookup record. It is a mapping of an IP address to a domain name.

37.6.5 Adding an (IPv6) Address/PTR Record

Click the **Add** icon in the **Address/PTR Record** or **IPv6 Address/PTR Record** table to add an IPv4 or IPv6 address/PTR record.

Figure 459 Configuration > System > DNS > Address/PTR Record Edit



The following table describes the labels in this screen.

Table 303 Configuration > System > DNS > (IPv6) Address/PTR Record Edit

LABEL	DESCRIPTION
FQDN	Type a Fully-Qualified Domain Name (FQDN) of a server. An FQDN starts with a host name and continues all the way up to the top-level domain name. For example, www.zyxel.com.tw is a fully qualified domain name, where "www" is the host, "zyxel" is the third-level domain, "com" is the second-level domain, and "tw" is the top level domain. Underscores are not allowed. Use "*." as a prefix in the FQDN for a wildcard domain name (for example, *.example.com).
IP Address	Enter the IP address of the host in dotted decimal notation.
OK	Click **OK** to save your customized settings and exit this screen.
Cancel	Click **Cancel** to exit this screen without saving

37.6.6 CNAME Record

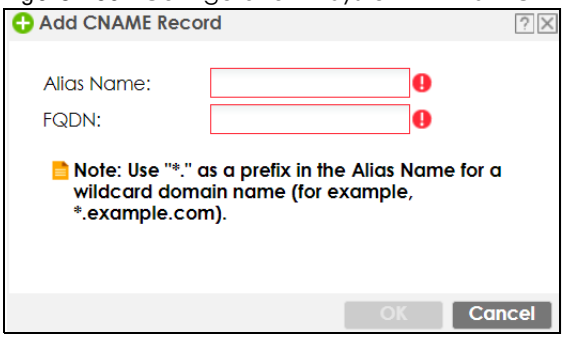
A Canonical Name Record or CNAME record is a type of resource record in the Domain Name System (DNS) that specifies that the domain name is an alias of another, canonical domain name. This allows users to set up a record for a domain name which translates to an IP address, in other words, the domain name is an alias of another. This record also binds all the subdomains to the same IP address without having to create a record for each, so when the IP address is changed, all subdomain's IP address is updated as well, with one edit to the record.

For example, the domain name zyxel.com is hooked up to a record named A which translates it to 11.22.33.44. You also have several subdomains, like mail.zyxel.com, ftp.zyxel.com and you want this subdomain to point to your main domain zyxel.com. Edit the IP Address in record A and all subdomains will follow automatically. This eliminates chances for errors and increases efficiency in DNS management.

37.6.7 Adding a CNAME Record

Click the Add icon in the CNAME Record table to add a record. Use "*." as a prefix for a wildcard domain name. For example *.zyxel.com.

Figure 460 Configuration > System > DNS > CNAME Record > Add



The following table describes the labels in this screen.

Table 304 Configuration > System > DNS > CNAME Record > Add

LABEL	DESCRIPTION
Alias name	Enter an Alias Name. Use "*." as a prefix in the Alias name for a wildcard domain name (for example, *.example.com).
FQDN	Type a Fully-Qualified Domain Name (FQDN) of a server. An FQDN starts with a host name and continues all the way up to the top-level domain name. For example, www.zyxel.com.tw is a fully qualified domain name, where "www" is the host, "zyxel" is the third-level domain, "com" is the second-level domain, and "tw" is the top level domain. Underscores are not allowed. Use "*." as a prefix in the FQDN for a wildcard domain name (for example, *.example.com).
OK	Click **OK** to save your customized settings and exit this screen.
Cancel	Click **Cancel** to exit this screen without saving.

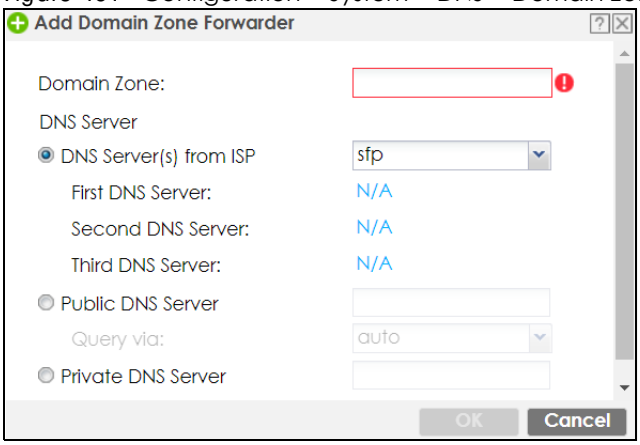
37.6.8 Domain Zone Forwarder

A domain zone forwarder contains a DNS server's IP address. The Zyxel Device can query the DNS server to resolve domain zones for features like VPN, DDNS and the time server. A domain zone is a fully qualified domain name without the host. For example, zyxel.com.tw is the domain zone for the www.zyxel.com.tw fully qualified domain name.

37.6.9 Adding a Domain Zone Forwarder

Click the **Add** icon in the **Domain Zone Forwarder** table to add a domain zone forwarder record.

Figure 461 Configuration > System > DNS > Domain Zone Forwarder Add



The following table describes the labels in this screen.

Table 305 Configuration > System > DNS > Domain Zone Forwarder Add

LABEL	DESCRIPTION
Domain Zone	A domain zone is a fully qualified domain name without the host. For example, zyxel.com.tw is the domain zone for the www.zyxel.com.tw fully qualified domain name. For example, whenever the Zyxel Device receives needs to resolve a zyxel.com.tw domain name, it can send a query to the recorded name server IP address. Enter * if all domain zones are served by the specified DNS server(s).
DNS Server	Select **DNS Server(s) from ISP** if your ISP dynamically assigns DNS server information. You also need to select an interface through which the ISP provides the DNS server IP address(es). The interface should be activated and set to be a DHCP client. The fields below display the (read-only) DNS server IP address(es) that the ISP assigns. **N/A** displays for any DNS server IP address fields for which the ISP does not assign an IP address. Select **Public DNS Server** if you have the IP address of a DNS server. Enter the DNS server's IP address in the field to the right. The Zyxel Device must be able to connect to the DNS server without using a VPN tunnel. The DNS server could be on the Internet or one of the Zyxel Device's local networks. You cannot use 0.0.0.0. Use the **Query via** field to select the interface through which the Zyxel Device sends DNS queries to a DNS server. Select **Private DNS Server** if you have the IP address of a DNS server to which the Zyxel Device connects through a VPN tunnel. Enter the DNS server's IP address in the field to the right. You cannot use 0.0.0.0.
OK	Click **OK** to save your customized settings and exit this screen.
Cancel	Click **Cancel** to exit this screen without saving

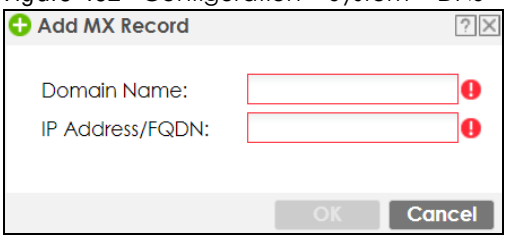
37.6.10 MX Record

A MX (Mail eXchange) record indicates which host is responsible for the mail for a particular domain, that is, controls where mail is sent for that domain. If you do not configure proper MX records for your domain or other domain, external email from other mail servers will not be able to be delivered to your mail server and vice versa. Each host or domain can have only one MX record, that is, one domain is mapping to one host.

37.6.11 Adding a MX Record

Click the **Add** icon in the **MX Record** table to add a MX record.

Figure 462 Configuration > System > DNS > MX Record Add



The following table describes the labels in this screen.

Table 306 Configuration > System > DNS > MX Record Add

LABEL	DESCRIPTION
Domain Name	Enter the domain name where the mail is destined for.
IP Address/FQDN	Enter the IP address or Fully-Qualified Domain Name (FQDN) of a mail server that handles the mail for the domain specified in the field above.
OK	Click **OK** to save your customized settings and exit this screen.
Cancel	Click **Cancel** to exit this screen without saving

37.6.12 Security Option Control

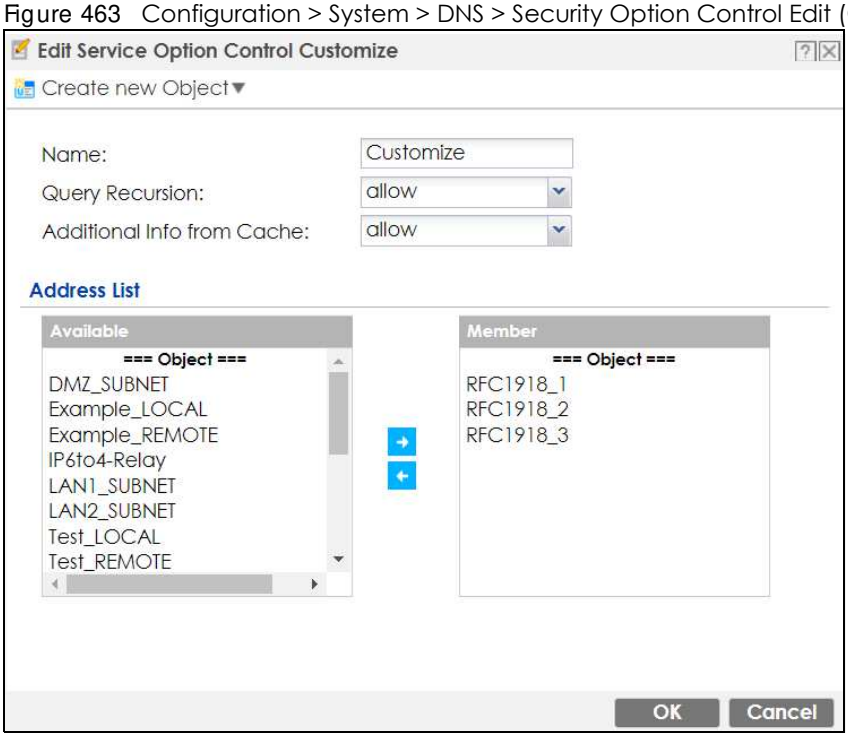
Configure the **Security Option Control** section in the **Configuration** > **System** > **DNS** screen (click **Show Advanced Settings** to display it) if you suspect the Zyxel Device is being used by hackers in a DNS amplification attack.

One possible strategy would be to deny **Query Recursion** and **Additional Info from Cache** in the default policy and allow **Query Recursion** and **Additional Info from Cache** only from trusted DNS servers identified by address objects and added as members in the customized policy.

37.6.13 Editing a Security Option Control

Click a control policy and then click **Edit** to change **allow** or **deny** actions for **Query Recursion** and **Additional Info from Cache**.

Figure 463 Configuration > System > DNS > Security Option Control Edit (Customize)



The following table describes the labels in this screen.

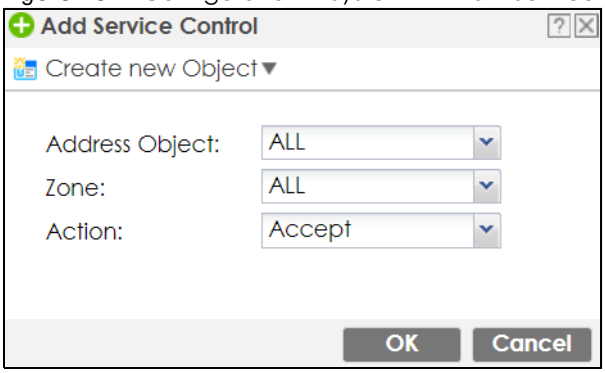
Table 307 Configuration > System > DNS > Security Option Control Edit (Customize)

LABEL	DESCRIPTION
Name	You may change the name for the customized security option control policy. The customized security option control policy is checked first and if an address object match is not found, the **Default** control policy is checked
Query Recursion	Choose if the ZyWALL/USG is allowed or denied to forward DNS client requests to DNS servers for resolution. This can apply to specific open DNS servers using the address objects in a customized rule.
Additional Info from Cache	Choose if the ZyWALL/USG is allowed or denied to cache Resource Records (RR) obtained from previous DNS queries.
Address List	Specifying address objects is not available in the default policy as all addresses are included.
Available	This box displays address objects created in **Object** > **Address**. Select one (or more), and click the > arrow to have it (them) join the **Member** list of address objects that will apply to this rule. For example, you could specify an open DNS server suspect of sending compromised resource records by adding an address object for that server to the member list.
Member	This box displays address objects that will apply to this rule.
OK	Click **OK** to save your customized settings and exit this screen.
Cancel	Click **Cancel** to exit this screen without saving

37.6.14 Adding a DNS Service Control Rule

Click the **Add** icon in the **Service Control** table to add a service control rule.

Figure 464 Configuration > System > DNS > Service Control Rule Add



The following table describes the labels in this screen.

Table 308 Configuration > System > DNS > Service Control Rule Add

LABEL	DESCRIPTION
Create new Object	Use this to configure any new settings objects that you need to use in this screen.
Address Object	Select **ALL** to allow or deny any computer to send DNS queries to the Zyxel Device. Select a predefined address object to just allow or deny the computer with the IP address that you specified to send DNS queries to the Zyxel Device.
Zone	Select **ALL** to allow or prevent DNS queries through any zones. Select a predefined zone on which a DNS query to the Zyxel Device is allowed or denied.

Table 308 Configuration > System > DNS > Service Control Rule Add (continued)

LABEL	DESCRIPTION
Action	Select **Accept** to have the Zyxel Device allow the DNS queries from the specified computer. Select **Deny** to have the Zyxel Device reject the DNS queries from the specified computer.
OK	Click **OK** to save your customized settings and exit this screen.
Cancel	Click **Cancel** to exit this screen without saving

37.7 WWW Overview

The following figure shows secure and insecure management of the Zyxel Device coming in from the WAN. HTTPS and SSH access are secure. HTTP and Telnet access are not secure.

Note: To allow the Zyxel Device to be accessed from a specified computer using a service, make sure you do not have a service control rule or to-Zyxel Device security policy rule to block that traffic.

To stop a service from accessing the Zyxel Device, clear **Enable** in the corresponding service screen.

37.7.1 Service Access Limitations

A service cannot be used to access the Zyxel Device when:

1. You have disabled that service in the corresponding screen.
2. The allowed IP address (address object) in the **Service Control** table does not match the client IP address (the Zyxel Device disallows the session).
3. The IP address (address object) in the **Service Control** table is not in the allowed zone or the action is set to **Deny**.
4. There is a security policy rule that blocks it.

37.7.2 System Timeout

There is a lease timeout for administrators. The Zyxel Device automatically logs you out if the management session remains idle for longer than this timeout period. The management session does not time out when a statistics screen is polling.

Each user is also forced to log in the Zyxel Device for authentication again when the reauthentication time expires.

You can change the timeout settings in the **User/Group** screens.

37.7.3 HTTPS

You can set the Zyxel Device to use HTTP or HTTPS (HTTPS adds security) for Web Configurator sessions. Specify which zones allow Web Configurator access and from which IP address the access can come.

HTTPS (HyperText Transfer Protocol over Secure Socket Layer, or HTTP over SSL) is a web protocol that encrypts and decrypts web pages. Secure Socket Layer (SSL) is an application-level protocol that enables secure transactions of data by ensuring confidentiality (an unauthorized party cannot read the transferred data), authentication (one party can identify the other party) and data integrity (you know if data has been changed).

It relies upon certificates, public keys, and private keys.

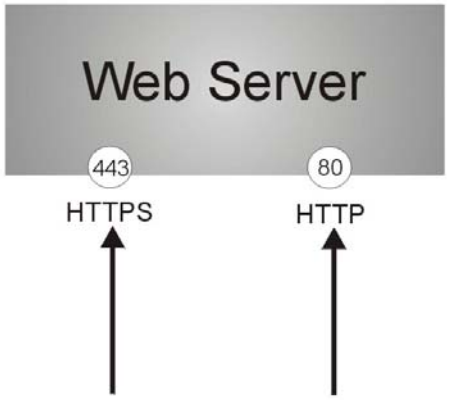
HTTPS on the Zyxel Device is used so that you can securely access the Zyxel Device using the Web Configurator. The SSL protocol specifies that the HTTPS server (the Zyxel Device) must always authenticate itself to the HTTPS client (the computer which requests the HTTPS connection with the Zyxel Device), whereas the HTTPS client only should authenticate itself when the HTTPS server requires it to do so (select **Authenticate Client Certificates** in the **WWW** screen). **Authenticate Client Certificates** is optional and if selected means the HTTPS client must send the Zyxel Device a certificate. You must apply for a certificate for the browser from a CA that is a trusted CA on the Zyxel Device.

Please refer to the following figure.

1 HTTPS connection requests from an SSL-aware web browser go to port 443 (by default) on the Zyxel Device's web server.

2 HTTP connection requests from a web browser go to port 80 (by default) on the Zyxel Device's web server.

Figure 465 HTTP/HTTPS Implementation



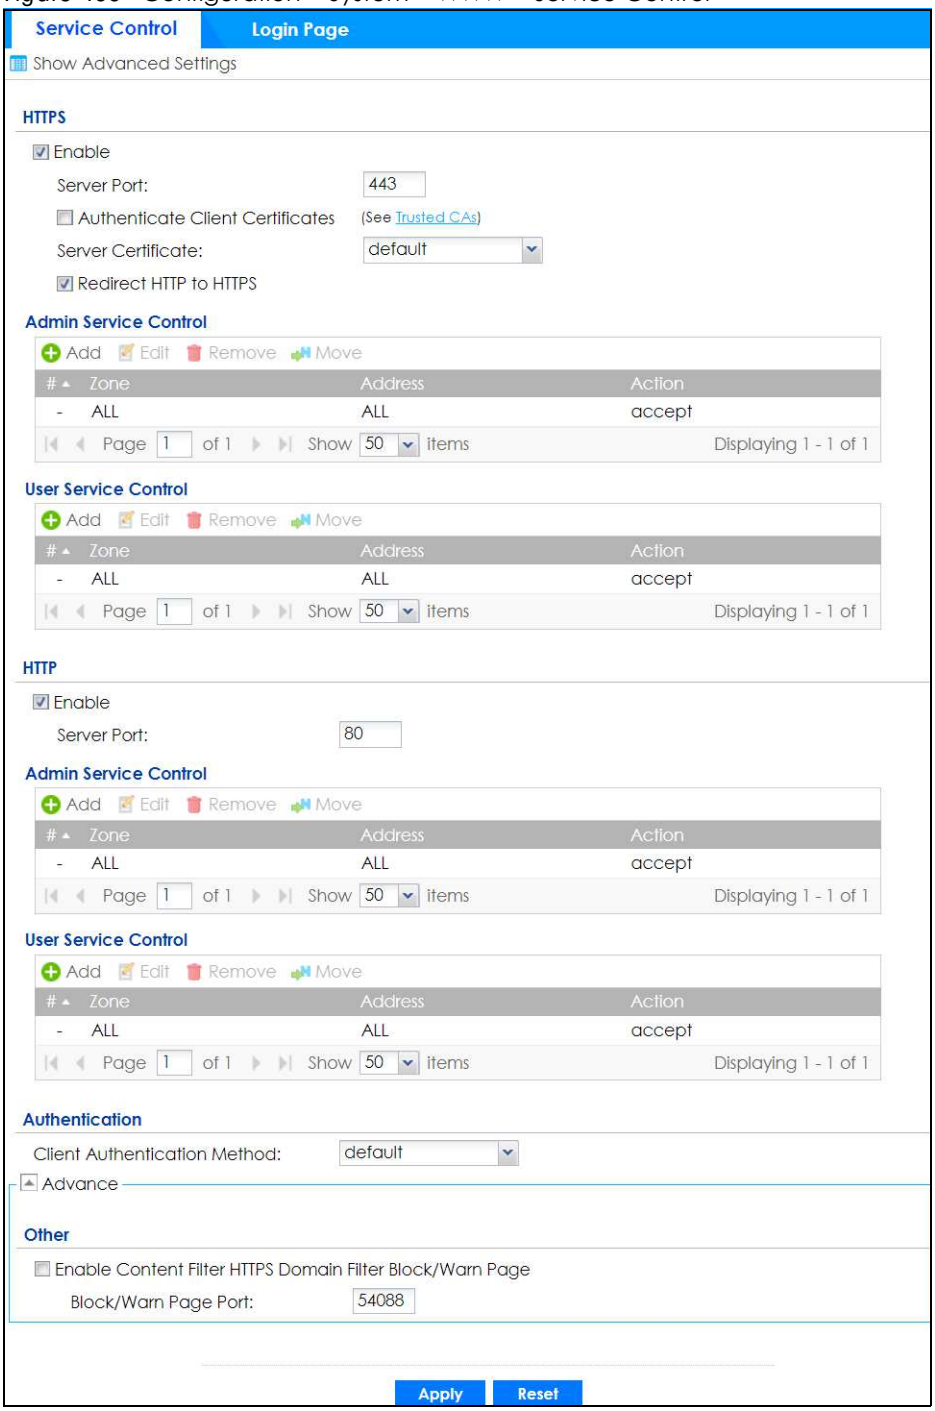
Note: If you disable **HTTP** in the **WWW** screen, then the Zyxel Device blocks all HTTP connection attempts.

37.7.4 Configuring WWW Service Control

Click **Configuration** > **System** > **WWW** to open the **WWW** screen. Use this screen to specify from which zones you can access the Zyxel Device using HTTP or HTTPS. You can also specify which IP addresses the access can come from.

Note: **Admin Service Control** deals with management access (to the Web Configurator). **User Service Control** deals with user access to the Zyxel Device (logging into SSL VPN for example).

Figure 466 Configuration > System > WWW > Service Control



The following table describes the labels in this screen.

Table 309 Configuration > System > WWW > Service Control

LABEL	DESCRIPTION
HTTPS	
Enable	Select the check box to allow or disallow the computer with the IP address that matches the IP address(es) in the **Service Control** table to access the Zyxel Device Web Configurator using secure HTTPs connections.

Table 309 Configuration > System > WWW > Service Control (continued)

LABEL	DESCRIPTION
Server Port	The HTTPS server listens on port 443 by default. If you change the HTTPS server port to a different number on the Zyxel Device, for example 8443, then you must notify people who need to access the Zyxel Device Web Configurator to use "https://Zyxel Device IP Address:8443" as the URL.
Authenticate Client Certificates	Select **Authenticate Client Certificates** (optional) to require the SSL client to authenticate itself to the Zyxel Device by sending the Zyxel Device a certificate. To do that the SSL client must have a CA-signed certificate from a CA that has been imported as a trusted CA on the Zyxel Device (see Section 37.7.7.5 on page 718 on importing certificates for details).
Server Certificate	Select a certificate the HTTPS server (the Zyxel Device) uses to authenticate itself to the HTTPS client. You must have certificates already configured in the **My Certificates** screen.
Redirect HTTP to HTTPS	To allow only secure Web Configurator access, select this to redirect all HTTP connection requests to the HTTPS server.
Admin/User Service Control	**Admin Service Control** specifies from which zones an administrator can use HTTPS to manage the Zyxel Device (using the Web Configurator). You can also specify the IP addresses from which the administrators can manage the Zyxel Device. **User Service Control** specifies from which zones a user can use HTTPS to log into the Zyxel Device (to log into SSL VPN for example). You can also specify the IP addresses from which the users can access the Zyxel Device.
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so. Note that subsequent entries move up by one when you take this action.
Move	To change an entry's position in the numbered list, select the method and click **Move** to display a field to type a number for where you want to put it and press [ENTER] to move the rule to the number that you typed.
#	This is the index number of the service control rule. The entry with a hyphen (-) instead of a number is the Zyxel Device's (non-configurable) default policy. The Zyxel Device applies this to traffic that does not match any other configured rule. It is not an editable rule. To apply other behavior, configure a rule that traffic will match so the Zyxel Device will not have to use the default policy.
Zone	This is the zone on the Zyxel Device the user is allowed or denied to access.
Address	This is the object name of the IP address(es) with which the computer is allowed or denied to access.
Action	This displays whether the computer with the IP address specified above can access the Zyxel Device zone(s) configured in the **Zone** field (**Accept**) or not (**Deny**).
HTTP	
Enable	Select the check box to allow or disallow the computer with the IP address that matches the IP address(es) in the **Service Control** table to access the Zyxel Device Web Configurator using HTTP connections.
Server Port	You may change the server port number for a service if needed, however you must use the same port number in order to use that service to access the Zyxel Device.
Admin/User Service Control	**Admin Service Control** specifies from which zones an administrator can use HTTP to manage the Zyxel Device (using the Web Configurator). You can also specify the IP addresses from which the administrators can manage the Zyxel Device. **User Service Control** specifies from which zones a user can use HTTP to log into the Zyxel Device (to log into SSL VPN for example). You can also specify the IP addresses from which the users can access the Zyxel Device.
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry.

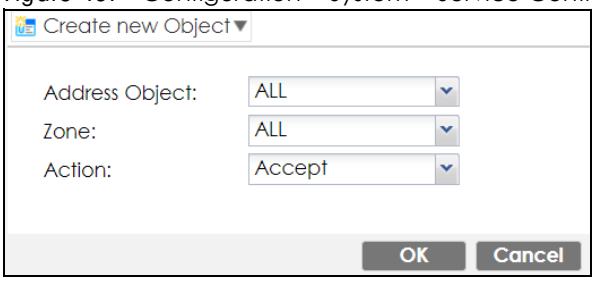
Table 309 Configuration > System > WWW > Service Control (continued)

LABEL	DESCRIPTION
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so. Note that subsequent entries move up by one when you take this action.
Move	To change an entry's position in the numbered list, select the method and click **Move** to display a field to type a number for where you want to put it and press [ENTER] to move the rule to the number that you typed.
#	This is the index number of the service control rule. The entry with a hyphen (-) instead of a number is the Zyxel Device's (non-configurable) default policy. The Zyxel Device applies this to traffic that does not match any other configured rule. It is not an editable rule. To apply other behavior, configure a rule that traffic will match so the Zyxel Device will not have to use the default policy.
Zone	This is the zone on the Zyxel Device the user is allowed or denied to access.
Address	This is the object name of the IP address(es) with which the computer is allowed or denied to access.
Action	This displays whether the computer with the IP address specified above can access the Zyxel Device zone(s) configured in the **Zone** field (**Accept**) or not (**Deny**).
Authentication	
Client Authentication Method	Select a method the HTTPS or HTTP server uses to authenticate a client. You must have configured the authentication methods in the **Auth. method** screen.
Other	When HTTPS Domain Filter blocks a page, the connection is redirected to a local web server to display the blocking message. HSTS (HTTP Strict Transport Security) may be activated in some browsers as the browser cached certificate is different to the one displayed by the local server. In this case, you cannot see a blocking warning message. Accessing a web page may require multiple connections to different sites to get all the information in the web page. When there is a connection to a HTTPS website that belongs to a blocked category, it is filtered, but you don't receive a warning page with the option to continue. For example, you want to block www.google.com and issue a **Warn** action. When you connect to www.google.com another connection to pic.google.com is created to get the pictures on the Google page. www.google.com can display a warning page in your browser (and you can click 'Continue' to forward the connection) but the connection to pic.google.com cannot display a 'Continue' dialog, so parts of the Google page will appear blank and will not display the related picture content.
Enable Content Filter HTTPS Domain Filter Block/Warn Page	Use this field to have the Zyxel Device display a warning page instead of a blank page when an HTPPS connection is redirected.
Block/Warn Page Port	Use the default port number as displayed for the warning page. If you change it, the new port number should be unique.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

37.7.5 Service Control Rules

Click **Add** or **Edit** in the **Service Control** table in a **WWW**, **SSH**, **Telnet**, **FTP** or **SNMP** screen to add a service control rule.

Figure 467 Configuration > System > Service Control Rule > Edit



The following table describes the labels in this screen.

Table 310 Configuration > System > Service Control Rule > Edit

LABEL	DESCRIPTION
Create new Object	Use this to configure any new settings objects that you need to use in this screen.
Address Object	Select **ALL** to allow or deny any computer to communicate with the Zyxel Device using this service. Select a predefined address object to just allow or deny the computer with the IP address that you specified to access the Zyxel Device using this service.
Zone	Select **ALL** to allow or prevent any Zyxel Device zones from being accessed using this service. Select a predefined Zyxel Device zone on which a incoming service is allowed or denied.
Action	Select **Accept** to allow the user to access the Zyxel Device from the specified computers. Select **Deny** to block the user's access to the Zyxel Device from the specified computers.
OK	Click **OK** to save your customized settings and exit this screen.
Cancel	Click **Cancel** to exit this screen without saving

37.7.6 Customizing the WWW Login Page

Click **Configuration** > **System** > **WWW** > **Login Page** to open the **Login Page** screen. Use this screen to customize the Web Configurator login screen. You can also customize the page that displays after an access user logs into the Web Configurator to access network services like the Internet.

Figure 468 Configuration > System > WWW > Login Page (Desktop View)

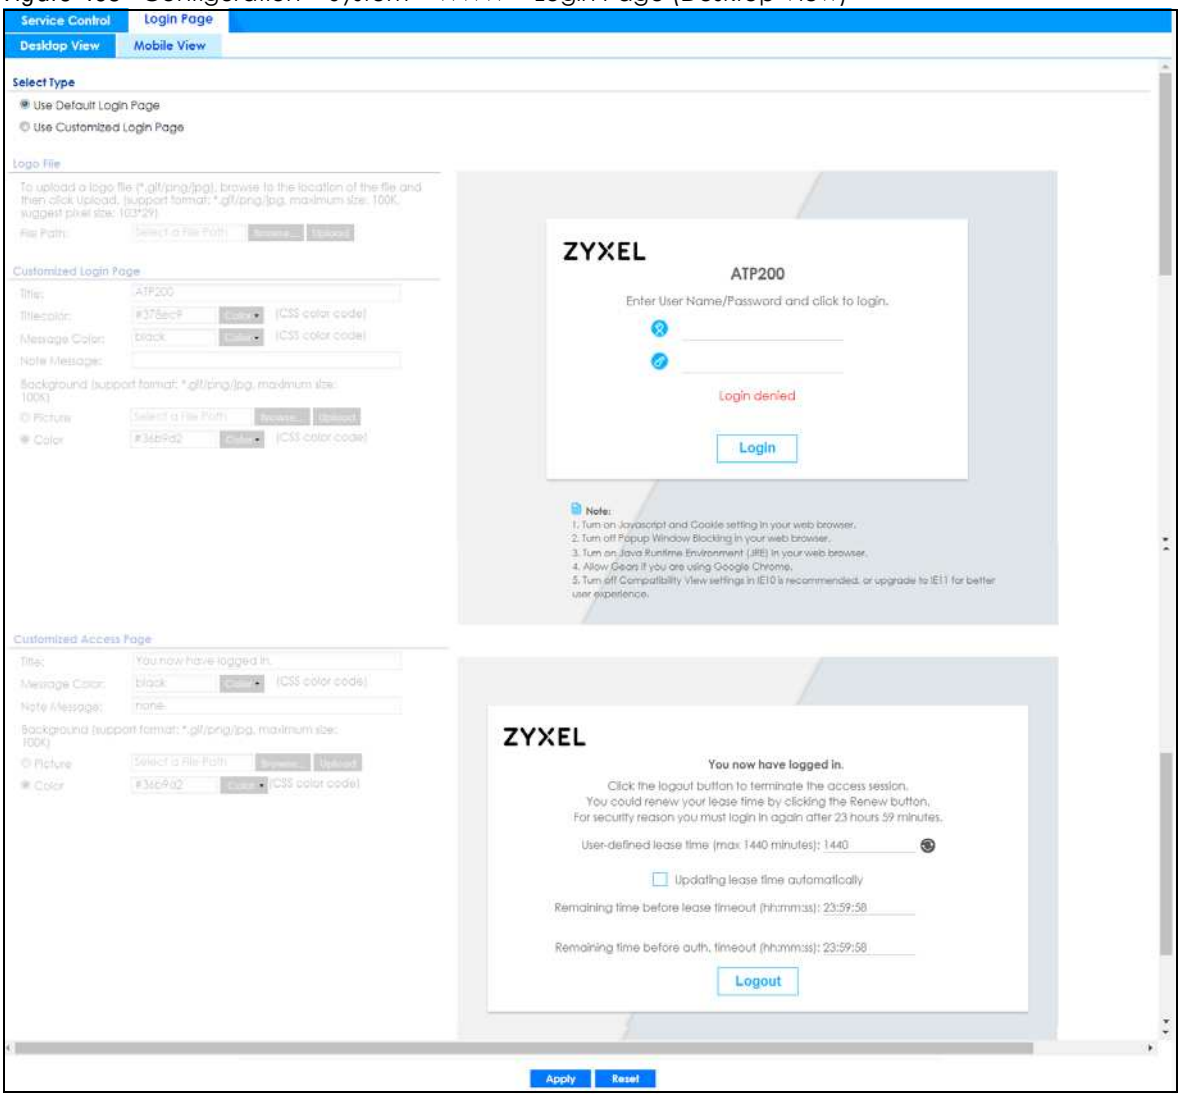


Figure 469 Configuration > System > WWW > Login Page (Mobile View)

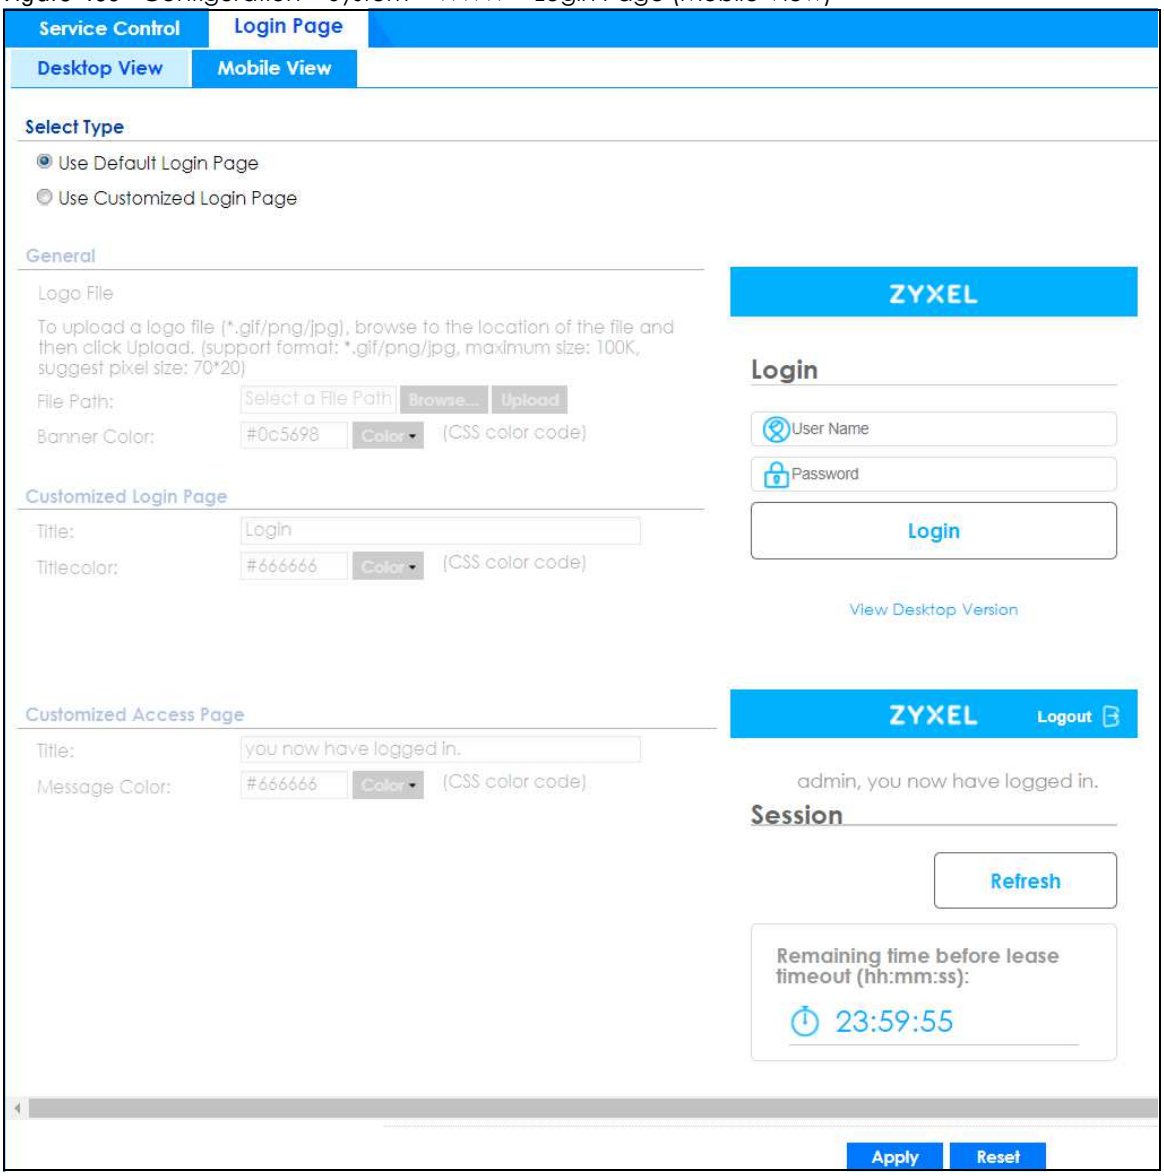

The following figures identify the parts you can customize in the login and access pages.

