

SIP VoIP Phone

VOI-7000

H/W Version: 1

The VOI-7000 has all the features of a normal VoIP phone but with more functionality where different media can now be transferred in one session at the same time.

Digital Telephony in one device

The VOI-7000 from LevelOne is a feature-rich yet cost competitive with high quality voice, speakerphone and a 2x16 LCD screen that displays caller ID, number dialed, speed dial entries. The keypad also doubles as an input device to set up your SIP account and to connect to the Internet.

The numeric pad is tone activated so you can use it with telephone services that incorporates interactive telephony systems. Also support volume adjustment, 10 button speed dial, phone book setup and programming, redial, call hold, call wait and forwarding.

Simplicity in one device

The VOI-7000 compatibility with all SIP and VoIP service providers. Also allows for 3 different SIP accounts (IP telephone numbers) to be used from a single phone. The QoS (Quality of Service) function to ensures that clear communication is possible at all times regardless of the LAN load.

From one phone to a phone network

The VOI-7000 is a standalone VoIP SIP phone, but combined with other phones in a network by using an IP PBX at different branch offices and gateways to connect the IP network with traditional analogue phone systems, enables significant cost savings when making international or long distance phone calls. If using LevelOne IP PBX systems, it is possible to assign extension numbers to a large phone group that will always be in touch regardless of their location.
