

8-Port PS/2KVM Switch

KVM-0811

H/W Version: 1

Product Overview

The LevelOne KVM-0811 8-port PS2 KVM Switch controls multiple PCs from a single keyboard, mouse and VGA monitor station. The KVM-0811 PS2 KVM switch is loaded with features such as Hot-Key Control, and on-screen display menu, PC server name searching, push-button and auto-scan control.

One Station Controlling Multiple Locations

The LevelOne KVM-0811 PS2 KVM Switch can control up to eight different units connected. Up to eight KVM units can be connected through Daisy Chain to deploy a larger KVM controlled network.

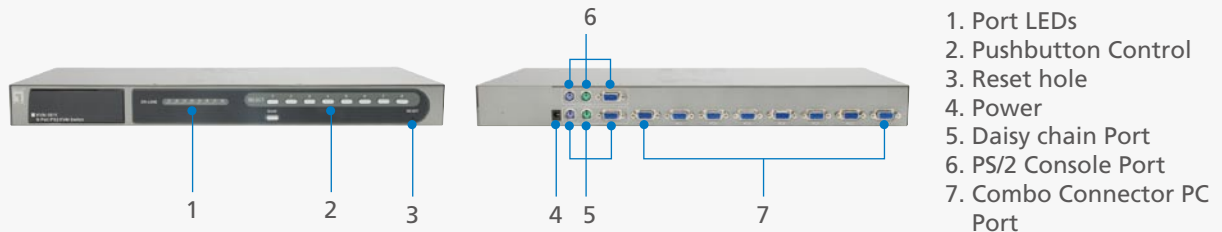

Each unit can be selected either through the user-friendly On-screen Menu or by using the

Hot Key pushbuttons located on the KVM-0811. Also, for easy management, PC's can be connected or disconnected without powering down any unit.

With the eight-character password control, connected PC's can be protected from unauthorized access. The KVM-0811 also features auto-PC server name search and an Auto-scan mode for monitoring PC's.

Multiple Platform Support

The KVM-0811 supports a variety of operating system platforms. It supports DOS, Win3.x, Win95/98/98SE/2000/ME/XP, WinNT, Netware, Unix and Linux.

Key Features

- Manage 8 PC's from a single location