Figure 470 Login Page Customization

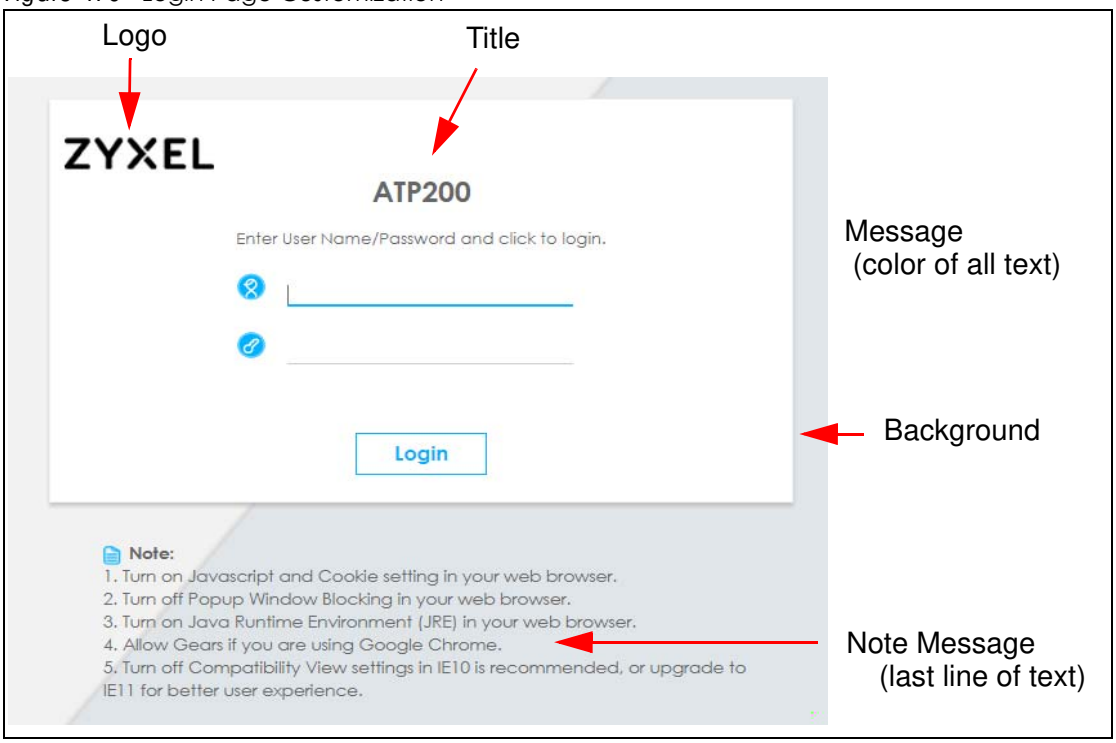

Figure 471 Access Page Customization

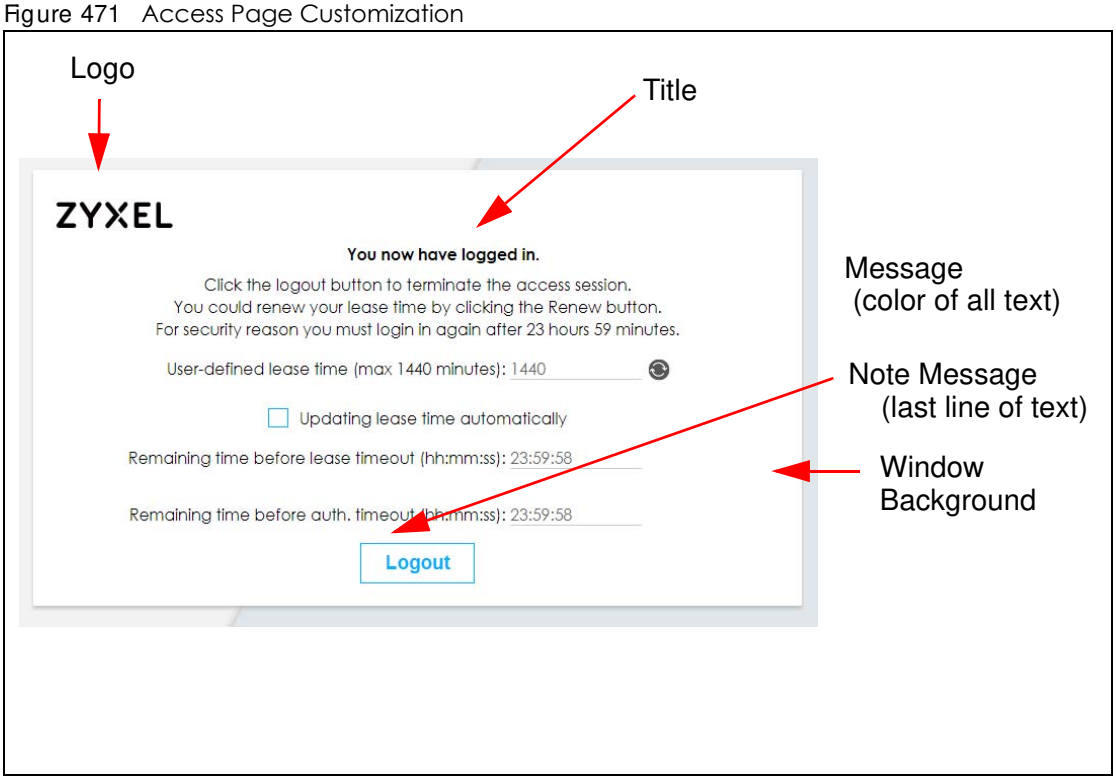


You can specify colors in one of the following ways:

- Click **Color** to display a screen of web-safe colors from which to choose.
- Enter the name of the desired color.

- Enter a pound sign (#) followed by the six-digit hexadecimal number that represents the desired color. For example, use "#000000" for black.
- Enter "rgb" followed by red, green, and blue values in parenthesis and separate by commas. For example, use "rgb(0,0,0)" for black.

Your desired color should display in the preview screen on the right after you click in another field, click **Apply**, or press [ENTER]. If your desired color does not display, your browser may not support it. Try selecting another color.

The following table describes the labels in the screen.

Table 311 Configuration > System > WWW > Login Page

LABEL	DESCRIPTION
Select Type	Select whether the Web Configurator uses the default login screen or one that you customize in the rest of this screen.
Logo File	You can upload a graphic logo to be displayed on the upper left corner of the Web Configurator login screen and access page. Specify the location and file name of the logo graphic or click **Browse** to locate it. Note: Use a GIF, JPG, or PNG of 100 kilobytes or less. Click **Upload** to transfer the specified graphic file from your computer to the Zyxel Device.
Customized Login Page	Use this section to set how the Web Configurator login screen looks.
Title	Enter the title for the top of the screen. Use up to 64 printable ASCII characters. Spaces are allowed.
Title Color	Specify the color of the screen's title text.
Message Color	Specify the color of the screen's text.
Note Message	Enter a note to display at the bottom of the screen. Use up to 64 printable ASCII characters. Spaces are allowed.
Background	Set how the screen background looks. To use a graphic, select **Picture** and upload a graphic. Specify the location and file name of the logo graphic or click **Browse** to locate it. The picture's size cannot be over 438 x 337 pixels. Note: Use a GIF, JPG, or PNG of 100 kilobytes or less. To use a color, select **Color** and specify the color.
Customized Access Page	Use this section to customize the page that displays after an access user logs into the Web Configurator to access network services like the Internet.
Title	Enter the title for the top of the screen. Use up to 64 printable ASCII characters. Spaces are allowed.
Message Color	Specify the color of the screen's text.
Note Message	Enter a note to display below the title. Use up to 64 printable ASCII characters. Spaces are allowed.
Background	Set how the window's background looks. To use a graphic, select **Picture** and upload a graphic. Specify the location and file name of the logo graphic or click **Browse** to locate it. The picture's size cannot be over 438 x 337 pixels. Note: Use a GIF, JPG, or PNG of 100 kilobytes or less. To use a color, select **Color** and specify the color.

Table 311 Configuration > System > WWW > Login Page (continued)

LABEL	DESCRIPTION
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

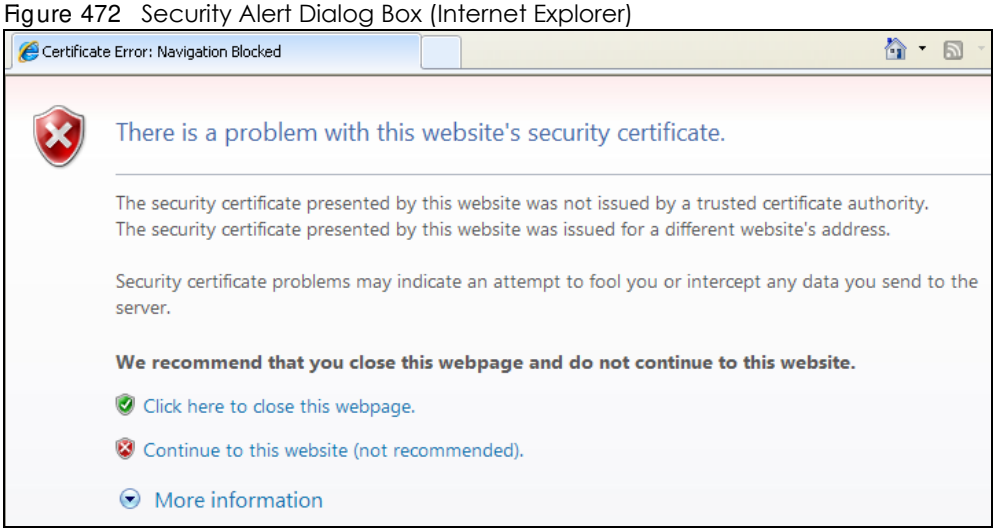
37.7.7 HTTPS Example

If you haven't changed the default HTTPS port on the Zyxel Device, then in your browser enter "https://Zyxel Device IP Address/" as the web site address where "Zyxel Device IP Address" is the IP address or domain name of the Zyxel Device you wish to access.

37.7.7.1 Internet Explorer Warning Messages

When you attempt to access the Zyxel Device HTTPS server, you will see the error message shown in the following screen.

Figure 472 Security Alert Dialog Box (Internet Explorer)



Select **Continue to this website** to proceed to the Web Configurator login screen. Otherwise, select **Click here to close this web page** to block the access.

37.7.7.2 Mozilla Firefox Warning Messages

When you attempt to access the Zyxel Device HTTPS server, a **The Connection is Untrusted** screen appears as shown in the following screen. Click **Technical Details** if you want to verify more information about the certificate from the Zyxel Device.

Select **I Understand the Risks** and then click **Add Exception** to add the Zyxel Device to the security exception list. Click **Confirm Security Exception**.

Figure 473 Security Certificate 1 (Firefox)

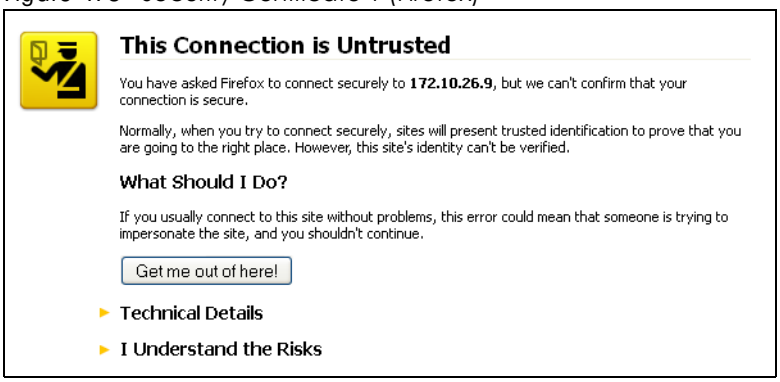


Figure 474 Security Certificate 2 (Firefox)

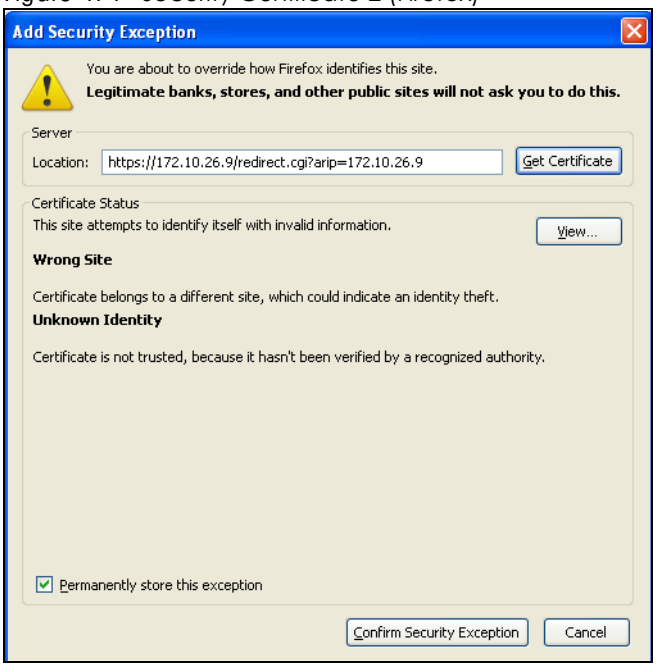


37.7.7.3 Avoiding Browser Warning Messages

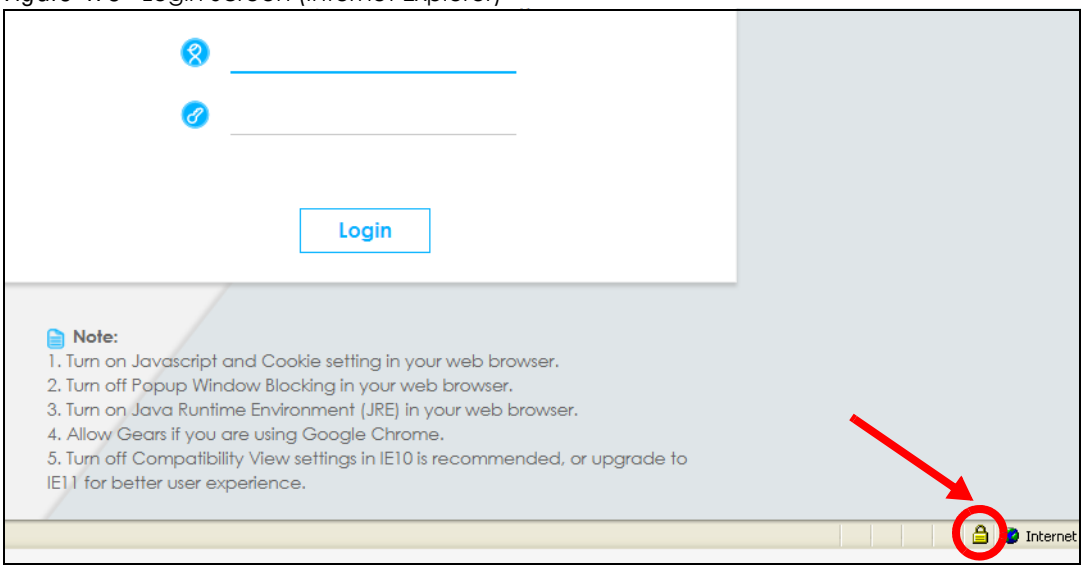
Here are the main reasons your browser displays warnings about the Zyxel Device's HTTPS server certificate and what you can do to avoid seeing the warnings:

- The issuing certificate authority of the Zyxel Device's HTTPS server certificate is not one of the browser's trusted certificate authorities. The issuing certificate authority of the Zyxel Device's factory default certificate is the Zyxel Device itself since the certificate is a self-signed certificate.
- For the browser to trust a self-signed certificate, import the self-signed certificate into your operating system as a trusted certificate.
- To have the browser trust the certificates issued by a certificate authority, import the certificate authority's certificate into your operating system as a trusted certificate.

37.7.7.4 Login Screen

After you accept the certificate, the Zyxel Device login screen appears. The lock displayed in the bottom of the browser status bar denotes a secure connection.

Figure 475 Login Screen (Internet Explorer)



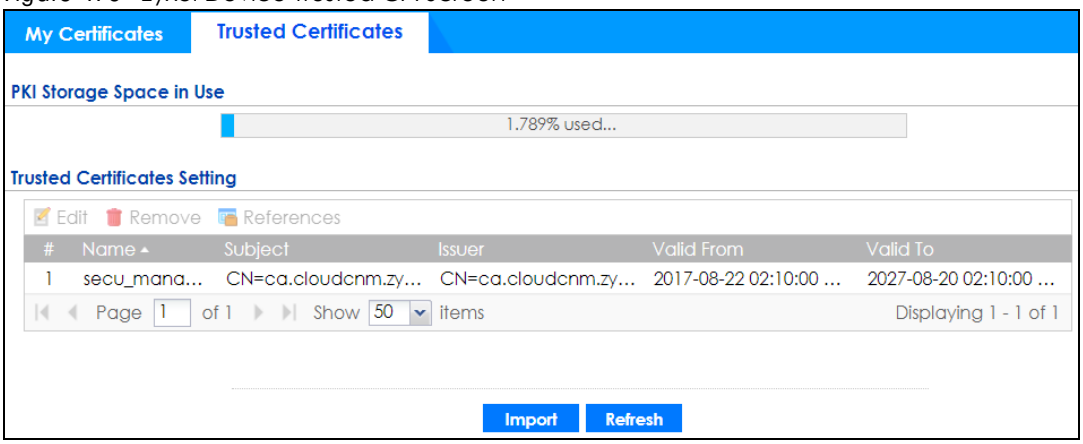
37.7.7.5 Enrolling and Importing SSL Client Certificates

The SSL client needs a certificate if **Authenticate Client Certificates** is selected on the Zyxel Device.

You must have imported at least one trusted CA to the Zyxel Device in order for the **Authenticate Client Certificates** to be active (see the Certificates chapter for details).

Apply for a certificate from a Certification Authority (CA) that is trusted by the Zyxel Device (see the Zyxel Device's **Trusted CA** Web Configurator screen).

Figure 476 Zyxel Device Trusted CA Screen

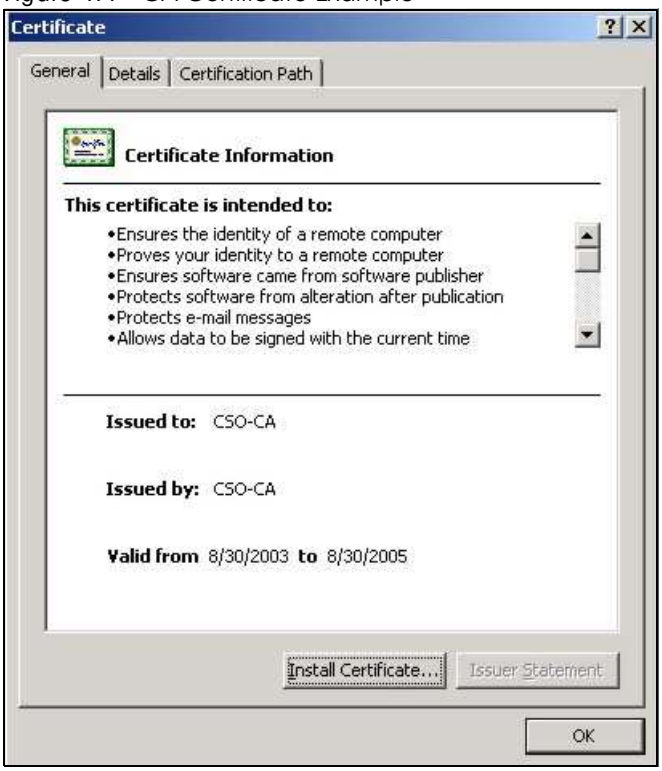


The CA sends you a package containing the CA's trusted certificate(s), your personal certificate(s) and a password to install the personal certificate(s).

37.7.7.5.1 Installing the CA's Certificate

1 Double click the CA's trusted certificate to produce a screen similar to the one shown next.

Figure 477 CA Certificate Example



2 Click Install Certificate and follow the wizard as shown earlier in this appendix.

37.7.7.5.2 Installing Your Personal Certificate(s)

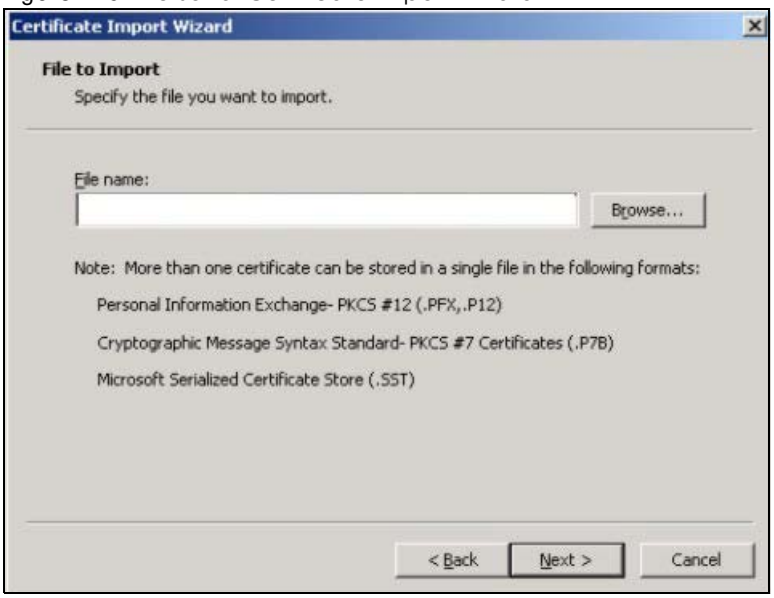
You need a password in advance. The CA may issue the password or you may have to specify it during the enrollment. Double-click the personal certificate given to you by the CA to produce a screen similar to the one shown next

1 Click Next to begin the wizard.

Figure 478 Personal Certificate Import Wizard 1

2 The file name and path of the certificate you double-clicked should automatically appear in the **File name** text box. Click **Browse** if you wish to import a different certificate.

Figure 479 Personal Certificate Import Wizard 2

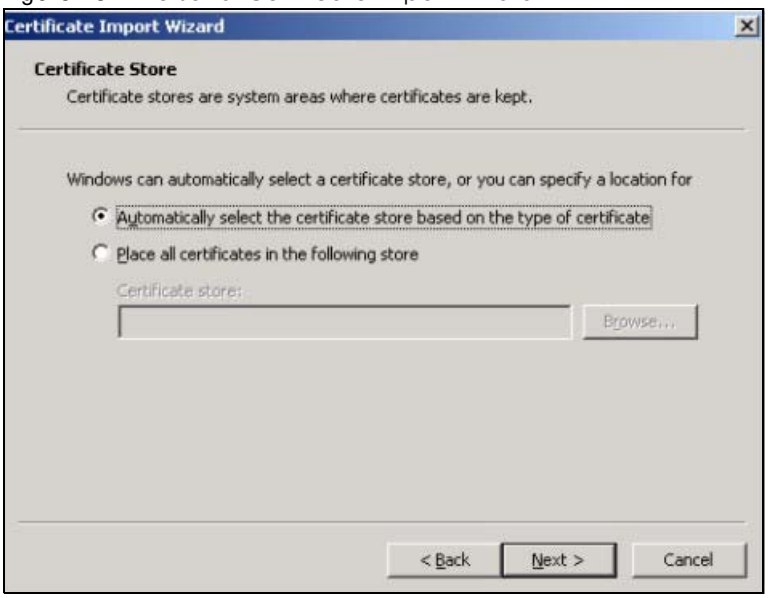


3 Enter the password given to you by the CA.

Figure 480 Personal Certificate Import Wizard 3

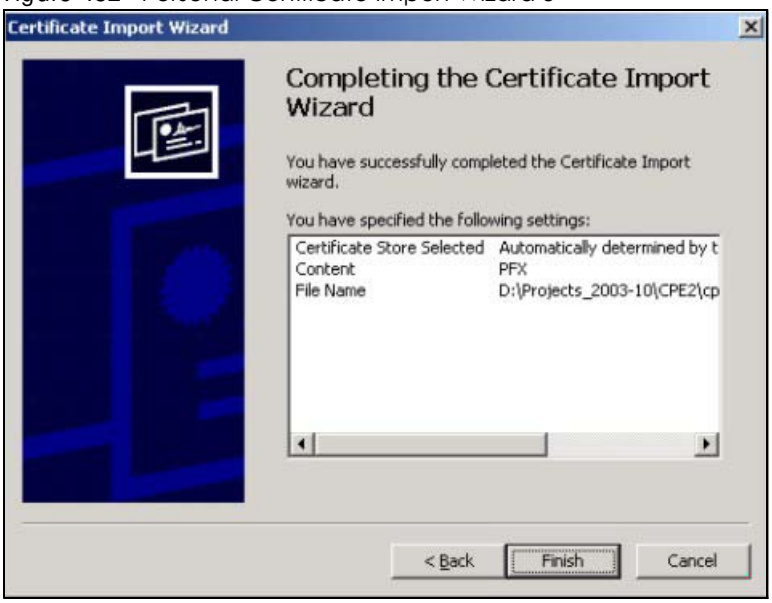
4 Have the wizard determine where the certificate should be saved on your computer or select **Place all certificates in the following store** and choose a different location.

Figure 481 Personal Certificate Import Wizard 4



5 Click **Finish** to complete the wizard and begin the import process.

Figure 482 Personal Certificate Import Wizard 5



6 You should see the following screen when the certificate is correctly installed on your computer.

Figure 483 Personal Certificate Import Wizard 6

37.7.7.6 Using a Certificate When Accessing the Zyxel Device Example

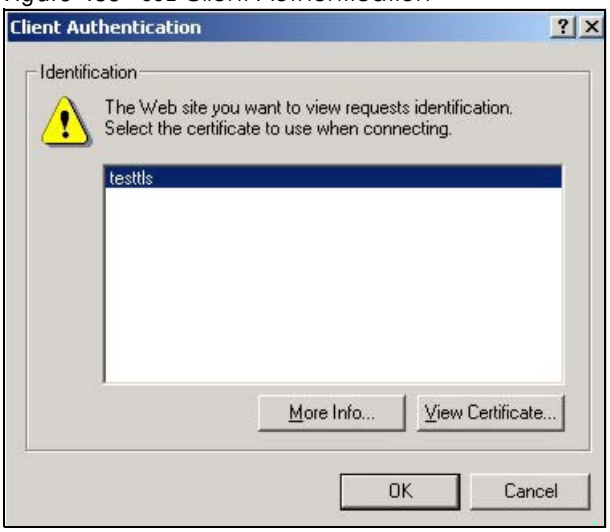
Use the following procedure to access the Zyxel Device via HTTPS.

1 Enter 'https://Zyxel Device IP Address/ in your browser's web address field.

Figure 484 Access the Zyxel Device Via HTTPS

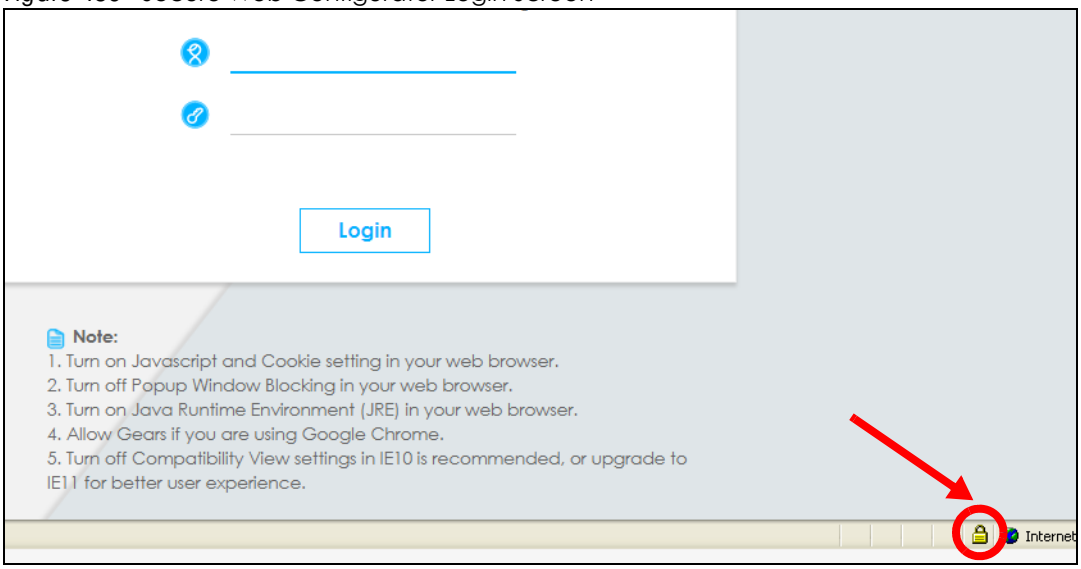
2 When **Authenticate Client Certificates** is selected on the Zyxel Device, the following screen asks you to select a personal certificate to send to the Zyxel Device. This screen displays even if you only have a single certificate as in the example.

Figure 485 SSL Client Authentication



3 You next see the Web Configurator login screen.

Figure 486 Secure Web Configurator Login Screen



37.8 SSH

You can use SSH (Secure SHell) to securely access the Zyxel Device's command line interface. Specify which zones allow SSH access and from which IP address the access can come.

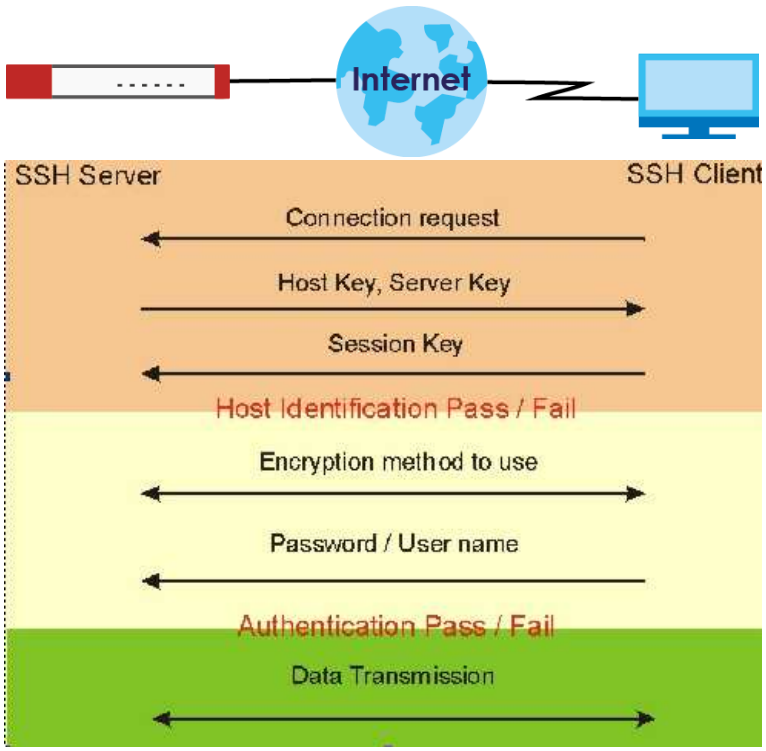
SSH is a secure communication protocol that combines authentication and data encryption to provide secure encrypted communication between two hosts over an unsecured network. In the following figure, computer **A** on the Internet uses SSH to securely connect to the WAN port of the Zyxel Device for a management session.

Figure 487 SSH Communication Over the WAN Example

37.8.1 How SSH Works

The following figure is an example of how a secure connection is established between two remote hosts using SSH v1.

Figure 488 How SSH v1 Works Example



1 Host Identification

The SSH client sends a connection request to the SSH server. The server identifies itself with a host key. The client encrypts a randomly generated session key with the host key and server key and sends the result back to the server.

The client automatically saves any new server public keys. In subsequent connections, the server public key is checked against the saved version on the client computer.

2 Encryption Method

Once the identification is verified, both the client and server must agree on the type of encryption method to use.

3 Authentication and Data Transmission

After the identification is verified and data encryption activated, a secure tunnel is established between the client and the server. The client then sends its authentication information (user name and password) to the server to log in to the server.

37.8.2 SSH Implementation on the Zyxel Device

Your Zyxel Device supports SSH versions 1 and 2 using RSA authentication and four encryption methods (AES, 3DES, Archfour, and Blowfish). The SSH server is implemented on the Zyxel Device for management using port 22 (by default).

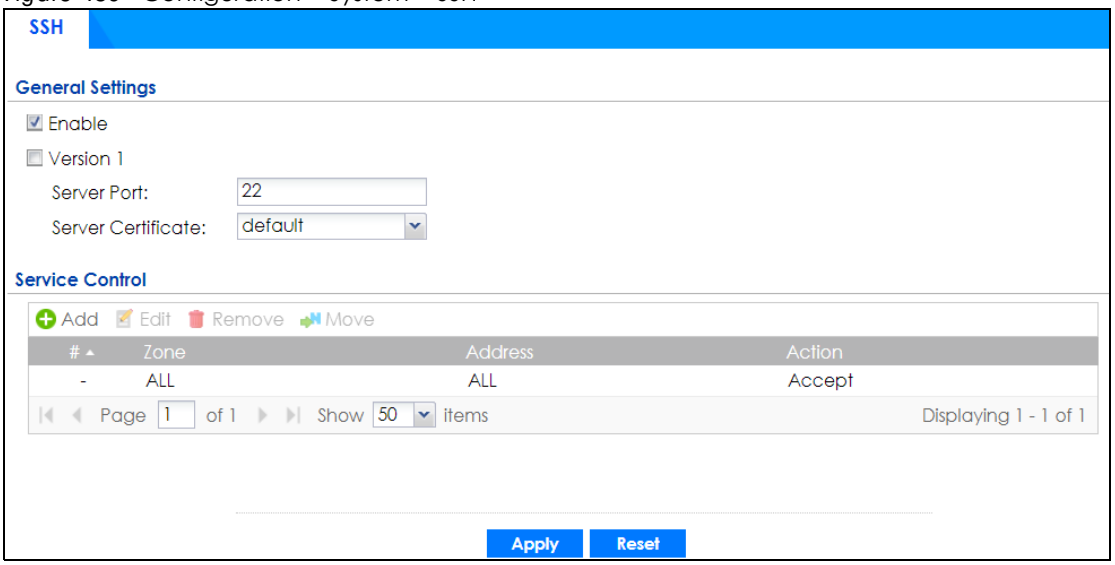
37.8.3 Requirements for Using SSH

You must install an SSH client program on a client computer (Windows or Linux operating system) that is used to connect to the Zyxel Device over SSH.

37.8.4 Configuring SSH

Click **Configuration** > **System** > **SSH** to change your Zyxel Device's Secure Shell settings. Use this screen to specify from which zones SSH can be used to manage the Zyxel Device. You can also specify from which IP addresses the access can come.

Figure 489 Configuration > System > SSH



The following table describes the labels in this screen.

Table 312 Configuration > System > SSH

LABEL	DESCRIPTION
Enable	Select the check box to allow or disallow the computer with the IP address that matches the IP address(es) in the **Service Control** table to access the Zyxel Device CLI using this service.
Version 1	Select the check box to have the Zyxel Device use both SSH version 1 and version 2 protocols. If you clear the check box, the Zyxel Device uses only SSH version 2 protocol.
Server Port	You may change the server port number for a service if needed, however you must use the same port number in order to use that service for remote management.

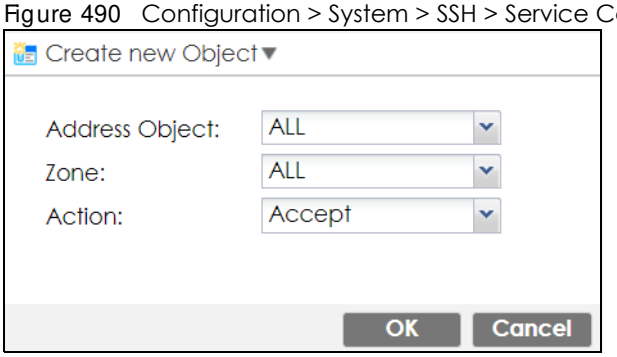
Table 312 Configuration > System > SSH (continued)

LABEL	DESCRIPTION
Server Certificate	Select the certificate whose corresponding private key is to be used to identify the Zyxel Device for SSH connections. You must have certificates already configured in the **My Certificates** screen.
Service Control	This specifies from which computers you can access which Zyxel Device zones.
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry. Refer to Table 310 on page 711 for details on the screen that opens.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so. Note that subsequent entries move up by one when you take this action.
Move	To change an entry's position in the numbered list, select the method and click **Move** to display a field to type a number for where you want to put it and press [ENTER] to move the rule to the number that you typed.
#	This the index number of the service control rule.
Zone	This is the zone on the Zyxel Device the user is allowed or denied to access.
Address	This is the object name of the IP address(es) with which the computer is allowed or denied to access.
Action	This displays whether the computer with the IP address specified above can access the Zyxel Device zone(s) configured in the **Zone** field (**Accept**) or not (**Deny**).
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

37.8.5 Service Control Rules

Click the **Add** or **Edit** icon in the **Service Control** table to add a service control rule.

Figure 490 Configuration > System > SSH > Service Control Rule Add/Edit



The following table describes the labels in this screen.

Table 313 Configuration > System > SSH > Service Control Rule Add/Edit

LABEL	DESCRIPTION
Create new Object	Use this to configure any new settings objects that you need to use in this screen.
Address Object	Select **ALL** to allow or deny any computer to communicate with the Zyxel Device using SSH. Select a predefined address object to just allow or deny the computer with the IP address that you specified to access the Zyxel Device using SSH.
Zone	Select **ALL** to allow or prevent any Zyxel Device zones from being accessed using SSH. Select a predefined Zyxel Device zone on which a incoming service is allowed or denied.

Table 313 Configuration > System > SSH > Service Control Rule Add/Edit (continued)

LABEL	DESCRIPTION
Action	Select **Accept** to allow the user to access the Zyxel Device from the specified computers. Select **Deny** to block the user's access to the Zyxel Device from the specified computers.
OK	Click **OK** to save your customized settings and exit this screen.
Cancel	Click **Cancel** to exit this screen without saving

37.8.6 Secure Telnet Using SSH Examples

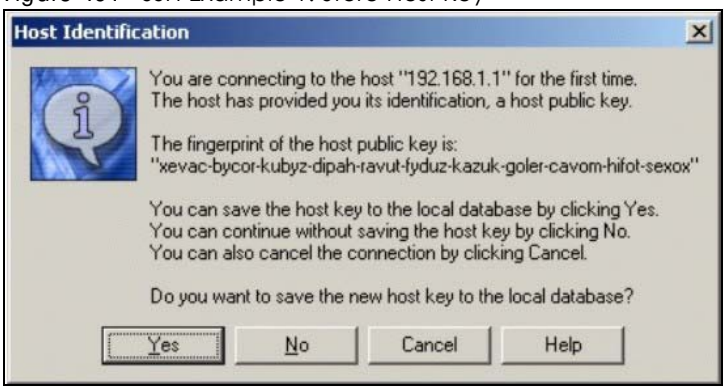
This section shows two examples using a command interface and a graphical interface SSH client program to remotely access the Zyxel Device. The configuration and connection steps are similar for most SSH client programs. Refer to your SSH client program user's guide.

37.8.6.1 Example 1: Microsoft Windows

This section describes how to access the Zyxel Device using the Secure Shell Client program.

1. Launch the SSH client and specify the connection information (IP address, port number) for the Zyxel Device.
2. Configure the SSH client to accept connection using SSH version 1.
3. A window displays prompting you to store the host key in you computer. Click **Yes** to continue.

Figure 491 SSH Example 1: Store Host Key



Enter the password to log in to the Zyxel Device. The CLI screen displays next.

37.8.6.2 Example 2: Linux

This section describes how to access the Zyxel Device using the OpenSSH client program that comes with most Linux distributions.

1. Test whether the SSH service is available on the Zyxel Device.

   Enter "`telnet 192.168.1.1 22`" at a terminal prompt and press [ENTER]. The computer attempts to connect to port 22 on the Zyxel Device (using the default IP address of 192.168.1.1).

   A message displays indicating the SSH protocol version supported by the Zyxel Device.

Figure 492 SSH Example 2: Test

```
$ telnet 192.168.1.1 22
Trying 192.168.1.1...
Connected to 192.168.1.1.
Escape character is '^]'.
SSH-1.5-1.0.0
```

2 Enter "ssh -1 192.168.1.1". This command forces your computer to connect to the Zyxel Device using SSH version 1. If this is the first time you are connecting to the Zyxel Device using SSH, a message displays prompting you to save the host information of the Zyxel Device. Type "yes" and press [ENTER].

Then enter the password to log in to the Zyxel Device.

Figure 493 SSH Example 2: Log in

```
$ ssh -1 192.168.1.1
The authenticity of host '192.168.1.1 (192.168.1.1)' can't be established.
RSA1 key fingerprint is 21:6c:07:25:7e:f4:75:80:ec:af:bd:d4:3d:80:53:d1.
Are you sure you want to continue connecting (yes/no)? yes
Warning: Permanently added '192.168.1.1' (RSA1) to the list of known hosts.
Administrator@192.168.1.1's password:
```

3 The CLI screen displays next.

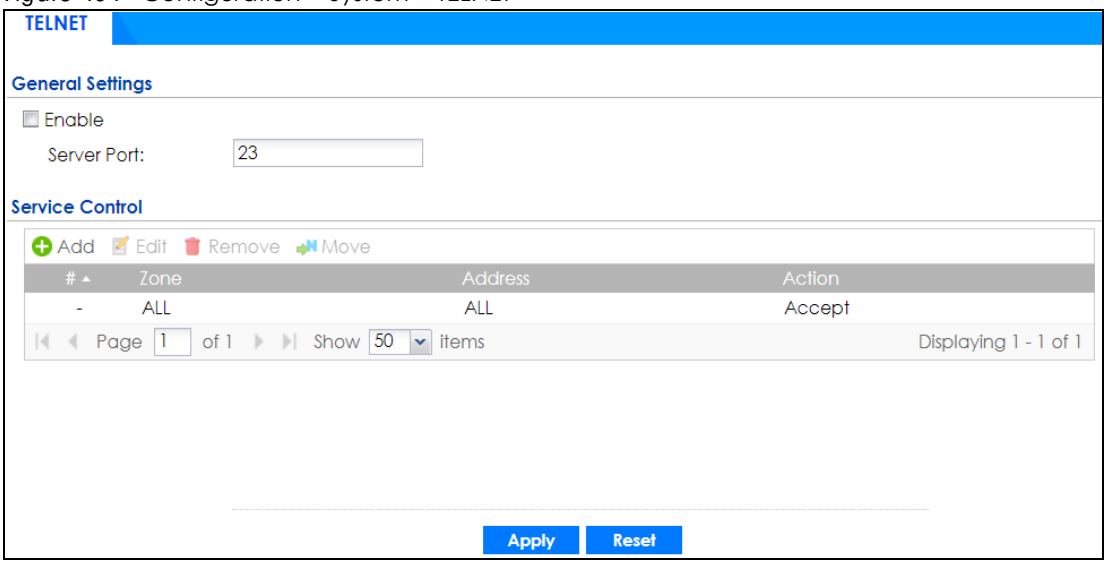
37.9 Telnet

You can use Telnet to access the Zyxel Device's command line interface. Specify which zones allow Telnet access and from which IP address the access can come.

37.9.1 Configuring Telnet

Click Configuration > System > TELNET to configure your Zyxel Device for remote Telnet access. Use this screen to specify from which zones Telnet can be used to manage the Zyxel Device. You can also specify from which IP addresses the access can come.

Figure 494 Configuration > System > TELNET



The following table describes the labels in this screen.

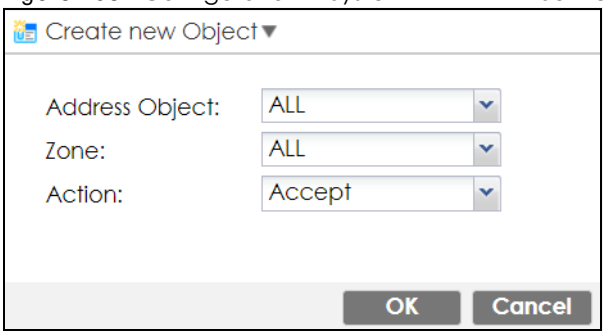
Table 314 Configuration > System > TELNET

LABEL	DESCRIPTION
Enable	Select the check box to allow or disallow the computer with the IP address that matches the IP address(es) in the **Service Control** table to access the Zyxel Device CLI using this service.
Server Port	You may change the server port number for a service if needed, however you must use the same port number in order to use that service for remote management.
Service Control	This specifies from which computers you can access which Zyxel Device zones.
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry. Refer to Table 310 on page 711 for details on the screen that opens.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so. Note that subsequent entries move up by one when you take this action.
Move	To change an entry's position in the numbered list, select the method and click **Move** to display a field to type a number for where you want to put it and press [ENTER] to move the rule to the number that you typed.
#	This the index number of the service control rule. The entry with a hyphen (-) instead of a number is the Zyxel Device's (non-configurable) default policy. The Zyxel Device applies this to traffic that does not match any other configured rule. It is not an editable rule. To apply other behavior, configure a rule that traffic will match so the Zyxel Device will not have to use the default policy.
Zone	This is the zone on the Zyxel Device the user is allowed or denied to access.
Address	This is the object name of the IP address(es) with which the computer is allowed or denied to access.
Action	This displays whether the computer with the IP address specified above can access the Zyxel Device zone(s) configured in the **Zone** field (**Accept**) or not (**Deny**).
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

37.9.2 Service Control Rules

Click the **Add** or **Edit** icon in the **Service Control** table to add a service control rule.

Figure 495 Configuration > System > TELNET > Service Control Rule Add/Edit



The following table describes the labels in this screen.

Table 315 Configuration > System > TELNET > Service Control Rule Add/Edit

LABEL	DESCRIPTION
Create new Object	Use this to configure any new settings objects that you need to use in this screen.
Address Object	Select **ALL** to allow or deny any computer to communicate with the Zyxel Device using Telnet. Select a predefined address object to just allow or deny the computer with the IP address that you specified to access the Zyxel Device using Telnet.
Zone	Select **ALL** to allow or prevent any Zyxel Device zones from being accessed using Telnet. Select a predefined Zyxel Device zone on which a incoming service is allowed or denied.
Action	Select **Accept** to allow the user to access the Zyxel Device from the specified computers. Select **Deny** to block the user's access to the Zyxel Device from the specified computers.
OK	Click **OK** to save your customized settings and exit this screen.
Cancel	Click **Cancel** to exit this screen without saving

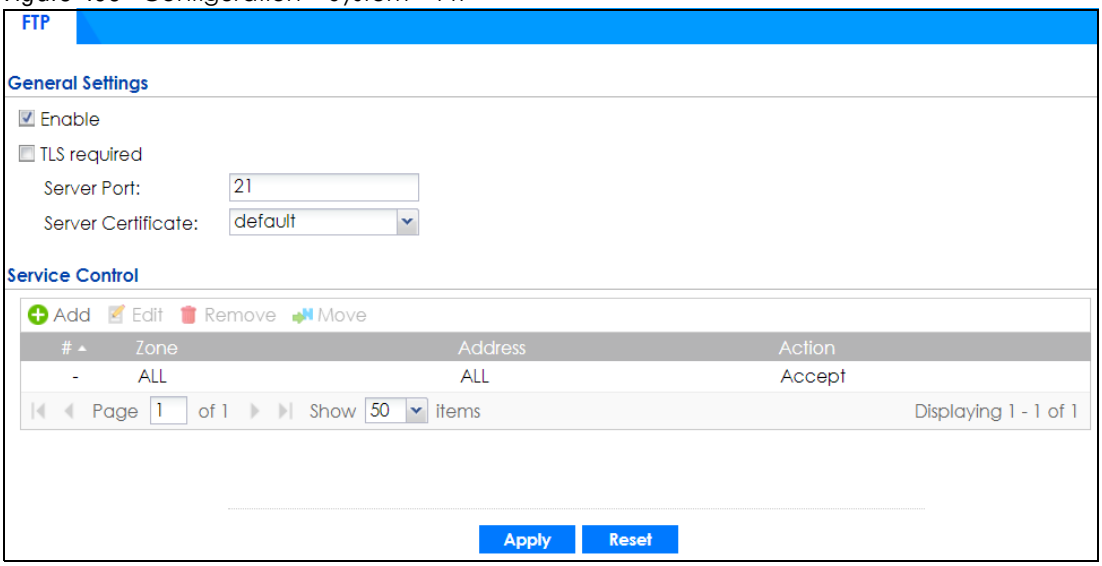
37.10 FTP

You can upload and download the Zyxel Device's firmware and configuration files using FTP. To use this feature, your computer must have an FTP client.

37.10.1 Configuring FTP

To change your Zyxel Device's FTP settings, click **Configuration** > **System** > **FTP** tab. The screen appears as shown. Use this screen to specify from which zones FTP can be used to access the Zyxel Device. You can also specify from which IP addresses the access can come.

Figure 496 Configuration > System > FTP



The following table describes the labels in this screen.

Table 316 Configuration > System > FTP

LABEL	DESCRIPTION
Enable	Select the check box to allow or disallow the computer with the IP address that matches the IP address(es) in the **Service Control** table to access the Zyxel Device using this service.
TLS required	Select the check box to use FTP over TLS (Transport Layer Security) to encrypt communication. This implements TLS as a security mechanism to secure FTP clients and/or servers.
Server Port	You may change the server port number for a service if needed, however you must use the same port number in order to use that service for remote management.
Server Certificate	Select the certificate whose corresponding private key is to be used to identify the Zyxel Device for FTP connections. You must have certificates already configured in the **My Certificates** screen.
Service Control	This specifies from which computers you can access which Zyxel Device zones.
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry. Refer to Table 310 on page 711 for details on the screen that opens.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so. Note that subsequent entries move up by one when you take this action.
Move	To change an entry's position in the numbered list, select the method and click **Move** to display a field to type a number for where you want to put it and press [ENTER] to move the rule to the number that you typed.
#	This the index number of the service control rule. The entry with a hyphen (-) instead of a number is the Zyxel Device's (non-configurable) default policy. The Zyxel Device applies this to traffic that does not match any other configured rule. It is not an editable rule. To apply other behavior, configure a rule that traffic will match so the Zyxel Device will not have to use the default policy.
Zone	This is the zone on the Zyxel Device the user is allowed or denied to access.
Address	This is the object name of the IP address(es) with which the computer is allowed or denied to access.
Action	This displays whether the computer with the IP address specified above can access the Zyxel Device zone(s) configured in the **Zone** field (**Accept**) or not (**Deny**).

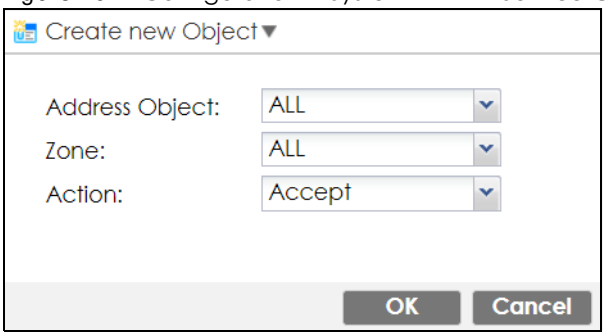
Table 316 Configuration > System > FTP (continued)

LABEL	DESCRIPTION
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

37.10.2 Service Control Rules

Click the **Add** or **Edit** icon in the **Service Control** table to add a service control rule.

Figure 497 Configuration > System > FTP > Service Control Rule Add/Edit



The following table describes the labels in this screen.

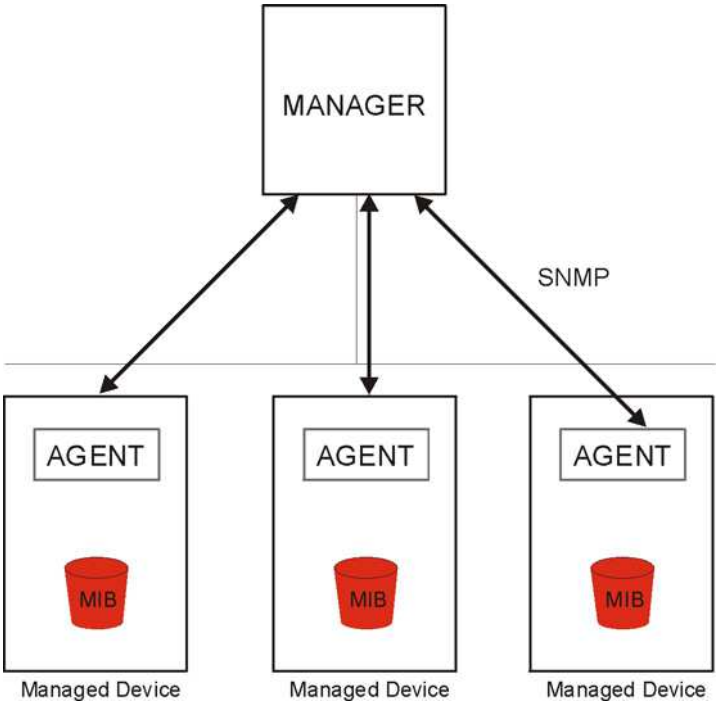
Table 317 Configuration > System > FTP > Service Control Rule Add/Edit

LABEL	DESCRIPTION
Create new Object	Use this to configure any new settings objects that you need to use in this screen.
Address Object	Select **ALL** to allow or deny any computer to communicate with the Zyxel Device using FTP. Select a predefined address object to just allow or deny the computer with the IP address that you specified to access the Zyxel Device using FTP.
Zone	Select **ALL** to allow or prevent any Zyxel Device zones from being accessed using FTP. Select a predefined Zyxel Device zone on which a incoming service is allowed or denied.
Action	Select **Accept** to allow the user to access the Zyxel Device from the specified computers. Select **Deny** to block the user's access to the Zyxel Device from the specified computers.
OK	Click **OK** to save your customized settings and exit this screen.
Cancel	Click **Cancel** to exit this screen without saving

37.11 SNMP

Simple Network Management Protocol is a protocol used for exchanging management information between network devices. Your Zyxel Device supports SNMP agent functionality, which allows a manager station to manage and monitor the Zyxel Device through the network. The Zyxel Device supports SNMP version one (SNMPv1), version two (SNMPv2c) and version 3 (SNMPv3). The next figure illustrates an SNMP management operation.

Figure 498 SNMP Management Model



An SNMP managed network consists of two main types of component: agents and a manager.

An agent is a management software module that resides in a managed device (the Zyxel Device). An agent translates the local management information from the managed device into a form compatible with SNMP. The manager is the console through which network administrators perform network management functions. It executes applications that control and monitor managed devices.

The managed devices contain object variables/managed objects that define each piece of information to be collected about a device. Examples of variables include such as number of packets received, node port status etc. A Management Information Base (MIB) is a collection of managed objects. SNMP allows a manager and agents to communicate for the purpose of accessing these objects.

SNMP itself is a simple request/response protocol based on the manager/agent model. The manager issues a request and the agent returns responses using the following protocol operations:

- Get - Allows the manager to retrieve an object variable from the agent.
- GetNext - Allows the manager to retrieve the next object variable from a table or list within an agent. In SNMPv1, when a manager wants to retrieve all elements of a table from an agent, it initiates a Get operation, followed by a series of GetNext operations.
- Set - Allows the manager to set values for object variables within an agent.
- Trap - Used by the agent to inform the manager of some events.

37.11.1 SNMPv3 and Security

SNMPv3 enhances security for SNMP management using authentication and encryption. SNMP managers can be required to authenticate with agents before conducting SNMP management sessions.

Security can be further enhanced by encrypting the SNMP messages sent from the managers. Encryption protects the contents of the SNMP messages. When the contents of the SNMP messages are encrypted, only the intended recipients can read them.

37.11.2 Supported MIBs

The Zyxel Device supports MIB II that is defined in RFC-1213 and RFC-1215. The Zyxel Device also supports private MIBs (zywall.mib and zyxel-zywall-ZLD-Common.mib) to collect information about CPU and memory usage and VPN total throughput. The focus of the MIBs is to let administrators collect statistical data and monitor status and performance. You can download the Zyxel Device's MIBs from www.zyxel.com.

37.11.3 SNMP Traps

The Zyxel Device will send traps to the SNMP manager when any one of the following events occurs.

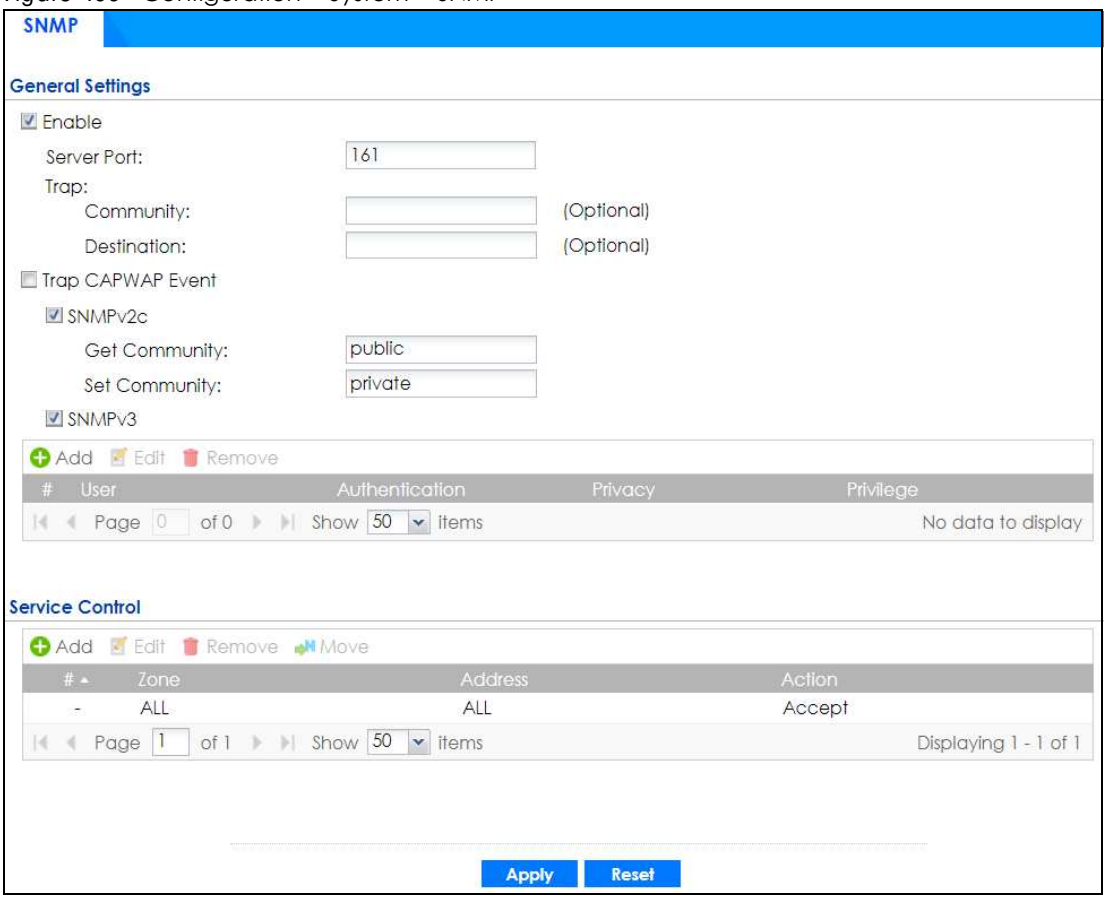
Table 318 SNMP Traps

OBJECT LABEL	OBJECT ID	DESCRIPTION
Cold Start	1.3.6.1.6.3.1.1.5.1	This trap is sent when the Zyxel Device is turned on or an agent restarts.
linkDown	1.3.6.1.6.3.1.1.5.3	This trap is sent when the Ethernet link is down.
linkUp	1.3.6.1.6.3.1.1.5.4	This trap is sent when the Ethernet link is up.
authenticationFailure	1.3.6.1.6.3.1.1.5.5	This trap is sent when an SNMP request comes from non-authenticated hosts.
vpnTunnelDisconnected	1.3.6.1.4.1.890.1.6.22.2.3	This trap is sent when an IPSec VPN tunnel is disconnected.
vpnTunnelName	1.3.6.1.4.1.890.1.6.22.2.2.1.1	This trap is sent along with the vpnTunnelDisconnected trap. This trap carries the disconnected tunnel's IPSec SA name.
vpnIKEName	1.3.6.1.4.1.890.1.6.22.2.2.1.2	This trap is sent along with the vpnTunnelDisconnected trap. This trap carries the disconnected tunnel's IKE SA name.
vpnTunnelSPI	1.3.6.1.4.1.890.1.6.22.2.2.1.3	This trap is sent along with the vpnTunnelDisconnected trap. This trap carries the security parameter index (SPI) of the disconnected VPN tunnel.

37.11.4 Configuring SNMP

To change your Zyxel Device's SNMP settings, click **Configuration** > **System** > **SNMP** tab. The screen appears as shown. Use this screen to configure your SNMP settings, including from which zones SNMP can be used to access the Zyxel Device. You can also specify from which IP addresses the access can come.

Figure 499 Configuration > System > SNMP



The following table describes the labels in this screen.

Table 319 Configuration > System > SNMP

LABEL	DESCRIPTION
Enable	Select the check box to allow or disallow the computer with the IP address that matches the IP address(es) in the **Service Control** table to access the Zyxel Device using this service.
Server Port	You may change the server port number for a service if needed, however you must use the same port number in order to use that service for remote management.
Trap	
Community	Type the trap community, which is the password sent with each trap to the SNMP manager. The default is public and allows all requests.
Destination	Type the IP address of the station to send your SNMP traps to.
Trap CAPWAP Event	Select this option to have the Zyxel Device send a trap to the SNMP manager when a managed AP is connected to or disconnected from the Zyxel Device.
SNMPv2c	Select the SNMP version for the Zyxel Device. The SNMP version on the Zyxel Device must match the version on the SNMP manager.
Get Community	Enter the **Get Community**, which is the password for the incoming Get and GetNext requests from the management station. The default is public and allows all requests.
Set Community	Enter the **Set community**, which is the password for incoming Set requests from the management station. The default is private and allows all requests.

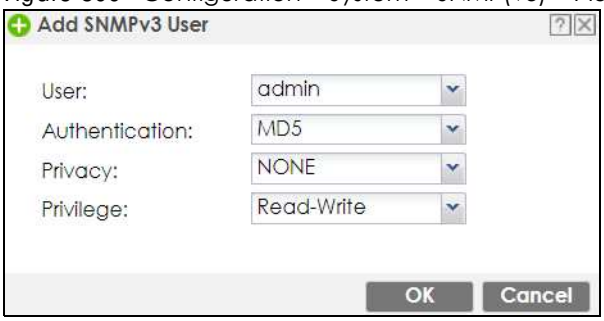
Table 319 Configuration > System > SNMP (continued)

LABEL	DESCRIPTION
SNMPv3	Select the SNMP version for the Zyxel Device. The SNMP version on the Zyxel Device must match the version on the SNMP manager. SNMPv3 (RFCs 3413 to 3415) provides secure access by authenticating and encrypting data packets over the network. The Zyxel Device uses your login password as the SNMPv3 authentication and encryption passphrase. Note: Your login password must consist of at least 8 printable characters for SNMPv3. An error message will display if your login password has fewer characters.
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so. Note that subsequent entries move up by one when you take this action.
#	This is the index number of the entry.
User	This displays the name of the user object to be sent to the SNMP manager along with the SNMP v3 trap.
Authentication	This displays the authentication algorithm used for this entry. **MD5** (Message Digest 5) and **SHA** (Secure Hash Algorithm) are hash algorithms used to authenticate SNMP data. SHA authentication is generally considered stronger than MD5, but is slower.
Privacy	This displays the encryption method for SNMP communication from this user. Methods available are: • **DES** - Data Encryption Standard is a widely used (but breakable) method of data encryption. It applies a 56-bit key to each 64-bit block of data. • **AES** - Advanced Encryption Standard is another method for data encryption that also uses a secret key. AES applies a 128-bit key to 128-bit blocks of data.
Privilege	This displays the access rights to MIBs. • **Read-Write** - The associated user can create and edit the MIBs on the Zyxel Device, except the user account. • **Read-Only** - The associated user can only collect information from the Zyxel Device MIBs.
Service Control	This specifies from which computers you can access which Zyxel Device zones.
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry. Refer to Table 310 on page 711 for details on the screen that opens.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so. Note that subsequent entries move up by one when you take this action.
Move	To change an entry's position in the numbered list, select the method and click **Move** to display a field to type a number for where you want to put it and press [ENTER] to move the rule to the number that you typed.
#	This the index number of the service control rule. The entry with a hyphen (-) instead of a number is the Zyxel Device's (non-configurable) default policy. The Zyxel Device applies this to traffic that does not match any other configured rule. It is not an editable rule. To apply other behavior, configure a rule that traffic will match so the Zyxel Device will not have to use the default policy.
Zone	This is the zone on the Zyxel Device the user is allowed or denied to access.
Address	This is the object name of the IP address(es) with which the computer is allowed or denied to access.
Action	This displays whether the computer with the IP address specified above can access the Zyxel Device zone(s) configured in the **Zone** field (**Accept**) or not (**Deny**).
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

37.11.5 Add SNMPv3 User

Click **Add** under SNMPv3 in **Configuration** > **System** > **SNMP** to create an SNMPv3 user for authentication with managers using SNMP v3. Use the username and password of the login accounts you specify in this screen to create accounts on the SNMP v3 manager.

Figure 500 Configuration > System > SNMP(v3) > Add



The following table describes the labels in this screen.

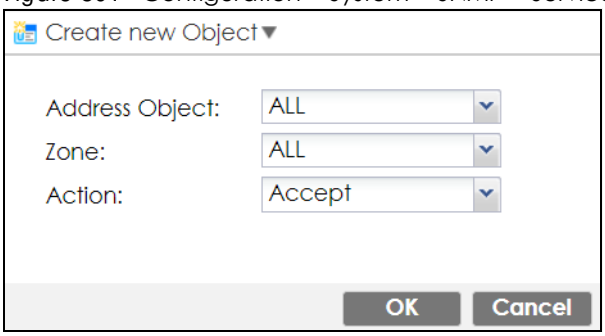
Table 320 Configuration > System > SNMP(v3) > Add

LABEL	DESCRIPTION
User	Specify the username of a login account on the Zyxel Device. The associated password is used in authentication algorithms and encryption methods.
Authentication	Select an authentication algorithm. **MD5** (Message Digest 5) and **SHA** (Secure Hash Algorithm) are hash algorithms used to authenticate SNMP data. SHA authentication is generally considered stronger than MD5, but is slower.
Privacy	Specify the encryption method for SNMP communication from this user. You can choose one of the following: • **DES** - Data Encryption Standard is a widely used (but breakable) method of data encryption. It applies a 56-bit key to each 64-bit block of data. • **AES** - Advanced Encryption Standard is another method for data encryption that also uses a secret key. AES applies a 128-bit key to 128-bit blocks of data.
Privilege	Select the access rights to MIBs. • **Read-Write** - The associated user can create and edit the MIBs on the Zyxel Device, except the user account. • **Read-Only** - The associated user can only collect information from the Zyxel Device MIBs.
OK	Click **OK** to save the changes.
Cancel	Click **Cancel** to begin configuring this screen afresh.

37.11.6 Service Control Rules

Click the **Add** or **Edit** icon in the **Service Control** table to add a service control rule.

Figure 501 Configuration > System > SNMP > Service Control Rule Add/Edit



The following table describes the labels in this screen.

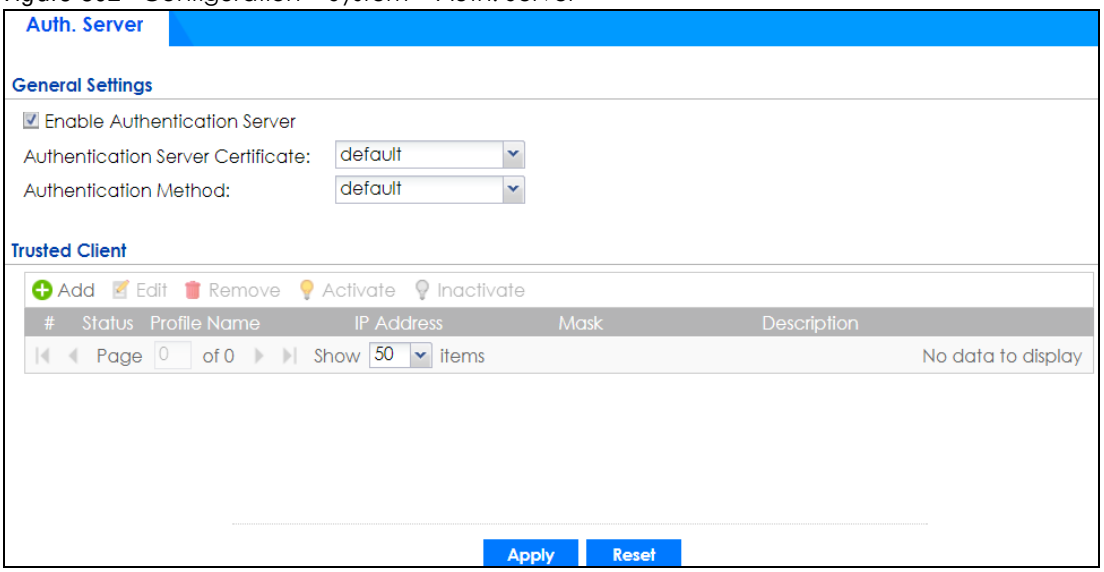
Table 321 Configuration > System > SNMP > Service Control Rule Add/Edit

LABEL	DESCRIPTION
Create new Object	Use this to configure any new settings objects that you need to use in this screen.
Address Object	Select **ALL** to allow or deny any computer to communicate with the Zyxel Device using SNMP. Select a predefined address object to just allow or deny the computer with the IP address that you specified to access the Zyxel Device using SNMP.
Zone	Select **ALL** to allow or prevent any Zyxel Device zones from being accessed using SNMP. Select a predefined Zyxel Device zone on which a incoming service is allowed or denied.
Action	Select **Accept** to allow the user to access the Zyxel Device from the specified computers. Select **Deny** to block the user's access to the Zyxel Device from the specified computers.
OK	Click **OK** to save your customized settings and exit this screen.
Cancel	Click **Cancel** to exit this screen without saving.

37.12 Authentication Server

You can set the Zyxel Device to work as a RADIUS server to exchange messages with a RADIUS client, such as an AP for user authentication and authorization. Click **Configuration** > **System** > **Auth. Server** tab. The screen appears as shown. Use this screen to enable the authentication server feature of the Zyxel Device and specify the RADIUS client's IP address.

Figure 502 Configuration > System > Auth. Server



The following table describes the labels in this screen.

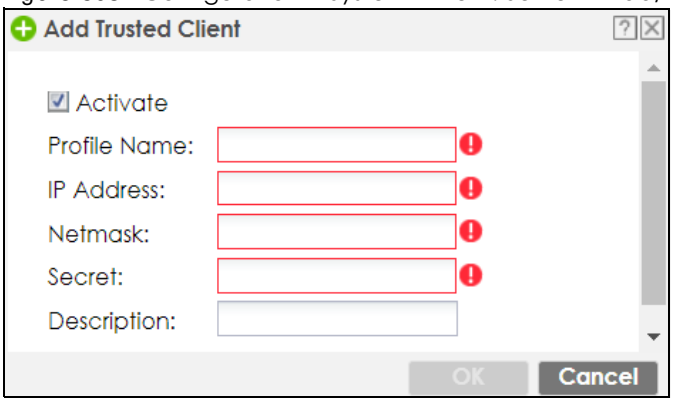
Table 322 Configuration > System > Auth. Server

LABEL	DESCRIPTION
Enable Authentication Server	Select the check box to have the Zyxel Device act as a RADIUS server.
Authentication Server Certificate	Select the certificate whose corresponding private key is to be used to identify the Zyxel Device to the RADIUS client. You must have certificates already configured in the **My Certificates** screen.
Authentication Method	Select an authentication method if you have created any in the **Configuration > Object > Auth. Method** screen.
Trusted Client	Use this section to configure trusted clients in the Zyxel Device RADIUS server database.
Add	Click this to create a new entry. Select an entry and click **Add** to create a new entry after the selected entry.
Edit	Double-click an entry or select it and click **Edit** to be able to modify the entry's settings.
Remove	To remove an entry, select it and click **Remove**. The Zyxel Device confirms you want to remove it before doing so. Note that subsequent entries move up by one when you take this action.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
#	This is the index number of the entry.
Status	This icon is lit when the entry is active and dimmed when the entry is inactive.
Profile Name	This field indicates the name assigned to the profile.
IP Address	This is the IP address of the RADIUS client that is allowed to exchange messages with the Zyxel Device.
Mask	This is the subnet mask of the RADIUS client.
Description	This is the description of the RADIUS client.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

37.12.1 Add/Edit Trusted RADIUS Client

Click **Configuration** > **System** > **Auth. Server** to display the **Auth. Server** screen. Click the **Add** icon or an **Edit** icon to display the following screen. Use this screen to create a new entry or edit an existing one.

Figure 503 Configuration > System > Auth. Server > Add/Edit



The following table describes the labels in this screen.

Table 323 Configuration > System > Auth. Server > Add/Edit

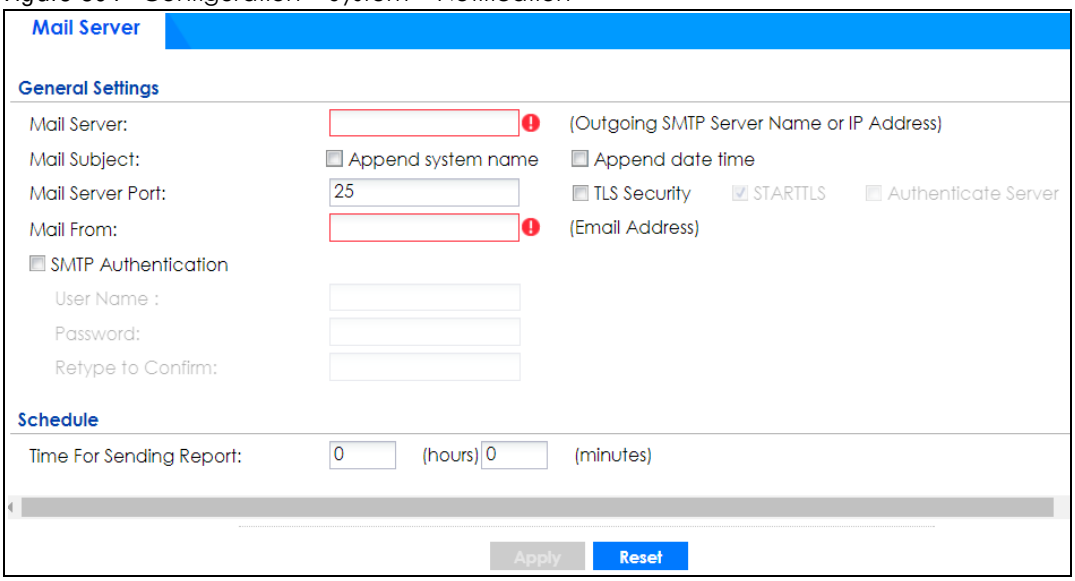
LABEL	DESCRIPTION
Activate	Select this check box to make this profile active.
Profile Name	Enter a descriptive name (up to 31 alphanumerical characters) for identification purposes.
IP Address	Enter the IP address of the RADIUS client that is allowed to exchange messages with the Zyxel Device.
Netmask	Enter the subnet mask of the RADIUS client.
Secret	Enter a password (up to 64 alphanumeric characters) as the key to be shared between the Zyxel Device and the RADIUS client. The key is not sent over the network. This key must be the same on the external authentication server and the Zyxel Device.
Description	Enter the description of each server, if any. You can use up to 60 printable ASCII characters.
OK	Click **OK** to save the changes.
Cancel	Click **Cancel** to discard the changes.

37.13 Notification > Mail Server

Use this screen to configure a mail server so you can receive reports and notification emails such as when your password is about to expire. After you configure the screen, you can test the settings in **Maintenance** > **Diagnostics** > **Network Tool** and then select **Test Email Server**. See **Configuration** > **Log & Report** > **Email Daily Report** to configure what reports to send and to whom.

Click **Configuration** > **System** > **Notification** to display the **Mail Server** screen.

Figure 504 Configuration > System > Notification



The following table describes the labels in this screen.

Table 324 Configuration > System > Notification

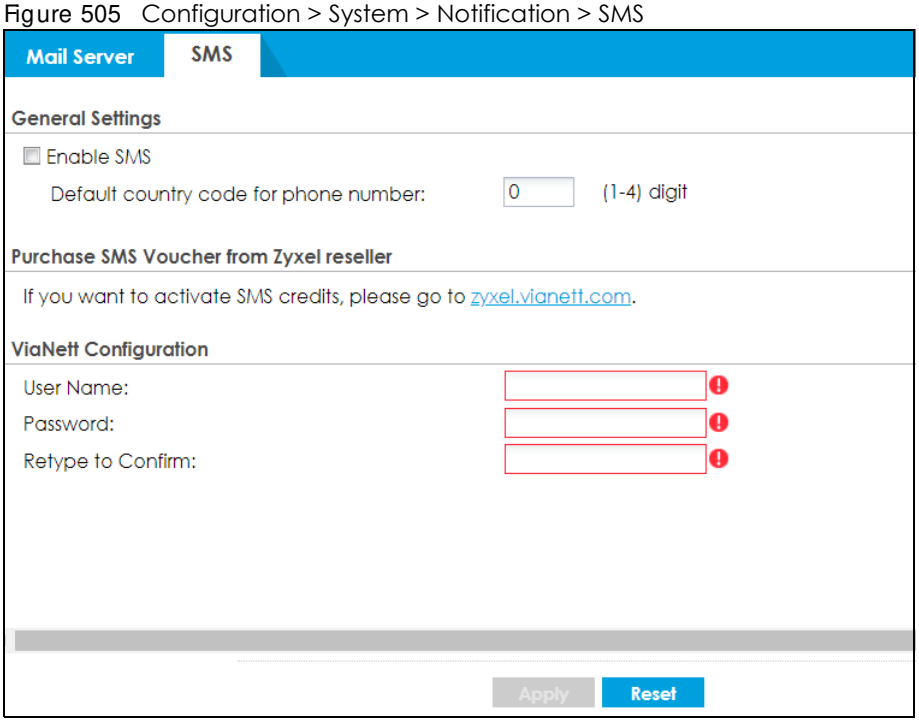
LABEL	DESCRIPTION
Mail Server	Type the name or IP address of the outgoing SMTP server.
Mail Subject	Go to **Configuration > Log & Report > Email Daily Report** to type a subject line for outgoing email from the Zyxel Device.
Append system name	Select **Append system name** to add the Zyxel Device's system name to the subject.
Append date time	Select **Append date time** to add the Zyxel Device's system date and time to the subject.
Mail Server Port	Enter the same port number here as is on the mail server for mail traffic.
TLS Security	Select this option if the mail server uses Transport Layer Security (TLS) for encrypted communications between the mail server and the Zyxel Device.
STARTTLS	Select this option if the mail server uses SSL or TLS for encrypted communications between the mail server and the Zyxel Device.
Authenticate Server	Select this if the Zyxel Device authenticates the mail server in the TLS handshake.
Mail From	Type the email address from which the outgoing email is delivered. This address is used in replies.
SMTP Authentication	Select this check box if it is necessary to provide a user name and password to the SMTP server.
User Name	This box is effective when you select the **SMTP Authentication** check box. Type the user name to provide to the SMTP server when the log is emailed.
Password	This box is effective when you select the **SMTP Authentication** check box. Type the password to provide to the SMTP server when the log is emailed.
Retype to Confirm	Type the password again to make sure that you have entered is correctly.
Time for sending report	Select the time of day (hours and minutes) when the log is emailed. Use 24-hour notation.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

37.14 Notification > SMS

The Zyxel Device supports Short Message Service (SMS) to send short text messages to mobile phone devices. At the time of writing, the Zyxel Device uses ViaNett as the SMS gateway to help forward SMS messages. You must already have a ViaNett account in order to use the SMS service.

Click **Configuration** > **System** > **Notification** > **SMS** to open the following screen.

Figure 505 Configuration > System > Notification > SMS



The following table describes the labels in this screen.

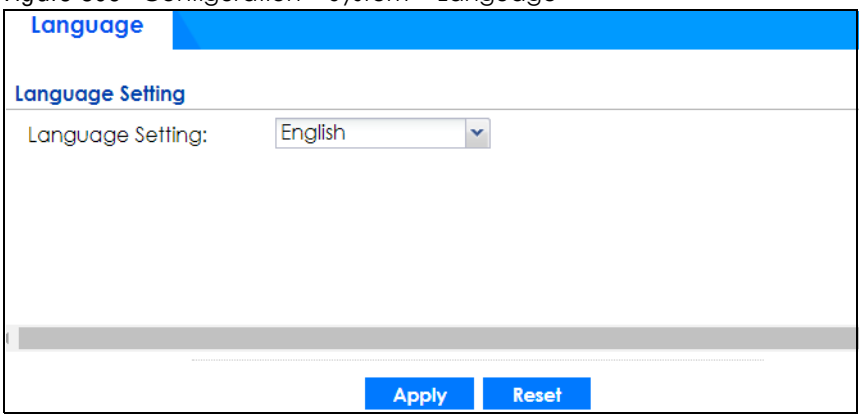
Table 325 Configuration > System > Notification > SMS

LABEL	DESCRIPTION
General Settings	
Enable SMS	Select the check box to turn on the SMS service.
Default country code for phone number	Enter the default country code for the mobile phone number to which you want to send SMS messages.
ViaNett Configuration	
User Name	Enter the user name for your ViaNett account.
Password	Type the Password associated with the user name.
Retype to Confirm	Type your password again for confirmation.
Apply	Click this button to save your changes to the Zyxel Device.
Reset	Click this button to return the screen to its last-saved settings.

37.15 Language Screen

Click **Configuration** > **System** > **Language** to open the following screen. Use this screen to select a display language for the Zyxel Device's Web Configurator screens.

Figure 506 Configuration > System > Language



The following table describes the labels in this screen.

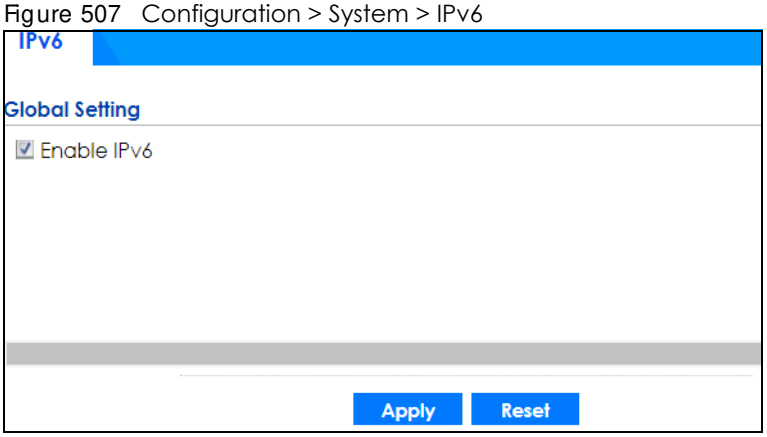
Table 326 Configuration > System > Language

LABEL	DESCRIPTION
Language Setting	Select a display language for the Zyxel Device's Web Configurator screens. You also need to open a new browser session to display the screens in the new language.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

37.16 IPv6 Screen

Click **Configuration** > **System** > **IPv6** to open the following screen. Use this screen to enable IPv6 support for the Zyxel Device's Web Configurator screens.

Figure 507 Configuration > System > IPv6



The following table describes the labels in this screen.

Table 327 Configuration > System > IPv6

LABEL	DESCRIPTION
Enable IPv6	Select this to have the Zyxel Device support IPv6 and make IPv6 settings be available on the screens that the functions support, such as the **Configuration** > **Network** > **Interface** > **Ethernet**, **VLAN**, and **Bridge** screens. The Zyxel Device discards all IPv6 packets if you clear this check box.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

37.17 Zyxel One Network (ZON) Utility

The Zyxel One Network (ZON) utility uses the Zyxel Discovery Protocol (ZDP) for discovering and configuring ZDP-aware Zyxel devices in the same broadcast domain as the computer on which ZON is installed.

The ZON Utility issues requests via ZDP and in response to the query, the Zyxel device responds with basic information including IP address, firmware version, location, system and model name. The information is then displayed in the ZON Utility screen and you can perform tasks like basic configuration of the devices and batch firmware upgrade in it. You can download the ZON Utility at www.zyxel.com and install it on a computer.

37.17.1 Requirements

Before installing the ZON Utility on your computer, please make sure it meets the requirements listed below.

Operating System

At the time of writing, the ZON Utility is compatible with:

- Windows 7 (both 32-bit / 64-bit versions)
- Windows 8 (both 32-bit / 64-bit versions)
- Windows 8.1 (both 32-bit / 64-bit versions)
- Window 10 (both 32-bit / 64-bit versions)

Note: To check for your Windows operating system version, right-click on **My Computer** > **Properties**. You should see this information in the **General** tab.

Hardware

Here are the minimum hardware requirements to use the ZON Utility on your computer.

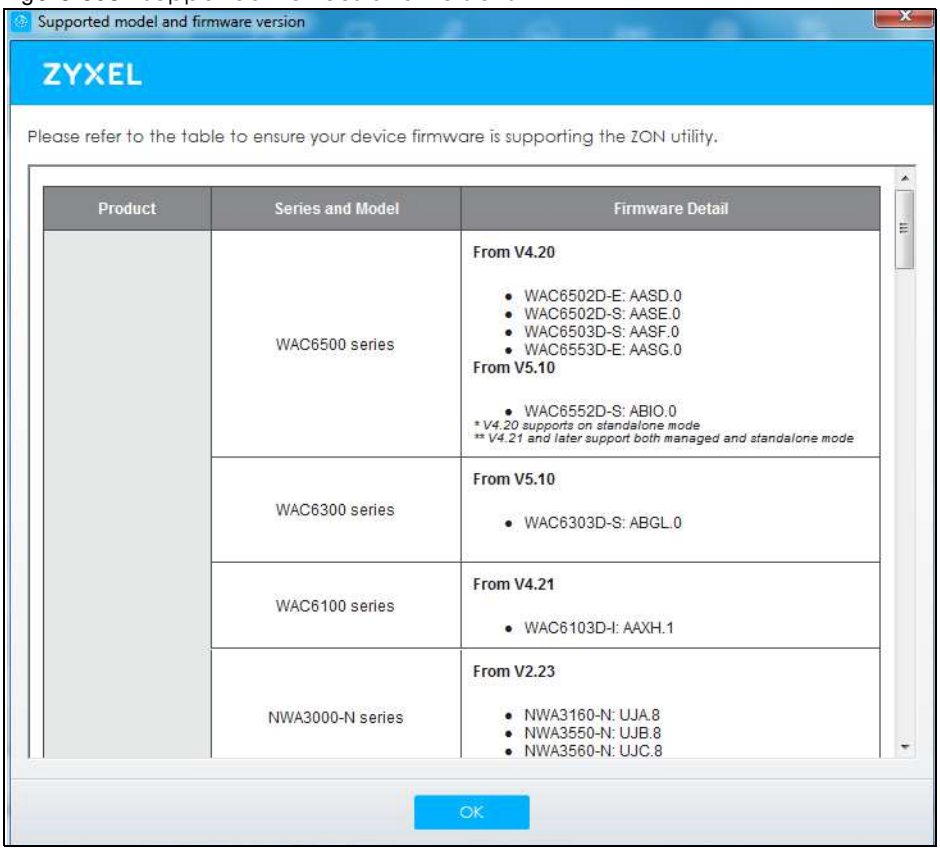
- Core i3 processor
- 2GB RAM
- 100MB free hard disk
- WXGA (Wide XGA 1280x800)

37.17.2 Run the ZON Utility

1 Double-click the ZON Utility to run it.

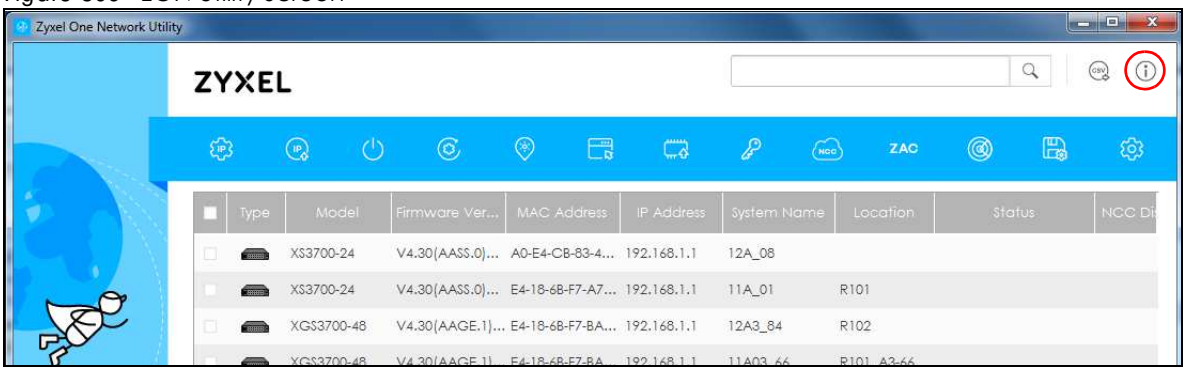
2 The first time you run the ZON Utility you will see if your Zyxel Device and firmware version support the ZON Utility. Click the **OK** button to close this screen.

Figure 508 Supported Devices and Versions



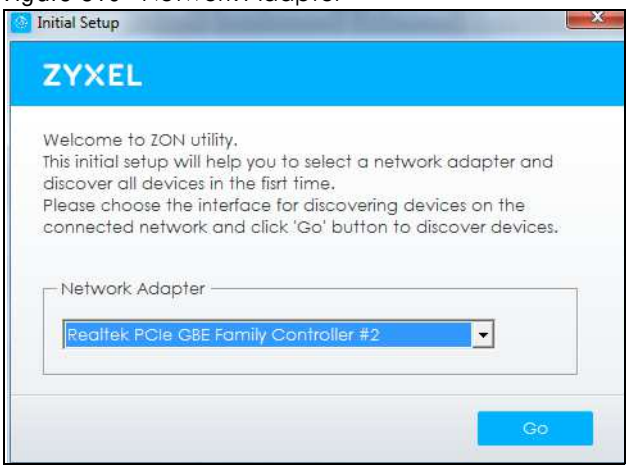
If you want to check the supported models and firmware versions later, you can click the **Show information about ZON** icon in the upper right hand corner of the screen. Then select the **Supported model and firmware version** link. If your device is not listed here, see the device release notes for ZON utility support. The release notes are in the firmware zip file on the Zyxel web site.

Figure 509 ZON Utility Screen



3 Select a network adapter to which your supported devices are connected.

Figure 510 Network Adapter



4 Click the Go button for the ZON Utility to discover all supported devices in your network.

Figure 511 Discovery

5 The ZON Utility screen shows the devices discovered.

Figure 512 ZON Utility Screen

6 Select a device and then use the icons to perform actions. Some functions may not be available for your devices.

The following table describes the icons numbered from left to right in the ZON Utility screen.

Table 328 ZON Utility Icons

ICON	DESCRIPTION
1 IP configuration	Change the selected device's IP address.
2 Renew IP Address	Update a DHCP-assigned dynamic IP address.

Table 328 ZON Utility Icons

ICON	DESCRIPTION
3 Reboot Device	Use this icon to restart the selected device(s). This may be useful when troubleshooting or upgrading new firmware.
4 Reset Configuration to Default	If you forget your password or cannot access the Web Configurator, you can use this icon to reload the factory-default configuration file. This means that you will lose all configurations that you had previously.
5 Locator LED	Use this icon to locate the selected device by causing its Locator LED to blink.
6 Web GUI	Use this to access the selected device web configurator from your browser. You will need a username and password to log in.
7 Firmware Upgrade	Use this icon to upgrade new firmware to selected device(s) of the same model. Make sure you have downloaded the firmware from the Zyxel website to your computer and unzipped it in advance.
8 Change Password	Use this icon to change the admin password of the selected device. You must know the current admin password before changing to a new one.
9 Configure NCC Discovery	You must have Internet access to use this feature. Use this icon to enable or disable the Nebula Control Center (NCC) discovery feature on the selected device. If it's enabled, the selected device will try to connect to the NCC. Once the selected device is connected to and has registered in the NCC, it'll go into the cloud management mode.
10 ZAC	Use this icon to run the Zyxel AP Configurator of the selected AP.
11 Clear and Rescan	Use this icon to clear the list and discover all devices on the connected network again.
12 Save Configuration	Use this icon to save configuration changes to permanent memory on a selected device.
13 Settings	Use this icon to select a network adaptor for the computer on which the ZON utility is installed, and the utility language.

The following table describes the fields in the ZON Utility main screen.

Table 329 ZON Utility Fields

LABEL	DESCRIPTION
Type	This field displays an icon of the kind of device discovered.
Model	This field displays the model name of the discovered device.
Firmware Version	This field displays the firmware version of the discovered device.
MAC Address	This field displays the MAC address of the discovered device.
IP Address	This field displays the IP address of an internal interface on the discovered device that first received an ZDP discovery request from the ZON utility.
System Name	This field displays the system name of the discovered device.
Location	This field displays where the discovered device is.
Status	This field displays whether changes to the discovered device have been done successfully. As the Zyxel Device does not support **IP Configuration**, **Renew IP address** and **Flash Locator LED**, this field displays "Update failed", "Not support Renew IP address" and "Not support Flash Locator LED" respectively.
NCC Discovery	This field displays if the discovered device supports the Nebula Control Center (NCC) discovery feature. If it's enabled, the selected device will try to connect to the NCC. Once the selected device is connected to and has registered in the NCC, it'll go into the cloud management mode.
Serial Number	Enter the admin password of the discovered device to display its serial number.
Hardware Version	This field displays the hardware version of the discovered device.

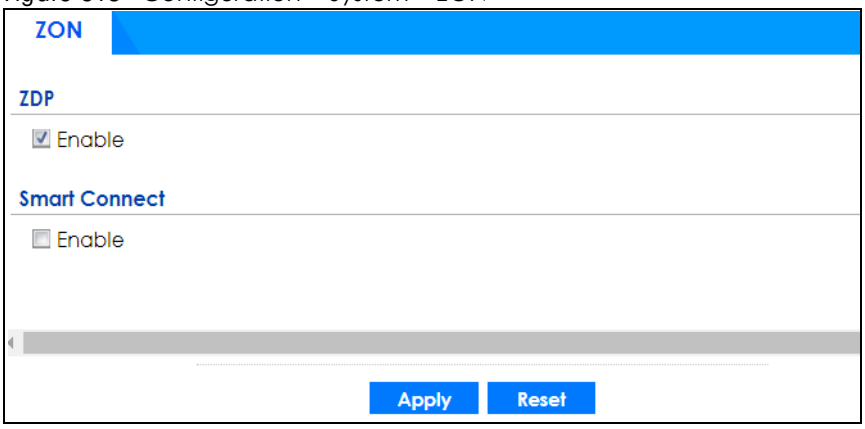
37.17.3 Zyxel One Network (ZON) System Screen

Enable **ZDP** (ZON) and **Smart Connect** (Ethernet Neighbor) in the **System** > **ZON** screen.

See **Monitor** > **System Status** > **Ethernet Neighbor** for information on using **Smart Connect** (Link Layer Discovery Protocol (LLDP)) for discovering and configuring LLDP-aware devices in the same broadcast domain as the Zyxel Device that you're logged into using the web configurator.

The following figure shows the **System** > **ZON** screen.

Figure 513 Configuration > System > ZON



The following table describes the labels in this screen.

Table 330 Configuration > System > ZON

LABEL	DESCRIPTION
ZDP	Zyxel Discovery Protocol (ZDP) is the protocol that the Zyxel One Network (ZON) utility uses for discovering and configuring ZDP-aware Zyxel devices in the same broadcast domain as the computer on which ZON is installed.
Enable	Select to activate ZDP discovery on the Zyxel Device.
Smart Connect	**Smart Connect** uses Link Layer Discovery Protocol (LLDP) for discovering and configuring LLDP-aware devices in the same broadcast domain as the Zyxel Device that you're logged into using the web configurator.
Enable	Select to activate LLDP discovery on the Zyxel Device. See also **Monitor** > **System Status** > **Ethernet Discovery**.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

CHAPTER 38
Log and Report

38.1 Overview

Use these screens to configure daily reporting and log settings.

38.1.1 What You Can Do In this Chapter

- Use the **Email Daily Report** screen (Section 38.2 on page 749) to configure where and how to send daily reports and what reports to send.
- Use the **Log Setting** screens (Section 38.3 on page 751) to specify settings for recording log messages and alerts, e-mailing them, storing them on a connected USB storage device, and sending them to remote syslog servers.

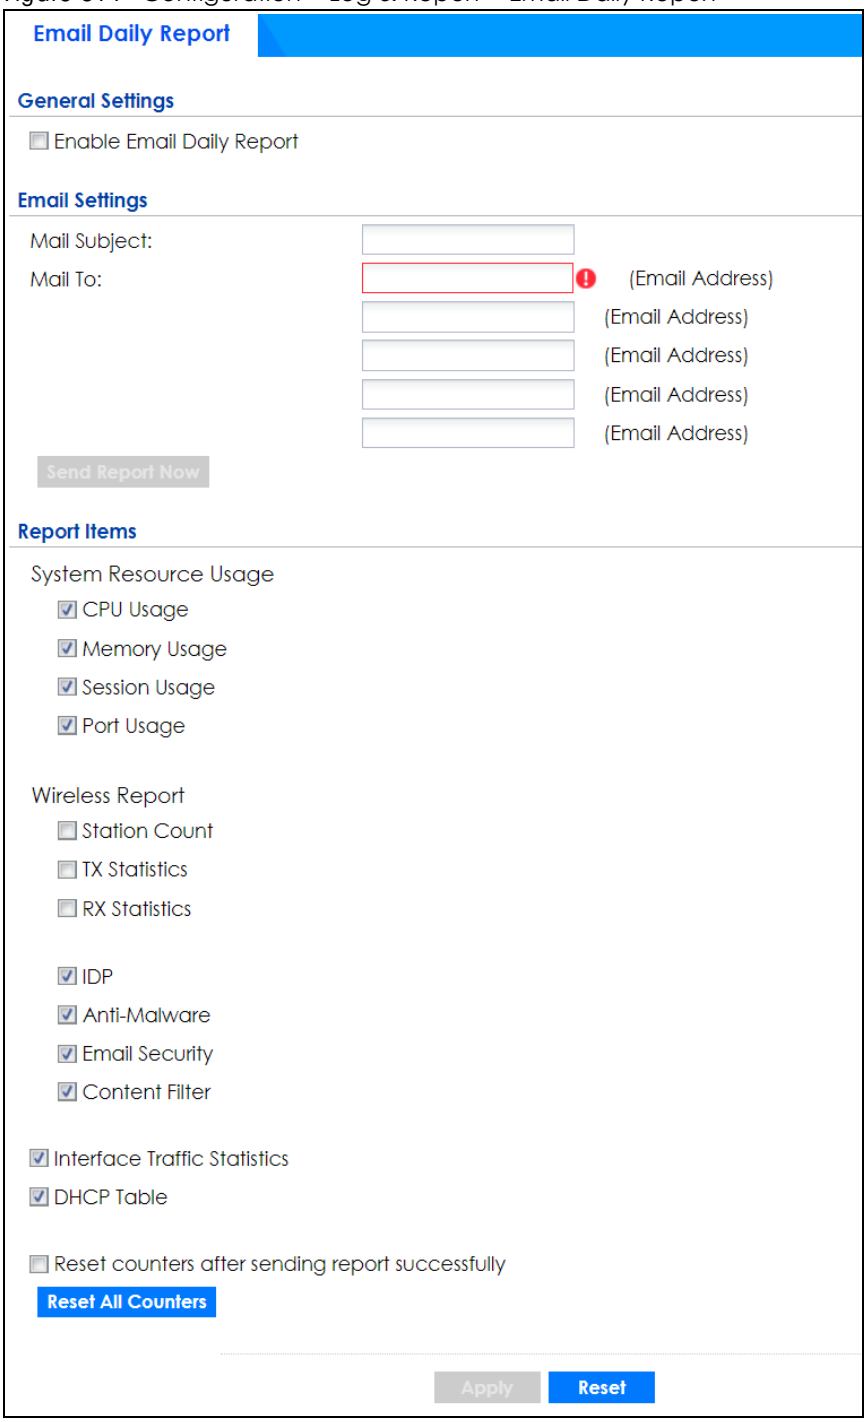
38.2 Email Daily Report

Use the **Email Daily Report** screen to start or stop data collection and view various statistics about traffic passing through your Zyxel Device. See **Configuration** > **System** > **Notification** to set up the mail server.

Note: Data collection may decrease the Zyxel Device's traffic throughput rate.

Click **Configuration** > **Log & Report** > **Email Daily Report** to display the following screen. Configure this screen to have the Zyxel Device email you system statistics every day.

Figure 514 Configuration > Log & Report > Email Daily Report



The following table describes the labels in this screen.

Table 331 Configuration > Log & Report > Email Daily Report

LABEL	DESCRIPTION
Enable Email Daily Report	Select this to send reports by email every day.
Mail Subject	Type the subject line for outgoing email from the Zyxel Device.

Table 331 Configuration > Log & Report > Email Daily Report (continued)

LABEL	DESCRIPTION
Mail To	Type the email address (or addresses) to which the outgoing email is delivered.
Send Report Now	Click this button to have the Zyxel Device send the daily email report immediately.
Report Items	Select the information to include in the report. Types of information include System Resource Usage, Wireless Report, Interface Traffic Statistics and DHCP Table. Select Reset counters after sending report successfully if you only want to see statistics for a 24 hour period.
Reset All Counters	Click this to discard all report data and start all of the counters over at zero.
Apply	Click Apply to save your changes back to the Zyxel Device.
Reset	Click Reset to return the screen to its last-saved settings.

38.3 Log Setting Screens

The Log Setting screens control log messages and alerts. A log message stores the information for viewing or regular emailing later, and an alert is emailed immediately. Usually, alerts are used for events that require more serious attention, such as system errors and attacks.

The Zyxel Device provides a system log and supports email profiles and remote syslog servers. View the system log in the MONITOR > Log screen. Use the email profiles to mail log messages to the specific destinations. You can also have the Zyxel Device store system logs on a connected USB storage device. The other four logs are stored on specified syslog servers.

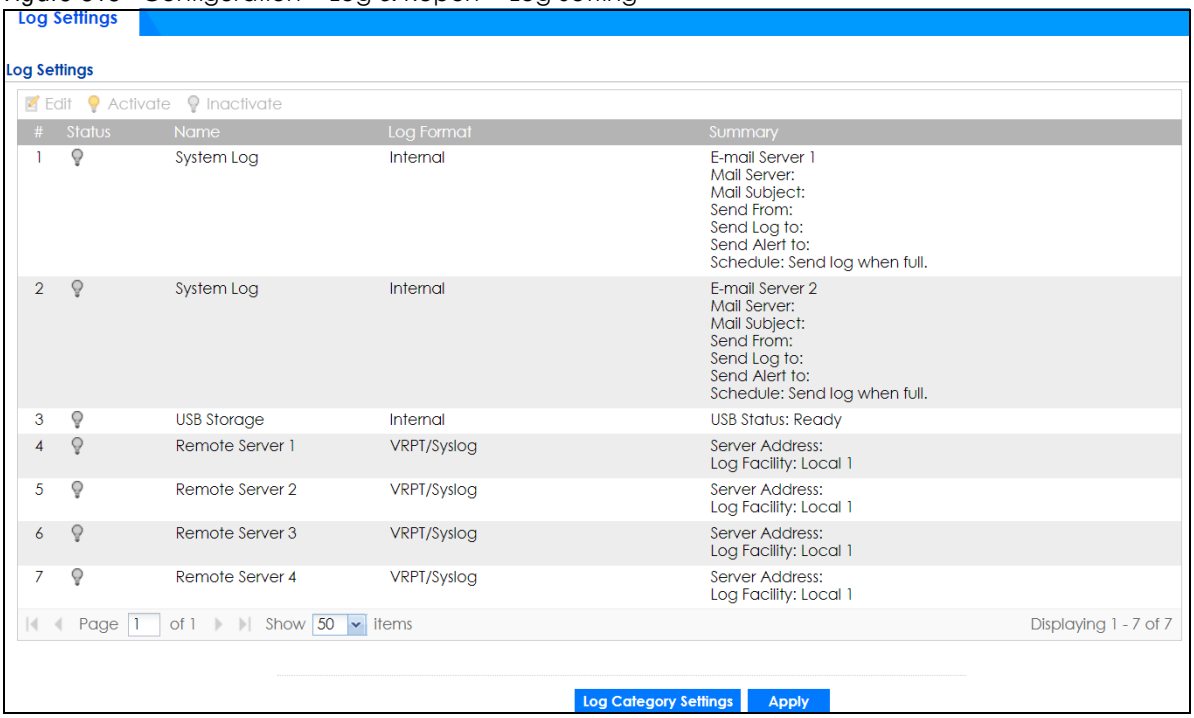
The Log Setting screens control what information the Zyxel Device saves in each log. You can also specify which log messages to email for the system log, and where and how often to email them. These screens also set for which events to generate alerts and where to email the alerts.

The first Log Setting screen provides a settings summary. Use the Edit screens to configure settings such as log categories, email addresses, and server names for any log. Use the Log Category Settings screen to edit what information is included in the system log, USB storage, email profiles, and remote servers.

38.3.1 Log Setting Summary

To access this screen, click Configuration > Log & Report > Log Setting.

Figure 515 Configuration > Log & Report > Log Setting



The following table describes the labels in this screen.

Table 332 Configuration > Log & Report > Log Setting

LABEL	DESCRIPTION
Edit	Double-click an entry or select it and click **Edit** to open a screen where you can modify it.
Activate	To turn on an entry, select it and click **Activate**.
Inactivate	To turn off an entry, select it and click **Inactivate**.
#	This field is a sequential value, and it is not associated with a specific log.
Status	The activate (light bulb) icon is lit when the entry is active and dimmed when the entry is inactive.
Name	This field displays the type of log setting entry (system log, logs stored on a USB storage device connected to the Zyxel Device, or one of the remote servers).
Log Format	This field displays the format of the log. **Internal** - system log; you can view the log on the **View Log** tab. **VRPT/Syslog** - Zyxel's Vantage Report, syslog-compatible format. **CEF/Syslog** - Common Event Format, syslog-compatible format.
Summary	This field is a summary of the settings for each log. Please see Section 38.3.2 on page 752 for more information.
Log Category Settings	Click this button to open the **Log Category Settings Edit** screen.
Apply	Click this button to save your changes (activate and deactivate logs) and make them take effect.

38.3.2 Edit System Log Settings

The **Log Settings Edit** screen controls the detailed settings for each log in the system log (which includes the email profiles). Go to the **Log Settings Summary** screen (see Section 38.3.1 on page 751), and click the system log **Edit** icon.

Figure 516 Configuration > Log & Report > Log Setting > Edit (System Log - E-mail Servers)

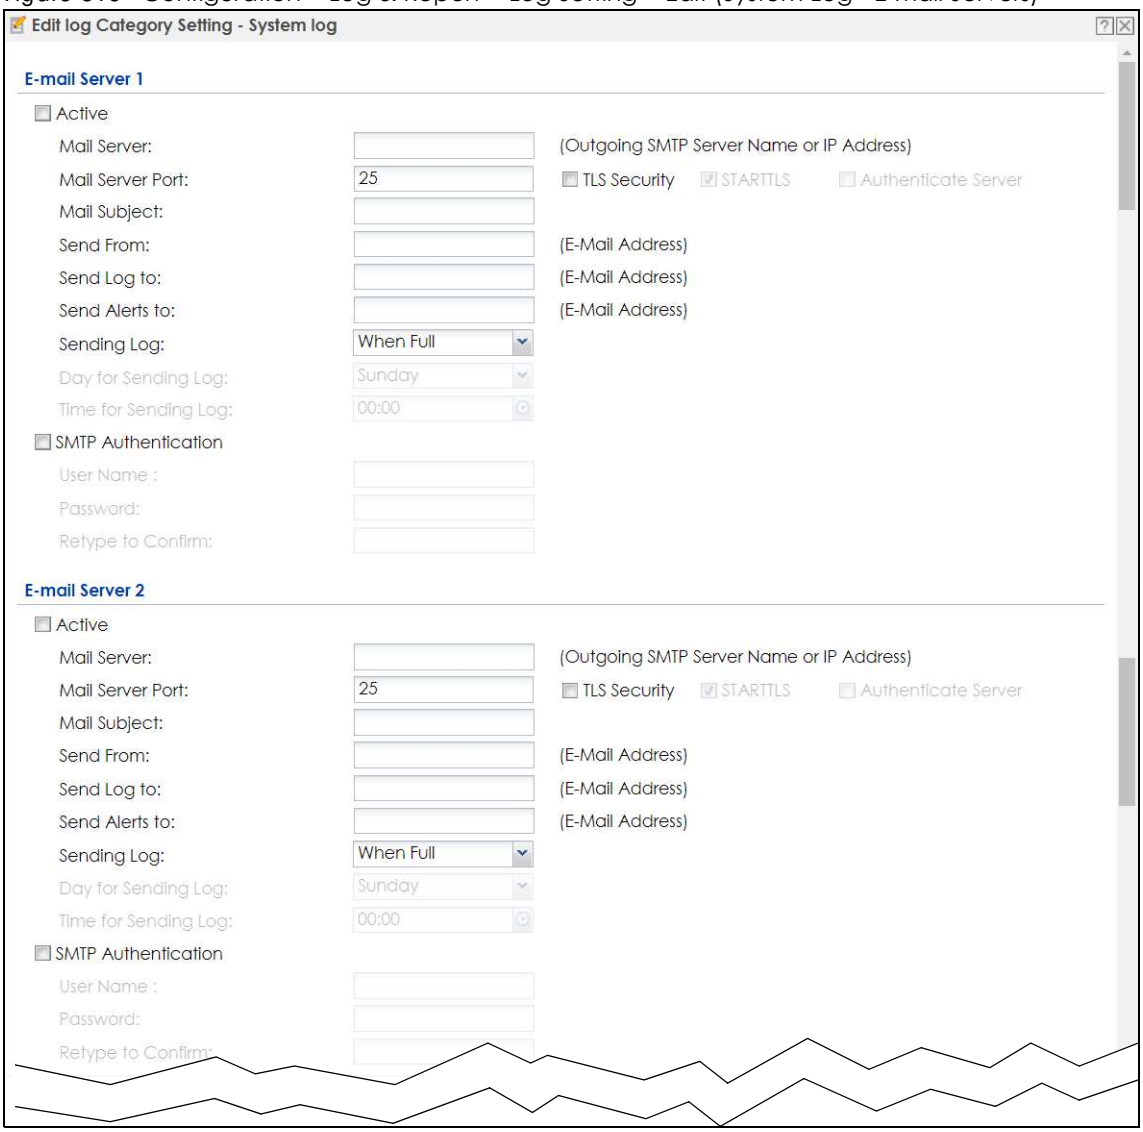


Figure 517 Configuration > Log & Report > Log Setting > Edit (System Log)

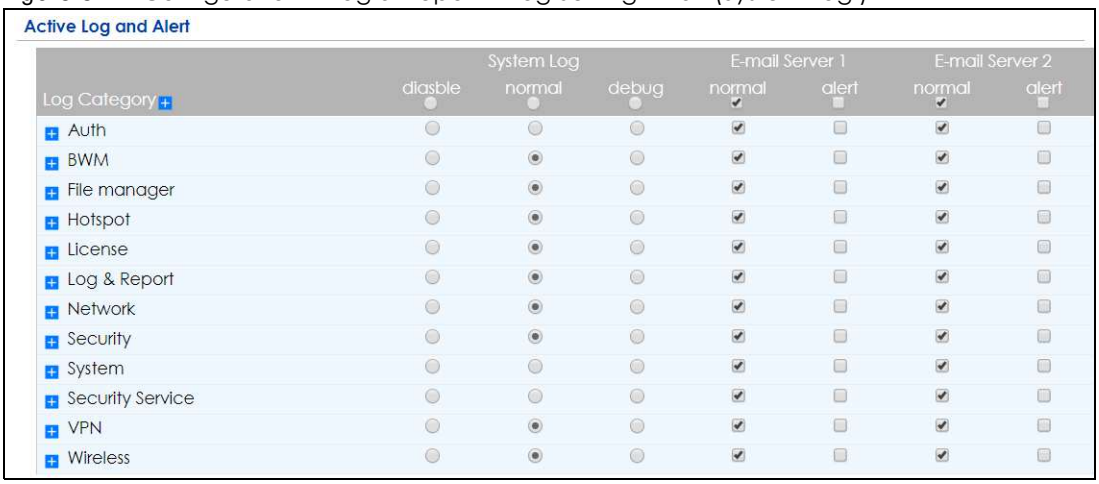

Figure 518 Configuration > Log & Report > Log Setting > Edit (System Log - AP)

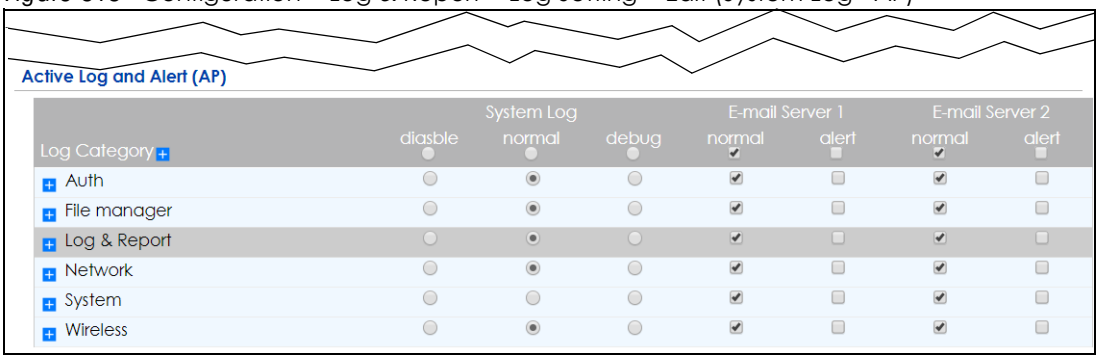


The following table describes the labels in this screen.

Table 333 Configuration > Log & Report > Log Setting > Edit (System Log)

LABEL	DESCRIPTION
E-Mail Server 1/2	
Active	Select this to send log messages and alerts according to the information in this section. You specify what kinds of log messages are included in log information and what kinds of log messages are included in alerts in the **Active Log and Alert** section.
Mail Server	Type the name or IP address of the outgoing SMTP server.
Mail Server Port	Enter the same port number here as is on the mail server for mail traffic.
Mail Subject	Type the subject line for the outgoing email.
Send From	Type the email address from which the outgoing email is delivered. This address is used in replies.
Send Log To	Type the email address to which the outgoing email is delivered.
Send Alerts To	Type the email address to which alerts are delivered.
Sending Log	Select how often log information is emailed. Choices are: **When Full**, **Hourly and When Full**, **Daily and When Full**, and **Weekly and When Full**.
Day for Sending Log	This field is available if the log is emailed weekly. Select the day of the week the log is emailed.
Time for Sending Log	This field is available if the log is emailed weekly or daily. Select the time of day (hours and minutes) when the log is emailed. Use 24-hour notation.
SMTP Authentication	Select this check box if it is necessary to provide a user name and password to the SMTP server.
User Name	This box is effective when you select the **SMTP Authentication** check box. Type the user name to provide to the SMTP server when the log is emailed.
Password	This box is effective when you select the **SMTP Authentication** check box. Type the password to provide to the SMTP server when the log is emailed.
Retype to Confirm	Type the password again to make sure that you have entered is correctly.
Active Log and Alert	
System Log	Use the **System Log** drop-down list to change the log settings for all of the log categories. **disable all logs** (red X) - do not log any information for any category for the system log or email any logs to email server 1 or 2. **enable normal logs** (green check mark) - create log messages and alerts for all categories for the system log. If email server 1 or 2 also has normal logs enabled, the Zyxel Device will email logs to them. **enable normal logs and debug logs** (yellow check mark) - create log messages, alerts, and debugging information for all categories. The Zyxel Device does not email debugging information, even if this setting is selected.

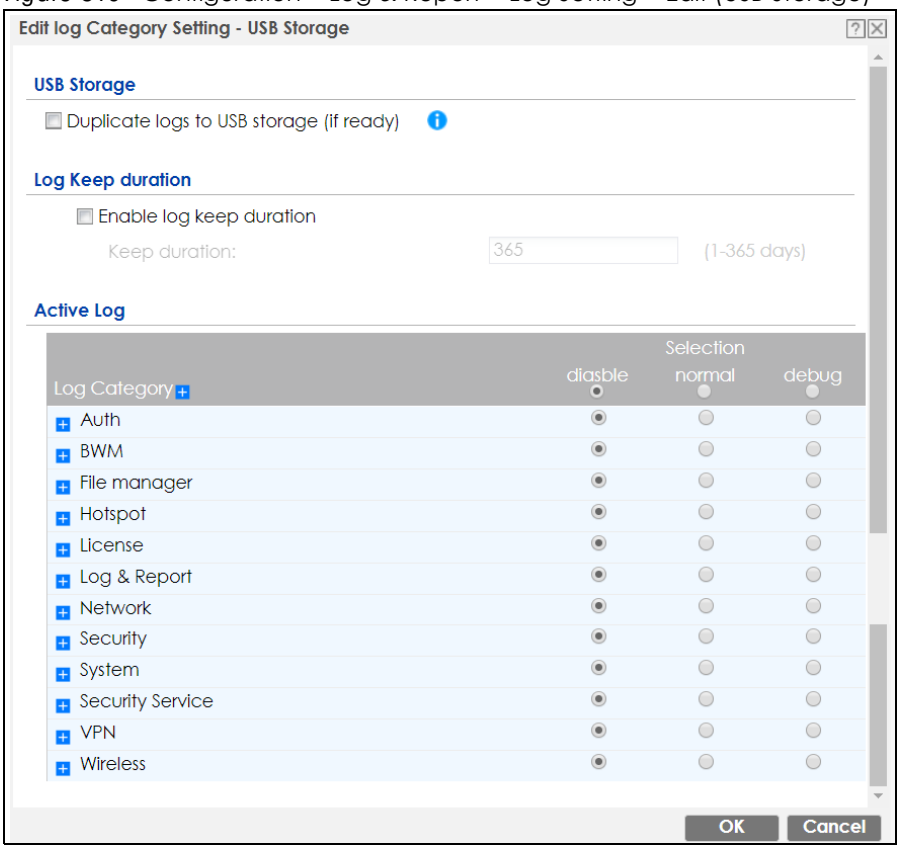
Table 333 Configuration > Log & Report > Log Setting > Edit (System Log) (continued)

LABEL	DESCRIPTION
E-mail Server 1	Use the **E-Mail Server 1** drop-down list to change the settings for emailing logs to email server 1 for all log categories. Using the **System Log** drop-down list to disable all logs overrides your email server 1 settings. **enable normal logs** (green check mark) - email log messages for all categories to email server 1. **enable alert logs** (red exclamation point) - email alerts for all categories to email server 1.
E-mail Server 2	Use the **E-Mail Server 2** drop-down list to change the settings for emailing logs to email server 2 for all log categories. Using the **System Log** drop-down list to disable all logs overrides your email server 2 settings. **enable normal logs** (green check mark) - email log messages for all categories to email server 2. **enable alert logs** (red exclamation point) - email alerts for all categories to email server 2.
Log Category	This field displays each category of messages. It is the same value used in the **Display** and **Category** fields in the **View Log** tab. The **Default** category includes debugging messages generated by open source software.
System log	Select which events you want to log by **Log Category**. There are three choices: **disable all logs** (red X) - do not log any information from this category **enable normal logs** (green check mark) - create log messages and alerts from this category **enable normal logs and debug logs** (yellow check mark) - create log messages, alerts, and debugging information from this category; the Zyxel Device does not email debugging information, however, even if this setting is selected.
E-mail Server 1	Select whether each category of events should be included in the log messages when it is emailed (green check mark) and/or in alerts (red exclamation point) for the email settings specified in **E-Mail Server 1**. The Zyxel Device does not email debugging information, even if it is recorded in the **System log**.
E-mail Server 2	Select whether each category of events should be included in log messages when it is emailed (green check mark) and/or in alerts (red exclamation point) for the email settings specified in **E-Mail Server 2**. The Zyxel Device does not email debugging information, even if it is recorded in the **System log**.
Log Consolidation	
Active	Select this to activate log consolidation. Log consolidation aggregates multiple log messages that arrive within the specified **Log Consolidation Interval**. In the **View Log** tab, the text "[count=*x*]", where *x* is the number of original log messages, is appended at the end of the **Message** field, when multiple log messages were aggregated.
Log Consolidation Interval	Type how often, in seconds, to consolidate log information. If the same log message appears multiple times, it is aggregated into one log message with the text "[count=*x*]", where *x* is the number of original log messages, appended at the end of the **Message** field.
OK	Click this to save your changes and return to the previous screen.
Cancel	Click this to return to the previous screen without saving your changes.

38.3.3 Edit Log on USB Storage Setting

The **Edit Log on USB Storage Setting** screen controls the detailed settings for saving logs to a connected USB storage device. Go to the **Log Setting Summary** screen (see Section 38.3.1 on page 751), and click the USB storage **Edit** icon.

Figure 519 Configuration > Log & Report > Log Setting > Edit (USB Storage)



The following table describes the labels in this screen.

Table 334 Configuration > Log & Report > Log Setting > Edit (USB Storage)

LABEL	DESCRIPTION
Duplicate logs to USB storage (if ready)	Select this to have the Zyxel Device save a copy of its system logs to a connected USB storage device. Use the **Active Log** section to specify what kinds of messages to include.
Enable log keep duration	Select this checkbox to enter a value in the **Keep Duration** field.
Keep Duration	Enter a number of days that the Zyxel Device keeps this log.
Active Log	
Selection	Use the **Selection** drop-down list to change the log settings for all of the log categories. **disable all logs** (red X) - do not send the remote server logs for any log category. **enable normal logs** (green check mark) - send the remote server log messages and alerts for all log categories. **enable normal logs and debug logs** (yellow check mark) - send the remote server log messages, alerts, and debugging information for all log categories.

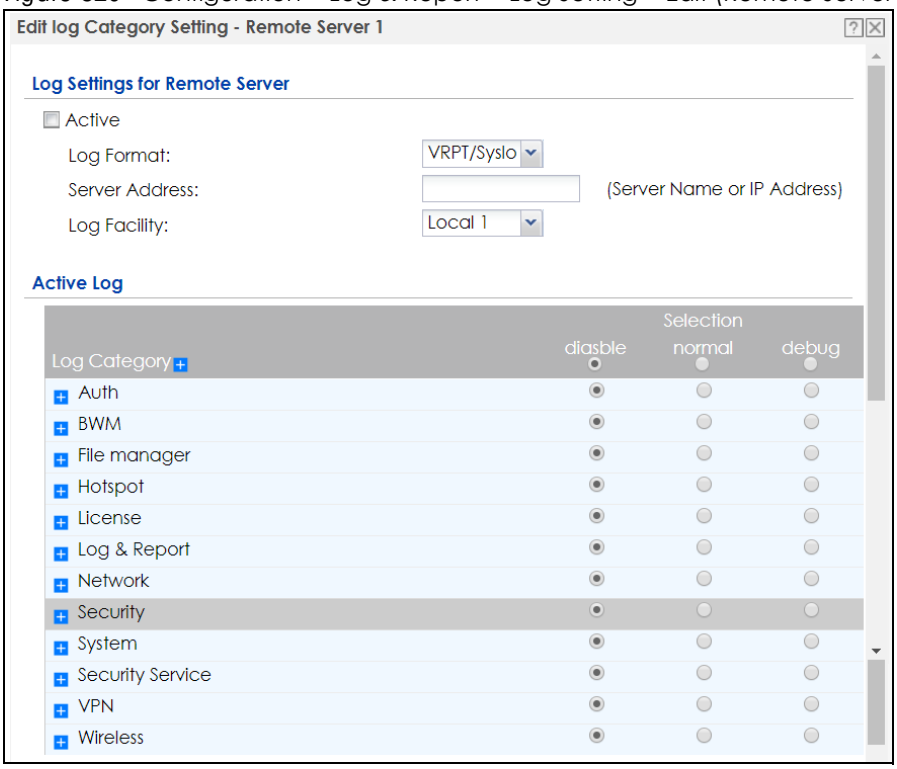
Table 334 Configuration > Log & Report > Log Setting > Edit (USB Storage) (continued)

LABEL	DESCRIPTION
Log Category	This field displays each category of messages. The **Default** category includes debugging messages generated by open source software.
Selection	Select what information you want to log from each **Log Category** (except **All Logs**; see below). Choices are: **disable all logs** (red X) - do not log any information from this category **enable normal logs** (green check mark) - log regular information and alerts from this category **enable normal logs and debug logs** (yellow check mark) - log regular information, alerts, and debugging information from this category
OK	Click this to save your changes and return to the previous screen.
Cancel	Click this to return to the previous screen without saving your changes.

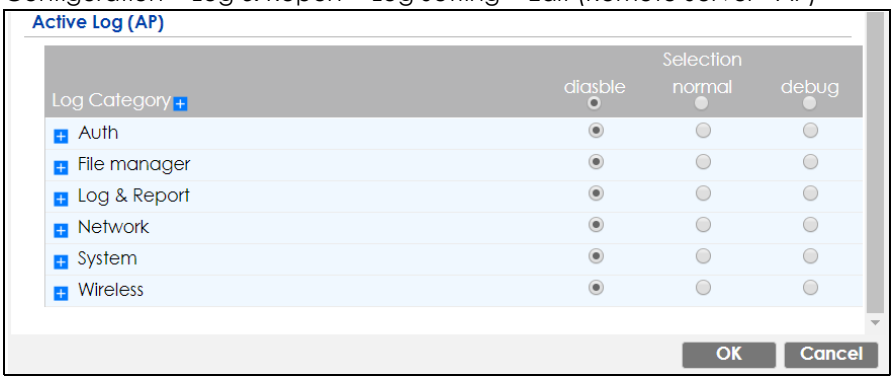
38.3.4 Edit Remote Server Log Settings

The **Log Settings Edit** screen controls the detailed settings for each log in the remote server (syslog). Go to the **Log Settings Summary** screen (see Section 38.3.1 on page 751), and click a remote server **Edit** icon.

Figure 520 Configuration > Log & Report > Log Setting > Edit (Remote Server - AC)



Configuration > Log & Report > Log Setting > Edit (Remote Server - AP)



The following table describes the labels in this screen.

Table 335 Configuration > Log & Report > Log Setting > Edit (Remote Server)

LABEL	DESCRIPTION
Log Settings for Remote Server	
Active	Select this check box to send log information according to the information in this section. You specify what kinds of messages are included in log information in the **Active Log** section.
Log Format	This field displays the format of the log information. It is read-only. **VRPT/Syslog** - Zyxel's Vantage Report, syslog-compatible format. **CEF/Syslog** - Common Event Format, syslog-compatible format.
Server Address	Type the server name or the IP address of the syslog server to which to send log information.
Log Facility	Select a log facility. The log facility allows you to log the messages to different files in the syslog server. Please see the documentation for your syslog program for more information.
Active Log	
Selection	Use the **Selection** drop-down list to change the log settings for all of the log categories. **disable all logs** (red X) - do not send the remote server logs for any log category. **enable normal logs** (green check mark) - send the remote server log messages and alerts for all log categories. **enable normal logs and debug logs** (yellow check mark) - send the remote server log messages, alerts, and debugging information for all log categories.
Log Category	This field displays each category of messages. It is the same value used in the **Display** and **Category** fields in the **View Log** tab. The **Default** category includes debugging messages generated by open source software.
Selection	Select what information you want to log from each **Log Category** (except **All Logs**; see below). Choices are: **disable all logs** (red X) - do not log any information from this category **enable normal logs** (green check mark) - log regular information and alerts from this category **enable normal logs and debug logs** (yellow check mark) - log regular information, alerts, and debugging information from this category
OK	Click this to save your changes and return to the previous screen.
Cancel	Click this to return to the previous screen without saving your changes.

38.3.5 Log Category Settings Screen

The **Log Category Settings** screen allows you to view and to edit what information is included in the system log, USB storage, email profiles, and remote servers at the same time. It does not let you change other log settings (for example, where and how often log information is emailed or remote server names). To access this screen, go to the **Log Settings Summary** screen (see Section 38.3.1 on page 751), and click the **Log Category Settings** button.

Figure 521 Log Category Settings AC

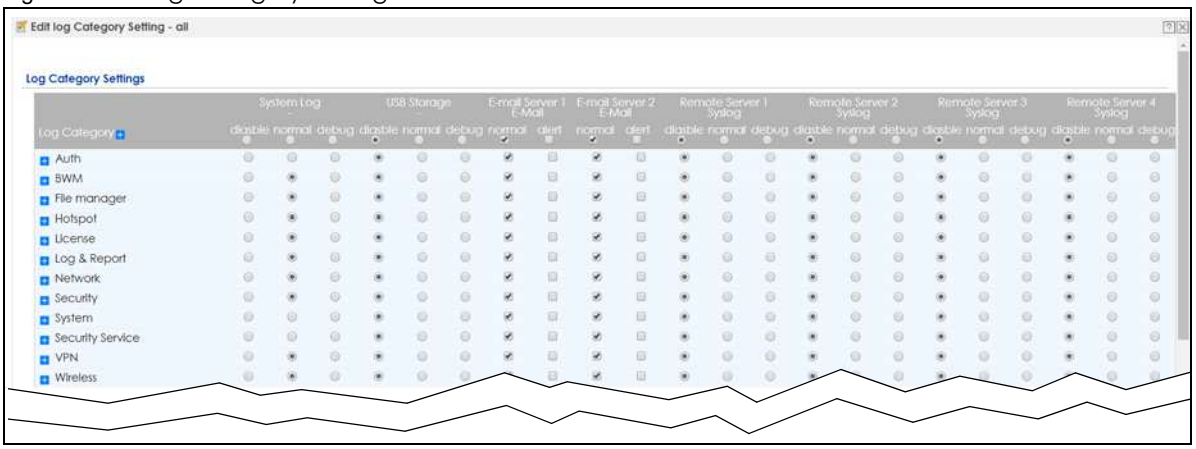


Figure 522 Log Category Settings AP

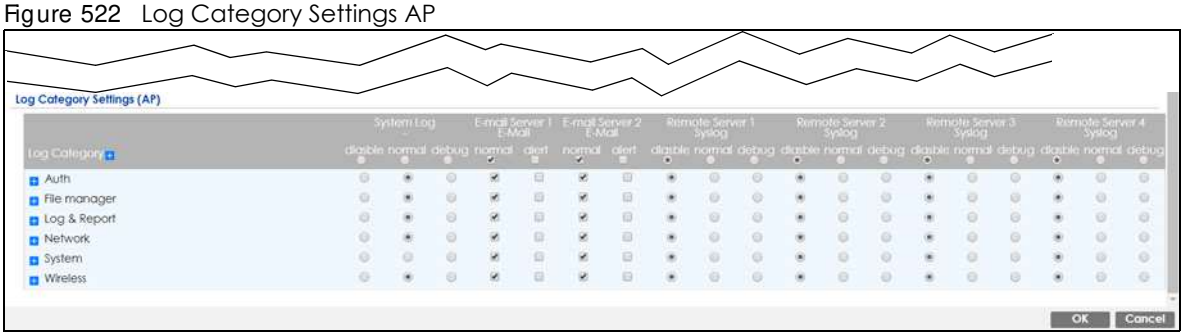


This screen provides a different view and a different way of indicating which messages are included in each log and each alert. Please see Section 38.3.2 on page 752, where this process is discussed. (The **Default** category includes debugging messages generated by open source software.)

The following table describes the fields in this screen.

Table 336 Configuration > Log & Report > Log Setting > Log Category Settings

LABEL	DESCRIPTION
System Log	Use the **System Log** drop-down list to change the log settings for all of the log categories. **disable all logs** (red X) - do not log any information for any category for the system log or email any logs to email server 1 or 2. **enable normal logs** (green check mark) - create log messages and alerts for all categories for the system log. If email server 1 or 2 also has normal logs enabled, the Zyxel Device will email logs to them. **enable normal logs and debug logs** (yellow check mark) - create log messages, alerts, and debugging information for all categories. The Zyxel Device does not email debugging information, even if this setting is selected.
USB Storage	Use the **USB Storage** drop-down list to change the log settings for saving logs to a connected USB storage device. **disable all logs** (red X) - do not log any information for any category to a connected USB storage device. **enable normal logs** (green check mark) - create log messages and alerts for all categories and save them to a connected USB storage device. **enable normal logs and debug logs** (yellow check mark) - create log messages, alerts, and debugging information for all categories and save them to a connected USB storage device.
E-mail Server 1 E-mail	Use the **E-Mail Server 1** drop-down list to change the settings for emailing logs to email server 1 for all log categories. Using the **System Log** drop-down list to disable all logs overrides your email server 1 settings. **enable normal logs** (green check mark) - email log messages for all categories to email server 1. **enable alert logs** (red exclamation point) - email alerts for all categories to email server 1.
E-mail Server 2 E-mail	Use the **E-Mail Server 2** drop-down list to change the settings for emailing logs to email server 2 for all log categories. Using the **System Log** drop-down list to disable all logs overrides your email server 2 settings. **enable normal logs** (green check mark) - email log messages for all categories to email server 2. **enable alert logs** (red exclamation point) - email alerts for all categories to email server 2.
Remote Server 1~4 Syslog	For each remote server, use the **Selection** drop-down list to change the log settings for all of the log categories. **disable all logs** (red X) - do not send the remote server logs for any log category. **enable normal logs** (green check mark) - send the remote server log messages and alerts for all log categories. **enable normal logs and debug logs** (yellow check mark) - send the remote server log messages, alerts, and debugging information for all log categories.
Log Category	This field displays each category of messages. It is the same value used in the **Display** and **Category** fields in the **View Log** tab. The **Default** category includes debugging messages generated by open source software.
System Log	Select which events you want to log by **Log Category**. There are three choices: **disable all logs** (red X) - do not log any information from this category **enable normal logs** (green check mark) - create log messages and alerts from this category **enable normal logs and debug logs** (yellow check mark) - create log messages, alerts, and debugging information from this category; the Zyxel Device does not email debugging information, however, even if this setting is selected.

Table 336 Configuration > Log & Report > Log Setting > Log Category Settings (continued)

LABEL	DESCRIPTION
USB Storage	Select which event log categories to save to a connected USB storage device. There are three choices: **disable all logs** (red X) - do not log any information from this category **enable normal logs** (green check mark) - save log messages and alerts from this category **enable normal logs and debug logs** (yellow check mark) - save log messages, alerts, and debugging information from this category.
E-mail Server 1 E-mail	Select whether each category of events should be included in the log messages when it is emailed (green check mark) and/or in alerts (red exclamation point) for the email settings specified in **E-Mail Server 1**. The Zyxel Device does not email debugging information, even if it is recorded in the **System log**.
E-mail Server 2 E-mail	Select whether each category of events should be included in log messages when it is emailed (green check mark) and/or in alerts (red exclamation point) for the email settings specified in **E-Mail Server 2**. The Zyxel Device does not email debugging information, even if it is recorded in the **System log**.
Remote Server 1~4 Syslog	For each remote server, select what information you want to log from each **Log Category** (except **All Logs**; see below). Choices are: **disable all logs** (red X) - do not log any information from this category **enable normal logs** (green check mark) - log regular information and alerts from this category **enable normal logs and debug logs** (yellow check mark) - log regular information, alerts, and debugging information from this category
OK	Click this to save your changes and return to the previous screen.
Cancel	Click this to return to the previous screen without saving your changes.

CHAPTER 39
File Manager

39.1 Overview

Configuration files define the Zyxel Device's settings. Shell scripts are files of commands that you can store on the Zyxel Device and run when you need them. You can apply a configuration file or run a shell script without the Zyxel Device restarting. You can store multiple configuration files and shell script files on the Zyxel Device. You can edit configuration files or shell scripts in a text editor and upload them to the Zyxel Device. Configuration files use a .conf extension and shell scripts use a .zysh extension.

39.1.1 What You Can Do in this Chapter

- Use the **Configuration File** screen (see Section 39.2 on page 764) to store and name configuration files. You can also download configuration files from the Zyxel Device to your computer and upload configuration files from your computer to the Zyxel Device.
- Use the **Firmware Package** screen (see Section 39.3 on page 769) to check your current firmware version and upload firmware to the Zyxel Device.
- Use the **Shell Script** screen (see Section 39.4 on page 774) to store, name, download, upload and run shell script files.

39.1.2 What you Need to Know

Configuration Files and Shell Scripts

When you apply a configuration file, the Zyxel Device uses the factory default settings for any features that the configuration file does not include. When you run a shell script, the Zyxel Device only applies the commands that it contains. Other settings do not change.

These files have the same syntax, which is also identical to the way you run CLI commands manually. An example is shown below.

Figure 523 Configuration File / Shell Script: Example

```
# enter configuration mode
configure terminal
# change administrator password
username admin password 4321 user-type admin
# configure ge3
interface ge3
ip address 172.23.37.240 255.255.255.0
ip gateway 172.23.37.254 metric 1
exit
# create address objects for remote management / to-ZyWALL firewall rules
# use the address group in case we want to open up remote management later
address-object TW_SUBNET 172.23.37.0/24
object-group address TW_TEAM
address-object TW_SUBNET
exit
# enable Telnet access (not enabled by default, unlike other services)
ip telnet server
# open WAN-to-ZyWALL firewall for TW_TEAM for remote management
firewall WAN ZyWALL insert 4
sourceip TW_TEAM
service TELNET
action allow
exit
write
```

While configuration files and shell scripts have the same syntax, the Zyxel Device applies configuration files differently than it runs shell scripts. This is explained below.

Table 337 Configuration Files and Shell Scripts in the Zyxel Device

Configuration Files (.conf)	Shell Scripts (.zysh)
• Resets to default configuration. • Goes into CLI **Configuration** mode. • Runs the commands in the configuration file.	• Goes into CLI **Privilege** mode. • Runs the commands in the shell script.

You have to run the example in Figure 523 on page 763 as a shell script because the first command is run in **Privilege** mode. If you remove the first command, you have to run the example as a configuration file because the rest of the commands are executed in **Configuration** mode.

Comments in Configuration Files or Shell Scripts

In a configuration file or shell script, use "#" or "!" as the first character of a command line to have the Zyxel Device treat the line as a comment.

Your configuration files or shell scripts can use "exit" or a command line consisting of a single "!" to have the Zyxel Device exit sub command mode.

Note: "exit" or "!" must follow sub commands if it is to make the Zyxel Device exit sub command mode.

Line 3 in the following example exits sub command mode.

```
interface ge1
ip address dhcp
!
```

Lines 1 and 3 in the following example are comments and line 4 exits sub command mode.

```
!
interface ge1
# this interface is a DHCP client
!
```

Lines 1 and 2 are comments. Line 5 exits sub command mode.

```
! this is from Joe
# on 2008/04/05
interface ge1
ip address dhcp
!
```

Errors in Configuration Files or Shell Scripts

When you apply a configuration file or run a shell script, the Zyxel Device processes the file line-by-line. The Zyxel Device checks the first line and applies the line if no errors are detected. Then it continues with the next line. If the Zyxel Device finds an error, it stops applying the configuration file or shell script and generates a log.

You can change the way a configuration file or shell script is applied. Include `setenv stop-on-error off` in the configuration file or shell script. The Zyxel Device ignores any errors in the configuration file or shell script and applies all of the valid commands. The Zyxel Device still generates a log for any errors.

39.2 The Configuration File Screen

Click **Maintenance** > **File Manager** > **Configuration File** to open the **Configuration File** screen. Use the **Configuration File** screen to store, run, and name configuration files. You can also download configuration files from the Zyxel Device to your computer and upload configuration files from your computer to the Zyxel Device.

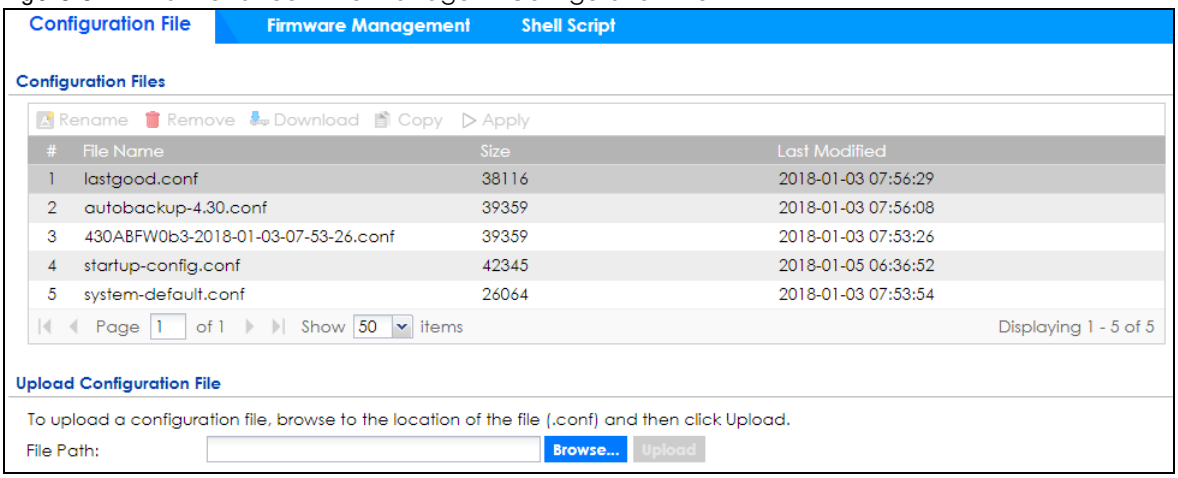
Once your Zyxel Device is configured and functioning properly, it is highly recommended that you back up your configuration file before making further configuration changes. The backup configuration file will be useful in case you need to return to your previous settings.

Filenames beginning with autoback are automatic configuration files created when new firmware is uploaded. backup-yyyy-mm-dd-hh-mm-ss.conf is the name of the automatic backup when a secure policy is added or changed. Select a configuration file, then click **Apply** to apply the file to the Zyxel Device .

Configuration File Flow at Restart

- If there is not a **startup-config.conf** when you restart the Zyxel Device (whether through a management interface or by physically turning the power off and back on), the Zyxel Device uses the **system-default.conf** configuration file with the Zyxel Device's default settings.
- If there is a **startup-config.conf**, the Zyxel Device checks it for errors and applies it. If there are no errors, the Zyxel Device uses it and copies it to the **lastgood.conf** configuration file as a back up file. If there is an error, the Zyxel Device generates a log and copies the **startup-config.conf** configuration file to the **startup-config-bad.conf** configuration file and tries the existing **lastgood.conf** configuration file. If there isn't a **lastgood.conf** configuration file or it also has an error, the Zyxel Device applies the **system-default.conf** configuration file.
- You can change the way the **startup-config.conf** file is applied. Include the `setenv-startup stop-on-error off` command. The Zyxel Device ignores any errors in the **startup-config.conf** file and applies all of the valid commands. The Zyxel Device still generates a log for any errors.

Figure 524 Maintenance > File Manager > Configuration File



Do not turn off the Zyxel Device while configuration file upload is in progress.

The following table describes the labels in this screen.

Table 338 Maintenance > File Manager > Configuration File

LABEL	DESCRIPTION
Rename	Use this button to change the label of a configuration file on the Zyxel Device. You can only rename manually saved configuration files. You cannot rename the **lastgood.conf**, **system-default.conf** and **startup-config.conf** files. You cannot rename a configuration file to the name of another configuration file in the Zyxel Device. Click a configuration file's row to select it and click **Rename** to open the **Rename File** screen. Figure 525 Maintenance > File Manager > Configuration File > Rename  Specify the new name for the configuration file. Use up to 25 characters (including a-zA-Z0-9;'~!@#$%^&()_+[]{}',.=-). Click **OK** to save the duplicate or click **Cancel** to close the screen without saving a duplicate of the configuration file.
Remove	Click a configuration file's row to select it and click **Remove** to delete it from the Zyxel Device. You can only delete manually saved configuration files. You cannot delete the **system-default.conf**, **startup-config.conf** and **lastgood.conf** files. A pop-up window asks you to confirm that you want to delete the configuration file. Click **OK** to delete the configuration file or click **Cancel** to close the screen without deleting the configuration file.
Download	Click a configuration file's row to select it and click **Download** to save the configuration to your computer.
Copy	Use this button to save a duplicate of a configuration file on the Zyxel Device. Click a configuration file's row to select it and click **Copy** to open the **Copy File** screen. Figure 526 Maintenance > File Manager > Configuration File > Copy  Specify a name for the duplicate configuration file. Use up to 25 characters (including a-zA-Z0-9;'~!@#$%^&()_+[]{}',.=-). Click **OK** to save the duplicate or click **Cancel** to close the screen without saving a duplicate of the configuration file.

Table 338 Maintenance > File Manager > Configuration File (continued)

LABEL	DESCRIPTION
Apply	Use this button to have the Zyxel Device use a specific configuration file. Click a configuration file's row to select it and click **Apply** to have the Zyxel Device use that configuration file. The Zyxel Device does not have to restart in order to use a different configuration file, although you will need to wait for a few minutes while the system reconfigures. The following screen gives you options for what the Zyxel Device is to do if it encounters an error in the configuration file. Figure 527 Maintenance > File Manager > Configuration File > Apply  **Immediately stop applying the configuration file** - this is not recommended because it would leave the rest of the configuration blank. If the interfaces were not configured before the first error, the console port may be the only way to access the device. **Immediately stop applying the configuration file and roll back to the previous configuration** - this gets the Zyxel Device started with a fully valid configuration file as quickly as possible. **Ignore errors and finish applying the configuration file** - this applies the valid parts of the configuration file and generates error logs for all of the configuration file's errors. This lets the Zyxel Device apply most of your configuration and you can refer to the logs for what to fix. **Ignore errors and finish applying the configuration file and then roll back to the previous configuration** - this applies the valid parts of the configuration file, generates error logs for all of the configuration file's errors, and starts the Zyxel Device with a fully valid configuration file. Click **OK** to have the Zyxel Device start applying the configuration file or click **Cancel** to close the screen
#	This column displays the number for each configuration file entry. This field is a sequential value, and it is not associated with a specific address. The total number of configuration files that you can save depends on the sizes of the configuration files and the available flash storage space.
File Name	This column displays the label that identifies a configuration file. You cannot delete the following configuration files or change their file names. The **system-default.conf** file contains the Zyxel Device's default settings. Select this file and click **Apply** to reset all of the Zyxel Device settings to the factory defaults. This configuration file is included when you upload a firmware package. The **startup-config.conf** file is the configuration file that the Zyxel Device is currently using. If you make and save changes during your management session, the changes are applied to this configuration file. The Zyxel Device applies configuration changes made in the Web Configurator to the configuration file when you click **Apply** or **OK**. It applies configuration changes made via commands when you use the `write` command. The **lastgood.conf** is the most recently used (valid) configuration file that was saved when the device last restarted. If you upload and apply a configuration file with an error, you can apply lastgood.conf to return to a valid configuration.

Table 338 Maintenance > File Manager > Configuration File (continued)

LABEL	DESCRIPTION
Size	This column displays the size (in KB) of a configuration file.
Last Modified	This column displays the date and time that the individual configuration files were last changed or saved.
Upload Configuration File	The bottom part of the screen allows you to upload a new or previously saved configuration file from your computer to your Zyxel Device You cannot upload a configuration file named **system-default.conf** or **lastgood.conf**. If you upload **startup-config.conf**, it will replace the current configuration and immediately apply the new settings.
File Path	Type in the location of the file you want to upload in this field or click **Browse ...** to find it.
Browse...	Click **Browse...** to find the .conf file you want to upload. The configuration file must use a ".conf" filename extension. You will receive an error message if you try to upload a fie of a different format. Remember that you must decompress compressed (.zip) files before you can upload them.
Upload	Click **Upload** to begin the upload process. This process may take up to two minutes.

39.3 Firmware Management

Use the **Firmware Management** screen to check your current firmware version and upload firmware to the Zyxel Device. You can upload firmware to be the **Running** firmware or **Standby** firmware.

Note: The Web Configurator is the recommended method for uploading firmware. You only need to use the command line interface if you need to recover the firmware. See the CLI Reference Guide for how to determine if you need to recover the firmware and how to recover it.

Find the firmware file in a folder that (usually) uses the system model name with the model code and a bin extension. For example, a firmware for ZyWALL VPN100 is "430ABFV0b2s1.bin".

The Zyxel Device's firmware package cannot go through the Zyxel Device when you enable the anti-malware **Destroy compressed files that could not be decompressed** option. The Zyxel Device classifies the firmware package as not being able to be decompressed and deletes it. You can upload the firmware package to the Zyxel Device with the option enabled, so you only need to clear the **Destroy compressed files that could not be decompressed** option while you download the firmware package. See Section 28.2 on page 526 for more on the anti-malware **Destroy compressed files that could not be decompressed** option.

The firmware update can take up to five minutes. Do not turn off or reset the Zyxel Device while the firmware update is in progress!

If your Zyxel Device has two firmware images installed, and one fails to boot (kernel crash, kernel panic, out-of-memory etc.), then the Zyxel Device will automatically use the (good) backup image to boot.

39.3.1 Cloud Helper

Cloud Helper lets you know if there is a later firmware available on the Cloud Helper server and lets you download it if there is.

Note: Go to myZyxel, create an account and register your Zyxel Device first. Then you will be able to see links to and get notifications on new firmware available.

At the time of writing, the Firmware Upgrade license providing Cloud Helper new firmware notifications is free when you register your Zyxel Device. The license does not expire if you have firmware version 4.32 patch 1 and later.

The following table explains the **Upgrade** icons in the web configurator.

Table 339 Cloud Helper Firmware Icons

Cloud Helper New	A later firmware is available on the Cloud Helper Server. Click this icon to display a **What's New** pop-up screen. You need a Firmware Upgrade license to upgrade the firmware. If you do not have a license, **Upgrade Now** is grayed out. If you have a license, click **Upgrade Now** to directly upgrade firmware to the standby partition and have the Zyxel Device reboot automatically so that the new standby firmware becomes the running firmware. The previous running firmware becomes the standby firmware. If you haven't registered the Zyxel Device, a message will appear and remind you to register it. Also, **Upgrade Now** is grayed out. 
Table 339 Cloud Helper Firmware Icons

Cloud Helper Downloading	Cloud firmware is being downloaded from the Cloud Helper Server. If you select another partition or the local firmware upgrade icon, you will see the following warning message.  When firmware is downloading, you can pause, resume, stop or retry the firmware download. Local Firmware	Use this if you have already downloaded the latest firmware from the Zyxel website to your computer and unzipped it. Click the icon and then browse to the location of the unzipped files.  If you upload the latest firmware to the running partition, the Zyxel Device will reboot automatically when it finishes uploading. If you upload the latest firmware to the standby partition, a message will appear to ask if you want to reboot the Zyxel Device.

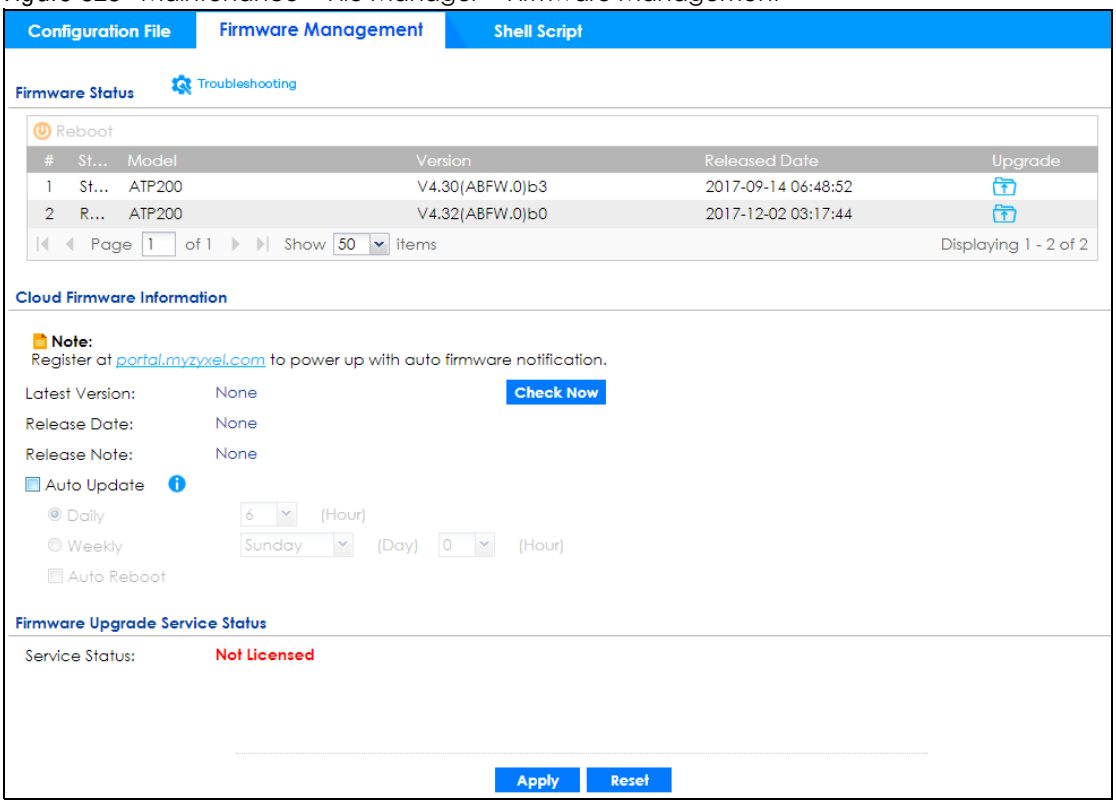
39.3.2 The Firmware Management Screen

Click **Maintenance** > **File Manager** > **Firmware Management** to open the **Firmware Management** screen.

Figure 528 Maintenance > File Manager > Firmware Management



The following table describes the labels in this screen.

Table 340 Maintenance > File Manager > Firmware Management

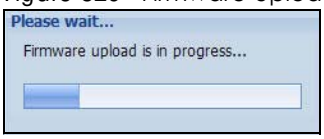
LABEL	DESCRIPTION
Firmware Status	
Reboot	Click the **Reboot** icon to restart the Zyxel Device. If you applied changes in the Web configurator, these were saved automatically and do not change when you reboot. If you made changes in the CLI, however, you have to use the `write` command to save the configuration before you reboot. Otherwise, the changes are lost when you reboot. If you want the **Standby** firmware to be the **Running** firmware, then select the **Standby** firmware row and click **Reboot**. Wait a few minutes until the login screen appears. If the login screen does not appear, clear your browser cache and refresh the screen or type the IP address of the Zyxel Device in your Web browser again. You can also use the CLI command `reboot` to restart the Zyxel Device.
#	This displays the system space (partition) index number where the firmware is located. The firmware can be either **Standby** or **Running**; only one firmware can be running at any one time.
Status	This indicates whether the firmware is **Running**, or not running but already uploaded to the Zyxel Device and is on **Standby**. It displays **N/A** if there is no firmware uploaded to that system space.
Model	This is the model name of the device which the firmware is running on.
Version	This is the firmware version and the date created.
Released Date	This is the date that the version of the firmware was created.

Table 340 Maintenance > File Manager > Firmware Management (continued)

LABEL	DESCRIPTION
Upgrade	A cloud helper icon displays if there is a later firmware on the Cloud Server than the firmware in the partition. Click the cloud helper icon to download a later firmware from the Cloud Helper Server. Use the local firmware icon if you have already downloaded the latest firmware from the Zyxel website to your computer and unzipped it.
Cloud Firmware Information	You must register your Zyxel Device at myZyxel first to use cloud firmware.
Latest Version	This displays the latest firmware version at the Cloud Helper Server. Click **Check Now** to see if there is a later firmware at the Cloud Server.
Release Date	This displays the date the latest firmware version was made available.
Release Note	The release note contains details of latest firmware version such as new features and bug fixes.
Auto Update	Select this check box to have the Zyxel Device automatically check for and download new firmware to the standby partition at the time and day specified. You should select a time when your network is not busy for minimal interruption.
Daily	Select this option to have the Zyxel Device check for new firmware every day at the specified time. The time format is the 24 hour clock, so '0' means midnight for example.
Weekly	Select this option to have the Zyxel Device check for new firmware once a week on the day and at the time specified.
Auto Reboot	Select this to have the newly downloaded firmware in the standby partition become the running firmware after the Zyxel Device automatically restarts.
Firmware Upgrade Service Status	
Service Status	This field displays whether the firmware license service is activated at myZyxel (**Activated**) or not (**Not Activated**).

After you see the **Firmware Upload in Process** screen, wait a few minutes before logging into the Zyxel Device again.

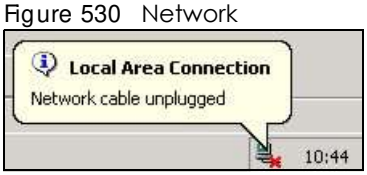
Figure 529 Firmware Upload In Process



Note: The Zyxel Device automatically reboots after a successful upload.

The Zyxel Device automatically restarts causing a temporary network disconnect. In some operating systems, you may see the following icon on your desktop.

Figure 530 Network



After five minutes, log in again and check your new firmware version in the **Dashboard** screen.

If the upload was not successful, the following message appears in the status bar at the bottom of the screen.

Figure 531 Firmware Upload Error

39.3.3 Firmware Upgrade via USB Stick

In addition to uploading firmware via the web configurator or console port (see the CLI Reference Guide), you can also upload firmware directly from a USB stick connected to the Zyxel Device.

1 Create a folder on the USB stick called '/[ProductName_dir]/firmware'. For example, if your Zyxel Device is USG110, then create a '/usg110_dir/firmware/' folder on the stick.

2 Put one firmware 'bin' file into the firmware folder. Make sure the firmware ID and version number are correct for your model (the firmware ID is in brackets after the firmware version number - for USG100 it is AAPH).

Note: Do not put more than one firmware 'bin' file into the firmware folder.

The firmware version in the USB stick must be different to the currently running firmware. If the firmware on the USB stick is older, then the Zyxel Device will 'upgrade' to the older version. It is recommended that the firmware on the USB stick be the latest firmware version.

3 Insert the USB stick into the Zyxel Device. The firmware uploads to the standby system space.

4 The SYS LED blinks when the Zyxel Device automatically reboots making the upgraded firmware in standby become the running firmware.

Note: If the startup-config.conf configuration file has problems and you are upgrading to 4.25 or later firmware, then the Zyxel Device will revert (failover) to the previously running firmware.

If the startup-config.conf configuration file has problems and you are upgrading to earlier than 4.25 firmware, then the Zyxel Device uses the new earlier firmware, but generates a log and tries the existing lastgood.conf configuration file. If there isn't a lastgood.conf configuration file or it also has an error, the Zyxel Device applies the system-default.conf configuration file.

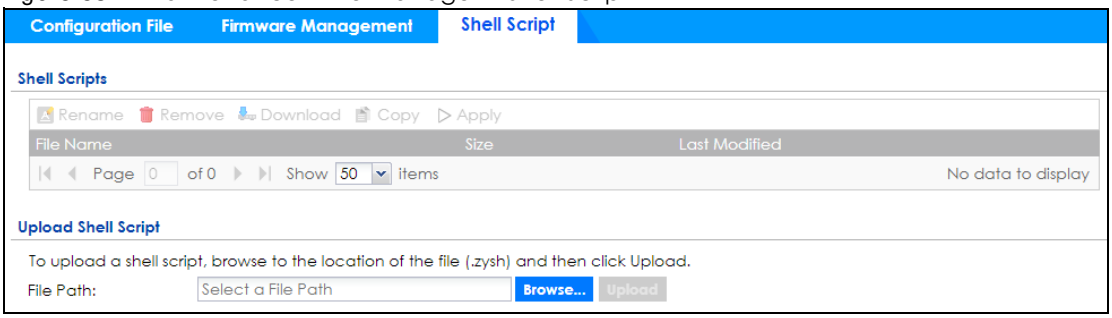
39.4 The Shell Script Screen

Use shell script files to have the Zyxel Device execute commands that you specify. Use a text editor to create the shell script files. They must use a ".zysh" filename extension.

Click Maintenance > File Manager > Shell Script to open the Shell Script screen. Use the Shell Script screen to store, name, download, upload and run shell script files. You can store multiple shell script files on the Zyxel Device at the same time.

Note: You should include `write` commands in your scripts. If you do not use the `write` command, the changes will be lost when the Zyxel Device restarts. You could use multiple `write` commands in a long script.

Figure 532 Maintenance > File Manager > Shell Script



Each field is described in the following table.

Table 341 Maintenance > File Manager > Shell Script

LABEL	DESCRIPTION
Rename	Use this button to change the label of a shell script file on the Zyxel Device. You cannot rename a shell script to the name of another shell script in the Zyxel Device. Click a shell script's row to select it and click **Rename** to open the **Rename File** screen. Figure 533 Maintenance > File Manager > Shell Script > Rename  Specify the new name for the shell script file. Use up to 25 characters (including a-zA-Z0-9;'~!@#$%^&()_+[]{}',.=-). Click **OK** to save the duplicate or click **Cancel** to close the screen without saving a duplicate of the configuration file.
Remove	Click a shell script file's row to select it and click **Remove** to delete the shell script file from the Zyxel Device. A pop-up window asks you to confirm that you want to delete the shell script file. Click **OK** to delete the shell script file or click **Cancel** to close the screen without deleting the shell script file.
Download	Click a shell script file's row to select it and click **Download** to save the configuration to your computer.

Table 341 Maintenance > File Manager > Shell Script (continued)

LABEL	DESCRIPTION
Copy	Use this button to save a duplicate of a shell script file on the Zyxel Device. Click a shell script file's row to select it and click **Copy** to open the **Copy File** screen. Figure 534 Maintenance > File Manager > Shell Script > Copy  Specify a name for the duplicate file. Use up to 25 characters (including a-zA-Z0-9;'~!@#$%^&()_+[]{}',.=-). Click **OK** to save the duplicate or click **Cancel** to close the screen without saving a duplicate of the configuration file.
Apply	Use this button to have the Zyxel Device use a specific shell script file. Click a shell script file's row to select it and click **Apply** to have the Zyxel Device use that shell script file. You may need to wait awhile for the Zyxel Device to finish applying the commands.
File Name	This column displays the label that identifies a shell script file.
Size	This column displays the size (in KB) of a shell script file.
Last Modified	This column displays the date and time that the individual shell script files were last changed or saved.
Upload Shell Script	The bottom part of the screen allows you to upload a new or previously saved shell script file from your computer to your Zyxel Device.
File Path	Type in the location of the file you want to upload in this field or click **Browse** ... to find it.
Browse...	Click **Browse**... to find the .zysh file you want to upload.
Upload	Click **Upload** to begin the upload process. This process may take up to several minutes.

CHAPTER 40 Diagnostics

40.1 Overview

Use the diagnostics screens for troubleshooting.

40.1.1 What You Can Do in this Chapter

- Use the **Diagnostics** screens (see Section 40.2 on page 777) to generate a file containing the Zyxel Device's configuration and diagnostic information if you need to provide it to customer support during troubleshooting.
- Use the **Packet Capture** screens (see Section 40.3 on page 781) to capture packets going through the Zyxel Device.
- Use the **CPU / Memory Status** screens (see Section 40.4 on page 784) to view the CPU and memory performance of various applications on the Zyxel Device.
- Use the **System Logs** screen (see Section 40.5 on page 786) to see system logs stored on a connected USB storage device on the Zyxel Device.
- Use the **Remote Assistance** screens (see Section 40.6 on page 786) to configure and schedule external access to the Zyxel Device for troubleshooting.
- Use the **Network Tool** screen (see Section 40.7 on page 788) to ping an IP address or trace the route packets take to a host.
- Use the **Routing Traces** screens (see Section 40.8 on page 790) to configure traceroute to identify where packets are dropped for troubleshooting.
- Use the **Wireless Frame Capture** screens (see Section 40.9 on page 791) to capture network traffic going through the AP interfaces connected to your Zyxel Device.

40.2 The Diagnostics Screens

The **Diagnostics** screens provide an easy way for you to generate a file containing the Zyxel Device's configuration and diagnostic information. You may need to send this file to customer support for troubleshooting.

Click **Maintenance** > **Diagnostics** to open the **Diagnostics** screens.

40.2.1 The Diagnostics Collect Screen

When you click **Collect Now**, a series of commands are run to display information about the Zyxel Device. This is an example of a default script with interface diagnostic commands.

```
debug interface ifconfig
debug interface show event_sink
debug interface show interface_obj
debug switch table
debug switch port_groupping
show ping-check status
debug system netstat interface
show interface all
show port status
```

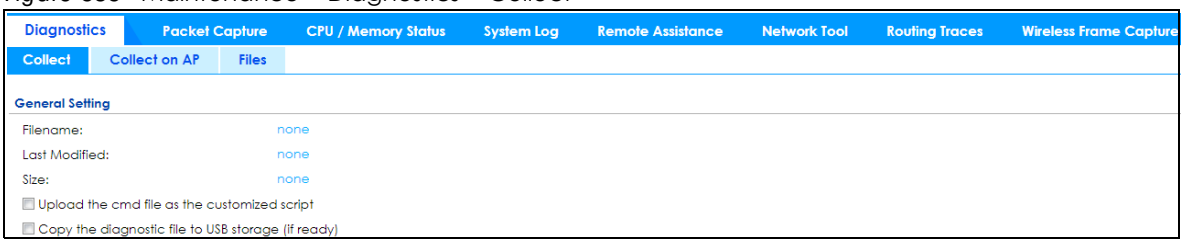
You can also create your own script to display information about the Zyxel Device. This is an example of a customized **Diagnostics** > **Collect** script.

```
show service-register status all
show myzyxel-service get-cloud-timezone
show cloud-helper firmware
show cloud-helper remind
```

Note: A script created in **File Manager** > **Shell Script** is used to run commands on the Zyxel Device. A script created in **Diagnostics** > **Collect** is used to display information about the Zyxel Device only. Both use a ".zysh" filename extension with a file name of up to 25 characters (including a-z, A-Z, 0-9 and ;'~!@#$%^&()_+[]{}',.=-). Spaces are allowed.

Click **Maintenance** > **Diagnostics** > **Collect** to open the **Collect** screen.

Figure 535 Maintenance > Diagnostics > Collect



The following table describes the labels in this screen.

Table 342 Maintenance > Diagnostics > Collect

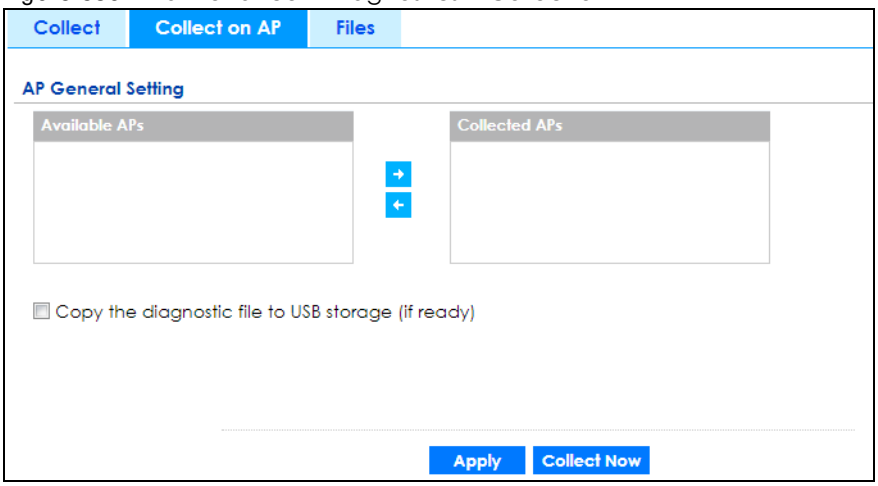
LABEL	DESCRIPTION
General Setting	
Filename	This is the name of the most recently created diagnostic file.
Last modified	This is the date and time that the last diagnostic file was created. The format is yyyy-mm-dd hh:mm:ss.
Size	This is the size of the most recently created diagnostic file.
Upload the cmd file as the customized script	Select this to upload a customized shell script to display information about the Zyxel Device. Use a text editor to create the shell script files. They must use a ".zysh" filename extension. Specify the new name for the shell script file. Use up to 25 characters (including a-z, A-Z, 0-9 and ;'~!@#$%^&()_+[]{}',.=-). Spaces are allowed.

Table 342 Maintenance > Diagnostics > Collect (continued)

LABEL	DESCRIPTION
Copy the diagnostic file to USB storage (if ready)	Select this to have the Zyxel Device create an extra copy of the diagnostic file to a connected USB storage device.
Select **Upload the cmd file as the customized script** to display the following fields.	
Shell Scripts	
Filename	This displays the names of the customized shell script you created.
Upload Shell Script	
File Path	Click **Browse** to find the location of the file you want to upload in this field. Click **Upload** to begin the upload process. This process may take a few minutes.
Apply	Click **Apply** to save your changes.
Collect Now	Click this to have the Zyxel Device create a new diagnostic file. Wait while information is collected. 
40.2.2 The Diagnostics Collect on AP Screen

This screen provides an easy way for you to generate a file containing the selected managed AP's configuration and diagnostic information. You may need to generate this file and send it to customer support during troubleshooting. Click **Maintenance** > **Diagnostics** > **Collect on AP** to open the **Collect on AP** screen.

Figure 536 Maintenance > Diagnostics > Collect on AP



The following table describes the labels in this screen.

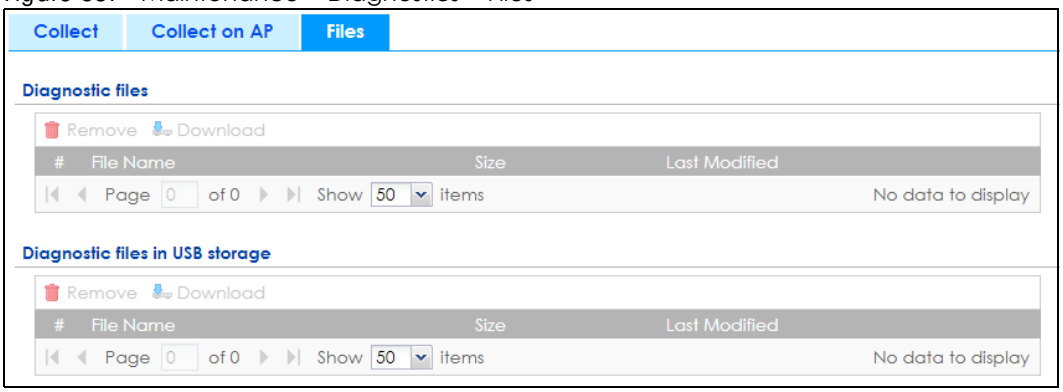
Table 343 Maintenance > Diagnostics > Collect on AP

LABEL	DESCRIPTION
AP General Setting	
Available APs	This text box lists the managed APs that are connected and available. Select the managed APs that you want the Zyxel Device to generate a diagnostic file containing their configuration, and click the right arrow button to add them.
Collected APs	This text box lists the managed APs that you allow the Zyxel Device to generate a diagnostic file containing their configuration. Select any managed APs that you want to prevent the Zyxel Device from generating a diagnostic file for them, and click the left arrow button to remove them.
Copy the diagnostic file to USB storage (if ready)	Select this to have the Zyxel Device create an extra copy of the diagnostic file to a connected USB storage device.
Apply	Click **Apply** to save your changes.
Collect Now	Click this to have the Zyxel Device create a new diagnostic file.

40.2.3 The Diagnostics Files Screen

Click **Maintenance** > **Diagnostics** > **Files** to open the diagnostic files screen. This screen lists the files of diagnostic information the Zyxel Device has collected and stored on the Zyxel Device or in a connected USB storage device. You may need to send these files to customer support for troubleshooting.

Figure 537 Maintenance > Diagnostics > Files



The following table describes the labels in this screen.

Table 344 Maintenance > Diagnostics > Files

LABEL	DESCRIPTION
Diagnostic files	This lists the files of diagnostic information stored on the Zyxel Device.
Diagnostic files in USB storage	This lists the files of diagnostic information stored in a connected USB storage device.
Remove	Select files and click **Remove** to delete them from the Zyxel Device or the USB storage device. Use the [Shift] and/or [Ctrl] key to select multiple files. A pop-up window asks you to confirm that you want to delete.
Download	Click a file to select it and click **Download** to save it to your computer.
#	This column displays the number for each file entry. The total number of files that you can save depends on the file sizes and the available storage space.

Table 344 Maintenance > Diagnostics > Files (continued)

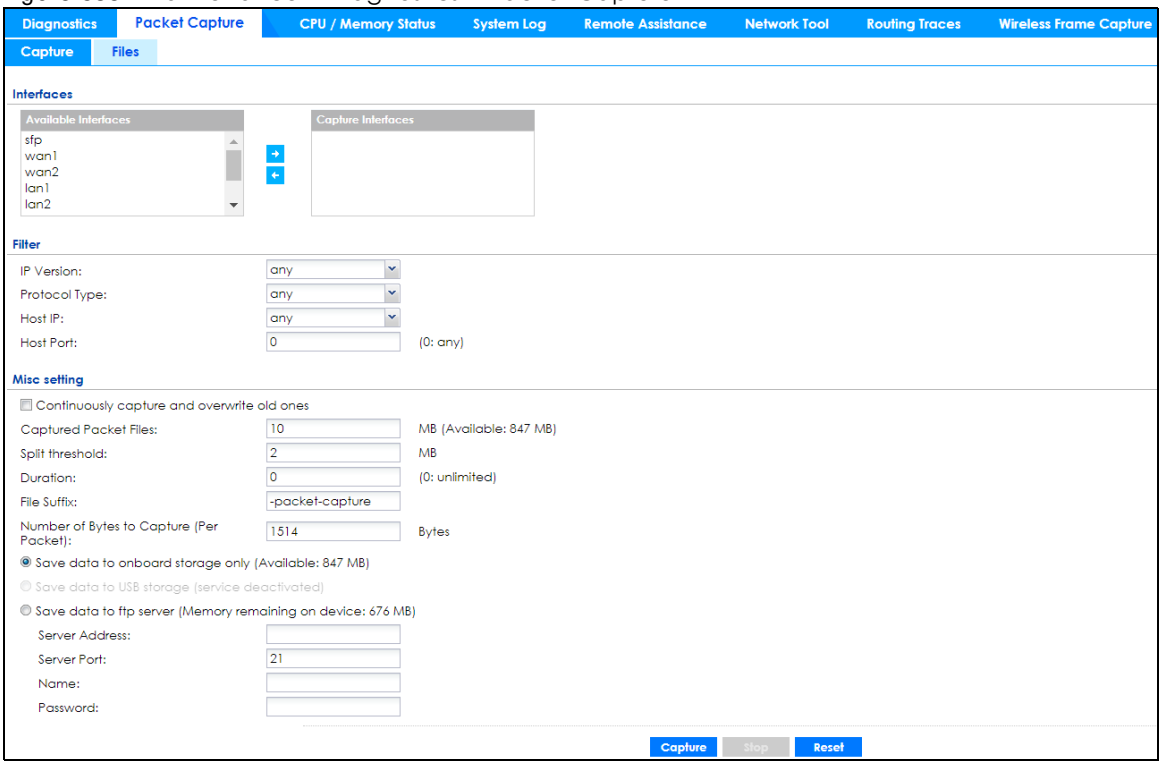
LABEL	DESCRIPTION
File Name	This column displays the label that identifies the file.
Size	This column displays the size (in bytes) of a file.
Last Modified	This column displays the date and time that the individual files were saved.

40.3 The Packet Capture Screen

Use this screen to capture network traffic going through the Zyxel Device's interfaces. Studying these packet captures may help you identify network problems. Click **Maintenance** > **Diagnostics** > **Packet Capture** to open the packet capture screen.

Note: New capture files overwrite existing files of the same name. Change the **File Suffix** field's setting to avoid this.

Figure 538 Maintenance > Diagnostics > Packet Capture



The following table describes the labels in this screen.

Table 345 Maintenance > Diagnostics > Packet Capture

LABEL	DESCRIPTION
Interfaces	Enabled interfaces (except for virtual interfaces) appear under **Available Interfaces**. Select interfaces for which to capture packets and click the right arrow button to move them to the **Capture Interfaces** list. Use the [Shift] and/or [Ctrl] key to select multiple objects.
IP Version	Select the version of IP for which to capture packets. Select **any** to capture packets for all IP versions.

Table 345 Maintenance > Diagnostics > Packet Capture (continued)

LABEL	DESCRIPTION
Protocol Type	Select the protocol of traffic for which to capture packets. Select **any** to capture packets for all types of traffic.
Host IP	Select a host IP address object for which to capture packets. Select **any** to capture packets for all hosts. Select **User Defined** to be able to enter an IP address.
Host Port	This field is configurable when you set the **IP Type** to **any**, **tcp**, or **udp**. Specify the port number of traffic to capture.
Continuously capture and overwrite old ones	Select this to have the Zyxel Device keep capturing traffic and overwriting old packet capture entries when the available storage space runs out.
Captured Packet Files	When saving packet captures only to the Zyxel Device's on board storage, specify a maximum limit in megabytes for the total combined size of all the capture files on the Zyxel Device. When saving packet captures to a connected USB storage device, specify a maximum limit in megabytes for each capture file. Note: If you have existing capture files and have not selected the **Continuously capture and overwrite old ones** option, you may need to set this size larger or delete existing capture files. The valid range depends on the available on board/USB storage size. The Zyxel Device stops the capture and generates the capture file when either the file reaches this size or the time period specified in the **Duration** field expires.
Split threshold	Specify a maximum size limit in megabytes for individual packet capture files. After a packet capture file reaches this size, the Zyxel Device starts another packet capture file.
Duration	Set a time limit in seconds for the capture. The Zyxel Device stops the capture and generates the capture file when either this period of time has passed or the file reaches the size specified in the **File Size** field. 0 means there is no time limit.
File Suffix	Specify text to add to the end of the file name (before the dot and filename extension) to help you identify the packet capture files. Modifying the file suffix also avoids making new capture files that overwrite existing files of the same name. The file name format is "interface name-file suffix.cap", for example "vlan2-packet-capture.cap".
Number Of Bytes To Capture (Per Packet)	Specify the maximum number of bytes to capture per packet. The Zyxel Device automatically truncates packets that exceed this size. As a result, when you view the packet capture files in a packet analyzer, the actual size of the packets may be larger than the size of captured packets.
Save data to onboard storage only	Select this to have the Zyxel Device only store packet capture entries on the Zyxel Device. The available storage size is displayed as well. Note: The Zyxel Device reserves some on board storage space as a buffer.

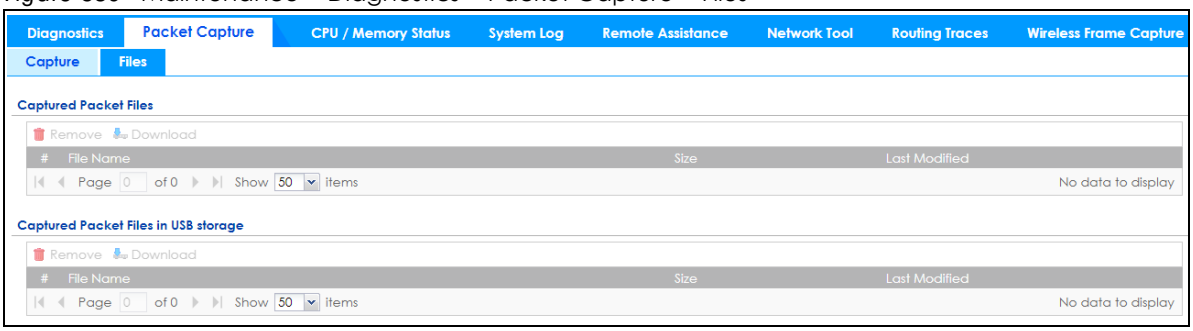
Table 345 Maintenance > Diagnostics > Packet Capture (continued)

LABEL	DESCRIPTION
Save data to USB storage	Select this to have the Zyxel Device store packet capture entries only on a USB storage device connected to the Zyxel Device if the Zyxel Device allows this. Status: **Unused** - the connected USB storage device was manually unmounted by using the **Remove Now** button or for some reason the Zyxel Device cannot mount it. **none** - no USB storage device is connected. **service deactivated** - USB storage feature is disabled (in **Configuration > System > USB Storage**), so the Zyxel Device cannot use a connected USB device to store system logs and other diagnostic information. **available** - you can have the Zyxel Device use the USB storage device. The available storage capacity also displays. Note: The Zyxel Device reserves some USB storage space as a buffer.
Save data to ftp server (available: xx MB)	Select this to have the Zyxel Device store packet capture entries on the defined FTP site. The available storage size is displayed as well.
Server Address	Type the IP address of the FTP server.
Server Port	Type the port this server uses for FTP traffic. The default FTP port is 21.
Name	Type the login username to access the FTP server.
Password	Type the associated login password to access the FTP server.
Capture	Click this button to have the Zyxel Device capture packets according to the settings configured in this screen. You can configure the Zyxel Device while a packet capture is in progress although you cannot modify the packet capture settings. The Zyxel Device's throughput or performance may be affected while a packet capture is in progress. After the Zyxel Device finishes the capture it saves a separate capture file for each selected interface. The total number of packet capture files that you can save depends on the file sizes and the available flash storage space. Once the flash storage space is full, adding more packet captures will fail.
Stop	Click this button to stop a currently running packet capture and generate a separate capture file for each selected interface.
Reset	Click this button to return the screen to its last-saved settings.

40.3.1 The Packet Capture Files Screen

Click **Maintenance > Diagnostics > Packet Capture > Files** to open the packet capture files screen. This screen lists the files of packet captures stored on the Zyxel Device or a connected USB storage device. You can download the files to your computer where you can study them using a packet analyzer (also known as a network or protocol analyzer) such as Wireshark.

Figure 539 Maintenance > Diagnostics > Packet Capture > Files



The following table describes the labels in this screen.

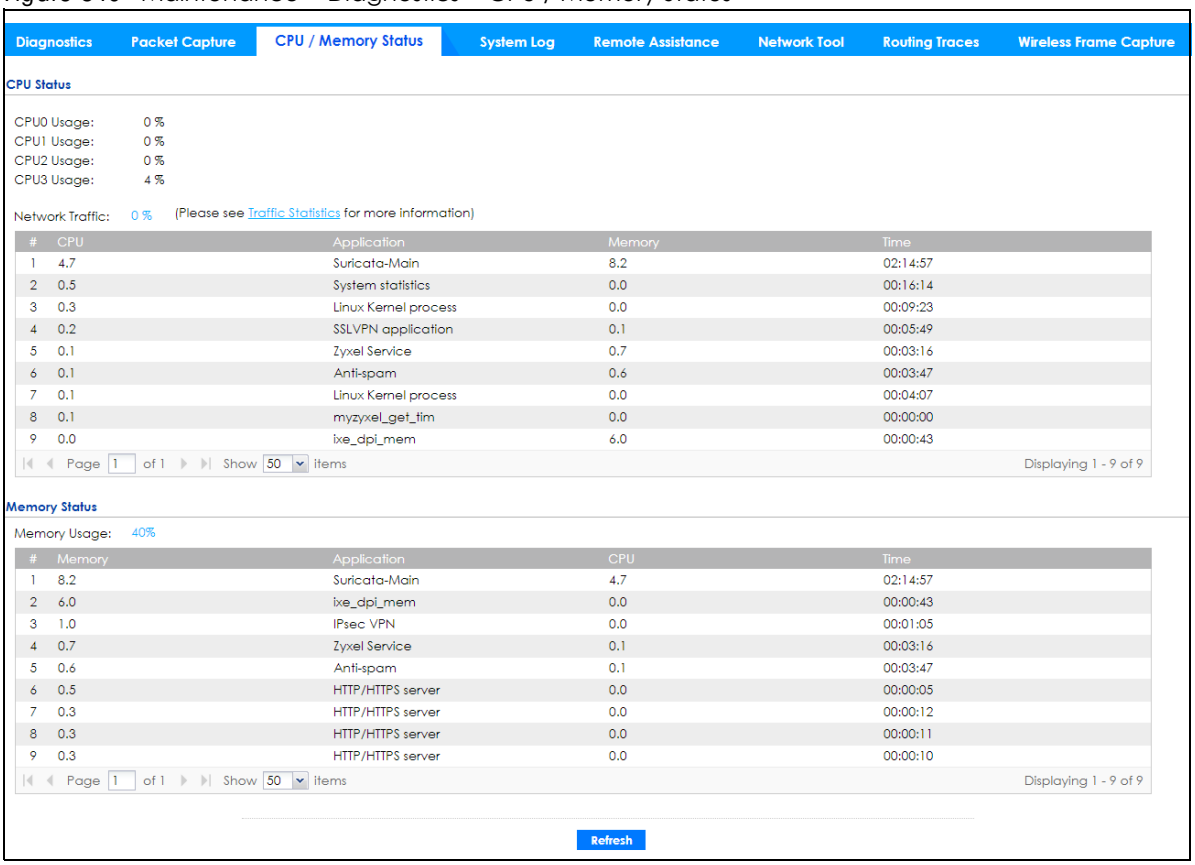
Table 346 Maintenance > Diagnostics > Packet Capture > Files

LABEL	DESCRIPTION
Remove	Select files and click **Remove** to delete them from the Zyxel Device or the connected USB storage device. Use the [Shift] and/or [Ctrl] key to select multiple files. A pop-up window asks you to confirm that you want to delete.
Download	Click a file to select it and click **Download** to save it to your computer.
#	This column displays the number for each packet capture file entry. The total number of packet capture files that you can save depends on the file sizes and the available flash storage space.
File Name	This column displays the label that identifies the file. The file name format is interface name-file suffix.cap.
Size	This column displays the size (in bytes) of a configuration file.
Last Modified	This column displays the date and time that the individual files were saved.

40.4 The CPU / Memory Status Screen

Click **Maintenance** > **Diagnostics** > **CPU / Memory Status** to open the **CPU/Memory Status** screen. Use this screen to view the CPU and memory performance of various applications on the Zyxel Device.

Figure 540 Maintenance > Diagnostics > CPU / Memory Status



The following table describes the labels in this screen.

Table 347 Maintenance > Diagnostics > CPU / Memory Status

LABEL	DESCRIPTION
CPU Status This table displays the applications that use the most Zyxel Device CPU processing.	
CPUn Usage	CPU usage shows how much processing power the Zyxel Device is using. This field displays the current percentage usage of a CPU (where n is the number of the CPU) as a percentage of total processing power.
Network Traffic	This field displays the current percentage of network traffic through the Zyxel Device.
#	This field is a sequential value, and it is not associated with any entry.
CPU	This field displays the current CPU utilization percentage for each application used on the Zyxel Device.
Application	This field displays the name of the application consuming the related processing power on the Zyxel Device.
Memory	This field displays the current DRAM memory utilization percentage for each application used on the Zyxel Device.
Time	This field displays each application's running time in hours - minutes - seconds.
Memory Status This table displays the applications that use the most Zyxel Device DRAM memory.	
Memory Usage	Memory usage shows how much DRAM memory the Zyxel Device is using. This field displays the current percentage of memory utilization.
#	This field is a sequential value, and it is not associated with any entry.
Memory	This field displays the current DRAM memory utilization percentage for each application used on the Zyxel Device.

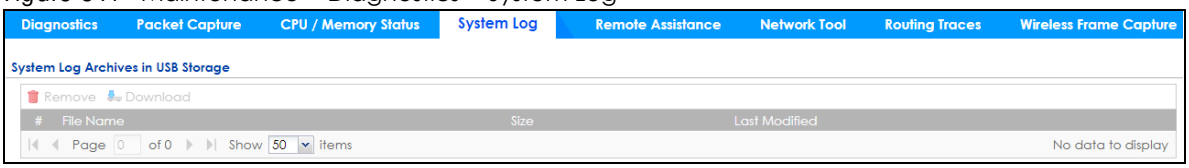
Table 347 Maintenance > Diagnostics > CPU / Memory Status

LABEL	DESCRIPTION
Application	This field displays the name of the application consuming the related memory on the Zyxel Device.
CPU	This field displays the current CPU utilization percentage for each application used on the Zyxel Device.
Time	This field displays each application's running time.
Refresh	Click this to update the information in this screen.

40.5 The System Log Screen

Click **Maintenance** > **Diagnostics** > **System Log** to open the **System Log** screen. This screen lists the files of Zyxel Device system logs stored on a connected USB storage device. The files are in comma separated value (csv) format. You can download them to your computer and open them in a tool like Microsoft's Excel.

Figure 541 Maintenance > Diagnostics > System Log



The following table describes the labels in this screen.

Table 348 Maintenance > Diagnostics > System Log

LABEL	DESCRIPTION
Remove	Select files and click **Remove** to delete them from the Zyxel Device. Use the [Shift] and/or [Ctrl] key to select multiple files. A pop-up window asks you to confirm that you want to delete.
Download	Click a file to select it and click **Download** to save it to your computer.
#	This column displays the number for each file entry. The total number of files that you can save depends on the file sizes and the available storage space.
File Name	This column displays the label that identifies the file.
Size	This column displays the size (in bytes) of a file.
Last Modified	This column displays the date and time that the individual files were saved.

40.6 The Remote Assistance Screen

Click **Maintenance** > **Diagnostics** > **Remote Assistance** to open the **Remote Assistance** screen. Use this screen to configure and schedule external access to the Zyxel Device for troubleshooting. You can also specify the port numbers the services must use to connect to the Zyxel Device. Remote assistance is disabled by default.

Figure 542 Maintenance > Diagnostics > Remote Assistance - Random

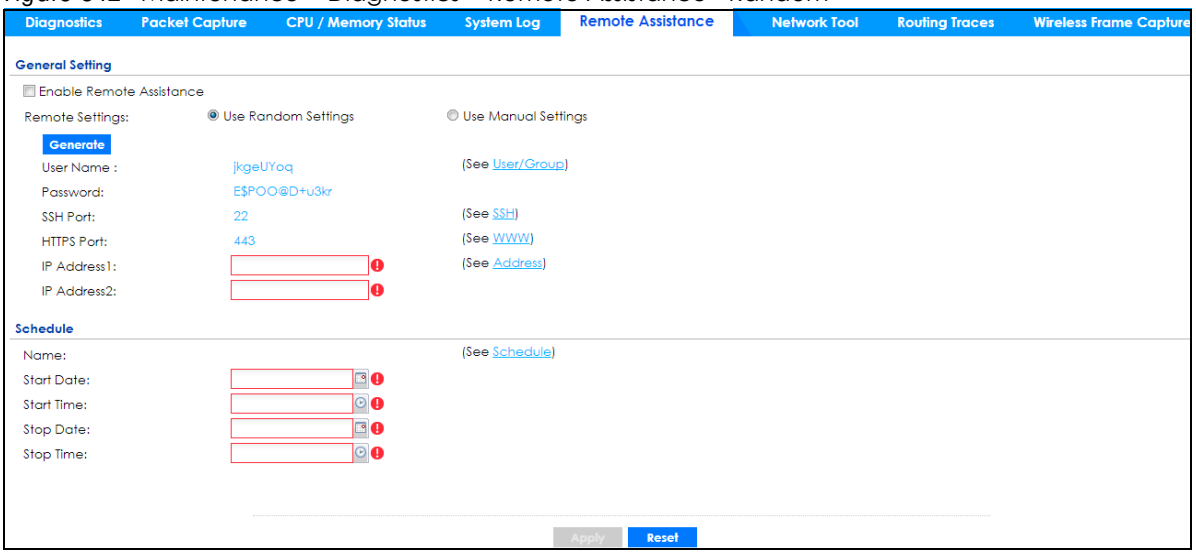


Figure 543 Maintenance > Diagnostics > Remote Assistance - Manual

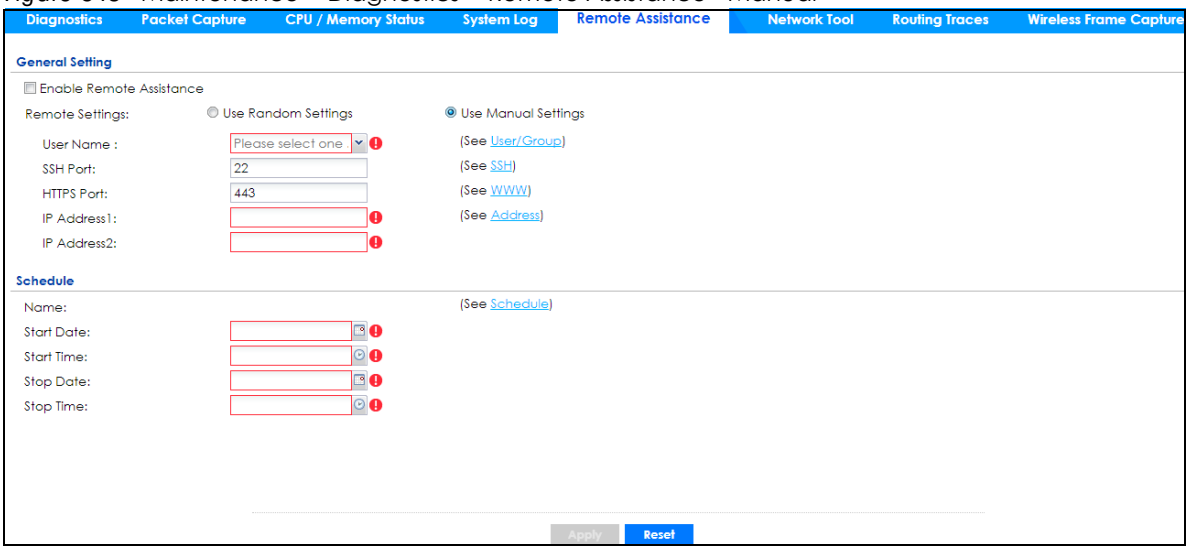

The following table describes the labels in this screen.

Table 349 Maintenance > Diagnostics > Remote Assistance

LABEL	DESCRIPTION
General Setting	
Enable Remote Assistance	Select this to enable an external person, such as customer support to access the Zyxel Device from a network outside the Zyxel Device local network for troubleshooting.
Remote Settings	Select **Use Random Settings** to access the Zyxel Device remotely by using a randomly generated user name and password pair. Select **Use Manual Settings** to access the Zyxel Device remotely by using a previously configured specific user account.
Generate	This button is displayed when you select **Use Random Settings** in the **Remote Settings** field. Click this button to generate a random user name and password pair.
User Name	Select a previously created user/group object that identifies who can have external access to the Zyxel Device for troubleshooting.

Table 349 Maintenance > Diagnostics > Remote Assistance (continued)

LABEL	DESCRIPTION
Password	Type a password for the selected user/group to allow external access.
SSH Port	This field displays the SSH port number for external access. It should be the same port number as the one configured in **Configuration** > **System** > **SSH**.
HTTPS Port	This field displays the HTTPS port number for external access. It should be the same port number as the one configured in **Configuration** > **System** > **WWW** > **Service Control**.
IP Address1	Enter the public IP address of the external user that is allowed to access the Zyxel Device remotely.
IP Address2	Enter the public IP address of the external user that is allowed to access the Zyxel Device remotely.
Schedule	
Name	This field displays the name of the schedule for allowed external access. The schedule must be first configured in **Object** > **Schedule**.
Start Date	This field displays the date on which the schedule begins.
Start Time	This field displays the time at which the schedule begins.
Stop Date	This field displays the date on which the schedule ends.
Stop Time	This field displays the time at which the schedule ends.
Apply	Click **Apply** to save your changes back to the Zyxel Device.
Reset	Click **Reset** to return the screen to its last-saved settings.

40.7 The Network Tool Screen

Use this screen to perform various network tests.

Click **Maintenance** > **Diagnostics** > **Network Tool** to display this screen.

Figure 544 Maintenance > Diagnostics > Network Tool

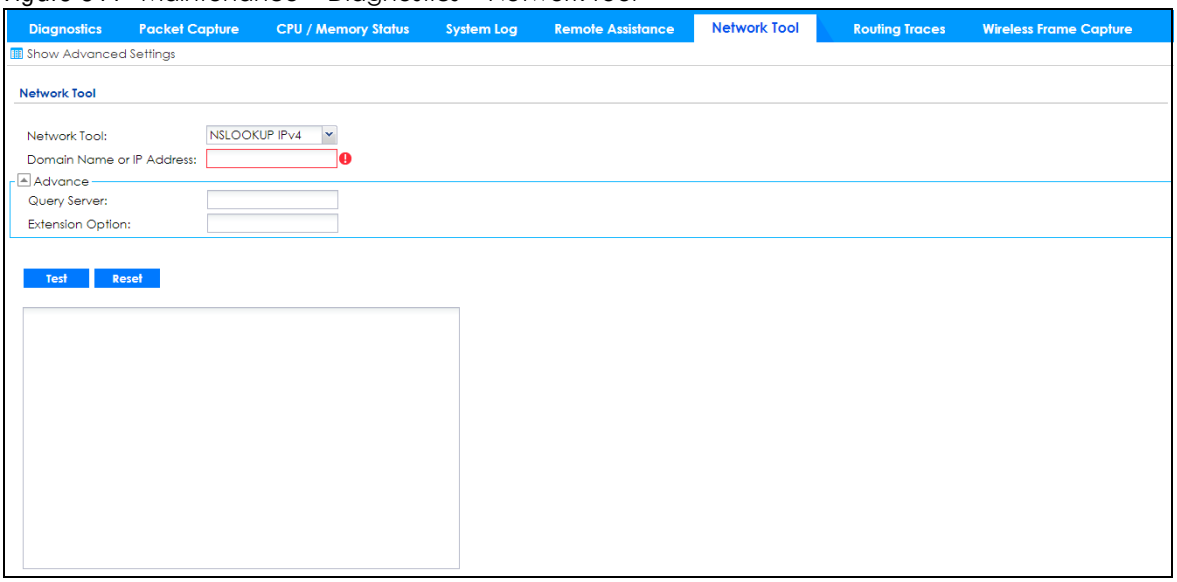

Figure 545 Maintenance > Diagnostics > Network Tool - Test Email Server

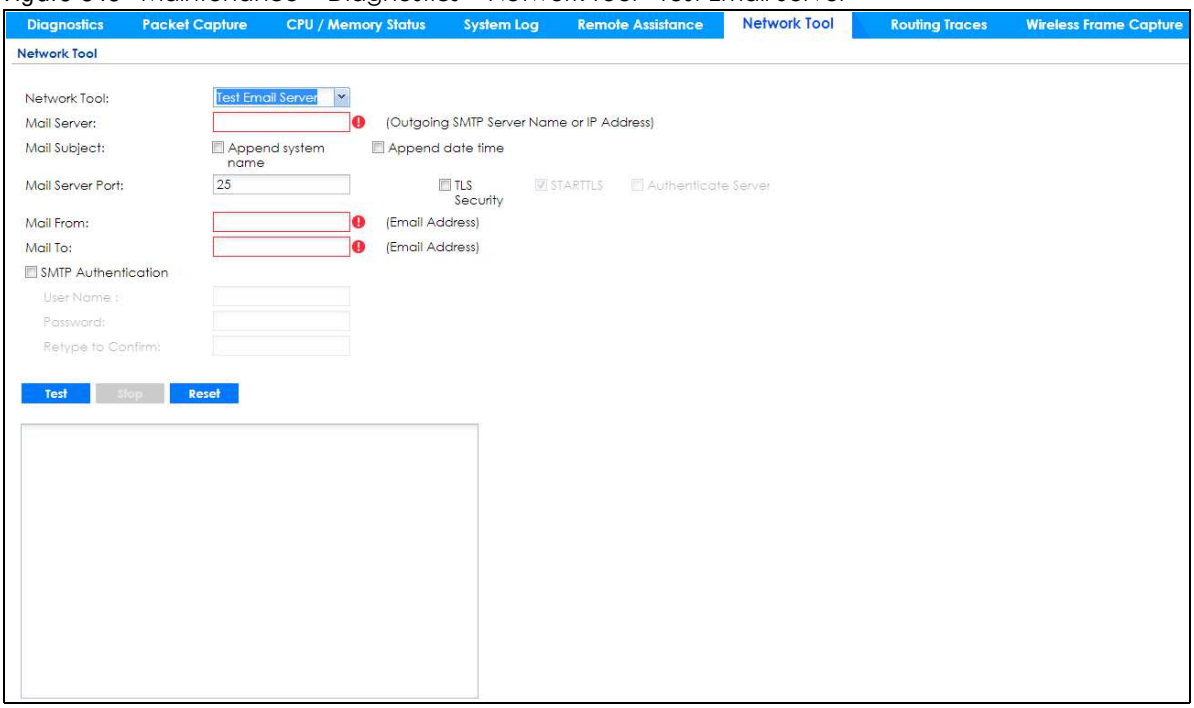


The following table describes the labels in this screen.

Table 350 Maintenance > Diagnostics > Network Tool

LABEL	DESCRIPTION
Network Tool	Select a network tool: • Select **NSLOOKUP IPv4** or **NSLOOKUP IPv6** to perform name server lookup for querying the Domain Name System (DNS) to get the domain name or IP address mapping. • Select **PING IPv4** or **PING IPv6** to ping the IP address that you entered. • Select **TRACEROUTE IPv4** or **TRACEROUTE IPv6** to run the traceroute function. This determines the path a packet takes to the specified computer. • Select **Test Email Server** to test access to an SMTP email server.
Domain Name or IP Address	Type the IP address that you want to use to for the selected network tool.
Advance Click this to display the following fields.	
Query Server	Enter the IP address of a server to which the Zyxel Device sends queries for NSLOOKUP.
Interface	Select the interface through which the Zyxel Device sends queries for PING or TRACEROUTE.
Extension Option	Enter the extended option if you want to use an extended ping or traceroute command. For example, enter "`-c count`" (where `count` is the number of ping requests) to set how many times the Zyxel Device pings the destination IP address, or enter "`-w waittime`" (where `waittime` is a time period in seconds) to set how long the Zyxel Device waits for a response to a probe before running another traceroute.
The following fields display when you select **Test Email Server** in **Network Tool**.	
Mail Server	Type the name or IP address of the outgoing SMTP server.
Mail Subject	Type the subject line for the outgoing email. • Select **Append system name** to add the Zyxel Device system name to the subject. • Select **Append date time** to add the Zyxel Device date and time to the subject.

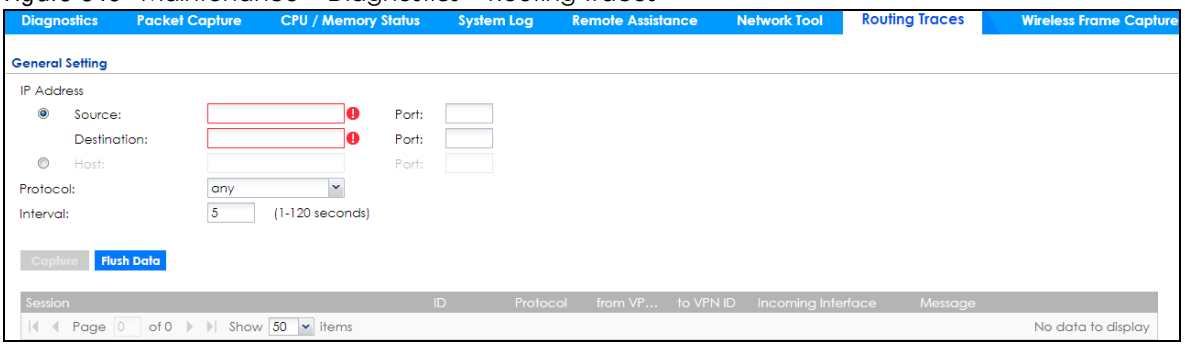
Table 350 Maintenance > Diagnostics > Network Tool (continued)

LABEL	DESCRIPTION
Mail Server Port	Enter the same port number here as is on the mail server for mail traffic.
TLS Security	Select this option if the mail server uses Transport Layer Security (TLS) for encrypted communications between the mail server and the Zyxel Device.
STARTTLS	Select this option if the mail server uses SSL or TLS for encrypted communications between the mail server and the Zyxel Device.
Authenticate Server	Select this if the Zyxel Device authenticates the mail server in the TLS handshake.
Mail From	Type the email address from which the outgoing email is delivered. This address is used in replies.
Mail To	Type the email address to which the outgoing email is delivered.
SMTP Authentication	Select this check box if it is necessary to provide a user name and password to the SMTP server.
User Name	This box is effective when you select the **SMTP Authentication** check box. Type the user name to provide to the SMTP server when the log is emailed.
Password	This box is effective when you select the **SMTP Authentication** check box. Type the password to provide to the SMTP server when the log is emailed.
Retype to Confirm	Retype your new password for confirmation.
Test	Click this button to start the test.
Stop	Click this button to stop the test.
Reset	Click this button to return the screen to its last-saved settings.

40.8 The Routing Traces Screen

Click **Maintenance** > **Diagnostics** > **Routing Traces** to display this screen. Use this screen to configure a traceroute to identify where packets are dropped for troubleshooting.

Figure 546 Maintenance > Diagnostics > Routing Traces



The following table describes the labels in this screen.

Table 351 Maintenance > Diagnostics > Routing Traces

LABEL	DESCRIPTION
IP Address	You can trace traffic through the Zyxel Device from a specific source-to-destination stream or just from/to a specific host (source or destination).
Source	Enter the source IP address of traffic that you want to trace.
Port	Enter the source port number of traffic that you want to trace.

Table 351 Maintenance > Diagnostics > Routing Traces (continued)

LABEL	DESCRIPTION
Destination	Enter the destination IP address of traffic that you want to trace.
Port	Enter the destination port number of traffic that you want to trace.
Host	Enter the IP address of a specific source or destination host whose traffic you want to trace.
Port	Enter the port number for particular source traffic on the host that you want to trace.
Protocol	Select the protocol of traffic that you want to trace. **any** means any protocol.
Interval	Enter a time interval in seconds for renewing a route trace. The default time interval is 5 seconds.
Capture	Click this button to have the Zyxel Device capture frames according to the settings configured in this screen. You can configure the Zyxel Device while a frame capture is in progress although you cannot modify the frame capture settings.
Flush Data	Click this to clear all data on the screen.
Session	This field displays established sessions that passed through the Zyxel Device which matched the capture criteria.
ID	This field displays the packet ID for each active session.
Protocol	This field displays the protocol used in each active session.
from VPN ID	This field displays the tagged VLAN ID in ingress packets coming into the Zyxel Device.
to VPN ID	This field displays the tagged VLAN ID in egress packets going out from the Zyxel Device.
Incoming Interface	This is the source interface of packets to which this active session applies.
Message	This field displays traceroute information.

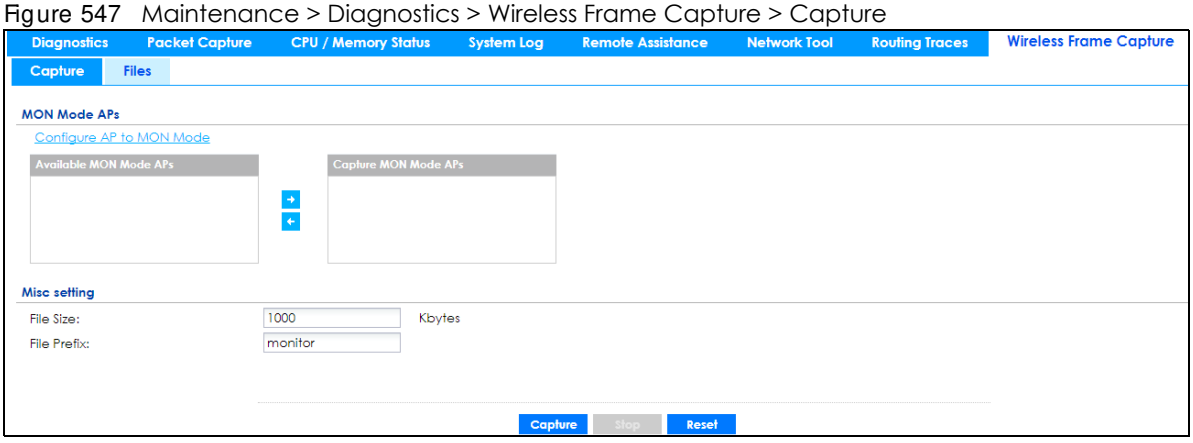
40.9 The Wireless Frame Capture Screen

Use this screen to capture wireless network traffic going through the AP interfaces connected to your Zyxel Device. Studying these frame captures may help you identify network problems.

Click **Maintenance** > **Diagnostics** > **Wireless Frame Capture** to display this screen.

Note: New capture files overwrite existing files of the same name. Change the **File Prefix** field's setting to avoid this.

Figure 547 Maintenance > Diagnostics > Wireless Frame Capture > Capture



The following table describes the labels in this screen.

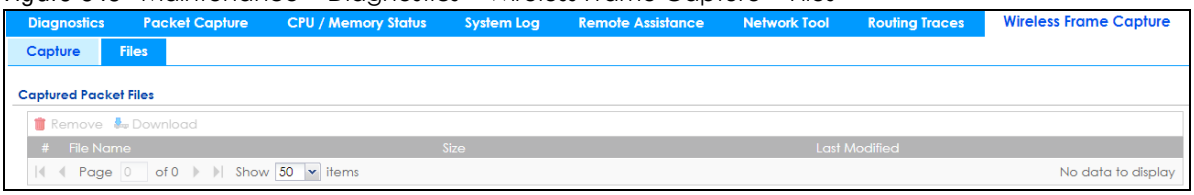
Table 352 Maintenance > Diagnostics > Wireless Frame Capture > Capture

LABEL	DESCRIPTION
MON Mode APs	
Configure AP to MON Mode	Click this to go the **Configuration > Wireless > AP Management** screen, where you can set one or more APs to monitor mode.
Available MON Mode APs	This column displays which APs on your wireless network are currently configured for monitor mode. Use the arrow buttons to move APs off this list and onto the **Captured MON Mode APs** list.
Capture MON Mode APs	This column displays the monitor-mode configured APs selected to for wireless frame capture.
Misc Setting	
File Size	Specify a maximum size limit in kilobytes for the total combined size of all the capture files on the Zyxel Device, including any existing capture files and any new capture files you generate. Note: If you have existing capture files you may need to set this size larger or delete existing capture files. The valid range is 1 to 50000. The Zyxel Device stops the capture and generates the capture file when either the file reaches this size.
File Prefix	Specify text to add to the front of the file name in order to help you identify frame capture files. You can modify the prefix to also create new frame capture files each time you perform a frame capture operation. Doing this does no overwrite existing frame capture files. The file format is: [file prefix].cap. For example, "monitor.cap".
Capture	Click this button to have the Zyxel Device capture frames according to the settings configured in this screen. You can configure the Zyxel Device while a frame capture is in progress although you cannot modify the frame capture settings. The Zyxel Device's throughput or performance may be affected while a frame capture is in progress. After the Zyxel Device finishes the capture it saves a combined capture file for all APs. The total number of frame capture files that you can save depends on the file sizes and the available flash storage space. Once the flash storage space is full, adding more frame captures will fail.
Stop	Click this button to stop a currently running frame capture and generate a combined capture file for all APs.
Reset	Click this button to return the screen to its last-saved settings.

40.9.1 The Wireless Frame Capture Files Screen

Click **Maintenance** > **Diagnostics** > **Wireless Frame Capture** > **Files** to open this screen. This screen lists the files of wireless frame captures the Zyxel Device has performed. You can download the files to your computer where you can study them using a packet analyzer (also known as a network or protocol analyzer) such as Wireshark.

Figure 548 Maintenance > Diagnostics > Wireless Frame Capture > Files



The following table describes the labels in this screen.

Table 353 Maintenance > Diagnostics > Wireless Frame Capture > Files

LABEL	DESCRIPTION
Remove	Select files and click **Remove** to delete them from the Zyxel Device. Use the [Shift] and/or [Ctrl] key to select multiple files. A pop-up window asks you to confirm that you want to delete.
Download	Click a file to select it and click **Download** to save it to your computer.
#	This column displays the number for each packet capture file entry. The total number of packet capture files that you can save depends on the file sizes and the available flash storage space.
File Name	This column displays the label that identifies the file. The file name format is interface name-file suffix.cap.
Size	This column displays the size (in bytes) of a configuration file.
Last Modified	This column displays the date and time that the individual files were saved.

CHAPTER 41
Packet Flow Explore

41.1 Overview

Use this to get a clear picture on how the Zyxel Device determines where to forward a packet and how to change the source IP address of the packet according to your current settings. This function provides you a summary of all your routing and SNAT settings and helps troubleshoot any related problems.

41.1.1 What You Can Do in this Chapter

- Use the **Routing Status** screen (see Section 41.2 on page 794) to view the overall routing flow and each routing function's settings.
- Use the **SNAT Status** screen (see Section 41.3 on page 798) to view the overall source IP address conversion (SNAT) flow and each SNAT function's settings.

41.2 The Routing Status Screen

The **Routing Status** screen allows you to view the current routing flow and quickly link to specific routing settings. Click a function box in the **Routing Flow** section, the related routes (activated) will display in the **Routing Table** section. To access this screen, click **Maintenance** > **Packet Flow Explore** > **Routing Status**.

The order of the routing flow may vary depending on whether you:

- Select **use policy route to override direct route** in the **CONFIGURATION** > **Network** > **Routing** > **Policy Route** screen.
- Use policy routes to control 1-1 NAT by using the `policy control-virtual-server-rules activate` command.
- Select **use policy routes to control dynamic IPSec rules** in the **CONFIGURATION** > **VPN** > **IPSec VPN** > **VPN Connection** screen.

Note: Once a packet matches the criteria of a routing rule, the Zyxel Device takes the corresponding action and does not perform any further flow checking.

Figure 549 Maintenance > Packet Flow Explore > Routing Status (Direct Route)

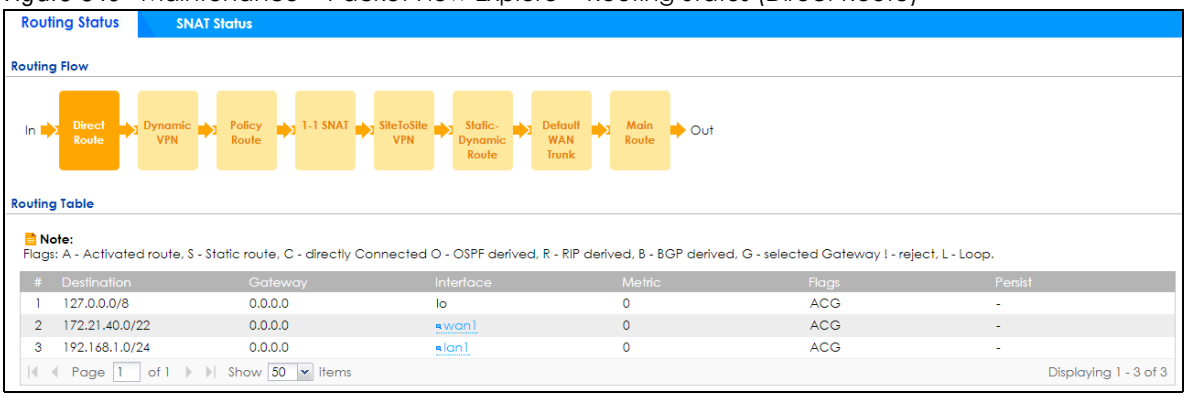


Figure 550 Maintenance > Packet Flow Explore > Routing Status (Dynamic VPN)

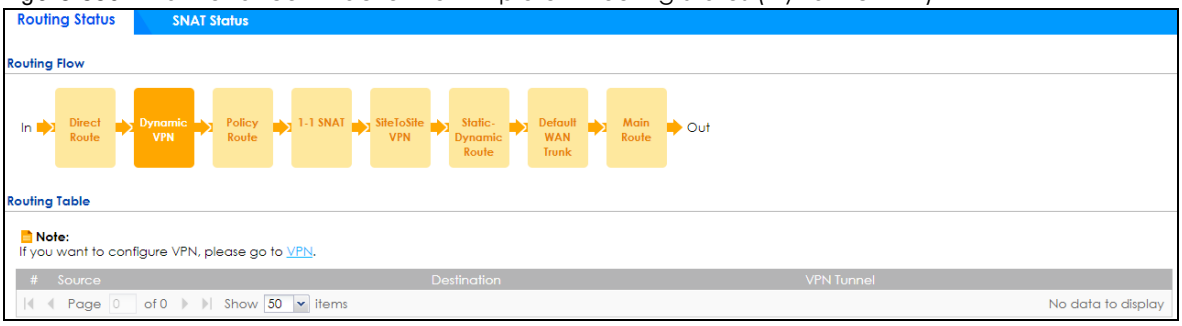

Figure 551 Maintenance > Packet Flow Explore > Routing Status (Policy Route)

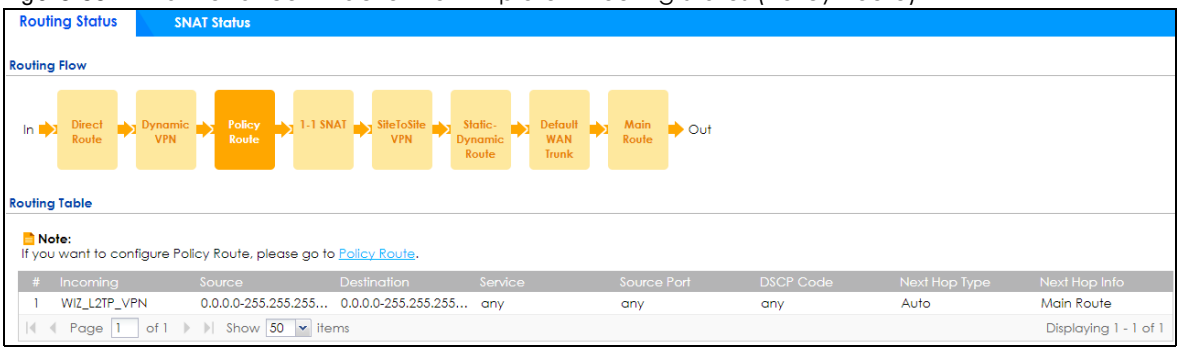

Figure 552 Maintenance > Packet Flow Explore > Routing Status (1-1 SNAT)

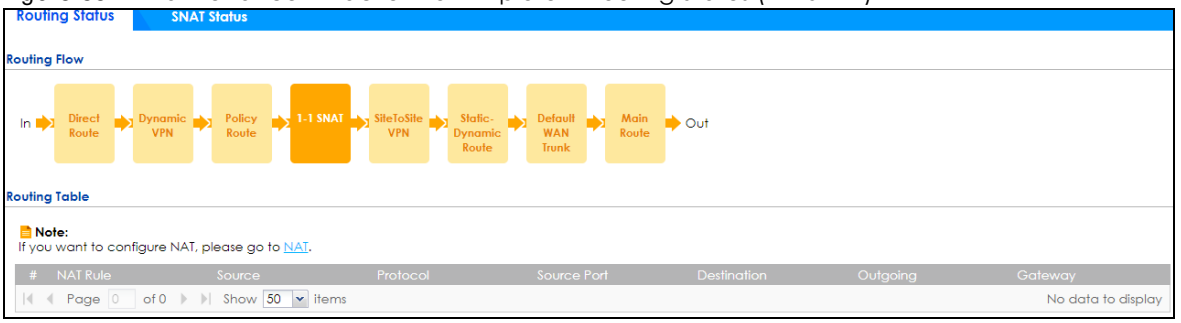

Figure 553 Maintenance > Packet Flow Explore > Routing Status (SiteToSite VPN)

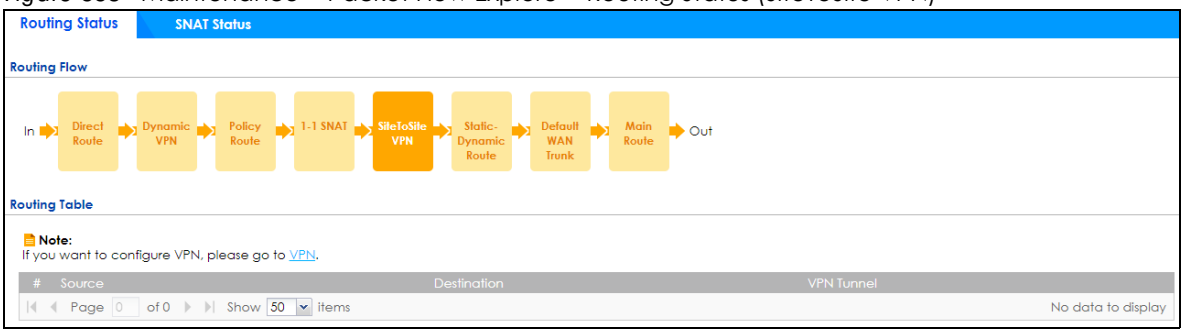

Figure 554 Maintenance > Packet Flow Explore > Routing Status (Static-Dynamic Route)

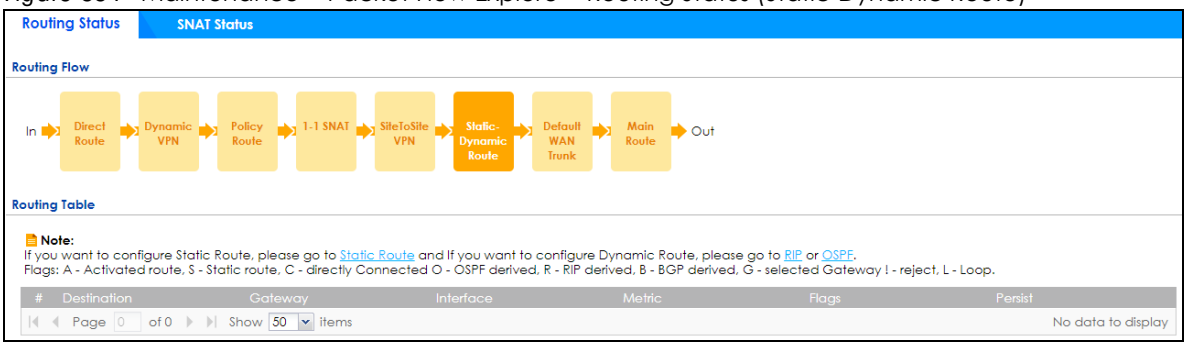

Figure 555 Maintenance > Packet Flow Explore > Routing Status (Default WAN Trunk)

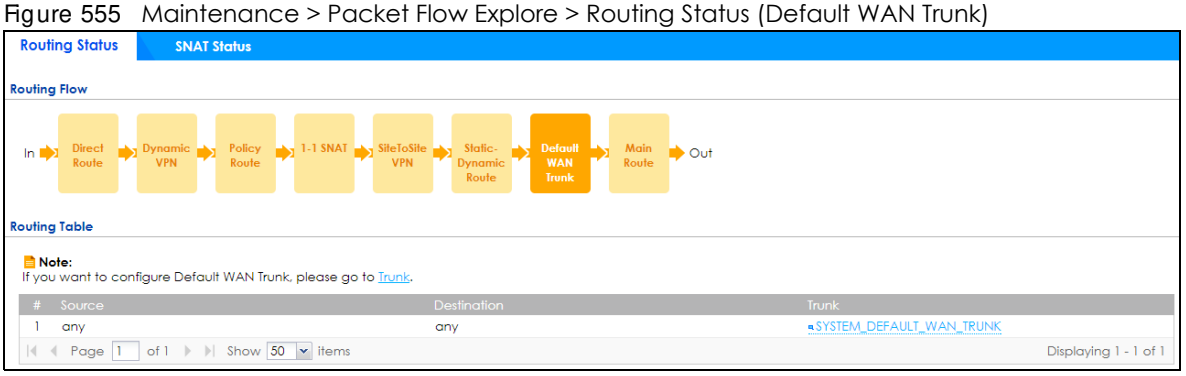

Figure 556 Maintenance > Packet Flow Explore > Routing Status (Main Route)

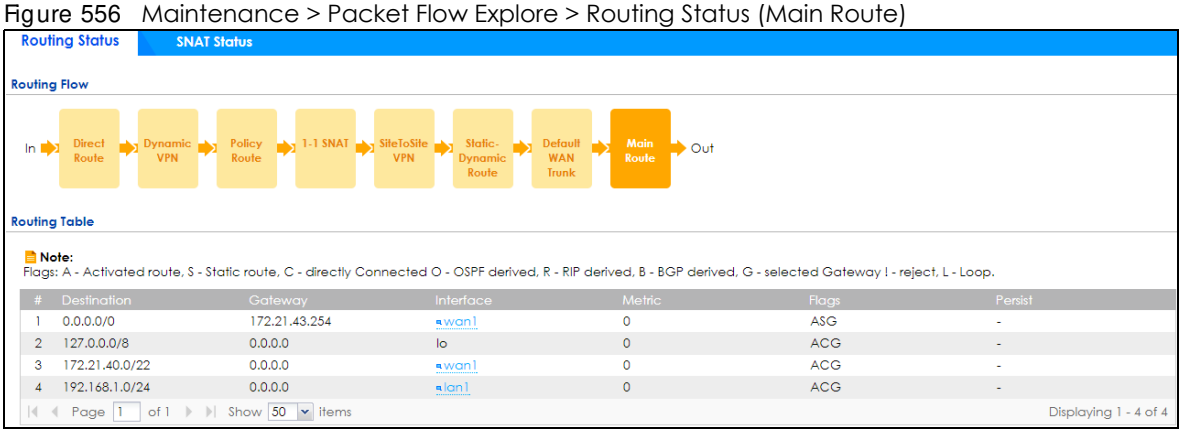

The following table describes the labels in this screen.

Table 354 Maintenance > Packet Flow Explore > Routing Status

LABEL	DESCRIPTION
Routing Flow	This section shows you the flow of how the Zyxel Device determines where to route a packet. Click a function box to display the related settings in the **Routing Table** section.
Routing Table	This section shows the corresponding settings according to the function box you click in the **Routing Flow** section.
The following fields are available if you click **Direct Route**, **Static-Dynamic Route**, or **Main Route** in the **Routing Flow** section.	
#	This field is a sequential value, and it is not associated with any entry.
Destination	This is the destination IP address of a route.
Gateway	This is the IP address of the next-hop gateway or the interface through which the traffic is routed.
Interface	This is the name of an interface associated with the route.
Metric	This is the route's priority among the displayed routes.
Flags	This indicates additional information for the route. The possible flags are: • **A** - this route is currently activated • **S** - this is a static route • **C** - this is a direct connected route • **O** - this is a dynamic route learned through OSPF • **R** - this is a dynamic route learned through RIP • **B** - this is a dynamic route learned through BGP • **G** - the route is to a gateway (router) in the same network. • **!** - this is a route which forces a route lookup to fail. • **B** - this is a route which discards packets. • **L** - this is a recursive route.
Persist	This is the remaining time of a dynamically learned route. The Zyxel Device removes the route after this time period is counted down to zero.
The following fields are available if you click **Policy Route** in the **Routing Flow** section.	
#	This field is a sequential value, and it is not associated with any entry.
Incoming	This is the interface on which the packets are received.
Source	This is the source IP address(es) from which the packets are sent.
Destination	This is the destination IP address(es) to which the packets are transmitted.
Service	This is the name of the service object. **any** means all services.
Source Port	This is the source port(s) from which the packets are sent.
DSCP Code	This is the DSCP value of incoming packets to which this policy route applies. See Section 10.2 on page 301 for more information.
Next Hop Type	This is the type of the next hop to which packets are directed.
Next Hop Info	• This is the main route if the next hop type is **Auto**. • This is the interface name and gateway IP address if the next hop type is **Interface / GW**. • This is the tunnel name if the next hop type is **VPN Tunnel**. • This is the trunk name if the next hop type is **Trunk**.
The following fields are available if you click **1-1 SNAT** in the **Routing Flow** section.	
#	This field is a sequential value, and it is not associated with any entry.
NAT Rule	This is the name of an activated 1:1 or Many 1:1 NAT rule in the NAT table.
Source	This is the external source IP address(es).
Protocol	This is the transport layer protocol.
Source Port	This is the source port number.

Table 354 Maintenance > Packet Flow Explore > Routing Status (continued)

LABEL	DESCRIPTION
Destination	This is the external destination IP address(es).
Outgoing	This is the outgoing interface that the SNAT rule uses to transmit packets.
Gateway	This is the IP address of the gateway in the same network of the outgoing interface.
The following fields are available if you click **Dynamic VPN** or **Site To Site VPN** in the **Routing Flow** section.	
#	This field is a sequential value, and it is not associated with any entry.
Source	This is the IP address(es) of the local VPN network.
Destination	This is the IP address(es) for the remote VPN network.
VPN Tunnel	This is the name of the VPN tunnel.
The following fields are available if you click **Default WAN Trunk** in the **Routing Flow** section.	
#	This field is a sequential value, and it is not associated with any entry.
Source	This is the source IP address(es) from which the packets are sent. **any** means any IP address.
Destination	This is the destination IP address(es) to which the packets are transmitted. **any** means any IP address.
Trunk	This is the name of the WAN trunk through which the matched packets are transmitted.

41.3 The SNAT Status Screen

The **SNAT Status** screen allows you to view and quickly link to specific source NAT (SNAT) settings. Click a function box in the **SNAT Flow** section, the related SNAT rules (activated) will display in the **SNAT Table** section. To access this screen, click **Maintenance** > **Packet Flow Explore** > **SNAT Status**.

The order of the SNAT flow may vary depending on whether you:

- select **use default SNAT** in the **CONFIGURATION** > **Network** > **Interface** > **Trunk** screen.
- use policy routes to control 1-1 NAT by using the `policy control-virtual-server-rules activate` command.

Note: Once a packet matches the criteria of an SNAT rule, the Zyxel Device takes the corresponding action and does not perform any further flow checking.

Figure 557 Maintenance > Packet Flow Explore > SNAT Status (Policy Route SNAT)

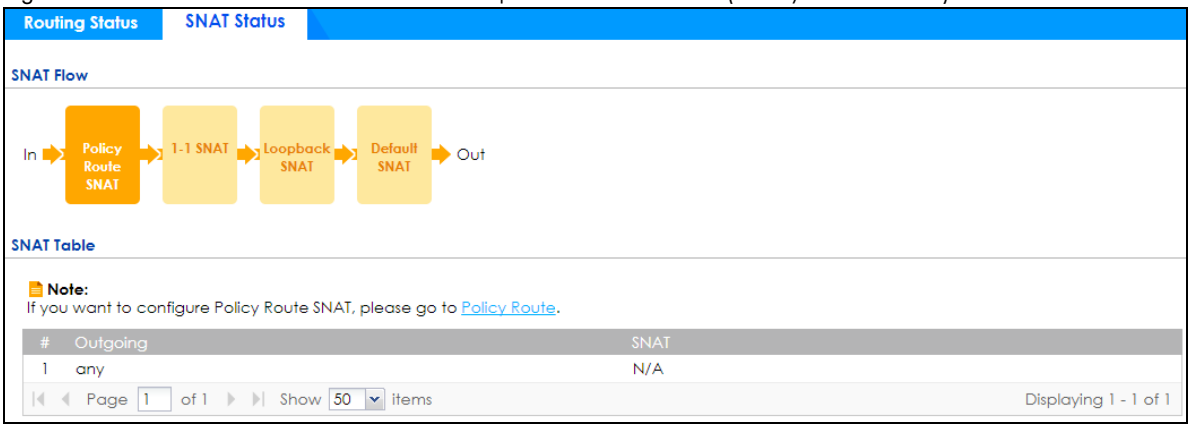

Figure 558 Maintenance > Packet Flow Explore > SNAT Status (1-1 SNAT)

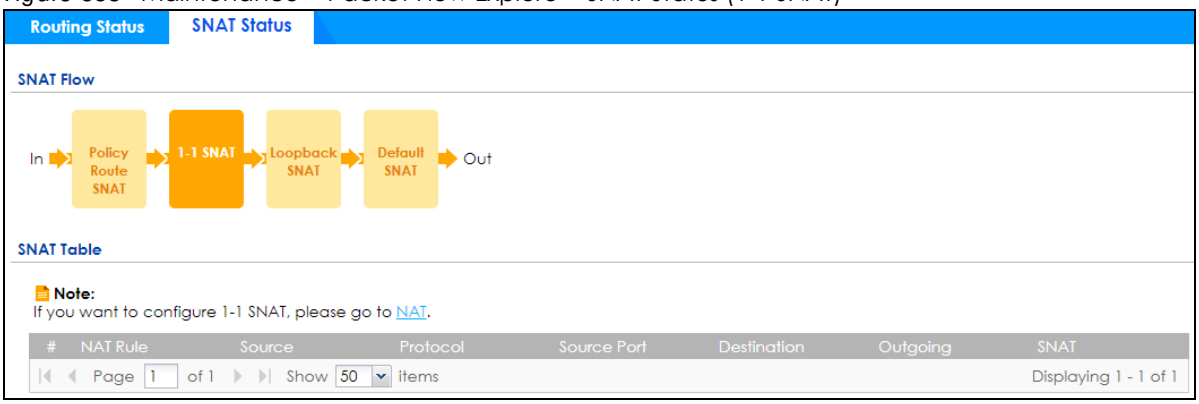

Figure 559 Maintenance > Packet Flow Explore > SNAT Status (Loopback SNAT)

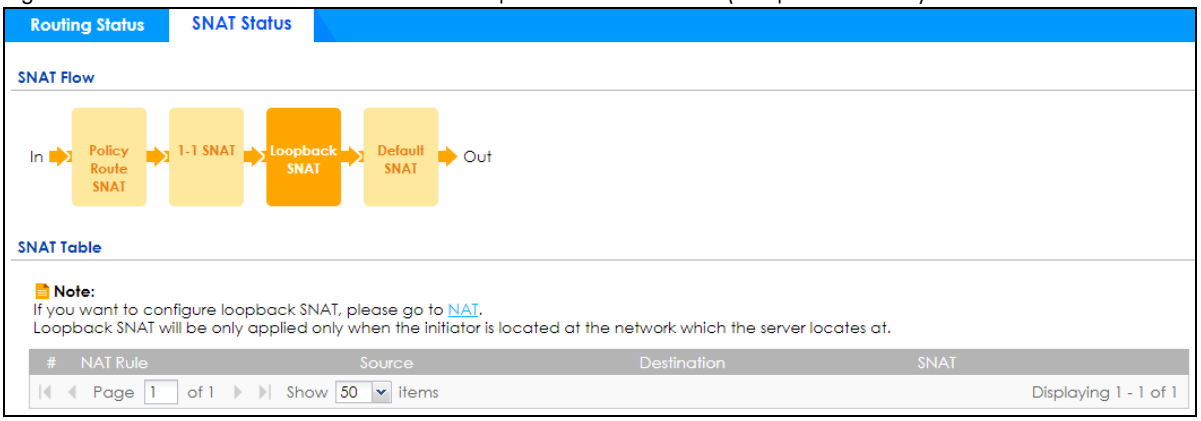

Figure 560 Maintenance > Packet Flow Explore > SNAT Status (Default SNAT)

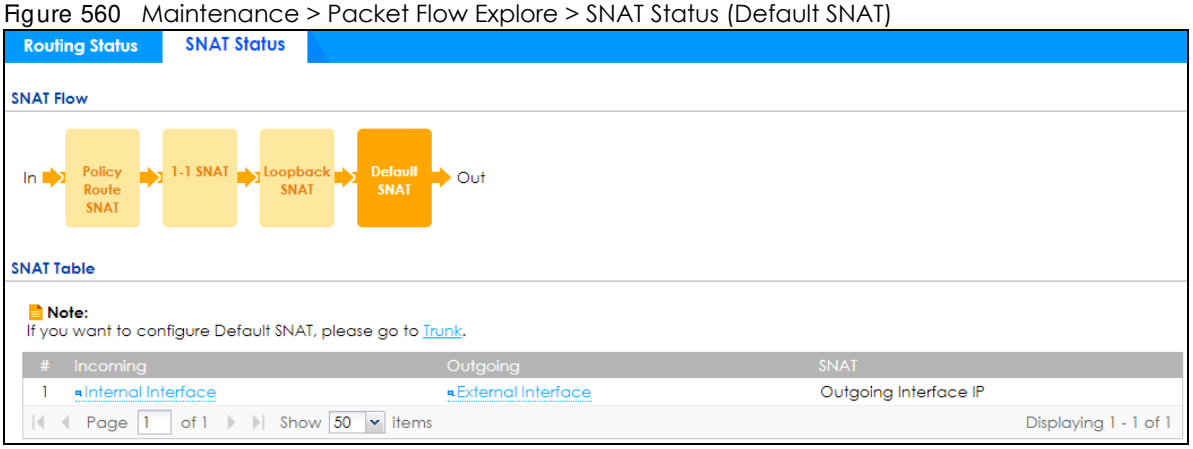


The following table describes the labels in this screen.

Table 355 Maintenance > Packet Flow Explore > SNAT Status

LABEL	DESCRIPTION
SNAT Flow	This section shows you the flow of how the Zyxel Device changes the source IP address for a packet according to the rules you have configured in the Zyxel Device. Click a function box to display the related settings in the **SNAT Table** section.
SNAT Table	The table fields in this section vary depending on the function box you select in the **SNAT Flow** section.
The following fields are available if you click **Policy Route SNAT** in the **SNAT Flow** section.	
#	This field is a sequential value, and it is not associated with any entry.

Table 355 Maintenance > Packet Flow Explore > SNAT Status (continued)

LABEL	DESCRIPTION
Outgoing	This is the outgoing interface that the route uses to transmit packets.
SNAT	This is the source IP address(es) that the SNAT rule uses finally.
The following fields are available if you click **1-1 SNAT** in the **SNAT Flow** section.	
#	This field is a sequential value, and it is not associated with any entry.
NAT Rule	This is the name of an activated NAT rule which uses SNAT.
Source	This is the external source IP address(es).
Protocol	This is the transport layer protocol.
Source Port	This is the source port number.
Destination	This is the external destination IP address(es).
Outgoing	This is the outgoing interface that the SNAT rule uses to transmit packets.
SNAT	This is the source IP address(es) that the SNAT rule uses finally.
The following fields are available if you click **Loopback SNAT** in the **SNAT Flow** section.	
#	This field is a sequential value, and it is not associated with any entry.
NAT Rule	This is the name of an activated NAT rule which uses SNAT and enables NAT loopback.
Source	This is the original source IP address(es). **any** means any IP address.
Destination	This is the original destination IP address(es). **any** means any IP address.
SNAT	This indicates which source IP address the SNAT rule uses finally. For example, **Outgoing Interface IP** means that the Zyxel Device uses the IP address of the outgoing interface as the source IP address for the matched packets it sends out through this rule.
The following fields are available if you click **Default SNAT** in the **SNAT Flow** section.	
#	This field is a sequential value, and it is not associated with any entry.
Incoming	This indicates internal interface(s) on which the packets are received.
Outgoing	This indicates external interface(s) from which the packets are transmitted.
SNAT	This indicates which source IP address the SNAT rule uses finally. For example, **Outgoing Interface IP** means that the Zyxel Device uses the IP address of the outgoing interface as the source IP address for the matched packets it sends out through this rule.

CHAPTER 42
Shutdown

42.1 Overview

Use this to shutdown the device in preparation for disconnecting the power.

> Always use the Maintenance > Shutdown > Shutdown screen or the "shutdown" command before you turn off the Zyxel Device or remove the power. Not doing so can cause the firmware to become corrupt.

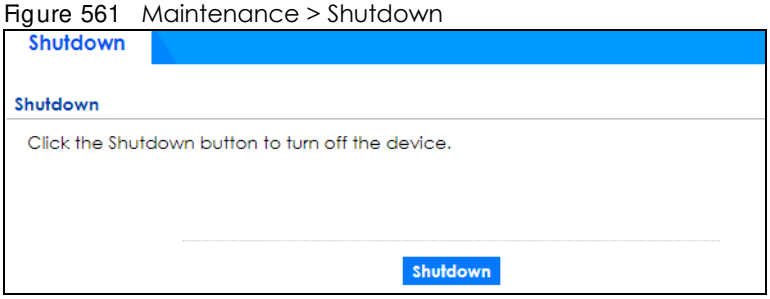
42.1.1 What You Need To Know

Shutdown writes all cached data to the local storage and stops the system processes.

42.2 The Shutdown Screen

To access this screen, click **Maintenance** > **Shutdown**.

Figure 561 Maintenance > Shutdown



Click the **Shutdown** button to shut down the Zyxel Device. Wait for the device to shut down before you manually turn off or remove the power. It does not turn off the power.

You can also use the CLI command `shutdown` to shutdown the Zyxel Device.

CHAPTER 43
Troubleshooting

This chapter offers some suggestions to solve problems you might encounter.

- You can also refer to the logs (see Chapter 6 on page 172).
- For the order in which the Zyxel Device applies its features and checks, see Chapter 41 on page 794.

None of the LEDs turn on.

Make sure that you have the power cord connected to the Zyxel Device and plugged in to an appropriate power source. Make sure you have the Zyxel Device turned on. Check all cable connections.

If the LEDs still do not turn on, you may have a hardware problem. In this case, you should contact your local vendor.

Cannot access the Zyxel Device from the LAN.

- Check the cable connection between the Zyxel Device and your computer or switch.
- Ping the Zyxel Device from a LAN computer. Make sure your computer's Ethernet card is installed and functioning properly. Also make sure that its IP address is in the same subnet as the Zyxel Device's.
- In the computer, click **Start**, (**All**) **Programs**, **Accessories** and then **Command Prompt**. In the **Command Prompt** window, type "ping" followed by the Zyxel Device's LAN IP address (192.168.1.1 is the default) and then press [ENTER]. The Zyxel Device should reply.
- If you've forgotten the Zyxel Device's password, use the **RESET** button. Press the button in for about 5 seconds (or until the **SYS** LED starts to blink), then release it. It returns the Zyxel Device to the factory defaults (password is 1234, LAN IP address 192.168.1.1 etc.
- If you've forgotten the Zyxel Device's IP address, you can use the commands through the console port to check it. Connect your computer to the **CONSOLE** port using a console cable. Your computer should have a terminal emulation communications program (such as HyperTerminal) set to VT100 terminal emulation, no parity, 8 data bits, 1 stop bit, no flow control and 115200 bps port speed.

I cannot access the Internet.

- Check the Zyxel Device's connection to the Ethernet jack with Internet access. Make sure the Internet gateway device (such as a DSL modem) is working properly.
- Check the WAN interface's status in the **Dashboard**. Use the installation setup wizard again and make sure that you enter the correct settings. Use the same case as provided by your ISP.

I cannot update the anti-malware signatures.

- Make sure your Zyxel Device has the anti-malware service registered and that the license is not expired. Purchase a new license if the license is expired.
- Make sure your Zyxel Device is connected to the Internet.

I cannot update the IDP/application patrol signatures.

- Make sure your Zyxel Device has the IDP/application patrol service registered and that the license is not expired. Purchase a new license if the license is expired.
- Make sure your Zyxel Device is connected to the Internet.

I downloaded updated anti-malware or IDP/application patrol signatures. Why has the Zyxel Device not re-booted yet?

The Zyxel Device does not have to reboot when you upload new signatures.

The content filter category service is not working.

- Make sure your Zyxel Device has the content filter category service registered and that the license is not expired. Purchase a new license if the license is expired.
- Make sure your Zyxel Device is connected to the Internet.

I configured security settings but the Zyxel Device is not applying them for certain interfaces.

Many security settings are usually applied to zones. Make sure you assign the interfaces to the appropriate zones. When you create an interface, there is no security applied on it until you assign it to a zone.

The Zyxel Device is not applying the custom policy route I configured.

The Zyxel Device checks the policy routes in the order that they are listed. So make sure that your custom policy route comes before any other routes that the traffic would also match.

The Zyxel Device is not applying the custom security policy I configured.

The Zyxel Device checks the security policies in the order that they are listed. So make sure that your custom security policy comes before any other rules that the traffic would also match.

I cannot enter the interface name I want.

The format of interface names other than the Ethernet interface names is very strict. Each name consists of 2-4 letters (interface type), followed by a number (x, limited by the maximum number of each type of interface). For example, VLAN interfaces are vlan0, vlan1, vlan2,...; and so on.

- The names of virtual interfaces are derived from the interfaces on which they are created. For example, virtual interfaces created on Ethernet interface wan1 are called wan1:1, wan1:2, and so on. Virtual interfaces created on VLAN interface vlan2 are called vlan2:1, vlan2:2, and so on. You cannot specify the number after the colon(:) in the Web Configurator; it is a sequential number. You can specify the number after the colon if you use the CLI to set up a virtual interface.

I cannot set up a PPP interface, virtual Ethernet interface or virtual VLAN interface on an Ethernet interface.

You cannot set up a PPP interface, virtual Ethernet interface or virtual VLAN interface if the underlying interface is a member of a bridge. You also cannot add an Ethernet interface or VLAN interface to a bridge if the member interface has a virtual interface or PPP interface on top of it.

My rules and settings that apply to a particular interface no longer work.

The interface's IP address may have changed. To avoid this create an IP address object based on the interface. This way the Zyxel Device automatically updates every rule or setting that uses the object whenever the interface's IP address settings change. For example, if you change LAN1's IP address, the Zyxel Device automatically updates the corresponding interface-based, LAN1 subnet address object.

I cannot set up a PPP interface.

You have to set up an ISP account before you create a PPPoE or PPTP interface.

The data rates through my cellular connection are no-where near the rates I expected.

The actual cellular data rate you obtain varies depending on the cellular device you use, the signal strength to the service provider's base station, and so on.

I created a cellular interface but cannot connect through it.

- Make sure you have a compatible mobile broadband device installed or connected. See www.zyxel.com for details.
- Make sure you have the cellular interface enabled.
- Make sure the cellular interface has the correct user name, password, and PIN code configured with the correct casing.
- If the Zyxel Device has multiple WAN interfaces, make sure their IP addresses are on different subnets.

Hackers have accessed my WEP-encrypted wireless LAN.

WEP is extremely insecure. Its encryption can be broken by an attacker, using widely-available software. It is strongly recommended that you use a more effective security mechanism. Use the strongest security mechanism that all the wireless devices in your network support. WPA2 or WPA2-PSK is recommended.

The wireless security is not following the re-authentication timer setting I specified.

If a RADIUS server authenticates wireless stations, the re-authentication timer on the RADIUS server has priority. Change the RADIUS server's configuration if you need to use a different re-authentication timer setting.

I cannot configure a particular VLAN interface on top of an Ethernet interface even though I have it configured it on top of another Ethernet interface.

Each VLAN interface is created on top of only one Ethernet interface.

The Zyxel Device is not applying an interface's configured ingress bandwidth limit.

At the time of writing, the Zyxel Device does not support ingress bandwidth management.

The Zyxel Device is not applying my application patrol bandwidth management settings.

Bandwidth management in policy routes has priority over application patrol bandwidth management.

The Zyxel Device's performance slowed down after I configured many new application patrol entries.

The Zyxel Device checks the ports and conditions configured in application patrol entries in the order they appear in the list. While this sequence does not affect the functionality, you might improve the performance of the Zyxel Device by putting more commonly used ports at the top of the list.

The Zyxel Device's anti-malware scanner cleaned an infected file but now I cannot use the file.

The scanning engine checks the contents of the packets for virus. If a virus pattern is matched, the Zyxel Device removes the infected portion of the file along with the rest of the file. The uninfected portion of the file before a virus pattern was matched still goes through. Since the Zyxel Device erases the infected portion of the file before sending it, you may not be able to open the file.

The Zyxel Device is not scanning some zipped files.

The Zyxel Device cannot unzip password protected ZIP files or a ZIP file within another ZIP file. There are also limits to the number of ZIP files that the Zyxel Device can concurrently unzip.

The Zyxel Device is deleting some zipped files.

The anti-malware policy may be set to delete zipped files that the Zyxel Device cannot unzip. The Zyxel Device cannot unzip password protected ZIP files or a ZIP file within another ZIP file. There are also limits to the number of ZIP files that the Zyxel Device can concurrently unzip.

The Zyxel Device's performance seems slower after configuring IDP.

Depending on your network topology and traffic load, binding every packet direction to an IDP profile may affect the Zyxel Device's performance. You may want to focus IDP scanning on certain traffic directions such as incoming traffic.

IDP is dropping traffic that matches a rule that says no action should be taken.

The Zyxel Device checks all signatures and continues searching even after a match is found. If two or more rules have conflicting actions for the same packet, then the Zyxel Device applies the more restrictive action (**reject-both**, **reject-receiver** or **reject-sender**, **drop**, **none** in this order). If a packet

matches a rule for **reject-receiver** and it also matches a rule for **reject-sender**, then the Zyxel Device will reject-both.

I uploaded a custom signature file and now all of my earlier custom signatures are gone.

The name of the complete custom signature file on the Zyxel Device is 'custom.rules'. If you import a file named 'custom.rules', then all custom signatures on the Zyxel Device are overwritten with the new file. If this is not your intention, make sure that the files you import are not named 'custom.rules'.

I cannot configure some items in IDP that I can configure in Snort.

Not all Snort functionality is supported in the Zyxel Device.

The Zyxel Device's performance seems slower after configuring ADP.

Depending on your network topology and traffic load, applying an anomaly profile to each and every packet direction may affect the Zyxel Device's performance.

The Zyxel Device routes and applies SNAT for traffic from some interfaces but not from others.

The Zyxel Device automatically uses SNAT for traffic it routes from internal interfaces to external interfaces. For example LAN to WAN traffic. You must manually configure a policy route to add routing and SNAT settings for an interface with the **Interface Type** set to **General**. You can also configure a policy route to override the default routing and SNAT behavior for an interface with the **Interface Type** set to **Internal** or **External**.

I cannot get Dynamic DNS to work.

- You must have a public WAN IP address to use Dynamic DNS.
- Make sure you recorded your DDNS account's user name, password, and domain name and have entered them properly in the Zyxel Device.
- You may need to configure the DDNS entry's IP Address setting to **Auto** if the interface has a dynamic IP address or there are one or more NAT routers between the Zyxel Device and the DDNS server.
- The Zyxel Device may not determine the proper IP address if there is an HTTP proxy server between the Zyxel Device and the DDNS server.

I cannot create a second HTTP redirect rule for an incoming interface.

You can configure up to one HTTP redirect rule for each (incoming) interface.

I cannot get the application patrol to manage SIP traffic.

Make sure you have the SIP ALG enabled.

I cannot get the application patrol to manage H.323 traffic.

Make sure you have the H.323 ALG enabled.

I cannot get the application patrol to manage FTP traffic.

Make sure you have the FTP ALG enabled.

The Zyxel Device keeps resetting the connection.

If an alternate gateway on the LAN has an IP address in the same subnet as the Zyxel Device's LAN IP address, return traffic may not go through the Zyxel Device. This is called an asymmetrical or "triangle" route. This causes the Zyxel Device to reset the connection, as the connection has not been acknowledged.

You can set the Zyxel Device's security policy to permit the use of asymmetrical route topology on the network (so it does not reset the connection) although this is not recommended since allowing asymmetrical routes may let traffic from the WAN go directly to the LAN without passing through the Zyxel Device. A better solution is to use virtual interfaces to put the Zyxel Device and the backup gateway on separate subnets. See Asymmetrical Routes on page 476 and the chapter about interfaces for more information.

I cannot set up an IPSec VPN tunnel to another device.

If the IPSec tunnel does not build properly, the problem is likely a configuration error at one of the IPSec routers. Log into both Zyxel IPSec routers and check the settings in each field methodically and slowly. Make sure both the Zyxel Device and remote IPSec router have the same security settings for the VPN tunnel. It may help to display the settings for both routers side-by-side.

Here are some general suggestions. See also Chapter 20 on page 379.

- The system log can often help to identify a configuration problem.
- If you enable NAT traversal, the remote IPSec device must also have NAT traversal enabled.
- The Zyxel Device and remote IPSec router must use the same authentication method to establish the IKE SA.
- Both routers must use the same negotiation mode.
- Both routers must use the same encryption algorithm, authentication algorithm, and DH key group.
- When using pre-shared keys, the Zyxel Device and the remote IPSec router must use the same pre-shared key.
- The Zyxel Device's local and peer ID type and content must match the remote IPSec router's peer and local ID type and content, respectively.
- The Zyxel Device and remote IPSec router must use the same active protocol.
- The Zyxel Device and remote IPSec router must use the same encapsulation.
- The Zyxel Device and remote IPSec router must use the same SPI.
- If the sites are/were previously connected using a leased line or ISDN router, physically disconnect these devices from the network before testing your new VPN connection. The old route may have been learned by RIP and would take priority over the new VPN connection.
- To test whether or not a tunnel is working, ping from a computer at one site to a computer at the other.
  Before doing so, ensure that both computers have Internet access (via the IPSec routers).
- It is also helpful to have a way to look at the packets that are being sent and received by the Zyxel Device and remote IPSec router (for example, by using a packet sniffer).

Check the configuration for the following Zyxel Device features.

- The Zyxel Device does not put IPSec SAs in the routing table. You must create a policy route for each VPN tunnel. See Chapter 10 on page 299.
- Make sure the To-Zyxel Device security policies allow IPSec VPN traffic to the Zyxel Device. IKE uses UDP port 500, AH uses IP protocol 51, and ESP uses IP protocol 50.
- The Zyxel Device supports UDP port 500 and UDP port 4500 for NAT traversal. If you enable this, make sure the To-Zyxel Device security policies allow UDP port 4500 too.
- Make sure regular security policies allow traffic between the VPN tunnel and the rest of the network. Regular security policies check packets the Zyxel Device sends before the Zyxel Device encrypts them and check packets the Zyxel Device receives after the Zyxel Device decrypts them. This depends on the zone to which you assign the VPN tunnel and the zone from which and to which traffic may be routed.
- If you set up a VPN tunnel across the Internet, make sure your ISP supports AH or ESP (whichever you are using).
- If you have the Zyxel Device and remote IPSec router use certificates to authenticate each other, You must set up the certificates for the Zyxel Device and remote IPSec router first and make sure they trust each other's certificates. If the Zyxel Device's certificate is self-signed, import it into the remote IPSec router. If it is signed by a CA, make sure the remote IPSec router trusts that CA. The Zyxel Device uses one of its **Trusted Certificates** to authenticate the remote IPSec router's certificate. The trusted certificate can be the remote IPSec router's self-signed certificate or that of a trusted CA that signed the remote IPSec router's certificate.
- Multiple SAs connecting through a secure gateway must have the same negotiation mode.

The VPN connection is up but VPN traffic cannot be transmitted through the VPN tunnel.

If you have the **Configuration > VPN > IPSec VPN > VPN Connection** screen's **Use Policy Route to control dynamic IPSec rules option** enabled, check the routing policies to see if they are sending traffic elsewhere instead of through the VPN tunnels.

I uploaded a logo to show in the SSL VPN user screens but it does not display properly.

The logo graphic must be GIF, JPG, or PNG format. The graphic should use a resolution of 103 x 29 pixels to avoid distortion when displayed. The Zyxel Device automatically resizes a graphic of a different resolution to 103 x 29 pixels. The file size must be 100 kilobytes or less. Transparent background is recommended.

I logged into the SSL VPN but cannot see some of the resource links.

Available resource links vary depending on the SSL application object's configuration.

I cannot download the Zyxel Device's firmware package.

The Zyxel Device's firmware package cannot go through the Zyxel Device when you enable the anti-malware **Destroy compressed files that could not be decompressed** option. The Zyxel Device classifies the firmware package as not being able to be decompressed and deletes it.

You can upload the firmware package to the Zyxel Device with the option enabled, so you only need to clear the **Destroy compressed files that could not be decompressed** option while you download the firmware package. See Section 28.2 on page 526 for more on the anti-malware **Destroy compressed files that could not be decompressed** option.

I changed the LAN IP address and can no longer access the Internet.

The Zyxel Device automatically updates address objects based on an interface's IP address, subnet, or gateway if the interface's IP address settings change. However, you need to manually edit any address objects for your LAN that are not based on the interface.

I configured application patrol to allow and manage access to a specific service but access is blocked.

- If you want to use a service, make sure the security policy allows Security Service application patrol to go through the Zyxel Device.

I configured policy routes to manage the bandwidth of TCP and UDP traffic but the bandwidth management is not being applied properly.

It is recommended to use application patrol instead of policy routes to manage the bandwidth of TCP and UDP traffic.

I cannot get the RADIUS server to authenticate the Zyxel Device's default admin account.

The default **admin** account is always authenticated locally, regardless of the authentication method setting.

The Zyxel Device fails to authentication the ext-user user accounts I configured.

An external server such as AD, LDAP or RADIUS must authenticate the ext-user accounts. If the Zyxel Device tries to use the local database to authenticate an **ext-user**, the authentication attempt will always fail. (This is related to AAA servers and authentication methods, which are discussed in other chapters in this guide.)

I cannot add the admin users to a user group with access users.

You cannot put access users and admin users in the same user group.

I cannot add the default admin account to a user group.

You cannot put the default **admin** account into any user group.

The schedule I configured is not being applied at the configured times.

Make sure the Zyxel Device's current date and time are correct.

I cannot get a certificate to import into the Zyxel Device.

1 For **My Certificates**, you can import a certificate that matches a corresponding certification request that was generated by the Zyxel Device. You can also import a certificate in PKCS#12 format, including the certificate's public and private keys.

2 You must remove any spaces from the certificate's filename before you can import the certificate.

3 Any certificate that you want to import has to be in one of these file formats:

- Binary X.509: This is an ITU-T recommendation that defines the formats for X.509 certificates.
- PEM (Base-64) encoded X.509: This Privacy Enhanced Mail format uses lowercase letters, uppercase letters and numerals to convert a binary X.509 certificate into a printable form.
- Binary PKCS#7: This is a standard that defines the general syntax for data (including digital signatures) that may be encrypted. A PKCS #7 file is used to transfer a public key certificate. The private key is not included. The Zyxel Device currently allows the importation of a PKS#7 file that contains a single certificate.
- PEM (Base-64) encoded PKCS#7: This Privacy Enhanced Mail (PEM) format uses lowercase letters, uppercase letters and numerals to convert a binary PKCS#7 certificate into a printable form.
- Binary PKCS#12: This is a format for transferring public key and private key certificates.The private key in a PKCS #12 file is within a password-encrypted envelope. The file's password is not connected to your certificate's public or private passwords. Exporting a PKCS #12 file creates this and you must provide it to decrypt the contents when you import the file into the Zyxel Device.

Note: Be careful not to convert a binary file to text during the transfer process. It is easy for this to occur since many programs use text files by default.

I cannot access the Zyxel Device from a computer connected to the Internet.

Check the service control rules and to-Zyxel Device security policies.

I uploaded a logo to display on the upper left corner of the Web Configurator login screen and access page but it does not display properly.

Make sure the logo file is a GIF, JPG, or PNG of 100 kilobytes or less.

I uploaded a logo to use as the screen or window background but it does not display properly.

Make sure the logo file is a GIF, JPG, or PNG of 100 kilobytes or less.

The Zyxel Device's traffic throughput rate decreased after I started collecting traffic statistics.

Data collection may decrease the Zyxel Device's traffic throughput rate.

I can only see newer logs. Older logs are missing.

When a log reaches the maximum number of log messages, new log messages automatically overwrite existing log messages, starting with the oldest existing log message first.

The commands in my configuration file or shell script are not working properly.

- In a configuration file or shell script, use "#" or "!" as the first character of a command line to have the Zyxel Device treat the line as a comment.
- Your configuration files or shell scripts can use "exit" or a command line consisting of a single "!" to have the Zyxel Device exit sub command mode.
- Include `write` commands in your scripts. Otherwise the changes will be lost when the Zyxel Device restarts. You could use multiple `write` commands in a long script.

Note: "exit" or "!" must follow sub commands if it is to make the Zyxel Device exit sub command mode.

See Chapter 39 on page 762 for more on configuration files and shell scripts.

I cannot get the firmware uploaded using the commands.

The Web Configurator is the recommended method for uploading firmware. You only need to use the command line interface if you need to recover the firmware. See the CLI Reference Guide for how to determine if you need to recover the firmware and how to recover it.

My packet capture captured less than I wanted or failed.

The packet capture screen's **File Size** sets a maximum size limit for the total combined size of all the capture files on the Zyxel Device, including any existing capture files and any new capture files you generate. If you have existing capture files you may need to set this size larger or delete existing capture files.

The Zyxel Device stops the capture and generates the capture file when either the capture files reach the **File Size** or the time period specified in the **Duration** field expires.

My earlier packet capture files are missing.

New capture files overwrite existing files of the same name. Change the **File Suffix** field's setting to avoid this.

43.1 Resetting the Zyxel Device

If you cannot access the Zyxel Device by any method, try restarting it by turning the power off and then on again. If you still cannot access the Zyxel Device by any method or you forget the administrator password(s), you can reset the Zyxel Device to its factory-default settings. Any configuration files or shell scripts that you saved on the Zyxel Device should still be available afterwards.

Use the following procedure to reset the Zyxel Device to its factory-default settings. This overwrites the settings in the startup-config.conf file with the settings in the system-default.conf file.

Note: This procedure removes the current configuration.

1. Make sure the **SYS** LED is on and not blinking.
2. Press the **RESET** button and hold it until the **SYS** LED begins to blink. (This usually takes about five seconds.)
3. Release the **RESET** button, and wait for the Zyxel Device to restart.

   You should be able to access the Zyxel Device using the default settings.

43.2 Getting More Troubleshooting Help

Search for support information for your model at www.zyxel.com for more troubleshooting suggestions.

APPENDIX A
Customer Support

In the event of problems that cannot be solved by using this manual, you should contact your vendor. If you cannot contact your vendor, then contact a Zyxel office for the region in which you bought the device.

See *http://www.zyxel.com/homepage.shtml* and also *http://www.zyxel.com/about_zyxel/zyxel_worldwide.shtml* for the latest information.

Please have the following information ready when you contact an office.

Required Information

- Product model and serial number.
- Warranty Information.
- Date that you received your device.
- Brief description of the problem and the steps you took to solve it.

APPENDIX B
Product Features

Please refer to the product datasheet for the latest product features.

VERSION	4.32	4.32
MODEL NAME	ATP200	ATP500
# Of MAC	7	7
Interface		
VLAN	16	64
Virtual (Alias)	4 per interface	4 per interface
PPP (System Default)	3	8
PPP (User Created)	4	16
Bridge	8	16
Tunnel (GRE/IPv6 Transition)	4	4
Routing		
Static Route	128	256
Policy Route	500	500
Reserved Sessions For Managed Devices	500	500
Max. OSPF Areas	10	10
Max. BGP Neighbors	5	5
BGP Max. Network	16	16
Sessions		
Max. TCP Concurrent Sessions (Forwarding, NAT/Firewall)	600,000	1,000,000
NAT		
Max. Virtual Server Number	256	1024
Firewall (Secure Policy)		
Max. Firewall ACL Rule Number = Secure Policy Number	500	2000
Max. Session Limit Per Host Rules	1000	1000
ADP		
Max. ADP Profile Number	32	32
Max. ADP Rule Number	32	32
Application Patrol		
Max. App Patrol Profile	32	32
Max. Application Object In Each Profile (Object + Object Group)	32	32
User Profile		
Max. Local User	128	128
Max. Admin User	5	5
Max. User Group	32	32
Max User In One User Group	128	128
Default Concurrent Device Login	100	200
Max. Concurrent Device Upgrade (License)	n/a	n/a
HTTPd		
Max HTTPd Number	256	512
Objects		
Address Object	300	1000
Address Group	50	200
Max. Address Object In One Group	128	128
Service Object	500	1000
Service Group	100	200

Max. Service Object In One Group	128	128
Schedule Object	32	32
Schedule Group	16	16
Max. Schedule Object In One Group	24	24
Application Object	500	1000

Regulatory Notice and Statement (Class A)

Model List: ATP200, ATP500

United States of America

The following information applies if you use the product within USA area.

FCC EMC Statement

- This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

  (1) This device may not cause harmful interference, and

  (2) This device must accept any interference received, including interference that may cause undesired operation.
- Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
- This device has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Canada

The following information applies if you use the product within Canada area

Industry Canada ICES statement

CAN ICES-3 (A)/NMB-3(A)

European Union

The following information applies if you use the product within the European Union.

CE EMC statement

WARNING: This equipment is compliant with Class A of EN55032. In a residential environment this equipment may cause radio interference.

Safety Warnings

- Do not use this product near water, for example, in a wet basement or near a swimming pool.
- Do not expose your device to dampness, dust or corrosive liquids.
- Do not store things on the device.
- Do not obstruct the device ventilation slots as insufficient airflow may harm your device. For example, do not place the device in an enclosed space such as a box or on a very soft surface such as a bed or sofa.
- Do not install, use, or service this device during a thunderstorm. There is a remote risk of electric shock from lightning.
- Connect ONLY suitable accessories to the device.
- Do not open the device or unit. Opening or removing covers can expose you to dangerous high voltage points or other risks. Only qualified service personnel should service or disassemble this device. Please contact your vendor for further information.
- Make sure to connect the cables to the correct ports.
- Place connecting cables carefully so that no one will step on them or stumble over them.
- Always disconnect all cables from this device before servicing or disassembling.
- Do not remove the plug and connect it to a power outlet by itself; always attach the plug to the power adaptor first before connecting it to a power outlet.
- Do not allow anything to rest on the power adaptor or cord and do NOT place the product where anyone can walk on the power adaptor or cord.
- Please use the provided or designated connection cables/power cables/ adaptors. Connect it to the right supply voltage (for example, 110V AC in North America or 230V AC in Europe). If the power adaptor or cord is damaged, it might cause electrocution. Remove it from the device and the power source, repairing the power adapter or cord is prohibited. Contact your local vendor to order a new one.
- Do not use the device outside, and make sure all the connections are indoors. There is a remote risk of electric shock from lightning.
- Caution: Risk of explosion if battery is replaced by an incorrect type, dispose of used batteries according to the instruction. Dispose them at the applicable collection point for the recycling of electrical and electronic device. For detailed information about recycling of this product, please contact your local city office, your household waste disposal service or the store where you purchased the product.
- Use ONLY power wires of the appropriate wire gauge for your device. Connect it to a power supply of the correct voltage.
- Fuse Warning! Replace a fuse only with a fuse of the same type and rating.
- The POE (Power over Ethernet) devices that supply or receive power and their connected Ethernet cables must all be completely indoors.
- The following warning statements apply, where the disconnect device is not incorporated in the device or where the plug on the power supply cord is intended to serve as the disconnect device,

  - For permanently connected devices, a readily accessible disconnect device shall be incorporated external to the device;

  - For pluggable devices, the socket-outlet shall be installed near the device and shall be easily accessible.
- This device must be grounded. Never defeat the ground conductor or operate the device in the absence of a suitably installed ground conductor. Contact the appropriate electrical inspection authority or an electrician if you are uncertain that suitable grounding is available.
- When connecting or disconnecting power to hot-pluggable power supplies, if offered with your system, observe the following guidelines:

  - Install the power supply before connecting the power cable to the power supply.

  - Unplug the power cable before removing the power supply.

  - If the system has multiple sources of power, disconnect power from the system by unplugging all power cables from the power supply.
- CLASS 1 LASER PRODUCT
- APPAREIL À LASER DE CLASS 1
- PRODUCT COMPLIES WITH 21 CFR 1040.10 AND 1040.11.
- PRODUIT CONFORME SELON 21 CFR 1040.10 ET 1040.11.

Important Safety Instructions

1. Warning! Energy Hazard. Remove all metal jewelry, watches, and so on from your hands and wrists before serving this device.
2. Warning! To avoid risk of electric shock, remove only one card at a time and do not place fingers or objects inside the chassis. Cover empty slots with slot covers.
3. Warning! Use the fan module handles when pulling out or pushing in the fan module. Be careful not to put fingers or objects inside the fan module.
4. Caution! The RJ-45 jacks are not used for telephone line connection.
5. Caution! To reduce the risk of fire, use only No. 26 AWG or larger telecommunication line cord.
6. Hazardous Moving Parts. Keep body parts away from fan blades.
7. Hot Surface. Do not touch.

1. Avertissement: Risque de choc électrique. Retirer tout bijoux en métal et votre montre de vos mains et poignets avant de manipuler cet appareil.
2. Avertissement: Pour éviter tout risque de choc électrique ne retirer qu'une carte à la fois et ne pas insérer vos doigts ou tout objet sous le Chassis Recouvrir les ouvertures avec les caches adaptés.
3. Avertissement: Utiliser les poignées du châssis pour retirer ou insérer le module de ventilation Faites attention à vos doigts et à tout objet quand vous manipulez le ventilateur.
4. Attention: Les câbles RJ-45 ne doivent pas être utilisés pour les connections téléphoniques.
5. Attention: Pour réduire les risques d'incendie, utilizer uniquement des conducteurs de télécommunications 26 AWG au de section supérleure.
6. Mobilité des pièces détachées. S'assurer que les pièces détachées ne sont pas en contact avec les pales du ventilateur.
7. Surface brûlante. Ne pas toucher.

Environment Statement

European Union - Disposal and Recycling Information

The symbol below means that according to local regulations your product and/or its battery shall be disposed of separately from domestic waste. If this product is end of life, take it to a recycling station designated by local authorities. At the time of disposal, the separate collection of your product and/or its battery will help save natural resources and ensure that the environment is sustainable development.

Die folgende Symbol bedeutet, dass Ihr Produkt und/oder seine Batterie gemäß den örtlichen Bestimmungen getrennt vom Hausmüll entsorgt werden muss. Wenden Sie sich an eine Recyclingstation, wenn dieses Produkt das Ende seiner Lebensdauer erreicht hat. Zum Zeitpunkt der Entsorgung wird die getrennte Sammlung von Produkt und/oder seiner Batterie dazu beitragen, natürliche Ressourcen zu sparen und die Umwelt und die menschliche Gesundheit zu schützen.

El símbolo de abajo indica que según las regulaciones locales, su producto y/o su batería deberán depositarse como basura separada de la doméstica. Cuando este producto alcance el final de su vida útil, llévelo a un punto limpio. Cuando llegue el momento de desechar el producto, la recogida por separado éste y/o su batería ayudará a salvar los recursos naturales y a proteger la salud humana y medioambiental.

Le symbole ci-dessous signifie que selon les réglementations locales votre produit et/ou sa batterie doivent être éliminés séparément des ordures ménagères. Lorsque ce produit atteint sa fin de vie, amenez-le à un centre de recyclage. Au moment de la mise au rebut, la collecte séparée de votre produit et/ou de sa batterie aidera à économiser les ressources naturelles et protéger l'environnement et la santé humaine.

Il simbolo sotto significa che secondo i regolamenti locali il vostro prodotto e/o batteria deve essere smaltito separatamente dai rifiuti domestici. Quando questo prodotto raggiunge la fine della vita di servizio portarlo a una stazione di riciclaggio. Al momento dello smaltimento, la raccolta separata del vostro prodotto e/o della sua batteria aiuta a risparmiare risorse naturali e a proteggere l'ambiente e la salute umana.

Symbolen innebär att enligt lokal lagstiftning ska produkten och/eller dess batteri kastas separat från hushållsavfallet. När den här produkten når slutet av sin livslängd ska du ta den till en återvinningsstation. Vid tiden för kasseringen bidrar du till en bättre miljö och mänsklig hälsa genom att göra dig av med den på ett återvinningsställe.

台灣

警告使用者

- 這是甲類的資訊產品，在居住的環境中使用時，可能會造成射頻干擾，在這種情況下，使用者會被要求採取某些適當的對策。

安全警告 - 為了您的安全，請先閱讀以下警告及指示：

- 請勿將此產品接近水、火焰或放置在高溫的環境。
- 避免設備接觸：
  - 任何液體 - 切勿讓設備接觸水、雨水、高濕度、污水腐蝕性的液體或其他水份。
  - 灰塵及污物 - 切勿接觸灰塵、污物、沙土、食物或其他不合適的材料。
- 雷雨天氣時，不要安裝，使用或維修此設備。有遭受電擊的風險。
- 切勿重摔或撞擊設備，並勿使用不正確的電源變壓器。
- 若接上不正確的電源變壓器會有爆炸的風險。
- 請勿隨意更換產品內的電池。
- 如果更換不正確之電池型式，會有爆炸的風險，請依製造商說明書處理使用過之電池。
- 請將廢電池丟棄在適當的電器或電子設備回收處。
- 請勿將設備解體。
- 請勿阻礙設備的散熱孔，空氣對流不足將會造成設備損害。
- 請插在正確的電壓供給插座 (如：北美 / 台灣電壓 110V AC，歐洲是 230V AC)。
- 假若電源變壓器或電源變壓器的纜線損壞，請從插座拔除，若您還繼續插電使用，會有觸電死亡的風險。
- 請勿試圖修理電源變壓器或電源變壓器的纜線，若有毀損，請直接聯絡您購買的店家，購買一個新的電源變壓器。
- 請勿將此設備安裝於室外，此設備僅適合放置於室內。
- 請勿隨一般垃圾丟棄。
- 請參閱產品背貼上的設備額定功率。
- 請參考產品型錄或是彩盒上的作業溫度。
- 產品沒有斷電裝置或者採用電源線的插頭視為斷電裝置的一部分，以下警語將適用：
  - 對永久連接之設備， 在設備外部須安裝可觸及之斷電裝置；
  - 對插接式之設備， 插座必須接近安裝之地點而且是易於觸及的。

About the Symbols

Various symbols are used in this product to ensure correct usage, to prevent danger to the user and others, and to prevent property damage. The meaning of these symbols are described below. It is important that you read these descriptions thoroughly and fully understand the contents.

Explanation of the Symbols

SYMBOL	EXPLANATION
	Alternating current (AC): AC is an electric current in which the flow of electric charge periodically reverses direction.
	Direct current (DC): DC if the unidirectional flow or movement of electric charge carriers.
	Earth; ground: A wiring terminal intended for connection of a Protective Earthing Conductor.
	Class II equipment: The method of protection against electric shock in the case of class II equipment is either double insulation or reinforced insulation.

Viewing Certifications

Zyxel Limited Warranty

Zyxel warrants to the original end user (purchaser) that this product is free from any defects in material or workmanship for a specific period (the Warranty Period) from the date of purchase. The Warranty Period varies by region. Check with your vendor and/or the authorized Zyxel local distributor for details about the Warranty Period of this product. During the warranty period, and upon proof of purchase, should the product have indications of failure due to faulty workmanship and/or materials, Zyxel will, at its discretion, repair or replace the defective products or components without charge for either parts or labor, and to whatever extent it shall deem necessary to restore the product or components to proper operating condition. Any replacement will consist of a new or re-manufactured functionally equivalent product of equal or higher value, and will be solely at the discretion of Zyxel. This warranty shall not apply if the product has been modified, misused, tampered with, damaged by an act of God, or subjected to abnormal working conditions.

Note

Repair or replacement, as provided under this warranty, is the exclusive remedy of the purchaser. This warranty is in lieu of all other warranties, express or implied, including any implied warranty of merchantability or fitness for a particular use or purpose. Zyxel shall in no event be held liable for indirect or consequential damages of any kind to the purchaser.

To obtain the services of this warranty, contact your vendor. You may also refer to the warranty policy for the region in which you bought the device at http://www.zyxel.com/web/support_warranty_info.php.

Registration

Register your product online to receive e-mail notices of firmware upgrades and information at www.zyxel.com for global products, or at www.us.zyxel.com for North American products.

Open Source Licenses

This product contains in part some free software distributed under GPL license terms and/or GPL like licenses. Open source licenses are provided with the firmware package. You can download the latest firmware at www.zyxel.com. To obtain the source code covered under those Licenses, please contact support@zyxel.com.tw to get it.
